STAWELL (FLORENCE MELIAN).
Certificated Student of Newnham College, Cambridge (Classical Tripos, 1892, Part I. Class I. Div. I.); sometime Lecturer in Classics at Newnham College.
Cyrenaics.

STOKES (GEORGE J.), M.A. (Trinity College, Dublin).
Of Lincoln's Inn, Barrister-at-Law; Professor of Philosophy and Jurisprudence in University College, Cork, National University of Ireland.
Delict.

STONE (DARWELL), M.A., D.D.
Principal Pusey Librarian, Oxford; author of *A History of the Doctrine of the Holy Eucharist*.
Councils (Early Christian).

STRAHAN (JAMES), M.A.
Edinburgh.
Conversion, Creation, Criticism (Old Testament), Divine Right.

SUDHOFF (Prof. Dr. KARL).
Direktor des Instituts für Geschichte der Medizin an der Universität zu Leipzig.
Disease and Medicine (Teutonic).

TAKAKUSU (JYUN), M.A., D.Litt. (Oxford), Dr. Phil. (Leipzig).
Professor of Sanskrit in the University of Tokyo.
Dhyana.

TAYLOR (ALFRED EDWARD), M.A. (Oxon.), D.Litt. (St. Andrews).
Professor of Moral Philosophy in the United College of SS. Salvator and Leonard, St. Andrews; late Fellow of Merton College, Oxford; Fellow of the British Academy; author of *The Problem of Conduct* (1901), *Elements of Metaphysics* (1903), *Varia Socratica* (1911).
Continuity.

THOMPSON (R. CAMPBELL), M.A., F.S.A., F.R.G.S.
Formerly Assistant in the Department of Egyptian and Assyrian Antiquities in the British Museum (1899–1905); formerly Assistant Professor of Semitic Languages in the University of Chicago (1907–1909).
Demons and Spirits (Assyro-Babylonian), Disease and Medicine (Assyro-Babylonian).

THOMSON (J. ARTHUR), M.A.
Regius Professor of Natural History in the University of Aberdeen; author of *The Study of Animal Life*, *The Science of Life*, *Heredity*, *The Bible of Nature*, *Darwinism and Human Life*.
Consanguinity, Development (Biological).

THRAEMER (EDUARD), Dr. Phil.
Ausserordentlicher Professor für classische Alterthumswissenschaft an der Universität zu Strassburg, seit 1909 emeritiert.
Disease and Medicine (Greek and Roman).

THURSTON (HERBERT), B.A., S.J.
Joint-Editor of the Westminster Library for Priests and Students; author of *Life of St. Hugh of Lincoln*, *The Holy Year of Jubilee*, *The Stations of the Cross*.
Confirmation (Roman Catholic), Councils (Modern Christian).

TOD (DAVID MACRAE), M.A., B.D. (Edin.).
Minister of St. James' Presbyterian Church, Huddersfield; formerly Cunningham Fellow, New College, Edinburgh.
Covetousness.

TRAILL (JOHN).
Late Missionary of the United Free Church of Scotland at Jaipur, Rajputana.
Dadu, Dadupanthis.

TROELTSCH (ERNST), Dr. theol., phil. jur.
Geheimer Kirchenrat; Professor der Theologie an der Universität zu Heidelberg.
Contingency.

WADDELL (L. AUSTINE), C.B., C.I.E., LL.D., F.L.S., F.R.A.I., M.R.A.S., Lt.-Colonel, I.M.S.
Late Professor of Tibetan in University College, London; author of *The Buddhism of Tibet*, *Tribes of the Brahmaputra Valley*, *Lhasa and its Mysteries*.
Death and Disposal of the Dead (Tibetan), Demons and Spirits (Buddhist, Tibetan), Divination (Buddhist).

WALKER (WILLISTON), Ph.D., D.D., L.H.D.
Titus Street Professor of Ecclesiastical History in Yale University.
Congregationalism.

WALSHE (W. GILBERT), M.A.
London Secretary of Christian Literature Society for China; late 'James Long' Lecturer; author of *Confucius and Confucianism*; editor of *China*.
Confucius, Cosmogony and Cosmology (Chinese), Crimes and Punishments (Chinese), Death and Disposal of the Dead (Chinese).

WATT (WELLSTOOD ALEXANDER), M.A., LL.B., D.Phil.
Author of *An Outline of Legal Philosophy, The Theory of Contract in its Social Light, A Study of Social Morality.*
Contract.

WENLEY (ROBERT MARK), D.Phil., LL.D. (Glasgow), D.Sc. (Edinburgh), Litt.D. (Hobart).
Professor of Philosophy in the University of Michigan; author of *Modern Thought and the Crisis in Belief, Kant and His Philosophical Revolution.*
Conscientiousness, Cynics.

WHITLEY (WILLIAM THOMAS), M.A., LL.D., F.R.Hist.S., F.T.S.
Secretary of the Baptist Historical Society; formerly Principal of the Baptist College of Victoria, and Secretary of the Victorian Baptist Foreign Mission.
Connexionalism.

WILDE (NORMAN), Ph.D.
Professor of Philosophy and Psychology in the University of Minnesota.
Doubt.

WILLETT (HERBERT LOCKWOOD), A.M., Ph.D.
Associate Professor of Semitic Languages and Literatures, and Dean of the Disciples' Divinity House, in the University of Chicago.
Disciples of Christ.

WILSON (GEORGE R.), M.D., M.R.C.P. (Edin.).
Late Medical Superintendent of Allanton House; author of *Drunkenness, Vice and Insanity.*
Delusion.

WISSOWA (GEORG), Dr. jur. et phil.
Ordentlicher Professor an der Universität zu Halle; Geheimer Regierungsrat.
Divination (Roman).

WOODS (FRANCIS HENRY), M.A., B.D.
Rector of Bainton, Yorkshire; late Fellow and Theological Lecturer of St. John's College, Oxford.
Deluge.

WORKMAN (HERBERT B.), M.A., D.Lit.
Principal of Westminster Training College; Member of the Board of Studies in the Faculty of Theology, London University; author of *The Dawn of the Reformation, Persecution in the Early Church*, and *Christian Thought to the Reformation.*
Constantine, Crusades.

WÜNSCH (RICHARD), Dr.Phil.
Ordentlicher Professor der Klassischen Philologie an der Universität zu Königsberg.
Cross-roads (Roman).

YOUNGERT (SVEN GUSTAF), Ph.D., D.D.
Professor of Philosophy and Greek New Testament Exegesis at Augustana College and Theological Seminary, Rock Island, Ill.
Cosmogony and Cosmology (Teutonic).

CROSS-REFERENCES

In addition to the cross-references throughout the volume, the following list of minor references may be useful:

TOPIC.	PROBABLE TITLE OF ARTICLE.
Conflict of Duties	Casuistry, Duty.
Conformity (Religious)	Nonconformity.
Congo	Negroes and West Africa.
Conjeeveram	Kanchi-puram.
Conservation	Energy, Force.
Constitutions	Bulls and Briefs, Lutheranism.
Consubstantiation	Eucharist, Lutheranism.
Corvée	Labour.
Cosmic Egg	Cosmogony and Cosmology.
Cosmography	Geography (Mythical).
Cowardice	Courage.
Creationism	Soul.
Credulity	Belief.
Darbyism	Brethren (Plymouth).
Dastur	Priesthood (Parsi).
Dayaks	Indonesia.
Debendra Nath Tagore	Brāhma Samāj.
Debt	Usury.
Decree	Election.
Dependent Origination	Paṭicca-Samuppāda.
Deprivation	Atimia, Discipline.
Diana	Roman Religion.
Diaspora	Judaism.
Dionysos	Greek Religion, Drama.
Dioscuri	Greek Religion, Twins.
Disestablishment	State.
Doppers	Sects (Chr.).
Dragon	Cosmogony and Cosmology, Symbols.

LISTS OF ABBREVIATIONS

I. General

A.H. = Anno Hijrae (A.D. 622).
Ak. = Akkadian.
Alex. = Alexandrian.
Amer. = American.
Apoc. = Apocalypse, Apocalyptic.
Apocr. = Apocrypha.
Aq. = Aquila.
Arab. = Arabic.
Aram. = Aramaic.
Arm. = Armenian.
Ary. = Aryan.
As. = Asiatic.
Assyr. = Assyrian.
AT = Altes Testament.
AV = Authorized Version.
AVm = Authorized Version margin.
A.Y. = Anno Yazdigird (A.D. 639).
Bab. = Babylonian.
c. = *circa*, about.
Can. = Canaanite.
cf. = compare.
ct. = contrast.
D = Deuteronomist.
E = Elohist.
edd. = editions or editors.
Egyp. = Egyptian.
Eng. = English.
Eth. = Ethiopic.
EV = English Version.
f. = and following verse or page: as Ac $10^{34f.}$
ff. = and following verses or pages: as Mt $11^{28ff.}$
Fr. = French.
Germ. = German.
Gr. = Greek.
H = Law of Holiness.
Heb. = Hebrew.
Hel. = Hellenistic.
Hex. = Hexateuch.
Himy. = Himyaritic.
Ir. = Irish.
Iran. = Iranian.
Isr. = Israelite.
J = Jahwist.
J" = Jehovah.
Jerus. = Jerusalem.
Jos. = Josephus.
LXX = Septuagint.
Min. = Minæan.
MSS = Manuscripts.
MT = Massoretic Text.
n. = note.
NT = New Testament.
Onk. = Onkelos.
OT = Old Testament.
P = Priestly Narrative.
Pal. = Palestine, Palestinian.
Pent. = Pentateuch.
Pers. = Persian.
Phil. = Philistine.
Phœn. = Phœnician.
Pr. Bk. = Prayer Book.
R = Redactor.
Rom. = Roman.
RV = Revised Version.
RVm = Revised Version margin.
Sab. = Sabæan.
Sam. = Samaritan.
Sem. = Semitic.
Sept. = Septuagint.
Sin. = Sinaitic.
Skr. = Sanskrit.
Symm. = Symmachus.
Syr. = Syriac.
t. (following a number) = times.
Talm. = Talmud.
Targ. = Targum.
Theod. = Theodotion.
TR = Textus Receptus.
tr. = translated or translation.
VSS = Versions.
Vulg. = Vulgate.
WH = Westcott and Hort's text.

II. Books of the Bible

Old Testament.

Gn = Genesis.
Ex = Exodus.
Lv = Leviticus.
Nu = Numbers.
Dt = Deuteronomy.
Jos = Joshua.
Jg = Judges.
Ru = Ruth.
1 S, 2 S = 1 and 2 Samuel.
1 K, 2 K = 1 and 2 Kings.
1 Ch, 2 Ch = 1 and 2 Chronicles.
Ezr = Ezra.
Neh = Nehemiah.
Est = Esther.
Job.
Ps = Psalms.
Pr = Proverbs.
Ec = Ecclesiastes.
Ca = Canticles.
Is = Isaiah.
Jer = Jeremiah.
La = Lamentations.
Ezk = Ezekiel.
Dn = Daniel.
Hos = Hosea.
Jl = Joel.
Am = Amos.
Ob = Obadiah.
Jon = Jonah.
Mic = Micah.
Nah = Nahum.
Hab = Habakkuk.
Zeph = Zephaniah.
Hag = Haggai.
Zec = Zechariah.
Mal = Malachi.

Apocrypha.

1 Es, 2 Es = 1 and 2 Esdras.
To = Tobit.
Jth = Judith.
Ad. Est = Additions to Esther.
Wis = Wisdom.
Sir = Sirach or Ecclesiasticus.
Bar = Baruch.
Three = Song of the Three Children.
Sus = Susanna.
Bel = Bel and the Dragon.
Pr. Man = Prayer of Manasses.
1 Mac, 2 Mac = 1 and 2 Maccabees.

New Testament.

Mt = Matthew.
Mk = Mark.
Lk = Luke.
Jn = John.
Ac = Acts.
Ro = Romans.
1 Co, 2 Co = 1 and 2 Corinthians.
Gal = Galatians.
Eph = Ephesians.
Ph = Philippians.
Col = Colossians.
1 Th, 2 Th = 1 and 2 Thessalonians.
1 Ti, 2 Ti = 1 and 2 Timothy.
Tit = Titus.
Philem = Philemon.
He = Hebrews.
Ja = James.
1 P, 2 P = 1 and 2 Peter
1 Jn, 2 Jn, 3 Jn = 1, 2, and 3 John.
Jude.
Rev = Revelation.

III. For the Literature

1. The following authors' names, when unaccompanied by the title of a book, stand for the works in the list below.

Baethgen = *Beiträge zur sem. Religionsgesch.*, 1888.
Baldwin = *Dict. of Philosophy and Psychology*, 3 vols. 1901–1905.
Barth = *Nominalbildung in den sem. Sprachen*, 2 vols. 1889, 1891 (²1894).
Benzinger = *Heb. Archäologie*, 1894.
Brockelmann = *Gesch. d. arab. Litteratur*, 2 vols. 1897–1902.
Bruns-Sachau = *Syr.-Röm. Rechtsbuch aus dem fünften Jahrhundert*, 1880.
Budge = *Gods of the Egyptians*, 2 vols. 1903.
Daremberg-Saglio = *Dict. des ant. grec. et rom.*, 1886–90.
De la Saussaye = *Lehrbuch der Religionsgesch.*³, 1905.
Deussen = *Die Philos. d. Upanishads*, 1899 [Eng. tr., 1906].
Doughty = *Arabia Deserta*, 2 vols. 1888.
Grimm = *Deutsche Mythologie*⁴, 3 vols. 1875–1878, Eng. tr. *Teutonic Mythology*, 4 vols. 1882–1888.
Hamburger = *Realencyclopädie für Bibel u. Talmud*, i. 1870 (²1892), ii. 1883, suppl. 1886, 1891 f., 1897.
Holder = *Altceltischer Sprachschatz*, 1891 ff.
Holtzmann-Zöpffel = *Lexicon f. Theol. u. Kirchenwesen*², 1895.
Howitt = *Native Tribes of S. E. Australia*, 1904.
Jastrow = *Die Religion Babyloniens u. Assyriens*, 2 vols. 1902–1905.
Jubainville = *Cours de Litt. celtique*, i.–xii., 1883 ff.
Lagrange = *Études sur les religions sémitiques*², 1904.
Lane = *An Arabic-English Dictionary*, 1863 ff.
Lang = *Myth, Ritual and Religion*², 2 vols. 1899.
Lepsius = *Denkmäler aus Ägypten u. Æthiopien*, 1849–1860.
Lichtenberger = *Encyc. des sciences religieuses*, 1876.
Lidzbarski = *Handbuch der nordsem. Epigraphik*, 1898.
McCurdy = *History, Prophecy, and the Monuments*, 2 vols. 1894–1896.
Muir = *Sanskrit Texts*, 1858–1872.
Muss-Arnolt = *A Concise Dict. of the Assyrian Language*, 1894 ff.
Nowack = *Lehrbuch d. heb. Archäologie*, 2 vols. 1894.
Pauly-Wissowa = *Realencyc. der classischen Altertumswissenschaft*, 1893–1895.
Perrot-Chipiez = *Hist. de l'Art dans l'Antiquité*, 1881 ff.
Preller = *Römische Mythologie*, 1858.
Réville = *Religion des peuples non-civilisés*, 1883.
Riehm = *Handwörterbuch d. bibl. Altertums*², 1893–1894.
Robinson = *Biblical Researches in Palestine*², 1856.
Roscher = *Lex. d. gr. u. röm. Mythologie*, 1884.
Schaff-Herzog = *The New Schaff-Herzog Encyclopedia of Relig. Knowledge*, 1908 ff.
Schenkel = *Bibel-Lexicon*, 5 vols. 1869–1875.
Schürer = *GJV*³, 3 vols. 1898–1901 [*HJP*, 5 vols. 1890 ff.].
Schwally = *Leben nach dem Tode*, 1892.
Siegfried-Stade = *Heb. Wörterbuch zum AT*, 1893.
Smend = *Lehrbuch der alttest. Religionsgesch.*², 1899.
Smith (G. A.) = *Historical Geography of the Holy Land*⁴, 1896.
Smith (W. R.) = *Religion of the Semites*², 1894.
Spencer (H.) = *Principles of Sociology*³, 1885–1896.
Spencer-Gillen[a] = *Native Tribes of Central Australia*, 1899.
Spencer-Gillen[b] = *Northern Tribes of Central Australia*, 1904.
Swete = *The OT in Greek*, 3 vols. 1893 ff.
Tylor (E. B.) = *Primitive Culture*³, 1891 [⁴1903].
Ueberweg = *Hist. of Philosophy*, Eng. tr., 2 vols. 1872–1874.
Weber = *Jüdische Theologie auf Grund des Talmud u. verwandten Schriften*², 1897.
Wiedemann = *Die Religion der alten Ægypter*, 1890 [Eng. tr., revised, *Religion of the anc. Egyptians*, 1897].
Wilkinson = *Manners and Customs of the Ancient Egyptians*, 3 vols. 1878.
Zunz = *Die gottesdienstlichen Vorträge der Juden*², 1892.

2. Periodicals, Dictionaries, Encyclopædias, and other standard works frequently cited.

AA = Archiv für Anthropologie.
AAOJ = American Antiquarian and Oriental Journal.
ABAW = Abhandlungen d. Berliner Akad. d. Wissenschaften.
AE = Archiv für Ethnographie.
AEG = Assyr. and Eng. Glossary (Johns Hopkins University).
AGG = Abhandlungen d. Göttinger Gesellschaft der Wissenschaften.
AGPh = Archiv für Geschichte der Philosophie.
AHR = American Historical Review.
AHT = Ancient Hebrew Tradition (Hommel).
AJPh = American Journal of Philosophy.
AJPs = American Journal of Psychology.
AJRPE = American Journal of Religious Psychology and Education.
AJSL = American Journal of Semitic Languages and Literature.
AJTh = American Journal of Theology.
AMG = Annales du Musée Guimet.
APES = American Palestine Exploration Society.
APF = Archiv für Papyrusforschung.
AR = Anthropological Review.
ARW = Archiv für Religionswissenschaft.
AS = Acta Sanctorum (Bollandus).
ASG = Abhandlungen der Sächsischen Gesellschaft der Wissenschaften.
ASoc = L'Année Sociologique.
ASWI = Archæological Survey of W. India.
AZ = Allgemeine Zeitung.
BAG = Beiträge zur alten Geschichte.
BASS = Beiträge zur Assyriologie u. sem. Sprachwissenschaft (edd. Delitzsch and Haupt).
BCH = Bulletin de Correspondance Hellénique.
BE = Bureau of Ethnology.
BG = Bombay Gazetteer.
BJ = Bellum Judaicum (Josephus).
BL = Bampton Lectures.
BLE = Bulletin de Littérature Ecclésiastique.
BOR = Bab. and Oriental Record.
BS = Bibliotheca Sacra.
BSA = Annual of the British School at Athens.
BSAA = Bulletin de la Soc. archéologique à Alexandrie.
BSAL = Bulletin de la Soc. d'Anthropologie de Lyon
BSAP = Bulletin de la Soc. d'Anthropologie, etc. Paris.
BSG = Bulletin de la Soc. de Géographie.
BTS = Buddhist Text Society.
BW = Biblical World.
BZ = Biblische Zeitschrift.

CAIBL = Comptes rendus de l'Académie des Inscriptions et Belles-Lettres.
CBTS = Calcutta Buddhist Text Society.
CF = Childhood of Fiction (MacCulloch).
CGS = Cults of the Greek States (Farnell).
CI = Census of India.
CIA = Corpus Inscrip. Atticarum.
CIE = Corpus Inscrip. Etruscarum.
CIG = Corpus Inscrip. Græcarum.
CIL = Corpus Inscrip. Latinarum.
CIS = Corpus Inscrip. Semiticarum.
COT = Cuneiform Inscriptions and the OT [Eng. tr. of *KAT*²; see below].
CR = Contemporary Review.
CeR = Celtic Review.
ClR = Classical Review.
CQR = Church Quarterly Review.
CSEL = Corpus Script. Eccles. Latinorum.
DACL = Dict. d'Archéologie chrétienne et de Liturgie (Cabrol).
DB = Dict. of the Bible.
DCA = Dict. of Christian Antiquities (Smith-Cheetham).
DCB = Dict. of Christian Biography (Smith-Wace).
DCG = Dict. of Christ and the Gospels.
DI = Dict. of Islam (Hughes).
DNB = Dict. of National Biography.
DPhP = Dict. of Philosophy and Psychology.
DWAW = Denkschriften der Wiener Akad. der Wissenschaften.
EBi = Encyclopædia Biblica.
EBr = Encyclopædia Britannica.
EEFM = Egyp. Explor. Fund Memoirs.
ERE = The present work.
Exp = Expositor.
ExpT = Expository Times.
FHG = Fragmenta Historicorum Græcorum (coll. C. Müller, Paris, 1885).
FL = Folklore.
FLJ = Folklore Journal.
FLR = Folklore Record.
GA = Gazette Archéologique.
*GB*² = Golden Bough ² (Frazer).
GGA = Göttingische Gelehrte Anzeigen.
GGN = Göttingische Gelehrte Nachrichten (Nachrichten der königl. Gesellschaft der Wissenschaften zu Göttingen).
GIAP = Grundriss d. Indo-Arischen Philologie.
GIrP = Grundriss d. Iranischen Philologie.
GJV = Geschichte des Jüdischen Volkes.
GVI = Geschichte des Volkes Israel.
HDB = Hastings' Dict. of the Bible.
HE = Historia Ecclesiastica.

ZKT = Zeitschrift für kathol. Theologie.
ZKWL = Zeitschrift für kirchl. Wissenschaft n. kirchl. Leben.
ZM = Zeitschrift für die Mythologie.
ZNTW = Zeitschrift für die neutest. Wissenschaft.
ZPhP = Zeitschrift für Philosophie und Pädagogik.
ZTK = Zeitschrift für Theologie n. Kirche.
ZVK = Zeitschrift für Volkskunde.
ZVRW = Zeitschrift für vergleichende Rechtswissenschaft.
ZWT = Zeitschrift für wissenschaftliche Theologie.

[A small superior number designates the particular edition of the work referred to, as *KAT*^{2}, *LOT*^{6}, etc.]

ENCYCLOPÆDIA

OF

RELIGION AND ETHICS

C

CONFIRMATION. — **1. Names.** — The word 'confirmation,' as used in this article, indicates an act, closely connected with baptism, in which prayer for the Holy Spirit is joined with some ceremony, such as the laying on of hands or anointing, through which the gift of the Spirit is believed to be conferred. So long as confirmation continued to be administered at the same time as baptism, the two forming a single rite, the need of a special name for the former was not much felt. The rite as a whole was known as baptism, and the part of it which was associated with the gift of the Spirit was designated by terms derived from its most prominent ceremony, such as 'laying on of hands' (ἐπίθεσις χειρῶν, He 6^2; ἡ χειροθεσία, Clem. Alex. *Exc. Th.* 22; *Const. Ap.* ii. 32, iii. 16, vii. 44; cf. Firmilian, *ap.* Cyp. *Ep.* 75; *impositio manus*) and 'chrism.' The word 'seal' (σφραγίς), originally, it seems, applied to baptism (Hermas, *Sim.* IX. xvi. 2–4; Iren. *Dem.* 3), was early used of confirmation, with reference to the signing of the baptized with the cross (Clem. Alex. *Strom.* ii. 3; Cornelius, *ap.* Eus. *HE* VI. xliii. 14 f.; cf. *Const. Ap.* iii. 17). 'Confirmation,' now universally accepted as the name of the rite in the West, does not appear to have been so used before the 5th century. It occurs in Faustus, Bishop of Riez, formerly Abbot of Lérins, *de Sp. S.* ii. 4 (ed. Engelbrecht, Vienna, 1889, p. 143), *hom. in die Pent.* (Bigne, *Max. Bib. Pat.*, Paris, 1677, vi. 649), and the cognate verb is similarly applied by St. Patrick (*Ep.* 2), who spent some years at Lérins. It appears, therefore, to have originated in Gaul, and probably at Lérins, though it was perhaps not fully established as a name of the rite at Lérins when St. Patrick left that monastery *c.* A.D. 415 (Bury, *Life of St. Patr.*, 1905, pp. 294, 336 ff.), since in his *Confession* (38, 51) he uses the word *consummare* instead of *confirmare*. St. Ambrose had at an earlier date used the latter verb with a similar but not identical meaning (*de Myst.* 42); and in the middle of the 5th cent. Pope Leo I. (*Ep.* 159) applies it to the laying on of hands on those who had been baptized in heresy. In Egypt at the present day the rite is called *tathbit*—a word exactly equivalent to 'confirmation.' In the 9th cent., when confirmation was deferred, the newly baptized were said to be 'confirmed' by the reception of the Holy Communion (Alcuin, *Ep.* 90; Jesse Ambian. *Ep. de bapt.*; Amalarius, *de Cær. Bapt.* 4; Raban. Maur. *de Cler. Inst.* i. 29).

2. Confirmation in the Apostolic Age.—A study of Ac 19^{1-6}—the account of the twelve disciples who had been baptized into John's baptism—seems to yield the following results. St. Paul's first question implies that a reception of the Holy Spirit usually, though not always, synchronized with admission to the Christian Society, and that in the case of disciples whose conversion was not due to the preaching of him or his immediate companions (v.^{2} ἐλάβετε πιστεύσαντες). It is also implied in what follows that the outpouring of the Spirit was not a result of the act of baptism (v.^{3}), but that it was mediated, at least in St. Paul's practice, by a laying on of hands which normally followed immediately upon baptism (v.^{6}). Since apparently St. Paul, in accordance with his rule (1 Co 1^{14-17}), which was also that of other Apostles (Ac 10^{48}, cf. 2^{38}), did not himself baptize the Ephesian disciples, though he laid his hands upon them (v.$^{5f.}$ ἐβαπτίσθησαν . . . ἐπιθέντος τοῦ Παύλου), it may be inferred that, while baptism was commonly administered by persons of lower ministerial rank, confirmation was reserved for those who had a higher place in the ministry, if not for Apostles.

These conclusions are confirmed by the narrative of the planting of the Church in Samaria (Ac 8^{12-17}). From it we learn that the practice of the older Apostles coincided with that of St. Paul. Baptism by itself did not convey the gift of the Spirit. That was mediated by a laying on of hands by Apostles, with prayer for the Holy Spirit (vv.$^{15.\ 17}$), the baptisms having been previously performed by Philip, and perhaps by others of inferior ministerial office who accompanied him. It is hinted that, at least when St. Luke wrote, according to established usage the bestowal of the Holy Spirit was not separated in time from the administration of baptism (v.^{18}).

In each of these cases the reception of the Spirit was manifested by the exercise of miraculous powers (8^{18} 19^6). But it would be contrary to the teaching of the NT as a whole to suppose that such manifestations were of the essence of the gift. If we may suppose (Chase, *Confirmation in the Apostolic Age*, p. 35) that 2 Ti $1^{6ff.}$ refers to

Timothy's confirmation, rather than to his ordination, it proves that the graces looked for as a result of the laying on of hands were such as 'power and love and soberness' (cf. Ac $2^{41ff.}$, where 'wonders and signs' are confined to the Apostles).

The inferences which have here been drawn from Ac 8^{12-17} 19^{1-6} are corroborated by many references in the Epistles to a reception of the Holy Spirit on admission to the Church (Ro 5^5, 2 Co 5^5, Eph $1^{13f.}$ 4^{30}, 1 Jn 2^{27} 3^{24}), in some of which St. Paul uses the very phrase ascribed to him by St. Luke, as pointing to a laying on of hands, πνεῦμα ἐλάβετε (Ro 8^{15}, 1 Co 2^{12}, 2 Co 11^4, Gal $3^{2f.}$), while others appear to indicate that the bestowal of the gift was an act distinct from and following the washing (1 Co 6^{11} 12^{13}, 2 Co $1^{21f.}$, Tit $3^{4ff.}$). To these may be added He 6^2, where βαπτισμοὶ ἐπιθεσίς τε χειρῶν must at least *include* a laying on of hands closely connected with a Christian act of lustration.

3. A review of the evidence afforded by the NT, therefore, leads to the belief that in the Apostolic age a rite of confirmation was widely, if not universally, used, the main parts of which were prayer and imposition of hands. But it has been held that at this period, as in later ages, with the laying on of hands was associated an anointing of the neophytes. In support of this view it has been urged (Chase, *op. cit.* p. 53): (*a*) that unction and imposition of hands are 'closely related symbolical acts' in both OT and NT (cf. Nu 8^{10} with Ex 28^{41}, etc.; and Mk 6^5 8^{23} and Ac 28^8 with Mk 6^{13} and Ja 5^{14}); (*b*) that anointing is associated with confirmation in the earliest sub-Apostolic records (Iren. *Hær.* I. xxi. 3; Tert.; *Can. Hipp.* 134–136; to the authorities cited by Chase may be added Theophilus of Antioch; see below, § 6 *a*); (*c*) that the supposition adds force to such passages as 2 Co $1^{21f.}$, 1 Jn $2^{20.\ 27}$.

It must be noticed, however, (*a*) that no Scripture evidence has been produced that unction was used *along with* the laying on of hands; while, on the other hand, it was, among both Jews and Gentiles, an accompaniment of the bath (Swete, *The Holy Spirit in the NT*, 1909, p. 386, citing Ru 3^3, Ezk 16^9, to which add Sus [17]); (*b*) that neither Irenæus (*loc. cit.*) nor Theophilus makes any reference to the laying on of hands; and both Tertullian and *Can. Hipp.* connect the unction not with it but with the immersion (see below, §§ 21, 26, cf. § 22); (*c*) that, if 2 Co $1^{21f.}$ enumerates in order the acts of the initiatory rites, σφραγισάμενος is naturally regarded as indicating baptism (see above, § 1), and the implication, therefore, is that the unction preceded baptism, and was separated by it from confirmation. The connexion of the unction with the gift of the Spirit in 1 Jn $2^{20.\ 27}$ does not by itself establisb the contention. It may, however, in part account for the close relation which subsisted in later times between the unction and the imposition of hands, leading in some cases to the overshadowing, or even the superseding, of the latter by the former.

On the whole, the reasonable inference from the facts appears to be that unction was a primitive accompaniment of baptism rather than of confirmation.

4. The passages of the NT examined in § 2 point to confirmation by laying on of hands after baptism. Nevertheless, it must be remarked that there is no indication that any feeling of incongruity was occasioned by the outpouring of the Holy Spirit upon Cornelius and his friends before they were baptized (Ac 10^{44-48}), and it is recorded that Ananias laid hands on Saul that he might be 'filled with the Holy Ghost,' and afterwards baptized him (Ac 9^{17}). These facts suggest the possibility that confirmation may regularly have preceded baptism in some regions, concerning whose customs in this matter the NT supplies no information. It will be found that this suggestion has some bearing upon peculiarities of the early Syrian rite of initiation (§ 7).

5. References to confirmation in the sub-Apostolic period.—It was not to be expected that the scanty remains of the earliest extra-canonical Christian literature would supply many references to confirmation. In the *Didache* and Justin Martyr's *1st Apology*, both of which contain accounts of the baptismal rite, explicit mention of it might, indeed, have been looked for. The absence of such mention in the former may, however, be accounted for by supposing that its administration belonged to apostles and prophets, for whose guidance the *Didache* was not intended. In Justin, on the other hand, but few details of the baptismal rite are given (*1 Apol.* 61), and we are told (ch. 65) that, after the washing, the neophyte was brought into the assembly, where prayer was made for him and others, followed by the kiss of peace and the Eucharist. That this is a vague account of the confirmation is rendered probable by its resemblance in general outline to *Can. Hipp.* 135 ff. (see below, §§ 26, 28). Irenæus seems to imply that a laying on of hands followed the immersion, both being included in the rite of baptism. Thus in *Hær.* III. xvii. 1, 2 he seems to distinguish the grace of baptism from the gift of the Spirit; and in *Dem.* 3 he describes the former as forgiveness of sins and regeneration, while in *Dem.* 41 f. he speaks of the Apostles as baptizing their converts and giving them the Holy Spirit, and connects this with the present life of the Church, by describing believers as the habitation of the Spirit given in baptism (cf. *Hær.* IV. xxxviii. 1, 2).

6. The ancient Syrian rite.—About the ceremonies of baptism used in Syria in earlier centuries there is a considerable amount of evidence, which must be set out as briefly as possible.

(*a*) From Theophilus, Bishop of Antioch (*c.* 180), we learn (*ad Autol.* i. 12, ii. 16) that anointing with the 'oil of God' was, when he wrote, an important feature of the initiatory rite; and his statement that the name 'Christian' was derived from it implies (see Ac 11^{26}) that he believed it to date from the Apostolic age. According to him, the immersion conveyed re-birth and remission of sins.

(*b*) *Clementine Recognitions*, iii. 67 (Gersdorf, p. 110; Lagarde, p. 119) (*c.* 200 [?]). A description of baptism is put into the mouth of St. Peter. It includes anointing with oil sanctified by prayer, immersion in the threefold Name, and Holy Communion.

(*c*) *Didascalia*, III. xii. 2 f. (Funk, p. 208) (*c.* 230). When speaking of the duties of deaconesses at the baptism of women, the writer mentions anointing by the bishop with the oil of unction on the head 'at the laying on of hands.' An anointing of the rest of the body by deaconesses or other women follows, and then the baptism by the bishop or by deacons or presbyters, at his command. Funk accounts for the absence of reference to a post-baptismal unction by supposing that the deaconesses had no share in it; but it must not be assumed that there was any unction after the baptism.

(*d*) *Syr. Acts of Judas Thomas*, in Wright, *Apoc. Ac. of Ap.* (vol. ii. Eng. tr.), 1871 (3rd cent.). This work contains five detailed accounts of baptisms (pp. 165, 188, 257, 267, 289), which, combined, give the following results: After the blessing of the oil, the candidates are anointed with the seal on the head, the men first. Their bodies are then anointed, in the case of the men by Judas, in the case of the women by a woman. They are subsequently baptized and communicated. There is no intimation of a consecration of the water, and apparently no recognition of a distinction between the grace conveyed by the anointing and by the immersion.

(*e*) Aphraates (*c.* 345). In one of his few allusions to the baptismal rite this writer mentions the unction before the baptism (*Dem.* xii. 13), though he does not actually state that the former preceded the latter in the rite. He does not, apparently, mention the gift of the Spirit, but he connects both regeneration and the putting on of spiritual armour with 'the water' (*Dem.* vi. 1, xiv. 16).

(*f*) Ephraim, *Epiphany Hymns* (Eng. tr. by Gwynn in *Nicene and Post-Nicene Fathers*, vol. xiii.) (*c.* 350). From many allusions we gather that the baptismal rite included the following elements in the order in which they are here mentioned: (1) anointing with 'the seal' (iii. 1, 2, v. 8); (2) the baptism (xi. 8, xiv. 41 *f.* [for the order of these two, see iii. 1, 17, iv. 1, vi. 9, 20, viii. 22]); (3) vesting of the neophytes in white (vi. 15, 18, xiii. 1, 5, cf. iv. 3); (4) crowning (xiii. 5); and (5) communion (vii. 23, viii. 22, cf. iii. 17, xiii. 17). From *Sermo Exeg. in Ps.* cxl. 3 (*Opp. Syr.*, Rome, 1737–43, ii. 332) it appears that the anointing

'with the seal of the Holy Spirit' on the head was followed by unction of the members of the body. In the commentary on Jl 2[24] (*ib.* 252) mention is made of the oil and fragrant μύρον with which the '*midhe*' are sealed and put on the armour of the Holy Spirit. [In this passage '*midhe*' may mean 'baptizandi,' in accordance with the order implied in the *Epiphany Hymns* (see the passage quoted in Diettrich, p. 63, n. 15).] The priest is the minister both of the unction and of the baptism (*Epiph. Hymns*, iv. 4, v. 8 f.).

(*g*) *History of John the son of Zebedee* (4th cent. [?]), in Wright, *op. cit.* Two baptisms are described in detail (pp. 38, 53). The 'fine scented' oil was first consecrated, and then the water, firs appearing over the former after consecration. Afterwards the candidates wers signed on the forehead, and their bodies anointed. Then followed the baptism, the vesting in white, the giving of the kiss of peace to the neophytes, and the communion. The immersion was 'for the forgiveness of debts and the pardon of sins,' while the appearance of fire on the oil may indicate that the unction conveyed the gift of the Spirit.

(*h*) *Apostolic Constitutions* (*c.* 380). The *Ordo Baptismi* agrees closely with that of the contemporary Church of Jerus. (below, § 18). But that the compiler, in introducing a second, post-baptismal, unction, was consciously innovating upon Syrian custom, is clear. (1) Upon it alone of the component parts of the rite does he comment, and his remark upon it is polemical in tone (vii. 44): ταῦτα καὶ τὰ τούτοις ἀκόλουθα λεγέτω· ἑκάστου γὰρ ἡ δύναμις τῆς χειροθεσίας ἐστὶν αὕτη. ἐὰν γὰρ μὴ εἰς ἕκαστον τούτων ἐπίκλησις γένηται παρὰ τοῦ εὐσεβοῦς ἱερέως τοιαύτη τις εἰς ὕδωρ μόνον καταβαίνει ὁ βαπτιζόμενος ὡς οἱ Ἰουδαῖοι κ.τ.λ. (2) He connects the gift of the Spirit with unction before baptism, while the post-baptismal unction is merely 'the seal of the covenants' or 'the confirmation of the confession' (iii. 16 f., vii. 22).

(*i*) St. Chryeostom (*c.* 390), in discourses delivered at Antioch, makes it plain that he regarded the bestowal of the Holy Spirit as mediated by unction (*in 1 Tim.* ii. 2), and as closely connected with baptism, which was followed by Holy Communion (*in Mt.* xii. 6, *in 1 Co.* xxx. 2; in the latter passage Mason [*Relation of Confirmation to Baptism*[2], p. 365] mistranslates ἀπὸ τοῦ βαπτίσματος 'directly after baptism'). Preaching at Constantinople, he implies that thers confirmation followed baptism; but, by his remark that it was not wonderful that Cornelius received the Spirit befors baptism, since 'this takes place also in our own day' (καὶ ἐφ' ἡμῶν τοῦτο γέγονεν), he hints that elsewhere it preceded it (*in Ac.* xxiv. 2). He distinguished the 'Spirit of remissioo,' which the Samaritans received at their baptism, from ths 'Spirit of signs' subsequently given, and probably held that the former was the gift bestowed in later times by the anointing (*in Ac.* xviii. 2 f. cf. xl. 1 f.).

(*j*) *Life of Rabbula*, in Overbeck, *S. Ephr. Syri sel. opp.*, p. 164 (*c.* 450). On his arrival at the river Jordan, Rabbula 'recited the Belief before' the priests, who then 'anointed and baptized him; and immediately after he was come up from the water' a cloth was wrapped about his body 'after the custom of the spiritual kindred of Christ.' Ths latter ceremony no doubt corresponded to the vesting of the neophytes in white.

(*k*) Theodoret, *in Cant.* i. 2 (*c.* 450). Those who are being initiated are said, after renunciation and profession of allegiance (and therefore before baptism), to receive 'as it were a certain royal seal, the unction of the spiritual ointment, receiving thereby, as in a figure, the invisible grace of the all-holy Spirit.' To argue (Mason, *op. cit.* p. 374), against the natural force of the words, that the unction followed baptism, because it was made with ointment (μύρον) and not with oil, is to assume that the Syrian usage of this period agreed with that of other places and other times. There is independent evidence that in Syria scented oil or ointment was used for the preliminary unction (above, *f*, *g*). In fact, in Syria to a comparatively late date, and in early writers elsewhere, there seems to have been no sharp distinction between μύρον and oil (see below, § 10, and Hippol. *in Dan.* i. 16). Elsewhere, as here, Theodoret seems to assume that normally the gift of the Holy Spirit conveyed by the laying on of hands preceded baptism (*in Heb.* vi. 1 ff., cf. *Qu. in Nu.* 47).

(*l*) Narsai, *Homilies*, 21, 22 (Nestorian, end of 5th cent.). According to these homilies, after the consecration of the oil the candidate was signed with it, first on the forehead and then over the whole body. After this—the water having been consecrated—he was immersed, and, on ascending from the font, was given the kiss of peace, clothed, and communicated. By the oil the Spirit was imparted (Connolly, in *TS* viii. 40, 43, 45, 50–52).

(*m*) *Baptism of Constantine*, in Overbeck, *op. cit.* p. 355 (*c.* 500 [?]). After the blessing of the font, Constantine is said to have been anointed with oil, baptized, and communicated.

(*n*) Severus, Patriarch of Antioch (Monophysite, 512–519), habitually speaks of anointing with chrism as following and completiog baptism. Since he quotes the *Testamentum Domini* as authoritative on the subject of baptism, it may be inferred that the rite, as he practised it, resembled that which is described in that work. See especially *Epp.* ix. 1, 3 (ed. E. W. Brooks).

(*o*) The catholicos Isô'yāhb I. (Nestorian, 580–596). In his *Quæstiones* (Diettrich, *Die nestor. Taufliturgie*, p. 94 ff.) directions are given for the baptism of adults by a priest, and for the baptism of a sick person by a deacon. In each cass a signing with oil (of men on the breast, of women on the forehead) is followed by the baptism. The only acts mentioned subsequent to baptism are the clothing of the women by the deaconesses and their crowning by the priest, and the administration of the Eucharist, if it is customary, by the deacon to the person baptized by him.

7. From this evidence some important inferences may be drawn. It would seem that throughout Syria up to the 5th cent., and among the Nestorians to the end of the 6th cent., the initiatory rite included three principal acts—unction, baptism, and communion of the baptized. The unction consisted of two parts—the signing of the head (3rd and 4th cents.), forehead (4th and 5th cents., and later in the case of women), or breast (6th cent.), and the anointing of the body. The gift of the Holy Spirit is usually associated with the unction (see above, § 6 *f*, *g*, *h*, *i*, *k*, *l*, and cf. *c*, where the unction is 'at the laying on of hands'); and in this connexion it should be noticed that the evidence for the consecration of the oil is earlier than for the consecration of the font (see *b*, *d*). There is no trace, apart from the *Apostolic Constitutions*, of any important act following the immersion except the communion of the baptized. Thus, according to the earliest known custom of the Syrian Christians, confirmation preceded baptism. It is not difficult to believe that this usage was simply a development of local primitive practice. In places where the laying on of hands for the imparting of the gift of the Spirit took place before baptism (above, § 4), if the baptismal unction also preceded the immersion (see § 3), the laying on of hands and the unction would in time come to be closely associated. Thus the confirmation would become the unction 'at the laying on of hands' (§ 6 *c*). Finally, in accordance with a tendency of which there are many examples, the unction would supersede the laying on of hands, except so far as the signing of the person with oil could be so described (cf. § 6 *k*).

In the early part of the 3rd cent. (§ 6 *c*) confirmation was reserved to the bishop, but, according to all later authorities, the entire rite is administered by one person—bishop or priest—assisted by a deacon or deaconess. It will be observed that there is early evidence for three minor ceremonies between the immersion and the baptismal Eucharist—the kiss of peace (§ 6 *g*, *l*), vesting in white (§ 6 *f*, *g*, *j*, *l*, *o*), and crowning (§ 6 *f*, *o*).

8. Modern Nestorian rite.—The Syrian ritual was re-cast shortly after the middle of the 7th cent. by the catholicos Isô'yāhb III. (652–661), and the office of baptism drawn up by him is the basis of the rite as now practised by the East Syrians. He allowed the pre-baptismal anointing to remain; indeed, he seems to have restored the ancient custom of an unction (that is, probably, a signing with oil) on *the head*, followed by an anointing of the body. The result of this change has been much confusion, through the persistence of 6th cent. customs, in the existing MSS. But in one point all agree. In the formula pronounced at this unction there is no reference to the gift of the Spirit. No special grace seems to be connected with it, and in a rubric it is described as a symbolic act indicating that 'the acknowledgment of the Trinity is imprinted on the heart' of the person about to be baptized. It no longer corresponds to confirmation.

The distinguishing feature of Isô'yāhb's ritual is, in fact, confirmation *after* baptism. It consists of two main acts—the imposition of the hand upon the head of the baptized with an appropriate prayer, and the signing of the forehead with oil (not ointment), accompanied by a formula. Some of the MSS omit mention of the use of oil in this signing, bnt there is good evidence that it was ordered by Isô'yāhb, and it is apparently still customary (A. J. Maclean, *Recent Discoveries illustrating early Christian Life and Worship*, 1904, p. 68). In the present Nestorian rite, as everywhere in the East, the priest is the minister

of confirmation. But it is characterized by several unusual features. The priest (not the bishop) consecrates the oil at each performance of the rite, the laying on of the hand is separated from the signing, and there is no use of ointment, as distinct from olive oil, at any part of the rite.

That post-baptismal confirmation was actually introduced by Isô'yāhb III. follows almost certainly from the evidence given in § 6, for there seems to have been no catholicos between Isô'yāhb I. and Isô'yāhb III. who was a liturgical reformer. The supposition is confirmed by the fact that Isô'yāhb III. was a traveller, who must have had some knowledge of non-Syrian rites (Connolly, *op. cit.* p. xlix), and by the number and magnitude of the variations of existing rituals from each other, and from the *Ordo* drawn up by him—a natural consequence of so startling an innovation.

One or two of these may be mentioned. Isô'yāhb seems to have given no direction about the ceremony of crowning. Hence in some MSS it is omitted. In one it is described as a custom in some places. In another it appears in its original position after the vesting, and therefore before confirmation (Diettrich, *op. cit.* p. 87). Its present place is after the final signing (Maclean-Browne, *The Catholicos of the East*, 1892, p. 272). Again, Isô'yāhb I. ordered that the water should not be let out of the font till after the mysteries—*i.e.* apparently the Eucharist—had been administered (Diettrich, *op. cit.* p. 94). Isô'yāhb III., on the contrary, ordered that it should be let out before the confirmation (*ib.* p. 92). Nevertheless the older usage persisted, and is still followed (*ib.* pp. 50f., 82, 101 f.).

The post-baptismal Eucharist was retained by Isô'yāhb III., and apparently still remained in the time of Elias III. (1176–1190; see Diettrich, *op. cit.* p. 101); but it has long fallen into desuetude (*ib.* p. 91 f.).

9. Rites of the Syrian Monophysites.—We have seen (§ 6 *n*) that post-baptismal confirmation with chrism is implied in the letters of Severus of Antioch. It is, in fact, probable that its introduction into Syria was due to him. Tradition ascribes to Severus a Gr. *Ordo Baptismi* which was translated into Syr. by James of Edessa in the latter part of the 7th cent., and received the approbation of Gregory Barhebræus six hundred years later (Denzinger, *Ritus orient.* i. 266, 279, 280). Four of the existing rituals, of which two bear the name of Severus and one that of James, while the fourth is anonymous (*ib.* p. 267), resemble one another closely, and are apparently all derived from the Syr. *Ordo* of James of Edessa, and thus ultimately from the Gr. of Severus. The anonymous ritual probably represents a recension subsequent to that of Barhebræus. There is also a short office for the baptism of the dying (*ib.* p. 318), attributed to Severus' contemporary Philoxenus, Bishop of Mabug or Hierapolis (*c.* 485–519). All these Orders contain a post-baptismal signing or unction. In two respects they stand apart both from ancient Syrian and from modern Nestorian usage: they have no form for the blessing of the oil, which is consecrated, not by the priest at the baptism, but by the bishop (*ib.* p. 361); and at the final unction unguent, likewise consecrated by the bishop, is used instead of oil.

10. On the other hand, among the liturgical reforms attributed to Peter the Fuller, Patriarch of Antioch (471–488), by Theodorus Lector (Valesius, *Hist.*, ed. Reading, 1720, iii. 582), was the consecration of the *μύρον* in the church before the whole people. This might seem to give colour to the supposition that post-baptismal confirmation was introduced among the Monophysites by him. But Peter, Bishop of Edessa (498), appears from the *Chronicle* of Joshua the Stylite (32, ed. Wright, p. 23), written during his episcopate, to have adopted the principal reforms of the Fuller about A.D. 500: among other things, 'he [prayed] over the oil of unction on the Thursday (before Easter) before the whole people.' From this passage it would seem that Theodorus quoted the actual words of the Fuller, and that the latter used *μύρον* as equivalent to oil (cf. § 6 *k*). It may be inferred that what the Fuller did was to reserve the consecration of the oil of unction to the bishop, and that post-baptismal chrismation had not come into use at Antioch in 488, or at Edessa by the end of the century.

11. The post-baptismal confirmation consisted of a prayer followed by a threefold signing of the baptized with chrism on the forehead and other parts of the body, with the formula, 'N. is signed with the holy chrism, the sweetness of the odour of Christ, the seal of the true faith, the complement of the gift of the Holy Ghost, in the Name,' etc., followed by an anointing of the rest of the body, the vesting in white, and prayers, one of which contained a petition for the sending forth of the Holy Spirit upon the neophytes.

That this form of confirmation is a later addition is perhaps already sufficiently clear. But this becomes still more evident when we consider the portion of the office which immediately precedes the immersion. Here the Monophysite rituals seem to follow ancient usage more closely than the Nestorian. Before baptism the candidates are signed on the forehead with oil, and their bodies are anointed. The connexion between these two acts is obscured in all the MSS by the interpolation between them of the consecration of the water. They are accompanied by prayers which distinctly associate with them the gift of the Spirit.

The first prayer has the petition: 'Vouchsafe to send upon them thy Holy Spirit.' The second begins: 'Holy Father, who by the hands of thy holy Apostles didst give the Holy Spirit to those who had been baptized, send now also, using the shadow of my hands, thy Holy Spirit on those who are about to be baptized . . . that they may be worthy of thy holy anointing.' This is evidence that a laying on of hands once preceded this unction, though no mention is made of it in the extant rituals (cf. § 6 *c*, *k*). The third runs: 'Thou who didst send upon thy only-begotten Son . . . thy Holy Spirit . . . and didst sanctify the waters of Jordan, may it please thee that the same thy Holy Spirit may dwell upon these thy servants . . . and do thou perfect them . . . purifying them by thy holy laver,' etc. This extract seems to indicate (1) that the consecration of the font originally followed the anointing, and (2) that the indwelling of the Spirit preceded the purification of the laver.

Thus the Monophysite rite is strangely anomalous. It has two distinct anointings, one before and the other after baptism, by both of which it is implied that the gift of the Holy Spirit is mediated. The former was at one time accompanied by an imposition of hands, and the references to the gift of the Spirit in immediate connexion with it are still much more precise and emphatic than in connexion with the latter, which is now regarded as the confirmation.

12. Of the attendant ceremonies, the vesting, the crowning, and communion follow the chrismation. All are omitted in the anonymous ritual.

It has not been thought necessary to take account here of two rituals used by the Monophysites, bearing the name of St. Basil, since they are not of Syrian origin. One is a mere translation of the Gr. *Ordo*, the other incorporates some Syrian elements (Denzinger, *op. cit.* p. 318).

13. Maronite rite.—It is probable that the two closely similar early Maronite baptismal rituals (Denzinger, *op. cit.* pp. 334, 351) are derived from an Order drawn up by James of Serug († 521), whose name appears at the head of one of them. But that they have been subjected to considerable revision is evident; *e.g.* the baptismal formula is not in the third person, as in all other Eastern Orders, but in the first, as in the Latin rite. This assimilation to Western standards was carried much further about the year 1700, when the Order now in use was composed (*ib.* pp. 334, 350). Till that revision, however, some ancient Syrian characteristics were preserved. The oil was consecrated at each baptism, and at the consecration

the deacon bid the prayers of the people that those who were to be baptized might be made 'pure temples for the habitation of the Holy Spirit.' Again, the pre-baptismal unction was divided into two parts, as in the Monophysite rite, by the consecration of the water. Before this consecration the candidate was signed with oil on the forehead, the prayer following, 'Let thy Holy Spirit come and dwell and rest upon the head of this thy servant,' etc.; after it the priest again signed him with oil, this time on the head, and the deacon anointed his body. After the baptism the candidate was signed with chrism, and then his body was anointed (*ib.* p. 349), or the principal members were signed (*ib.* p. 357), a formula being used similar to that of the Monophysite rite. In an accompanying prayer (not in all MSS) the words occur, 'Grant us by this seal the union of thy Holy Spirit.' Thus in this rite there is the same anomaly as in the Monophysite, proving that the post-baptismal confirmation had no place in the ancient Syrian Order from which it was derived.

14. The attendant ceremonies are the vesting—which in one Order retains its original place immediately after baptism (*ib.* p. 357), and in the other (*ib.* p. 349) is postponed till after the chrismation—the crowning, and the communion.

15. **Armenian rites.**—The Armenian baptismal ritual is said to have been drawn up by the catholicos John Mandakuni (*c.* 495). It was revised at the end of the 9th cent. (Conybeare, *Rituale*, p. xxvii ff.). The extant office obviously differs much from the original from which it was derived. After the consecration of the 'holy oil,' the filling and consecration of the font takes place, and then the baptism. After this there is a prayer for the baptized, and an anointing with the 'holy oil,' with which the forehead and several members of the body are signed, in each case with an appropriate formula. In these formulæ no mention is made of the Holy Spirit.

The consecration of the oil at the beginning of the baptismal office proper seems to imply an unction before immersion, which has fallen into desuetude (cf. Denzinger, *op. cit.* pp. 35, 57). At present simple oil is not used at all, and this prayer of consecration is said over the chrism which has been already consecrated by the catholicos at Etchmiadzin (*ib.* p. 34; Neale, *Hist. East. Ch.*, 1850, Introd. p. 967). The single petition for the grace of the Holy Spirit in the prayer before the anointing is so wanting in definiteness that this act can scarcely be regarded as a confirmation. It is less emphatic than the clause in the prayer of consecration, 'Send the grace of thy Holy Spirit into this oil, to the end that it shall be to him that is anointed therewith unto holiness of spiritual wisdom,' etc. On the whole, it appears that this rite is of Syrian origin, and that it once had two unctions, with each of which the gift of the Spirit was associated (cf. §§ 11, 13). As in the modern Nestorian rite, the unctions were probably performed, not with chrism, but with oil consecrated by the priest in the course of the office; though the use of chrism consecrated by the catholicos was certainly in vogue to some extent as early as the 7th cent. (Denzinger, p. 55).

16. After the unction follow the vesting, crowning, bowing to the altar, and communion. The prayer used at the bowing to the altar has no special appropriateness to this ceremony; but it contains words which imply a laying on of the hand ('Stretch forth thy unseen right hand and bless him'), and is perhaps misplaced.

17. The baptismal office of the Paulicians of Armenia (Conybeare, *Key*, p. 96) has neither anointing nor imposition of hands, but after the affusion there are prayers for the gift of the Holy Spirit to the baptized, interspersed with lessons (Mt 3^{13-17}, Ac 2^{1-4}, Mk 1^{9-11}, Gal 3^{24-29}, Lk $3^{21f.}$, Ac 8^{26-40} [with the 'Western' additions in vv.$^{37.\ 39}$], Jn 20^{19-23}; but not Ac $8^{14ff.}$ $19^{1ff.}$). One of the prayers seems to imply that communion followed (*ib.* p. 98, cf. p. xlix). The minister is the 'elect one.' This rite cannot be said to include an act of confirmation, but it was probably derived from one in which confirmation followed baptism.

18. **Orthodox Eastern rite.**—The baptismal office of the Orthodox Church (Goar, Εὐχολόγιον, 1647, p. 350) closely resembles that which was used at Constantinople in the 8th cent. (Conybeare, *Rituale*, p. 389), and both belong to a group which comprises the *Ordo Baptismi* in *Const. Ap.* vii. 39–45 (cf. iii. 16 f.) and the rite as described by St. Cyril of Jerusalem (*Cat. Myst.*) and ps.-Dionysius (*Hier. Eccl.* ii. 2, 3). The *Ordo* in *Const. Ap.* seems to represent an attempt to bring the Syrian rite into agreement with that of the Church of Jerusalem. It accordingly preserves some Syrian features.

Combining the testimony of all these documents, we learn that the following series of acts in the modern office has descended from the 4th cent.: anointing with exorcized oil, consecration of the font, baptism, vesting in white, anointing with chrism on the forehead and other parts of the body (the vesting follows the chrismation in St. Cyril), and communion. In St. Cyril and ps.-Dionysius the second unction is associated with the gift of the Spirit, and in the present rite it is accompanied by the formula, 'The seal of the gift of the Holy Spirit' (cf. the spurious can. 7 of C. Constantinop. I.). It is, therefore, rightly described as confirmation. It is said, however, that the chrism is now administered with a spoon (Maclean, *Rec. Discoveries*, p. 68); thus no vestige of the primitive laying on of hands remains at this point of the rite. That *c.* A.D. 325 it was still an act distinct from the chrismation is shown by the evidence of Macarius, Bishop of Jerusalem (Conybeare, *Key*, pp. 183, 186).

Among the Orthodox the chrism is consecrated by the Patriarch apart from the administration of baptism. The practice of the 4th cent. in this matter is somewhat obscurely described by Macarius (*ut supra*).

It is possible that the rite of the Church of Jerusalem with its modern Greek derivative was developed from an ancient Syrian rite in which confirmation preceded baptism. But however that may be, it is highly probable that many of the more modern features of the Monophysite, Maronite, and Armenian rituals—especially post-baptismal confirmation with chrism—were borrowed from it (cf. Conybeare, *Key*, p. 179).

19. **The Egyptian rite.**—The baptismal rituals of the Alexandrian Copts (Denzinger, *op. cit.* p. 191) and the Abyssinians (*ib.* p. 222) vary so slightly from each other that they may be treated as one. There are two unctions, but the first is performed outside the baptistery and is separated from the baptism by a long interval. Immediately after the baptism comes the confirmation. The priest, standing before the altar, prays for the bestowal of the Holy Spirit on the baptized, and signs his forehead or head with chrism in the threefold Name. Other parts of the body are then signed, each with an appropriate formula. This is succeeded by the laying on of the hand with a formula in which the words occur, 'Receive the Holy Ghost,' and another prayer for the neophyte, including a petition for the sending forth of the Spirit upon him. Both oil and chrism are consecrated by the Patriarch of Alexandria (*ib.* pp. 54, 248 f.).

By means of the newly recovered Sacramentary of Serapion and the evidence of contemporary writers, it has been shown that an Order of confirmation identical with this in its main features was in use in Egypt in the 4th cent. (Brightman, in *JThSt* i. 252 f., 263 ff., 268 ff.). Indeed, some of its elements can be traced much further back. Origen alludes to the final unction in several places (*Hom. in Lev.* vi. 5, *in Rom.* v. 8 ; *Sel. in Ezk.* 16). The laying on of hands seems also to be implied by him, and if so, he certainly regarded it as of Apostolic origin (*de Princ.* I. iii. 27 ; cf. Clem. Alex. *Exc. Th.* 22). In Egypt alone has the laying on of hands been preserved, apart from the signing with chrism, by an unbroken tradition, as part of confirmation. In the 4th cent., indeed, it preceded instead of following the chrismation (Brightman, *loc. cit.* p. 265) ; but in Abyssinia at present there is laying on of hands with prayer for the Holy Spirit, before as well as after the chrismation. In early times, as now, the priest administered the chrism, but only as the delegate of the bishop (Ambrosiaster, *Qu. Veteris et Novi Test.*, ci. 5 ; *in Eph.* iv. 12).

20. After confirmation follow the vesting, crowning, and communion of the baptized. In Abyssinia and, until comparatively recent times, at Alexandria, they received milk and honey in the Eucharist. At Alexandria only milk is now given. No early evidence has been discovered for the crowning ; but the vesting is alluded to in the 4th cent., the baptismal Eucharist is referred to by Origen (*Sel. in Ex.* [*PG* xii. 283]), and apparently the giving of milk and honey is mentioned by the writer of the *Ep. of Barnabas* (6) and by Clem. Alex. (*Pæd.* i. 6).

21. The African rite.—In several passages (*de Præsc. Hær.* 36, 40 ; *de Bapt.* 6 ff., 17 ; *de Res. Carn.* 8 ; *adv. Marc.* i. 14 ; *de Cor.* 3 ; *de Pud.* 9) Tertullian alludes to the ceremonies of the rite of initiation. From them we learn that immediately after the immersion the baptized was anointed, perhaps over the whole body (' perungimur,' *de Bapt.* 7). He was afterwards signed with the cross, apparently on the forehead. The laying on of the hand followed, and finally the Eucharist. At some point of the rite the neophyte received a mixture of milk and honey. The exact position of this ceremony is doubtful ; but it was certainly between the anointing and the Eucharist, and probably immediately after the former. It is possibly hinted in one place that the baptized was crowned (*de Præsc.* 40).

The imposition of the hand is separated from the unction by the signing, and probably the giving of milk and honey. Moreover, while the spiritual effect of baptism is remission of sins, of unction consecration, and of the signing protection, the gift of the Holy Spirit is attributed to the imposition of the hand. The unction, therefore, is connected with baptism rather than with confirmation (cf. BAPTISM [Early Chr.], vol. ii. p. 387[a] (β)). The proper minister of the entire rite is the bishop, but with his authority it may be performed by a presbyter or a deacon. Tertullian holds that in case of necessity a layman may baptize (and confirm) ; but it seems to be implied that this opinion was not generally accepted. Since Tertullian (*de Cor.* 3) claims the authority of long-standing tradition for several of the ceremonies, it is probable that he describes the rite as it was practised in Carthage at least as early as the middle of the 2nd century.

22. The letters of Cyprian on the baptism of heretics confirm and supplement the information given by Tertullian. According to him, the special gift of baptism is remission of sins (*Ep.* lxix. 11, lxx. 1, lxxiii. 6, lxxiv. 5) and regeneration (lxxiv. 7) ; but the regeneration is not complete without the gift of the Spirit (lxxii. 1, lxxiii. 21), which is conveyed by the laying on of the hand (lxxii. 1, lxxiii. 6, lxxiv. 5). Thus baptism and confirmation are distinct, yet closely related as parts of the same rite (lxx. 3, lxxiii. 9). The immersion was immediately followed by unction (lxx. 2), and it is implied that the unction was connected rather with baptism than with confirmation. The gift of the Spirit is not associated with it in the one passage in which it is mentioned ; and in that passage, arguing against the validity of heretical baptism, as distinct from confirmation, Cyprian makes a point out of the invalidity of the unction which accompanied it. It is to be added that he speaks of sanctification (*sanctificatio*) as one of the benefits conferred by baptism, in the narrower sense (*e.g.* lxix. 1, 8, 11, lxx. 2, lxxiii. 18 f., lxxiv. 5, 7), just as Tertullian had connected the same (*consecratio*) with unction. The act by which the Holy Spirit was communicated was, therefore, the imposition of the hand. But this act was accompanied by prayer for the Holy Spirit and signing of the baptized on the forehead (lxxiii. 6, 9 ; *ad Demetrian.* 22). At some time in the course of the rite, probably after confirmation, the kiss of peace was given (lxiv. 4). The bishop confirmed, but apparently he did not usually baptize (lxxiii. 9). The oil used in the unction was consecrated on the altar at the Eucharist, and therefore not at the administration of baptism (lxx. 2).

23. The mode of administration of the rite remained much as it was in the 2nd cent. till at least the beginning of the 5th ; but the giving of milk and honey was transferred to the baptismal Eucharist (C. Carthag. III. c. 24, longer form).

For the order, see St. Augustine, *Serm.* 324 ; for consecration of oil at the Eucharist, *de Bapt. cont. Don.* v. 28 ; for conferring the Holy Spirit by imposition of hand with prayer, *ib.* iii. 16, *de Trin.* xv. 46, *Retract.* i. 12. 9, *Tract. in Ep. Jo.* vi. 10 ; for communion, *Serm.* 224, 227, 228 ; for the bishop as minister, *de Trin.* xv. 46, and for the presbyter acting in his stead, *Serm.* 324.

By the second half of the 5th cent. the unction had become a more prominent feature, and was closely connected with the imposition of the hand, for which it was a preparation (Optat. Milev. iv. 7, vii. 4 ; Aug. *contra litt. Pet.* ii. 239), though it still always followed baptism (Avitus Vienn. *Ep.* 24). The material used seems to have been no longer simple oil (Optat. *loc. cit.* ; Aug. *de Trin.* xv. 46, *cont. litt. Pet.* ii. 104). The unction, though not apparently held to convey the Spirit, is the ' sacramentum Spiritus sancti ' (Aug. *Serm.* 227, *Tract. in Ep. Jo.* iii. 5, 12). During this period attempts were made to abolish the consecration of the chrism by priests, which appears to have been the older custom ; but the practice still continued (C. Carth. II. c. 3, III. c. 36 ; C. Hipp. c. 34 ; Joan. Diac. *Ep. ad Senar.* 8).

24. The Gallican rite.—The rite which prevailed most widely in the West in early centuries was that known as the Gallican, which was used in North Italy, Gaul, Spain, probably Britain, and Ireland. The earliest descriptions of it are found in Ambrose, *de Mysteriis*, and another tract founded upon it, viz. ps.-Ambrose, *de Sacramentis*. These witness to the use of North Italy *c.* A.D. 400. In this rite baptism was immediately followed by an anointing with chrism on the head or forehead (Prudent. *Psychom.* 360 ; Patr. *Ep.* 3 ; *Missal. Bobbien.* ; cf. *Stowe Missal*), with the formula ' Deus . . . qui te regeneravit . . . ipse te unget,' etc. After the chrismation the feet of the candidates were washed (Maximus Taurin. *Tract.* iii. ; Cæsarius, *Serm.* clxviii. 3, cclvii. 2 [*PL* xxxix. 2071, 2220], *Serm. de unct. cap.* [*PL* xl. 1211] ; C. Elib. c. 48 ; and the Orders), and they were vested in white. They then received the *signaculum spirituale*—apparently a signing with the chrism (cf. Greg.

Tur. *Hist. Franc.* ii. 31)—which was accompanied by a prayer for the septiform Spirit, no doubt similar to that which occurs in all later Western rites, including the Anglican (Isidor. *de Eccl. Off.* II. xxvii. 3; Ildefons. *de Cogn. Bapt.* 127). Finally, they communicated (*Sac. Gall.*; *Sac. Goth.*; *Stowe Missal*; Zeno Veron. *Tract.* ii. 38, 53). Since there is early evidence that confirmation consisted of two acts—chrismation and 'imposition of the hand' or 'benediction' (Gaul: C. Araus. I. c. 1 f.; Gennadius Massil. *de Eccl. Dog.* 52; Avitus, *Ep.* 24; Spain: Isidor. *op. cit.* II. xxv. 9, xxvii. 1; Ildefons. *op. cit.* 121–125, 128 f.)—it may be inferred that both the unction and the *signaculum*, though not in immediate sequence, belonged to it. In some *Ordines* the *signaculum*, or laying on of hands, disappeared as a separate act (Gaul: German. Paris. *Ep.* 2; *Sac. Gall.*; *Sac. Goth.*; North Italy: Maximus Taurin. *ut supra*; *Missal. Bobbien.*; Ireland: Patr. *Ep.* 2 f.; *Stowe Missal*), and with it the invocation of the septiform Spirit. Thus the 'confirmation' was reduced to an anointing with chrism, perhaps including a signing, without any direct prayer for the Holy Spirit. If this was the use of the Irish Church in the 12th cent., the statement of St. Bernard (*Vita S. Mal.* 3), that confirmation was not practised in Ireland, is not only intelligible but justified.

25. It is clear that about the end of the 4th cent. baptism and confirmation were ordinarily administered by the same person (Ambr. *op. cit.*; ps.-Ambr. *op. cit.*; Pacianus, *Serm. de bapt.* 6, *Ep.* i. 6; Zeno Veron. *Tract.* ii. 53). This, according to Ambrose and Pacianus, was the bishop; but ps.-Ambrose seems to make the presbyter the minister of both (Wordsworth, *Ministry of Grace*, 1901, p. 80). A century earlier the Synod of Elvira (cc. 38, 77) implies that if a presbyter baptized he also confirmed, and that presbyterial confirmation prevailed widely in later times, in spite of continual efforts to suppress it, there is abundant evidence (Gaul: C. Araus. I. c. 1 f.; C. Arel. II. c. 26 f.; Gallican Statutes [C. Carth. IV.], c. 36; Leo, *Ep. de priv. Chorep.*; C. Epaon. c. 16; C. Autisiodoren. c. 6; C. Hispal. II. c. 7; *Sac. Gall.*; *Sac. Goth.*, cf. C. Vasen. c. 3; North Italy: *Missal. Bobbien.*; Ireland: *Stowe Missal*; Spain: C. Tolet. I. c. 20; Mart. Bracar. *Capitula*, 52; Isidor. *op. cit.* II. xxvii.; Ildefons. *op. cit.* 128, 131; cf. Montanus, *Ep.* 1 [Mansi, viii. 788]; C. Bracar. II. c. 19).

This summary of the evidence will suffice to show that between the Gallican and the Eastern confirmation rites there are many points of resemblance. Gallican usages gave place to Roman in France at the end of the 8th century. They had a more prolonged existence in Spain, Milan, and Ireland (Duchesne, *Orig.* p. 97 ff.).

26. **The Roman rite.**—If the Gallican rite resembled those of the Eastern Church, the baptismal rite of Rome was akin rather to that of Africa. According to the *Canons of Hippolytus* (134 ff.), in the Rom. use of *c.* A.D. 200, the priest, immediately after administering baptism, signed the baptized on the forehead, mouth, and breast with the χρῖσμα εὐχαριστίας, or oil of unction, which had been consecrated by the bishop at an earlier stage of the office, and then proceeded to anoint his body. The baptized was then vested and brought into the church, where he was confirmed by the bishop. The confirmation consisted of imposition of the hand and a prayer, in which there was a thanksgiving for the outpouring of the Holy Spirit, and a petition that the neophyte might receive the earnest of the Kingdom, followed by the sign on the forehead without oil.

That this represents early Rom. practice is confirmed by Hippolytus, *in Dan.* i. 16, where the oil used in the bath is said to signify 'the powers (δύναμις [read δυνάμεις?]) of the Holy Spirit wherewith (αἷς) the believers are anointed after the laver, as though (ὡς) with ointment,' the implication being that oil was not actually used in conferring the Holy Spirit.

Thus the unction was connected with baptism, not with the laying on of hands.

The imposition of the hand continued to be the principal act in confirmation till at least the end of the 4th cent., when it was accompanied by the prayer for the septiform Spirit (Jerome, *cont. Luc.* 9; Siricius, *Ep. ad Himer.*). But by that time the unction on the forehead seems to have come to be regarded as closely associated with it, and as belonging, like it, rather to the bishop than to the priest. In 416, Pope Innocent I. *permitted* an additional unction, which must not be on the forehead, by the priest after baptism. This is the first notice of the double chrismation, which soon afterwards became the regular practice of the Roman Church (Innoc. *Ep. ad Dec.* 6, cf. 9; Joan. Diac. *Ep. ad Senar.* 6, 14). A signing of the head with chrism after baptism, with a formula almost identical with that of the Gallican rite (§ 24), is enjoined in the *Gelasian Sacramentary* and in later Rom. books.

27. The development of the Rom. order of confirmation is instructive. In the *Gelasian Sacramentary* (which agrees with the description of the Rom. rite in the Epistle of Jesse of Amiens, A.D. 812), and the 9th cent. *Ordo* of St. Amand (Duchesne, *op. cit.* p. 453)—as in the much later *Liber S. Cuthberti* (C. Wordsworth, *Pontif. S. Andreæ*, 1885, App. 5)—the imposition of the hand, with the prayer for the septiform Spirit, is preserved, and at the subsequent chrismation a special formula is used. In the *Gregorian Sacramentary* the laying on of the hand gives place to the raising of the hand. In later orders the raising or extending of the hand is sometimes accompanied by the formula 'Spiritus sanctus superveniat,' etc., the prayer for the septiform Spirit following, and a formula more or less resembling the Gelasian being used with the signing. Of the latter the latest form is that which Pope Eugenius IV. (*Decr. pro Armen.*) declared to be the 'form' of the sacrament.

28. In the *Canons of Hippolytus*, and in most later Orders in which confirmation immediately follows baptism, the communion of the neophytes is enjoined. The communion commonly followed baptism when confirmation was deferred, though it is sometimes ordered with the reservation that it is to be administered only if the neophytes are of suitable age. Two ceremonies anciently followed confirmation (*Can. Hipp.*)—the kissing of the neophyte, with the words, 'The Lord be with you,' and the giving of milk and honey. The former has disappeared from all later Orders, but the memory of it is preserved in the words 'Pax vobiscum' after the chrismation. The latter continued till the 6th cent. (Joan. Diac. *op. cit.* 12). The bishop has always been the minister of confirmation in the Rom. Church, though apparently Innocent I. (*ut supra*) permitted priests to confirm in cases of necessity if authorized to do so by the bishop. The bishop has also always consecrated the chrism (but see Joan. Diac. *op. cit.* 8).

29. **The mingling of Roman and Gallican rites.**—In early centuries the Rom. rite was used only in the immediate neighbourhood of the city. That it had not been adopted in the Gr. district of Lucania at the end of the 5th cent. is easily understood (Gelas. *Ep.* ix. 6, 10); but it is more surprising that at the beginning of the same cent. Pope Innocent I. should find it necessary to urge a bishop of Umbria to bring the customs of his diocese into conformity with those of Rome. From his letter to Decentius (416) it may be gathered that at Eugubium (Gubbio) the consecration of the chrism was not reserved to the bishops, and that presbyters anointed the baptized with chrism (apparently on

the forehead) and laid hands upon them, with an invocation of the Spirit. Thus in Eugubium (*c.* 400) the baptismal rite was of the Gallican type (cf. Leo, *Ep.* 168). Innocent compromised matters with Decentius by suffering the chrismation by the priest to remain, provided it was not on the forehead, and provided the baptized was subsequently confirmed in Rom. fashion by the bishop. One result of his letter, which was widely quoted as an authoritative document, was, no doubt, the modification of Gallican usage in a Romeward direction in many places; another was the introduction into the Rom. baptismal office of the post-baptismal chrismation. The Western rite, in fact, combines the Gallican and the earlier Rom. confirmation Orders, which suffices to explain the anxiety of Gallican writers like Rabanus Maurus (*de Cler. Inst.* i. 28–30; cf. Theodulf. *de Ord. Bapt.* 14; Jesse of Amiens, *Ep. de bapt.* [*PL* cv. 790]), not long after the suppression of the Gallican customs, to distinguish the spiritual effect of the two chrismations, assuming that each of them conveyed a gift of the Spirit. The phenomenon is not unlike that which presents itself in the rites of Western Syria (above, §§ 11, 13, 15). The consequence of the interaction of the Rom. and Gallican rites, exemplified in this striking case, is that the present Latin confirmation rite is not purely Roman, though it is not now possible to distinguish in all cases those features which were developed within the Rom. Church from others which may have been imported from without. Cf. the following article.

30. **The separation of confirmation from baptism.**—For many centuries in the West, confirmation has been divided from baptism by a considerable interval. The beginning of this separation of the rites may be traced to the 3rd cent., when the validity of heretical confirmation was denied even by those who admitted the validity of heretical baptism (but see E. W. Benson, *Cyprian*, 1897, p. 420). By them persons baptized in heresy, when they joined the Catholic Church, were admitted by a ceremony analogous to, if not identical with, confirmation. Later on we find cases contemplated in which confirmation at the time of baptism was impossible, either because the minister was a deacon or a layman, or because the baptizing priest had no chrism (C. Elib. cc. 38, 77; C. Araus. I. c. 2). But the practice of administering confirmation apart from baptism in ordinary cases had a different origin. The Rom. tradition of restricting the administration of confirmation to bishops involved its postponement in the case of all persons baptized by a priest in the absence of the bishop. This, of course, became more frequent as the Church spread beyond the cities, as bishops became fewer in proportion to the number of Christians, and infant baptism became the rule. It was already common at the end of the 4th cent. (Jerome, *loc. cit.*; cf. Anon. *de Re-baptismate*, 4 f.). But the separation of the rites did not become universal in the West for many centuries, and, when confirmation was postponed, it was usually only deferred till the offices of a bishop could be had. If it was not administered in infancy, the delay was due to the negligence of parents or of the bishops themselves. On the eve of the Reformation, infant confirmation was still the normal practice (see, *e.g.*, Tindale, *Answer to More*, 1531, ed. Parker Soc., 1850, p. 72). At a much earlier period, however, there was a movement towards admitting to confirmation only those of more mature age (Gratian, *Decr.* III. v. 6; Syn. Colonien. 1280, c. 5), and in the latter part of the 16th cent. it became the rule, both in the Rom. and in the Anglican Communion, that candidates for confirmation should have come to years of discretion (Eng. Pr. Bk.; *Cat. ad paroch.* ii. 3, § 8; cf. *CQR* xxiii. 72 ff.).

For information about modern offices of confirmation and substitutes therefor, in the Reformed Communions, it must suffice to refer to the works named at the close of the following list of authorities, and to art. BAPTISM (Later Chr.), vol. ii. p. 404.

CONFIRMATION (Roman Catholic).—As a supplement to the data furnished in the preceding article, the following points illustrating the position of Confirmation in the present teaching and practice of the Roman Catholic Church seem worthy of note:—

1. **Dogmatic tenets.**—The doctrine according to which Confirmation is named as the second of seven Sacraments is clearly enunciated at least as early as the middle of the 12th century. In a sermon which is put into the mouth of St. Otto, Bishop of Bamberg († 1139), by his biographer Herbord (*c.* 1159), the preacher, addressing the newly baptized Pomeranians, discourses at some length of the seven Sacraments. Enumerating them in their order, he says:

'The second Sacrament is Confirmation, that is, the anointing with chrism on the forehead. This Sacrament is necessary for those that are to conquer, to wit, that they be protected and armed by the strengthening of the Holy Spirit, as they will have to fight against all the temptations and corruptions of this present life. Neither is this rite to be deferred until old age, as some suppose, but it is to be received in the vigour of youth itself, because that age is more exposed to temptation' (Pertz, *MGH* xxii. 733).

Most of this doctrine, including the sevenfold number of the Sacraments, can be shown to have been taught by Radulfus Ardens fifty years earlier, in his as yet unprinted *Speculum Universale* (see Grabmann, *Gesch. der scholast. Methode*, i. 259), but much vagueness still prevailed regarding the nature and definition of a Sacrament. A decretal of Innocent III. in 1204, included in the *Corpus Juris Canonici* (Friedberg, Leipzig, 1876–80, ii. 133), outlines further the main points upon which stress was laid by scholastic theologians both before and after the Council of Trent.

'By the unction,' he says, 'of the forehead with chrism (*per frontis chrismationem*) is denoted the imposition of hands, which is otherwise called Confirmation, because by this means the Holy Spirit is bestowed for increase and strength. Hence, while a simple priest (*sacerdos vel presbyter*) may perform other unctions, this ought not to be administered by any one but a high priest, that is to say a bishop, seeing it is recorded of the Apostles alone, whose vicars the bishops are, that they conferred the Holy Spirit by the imposition of hands' (cf. Ac 8[14ff.]).

During the Council of Florence (1438–1445), a bull was issued by Eugenius IV., known as the *Decretum pro Armenis*. This, taken as a whole, was not so much a dogmatic decree, defining points of faith, as an instruction to secure uniformity of practice. A portion of it, which consists of a compendious treatise on the Sacraments, is taken almost word for word from an opusculum of St. Thomas Aquinas, *De fidei articulis et septem sacramentis*. The 'matter' of the Sacrament is declared to be chrism, *i.e.* oil mixed with balsam, and the 'form' to be the words, 'I sign thee with the sign of the cross, and I confirm thee with the chrism of salvation in the name of the Father and

of the Son and of the Holy Ghost,' spoken both then and now by the bishop in administering the unction. In view, however, of the imperfectly dogmatic nature of the *Decretum pro Armenis*, this decision is not held to be an infallible pronouncement. On the contrary, the more commonly accepted view regards the act of unction as itself constituting an imposition of hands, so that the 'matter' comprises both the unction with chrism and the laying on of hands.[1]

The most prevalent theory, then, concerning Confirmation regards the 'outward sign' of the Sacrament as consisting in the act of the bishop, who makes the sign of the cross with chrism upon the candidate's forehead, whilst he pronounces the words already quoted. The Council of Trent, in its systematic review of Sacramental doctrine, is very guarded in its affirmations concerning Confirmation. It contents itself with declaring that it is 'truly and properly a sacrament,' and 'one of the seven, all of which were instituted by Jesus Christ our Lord.' It denies that 'it was in olden days nothing else but a sort of catechism in which those who were entering upon youth gave an account of their faith in the presence of the Church.' It condemns those (Reformers) who had declared that to attribute any virtue to the chrism used in Confirmation was an outrage to the Holy Ghost. It also rejected the view that every simple priest could administer the Sacrament; but, by pronouncing that a bishop was 'the *ordinary* minister,' it tolerated the practice by which simple priests in special cases receive from the Holy See faculties to confirm. Finally, the Council declares (Sess. vii. can. 9) that 'in Confirmation a character is imprinted in the soul, that is, a certain spiritual and indelible sign, on account of which the Sacrament cannot be repeated.' It will be observed that this leaves many questions open. In particular, nothing is said as to the time and manner of the institution by Christ, whether direct or indirect; and no definition is given regarding the matter and form—for example, as to whether the use of chrism is essential to the validity of the Sacrament.

Of late years another pronouncement, which, however, is not usually regarded as possessing infallible authority, has been made in the decree of the Inquisition, *Lamentabili sane*, of 3rd July 1907. This, in its 44th heading, condemns the following proposition as an error, viz., 'there is no proof that the rite of the Sacrament of Confirmation was employed by the Apostles; while the formal distinction between the two Sacraments, Baptism and Confirmation, has no place in the history of primitive Christianity' (Denzinger-Bannwart, *Enchiridion*[10], Freiburg, 1908, n. 2044).

Lastly, it should be noticed that, according to the teaching outlined in the above-mentioned *Decretum pro Armenis*, and universally held by Catholic theologians, the Sacrament of Baptism is *vitæ spiritualis janua*, and consequently no other Sacrament can take effect except in the case of those who have first been admitted to the life of supernatural grace through these portals. Hence it follows that, if Confirmation should precede Baptism, it would be invalid.

2. Adjustment of theory to historical fact.—It must be sufficiently obvious that, accepting the foregoing as a summary of approved Roman teaching upon the Sacrament of Confirmation, some explanations are needed to bring these tenets into accord with the facts of early Church history set forth in the preceding article. Attention may be directed, in particular, to the following points:—

(1) Although Trent teaches that Confirmation, like all the other Sacraments, was instituted by Christ, nothing is positively laid down concerning the manner of that institution, *i.e.* whether immediate or mediate, whether *in genere* or *in specie*. Modern theological opinion seems to favour the view that Christ did Himself immediately institute all the Sacraments (*i.e.* that we do not owe their institution to the Church, acting upon His general commission), but that He did not Himself give them all to the Church fully constituted. As a recent authority puts the matter:

'On some Sacraments particularly essential to Christianity, Baptism and Holy Eucharist for example, Christ explained Himself completely, so that the Church has had from the very beginning full and entire consciousness of these sacramental rites. As to the rest, the Saviour laid down their essential principles, leaving to development to show the Apostles and the Church what the Divine Master wished to accomplish. . . . In other words, Jesus instituted immediately and *explicitly* Baptism and Holy Eucharist; He instituted immediately but *implicitly* the five other Sacraments' (Pourrat, *Theol. of the Sacraments*, Eng. tr. p. 301 f.).

(2) It would be readily conceded that, in the case of such a Sacrament as Confirmation, the historical evidence is in some respects imperfect and obscure. The Church does not claim to clear up all the dark passages, but she claims to supplement by supernatural guidance and theological reasoning the data which we owe to natural research.

(3) With regard to the early recognition of the gift of the Holy Spirit as a distinct rite following Baptism, great stress is usually laid by Roman Catholic theologians, and deservedly, upon the opening of the heavens and the descent of the Holy Ghost in the form of a dove upon our Saviour after His baptism in the Jordan. This, taken in combination with the NT passages cited in §§ 2 and 3 of the preceding article, seems to provide a sound historical foundation for such an immediate but implicit institution of the Sacrament by Christ as has just been spoken of.

(4) The extensive treatment which, following Connolly's *Homilies of Narsai*, pp. xlii–xlix, has been given to the peculiarities of the ancient Syrian rite in the preceding article (§§ 7 and 8), tends to obscure the very local character of the observances by which the gift of the Spirit seems to be connected with unctions *preceding* baptism. At Jerusalem itself, where the testimony of St. Cyril is explicit, as well as at Constantinople, Alexandria, Northern Africa, Rome, and throughout the West, we find full and clear historical evidence which not only establishes the practice of conferring the Holy Spirit *after* baptism, either by unction or by imposition of hands, but points to a very marked consciousness of the distinction between the two rites; in other words, to the recognition of Confirmation as a sanctification of a separate order, often conferred by a separate minister. For a discussion of this subject the reader may be referred to Dölger, *Das Sakrament der Firmung*, while the same writer, in an article in the *Röm. Quartalschrift* (1905, pp. 1–41), has dealt with the archæological evidence of early date, which establishes the existence in many places, *e.g.* at Naples, Rome, and Salona in Dalmatia, of a separate Confirmation chapel (*consignatorium, chrismarium*) distinct from the baptistery. In the Syrian Church, however, the accounts given of the unction, *e.g.* the lengthy discussion of Narsai himself, do *not* seem to remove it from the category of a mere ceremony subsidiary to baptism, while the effort made in the *Apostolic Constitutions* to alter the Syrian practice, introduc

[1] This point of view may be curiously paralleled by some of the prayers of the early coronation rituals, in which the sovereign is described by the officiant prelate as receiving his crown *per impositionem manus nostræ* (*e.g.* in Legg, *Three Coronation Orders*, Henry Bradshaw Soc., 1900, p. 62); and it is supported by the wording of the *Professio Fidei* of Michael Palæologus, drafted at the Second Council of Lyons (1274), which speaks of the *sacramentum confirmationis quod per manuum impositionem episcopi conferunt chrismando renatos.*

ing an unction with chrism after baptism (see Connolly, p. xlvii), points to a consciousness that the former practice was fundamentally incomplete. Or, can it be that, after all, a post-baptismal unction was in use, although for some unaccountable reason it is not formally spoken of in the Syrian texts? It is certainly strange that, as has been pointed out by A. J. Maclean (*JThSt*, Jan. 1910, p. 316), 'in the present East Syrian rite the post-baptismal anointing is not explicitly mentioned, though it is usually administered in practice.'

(5) With regard to many other points—*e.g.* the alleged re-administration of Confirmation when heretics were reconciled to the Church (see previous article, §§ 22 and 30), the reservation to the bishop of the power of consecrating the chrism, or, again, the history of the introduction of the unctions with the 'oil of catechumens' and chrism, which now precede and follow the administration of baptism in the Roman rite—it is submitted that our ancient authorities do not speak with sufficient clearness to warrant any certain conclusions. Much difference of opinion upon such matters exists even among writers of the same theological sympathies.

3. Modern liturgical details.—Two or three details of the ritual prescribed in the *Pontificale Romanum* call for brief comment.

(1) The bishop holds his hands out over the candidates while saying certain preliminary prayers. This action was formerly considered by some to constitute a *manuum impositio*, and to be of the essence of the rite.

(2) The candidates—it is not now the custom to confirm children before they are seven or eight years old—are presented to the bishop by a godfather or godmother, according to sex. This practice seems, however, to date back to the time when Confirmation was administered immediately after Baptism, at which period the same godparents served for both ceremonies.

(3) A curious rubric, still printed, though obsolete in practice, directs that the candidate who is not an infant shall place his foot upon the foot of the godfather. This seems to be a vestige of some feudal practice of commendation, and may be compared with a similar practice in Teutonic marriages (cf. Grimm, *Deut. Rechtsalterthümer*, Berlin, 1881, pp. 142, 155-156, and Weinhold, *Deutsche Frauen*[2], Vienna, 1882, ii. 40 ff.).

(4) After the unction, the bishop is directed to give the newly confirmed a slight blow on the cheek, with the words *Pax tecum*. This is most probably an imitation of the blow by which knighthood was conferred (cf. the *Ordo* 'De Benedictione Novi Militis,' in the *Pontificale Romanum*; and Martène, *de Antiq. Eccles. Ritibus*, Venice, 1783, ii. 240). But there is perhaps something also to be said for the view that the blow may have originally been given to the child to impress upon his mind the fact of his confirmation (cf. Tongard in *Précis historiques*, Jan. 1888; Heuser in *Amer. Eccles. Review*, May 1889; and F. Brenner, *Verrichtung der Firmung*, p. 68), much as the boys of the parish were formerly whipped at specified places on the occasion of the 'beating of the bounds.' An early instance, before 1200, of the mention of such a blow in administering confirmation occurs in the Life of St. Hugh of Lincoln (Giraldus Cambrensis, *Opera*, vii. 95).

LITERATURE.—The best historical account is that of F. J. Dölger, *Das Sakrament der Firmung*, Vienna, 1906. A very full treatment of the subject is also given by various critics in Vacant-Mangenot, *Dict. de théol. cathol.*, Paris, 1905, iii. 975–1103. Consult also Chardon, *Hist. des sacrements*, Paris, 1745; N. Gihr, *Die heil. Sakramente*, 2 vols., Freiburg, 1899; B. Nepefny, *Die Firmung*, Passau, 1869; Van Noort, *Tract. de Sacramentis*, Amsterdam, 1905; M. Grabmann, *Gesch. der scholast. Methode*, Freiburg, 1909; P. Pourrat, *La Théol. sacramentaire*[3], Paris, 1909 (Eng. tr., St. Louis, Mo., 1910); F. Brenner, *Geschichtl. Darstell. der Verrichtung der Firmung*, Würzburg, 1820; J. Pohle, *Lehrb. d. Dogmatik*[3], Paderborn, 1907; J. Turmel, *Hist. de la théol. positive*, Paris, 1904; Tanquerey, *Synopsis Theol. Dogmat.*[11], Paris, 1908, vol. ii.; L. Billot, *De Ecclesiæ Sacramentis*, Rome, 1896; C. S. J. Pesch, *Prælectiones Dogmaticæ*, vol. vi.[3], Freiburg, 1908; F. Probst, *Sakramente und Sakramentalien in den drei ersten Jahrhunderten*, Tübingen, 1872; G. L. Hahn, *Die Lehre van den Sakramenten*, Breslau, 1864.

HERBERT THURSTON.

CONFORMITY.—The ethical question regarding conformity is, How far may a man, from regard to the feelings or authority of others, consent in outward action to what, apart from such regard, he is not inwardly convinced is right or true, or what he is even inwardly convinced is not right or true—more shortly, How far may a man conceal or act against his own inward conviction, in deference to the feelings of other persons or to external authority? Such a question cannot be simply set aside as illegitimate, unless we are prepared to assert for certain abstract formulæ of duty (*e.g.* that we ought to speak the truth) a kind of absoluteness which ignores the social ends to which all duties are relative, and ignores also the way in which a general rule, valid under ordinary and tacitly assumed conditions, may be modified or abrogated by the presence of extraordinary conditions not contemplated in the general statement. No one would seriously contend, *e.g.*, that the duty of promise-keeping requires the promiser not to stop even to save a drowning man's life, if by so doing he would have to break an appointment. On the other hand, it is evident that our question is, as it has been called (Morley, *On Compromise*), 'a question of boundaries,' a question involving a conflict of duties. And, so far as the decision of such questions turns upon the infinite variety and subtle details of personal relations between individuals, ethical science can have nothing to say beyond the vaguest generalities, such as that, on the one hand, we ought not unnecessarily to wound other people's feelings, or that, on the other, we ought not to suppress our convictions except for grave reasons. It is difficult, *e.g.*, to see how the writer just quoted is entitled to say, so emphatically as he does, that 'one relationship in life, and one only, justifies us in being silent where otherwise it would be right to speak; this relationship is that between child and parents' (*op. cit.* p. 165). If we take a duty such as that of a son to support and care for his parents in old age, it is obvious that the duty is one which falls upon a son as such: the relationship is the very basis of the duty. But we can hardly say the same of the duty of suppressing one's convictions: here the relationship seems to require only that added degree of deference which a son will naturally pay to his parents' opinions in all relations of life. And, if so, it is surely paradoxical to contend that a like deference is not equally obligatory in the more intimate relation of husband and wife.

It would seem, then, that the only cases in which we can look for a definite development of ethical doctrine in regard to conformity—as distinguished from mere casuistical discussion—are those in which some external authority has a peculiar claim upon our conformity, in a sense analogous to that in which parents have a peculiar claim to their boy's obedience or to their adult son's support. The two authorities which most evidently possess such a claim, and whose claims most need discussion, are the State and the Church. How far is a citizen morally permitted or obliged to obey legal injunctions of whose nature or objects he disapproves? How far, *e.g.*, is military service to be obligatory upon a Quaker, payment of Church rates upon a Dissenter? And the question of obligation is, of course, both accentuated and modified when the citizen is himself an official of the State acting as such; *e.g.*, how

far is a soldier or a subordinate officer, when ordered to fire upon a mob, relieved from all moral responsibility by the fact of his superior's command? Very similar questions are raised by the Church's claim to authority. How far may a layman, and still more a clergyman, subscribe a creed which he does not fully or literally believe?

All that can be attempted here is to point out some of the more general considerations which must be kept steadily in view if these questions are to be adequately discussed. In the first place, we must put aside as an empty truism—irrelevant or even question-begging—the assertion that a man must at all costs obey his conscience. For our problem is precisely to determine what, in the above cases, conscience really commands. We cannot, then, from the ethical point of view, start with a deliverance of conscience as a fixed datum. (From the political point of view, the ruler must needs take the conscience of any section of his subjects as a datum to be reckoned with. Not that he is obliged to give way to their conscience if he thinks them wrong,—for the sanctity of conscience can extend, in any ultimate sense, no further than the amount of moral truth which it apprehends,—but he must take it into account as one of the data of his problem. A Christian ruler might be very unwise in trying to enforce monogamy on a Muhammadan population, and yet the United States be entirely justified in putting down Mormonism.) In the second place, we must be on our guard against a fallacy into which we are likely to fall, if we begin by considering what the individual's duty would be, apart from his relation to the external authority, and then bring in this relation as a modifying circumstance. For we are then apt to think of the relation as *merely* a modifying circumstance, in the sense of being essentially subordinate to the abstract rule of duty. That is to say, we are apt to assume beforehand that the relation to the external authority *cannot* be important enough to alter the whole character of the duty. And thus, by the very form in which we put our question, we already go far to prejudge the answer. It would be absurd, *e.g.*, to begin the consideration of the duty of military service in time of war by laying down that we may not kill a man who has done no wrong, and then go on to ask whether we may break this rule at the command of the State. If, with Tolstoi, we begin by putting the question in this form, we have already committed ourselves, tacitly or by implication, to that denial of the value and authority of the State as an institution to which he proceeds to give open expression (*Kingdom of God is within you*, 1894, ch. vii.). But, on any less extravagant view than his, it is impossible for the citizen of a State, that is to say, the institution on which the whole system of law and order in life practically depends, to treat his relation to the State in any matter of public duty as a mere qualifying circumstance to be taken into account *after* his duty has been *otherwise* determined. In any matter of public duty the real question at issue as regards conformity is always this, Do I think *the particular human interest*[1] that is endangered by conformity so vital, that I, with others of like mind, am prepared to endanger, by our refusal of service or our passive resistance or our active rebellion, the institution on which *the whole fabric of human interests* depends? This, at any rate, is the question of principle. To say, with regard to a particular case, that no such danger to the State is likely to ensue, is (1) to admit that the interest, however important in itself, is a narrow one; and (2) to ignore the fact that the State depends on a *universal habit* of obedience, which is undermined in some degree by every example of disobedience. If, then, the citizen cannot answer the above question of principle in the affirmative, he does no wrong by conformity—provided always, of course, that in his capacity as a citizen he uses all lawful means to secure the particular interest endangered.

We have illustrated the duty of conformity, as regards the ordinary citizen, from the supposed case of a citizen required to serve in the army. It is worth while to illustrate the duty of an official of the State from the corresponding case of a soldier required, *e.g.*, to fire on a mob. For it is interesting to observe that our English system of law commits in practice, and in an even aggravated form, the same mistake as that to which we have objected in theory. It treats the soldier's special duty of obedience to military law as a mere qualifying circumstance in relation to his general civic duty to obey the ordinary law of the land; or, rather, it says he must obey both laws, and choose as best he can which to obey when they conflict. Hence 'he may . . . be liable to be shot by a court-martial if he disobeys an order, and to be hanged by a judge and jury if he obeys it' (Dicey, *Law of the Constitution*[6], 1902, p. 298, and cf. case cited p. 297, note 4). In the actual working of the legal machinery the absurdity of this situation is, of course, largely relieved by reliance on the common sense of a jury and by the power of the Crown 'to nullify the effect of an unjust conviction by means of a pardon' (Dicey, p. 301). But the situation illustrates very well the practical consequences of the theoretical error.

The question of religious conformity differs from that of civic in this respect, that membership of a Church is voluntary in a sense in which citizenship is not. We ought not, indeed, to exaggerate this difference, for in the case of a person of strong religious convictions, and of (what may be roughly called) 'high' Church views, it may amount to very little in practice. We can hardly wonder, *e.g.*, at the submission with which Roman Catholic disbelievers in Papal Infallibility received the decree, when the choice lay between submission and excommunication. Provided that we recognize, however, that Protestants and Nonconformists are, in the very nature of the case, disposed to take a less grave view of schism in the ecclesiastical sphere than the secular moralist must take of rebellion in the civic sphere, the question of principle and the general considerations to be kept in view are otherwise similar. If we begin by assuming that the repetition of a creed in a church service is to be judged like an ordinary assertion made with reference to a simple matter of fact in words chosen by ourselves, and that subscription to a creed is to be judged like an ordinary promise made with reference to a particular act in terms chosen by ourselves, and that the only question as regards conformity, accordingly, is whether and how far we may relax the ordinary rules of truth-speaking and promise-keeping in church matters without bad results, we simply prejudge the answer from the outset. We may as well go on to repudiate creeds and Churches altogether, as Tolstoi repudiates the State. Argument about the function of a creed and the adequacy of actual creeds does not fall within the scope of this article, any more than argument about unity and schism. So it will here be simply assumed that the kind of creed with which we are practically concerned is to be regarded as a traditional symbol of the Church's

[1] It might be objected that what is endangered by war is, not a particular human interest, but the sanctity of human life in general. But the objection simply repeats the original fallacy. There is no World-Empire which could assert the sanctity of human life against warring States, and therefore we have to choose, not between a cosmopolitan and a civic patriotism, but between a civic patriotism and anarchy.

faith, and is to be interpreted by the authority of the present-day Church itself. From the point of view thus assumed we must regard such an accusation as that of 'hard, flat, unmistakable falsehood' (Sidgwick, in the controversy referred to in literature below), brought against clergymen who do not accept certain propositions in the Apostles' Creed in their literal sense, as analogous to the accusation of murder brought against soldiers who, under orders, fire on an enemy or on a riotous mob. The only objective definition of the extent of the clergyman's obligation is that which is given to it by the authoritative organs of the Church's government. And if he satisfies his own ecclesiastical superiors, outsiders have no right to apply to his action a standard which implicitly sets aside the Church's authority. We need not, of course, deny that a Church would do well to revise a creed which in any considerable measure has ceased to afford an adequate expression of its faith. But this is a question of the Church's obligation rather than of the individual clergyman's. Just as a citizen may—within wide limits—rightly conform to a law which he thinks unjust, so too a churchman may—within corresponding, if perhaps narrower, limits—rightly conform to a creed that contains propositions which he thinks untrue (whether in a historical or in a religious sense)—provided always, of course, that the churchman, like the citizen, has used all lawful means to have the evil remedied.

A special difficulty is caused by the fact, just alluded to, that propositions may be true in a religious sense, while false in a literal, historical, or scientific sense; or, to put the distinction in a less objectionable or ambiguous way, a proposition intended to express a genuine religious truth, which the believer does accept, may express it in a form which he is unable to accept, not because of any religious reason, but because the proposition so formulated combines the genuine religious truth with other statements neither true nor religious; *e.g.*, to very many religious persons the Divinity of Christ is inconceivable apart from His miraculous birth, but to others 'it is just blasphemy to suppose that the divinity of a man who comes nearer to God than other men consists in some abnormality of his physical organization' (Nettleship, *Philosophical Remains*, 1897, p. 105; cf. whole Letter). If the Church at large enforces the former view, while the individual takes the latter, the case is specially hard, because the individual then finds himself expelled from the communion of the Church, although he is not conscious of any real or religious divergence from its faith. See also art. NONCONFORMITY.

LITERATURE.—On the general ethical principles: T. H. Green, *Proleg. to Ethics*, Oxford, 1883, bk. iv. ch. ii., and *Princ. of Polit. Obligation* (reprinted from *Works*, vol. ii.), Lond. 1895, especially sect. H. On conformity generally: J. Morley, *On Compromise*[2], Lond. 1877 (often reprinted). On the ethics of religious conformity: an interesting discussion between J. Sidgwick and H. Rashdall in *IJE*, vols. vi. and vii., 1896–7, continued by Sidgwick, *Practical Ethics*, Lond. 1898, pp. 142 ff., and T. O. Smith, *IJE*, vol. x. HENRY BARKER.

CONFUCIAN RELIGION.—The Confucian religion is the ancient religion of China, the worship of the Universe by worship of its parts and phenomena. In the age of Han, two centuries before and two after the birth of Christ, that Universalism divided itself into two branches—Taoism and Confucianism, and simultaneously Buddhism was grafted upon it. Buddhism probably found its way into China principally in the universalistic form which is called Mahāyāna, so that it could live and thrive perfectly upon the congeneric stem. And so we have in China three religions, as three branches upon one root or trunk, which is Universalism.

The Chinese Empire was created in the 3rd cent. B.C., when the mighty Shi Hwang, of the Ts'ing dynasty, which had ruled in the north-west since the 9th cent. B.C., destroyed in streams of blood the complex of States which, up to that time, had existed in the birthplace of higher East Asian culture, the home of Confucius and Mencius. But the House of Ts'ing did not exist long enough to organize the great creation of this first Emperor of China. It collapsed after a few years, giving place to the glorious House of Han, which maintained itself and its throne till the 3rd cent. A.D. This dynasty, in organizing the enormous young Empire, built up a political constitution, naturally and systematically taking for its guide the principles, rules, and precedents of the old time, that is to say, the ancient literature, in so far as it was not irrecoverably lost in the flames which Shi Hwang, in a frenzy of pride, had kindled to devour it. With a view to the completion of this gigantic task of organization, this classical literature was sought for, restored, emended, commented upon, and thus there arose a classical, ultra-conservative State-constitution, which, handed down as an heirloom to all succeeding dynasties, exists to this day. The religious elements contained in the classics were necessarily incorporated with that constitution, together with the political, seeing that everything contained in the classics was to be preserved and developed as a holy institution of the ancients; in other words, those religious elements became the State religion. This is, in consequence, now fully two thousand years old. Its basal principle, Universalism, is, of course, older, much older than the classical books by which it has been preserved. As is the case with many origins, that of China's Universalism is lost in the darkness of antiquity.

With the classical books the name of Confucius is inseparably associated. Five are called *King*; the others are called *Shu*. Certainly Confucius did not write them all; they belong partly to a much older, partly to a later, period. He is held to have written only one *King*, the *Ch'un-ts'iu*. Three other *Kings*, called the *Shu*, or Book of History, the *Shi*, or Songs, and the *Yih*, or Natural Mutations, he is said merely to have compiled or edited; and even this may not be true. In the books which constitute the fifth *King*, entitled *Li-ki*, or Memorials on Social Laws and Rites, he and his disciples are mentioned so frequently that this classic appears to have been composed from information about him, and from sayings originating with himself. The four *Shu* originated almost entirely with disciples of the sage; they contain sayings, doctrines, and conversations of their master, mostly of an ethical and political complexion. The titles are: *Lun-yü*, or Discourses and Conversations; *Chung-yung*, or Doctrine of the Mean; *T'ai-hioh*, or Great Study; and *Meng-tszĕ*, or (Works of) Mencius.

We may then just as well call Confucianism Classicism, and the classics the holy books or bibles of Confucianism. Universalism, which it represents, is known by the name of Taoism. Indeed, its starting-point is the Tao, which means the 'Road' or 'Way,' that is to say, the road in which the Universe moves, its method and processes, its conduct and operation, the complex of phenomena regularly recurring in it—in short, the Order of the World, Nature, or Natural Order. Actually, it is in the main the annual rotation of the seasons, the process of renovation and decay of Nature; and it may, accordingly, be called Time, the creator and destroyer. According to the classics, Tao is the *Yang* and the *Yin*, the two cosmic souls or breaths which represent the male and the female part of the Universe,

assimilated respectively with the fructifying Heavens, and with the Earth which they fructify, as also with heat and cold, light and darkness. The vicissitudes of these souls, indeed, every year produce the seasons and their phenomena.

Universalism defines the Yang as a supreme universal *shen*, or deity, living, creating, which divides itself into an infinite number of *shen*, and deposes them into beings; and it defines the Yin as a universal *kwei*, likewise divisible into myriads of particles, each of which, in a man, may form his other soul. Accordingly, creation is a continuous emanation or effusion, and destruction a never ceasing re-absorption, of particles of the Yang and the Yin. These particles, the *shen* and *kwei*, are innumerable. The Universe is crowded with them in all its parts. A *shen*, being a part of the Yang, or the beatific half of the Universe, is a good spirit or a god, and a *kwei*, belonging to the Yin, is, as a rule, a spirit of evil, a spectre, a devil, or demon. As there is no power beyond the Tao, there is no good in the Universe but that which comes from the *shen*, no evil but that which the *kwei* cause or inflict.

We may, accordingly, say that Confucianism is a universalistic Animism, polytheistic and polydemonistic. The gods are such *shen* as animate heaven, the sun and moon, the stars, wind, rain, clouds, thunder, the earth, mountains, rivers, etc.; in particular also the *shen* of deceased men are gods. And *kwei* swarm everywhere; this is a dogma as true as the existence of the Yin, as true also as the existence of the Tao, or Order of the World. They perform in that Order the part of distributers of evil, thus exercising a dominant influence over human fate. But, since the Yang is high above the Yin, as high as heaven which belongs to it is above the earth, Heaven is the chief *shen*, or god, who rules and controls all spectres and their actions; and so theology has this great dogma, that no spirits harm men without the authorization of Heaven or its silent consent. They are, accordingly, Heaven's agents for punishing the bad; and this dogma is a principal article in the Confucian system of ethics.

1. Because the Emperor stands at the head of the realm, nay, of the whole earth, he is the head of the State religion. He acknowledges the superiority only of Heaven, whose son he is. Heaven is the natural protector of his throne and house, which would unavoidably perish if, by wicked conduct, he forfeited Heaven's favour. Heaven is the highest god that exists, there being in the Chinese system no god beyond the world, no maker of it, no Jahweh, no Allah. It bears to this hour its old classical names, *T'ien*, Heaven; *Ti*, Emperor; or *Shang-ti*, Supreme Emperor (cf. also vol. iii. p. 549 f.).

The most important sacrifice offered to this god takes place on the night of the winter-solstice, an important moment in the Order of the World, when Heaven's beneficent influence is re-born, because the Yang, or light and heat, then begins to increase after having descended to its lowest ebb. The sacrifice is presented on the so-called Round Eminence (*yuen khiu*), also known as the Altar of Heaven (*T'ien tan*), which stands to the south of the Tatar city. This altar, quite open to the sky, is composed of three circular marble terraces of different diameters, placed one above the other, all provided with marble balustrades, and accessible by staircases which exactly face the four chief points of the compass. At the northern and eastern sides there are buildings for various purposes. A wide area, partly a park with gigantic trees, and surrounded by high walls, lies around this altar, which is the largest in the world. On the longest night of the year, the Emperor proceeds to the altar, escorted by princes, grandees, officers, and troops, to the number of many hundreds. Everybody is in the richest ceremonial dress. The spectacle, illuminated by the scanty light of large torches, is most imposing. Every magnate, minister, and mandarin has his assigned place on the altar and its terraces, or on the marble pavement which surrounds it. On the upper terrace, a large tablet, inscribed 'Imperial Heaven, Supreme Emperor,' stands in a shrine on the north side, and faces due south. In two rows, facing east and west, are shrines which contain tablets of the ancestors of the Emperor. Before each tablet a variety of sacrificial food is placed—soup, meat, fish, dates, chestnuts, rice, vegetables, spirits, etc., all conformably to ancient classical precedent and tradition. On the second terrace are tablets for the spirits of the sun, the moon, the Great Bear, the five planets, the twenty-eight principal constellations, and the host of stars; furthermore, there are those of the winds, clouds, rain, and thunder. Before these tablets are dishes and baskets with sacrificial articles. Cows, goats, and swine have been slaughtered for all those offerings, and, while the ceremonies are proceeding, a bullock or heifer is burning on a pyre as a special offering to high heaven. The Emperor, who has purified himself for the solemnity by fasting, is led up the altar by the southern flight of steps, which on both sides is crowded by dignitaries. Directors of the ceremonies guide him, and loudly proclaim every action or rite which he has to perform. The spirit of Heaven is invited, by means of a hymn accompanied by sacred music, to descend and settle in the tablet. Before this tablet, and subsequently before those of his ancestors, the Emperor offers incense, jade, silk, broth, and rice-spirits. He humbly kneels, and knocks his forehead against the pavement several times. A grandee reads a statutory prayer in a loud voice, and several officials offer incense, silk, and spirits to the tablets of the sun, moon, stars, clouds, rain, wind, and thunder. Finally, the sacrificial gifts are carried away, thrown into furnaces, and burned.

This Imperial sacrifice is probably the most pompous worship which ever has been paid on this earth to a divinity of Nature. It is attended by a large body of musicians and religious dancers, performing at every important moment.

In the same vast altar-park there is, to the north of the Round Eminence, another altar of the same form, but of smaller dimensions, bearing a large circular building with dome or cupola, called *ki nien tien*, or 'temple where prayers are sent up for a good year,' that is to say, for an abundant harvest throughout the Empire. Here a sacrifice is offered by the Emperor to Heaven and to his ancestors, in the first decade of the first month of the year; while, to obtain seasonable rains for the crops, a sacrifice is presented in the same building, in the first month of the summer, to the same tablets, as also to those of rain, thunder, clouds, and winds. This ceremony is repeated if rains do not fall in due time or sufficiently copiously. These sacrifices are mostly performed by princes or ministers, as proxies of the Son of Heaven.

The ritual for all the State sacrifices is similar to that for Heaven, but the pomp and offerings vary with the rank of the gods.

Next to Heaven in the series of State divinities is Earth, called officially *Hu-t'u*, or 'Empress Earth,' whose square altar of marble, open to the sky, is situated in a vast walled park, outside the northern wall of Peking. Here a solemn sacrifice is offered annually by the Emperor, or his proxy, on the day of the summer solstice, to the tablet

of Earth and to those of the Imperial ancestors, and, on the second terrace, to the tablets of the chief mountains, rivers, and seas.

From the fact that the Emperor, in performing the sacrifices to Heaven and Earth, allots a second place to the tablets of his ancestors, it follows that they stand, in the system of the State religion, next to Heaven and Earth in rank. Solemn sacrifices are offered to them by the Emperor in the *T'ai miao*, or 'Grand Temple,' on the south-east of the Palace grounds, and at the mausolea, in temples erected there, one in front of each grave-mound.

Next in rank to the Imperial ancestors in the pantheon of the State are the *Sié-Tsih*, or gods of the ground, and of millet or corn. They have their large open altar in a park to the west of the Grand Temple. The Emperor sacrifices there in spring and autumn, or sends a proxy to perform this high-priestly duty.

2. The above are the so-called *Ta-szĕ*, or 'Great Sacrifices.' Next in rank are those of the second category, the *Chung-szĕ*, or 'Middle Sacrifices.' These are presented at various altars or temples erected in or about Peking. The Sun-god has his large walled park, with round, open altar-terrace, outside the main east gate, to the region of sunrise; the Moon-goddess has her square altar outside the west gate, because the west is the region in which the new moon is born. Sacrifices are offered there to the sun by the Emperor or his proxy, at the astronomical mid-spring, when the sun conquers darkness; the Moon receives her sacrifice on the day of mid-autumn,—autumn being, in China's natural philosophy, associated with the west, where the new moonlight is born.

The other State-gods of this Middle Class are the famous men of fabulous antiquity who introduced the Tao, or Order of the Universe, among men, thus conferring on them the blessings of civilization, learning, and ethics. They may be enumerated as follows:—

(1) *Shen Nung*, the 'divine husbandman,' the Emperor (28th cent. B.C.) who taught people husbandry. He is worshipped by the Emperor, or his proxy, with a sacrifice on an auspicious day in the second month of the spring, when the works of husbandry are supposed to begin, this rite being performed on an open square altar in a walled park, situated west of the great Altar of Heaven.

(2) *Sien-ts'an*, or 'the first breeder of silkworms,' supposed to have been the wife of the Emperor Hwang (27th cent. B.C.). In the first month of spring, the Empress, followed by a great train of court-ladies, presents a sacrifice to her on an altar in the park of the Palace.

(3) 188 Imperial and princely rulers of the past. The five Emperors of the oldest mythical period receive special sacrificial worship in a temple in the Palace, viz. Fuh Hi, Shen Nung, Hwang-ti, Yao, and Shun, together with the founders of the house of Cheu, and Confucius.

(4) Confucius. He is worshipped together with his nearest ancestors, and over seventy earlier and later exponents of his doctrine and school, all of whom have tablets in his temples throughout the Empire.

(5) State deities also are the men and women who, in the course of the centuries, have been distinguished for Confucian virtue and learning. Four temples are built for them near every Confucius temple.

(6) The *T'ien Shen*, or 'deities of the sky,' that is to say, of the clouds, the rain, the wind, and thunder.

(7) The *T'i-ki*, or 'earth-gods,' are the ten principal mountains of the Empire, besides five hills and ranges of hills which dominate the site of the mausolea of the present dynasty; further, the four seas or oceans at the four sides of the Empire or of the earth, and the four main rivers of China, viz. the Hwang-ho, the Yang-tze, the Hwai, and the Tsi; and, finally, the mountains and streams in the neighbourhood of Peking, and various others within the Empire.

(8) Next comes *T'ai-sui*, or 'the Great Year,' the planet Jupiter, whose path in the heavens governs the arrangement of the almanac which is annually published by Imperial authority, and gives the various days considered suitable for the transaction of the various business of life. This god thus rules the Tao, or revolution of the Universe, and consequently the Tao of human life, which, in order to bestow happiness and prosperity, must fit in with the Universal Tao, or course of Time.

3. The third section of the Confucian State religion embraces the *Kiün-szĕ*, or 'Collective Sacrifices.' These are all offered by mandarins to the gods in the following lists: (1) the *Sien-i*, or 'physicians of the past,' patriarchs of the art of promoting and preserving human health: Fuh Hi, Shen Nung, and Hwang-ti; (2) *Kwan-yü*, the war-god of the present dynasty, a great hero of the 2nd and 3rd cents. A.D.; (3) *Wen-ch'ang*, a star in the Great Bear, the patron of the classical studies on which is based the selection of State officials, who by their rule maintain the Tao among men; (4) *Peh-kih kiün*, 'the ruler of the north pole'; (5) *Hwo shen*, 'the god of fire'; (6) *P'ao-shen*, 'the cannon-gods'; (7) *Ch'ing-hwang shen*, 'gods of the walls and moats,' that is to say, the patron divinities of walled cities and forts throughout the Empire; (8) *Tung-yoh shen*, the 'god of the Eastern Mountain,' *i.e.* the Thaishan in Shan-tung; (9) four *Lung*, or dragons, gods of water and rain, for whom temples exist in the environs of Peking, apparently for the management and regulation of the *fung-shui* of the city and the Imperial palace; (10) *Ma Tsu-p'o*, the goddess of the ocean and water; (11) *Hu-t'u-shen*, or 'god of the ground'; and *Szĕ-kung shen*, the patron of architecture, to each of whom, before any building works are undertaken, sacrifices are offered on altars erected on the site of the building; (12) *Yao shen*, 'the gods of the porcelain kilns'; (13) *Men shen*, the gods of certain Palace doors and gates of Peking; and (14) *Ts'ang-shen*, 'the gods of the store-houses' of Peking and Tung-chow.

Many of these State sacrifices are also offered by the authorities throughout the provinces, on altars or in temples which have been built for this purpose in the chief city of each province, department, or district—namely, those of the gods of the ground and of millet; those of Shen Nung, Confucius, and the gods of clouds, rain, wind, and thunder; those of the mountains and rivers in the country; those of the walls and moats of the city; and those of Kwan-yü. In Peking, as in the provinces, there are, moreover, temples, built with the same official design, for a great number of historical persons who have rendered services to the dynasties and the people. They have, on that account, received titles of honour from the Emperors, and have their special temples in the places where they lived and worked. There are also similar temples for former wise and faithful princes, nobles, and statesmen; for men who have sacrificed their lives in the service of the dynasty, etc.

4. Lastly, three sacrifices are prescribed to be offered annually by the authorities all through the Empire for the repose and refreshment of the souls of the departed in general.

All the State sacrifices take place either on certain fixed days of the calendar, or on days which are indicated as favourable and felicitous.

This synopsis of the State pantheon shows that the Confucian religion is a mixture of Nature-worship and worship of the dead. It is the rule to represent the gods who are believed to have lived as men, by images in human form, and the others by tablets inscribed with their principal divine titles. Images as well as tablets are inhabited by the spirits, especially when, at sacrifices, these have been formally prayed to or summoned, with or without music, to descend into those objects. Confucian worship and sacrifice, then, being actually addressed to animate images, is idolatry. Certainly it is quite inconsistent with the Chinese spirit to think of such tablets and images as mere wood and paint.

The religion of the State, performed by the Son of Heaven as high priest, and by ministers and mandarins all through the Empire as his proxies, is thoroughly ritualistic. Since, during the Han dynasty, under the auspices of Emperors and by the care of illustrious scholars, the classics were rescued from oblivion, an elaborate ritual, based on those classics, was at the same time called into existence in the form of rescripts, regulating in minutest detail every point in the State religion. Subsequent dynasties framed their institutions in general, and their ritual of the State religion in particular, on those of the House of Han, though with modifications and additions of more or less importance. Instances of eminent statesmen presenting memorials to the throne, in which they criticized rituals and proposed corrections, abound in the historical works; and these instances prove that formal codifications of rites have always been in existence since the reign of the House of Han.

These codifications have for the most part been preserved in the dynastic Histories, but it is not possible now to decide whether they are given in their entirety or in an abridged shape. None of them equals in elaboration that of the Khai-yuen period (713–741). This vast compendium of statutory rites of the T'ang dynasty is a systematic compilation of nearly all the ceremonial usages mentioned in the classical books, with a few additional elements borrowed from the House of Han. It was drawn up by the statesman Siao Sung, assisted, as we may admit, by a body of officials and scholars, and it has been the medium through which the most ancient religious institutions of China have held their place as standard-rites of the State religion to this day. The *Ta Ts'ing hwui tien*, or Collective Statutes of the Great House of Ts'ing, are moulded on it. It is also the prototype of the *Ta Ts'ing t'ung li*, or General Rituals of the Great Ts'ing dynasty, which is an official codification of the rites proper for the nse of the nation and its rulers. Therefore, whoever is able to read and interpret Chinese texts has it in his power to study and describe in its details the State religion from official printed documents.

The conclusion is, of course, ready to hand, that the State religion is instituted for no other purpose than to influence the Universe by the worship of gods who constitute the Yang, in order that happiness may be ensured to the Emperor and his house and to his people. It is, in other words, a religion purporting to secure the good working of the Tao, or Universal Order, thus naturally to frustrate the work of the Yin and its spectres. Thus the exercise of that religion is reasonably the highest duty of rulers, whom that Tao has assigned to secure that good working among men. The people are not allowed to take part in it, except by erecting the State temples and altars, and keeping them in good repair at their own cost and by their own labour. The only religion allowed to them by the State is the worship of their own ancestors, which is classical and therefore Confucian.

Yet, as everywhere in the world, religious instincts in China go their own way, in spite of official rescripts. Not content with the worship of their ancestors, the people freely indulge in the worship of Confucian deities. In villages and in other localities they have temples for the worship of mountains, streams, rocks, and the like. The god of the earth in particular enjoys much veneration; in all quarters the people have erected temples or chapels and shrines to him; they regard and worship him as the god of wealth, and the patron divinity of agriculture. And everywhere the people resort to certain State temples in the chief towns of provinces, departments, and districts, and worship the idols there after their own fashion.

This popular worship of Confucian divinities being practised all through the Empire, the images of gods exist by tens of thousands, the temples by thousands. Almost every temple has its idol gods which are co-ordinate or subordinate in rank to the chief god, so that China fully deserves to be called the most idolatrous country in the world. This religion is also practised in private houses, many of which have altars for gods and goddesses, to whom, on fixed days, sacrifices are annually presented.

The worship of ancestors is mentioned in the ancient classics so often, and in such detail, that we cannot doubt it was also the core of the ancient religion. It has assumed the form of a most elaborate system of disposal of the dead. Washing and dressing of corpses, coffining and burial, and grave-building are matters of the greatest solicitude. The erection of large tumuli for princes and nobles was always the rule in China, and the mausolea built for emperors and princes were magnificent structures. Those of the present ruling dynasty certainly belong to the greatest and grandest which the hand of man ever produced.

The ancestral cult is regulated in the State ritual by special rescripts for all classes of the Chinese people. Many a well-to-do family possesses its ancestral temple, where the soul tablets of its older generations are preserved, and where sacrifices are offered to them. In the dwelling-house a part of the altar is set apart for the worship of the latest generations. A temple in front of the altar serves for the offerings, which are presented by the family on various fixed days in the calendar, with the father or grandfather at their head. Besides, there is an altar on each grave, which has been built with some outlay, and the mausolea of the great of this earth have even a temple, containing an altar with the tablet of the soul which rests with the body in the grave. In the first months and years after the burial, certain sacrifices are offered on the grave; later on there is one sacrifice in every year, in spring, in the *Ts'ing ming* season, reserved for visits to the family tombs, and for cleaning and repairing them. Of course the tombs are visited on many other occasions (cf., further, art. COMMUNION WITH THE DEAD [Chinese].

No doubt ancestor-worship has some value as an ethical element. The punishing hand of the forefathers is always present on the house-altar and in the temple of the family, and will deter many a son or daughter from evil. Ancestor-worship strengthens the ties of family life, as it supplies the descendants with a rallying point in the common ancestral altar. It thus fosters a spirit of mutual help in the emergencies of life, and it has exercised a powerful influence upon Chinese family life and social institutions.

LITERATURE.—See end of next article.

J. J. M. DE GROOT.

CONFUCIUS.—The system which is known in the West as Confucianism is described in China as *Jü-kiao*, or 'School of the Learned,' and professes to conserve the teachings of K'ung Fu-tsu, the philosopher Kung, whose name is familiar to Westerns under the Latinized form of Confucius. *Jü-kiao* represents orthodoxy in China, all other systems being nominally heterodox, though Taoism and Buddhism have, as a result of long association, been popularly admitted to a place among the 'three Schools.' Buddhism is, of course, exotic in its origin, but Taoism is based upon the same ancient materials as Confucius requisitioned. Lao-tse, or Laocius, to whom is attributed the system known as *Tao-kiao*, or 'School of the Way,' commonly known as 'Taoism,' was a strenuous reformer, who boldly applied the teachings which he discovered in the ancient Chinese records to the amelioration of existing conditions, making non-interference and the suppression of personal ambition the keystones of his system. Confucius made no profession of original thought, and confessed himself to be but a transmitter of the manners and maxims of the 'good old times.' What he attempted to do was to apply to the degenerate days in which he lived the best elements of the accumulated wisdom and experience of the past, which he found locked up in the ancient records, and reflected in the time-honoured ceremonials. These he endeavoured to elucidate and emphasize, not only *viva voce* to the ardent disciples who flocked to him from all quarters, and to the feudal lords whom he interviewed in the course of his wanderings from State to State, but also by carefully prepared and annotated editions of the early writings for the benefit of posterity. His highest hope was to lead the rulers of the feudal kingdoms, by easy stages, to the gentler manners of the past, and thus to initiate a reign of peace. In order to appreciate the standpoint of Confucius and his contemporary Laocius, it is necessary that the political circumstances of their times should be carefully considered.

1. **The times in which Confucius lived.**—The Chow dynasty, established by King Wu (1122 B.C.), was in a declining condition at the time when Confucius was born, and the central authority, which gave its name to the Central State, or 'Middle Kingdom,' as the Chinese call their Empire even to-day, was powerless to enforce its dicta upon the turbulent States which were its nominal vassals. Constant war, with its dreadful concomitants, was the 'sign of the times.' The soldier was in the ascendant, the schoolmaster unemployed. Agriculture languished for lack of manual labour, and plague, pestilence, and famine wrought untold horrors upon the feudal kingdoms. In the midst of scenes such as these a son was born (551 B.C.) to an ancient officer of the K'ung family, who had distinguished himself by commanding physique and martial powers in the wars of his times, and who was then living a retired life in the State of Lu, situated in the modern province of Shantung. The infant was given the name of K'iu ='a hillock' (in allusion to certain circumstances of his birth and appearance), with the alternative Chung-Ni, or 'second Mount Ni,' there being another 'Mount Ni' in the person of an elder step-brother, the offspring of a concubine.

The life of K'ung K'iu, or, as we know him, Confucius, may be divided into 5 periods: (1) 551–531, covering his early boyhood, his marriage at the age of 19, and his appointment to the office of keeper of the State granaries, and, a year later, to that of guardian of the common lands; (2) 530–501, when he devoted himself to the work of teaching, and gradually collected around him an enthusiastic band of disciples, at the same time completing his own education and labouring at a new edition of the ancient Odes and Historical Records; (3) 500–496, when, for a short period, he acted as magistrate in his native State, and, as a result of the signal success of his methods, was promoted to the office of Minister of Works, and, subsequently, to that of Minister of Justice, resigning his office only when he found his counsels unavailing to turn the reigning Duke from the evil ways he had adopted; (4) 496–483, when he wandered over a large number of the feudal States, vainly endeavouring to induce their rulers to reform their manners and return to the ancient ways; and (5) 483–478, the last period of his life, spent in his native State, during which he devoted himself to the completion of his literary labours in connexion with the ancient records, and to the production of his one original work, the *Ch'un-ts'iu*= 'Spring and Autumn' annals.

2. **The Confucian library.**—The materials upon which the system known as Confucianism is based are to be found in the various *King*, or Canons, and the *Shu*, or Writings, which are attributed to Confucius and his disciples. These have been variously tabulated at different periods of history, but are nowadays generally described as the 'Four *Shu*' and the 'Five *King*' (see preceding art., p. 12[b]).

3. **The doctrines of Confucius.**—When the condition of the feudal kingdoms in Confucius' time is borne in mind, it will be seen to follow naturally that the great object towards which he directed his efforts was the tranquillizing of the Empire. The possibility of effecting this aim he demonstrated in three ways: (1) by his redactions of the ancient historical records and poetry, showing, to the present and to all future ages, the method by which the great rulers of antiquity, Yao, Shun, and others, had succeeded in controlling and directing the 'black-haired people'; (2) by his personal instructions and counsels to the various nobles whom he interviewed in the course of his journeyings through the feudal kingdoms, and to the ardent students who delighted to sit at his feet; and (3) by his own example in the small spheres which were entrusted to him, and where his methods are represented as being entirely successful. This, indeed, was the cardinal principle which he so frequently emphasized, viz., that, if Sage and Sovereign could be combined in one person, the difficulties of empire would disappear. The force of example was the great motive power he sought to apply to every exigency; if the lord paramount would but imitate the ancient worthies, the various princes would be excited to emulation, and thus, through every grade of society, the process would be continued until the whole nation was reformed. The stages by which this process was to be completed are thus described in the 'Great Learning' ['Great Study']:

> 'The ancients who wished to illustrate illustrious virtue throughout the Empire first ordered well their own States. Wishing to order well their own States, they first regulated their families. Wishing to regulate their families, they first cultivated their persons. Wishing to cultivate their persons, they first rectified their hearts. Wishing to rectify their hearts, they first sought to be sincere in their thoughts. Wishing to be sincere in their thoughts, they first extended to the utmost their knowledge. Such extension of knowledge lay in the investigation of things. Things being investigated, knowledge became complete. Their knowledge being complete, their thoughts were sincere. Their thoughts being sincere, their hearts were thus rectified. Their hearts being rectified, their persons were cultivated. Their persons being cultivated, their families were regulated. Their families being regulated, their States were rightly governed. Their States being rightly governed, the whole Empire was made tranquil and happy.'

As to extraneous aids to the effecting of this purpose, Confucius could only propose the illustrious examples of antiquity, which he delighted in discovering and popularizing; he could promise no assistance from above. Heaven might commis-

sion men to perform certain tasks, and protect them whilst in the execution of them, but, for the carrying out of those commissions, man must depend upon his own unaided abilities, upon that 'nature,' predisposed towards goodness, which Heaven had conferred on him, and to which he himself must allow its full development, in harmony with the observed course of Nature and the examples of the great sages of the past. The gifts of nature vary in different individuals. There are four great classes of mankind: (1) those who possess intuitive knowledge; (2) those whose natural abilities enable them to learn with ease; (3) those who, though naturally dull, are able by earnest application to become learned; and (4) those who decline the attempt to acquire knowledge because of natural incapacity and indifference. Yet, in spite of the diversities of natural gifts, it is possible for every man, by means of self-culture, to reach the highest development of which his nature is capable; and nothing less than this should satisfy the aspirant. 'Rest in the highest,' or 'Cease only when the acme is reached,' is the key-note of the 'Great Learning.' Confucius himself aimed high; he did not expend his strength in the interests of common men, but concentrated his efforts on the education of rulers, either those who were already in office or those who were likely to attain to power, believing that, if he should succeed in implanting his opinions amongst the highest classes, the regeneration of the masses would follow as a matter of course.

There is practically nothing of a religious nature in Confucianism pure and simple. Religion, in the strict sense, existed in China long before his day, and survives even to the present in the sacrifice to Shang-ti, described on p. 13, which the Emperor offers as the representative of the myriad people. Confucius seems to have directed all his energies to the promotion of self-culture, adopting an attitude of strict reserve on the question of religion. He certainly countenanced the religious observances of his time so far as they were consonant with the ancient rites, and did not openly rebuke the extravagances which existed, as, for instance, the burial alive of human victims, which was not unknown in his day. Perhaps in this matter he was guided by a principle which he enunciated, viz., 'When good government prevails in a State, language may be lofty and bold, and actions the same. When bad government prevails, the actions may be lofty and bold, *but the language may be with some reserve.*' It may be that he had but little sympathy with the religious decadence of his own times and the abuses which were then prevalent, but he evidently considered it no part of his mission to attack them in any iconoclastic spirit, and he preferred to adopt an attitude of strict reticence towards the question of religion, recommending the observance of the accustomed ritual, but deprecating a too close inquiry into the spiritual phenomena. He evidently regarded the offering of sacrifice as of great subjective value, but professed ignorance of the meaning of the great sacrifice to Shang-ti. He certainly added nothing to the contemporary knowledge of God or of spirits; he had nothing to say with regard to death or the hereafter; the 'present distress' was a sufficient occasion for the exercise of his disciplinary methods; the present life was the only theatre in which he sought to inspire men to act their part. The existence of the Empire was imperilled through the unceasing struggles of the feudal States, and his great endeavour was to induce their several rulers to suppress their overweening ambitions, and to cultivate that moderation, that harmonious balance, which is emphasized in the 'Doctrine of the Mean'; so that the various parts of the social organism might work together smoothly and with mutual profit, like a perfectly fitted and well-oiled machine, each State furnishing its quota of Imperial service, each ruler and officer occupying his appointed place, and all friction being avoided, so that the Middle Kingdom might become once more a model to the barbarians on its frontiers, and a power which no alien combination might venture to impugn.

Confucius was, above all things, a political reformer, but one who founded his political principles upon moral bases. He wished the harmony of Nature to be reflected in the world of men, and hence the very first essential in his system was the cultivation of knowledge, especially natural science. But, by a strange irony of fate, the chapter of the 'Great Learning' which was supposed to deal with this fundamental question has been lost, and what remains is occupied with the lesser details which appear as branches detached from the tree. The abortive attempts of later philosophers to deal with the phenomena of Nature are described in art. COSMOGONY AND COSMOLOGY (Chinese).

The steps in the process of self-culture have already been enumerated; the completion of knowledge leads to sincerity in thought, for the reason that the scholar who has thus attained enlightenment can no longer be deceived by outward appearances or inward imaginings. Being thus freed from the deceptive influences of passion, emotion, fear, etc., he is able to rectify his heart, *i.e.* to restrain wayward thoughts, feelings, and tendencies; as a consequence, his outward actions are conformed to the highest ideals of propriety, *i.e.* the cultivation of the person; and, from this point, he becomes a centre of influence which extends to his family, his State, etc., so that the whole Empire is made tranquil and happy.

This may be said to be the Confucian gospel in a word, and it will be evident that it is based upon the conviction that man's nature is originally good, and merely requires cultivation on right lines to bring it to its highest perfection. Confucius admitted that 'by nature men are nearly alike; by practice they get to be wide apart.' It follows, therefore, that what is prescribed for rulers should also apply, in a measure, to the mass of the people; they may not have the opportunity of pursuing their studies to the same degree, but all must share in the process of self-culture, and thus bear a part in the tranquillizing of the Empire, which is to be brought about by the regulation of the individual State, family, and person.

In the family and social relations the recognition of a common brotherhood is to be the inspiration and obligation of all corporate life. 'Within the four seas all are brethren,' and this is the idea which underlies (1) the principle of 'Benevolence,' which is the first of the five cardinal virtues. Upon this follow: (2) 'Uprightness of Mind,' *i.e.* the exhibition of moral excellence, as the word seems to denote; (3) 'Propriety in Demeanour,' the observance of convention, including the orthodoxies of religious worship, etc.; (4) 'Practical Sagacity,' or 'Knowledge of Affairs'; and (5) 'Good Faith.' The whole may be combined in the word which may serve as a rule of life—Reciprocity or Considerateness, *i.e.* 'What you do not want done to yourself, do not do to others.' These were to be regarded as the special characteristics of rulers; but the five cardinal relations, upon which the whole social structure is based, were required of all classes, and were defined as those existing between sovereign and subject, father and son, elder brother and younger, husband and wife, friend and friend. Filial conduct and its correlate of fraternal subordination may be described as the corner-stones of the system, for upon them depend

not only self-culture, but also the regulation of the family and the government of the State. It may have been for this reason that Confucius was willing to overlook the extravagant attention paid to ancestor-worship, because it served to emphasize his own doctrines of Divine right and the paramount importance of acquiescence in the prevailing order. He anticipates St. Paul in saying, 'Let every soul be in subjection to the higher powers . . . the powers that be are ordained of God' (Ro 13[1]). The appointment of a new ruler is described as the 'receiving of Heaven's decree'; every subject of the State must, therefore, accept his ordered place, and every member of the family, in like manner, must fulfil his part with loyal submission. There must be 'no contrariety' in the home or in the State; no trespass beyond the appointed limits, no disruption of the social harmonies. This is the teaching of the 'Doctrine of the Mean,' which follows on the 'Great Learning'; *i.e.* the avoidance of all *eccentricity*, or departure from the normal course as exemplified in Nature. Equilibrium and Harmony are the two essentials to happy social relations and a contented empire, Equilibrium being the negative side when the mind is not aroused by feeling or emotion, and Harmony the positive side when feeling is excited but acts in due accord with its environment.

Amongst the factors which conduce towards correctness of conduct are included Poetry, which inspires to the attempting of noble deeds; Ceremonials, by which the habit of correct action is established; Music, which, if orthodox, produces an atmosphere congenial to the cultivation of virtue, and gives a finish to character; and Archery, which is recommended as exercising a moral discipline.

From the above it may be seen how little of a transcendental character there is in the teachings of Confucius. The process of self-culture must proceed independently of any spiritual aid, except in so far as the conventional rites of sacrifice may be considered as of such a nature—a supposition which appears to be negatived by the fact that to Confucius they were evidently of little objective value.

The doctrines thus enumerated find illustration in the *Analects*, or Counsels, of Confucius—a collection of acts and sayings attributed to him by his immediate disciples; and they are represented in concrete form in the person of the 'princely man,' or ideal scholar, who is constantly held up as a standard of imitation, and a criterion of conduct—an ideal which, by the way, Confucius himself disclaimed having attained.

The principles of Confucius found further exposition in the writings of Mencius (Mêng k'o, 372–289 B.C.), who is accorded the title of 'Second Sage,' or the next in order of dignity to Confucius himself. The work which bears his name enlarges on the topics of Benevolence and Righteousness, which formed the subject of his discussions with the rulers of the several States he visited and the disciples he gathered. But the most popular exponent of Confucianism was Chu Hsi, or Chucius (A.D. 1130–1200), whose commentaries on the classical books are now generally accepted as the highest standard of orthodoxy. Like Confucius, he proceeds upon the assumption that human nature is originally good, but applies his speculations to the hitherto unsolved problem of the origin of evil. So great has been the influence of Chucius upon modern thought in China, that 'Chucianism' might be substituted for 'Confucianism' as descriptive of the later development of the tenets of Confucius and his followers.

4. Secret of the success of Confucianism.—In view of what has been stated above as to the absence of religious motive in Confucianism, it may be asked how the system which is thus denominated attained its present popularity and general acceptance. As a matter of fact, Confucius utterly failed to convince his generation of the value of the methods he so ardently advocated. Outside of the circle of those who formed his school of disciples he appears to have had few admirers. No ruler of his day was prepared to put his opinions to the test; only in the small sphere which he himself occupied, for a short period, in his own State of Lu, was he able to demonstrate their practical character. His personal influence over his immediate followers must have been immense, though his family life was unfortunate; but, when his despairing complaint of the non-appreciation of his doctrines and non-recognition of his character had been silenced by death, and after his favourite disciples had passed away, it seemed as if the very memory of the sage was about to perish. Many years elapsed before any national attempt to commemorate him was initiated, but succeeding ages and dynasties have vied with one another in elevating him in the scale of posthumous dignities, until, at the beginning of the present century, he was at last raised to the pre-eminent position of 'Co-assessor with Heaven and Earth.'

No doubt the intense patriotism of Confucius was a feature which won the hearts of those who delighted to learn from him; everything was subordinated to the well-being of the distracted Empire, and to this end he was prepared to sacrifice his personal ambitions, and to subject himself to ignominy and even physical danger. His doctrine of the Divine right of virtuous sovereigns, even though usurpers, was entirely congenial to the founders of later dynasties, such as the Han line of rulers, who were anxious to conciliate the student classes that had suffered so severely under the regime of the short-lived Ts'ing dynasty, and who sought to find justification for their claim to the supreme authority in the literature which their predecessors so greatly feared. The masses were well content with the abolition of the severe measures with which the first Empire (the Ts'ing) had familiarized them, and were prepared to accept the new conditions. Hence it was the policy of the new rulers and the scholars to come to an understanding, and an active endeavour was made to restore the Confucian literature which survived the fires of Ts'ing, for such writings were now almost the sole survivors of the ancient records, and were regarded with a new interest and an ever growing veneration. The course of time served only to deepen the impression, though Confucianism did not succeed in obtaining exclusive recognition until long ages of conflict with Taoism and Buddhism had passed. The masses, too, were predisposed in favour of the Confucian system, not only because of its intrinsic excellence, but because it advocated the rights of the people, and aimed at individual happiness as well as at the larger issue of national tranquillity. Hence it was to the interest of all classes—the newly established rulers, the scholarly classes, and the majority of the people—that the system of Confucius should be accepted as a moral code, even though the feudal conditions to which it owed its birth, and for the amelioration of which it had been designed, had long passed away. The establishment of the Hanlin academy and of the system of literary examinations, during the T'ang dynasty (A.D. 755), had the effect of encouraging the study of the Confucian classics amongst all sections of society, since a complete knowledge of the text was required by those who presented themselves for examination with a view to official employment.

5. Defects of Confucianism.—The failure of

Confucianism to satisfy the cravings of man's spiritual nature, its attitude of reserve on questions affecting the unseen world, its silence with regard to sin and its remedy, and its equivocal references to the possibility and value of prayer—all these have had the effect of paving the way for the introduction of Buddhism, with its doctrines of an All-merciful One, its spiritual aids and consolations, its plans of salvation and theory of a 'Western Paradise,' and its recognition of woman's place in its propaganda (cf. art. CHINA [Buddhism in]). Here also is offered a field where Christianity, when once relieved of the prejudice and suspicion which now encompass it, will find a place and a welcome, and the true Sage whom Confucius dimly outlined, the true 'Coming One' of whom the Buddha prophesied, will be recognized in Jesus Christ, in whom alone the highest definition of brotherhood is exhibited, and in whom alone fatherhood, in the ultimate sense, is propounded—the Fatherhood of God, whose offspring is not limited to the confines of the four seas, but embraces 'all nations of men' who 'dwell on all the face of the earth' (Ac 17^{26}); in whom also is found that motive power which can compensate for the weaknesses and disabilities of a corrupted human nature, and can enable men to attain to the highest perfection—a standard far transcending that which Confucius had in mind when he enunciated his great axiom, 'Rest in the highest excellence.'[1]

W. GILBERT WALSHE.

CONGREGATIONALISM.—1. The name.—The term 'Congregational' came into general use about the beginning of the great Civil War in England, and contemporaneously in New England, as descriptive of a form of Church polity in which the local congregation is the unit of organization and the source of ecclesiastical government (*e.g.* Richard Mather, *An Apologie*, London, 1643 [written 1639], p. 6, and generally in the literature of the succeeding years). From the last decade of the 16th cent. its adherents had been nick-named 'Brownists,' from Robert Browne (see BROWNISM). Against this name they protested (e.g. *A True Confession*, Amsterdam, 1596, title; *An Apologeticall Narration*, London, 1643, p. 24). They were also called 'Separatists,' because of their withdrawal from the English Establishment. The title 'Independency' was attached to the system at about the same time as that of 'Congregationalism' (in 1642), and, though an object of early protest (e.g. *An Apologeticall Narration*, p. 23), long remained its usual designation in Great Britain, though it is now generally supplanted by 'Congregationalism.' In America it was never in use. 'Congregationalist,' as a title of the adherents of the polity, is encountered in 1692 (C. Mather, *Blessed Unions*, Boston); and 'Congregationalism,' in 1716 (I. Mather, *Disquisition on Ecclesiastical Councils*, Boston, p. vi). As a polity, Congregationalism is much more wide-spread than the Congregational name. The Baptists, the Plymouth Brethren, the Disciples of Christ, the Unitarians of the United States, as well as certain sections of the Adventists and of the Lutherans, are congregationally governed. In this article, however, only that group of Churches to which the name 'Congregational' is attached by historic, popular, and official usage, will be considered.

[1] Cf. J. Iverach, *Is God Knowable?*, 1884, p. 112 f.

2. Fundamental principles.—Early Congregationalism was a product of the devotion of the Reformation epoch to the Bible. That period exalted the Bible as the only rule of faith and practice. If the Scriptures teach fully all that it is requisite for men to know or believe, and all duties of the Christian life, it was but logical to raise the question whether they did not also contain a complete and authoritative guide as to the nature, organization, officering and administration of the Christian Church. It was the conviction that the Bible contains such a pattern that gave rise to Congregationalism.

'The partes of Church-Government are all of them exactly described in the word of God . . . soe that it is not left in the power of men, officers, Churches, or any state in the world to add, or diminish, or alter any thing in the least measure therein' (*Cambridge Platform*, 1648, ch. i.; see also *A True Confession*, 1596, of the London-Amsterdam Church, ch. xx.).

Examining the Scriptures, therefore, in the light of the knowledge of their age, and under a profound conviction of an inspiration which made every portion a word of God, the Congregationalists of the 16th and 17th cents. denied the existence of national or territorial Churches; and, while holding that the invisible Church 'conteyneth in it all the Elect of God that have bin, are, or shal be' (*A True Description*, Dort, 1589, p. i), affirmed that none but local associations of experiential Christians are visible Churches. Each of these Churches has Christ as its immediate and only Head. Each 'hath powre and commandement to elect and ordeine their own ministerie,' as well as 'to receive in or to cut off anie member' (*A True Confession*, chs. xxiii. and xxiv.). Each local church is therefore a completely self-governing body.

There can be no doubt that early Congregationalism felt a mystical conviction, not now characteristic of it, that Christ is in so real and true a sense the Head of each church of His disciples, and they are so one with Him by covenant, that the acts of such a church, though those of human agents, are in vital reality His acts, whether in the admittance of members, the choice of officers, or the administration of discipline.

That which distinguishes between a chance assemblage of Christian people and a church is that the members of the local congregation are united into church-estate by 'a willing covenant made with their God' and with one another (R. Browne, *A Booke which sheweth*, Middelburg, 1582, p. 3). 'A company becomes a Church, by joyning in Covenant' (R. Mather, *An Apologie*, p. 5). Yet this covenant is not necessarily formal, though it is more desirable that it be so, for 'wee conceive the substance of it is kept where there is a real agreement and consent of a company of faithful persons to meet constantly together in one congregation for the publick worship of God and their mutuall edification' (*Cambridge Platform*, ch. iv.). The only fit persons to enter into such a covenant, and hence the only proper church-members, are those of personal religious experience; but, by a comparison with the Abrahamic covenant of Gn 17^{7}, early Congregationalists argued that the children of such covenanting members were included in the parents' covenant and were themselves therefore church-members. The status of such children, when grown to maturity and not conscious of a personal religious

faith, was a sore puzzle to New England Congregationalism from the middle of the 17th to the end of the 18th cent., and led to the strenuous controversies known as the Half-Way Covenant discussions; but the belief of Congregationalism has always been that the true material of church-membership is to be found only in conscious and purposeful Christian discipleship.

Such a local church as has been described should have no officers but those of NT example—'pastors, teachers, elders, deacons, helpers' (*A True Confession*, ch. xix.). The 'pastor' 'hath the guift of exhorting and applying especiallie'; the 'teacher' that 'of teaching especiallie' (R. Browne, *A Booke which sheweth*, p. 32). Both preached, though the teacher gave special attention to doctrinal exposition. Both administered the sacraments. The 'ruling elder' was a disciplinary officer, reckoned to the ministry, whose 'work is to joyn with the pastor and teacher in those acts of spiritual rule which are distinct from the ministry of the word and sacraments' (*Cambridge Platform*, ch. vii.). Only in the absence of pastor and teacher could the ruling elder preach, and in no case could he administer the sacraments. All three officers, known as 'teaching' and 'ruling' elders, were chosen by the congregation they served, and, in earliest Congregationalism, were ordained by representatives of the congregation. Ordination, being considered but the recognition of a charge in a particular church, was to be repeated at each fresh entrance into office. But by the time that the *Cambridge Platform* was adopted, in 1648, custom was changing, and ordination was passing from the membership of the particular church to the hands of those already in the ministry. 'In such churches where there are no elders, and the church so desire, wee see not why imposition of hands may not be performed by the elders of other churches' (*ib.* ch. ix.). Ordinations by the membership of the local church ceased soon after the middle of the 17th century. Two other classes of officers were recognized as to be chosen by the church. Of these the more important were 'deacons,' whose work was 'to receive the offrings of the church, gifts given to the church, and to keep the treasury of the church, and therewith to serve the tables which the church is to provide for, as the Lord's table, the table of the ministers, and of such as are in necessitie' (*Cambridge Platform*, ch. vii.). Theoretically desirable were 'helpers' or 'widows' 'to minister in the church in giving attendance to the sick' (*ib.*); but, though an instance or two of their appointment may be found in early English Congregational practice, none held office in New England.

Each local church was from the first free to express its faith in its own language, and to make such tests for admittance to its membership as it chose. Congregationalists from the beginning felt, however, that churches had relations of fellowship one with another, which were generally pictured as those of sisterhood in a common family of God.

'There be synodes or meetings of sundrie churches, which are when the weaker churches seeke helpe of the stronger, for deciding or redressing of matters, or else the stronger looke to them for redresse' (R. Browne, *A Booke which sheweth*, p. 30). 'Allthough churches be distinct, and therfore may not be confounded one with another; and equall, and therfore have not dominion one over another; yet all the churches ought to preserve church-communion one with another' (*Cambridge Platform*, ch. xv.).

The two principles of local autonomy and fellowship have always been the foci of Congregationalism, and the latter has preserved it from Independency. The principle of fellowship gave rise almost at the settlement of New England to the occasional council—a meeting of pastors and lay delegates from such churches as the church seeking advice chooses to summon, called to give counsel in such matters as the ordination, installation, and dismissal of ministers, cases of discipline beyond the power of the local church to control, and similar ecclesiastical exigencies. Such councils have always been a feature of American Congregational practice, though not employed in Great Britain.

3. **Present Congregational principles and organization.**—Early Congregationalism, as thus described, has undergone much modification in detail, though its essential features still remain unaltered. Modern Congregationalism, like its prototype, still conceives of the Church as a local company of experiential Christians, autonomous, yet owing fellowship to sister churches. But it does not find, as its early leaders did, any hard and fast pattern of the Church in the Scriptures. It would emphasize the congregational as a desirable, rather than as the only rightful, polity. Congregationalism sees the merits of that polity in its democracy, its voluntaryism, its capacity to develop full, rounded, Christian manhood and womanhood, its freedom, and its flexibility. The number of officers supposed by early Congregationalism to be required by Scripture proved long ago beyond the power of a small congregation to maintain. Though instances of the 'teacher' and 'ruling elder' continued late into the 18th cent., and a single example of the 'ruling elder' may be found in the 19th, most Congregational churches, on either side of the Atlantic, had before the close of the 17th cent. reduced their officers to a pastor and several deacons. These are the chief officers of a Congregational church at the present time. Of comparatively modern growth are such additional officers as a superintendent of the Sunday School, a treasurer, a choir-master, and the like. Only the pastor is now ordinarily ordained. In a few churches deaconesses have been recently introduced, and, in most, several members are chosen, usually annually, to serve with the pastor and deacons as an executive committee by which the admittance of members and other ecclesiastical business are primarily considered, though with ultimate reference, on its recommendation, to the whole body of the church.

The larger fellowship of the churches is expressed not only in the occasional councils, characteristic of the United States, of which mention has been made, but in a close-knit network of regularly recurrent meetings in which larger or smaller groups of churches are represented. Some 'Associations' came into existence in Great Britain in the time of the Commonwealth, and probably survived the vicissitudes of the Restoration; but, beginning with that of Devonshire, organized in 1785, county 'Associations' spread rapidly through England. The desire for a larger expression of fellowship found embodiment in the additional organization of a 'Union' for Scotland in 1812, and for England and Wales in 1832. The latter now meets twice a year. In the United States, the first voluntary ministerial 'Association' was formed in Cambridge, Mass., in 1690. In Connecticut, 'Consociations' of ministers and lay delegates were organized in 1709. The system of meetings representative of churches by pastors and lay delegates was not generally introduced, however, till the early years of the 19th century. It is now universal in American Congregationalism. A variety of nomenclature exists, but uniformity is now being sought, so that the local groups into which churches are confederated shall be known as 'Associations,' and the larger State-wide organizations as 'Conferences.' After preliminary gatherings representative of the Congre-

gationalism of the United States as a whole, held in Albany, N.Y., in 1852, and in Boston, Mass., in 1865, the 'National Council of the Congregational Churches of the United States' was formed in Oberlin, Ohio, in 1871, and has met triennially since. Similar organizations exist in Canada and the British colonies. In 1891, an International Council, representative of world-wide Congregationalism, met in London, and subsequent sessions were held in Boston in 1899, and in Edinburgh in 1908.

None of these representative bodies, though composed of delegates from the churches, possesses judicial or legislative authority. Their action is purely advisory; but such action, in actual practice, carries great weight. An important function discharged by the local Associations in Great Britain and America is that of certification of ministerial good-standing; and efforts are being made in America to constitute the local Association the regular ordaining body instead of the occasional council.

4. Relation to the State.—Original Congregationalism denied the existence of a State Church, and practised voluntaryism in church maintenance and ministerial support. As a party of protest it could not do otherwise. At the same time it held, with Calvinism in general, that civil rulers ought 'to establish and mayntein by their lawes every part of God's word, his pure relligion and true ministerie' (*A True Confession*, ch. xxxix.). It was natural, therefore, that wherever Congregationalism became the dominant faith, it entered into an intimacy of association with the State, not wholly justified, perhaps, by a strict construction of its principles. The political history of England afforded few such opportunities. Under Cromwell, Congregationalists enjoyed some State patronage; and, in 1658, a council of the Congregational Churches of England, the 'Savoy Synod,' met in London with Governmental approval, though not directly called by the Government, its work being a revision of the Westminster Confession and a statement of polity From the Restoration to the present day Congregationalism has not been in a position to receive Governmental support in Great Britain, and therefore counts voluntaryism among its cardinal principles.

In the New England colonies the situation was widely different. In Massachusetts the political franchise was from 1631 to 1664 confined by law to members of Congregational churches. In New Haven Colony it was similarly restricted from 1639 to 1665. Between 1638 and 1655 all the Congregational colonies of New England passed statutes basing ministerial support on universal taxation. The colonial legislatures, though maintaining the theory of ecclesiastical autonomy, were really the ultimate bodies of appeal in ecclesiastical controversies. By civil authority 'Synods' were called, composed of ministers and representatives of churches, to discuss doctrinal and administrative problems in 1637, 1646, 1662, 1679, 1708, and 1741. The Congregational churches were a real 'Establishment,' from the support of which Episcopalians were not relieved in Massachusetts and Connecticut till 1727, and Baptists and Quakers not till 1728 and 1729. This connexion with the State continued in Connecticut till 1818, and in Massachusetts till 1834. Since then, in America, Congregationalism has had purely voluntary support; but voluntaryism has never been a fundamental contention in America as in Great Britain. American Congregationalists have, however, cheerfully acquiesced in the separation of Church and State characteristic of the United States.

5. Continental antecedents.—It is difficult to estimate the possible influence of the more radical Continental parties of the Reformation age in the origin of Congregationalism. Their direct connexion it is impossible to demonstrate, and English Congregationalism seems far more a radical growth out of English Puritanism than any effect of Continental discussions. Nevertheless, the fact deserves notice that many of the most characteristic positions of Congregationalism were anticipated by the radicals of the Reformation age, notably the Anabaptists (see art. ANABAPTISM).

Originating in Switzerland in 1523 or 1524, and apparently arising nearly contemporaneously in other parts of the Continent, the Anabaptists were known chiefly for their rejection of infant baptism, their chiliastic hopes, their condemnation of oaths, their opposition to war, their denial to Christian disciples of the right to hold civil office, and their criticism of the Augustinian theology. Congregationalism followed them in none of these things. But they also held that the Church is made up of local congregations of experiential Christians, and that each congregation is self-governing, and is empowered in democratic fashion by the suffrages of its members to choose and ordain its own officers and administer its own discipline. They held that the Bible is the all-sufficient rule of faith and practice. In these principles Congregationalism agreed with them. Drawn mostly from the ignorant lower orders of the population, though not without a few educated leaders, the Anabaptists were severely persecuted by Catholics and Protestants alike; and, in the opinion of their opponents, the movement bore its appropriate fruitage in the frightful fanaticism in Münster in 1534–1535. The fanatical element was only a fraction of the Anabaptist party, however, and notably under the lead of Menno Simons (1492–1559) it grew in orderly fashion, especially in the Netherlands, where it obtained protection from William the Silent, and became wide-spread among the artisan classes. The terrible wars with Spain through which the Netherlands independence was achieved drove thousands of Protestant Dutch and Walloon working-men to England, where they constituted a not inconsiderable element in the population of London, and more than half the inhabitants of Norwich—cities intimately identified with the beginnings of Congregationalism—at the very time when Congregationalism had its origin. It is not probable that any large portion of the Netherlands exiles were Anabaptists, but there were Anabaptists among them; and it is not impossible that some more or less unconscious infiltration of Anabaptist ideas may have prepared the way for Congregationalism. Of this, however, there is no direct proof, though the similarity between some of the principles of the Anabaptists and those of the Congregationalists makes the question of a connexion an interesting problem.

6. History.—The beginnings of Congregationalism, so far as they can be definitely traced, were associated with Puritanism, of which it was the most radical expression. The form of the Church caused relatively little discussion in the early years of the English Reformation, and, when discussion arose, it was forced by practical rather than by theoretical considerations. England presented a most difficult problem at the beginning of the reign of Elizabeth. A clergy and a population, a great proportion of whom, while eager to maintain England for Englishmen, were averse to any considerable doctrinal changes, had accepted with outward conformity the restoration of a uniform service in the English tongue, and admitted the royal supremacy over the Church.

From a Governmental point of view it was eminently wise to make the transition from Roman Catholicism as easy as possible, and to keep as many of the ancient clergy in office as would acquiesce in the new institutions, without inquiring too minutely into their spiritual fitness. From the religious standpoint, however, such a course was extremely distasteful, especially to those more earnest Protestants who, like many who had gone into exile under Queen Mary, had drawn their ideals from Geneva. These men desired the abolition of such vestments and ceremonies as seemed to them calculated to preserve what they deemed Roman superstitions. They wished to see an earnest, educated, preaching ministry established in every parish, and to institute a vigorous discipline by which the Church could be purged from unworthy members. They were soon nick-named 'Puritans.' Their attempts to effect these results, especially the modification of vestments and ceremonies, encountered the opposition of Elizabeth and her spiritual agents, the bishops—an opposition based in large measure on a desire to avoid cootroversy and civil discord. But this opposition aroused further questioning, which ushered in a second stage of Puritanism. Men, of whom Thomas Cartwright (1535–1603) was typical, began to ask whether a form of Church government that opposed reforms which seemed to them so desirable was Divinely warranted. By 1569, Cartwright, who became that year Lady Margaret professor of Divinity in Cambridge, was attacking the constitution of the

Church of England itself, and urging its further reformation along lines essentially borrowed from Presbyterianism as it had been developed under the influence of Calvin and his disciples. This seemed to him and to his party the Scriptural model of what a Church should be. Cartwright held to the existence of a national Church. The disaffected Puritan was not to separate from it; but to labour in it to introduce as much of what he believed to be Gospel order and discipline as he might, and to wait for the strong hand of civil authority to reform the often-altered Church of England into full conformity to what he deemed the Divine pattern. To come out from it and to found different churches was no part of the duty of a Christian. These views of Cartwright represented the opinions of the vast majority of Puritans down to the Great Rebellion.

To the more radical thinkers of the time this condition of things seemed intolerable. They would come out from the Church and organize at once as they believed the Church should be organized. They were 'Separatists.' Such was an obscure company of which Richard Fitz was pastor, which was arrested in Plumber's Hall, London, 19th June 1567, and has often been called 'the first Congregational Church.' But their Congregationalism, though evident, was not systematically developed. The first careful theoretic exponent of Congregationalism was Robert Browne (1550?–1633), whose life and doctrines are considered in art. BROWNISM. Whether through the influence of his books, or as an independent illustration of the same tendencies which led Browne to separation, a similar movement soon showed itself in London, under the leadership of a radical Puritan clergyman, John Greenwood (?–1593), and a lawyer of ability, Henry Barrowe (1546?–1593). Arrested in 1587, they were yet able to write from their prison treatises of which Barrowe's *A Briefe Discoverie of the False Church*, 1590, is the most important. Their sympathizers increased, however, and, in 1592, a Congregational Church was formed in London, or, if organized four or five years earlier, as is possible, was then more definitely established, with Francis Johnson (1562–1618) as its 'pastor' and Greenwood as its 'teacher.' This activity excited the authorities. On 6th April 1593, Barrowe and Greenwood were hanged for denying the queen's ecclesiastical supremacy, and the rest of the church was gradually driven into exile. It found a refuge in Amsterdam, where its experience proved stormy owing to exaggerated attempts to enforce discipline.

The same causes which had resulted in the movements in which Browne and Barrowe were leaders induced a company of advanced Puritans in Gainsborough and the region about Scrooby to organize two Separatist churches, probably late in 1605 or early in 1606. Of that in Gainsborough, Rev. John Smyth (?–1612) was the leader; and in that meeting in the home of William Brewster (1560?–1644), postmaster in Scrooby, Rev. Richard Clyfton, Rev. John Robinson (1576?–1625), and the youthful William Bradford (1590–1657), in addition to Brewster himself, were the most prominent. Compelled to leave England, both congregations found a refuge in Amsterdam, where Smyth and his associates adopted Baptist principles. The Scrooby exiles, under the lead of Robinson, removed, in 1609, to Leyden; but, being anxious to live on English soil, even across the Atlantic, a minority of the church, under the spiritual oversight of 'ruling elder' William Brewster, made the voyage in the *Mayflower*, and established the colony of Plymouth in New England in 1620. Meanwhile, in 1616, a Congregational church, which still exists, was founded in the Southwark district of London by Rev. Henry Jacob (1563–1624), who had been a member of the Leyden congregation.

It may be doubted, however, whether Congregationalism would have developed in power on either side of the Atlantic had it not been for the stimulus of the great Puritan struggle with Charles I. Puritan thought, despairing of securing the reforms desired in England, inclined to seek the New World to which the Scrooby-Leyden Pilgrims had already shown the way. In 1628 the advance-guard of Puritan emigration, under John Endicott, landed in Salem, Massachusetts. On 4th March 1629 the royal charter creating the 'Governor and Company of Massachusetts Bay' was sealed. The same year the Salem colony was largely reinforced. In 1630 no fewer than 1000 persons left old England for the new, and the emigration ran full tide till the advent of the Long Parliament in 1640 changed the political situation in the homeland. To the Massachusetts colony of 1629, Connecticut was added in 1635–1636, and New Haven in 1638. These settlers were Puritans, not Separatists. They were, many of them, men of wealth and position, and they had among them a large proportion of well-educated, influential ministers. Yet the remarkable fact is that, on their arrival in the new land, they organized their ecclesiastical institutions, beginning with the church in Salem in 1629, essentially on the model of Separatist Plymouth. The explanation is that the Scripture model of Church government seemed to them that which Separatism had already anticipated, and, under the freedom of the plastic conditions of new settlements, they created churches of practically the same type as the earlier Separatist congregations. But, as has been indicated in the section on the relations of Congregationalism to the State, these New England churches became a real Establishment, and enjoyed State support in a manner for which the earlier Separatism never had opportunity, and which it repudiated in principle. The history of Congregationalism in 17th-cent. New England was largely that of growth in numbers by reason of the slow increase of the population, of a declining religious enthusiasm, and of discussions arising from the development of polity. Education was fostered not only by lesser schools, but by the founding of Harvard College in 1636, and of Yale College in 1701. There was little doctrinal division, all the churches representing the current Puritan Calvinism, and there was remarkable uniformity in organization, worship, and method.

Congregationalism made slow progress in England from its permanent establishment in Southwark in 1616 to the meeting of the Long Parliament in 1640. Its chief representatives found refuge in New England or in the Netherlands. But, with the outbreak of the struggle between King and Parliament, and the return of a number of the exiles, it grew very rapidly. Though the Westminster Assembly, which began its sessions in 1643, was overwhelmingly Presbyterian, it included five determined Congregationalists and several at least partial adherents. The desire of Cromwell and the army for a large toleration was favourable to the spread of Congregationalism. Congregationalists were appointed to many important ecclesiastical and educational posts under the Protectorate, and enjoyed the cordial favour of Cromwell. The Savoy Synod, held in London in 1658, gathered the representatives of 120 churches. Congregationalists suffered with other Nonconformists from the repressive policy of the Restoration, but their churches were not extinguished, and at the Revolution in 1689 the Toleration Act secured them legal standing, under rather onerous conditions, in common with other Dissenters. The enthusiasm of the epoch of the struggle between King and Parliament and of the Commonwealth was spent, and Congregationalism shared in the spiritual decline of the first half of the 18th century. It was touched, however, but slightly by the Arian and Socinian defection that made such inroads on contemporary English Pres-

byterianism. During the latter half of the 18th cent. it felt with increasing power the stimulus of the great Evangelical movement which the Wesleys and Whitefield had initiated, and experienced a profound spiritual re-awakening which led to rapid growth. County Associations were generally established between 1785 and 1810. The London Missionary Society, nominally an undenominational organization for carrying the gospel to the heathen, but increasingly Congregational in constituency, came into being in 1795. The Home Missionary Society was organized in 1819, and the Colonial Missionary Society in 1836. The year 1832 saw the formation of the Congregational Union of England and Wales. The period from that time to the present has been one of healthful growth and spiritual fruitfulness.

In Scotland, Congregationalism did not gain a permanent foothold till the last decade of the 18th cent., when it won its way as the supporter of a warm, evangelical type of piety and preaching. Its hold on the Scottish people has been relatively small, but it has proved a vigorous force in the religious life of the nation.

The earlier part of the 18th cent. witnessed a decline in the spiritual vigour of Congregationalism in America as in England. From this condition in America it was powerfully aroused by the 'Great Awakening' in 1740–1742, through the preaching of George Whitefield, Jonathan Edwards, and other promoters of the revivals. The 'Awakening' led to division of sentiment, though not to actual separation, in the New England churches—the 'Old Lights' opposing its methods, which the 'New Lights' favoured. With Jonathan Edwards (1703–1758) a great theological development began, essentially Calvinistic in fundamentals, but with no little modification of historic Calvinism. This was continued by Joseph Bellamy (1719–1790), Samuel Hopkins (1721–1803), Jonathan Edwards the younger (1745–1801), Nathanael Emmons (1745–1840), Timothy Dwight (1752–1817), Nathaniel W. Taylor (1786–1858), and others, and produced the most distinctive school of theology that America has originated. In the Revolutionary War the Congregational churches sympathized warmly with the colonial cause. The year 1792 saw the beginning of a great epoch of revivals, which continued to recur at intervals till 1858. By 1800, Congregationalism, which had been practically confined to New England, began to spread westward with the settlement of the country, and the process was initiated which has resulted in the establishment of nearly three-quarters of the present Congregational churches of the United States beyond New England borders.

By 1815 a Unitarian movement, the roots of which ran back into the 18th cent., was felt especially in Massachusetts, and resulted in a separation, which still continues, from the main Congregational body. The American Board of Commissioners for Foreign Missions was organized in 1810 to do the work indicated in its title. Home missionary work was begun by State bodies, commencing with Connecticut in 1774, and resulted, in 1826, in the formation of a Home Missionary Society of national scope. The American Missionary Association, which has laboured chiefly among the Negroes and the Indians, came into being in 1846; and the Congregational Church Building Society dates from 1853.

World-wide Congregationalism has expressed its fellowship in International Councils, of which previous mention has been made.

7. Beliefs.—Congregationalism has been a system of Church polity rather than a peculiar form of faith. In its early history it stood, in common with Puritanism in general, on the basis of Calvinism. The Cambridge Synod in New England, in 1648, approved the doctrinal portions of the Westminster Confession; and the Savoy Synod in London, ten years later, expressed a like concurrence, except for slight modifications. The 'New England Theology' of the 18th and 19th cents., whatever its departures from earlier Calvinism, belonged to the Calvinistic school. It regarded itself as an improved or 'consistent' Calvinism. The Declaration adopted by the Union of the Congregational Churches of England and Wales in 1833 is distinctly, though mildly, Calvinistic. The National Council of the Congregational Churches of the United States, held in Boston in 1865, was with difficulty prevented from adopting a declaration that the faith of the Churches was 'that which is commonly known among us as Calvinism.' The Declaration was frustrated by the determined efforts of those who deprecated any party shibboleth. But the later years of the 19th cent. witnessed a rapid decline of interest in the older doctrinal discussions. The 'Declaration' adopted by the National Council at Oberlin, in 1871, was designed by its omissions to make the way easy for those of Arminian sympathies. The 'Creed,' prepared in 1883 by a commission appointed by the National Council, maintains the same neutrality between Calvinism and Arminianism. It will be remembered that these various expressions of belief have the value only of testimonies, each local church being free to declare its faith in its own way. Since the last of them was set forth, however, the Congregational churches, in common with Protestantism generally, have been passing through a period of theological re-statement—the result of Biblical criticism, of the wide prevalence of an evolutionary view of history, of the new emphasis on the Divine immanence, and of a quickened conception of social service as a main aim of the Christian life, whether of individuals or of Churches. No body of Christians has on the whole been more willing to welcome these newer views than the Congregationalists, but the degree in which they have been accepted varies widely in different churches. It is not sufficient, however, to disturb their sense of fellowship and of continuity with their historic past, or the broad fundamental outlines of their conception of the meaning of the Gospel.

8. Worship.—The Congregational churches, at their origin, shared to the full the Puritan objections to ceremonies and vestments which seemed to savour of Romanism, and, like the more radical Puritans in general, they rejected fixed forms of prayer. They long confined the hymns of their services to rhymed portions of Scripture. It was not till the first half of the 18th cent., through the influence of the English Congregational hymn-writer, Rev. Isaac Watts (1674–1748), that this prejudice against hymns 'of human composition' gradually broke down. The typical Congregational service of the 17th cent. began with a prayer in words of the minister's own choosing, followed by the reading of Scripture, generally with comments verse by verse, then the singing of a psalm, the sermon, a second free prayer, a second psalm, and the benediction. This order was slightly modified, very possibly through the influence of the Westminster *Directory*, so that the sequence became commonly a brief prayer of invocation, reading of the Scriptures, usually without comment, singing, a 'long prayer,' the sermon, prayer, singing, and the benediction. This remained the almost universal order till within half a century, and still constitutes an approximate outline of Congregational worship. The last few decades have witnessed a large use of responsive readings, anthems, and other efforts at the 'enrichment' of

service, and the individual freedom of each congregation makes possible a considerable variety of usage. Opposition to some use of fixed forms of prayer is waning, but Congregational worship is still non-liturgical in its fundamental character. The Lord's Supper has been observed since the early days of Congregationalism at intervals of a month or two months. Till near the close of the 18th cent. Congregational worship involved two services, such as have been described, each Sunday, and in large towns a mid-week 'lecture,' which was really another sermon. About the end of the 18th cent. the 'prayer-meeting' was generally introduced for the cultivation of the Christian life—by prayer, Scripture exposition, singing, and informal addresses, under the presidency of the pastor, but with free participation by the laity. It has been ever since a feature of congregational worship, but its successful maintenance, save in times of unusual religious interest, is generally regarded as one of the most difficult of pastoral problems.

9. **Characteristics.**—Congregationalism has always favoured education, both in the pulpit and in the pew. In England many 'academies' were founded after the Toleration Act and throughout the 18th century. A number of these have become flourishing 'colleges,' their aim being to train a learned ministry and to provide the higher education for laymen which ecclesiastical tests, now abrogated, then made unattainable in the Universities. In the United States the Congregationalists have been foremost among religious bodies in planting colleges and fostering schools. The Congregational spirit has not been sectarian, however, and these institutions have been freely opened, and have not been used as a means of denominational propaganda.

Congregationalists have been greatly interested in home and foreign missions. The efforts of the Rev. John Eliot (1604–1690), begun in 1646, for the conversion of the Massachusetts Indians, led to the incorporation by the Long Parliament, in 1649, of the first English Foreign Missionary Society, the 'President and Society for the Propagation of the Gospel in New England.' The establishment of the London Missionary Society in 1795 and of the American Board of Commissioners for Foreign Missions in 1810 has already been noted.

The flexibility of Congregationalism has made it easy to try experiments in methods of Christian work, and these churches, as a whole, have always been ready to welcome novel activities which seemed to promise greater usefulness in Christian service.

10. **Problems.**—The problems of Congregationalism are those of democracy generally. That which is most pressing is how to secure efficiency without sacrificing democratic liberty. Congregationalism has proved itself admirably adapted to rural conditions among a homogeneous population of intelligence. It has been less successful in cities where contrasts in wealth and education are extreme. Each church being a self-governing, democratic community, there is always danger that those congregations in the more needy parts of a city will be unduly weak in resources both of money and of men of ability. Congregationalism endeavours, with partial success, to counteract this tendency by Home Missionary aid and superintendence. There is also the peril, in city communities, where congregations are gathered largely by elective affinity, that a church may become essentially a religious club. As in all democratic bodies, union for strategic advance is often accomplished at the cost of undue effort, or is not achieved at all. In order to make itself more efficient in these respects, without forfeiting the essential autonomy of the local church, Congregationalism, both in Great Britain and in America, is at present displaying a centralizing tendency. The advisory powers of Associations are being extended and increased, and a system of superintendency, by committees or individuals, without judicial or mandatory powers, but with large advisory influence, is in process of development. The watchword of this movement, now felt on both sides of the Atlantic, is 'a more efficient Congregationalism.'

11. **Statistics.**—In the statistics of Congregationalism only those who have become church-members by a profession of personal Christian experience are included. The figures, it is usually thought, must be multiplied five-fold to represent the total number of adherents.

In the following table only church-members are included:

Countries.	Churches, Chapels, and Stations.	Church Members.	Sunday-School Scholars.
England and Wales	4,652	459,147	675,785
Scotland	211	35,920	34,521

LITERATURE.—The literature of Congregationalism is enormous, but a substantially complete bibliography to 1879, embracing 7250 titles, may be found in H. M. Dexter, *The Congregationalism of the last Three Hundred Years as seen in its Literature*, New York, 1880. The following works will be found of special value:—

(1) *POLITY.*—Robert Browne, *A Booke which sheweth the Life and Manners of all true Christians*, Middelburg, 1582; Henry Barrowe, *A Briefe Discoverie of the False Church*, Dort, 1590; John Robinson, various treatises between 1610 and 1625, collected in R. Ashton's *Works of John Robinson*, London, 1851; Richard Mather, *Church-Government and Church-Covenant Discussed*, London, 1643; John Cotton, *The Keyes of the Kingdom of Heaven*, London, 1644; Thomas Hooker, *Survey of the Summe of Church Discipline*, London, 1648; *A Platform of Church Discipline*, etc. (The 'Cambridge Platform'), Cambridge, Mass. 1649, and twenty-five later editions; *A Declaration of the Faith and Order owned and practised in the Congreg. Churches in England* (The 'Savoy Declaration'), London, 1658, and eleven later editions; *Heads of Agreement Assented to by the United Ministers in and about London*, London, 1691, and many later editions; *A Confession of Faith*, etc. (The 'Saybrook Platform'), New London, Conn. 1710, and six later editions; John Wise, *A Vindication of the Government of New England Churches*, Boston, 1717; Cotton Mather, *Ratio Disciplinae*, Boston, 1726; Thomas C. Upham, *Ratio Disciplinae*, Portland, Maine, 1829; Woodbury Davis, *Congreg. Polity, Usages, and Law*, Boston, 1865; H. M. Dexter, *Congregationalism: What it is; Whence it is; How it Works*, Boston, 1865, also *A Handbook of Congregationalism*, Boston,

1890, and *The Council Manual for a Congreg. Church*, Boston, 1896; Edgar L. Heermance, *Democracy in the Church*, Boston, 1906. The more important documents relating to Congregational polity have been collected and annotated by Williston Walker, *The Creeds and Platforms of Congregationalism*, New York, 1893.

(2) *HISTORY.*—Champlin Burrage, *The True Story of Robert Browne*, Oxford, 1906; F. J. Powicke, *Henry Barrow*, London, 1900; O. S. Davis, *John Robinson*, Boston, 1903; William Bradford, *Hist. of Plymouth Plantation*, Boston, 1856; John Brown, *The Pilgrim Fathers*, London, 1895; E. Arber, *The Story of the Pilgrim Fathers*, London, 1897; John A. Goodwin, *The Pilgrim Republic*, Boston, 1888; Cotton Mather, *Magnalia Christi Americana*, London, 1702; Benjamin Hanbury, *Historical Memorials relating to the Independents*, London, 1839–44; William B. Sprague, *Annals of the American Pulpit*, New York, 1857; George Punchard, *Hist. of Congregationalism*, Boston, 1865–81; John Waddington, *Congreg. Hist.*, London, 1869–78; H. M. Dexter, *The Congregationalism of the last Three Hundred Years as seen in its Literature*, New York, 1880; Williston Walker, *Hist. of the Congreg. Churches in the United States*, New York, 1894; Albert E. Dunning, *Congregationalists in America*, New York, 1894; George Leon Walker, *Some Aspects of the Religious Life of New England*, Boston, 1897; James Ross, *A Hist. of Congreg. Independency in Scotland*, Glasgow, 1900; Williston Walker, *Ten New England Leaders*, Boston, 1901; R. W. Dale, *Hist. of Eng. Congregationalism*, London, 1907. An official *Congregational Year-Book* is issued annually by both the British and the American bodies.

WILLISTON WALKER.

CONNEXIONALISM.—There are many systems of Church organization in which itinerant evangelists link together scattered congregations, and maintain a strong corporate feeling by regular meetings among themselves, when they as a body arrange the sphere of work for each, and often exercise other functions of government. Such systems are usually styled 'Connexional,' and although that name is also employed more loosely, it is such systems that are here compared with one another. They flourish where a democracy, or an oligarchy, is inspired with a zeal for propaganda, and especially where a revival is prompted and supported by Bible study.

Connexional elements may be traced even in the Apostolic era, when the Apostles allotted among themselves their fields of labour, and when St. Paul and his comrades travelled widely, and kept in touch with the churches they founded, both by visits and by letters, and by delegates to supervise, such as Timothy, and Tychicus, and Titus. But the Greek churches brought over the Greek love of independence, and the Third Epistle of John shows at the close of the Apostolic age a local minister revolting against the mere presence of any visiting missionary. This tendency was reinforced by a jealousy between the officers of business, appointed primarily to 'serve tables,' and the gifted brethren, including those who were set apart to give themselves to the ministry of the word. The local administrators steadily gained in esteem at the expense of the travelling evangelists, and, when the Montanist movement failed, the reaction within the Catholic Church practically ended the career of the evangelists. They survived only on the frontiers of Christendom, and we shall see that connexionalism flourishes best in the mission stage of a church, and in communities which emphasize evangelism.

While a bureaucracy of church officials developed, on lines suggested by the Roman civil service, there was no room for connexionalism in this diocesan system. But among the laity there arose a new plan of organization, whereby those who were in thorough earnest about their Christian life put themselves under severe discipline as monks. Basil for the East, and Benedict for the West, produced bodies of rules to order the community life, and these were widely adopted. But neither the one nor the other contemplated evangelism as a leading feature; salvation of self rather than salvation of others was the chief aim. Although the Iro-Scottish monks had a loftier conception, yet they conspicuously lacked the faculty of organization, and their foundations remained isolated. Two races have displayed a genius for method and order—the Roman and the English,—and certain developments of the Benedictine scheme due to these nations show signs of connexionalism.

Thus Stephen Harding in 1119 inspired the Cistercian method, whereby the religious belonged to an Order rather than to a single House. Year by year the Abbots of the Houses met in consultation, and in theory not only the humbler members, but the Abbots themselves, could be transferred from convent to convent. Since, however, no systematic plan of rotation was adopted, or even any rule that rotation should take place, there was in practice much inertia. And as the aims of the Order did not exalt evangelism, there was no special motive for circulation.

A century later the English Benedictines moved in the same direction, but the Italians evolved farthest, producing the Silvestrine, the Celestine, and the Olivetan organizations. Instead of officers being appointed for life, they had fixed terms of duty; a General Chapter chose a nominating committee which selected them. This line of evolution culminated in 1432, with the approval of the Cassinese constitution. Details of these schemes are given by Abbot Gasquet in his Introduction to Montalembert's *Monks of the West* (Eng. tr. 1861–79).

It might have been expected that the friars would show more originality, that their ideal of brotherhood would express itself in a democratic rule, and that their ideal of service would impel them to steady organized work for others. But the movement was soon captured by the Roman Curia, and the time-honoured diocesan pattern was adopted, with the slight changes needed for definitely local groups of professed Christians instead of areas within which a professed clergy ministered to a population nominally Christian. Thus friaries were grouped into congregations under a provincial, and all were ruled by a minister-general. The Roman monarchical ideal prevailed in the plan of government.

But a similar movement, originated by Peter Waldo of Lyons, being discountenanced by the authorities, was free to elaborate its own machinery (Newman, *Manual of Church History*, i. 571–8). In 1218 a conference was held at Bergamo, when, amongst other matters, the polity came up for discussion. An annual meeting was held, usually in Lombardy, when probationers were admitted to membership after long training and testing. They made promises of celibacy, poverty, and readiness to evangelize, quite on the Franciscan model. But, once the initiate was admitted, he found himself a member of a governing corporation, which not only recruited itself and saw to the purity of the whole body, but also required reports from every part of the field, and administered the funds of the community, gathered during the year. The Lombards, indeed, with the Italian instinct, decidedly preferred a single head, chosen for life; and they favoured a general life tenure of all offices. The Germans, again, upheld the plan of Waldo, that all offices should be terminable, and that there should be no single head, but several rectors. In this matter the two parties apparently agreed to differ, maintaining their own customs and recognizing the legitimacy of each others' officers. But the unique feature is that the annual meeting had full powers, and actually exercised them in the appointment of all officers, in allotting to each member his work, and in determining its nature and sphere. To some extent this scheme influenced the Bohemian Brethren and the Moravian Anabaptists, though these bodies

adopted the Italian plan of a single head holding office for life.

In 1527 an important conference was held at Augsburg, when delegates from the 'Brethren' organized on new lines (Lindsay, *Hist. of Reformation*, Edinb. 1907, ii. 435). All the officers of all the congregations within a convenient district chose a committee of themselves to act for the group, and the committee chose a president. The districts associated on the same principle, and thus a pyramid of committees was erected. To these people, popularly known as 'Anabaptists,' is therefore due not only the machinery of a single congregation, which was presently taken over by Calvin in his *Institutio*, and put in practice at Geneva, but also the machinery for an alliance of congregations, adopted in France during 1559, and in Scotland next year, and so well known as the Presbyterian scheme. But the 'Brethren' had one feature which was dropped by the French, the Scots, and the Dutch—an order of evangelists whose business it was to travel and propagate the faith. It is not quite clear how these were appointed, or how their routes were determined—if, indeed, appointment and travelling were not spontaneous rather than systematic. And, although several conferences were held, the persecutions of the next few years were enough to disorganize any machinery.

A year after the fall of Münster, an important meeting was held a few miles away at Bockholt, when the Anabaptists of Lower Germany and England re-organized and adopted the connexional plan (Barclay, *Inner Life of the Religious Societies of the Commonwealth*, 88). Each congregation sent delegates to an annual meeting, which stationed the ministers and arranged for the support of those who itinerated, besides aiding poor congregations and members. This system was developed in the Netherlands and up the Rhine, and, though many divisions occurred,—into Mennonites, Waterlanders, Doopsgezinden, Flemings, Old Flemings, Frisians, etc.,—yet each body held to the connexional type. As most of these Connexions held the doctrine of passive resistance, and objected to bearing arms or taking oaths, they found their position extremely awkward during the Napoleonic era; and the renewed conscriptions of the last forty years have caused their practical disappearance from Europe, and their emigration to America (Barclay, *op. cit.* 243). In the New World may still be found the remnants of these ancient bodies, and of kindred organizations like the Schwenkfeldians, true to the connexional type in that the annual meeting governs; but, as the numbers have greatly diminished, the vote is exercised not by officers alone, but by all male members.

Recurring to the Reformation period, we find forty churches in Lombardy and Switzerland acting together; and a special convention was held at Venice in 1550 (Newman, *Hist. of Anti-Pedobaptism*, Philad. 1896, pp. 327–9). The Waldensian plan so well known in the vicinity had been adopted in general outline, and the government lay in the hands of the itinerant preachers, who associated with themselves candidates under training, and not only visited all the congregations, but also ordained the local ministers. These churches mostly adopted anti-Trinitarian views, and were persecuted till they left the district; but many members went to Moravia and Poland, where they spread their tenets, so that the 'Socinians' were indebted to them for hints on ecclesiastical polity as well as on doctrine.

The Reformed Churches took over from the Anabaptists the general scheme of organization, and especially the principle that, whether in a single congregation or in a court supervising several congregations, the power was vested entirely in the officers. Ordinary members might have a voice and vote in electing an elder, but his ordination rested with the existing elders, who thus tended to become a self-perpetuating caste. Ruling elders were usually local, but preaching elders or ministers were liable to move; in Germany and Scotland the authority of the State was interposed in various matters, extending occasionally to the location of a minister, and thus the autonomy of the Churches was crippled. Owing partly to the high educational qualifications of the Reformed ministry, and partly to general inertia, long tenure of a pastorate became customary, and thus one frequent feature of a Connexion was obscured. But in theory the whole spiritual government of a Presbyterian church resides with the ordained members, and they have at least a veto on any increase of their number, or on the translation of any minister; nor is his personal preference a decisive factor any more than the wish of a single congregation. While these theories are still upheld, the connexional element is not extruded, however little certain powers may be actually exercised. Yet there has been much specialization, so that ruling elders hardly rank themselves with ministers on the ground of their common ordination; and their interests are so local that they hardly consider themselves a class apart from their fellow-members, with a corporate life of their own; still less do the officers as such pursue systematically a policy of extension, a policy which seems closely linked with the vigour of connexionalism.

In England, voluntary sects were unable to organize till the general relaxation of government in 1640. Then the General Baptists, who for thirty years had been in close contact with the Waterlanders of Amsterdam, entered on a vigorous campaign of evangelism. As churches were gathered in different parts of the country, they were kept in touch, and the earliest minutes that survive testify to some plan of organization. Thus, thirty congregations in and near Leicestershire and Lincolnshire sent delegates to a conference in 1651, which stated the faith and order which they held in common: in concise terms they set forth that gifted men are set apart for preaching, and are maintained by voluntary gifts. Five years later a 'General Assembly' was held in London, attended by delegates from Surrey, Kent, Sussex, Bucks, Northants, and other parts. The constitution of the Assembly is not stated, but the minutes show two classes of superior officers: Elders are explicitly said to be local, bound to serve their own congregations for life, and having no status in other congregations; Messengers exercise a general superintendence over whole districts, but are forbidden to choose other Messengers without the unanimous consent of the Churches. The minutes are signed by ten Messengers and eight Elders (Brit. Museum, *Add. MSS* 36709).

In 1678, Thomas Grantham published a folio on primitive Christianity, and, when expatiating on the officers of the Christian Church, he put in the forefront the Messengers or Apostles, whose permanent functions were to succeed the original Apostles 'as Travelling Ministers, to plant churches, and to settle those in order who are as Sheep without a Shepherd.' These, like the Bishops (or Elders) and Deacons, were to be elected by the free choice of the brotherhood and then ordained; and it is expressly laid down that the power of ordination is not limited to those who were already ordained, but is shared by all who have received the gifts of God's Holy Spirit. Then, in discussing General Assemblies, which were proved to be Scriptural, and were therefore

held regularly by the General Baptists, not only the Messengers and Elders who signed were admitted to the meetings, but also any gifted brethren who chose to attend. The office of Messenger was evidently regarded askance by some. So, from the analogy of Timothy and Titus, it was claimed by Grantham that, while they had a larger circuit, had business in many places, and so were greater servants than the fixed ministers, yet they had no jurisdiction over other bishops (Grantham, *Ancient Christian Religion*, 186). Then, in a special treatise, Grantham showed that the actual practice of the Brethren was to 'send forth Men to act Authoritatively, both in preaching to the World, and setting things in order to remote Congregations, to exercise Discipline by Excommunication of Offenders and remitting the Penitent; by ordaining them Elders, and dispensing to them the Holy Mysteries or Ordinances' (*op. cit.* 160).

Grantham wrote on his own authority only, but probably expressed the feeling of the Fen districts —Lincoln, Hunts, and Cambridge. In the same year a meeting of the General Baptists, near Bucks and Oxon, adopted a Confession, drawn up by Monk, another Messenger, in which Article xxxix. is very explicit:

'General Councils, or assemblies, consisting of bishops, elders, and brethren, of the several churches of Christ, and being legally convened, and met together out of all the churches, and the churches appearing there by their representatives, make but one Church, and have lawful right and suffrage in this general meeting or assembly, to act in the name of Christ, it being of Divine authority, and is the best means under heaven to preserve unity, to prevent heresy, and superintendency among or in any congregation whatsoever within its own limits or jurisdiction,' etc.

In a long article, xxxi., 'Of Officers in the Church of Christ,' we see a slight difference of opinion as to the power of ordination:

The bishop or messenger is to 'be chosen thereunto by the common suffrage of the Church, and solemnly set apart by fasting or prayer, with imposition of hands, by the bishops of the same function, ordinarily; and those bishops, so ordained, have the government of those churches that had suffrage in their election, and no other ordinarily; as also to preach the word or gospel to the world, or unbelievers. And the particular pastor, or elder, in like manner is to be chosen by the common suffrage of the particular congregation, and ordained by the bishop or messenger God hath placed in the church he hath charge of,' etc. (Hanserd Knollys Society, *Confessions of Faith*, pp. 159, 160).

When after 1689 the organization comes into full light, and its records become continuous, we find not only this order of Messengers fully rooted in the esteem of the Connexion, but numerous Associations established, each of which was supposed to have one Messenger at least, while all sent representatives to the General Assembly. As everything depended on voluntary consent, the choice of a new Messenger was a matter of careful negotiation between the Assembly and the Association concerned, usually extending over more than a year, and generally the consent was sought of the church where he was a member. Ordination was by authority of the Assembly, or of the Association concerned, and was usually performed by the existing Messengers. In practice the office was maintained by voluntary subscription, which, however, was not large enough to free the officer from the necessity of supporting himself, often by manual labour. The Messenger usually resided for life within his district, and visited all the churches there freely. The order was considered superior to the Eldership, both priority and presidency being conceded. But there are no signs that the Messengers ever met together apart from the Elders of local churches, or that they acted as a corporate body. The Elders were so far from any system of itinerancy, that in 1696 it was resolved that no Elder might leave his own people and be established as Elder over another people in another place (T. Goadby, *By-paths of Baptist History*, London, 1871, p. 244). The funds of the Connexion were vested in lay trustees, on trusts so loosely expressed that the Messengers never tried to assert any legal claim to them. (The Minutes of Assembly are published by the Baptist Historical Society.)

As the Connexion lost vitality during the 18th cent., whole Associations ceased to meet, and therefore their Messengers died out, while the local churches, in many cases, asserted their independence. Then the foundation of the New Connexion of General Baptists effectually stopped the revival of the Old Connexion, and attracted some of its component parts. Yet, even at the present day, there are about a score of churches, unobtrusively pursuing their way, with their Messengers, keeping up their General Assembly, and showing still this primitive connexional system, though completely devoid of that which inspires it, the spirit of propagandism.

In the 17th cent. this organization had been copied and developed by the Society of Friends, who were also in direct contact with the Dutch Mennonite Connexion (Barclay, *op. cit.* 342). While a group of local Friends formed a church for local purposes, the provision of evangelists was clearly beyond the power of such a group. At first George Fox organized, then associations of local churches recognized, ministers and certified them as fit to travel; these then shared his responsibility, both gathering converts and organizing them into churches, even appointing the first Elders (*ib.* 388). By 1661 a regular Yearly Meeting was established in London for the whole Society (*ib.* 392). As custom became settled, it was agreed that the Travelling Ministers were *ex officio* members of this Yearly Meeting, and Fox even applied to them the term 'Apostles,' which the General Baptists also had borrowed from Scripture. The other members were to be chosen by the quarterly meetings out of the local Elders, but these did not always sit with the 'Public Labourers' (*ib.* 404). These Travelling Ministers retained for themselves the right to organize and control their own work of evangelization, which fell entirely into their hands when Fox passed away. They met regularly on Monday and Sunday to arrange where they would preach; they discussed openings for new work, and the character of those who wished to be recognized as ministers, and they kept a roll of their own membership (*ib.* 381).

The fervour of the age died down, and propagandism became of less importance, so that the Travelling Ministers lost their pre-eminence. In 1735 the Yearly Meeting forbade their meeting to control its own membership, and within twenty years they were brought under the direction of Mixed Meetings, in which the dominant element was a new kind of Elder, whose main business was to administer, not to preach. Thus, with the cessation of evangelizing came the transformation from the connexional type in the Society. The pyramidal series of courts remains, but the Travelling Ministers now form a very small element in them, and in the Society.

The general decay of the 18th cent. was met by the vigorous evangelism of Whitefield and Wesley; and, as crystallization took place, it was on the connexional system. In 1744 six clergymen and five lay preachers met, and traced the foundations of the Methodist polity; forty years later, Wesley enrolled a deed in Chancery which settled the government of the Connexion, while in the same year a Conference at Baltimore organized the Methodist Episcopal Church in America. The United Empire Loyalists laid the foundation of Methodism in Canada, while from

England other Methodists spread throughout the British dominions. Questions of Church polity, however, have been fiercely debated, and have led to many secessions in both England and America, which have only partially been offset by reunions; the very principle of these secessions calls in question the connexional scheme. As Wesley organized it, the body with supreme authority in spiritual matters was a Conference of a hundred ministers. These, however, he desired to act in harmony with the whole number of mutually recognized ministers, and his wishes have invariably been respected. Thus all questions of doctrine, of discipline, and of ministerial standing and employment, are settled by the ministers in full conclave. It was against the exclusion of other members that revolts chiefly occurred, and the resulting bodies, such as the Primitive Methodists and the United Methodists, temper their Conferences with laymen in at least an equal proportion. Even the Wesleyan Methodists now have a Representative Conference, with equal numbers of ministers and laymen meeting first and dealing with all matters of policy and finance. But here it is to be noted that the trust deeds on which chapel property is held ensure that the enjoyment is secured to the ministers stationed by the Pastoral Conference. The Methodist Episcopal Churches have moved on similar lines; but here the bishops retain their exclusive powers, and when met as a body they define the duties of each member. While an increasing deference is paid to local wishes, the supreme authority technically resides in the Conference, and in England at least the Conferences regularly exercise their powers. The itinerant system is being encroached upon by the claims of central offices or by the new system of Central Missions, in which continuity of service is regarded as important. Wesley's three year rule is also being relaxed, both in the parent body by ingenious constructions of the Deed Poll, and in the offshoots by open legislation.

The title of 'Connexion' was adopted by other bodies, such as the Calvinistic Methodists of Wales, the Countess of Huntingdon's chaplains, and the New Connexion of General Baptists. Historically these originated almost independently of one another and of other bodies, and in their gradual organization they have profited by the experience of Methodists and Presbyterians, besides steadily rejecting the central feature of the ever-present Episcopal system; thus they have given new extensions to the term 'Connexion.'

The Leicester preachers, who formed the nucleus of the New Connexion of General Baptists, had retained all power to themselves at first, and so had the Yorkshire preachers who joined with them; but soon the local officers were associated, and, when negotiations were undertaken with the Lincolnshire churches of the Old Connexion, they explicitly repudiated the office of Messenger as not of Divine institution, although they were ready to discuss its expediency. The first rules were drafted by ministers alone, who advised that the Association should be open only to ministers and elders; but the separate churches made steady efforts to secure local control by the whole body of local members. Thus in 1817 their historian summed up to the effect that they were in their discipline strictly congregational, that each society allowed no foreign control even from its own Conferences or Association, and that the rights of church members were sacred against the encroachments of their own officers (A. Taylor, *Hist. of Eng. Gen. Baptists*, Lond. 1818, ii. 468). In that year also the basis of representation in the Association was settled on such terms that the pastors were far outnumbered by the lay delegates. Twenty years later a new constitution was drafted, but was carefully emended, to ensure the independence of the churches; and the united action was reduced to the consideration of cases referred spontaneously by Conferences, churches, or individuals, to the management of the academy and of some publications, to the conduct of home and foreign missions (J. H. Wood, *Hist. of the Baptists*, Lond. 1847, p. 278). Even as regards the ministry, the advisory committee to report on applicants had equal numbers of laymen and ministers, while the ministers had no joint function peculiar to themselves. When we note, also, the disappearance of any itinerant system, it will appear that the mere name of Connexion survived the reality in this case; and since 1891, in order to establish more intimate relations with Baptists of another school, the meetings of the Association have been reduced to a mere formal gathering.

Similarly, the Countess of Huntingdon's Connexion has long ceased to show any connexional vitality, and the methods of its churches and ministers approximate to the Congregationalists. In the Principality, however, the Calvinistic Methodists have moved the other way, as is shown in their adoption of the title 'Presbyterian Church of Wales'; yet, while the ministers are ordained only with the approval of an Association, and have part of their time claimed by the whole body rather than by the local congregation, there is a feature of Connexionalism still discernible.

Many mission fields present good examples of connexional principles. Often the whole body of foreign workers are associated into a Synod or Conference, which reviews the progress of the hand, decides on plans, and allots the individual members to their departments. Rarely, indeed, do the native converts have any voice at all in such a meeting, though a native minister may have a seat in Conference as a worker. Sometimes the decisions of the Conference are subject to review by a committee chosen by the subscribers who defray the expenses, and by this feature a special complication is introduced into the connexional machinery. This power of the purse is one of the most important factors in the modification of Connexionalism. Not only may a committee sitting in Britain tend to regard the workers abroad rather in the light of civil servants, to be moved about at the will of an ecclesiastical Foreign Office; but also in home affairs a rich Methodist circuit often appears to obtain the particular ministers it wishes, even against the apparent good of the whole Connexion. Yet this same power of the purse can manifestly be used to stereotype connexional methods in the drawing up of trust deeds, so that all ecclesiastical property, buildings and endowments alike, can be placed under the control of the Conference of workers, and not of local supporters.

Another menace to Connexionalism, as to all other organizations, is the irrepressible ambition of some men to wield power. In the early days, an outside autocrat like Constantine was able to capture and transform the machinery of the Church. For many centuries within Christian circles, a steady claim to supremacy has been put forth from Rome by an oligarchy of Pope and cardinals, who have succeeded in rendering nearly every revival subservient to their concentrated rule. Nor is it needful to look outside connexional circles: the corps of ministers most readily arranges to perpetuate itself, excluding the mass of members from all direct influence; it reaches out beyond the stationing and supervising of its own members, to the control of all activity, on which it can at least interpose a veto. Such encroachments have more than once excited revolt,

and led to the formation of other bodies in which such domination is expressly guarded against. Within the body of active self-governing workers there has often arisen some commanding figure, whose actual influence extends far beyond the nominal position he holds; but such a phenomenon is equally common under any system of management, and no such leader has proved able, or even desirous, to found a dynasty which may subvert the general principles.

In estimating the permanence of the type, we have to bear in mind that details of organization are not prescribed in the New Testament, but a few principles are insisted upon as fundamental. None is more urgently reiterated than: 'All ye are brethren; one is your Master, even the Christ.' Again, the primary object of the Church is evangelization: Go everywhere, tell all peoples, enlist the converts, instruct them in the ways of Christ; such are the purposes for which the Church was called into being. Propagandism and brotherhood are thus to be inwrought in any scheme. Now, as a matter of history, every great revival of religion has been marked by an appreciation of these elements, and has fashioned its machinery on somewhat connexional lines. True, the Franciscans were brought under the control of the Curia, but the very struggle against this, and the rapid degeneracy from the spirit of Francis, show the natural relation of Connexionalism to these principles, so that the disappearance of the one imperils the existence of the other. Similarly the transformation of the connexional type among the old General Baptists and the Friends reflects the decay of the spirit of propaganda in those bodies. But the great Methodist Churches, with their firm grasp on the evangelistic purpose of their existence, and their warm fraternity, hold fast to the connexional system as the best embodiment of their principles. And whenever a revival takes place, even on a microscopic scale, it seems natural that those who are actively concerned shall meet simply as brethren to consult and arrange mutually as to the division of labour.

W. T. WHITLEY.

CONSANGUINITY.—By 'consanguinity' is meant blood-relationship, and more particularly, close blood-relationship. When we speak of a consanguineous union, we mean that the two organisms are near relatives; when we speak of a high degree of consanguinity in a herd or in a community, we mean that there has been much in-breeding or endogamy. It is desirable to know what the biological facts are in regard to the results of the sex-union of closely consanguineous organisms, but it must be admitted that clear-cut facts are few. It should also be noted that, as the range of living creatures expresses a very long gamut, we must be very careful in arguing from one level to another. What is normal and apparently wholesome at one grade of organization may not be desirable at another.

It seems to have been securely established that some hermaphrodite animals habitually fertilize their own eggs. This autogamy has been proved in some tapeworms and flukes—not auspicious illustrations; it seems sometimes to occur in the freshwater hydra and a few other free-living animals. There are numerous self-fertilizing flowers, though there is no case known where cross-fertilization is impossible. It may also be that one hermaphrodite liver-fluke sometimes inseminates another, so that the habitual autogamy may be interrupted. In the great majority of hermaphrodite animals, such as earthworms and snails, cross-fertilization is the invariable rule. It is also relevant to recall the fact that in many of the small Crustaceans, in many Rotifers, and in some insects, such as Aphides, there may be long-continued parthenogenesis—generation succeeding generation without loss of vitality, although the eggs develop without any fertilization. In some of the Rotifers the males are still undiscovered; Reaumur kept Aphides breeding parthenogenetically for over three years (50 consecutive generations), and Weismann kept females of a common water flea (*Cypris reptans*) breeding in the same way for eight years. This shows that at certain levels of organization a vigorous life may be kept up for many generations, not only without any introduction of 'fresh blood,' but without the presence of any males.

A number of careful experiments have been made on in-breeding, but there is imperative need for more. Weismann in-bred mice for twenty-nine generations, and his assistant Von Guaita continued the experiment for seven more generations, but the only notable general result was a reduction of the fertility by about thirty per cent. Some experimenters, such as Crampe, have found that the in-breeding of rats resulted in disease and abnormality, but this was not observable in the equally careful experiments of Ritzema-Bos. He in-bred rats for thirty generations; for the first four years (twenty generations) there was almost no reduction in fertility; after that there was a very marked decrease of fertility, an increase in the rate of mortality, and a diminution of size. These and other experiments on mammals, though insufficient to be satisfactory as a basis for generalization, suggest that very close in-breeding may be continued for many generations without any observable evil effects, and, on the other hand, that there are limits beyond which in-breeding becomes disadvantageous. It is certain that, if there be well-defined hereditary predisposition to disease in the stock, then in-breeding soon spells ruin.

'Extensive experiments by Castle and others [see *Proc. Amer. Acad.* xli. 731–786] on the in-breeding of the pomace-fly (*Drosophila ampelophila*) led to the general result that "inbreeding probably reduces very slightly the productiveness of *Drosophila*, but the productiveness may be fully maintained under constant inbreeding (brother and sister) if selection be made from the more productive families"' (J. A. Thomson, *Heredity*, 1908, p. 393).

Some of the histories of domesticated breeds are so well recorded that they may be ranked as carefully-conducted experiments, and it seems that some very successful breeds of cattle—such as Polled Angus—have in their early stages of establishment involved extremely close in-breeding. When we examine the pedigree of famous bulls and stallions, we find in some cases an extraordinarily close consanguinity. Valuable results have often been attained by using the same stallion repeatedly on successive generations.

From breeding experiments four general results seem to be clear: (1) that progressive results have usually followed mating within a narrow range of relationship; (2) that close in-breeding has a great utility in fixing characters or developing 'prepotency'; (3) that close in-breeding may go far without any injurious effect on physique; and (4) that, if there be any morbid idiosyncrasy, close in-breeding tends to perpetuate and augment it.

Darwin paid much attention to the question of in-breeding (see *Variation of Animals and Plants under Domestication* [London, 1868], etc.), and his general conclusions were:

(1) 'The consequences of close interbreeding carried on for too long a time are, as is generally believed, loss of size, constitutional vigour, and fertility, sometimes accompanied by a tendency to malformation.' (2) 'The evil effects from close interbreeding are difficult to detect, for they accumulate slowly and differ much in degree in different species, whilst the good effects which almost invariably follow a cross are from the first manifest.' (3) 'It should, however, be clearly understood that the advantage of close interbreeding, as far as the retention of character is concerned, is indisputable, and often outweighs the evil of a slight loss of constitutional vigour.'

From his researches on flowering plants, Darwin concluded that there was 'something injurious' connected with self-fertilization; and although he came to recognize that self-fertilization was more frequent and more successful than he had at first believed, he adhered on the whole to the aphorism, 'Nature abhors perpetual self-fertilization.' In his book on *Cross and Self Fertilisation* (1876), however, he says: 'If the word "perpetual" had been omitted, the aphorism would have been false. As it stands, I believe that it is true, though perhaps rather too strongly expressed.' The fact is that self-fertilization in flowers is for the most part relatively, and not absolutely, injurious.

In the present state of our knowledge, it seems fair to say that there is little biological evidence to show that there is anything necessarily disadvantageous or dangerous in close consanguineous unions. These seem often to occur in nature in isolated and restricted areas, and they are frequent in successful breeding. It must be admitted that evil effects *sometimes* follow prolonged consanguineous pairing in the artificial conditions of stock-breeding, but it must not be hastily inferred that these evil effects are necessarily due to the consanguinity. There may be persistence of unwholesome conditions of life which have a cumulative evil effect as generation succeeds generation, or there may be some organic taint in the early members of the stock which becomes aggravated, just as a desirable organic peculiarity may be enhanced.

Bateson expresses the view of most biologists when he says:

'It should perhaps be pointed out categorically that nothing in our present knowledge can be taken with any confidence as a reason for regarding consanguineous marriages as improper or specially dangerous. All that can be said is that such marriages give extra chances of the appearances of recessive characteristics among the offspring. Some of these are doubtless bad qualities, but we do not yet know that among the recessives there may not be valuable qualities also' (*Mendel's Principles of Heredity*, new ed., London, 1909, p. 226).

When we take into account such evidence as there is from animals and from plants, and such studies as those of Huth (*Marriage of Near Kin*[2], 1887), and the instances and counter-instances of communities with a high degree of consanguinity, we are led to the conclusion that the prejudices and laws of many peoples against the marriage of near kin rest on a basis not so much biological as social.

CONSCIENCE.—The term 'conscience' is derived from the Lat. *conscientia*, which meant originally 'joint knowledge,' or the knowledge which we share with others. It soon came to denote, however, what we mean by concomitant knowledge, that is, consciousness or self-consciousness, and only in later literature had it the meaning which we attach to 'conscience.' Even then it was not exactly what we mean by it as the arbiter and motive power in right and wrong. The Greek equivalent of Lat. *conscientia* was *συνείδησις*. This was in use by Plato and the Stoics, and denoted joint knowledge, and with the Stoics it also denoted the knowledge of right and wrong. In Cicero *conscientia* can often be translated indifferently 'conscience' or 'consciousness.' It is the same with the French term *conscience*.

It is more distinctively in modern times that a radical difference is marked between the idea of consciousness and that of conscience. Consciousness with us is a purely intellectual function, a generic term for the phenomena of mind, or for that concomitant act of mind which Hamilton has well called the 'complement of the cognitive energies.' 'Conscience' is a term with a moral import, though complicated with the intellectual, and implies an emotional content at the same time. 'Consciousness' is thus a term for Psychology, and 'conscience' one for Ethics, with the distinction, however, that consciousness is implied in the problems of Ethics, while conscience is not necessarily so implied in those of Psychology. 'Conscience' is thus a name for the function of distinguishing between right and wrong, and of enforcing the one or preventing the other. The difference between the ancient and the modern conception of it is determined by the difference between their ideas of morality, and may be said to reflect the whole difference between their ethical and religious civilizations. The morality of antiquity, in so far as it was a subject of reflexion, hardly got beyond the conception of prudence—except, perhaps, with the Stoics. That of modern times involves the idea of duty or devotion to a law which may require sacrifice. There is no doubt a perfect reconciliation between these two points of view when we come to make a concrete examination of the facts to which they are supposed to apply; but in their abstract formulæ they seem opposed to each other. In its conception of rational conduct antiquity sacrificed a proximate to a remoter interest; modern ideas assume to deny all interest or happiness, and to demand unswerving obedience to law. But when this is carefully scrutinized it often turns out to be a sacrifice of the interests of the present life to a remoter interest in a life to come. The Christian system was the originator of the phrases which came to express inflexible obedience to duty; but this system was based on the immortality of the soul, and on the rewards and punishments apportioned to the nature of one's conduct in this life. Hence, when its moral conceptions are subjected to analysis, they do not differ absolutely in kind from those of antiquity, but they take two worlds into account where the ancient took only one, namely, the present world. The difference, so far as it is a difference, was between a materialistic and a spiritualistic view of the present life, and also between merely intelligent action and such action as involved duty with personal sacrifice.

The difficulty of comparing our modern conception of conscience with that of the ancients is apparent in the philosophy of Plato. Though he used the etymological equivalent of the modern term 'conscience,' this was not the term for one of the main functions of conscience with us.

'Reason' was the function which did service for conscience, and even this was not the motive agency in the direction of the will, but the guide for other influences. The myth of the chariot with the two steeds represents Plato's conception of the moral nature. Plato's distinction was between 'rational' and 'irrational' conduct, by which he meant the distinction between intelligent and ignorant conduct. Irrational action was under the influence of desire and passion, two unruly steeds which in their behaviour never looked before and after, but rushed into action without deliberation or reflexion. Reason was the charioteer whose function it was to direct these two steeds or impulses towards an end which represented knowledge of what the subject does, instead of blind passion. In this conception, however, reason furnishes light but not power. The motive agency was in the desires and passions, and reason only gave counsel or directed them, without providing any other end than these impulses offered. It took a more spiritual age to supply an end which was distinct from that of sense and passion, and so to modify the conception which gave rise to the more modern idea of conscience. The distinction between right and wrong with Plato, and, for that matter, with all Greece, was that between the prudent and the imprudent, between what was best for the individual and what was injurious to him, and the judge of this was intelligence, not conscience in our use of the term. The nearest conception to ours was the Stoic obedience to law, a law too which sacrificed the impulses and started the reflective mind towards the later Christian doctrine. But it was still an appeal to reason, and tried to reconcile its opposition to passion by insisting upon traditional ethics in details. But other Greek thinkers conceived reason as the director, not the commander, of the impulses, and so the Greek point of view was not that of the supremacy of conscience, but the supremacy of reason, thus making prudence instead of law its standard of morality. The emotional element of conscience the ancients did not recognize. The influence which introduced this factor into the conception was partly the Christian idea of sacrifice, and partly the idea of respect for an inner law of life and conduct, suggested by the Stoic ethics, and made effective in the Christian system by the necessity of eschewing politics. This conception was explicitly formulated in later thought, and especially in the ethics of Immanuel Kant, as represented in his 'categorical imperative,' an unbending sense of duty, regardless, in some thinkers, of all consequences, and in others of pleasure and pain. Here it denotes not only the consciousness of moral distinctions, but also an impelling motive or influence towards the execution of the right and the evasion of the wrong.

The Furies, or *Erinyes* (*q.v.*), are often regarded as mythological representations of the Greek idea of conscience. But this interpretation of them is due to certain analogies with the more modern conception of remorse as a punishment for sin inflicted by conscience on the transgressor. The Furies were not inner monitors, but external agencies punishing the individual for the violations of the moral law. Remorse is an inner punisher. In the rationalistic stage of Greek reflexion there was a tendency on the part of some thinkers to give a subjective interpretation to the idea of the *Erinyes*, but this never availed to suggest to them the modern idea of conscience as a distinct function of the mind. There was no tendency in Greek thought to combine the ideas of reason, self-consciousness, and penitence for sin so as to form the complex idea which has done so much service in modern times. The consciousness of sin was not a characteristic of the Greek mind.

It was the general character of Christianity that gave rise to the new conception of conscience, and this was because it created a new morality. The Greek never got away from the secular view of things. Whatever his talk about the Divine, he associated it with the æsthetic and political view of the world; his ethical interests were confined to the present life and its joys. But Christianity extended the horizon of human hope beyond the present, and created the brotherhood of man, a new social feeling and interest. At the same time it brought a doctrine of personal salvation, based upon the idea that the present life was a probation for a better, and that man's only hope of happiness in the next life was his conformity to duty here. With this new social ideal, the extension of man's horizon of hope, and the strenuousness of his conception of duty and limited probation, the idea of morality was formed with a direct reference to a spiritual as opposed to a material or carnal world. Morality was conceived as possibly demanding a sacrifice of all that the Greek mind valued in life, namely, the world of sense, or the intellectual world of speculation—which was only the grosser sense-world a little refined. The transfer of happiness to a spiritual world forced morality to neglect that end here, and gave a very abstract meaning to duty. It also laid so much stress on the moral law, and so little on mere intellectual culture, that morality became the important characteristic of the man who was to be saved; that is to say, his morality and not his wisdom saved him. This, too, was the consequence of the democratic as opposed to the aristocratic view of social relations involved. In all, however, it substituted moral for intellectual virtues, and started civilization on a new tack, which was to make conscience more important than culture, while it gave a larger content to the conception of man's moral nature. As conduct rather than knowledge came to be the condition of salvation, the idea of conscience took root as the most important part of man's constitution, and it was appealed to not only to secure individual salvation, but also as the characteristic in man which reflected his lineage with the Divine.

The early Fathers defined conscience as the director of man's spiritual nature, and the distinguisher between right and wrong. Apparently not until Descartes did it take on the special import of an inner faculty to punish the soul for its sins. The function of remorse was recognized long before, but it took philosophic reflexion to introduce the idea into the scholastic conception of conscience. The same conception prevails in Spinoza. But this is entirely altered when we come to Kant. He identifies conscience with the function of the 'categorical imperative,' or sense of duty. Conscience, he says, is not the product of experience, but an inherited or original capacity of the soul, and is identical with the law of duty. This was equally a departure from the ancient idea that it was an intellectual function, and from the Cartesian idea that it was the after-emotion of the soul in regard to conduct. It was not, with Kant, a faculty of judgment determining means to end, or deciding when any particular course was right or wrong, but the faculty which impelled the right attitude of mind towards any course which the judgment made right or wrong. The consequence was that conscience was convertible with the inner sense of duty or the compulsory nature of the moral law.

Bishop Butler's view preceded that of Kant historically, but was much the same as that of the great German. It did not have the same development, but it reflected the logical consequence of the age toward this view. Butler expounds his conception of conscience in his *Sermons*, which are an analysis of human nature. There is a tendency to emphasize the emotional element, but the intellectual is admitted as essential to it. He says:

'There is a principle of reflection in men, by which they distinguish between, approve and disapprove their own actions. We are plainly constituted such sort of creatures as to reflect upon our own nature. The mind can take a view of what passes within itself, its propensions, aversions, passions, affections, as

respecting such objects, and in such degrees; and of the several actions consequent thereupon. In this survey it approves of one, disapproves of another, and towards a third is affected in neither of these ways, but is quite indifferent. This principle in man, by which he approves or disapproves his heart, temper, and actions, is conscience' (*Serm.* i. § 7 f.).

He is careful subsequently to insist that the function involves 'reflexion,' and distinguishes it from the appetencies or natural affections, as the agency which can give their promptings stability and rationality. The conception at this point takes on some resemblance to that of Plato, with additions from the course of Christian development. But in completing his conception of it he assigns a supremacy to conscience which is based not on its power but on its right to prior judgment in questions of right and wrong.

'Thus,' he says, 'that principle, by which we survey, and either approve or disapprove our own heart, temper, and actions, is not only to be considered as what is in its turn to have some influence; which may be said of every passion, of the lowest appetites: but likewise as being superior; as from its very nature manifestly claiming superiority over all others—insomuch that you cannot form a notion of this faculty, conscience, without taking in judgment, direction, superintendency. This is a constituent part of the idea, that is, of the faculty itself: and, to preside and govern, from the very economy and constitution of man, belongs to it. Had it strength, as it has right; had it power, as it has manifest authority; it would absolutely govern the world' (*Serm.* ii. § 19).

In respect of the idea of authority, this view is strikingly like that of Kant, but it contains an element of judgment and emotional attitude after the act which does not appear to make a part of Kant's conception. Kant starts with a law of rational action which is to hold good for all rational beings, and makes this an imperative duty which is to regulate conduct without regard to consequences or external relations and conditions. External deeds are with him neither good nor bad. The only good or bad thing in the world is a good or bad will, and any will governed by the 'categorical imperative,' or sense of duty, is moral, regardless of what the external act is. One does not need to know the means to an end or to reflect on consequences in order to be virtuous in this conception. Neither the amount of intelligence or wisdom nor the after-emotional effects of approval or disapproval have anything to do with virtue, but only the right attitude of the will and reverence for the law. The motive or mere sense of duty was sufficient to determine the whole character of conduct, and this motive constituted the nature of conscience.

Both these schools or tendencies resulted in the conception that conscience is a simple and unique faculty of the mind. This was especially indicated in the simplicity of its function in the Kantian system, and in the view that it was not a product of experience, and with the English thinkers it was further favoured by the emphasis placed upon its presence in man as an evidence of the Divine. The Kantian argument for immortality and the existence of God pointed in a similar direction, as it rested on the moral nature of man. Both schools treated conscience as an implanted power and not the result of experience, and accordingly their conception came into conflict with the implications of the doctrine of evolution. This theory attempted to derive conscience from various elements in man's social nature, and refused to regard it as an implanted and unique faculty of the mind. The controversy between the two schools was made clear by the relation of the idea of conscience to the theistic interpretation of the cosmos. The last resource of the theologian for the proof of a Divine existence had been the unique and moral character of conscience. Evolution had assumed that it had proved its claims in all other matters, and was reluctant to make an exception of conscience. It was only natural that it should so treat the question, and it was unfortunate for the theistic view of things that it seemed to stake its claims on the integrity of its argument regarding the origin of conscience.

This controversy, however, is not the best setting for the consideration of conscience. We should first see what we think it is as a fact, and we can then discuss its origin. The tendency since the rise of the controversy has been to consider conscience not as a unique or simple faculty, but as a complexus of mental phenomena organized with reference to moral ends. Instead of being made a separate faculty—the 'faculty' Psychology having been abandoned—it is considered as the *mind occupied with moral phenomena*. This enables us to conceive it as the organization of all that intelligence and feeling which are connected with the actions called moral or immoral. There was an approximation to this view in the conception of Butler, but it was concealed by the prevailing interest in other questions. But, taking conscience as a complex instead of a simple function, the present writer would recognize three general elements in it: (1) The *intellectual* or *cognitive* element, which is concerned with the perception of the means to ends, and the fact of some end which we agree to call the good as distinct from the merely true. Other mental functions are called in to estimate what shall be the good as distinct from the true, but the intellectual judgment and perceptions are involved in determining both the fact of this ideal and the necessary means to its realization, and on these means rests a part of the judgment of right and wrong. In fact, right and wrong hardly have any meaning without this conception of means to ends. (2) The *emotional* element, which is primarily the valuation of facts and things in relation to our welfare, whether they represent retrospective or prospective feelings. Hence they divide into what we shall call the *judicial* and the *legislative* feelings. The judicial feeling represents the approval or disapproval of self or actions in their relation to the moral law. The legislative feeling is the sense of duty, or 'categorical imperative,' and commands obedience as the retrospective feelings pass judgment on acts already done. (3) The *desiderative* element, or that mental state which may be called reverence, good-will, or conscientiousness, and is representative of respect for law, where the sense of duty represents a sense of compulsion often against the desires. The highest condition of conscience is that in which respect for law is substituted for the imperative which feels a struggle against natural desire.

These various elements will include all the social instincts which figure so prominently in the theories of Darwin and Spencer and the evolutionists generally. The important point, however, is that they show the moral nature or conscience to be complex and not simple. The view solves some perplexities in the evolutionist controversy. The difficulty proposed by the older view, in its effort to utilize the distinction between man and the animal in respect of morality, was that evolution could not account for this new increment in the process of creating man, and that, since it was not derived from anything like it in previous organic life from which man was supposed to be developed physically, a special creative act was necessary to account for it in man. But with the analysis of conscience into elements which may be found in all consciousness, animal or otherwise, we may suppose that the process of evolution has only organized or consolidated elements otherwise separate into a systematic tendency to act in the direction we call conscience. In this manne w may admit the uniqueness of the function, and so its distinction from animal life, while we at the same time accept the evolution, if not of the ele-

ments, certainly of the organic whole for which the term stands. The distinction as a whole between man and animal is preserved, while the identity of their elements is maintained, evolution being formative, not creative.

The consequence of this view is that conscience is no more simple than the æsthetic faculty or any other function of the mind. It receives a distinct name merely because of the importance attaching to certain fixed relations between men and their conduct. All the functions of the mind are employed in the determination of action, and it seems simple only because we are in the habit of seizing some one particular mark in the whole for denominating the process; and, in any case in which a single term is used to denominate a fact, a natural tendency arises to consider that fact a simple one. But in matters of moral character there are many mental states and many external relations involved, and so long as conscience is a term to denote the moral nature it must include all these factors.

The problem, however, of its origin is not so important as its validity as a function of mind. The perplexity created by the controversy of the religious mind with the evolutionist was caused by the original conception that its meaning and value as a function of mind depended on its origin. The assumption was that, unless it had a Divine origin, its authority was impaired. In other words, its validity was made to depend on its creative origin instead of upon its judgment of facts. The consequence was that evolution only enforced the conclusion which the theist admitted hypothetically. But once realize, as we do in all other scientific and philosophic problems, that historical origin does not determine validity, and the authority of conscience will depend on the same criteria as those which determine ordinary truths, and not upon any contingency of its remote source, whether it be a simple or a complex faculty. We do not make any other scientific truth depend on the cause of its origin but upon its conformity to facts and the law of things. It must be the same with the dictates of conscience. They are valid or invalid irrespective of the mode of their origin, and because of their relation to the welfare of the individual.

JAMES H. HYSLOP.

CONSCIENCE (Babylonian).—As is indicated in the art. CONFESSION (vol. iii. p. 825), the Assyro-Babylonians felt strongly the consciousness of the commission of sin and wrongdoing, and herein the idea of conscience appears plainly, and must have presented itself with all its force to their minds. Confession of sin, in fact, can exist in all sincerity only when conscience speaks to a man, and tells him that he is in fault—when,

> 'Sitting in lamentation,
> In bitter mutterings and *pain of heart*,
> In evil weeping, in evil lamentation,
> He mourns like a dove; tearfully night and day,
> To his merciful god like an ox he lows, (and)
> Bitter lamentation he constantly makes.'[1]

The Assyr.-Bab. conception of sin, however, differed from that prevailing in a Christian community, as the failings of a religious man belonging to those ancient nationalities might be due to causes over which he had no control—the effects of the actions of evil spirits, or the ritual uncleanness brought about by acts of forgetfulness or by the effects of illness. The disadvantage arising from this consisted in the disfavour of the gods, or of the king as the gods' representative, and there was a desire to avoid such disfavour in future by refraining from the commission of the misdeeds which brought it about. This, though not the Christian idea of conscience (including, as it does, the feeling of remorse), may have tended to bring about the frame of mind which we understand thereby, or something akin to it.

An excellent example of the heart-searchings of the Babylonians and their remorse of conscience is given by the 2nd tablet of the *Šurpu*-series. Here the afflicted man has not only to ask himself whether he has committed the sins of blasphemy, uncleanness, bribery (?) to thwart the ends of justice, used false balances, removed his neighbour's landmark, etc., but must also put to himself searching questions as to whether he has separated father and son (or other near relatives), refrained from freeing the captive, failed to enable the imprisoned to see the light of day, whether, being 'upright of mouth,' his heart was nevertheless faithless, and whether, while saying 'Yes' with his mouth, 'No' was in his heart.[1] As these queries run to about 80 lines, it will easily be recognized that the Babylonian, in his conscientiousness, was exceedingly thorough.

In fact, we may, perhaps, see in the last of the following lines something expressing the idea which the word 'conscience' contains:

> 'On account of his eye, which is filled with tears, [accept thou his] lamentation;
> On account of his troubled face, [accept thou his] lamentation;
> On account of his mind (?), from which tears depart not, [accept thou his] lamentation;
> On account of his lips, on which a bridle is placed, [accept thou his] lamentation;[2]
> On account of his hands, which rest spread abroad, [accept thou his] lamentation;
> On account of his breast, which complains like a resounding flute, [accept thou his] lamentation.'[3]

In this extract the breast, the seat of the feelings, may be regarded as the inner conscience of a man, and as practically synonymous with the heart, when used in the same sense. In the Laws of Ḫammurabi, the person who had a complaint to make was recommended to go before Merodach and Zērpanîtum in prayer, 'with perfection of heart.' 'Perfection of heart' would, therefore, seem to have been an expression equivalent to freedom from the consciousness of sin—a clear conscience. In the fullest sense of the words, therefore, the great gods of Babylonia exacted, for their favour, not only that rectitude in the sight of the world which every right-minded person desires, but also a good conscience, such as would urge one to repentance, contrition, reconciliation, and restitution when the interests of his fellow-men were involved.

Numerous inscriptions, mostly of the nature of penitential psalms and litanies, might be quoted in illustration of the above, but very little fresh information is to be obtained from them.[4] Their cumulative evidence, however, shows the Babylonians in a most favourable light, notwithstanding that the objects of their worship were the gods and goddesses of their national pantheon. Religious in the extreme, the constant aim of the believer among them was a clear conscience, without which there was no hope of happiness, but, on the contrary, pain and grief in this world, and, to all appearance, separation in the world to come from the deity whom they worshipped.

LITERATURE.—This is given in the notes.

CONSCIENCE (Egyptian).—The actual word 'conscience' does not occur in the indexes of Egyptological works—which is *a priori* a significant fact. For not only must we suppose that the word has no exact equivalent in the Egyptian vocabulary (any more than have the terms 'sanction,' 'morality,' 'remorse,' etc.), but we must also conclude that the literature of ancient Egypt has nothing to say on the subject. Of course, we find numerous writings on propriety, on duty, on everything connected with the vast domain of ethics in general; but there is nothing that bears directly upon the phenomena of conscience in themselves. Since, on the other hand, we still find most delicate manifestations of what we might call an *organized* conscience in Egypt, in its literature and religious works, we must presume that the Egyptians had quite a different conception of conscience from ours for both of the senses in which the word is used to-day. Psychologically, they connected it with very different phenomena, and with methods of perception of the 'ego' which are no longer ours. Morally, conscience was regarded as playing a part in concepts grouped in a different way from that followed by our method. Or, rather, Egyptian thought arranged the operations of the moral conscience in separate and independent categories, whereas we make them a unity. It would take too long to investigate whether this fact is due to the general inability of the Egyptians to make abstract definitions, or, on the other hand, to the method whereby Egyptian intellectual civilization originally formed the foundations of its knowledge. The latter is probably the more correct view.

These radical differences of terminology explain, at any rate, why the question has never yet been entered into in modern works of Egyptology. These speak very often of the moral culture of Egypt, but never of its conscience or of the possible formation of the same (the work of Flinders Petrie, *Religion and Conscience*, is the only exception at present; but note also the restriction made in the Literature at the end of this article). In fact, the complete absence in ancient Egypt of definition or treatment of the subject forces us to a long process of reconstruction of the Egyptian conscience by means of the direct study of whatever implicit manifestations of conscience can be seen in the whole collection of Egyptian writings. Thus, inscriptions such as a prayer, a hymn, a biography, or a copy of a deed of division or a lawsuit; or testamentary or epistolary papyri; or even magical incantations may supply a detail here or there; and the sum of such contributions may gradually make it possible to reach a knowledge of Egyptian conscience. This study is necessarily a very intricate one; but it is indispensable for our ultimate understanding of the duties and divisions of Egyptian morality, of which so much has been said. What follows cannot be any more than a first attempt, of provisional character.

It is a common thing to read that the Egyptians 'had a conscience superior to that of the other peoples of classic antiquity.' Such an expression is ambiguous. Its actual meaning, as Petrie rightly notes (*op. cit.* 86), must be that the *theoretical standards* were nowhere so well defined and apparently so high as in Egypt. The gradual development of these standards can be followed in a long historical series of documents.[1] But the study of this evolution constitutes an inquiry which belongs to moral and social history. It amounts, in short, to an attempt to disentangle the notion of the *co-ordinate* moral system, with its sanctions and its more or less successful attempts at a codification of duties—the whole being organized on the standards of which we have just spoken. An investigation of this nature must be accompanied by that of the word 'duty,' because it is connected logically with the conception of moral obligation, and with the various questions attached thereto (nature of duty, categories, origins, sanctions, etc.). This has been the treatment followed in almost all the works occupied with the word 'conscience' in general.

It appears, then, to have been a mistake to study the 'duties' of Egyptian morality in connexion with conscience, as Petrie has done (*op. cit.*); and an examination of his work shows precisely that, among the hundreds of obligations and prohibitions figuring among the duties, the majority (food tabus, ritual and sexual tabus, etc.) arise from sources quite apart from the true domain of conscience.

We must, consequently, occupy ourselves exclusively with the phenomenon 'conscience' considered by itself, *i.e.* that immediate intuition of good and bad, that inward feeling, instinctive (from its appearing innate), which shows itself contemporaneously with an action. There is in it a quasi-spontaneous disposition of the mind to make the judgment (which it forms on actions and intentions) subordinate to an idea that appears to be *sui generis*.

Applying as it does to a dead race, and to a race which has left no didactic matter of its own on the subject, our study must be cautious, and should begin by limiting our field of inquiry as much as possible. Thus we must dismiss as too wide the definition that 'conscience is the mass of intuitions as to what is good or bad,' because an apparent intuition may be an acquisition that has become so rapid by force of habit that it seems instinctive (either by individual education or by hereditary transmission of the tendency). This suggests the subject of physical movements (*e.g.* 'struggling' movements) which seem instinctive, but are not necessarily innate. Petrie (*op. cit.* 92) shows very clearly that similarly the body of intuitions which we call conscience is the accumulated heritage of centuries. Not one of the apparent 'intuitions' brought to light by Egyptian writings can be classed with any degree of certainty among the primordial phenomena. They must be studied as one of the fundamental elements of a social morality composed of all the individual consciences brought together, and it belongs to ethics to investigate how heredity has impressed them little by little until they have the force of instinct (cf. A. Leroy, *Religion des primitifs*, Paris, 1909, p. 211).

Thus limited, the question comes to be whether there is in the body of Egyptian literature a means of defining the *initial* element (we must avoid the words 'innate' and 'acquired'), or the *earliest possible* elements from which the Egyptian moral conscience seems to proceed. In a question of this type, if we do not want it to extend indefinitely, it is a good method of procedure to apply to Egypt the principal theories relating to the origin of conscience among primitive peoples, and to investigate whether what we know of Egyptian religion and ethics agrees with them.

At the very outset, it seems certain that the Egyptian conscience cannot be brought into connexion with the Divine world of the nation. The literary expressions employed in the question as to 'whether conscience is the herald of the Lawgiver or the Lawgiver Himself' have no precise meaning here. If we can prove that social morality is the product of the body of individual

[1] Especially if we use documents very much neglected as a rule, such as: the 'Negative Confession' of the Roman era; the 'Duties of the Governor' (Rekhmara inscription), and, generally, the biographies of the first Theban empire. Hitherto we have made too exclusive a use of the celebrated ch. oxxv. of the Book of the Dead and of the 'Treatises on Wisdom' (inaccurately called 'Treatises on Morality').

consciences, and show the initial separateness of morality and any given religious system, we see that this separation naturally affects the origin of conscience. Now this separation of morality from religious beliefs has been attempted time after time, since Tylor, in all the religions of uncivilized or semi-civilized peoples. But nowhere is this phenomenon more scientifically clear than in Egypt, where, from the time of the pre-historic texts of the Funerary Books to the Roman Empire, the accession of the gods to the domain of morality was a slow process. Right down to near the latter period, Osiris was almost the only god connected with a moral idea (Ptah of Memphis is *perhaps* an exception, if we judge by the latest discoveries, in his temples, of stelæ to the name of 'Ptah who hears the plaint of the wretched' [cf. Petrie, *Memphis*, i., Lond. 1908, p. 17 ff.]). The other gods neither prescribed nor taught anything of morality. They only punished those who did them wrong, and blessed their benefactors. It may even be remarked, as one of the strongest characteristics of Egyptian religions, that this neutrality of the gods persists throughout the whole domain of ethics.

The systems which base conscience on 'sympathy' seem incapable of explaining its manifestations in Egypt. Not one of the texts of the monuments, *e.g.*, or of the moral or popular literature, makes any mention of, or even allusion to, anything of the nature of the Shinto doctrine of *kami*. In Egypt, 'to follow the dictates of the heart' would lead to very different results from those of a fundamental concept that 'the heart is good.' On the contrary, the total impression given by Egyptian writings may be summed up in two remarks which do not favour this system. (1) We find a great lack of those ideas which are often regarded as indications of the 'sympathetic' origin of conscience. These are the feelings which are usually qualified with 'temporary sanction,' and are called the pleasure and joy of doing good, and the remorse, regret, and repentance for evil-doing. Inversely, certain chapters of the Pyramids and the Book of the Dead, and certain reflexions of the popular tales, offer lamentable analogies, in point of 'sympathy,' with the present mental status of the very lowest races among those studied in the Congo (cf. *Notes sur la vie familiale et juridique de quelques populations au Congo Belge*, ser. iii. fasc. i. [Brussels, 1909]). (2) The study of 'sanctions' properly so called (of very different kinds, of course) reveals an *organization* (*i.e.* a *formation*) which shows its connexion with fundamental elements that are quite different, and perhaps even totally opposite.

The history of this will be examined elsewhere (see ETHICS). Here, however, we should note this tangle—at first sight inextricable—of the most various fundamental sanctions. The lowest of these are based on violation of 'tabus,' and have no possible connexion with any moral action whatever; the others show themselves as consequences, conceived from a utilitarian point of view (and recognized as such *by experience*), of incoherent series of actions which are not arranged in any kind of rational groups. We see this in the absolute and persistent inability of the Egyptians to compose any kind of reasonable list of sanctions. All that we find (Treatises on Wisdom, Book of the Dead, Maxims, Proverbs, Instructions, etc.) are lists formed in reference, not to classes of duties, but to the individuals or forces whence these sanctions proceed: the gods, chiefs, the dead, the family. Sometimes, indeed, there is a suggestion of the motives of command or prohibition. But then we find a vast confusion: the career, renown, long life, the gratitude of men, business gains and losses, eschatological conditions, reciprocity, etc. Few documentary sources give the idea of a moral conscience with any other basis better than that of 'innate goodness' or 'sympathy.'

The *innate* appreciation of right and wrong, which many regard as the irreducible, constitutive element of the moral conscience, seems at first sight a good theory for Egypt. There is probably no other ancient literature so impregnated with ideas of right and justice. Discourses like the one supposed to be addressed by the king to his vizier on the duties of the guardians of justice (cf. Newberry, *Rekhmara*, Lond. 1900, p. 33), the statements of ch. cxxv. of the Book of the Dead, and especially the constant references of the biographical inscriptions to equity and hatred of wrong in all its moral and social forms, would seem to picture the very inmost mental state of the race. A critical examination of the texts, however, makes this tempting hypothesis untenable. In eschatology, we find that the idea of 'retribution' or that lofty idea of the 'average of years of good fortune' (cf. Griffith, *Stories of the High Priests*, Oxford, 1900, pp. 41–66) is of very late appearance, and the most perfect injustice preceded it, for—as has been noticed—the famous 'Negative Confession' confines itself to a magical affirmation without proofs. Finally, the moral concept which it supposes in relation to the actions of this life is not ancient in respect of its insertion in the Book of the Dead; there is no getting over the plain fact that, while we have for several years been in possession of about two hundred specimens of the Book of the Dead of earlier date than the XVIIIth dynasty, we have not *one* containing a single line of the only moral chapter of this literature. It is the same with the ordinary inscriptions, where the development can be followed from the *mastabas* of the IVth dynasty. Right and wrong do not appear at first except in the form of affirmations of the lawful ownership of various goods, or the absence of wrong done to those things of which the deceased has need—which is quite a different thing. Even reducing it to its humblest form (as conceded, *e.g.*, by Réville, *Prolégomènes*[3], Paris, 1881, p. 276), we cannot reach the evidence of a primordial, irreducible element, consisting of an *innate* feeling of right, for any one of the ancient Egyptian cases. On the other hand, it is not easy to find satisfaction in a system like that taken up lately by Leroy (*op. cit.* 205), which posits at the outset an irreducible *innate* idea of right, while admitting the infinite and contradictory variety of practical applications. It is an evident paralogy to make, from the establishment of a connexion by mental operation, an entity existing by itself. The philological examination of the texts that one would apply to this special exposition might arrive some time at the evidence of the primitive confusion of the notions of goodness and utility, but never at an abstract conception of right; such a process would lead rather to conclusions remarkably like that suggested by the examination of the moral ideas of the races recently examined in Equatorial Africa, in the basin of the Congo, or in British East Africa.

Petrie's conclusion is the theory of *utility* brought to perfection by heredity (*op. cit.* 88).

His views may be summed up as follows: The conscious idea of right and wrong conforms at its basis with what is useful or the reverse for the community. Passing centuries have gradually done away with this idea, and have imposed on the individual, and thereafter on his descendants, respect for it (if not intelligence); so that his manner of appreciating it has, like hereditary movements, become instinctive. In fact, the primitive reasoning of the ancestor has been transmitted to his posterity in the form of propensities to conscience.

This theory of Petrie's is a remodelled form, to suit Egypt, of the conception that we find elsewhere in all sorts of analogous forms; *e.g.* 'le précepte devient axiomatique dans la conscience par hérédité' (Réville, *op. cit.* 276); or the elementary principles are 'l'utilité, l'opinion, les sentiments affectifs, l'hérédité' (G. Le Bon, *Premières civilisations*, ed. 1905, p. 95), etc. The whole idea seems well adapted to the Egyptian world, so well organized in all its workings for social co-operation and utility.

But this is a narrow basis, and must be broadened. Such a system does not explain why Egypt, having the same constitutive elements of conscience as the other African peoples, should have developed its moral conscience further than

they. A more precise and intricate mechanism must be found, and can be found—in the present writer's opinion—in a careful examination of Egyptian literature. A total of 500 or 600 proverbs, maxims, precepts, ideas, or thoughts of a moral type, extending from the IVth dynasty to the Christian era, will suffice for this inquiry, the business of which is not to define the idea of duty or its working out (see ETHICS), but to find the elements of formation of what we call conscience *in Egypt*. The development of the utilitarian and social datum will appear as the result of the combination of two chief elements.

The first consists essentially in the feeling that there is no indifferent action, and that every action has consequences for its author. This idea is by no means of the same nature as that of right and wrong. It is not even the idea of responsibility, but it contains the latter in embryo. It also includes the future idea of *reciprocity*, applied to the doer of the action. It thus reduces itself to the form: 'If I do this, the same will be done to me (or will happen to me)'; then to the form: 'I shall not do that, so that the same may not be done to me (or happen to me).' A comparison of the mentality of the black African of to-day with the Egyptian texts makes it possible to hold that this idea of the necessary consequences of every good or bad action is a truly innate idea, or, if not innate, at least the most primitive instinctive idea that can be found. It does not presuppose, so far as appears, a developed intelligence or a long education. The African—to continue our illustration—is surrounded by an infinite number of forces and spirits of such importance that every human action and movement affects them, for good or ill—we might almost say, most often for ill. And this pessimism, rightly remarked as a characteristic of the African mind, is still visible in Egyptian literature. The action, with its consequences, agreeable or harmful or displeasing to one or other of those innumerable spirits and forces, begets the immediate perception of a good or evil consequence for the doer. This is clearly seen in the case of numerous interdictions of a ritual nature, or in the mysterious vengeance of spirits and gods offended unawares, or in violent deaths. The famous ch. cxxv. itself, looked at from this point of view, shows itself to be composed from the very same elements as those of a Kavirondo or Ubangi native's conscience. And the idea that other men, neighbours and fellowmen, are linked, by their death or by their guardian-spirits, to this sum of mysterious forces brought into motion by every action, seems to have supplied the natural means for the extension of this primitive feeling.

Whether the original mental operation is *innate* or not will not be discussed here. The positive fact is that what, in every case, is described as the first manifestation of the feeling of conscience among the 'non-civilized' Africans is at the foundation of Egyptian mentality. Experiment naturally gave this feeling definiteness and precision, and, low as we may judge it from the moral point of view, it started a great forward movement on the day when it became the idea of *necessary reciprocity*, attached to the actions or intentions. We can still detect that stage very clearly in Egypt (especially in the popular tales), when this idea is embodied in the vague form of a sort of 'fatality,' whose consequences man lets loose by his own action. It is only later, and in a very imperfect form, that this mechanism is connected with precise interventions: (1) with the dead as punishing or rewarding (cf., *e.g.*, the expression 'your gnds [*i.e.* your deified dead] will bless you if you do,' etc.); (2) with the guardian-deities of the dead. And yet, even in historic times, the perception of the results of the evil action is attached to forces that are quite vague and undefined, such as chance, misfortune, and accident. These are the survivals, modified by time, of the 'spirits' of the most ancient Egyptian beliefs. Never have national religions been able to rise higher.

If we find at the base of Egyptian thought first fear, and then, with progress, the idea of personal responsibility, we must demonstrate why finally this sort of 'conscience' later developed so differently in Egypt and among the African peoples of whom we have been speaking. A second factor came into play, which was indispensable to the evolution, and it seems that it was this factor which organized the Egyptian conscience, with its special traits, with its imperfections—but also with its nobility. The second element consists very probably in the idea of order, or the idea of the harmony of the world—later designated by the word *κόσμος*. The first knowledge of 'order' in the progress and forces of the world naturally began as purely material order, in the domain of physics and geography. We have explained in art. CALENDAR (Egyptian) the important part played in this question by the observation of the stars, and the idea that the Divine influences of the stellar powers governed the world. As the heavenly vault set the example of order, and directed events on earth, the knowledge of the laws and harmonies of the sensible world followed. A relation of this kind between the astral world and the earth seems to have been made very much more natural in Egypt by the character of the climate, in which the regularity of certain rhythms and the well-defined character of certain opposites were noticeable (the periodicity of the Nile's rise, the fixity of the seasons and winds, the contrast between the desert and the valley, etc.). The knowledge of this supposed co-relation helped the Egyptians to establish the first ideas of the correspondence that could exist between this regular rhythm of the material world and the individual efforts of men to associate their own activity therewith in a beneficial manner. Hence arose a more and more clear comprehension of the identity of what is useful for man with what is indicated by the order of astral powers. Such a conviction must in its turn engender gradually, as the foundations of intuitive conscience, the ideas of the necessity of all uniting together for the common struggle, of the necessity of solidarity, of the superiority of the general interest over the particular, and of the dependence of the individual upon the community.

The whole question, then, in the special case of Egypt, turns upon the theory that the origin of conscience 'se rattache aux efforts faits par l'homme depuis la préhistoire pour se civiliser par la coopération et la solidarité' (G. Le Bon, *Origines*, 1906, p. 191). But, instead of general hypotheses, we have here documentary evidences of this evolution; *e.g.* in the very frequent references in the ancient texts to the important rôle, from a moral standpoint, filled by the questions relating to water, irrigation, and the struggle against the desert (cf. ch. cxxv. of the Book of the Dead; certain passages in the panegyrics of the lords of Syut in the Xth dynasty; or of Beni Hasan in the XIIth, etc.). The idea of a higher authority and an earthly hierarchy being necessary in this world, as they are in the celestial world, for the common good, is also a result of a conscience based on the vision of the *κόσμος*; this vision has likewise impregnated all the literature of the 'moral' type.

In conclusion, from the vague fear common to all primitive societies, the nature and climate of Egypt developed the more fertile and definite idea of an arrangement of the forces and beings of the sensible world into regular armies, some of which are man's allies and preside over the progress of the world, while others try to harass the world and so hurt man. The comprehension of consequences was followed by the comprehension of the necessity of social order, the comprehension of social interest, etc. Owing simply to its complex origin, Egyptian conscience never succeeded, in its reasoned elaboration of duties, in separating ritual *tabu* from the obligation of the moral domain. These were for the Egyptian two different forms of the necessary co-operation of men for the maintaining of the order requisite to society.

A satisfying counter-proof of this view is supplied by a comparison with a certain number of living races in the uncivilized parts of Africa. It might be concluded that the degree of organization of the moral conscience in Africa is

usually proportionate to the clearness of the conception of order in the terrestrial world, meteorological or astronomical (cf., *e.g.*, the comparative series of the collection of *Monographies descriptives* by Van Overbergh, Brussels, 1907 ff., with what is said of the Bavili and of Benin by R. E. Dennett, *At the Back of the Black Man's Mind*, London, 1906, and *Nigeria Studies*, 1910, for the various manifestations of conscience among these peoples).

The Egyptian idea, then, ends in something very analogous to the statement of Chinese wisdom, that the natural order of the world is bound up with its political, social, and moral order, and is even quite identical with it. Only—in spite of passages of certain texts—the Egyptians do not seem to have been able to formulate this view with the same theoretical clearness. It is in any case curious to notice—and here we have probably more than a simple coincidence—that, just as the sanctions of Taoism in China are of late date, so in Egypt the organization of *definite* sanctions (rewards and punishments in permanent categories) did not appear until well after the actual organization of the moral conscience.

The history of this organization will be discussed in art. Ethics. We need only observe here (1) that the material κόσμος has become harmony, equity, and moral and intellectual truth by a series of evolutions which can be shown philologically by the series of Egyptian texts, and that this series is analogous to the series which has gradually transformed the data on the human voice, cry, or vibration, into concepts where the word 'voice' is taken to mean the spoken word, and then becomes the equivalent of λόγος; and (2) that the appearance of the moral conscience, based on the comprehension of the κόσμος, does not in any way assume the attribution of a properly so-called moral character to the beings or forces directing the κόσμος. These simply did their own work in this world, without ever making any express demand upon the Egyptian's co-operation; and the latter simply sought, for his own good, to bring his efforts into harmony with those of the directors of the supposed order. Hence he derived, among innumerable other acquisitions, a certain number of ideas on conscience, morality, interdictions, obligations, etc. A significant fact in this respect is that, in the majority of cases, the sanctions of these obligations and interdictions are tacked on to all possible kinds of beings and things, except beings of a Divine character.

Literature.—As was said at the beginning, the only work really dealing with the subject is W. M. Flinders Petrie's little book, *Religion and Conscience in Ancient Egypt*, London, 1898. Even here we must observe that the real question of conscience is treated only on pp. 86–109, the rest of the book being practically given up to a summary of Egyptian mythology (pp. 1–85), and an examination of the various categories of duties (pp. 109–163). George Foucart.

CONSCIENCE (Greek and Roman).—I. *Greek.*—1. **Definition.**—Conscience operates when the individual passes an intellectual judgment on definite acts, accomplished or purposed, of his own, and decides whether these acts are right or wrong. Such judgments, being self-regarding, are always accompanied by self-satisfaction, or self-dissatisfaction, according as the individual feels he has fulfilled, or fallen short of, the moral law; conscience punishes or approves, deters or suggests. It has an intellectual side and an emotional side; it may be enlightened or the reverse, sensitive or the reverse. Its enlightenment is to be estimated by the moral ideal of the individual; he may obey the moral law through fear of punishment here or hereafter; through hope of reward here or hereafter; or simply in order to realize the ideal self. The most educated conscience is that of the man who has the highest ideal, who wishes to realize the best life of which humanity is capable. The sensitiveness of conscience depends partly upon heredity, and partly upon habit and training. Some people naturally feel their shortcomings more acutely than others, while indulgence in vice always tends to lessen the shame felt at such indulgence.

2. **Homer and early times.**—Although there is embedded in the Greek language the notion, in later times developed by philosophers, that virtue and sin have an intellectual side (Homer's phrase for 'versed in wickedness' is ἀθεμίστια εἰδώς, 'knowing lawless deeds' [see, for example, *Od.* ix. 189, 428, xx. 287]), yet the most common moral terms used in early times refer to the emotional side of conscience. In Homer we have: (1) αἰδώς (αἰδέομαι), used of those who feel reverence towards the gods (*Il.* xxiv. 503; *Od.* ix. 269, xxi. 28), towards suppliants or guests (*Il.* i. 23, 377, xxi. 74, xxii. 419; *Od.* iii. 96, iv. 326), or of those who inhibit their passions in order to realize some higher end (*Il.* v. 530, vi. 442, vii. 93, xiii. 122, xv. 561, 657, 661, xxiv. 44; *Od.* iii. 24, vi. 66, 221, viii. 172, 324, 480, xiv. 146, xx. 171). The substantive may be rendered 'shame at offending gods or men,' 'respect for the moral rebuke of others,' 'modesty,' 'sense of honour,' 'self-respect.' (2) If αἰδώς sometimes approximates to the 'lawgiving conscience' which precedes an act, αἰσχύνομαι (*Od.* vii. 305, xviii. 12, xxi. 323) generally represents the shame (or the fear of it) inflicted by the 'judging conscience,' although it is not always possible to distinguish between the terms. (3) The indignation felt by others at transgression is represented by νέμεσις (*Il.* vi. 351; *Od.* ii. 136, xxii. 40), but occasionally νέμεσις is self-regarding (*Od.* ii. 64, 138, iv. 158; *Il.* xvi. 544, xvii. 254), and on one occasion (*Od.* i. 263) θεοὺς νεμεσίζετο means 'he stood in awe of the gods.' (4) A feeling of reverence for the rights of humanity is expressed in *Il.* xviii. 178 by σέβας, and in *Il.* vi. 417 by the verb σεβάσσατο.

The moral sanctions of the Homeric Greek were thus (i.) fear of the gods, (ii.) respect for public opinion (φάτις ἀνδρῶν, *Od.* xxi. 323), and (iii.) self-respect (Helen calls herself 'a dog,' *Il.* vi. 356), and a sense of honour which sometimes led to deeds of heroism. Achilles would rather die than fail to avenge his friend Patroclus (*Il.* xviii. 95 ff.)—an instance of devotion to duty which Socrates, in the Platonic *Apology* (28 C D), quotes with strong approval. Conscience, in fact, was acting, although as yet no special word existed to represent it, while the intellectual side was less developed than the emotional.

3. **Individual merged in the citizen.**—The characteristically Greek respect for public opinion found freer scope as city life developed, and as State discipline became the chief educator of the Greek people. The citizen looked upon morality as submission to the will of a corporate body. 'We lie here in obedience to our country's commands,' was the epitaph of the noblest heroes that Greece ever produced. The law, in fact, was invested with a peculiar sanctity of its own, and the individual found moral satisfaction in yielding implicit obedience to the powers that be; in modern language, he surrendered his conscience to the general conscience, and was content to be guided by the latter. Plato (*Crito*, 51 E) makes Socrates personify the Laws, who point out that every citizen has virtually agreed to abide by them, and not to prefer his own sense of right and wrong. That such was the belief of the historical Socrates is shown by Xenoph. *Mem.* iv. iv. 12, where τὸ νόμιμον is equated with τὸ δίκαιον. It was generally felt that the vast majority of men needed some strong external constraint. Hesiod (*Works*, 182 ff.) dreads the departure of moral fear from the earth, and the Platonic Protagoras (*Prot.* 322 B C) calls αἰδώς and δίκη the bonds of political and social life. The language of Æschylus is stronger still. 'Who,' asks Athene (*Eum.* 699), 'is righteous if he fear nothing?' In a remarkable passage of the *Ajax* of Sophocles (1073 ff.) it is stated that φόβος and αἰδώς are a necessary defence to both States and armies; that only δέος and αἰσχύνη can bring a man safety. Plato, in a yet more striking passage (*Laws*, 699 C), makes φόβος and αἰδώς responsible for the Athenian victories over Persia. The

Athenians, he says, had a despotic mistress in *αἰδώς*, through whom they were the willing slaves of the laws (698 B), and those who would be good must be similarly disciplined.

4. Unwritten laws.—But, in spite of the tendency to merge morality in legality, the Greek was aware that the individual ought to form moral judgments for himself when the laws were silent. The jurymen at Athens swore to decide suits according to the laws, but, when these were no guide, to judge the case conscientiously (*γνώμῃ τῇ ἀρίστῃ*, Aristotle, *Rhet.* i. 15. 5; cf. Æsch. *Eum.* 674). Again, the Greek acknowledged certain great 'unwritten laws,' of which Socrates (Xenoph. *Mem.* IV. iv. 19 f.) mentions four—to worship the gods, honour parents, avoid incest, and repay benefactors. Occasionally the unwritten laws might clash with those of the State; then the individual must decide between them. The tragedians are constantly depicting situations in which a character has to choose between the traditional code and some higher moral end. Philoctetes is a good example, while Antigone readily faces death rather than obey the edict of Creon, and, by leaving her brother unburied, violate the unwritten laws.

5. Decay of State discipline.—It is remarkable that the notion of conscience was more clearly apprehended just at the time when the morality of the masses began to decline, that is, during the period subsequent to the outbreak of the Peloponnesian War. The reason is partly that, as the State discipline slackened, the vicious and weaker characters, no longer having so firm a check upon them, grew more immoral, while the stronger and nobler natures (not necessarily the philosophers) learned to obey an inner law of righteousness. But the latter were comparatively few, and Plato, in the second book of the *Republic*, repeats the story of Gyges' ring in such a way as to show his own belief that the many are incapable of being virtuous for the sake of virtue.

6. Decay of State religion.—Not only the State discipline, but the belief in the State religion, had by this time lost much of the power it once possessed. Few thinking men continued to believe in the existence, let alone the providence, of Zeus, Apollo, and the other Olympians. The story told by Herodotus (vi. 86) of Glaucus and the Delphic oracle illustrates how the State religion had once been, in some respects at least, a good moral influence. When, however, the Divine sanction failed to exert effective control, the individual conscience more clearly manifested itself. In yet another way did the decay of belief in the Olympic pantheon further the development of the idea of conscience: the early Greek had thought, with a strange inconsistency, that the gods both tempted men to sin and punished sin; at first he blamed the gods for leading him astray; then, deprived of this excuse, he began to blame himself.

7. Other components in Greek religion.—But there were other and more abiding components than Olympian worship in the religion of the Greeks. One should note the *φαρμακός*, or scapegoat, mentioned by Hipponax (frag. 4 ff., ed. Bergk) and Aristophanes (*Frogs*, 733). Fear of spirits (probably Pelasgian in origin, as it is not to be found in Homer), especially dread of a murdered man's ghost, gave rise to the ideas of an avenging deity (*ἀλάστωρ*), and of blood-guilt (*παλαμναῖος, προστρόπαιος, ἐναγής*). The latter might infect a whole family, or even a State (Thuc. vii. 18). Doubtless at first the infection (*μίασμα, μύσος*) was regarded as something material, to be cleansed by expiatory ceremonies, or it might even be personified (Furies, *μητρὸς ἔγκοτοι κύνες* [Æsch. *Choeph.* 1051]); but in time the doctrine was spiritualized. Xenophon (*Cyrop.* VIII. vii. 18) speaks of the fears that the souls of wronged persons bring upon murderers, and of the avenging spirits (*παλαμναίους*) which they cause to visit the unholy; while Euripides interprets the Furies of Æschylus as the stings of conscience (*Orestes*, 396).

Orphism introduced the doctrine that the soul was exiled from heaven because of sin, and that reunion could be achieved only by purification. In Homer the gods lead men to transgress, but Orphism taught that guilt arose from man himself. Abstinence and rites were the Orphic means of cleansing; but, however degrading this teaching might be in unscrupulous hands (Plato, *Rep.* ii. 364 E), it was possible to give it a spiritual interpretation (*νηστεῦσαι κακότητος* [Empedocles, 406, ed. Karsten]), and it most certainly helped to foster a sense of sin. The doctrine of *ὁμοίωσις* (becoming like unto God) is Orphic in origin, and gave to the world an ideal which increased in moral value as the idea of the Divine nature was purified and ennobled. According to Orphism, man was good and bad, Divine and human. The realization of man's dual nature must have tended to develop the individual conscience. In the Pythagorean sect, which owed much to Orphism, examination of the conscience was enjoined (according to C. Martha, *Études morales sur l'antiquité*, 1883) from early times, and in the *Hippolytus* of Euripides we have an Orphic who is horrified at the suggestion to commit a sexual offence. In the history of morals the idea of physical impurity generally precedes, and leads up to, the conception of a guilty soul.

8. Morality and the human heart.—Whatever the origin may have been, the 5th cent. witnessed the development of the idea that the human soul (*ψυχή, φύσις, φρήν, νοῦς*) is the supreme judge in the sphere of morality. The mere fact that philosophers like Xenophanes criticized the Homeric theology on moral grounds, shows that they regarded human nature as superior to religious tradition. This thought is specially prominent in the plays of Euripides. The *Ion* is an angry protest of the human soul against a conscienceless god who ravishes maids and leaves them to their shame (*Ion*, 892; cf. 880). The heart of man is considered by Euripides to be the seat—possibly the source—of virtue and of vice. Chastity is said to reside in the human *φύσις* (*Bacchæ*, 314, 315, *Hipp.* 79, *Tro.* 987, 988); Theonoë (*Hel.* 1002, 1003) has a 'mighty shrine of righteousness' in her *φύσις*; the unhappy Phædra exclaims, 'My hands are pure; the stain is on my soul' (*Hipp.* 317). Conscience the lawgiver and conscience the accuser are both manifest in these dramas. The countryman in the *Electra* is too honourable to consummate the marriage which has been forced upon Electra; Macaria goes voluntarily and readily to an awful death in order to save her kindred; Orestes is tormented by the consciousness of matricide. Like many other men of a sensitive moral nature, Euripides is painfully aware that the times are out of joint; oaths are no longer sacred, and *αἰδώς* has vanished from the earth (*Medea*, 439). This dramatist, perhaps more than his great predecessors, admired the beauty of self-sacrifice; Alcestis and Macaria are worthy successors to Prometheus and Antigone.

The Greek of the 5th cent. was thus fully aware of the working of conscience, and he began to use special words to describe it. These laid stress, not upon the emotion which follows a judgment of conscience, but upon the intellectual character of that judgment. One word is *σύννοια*, 'deep thought' (Eurip. *And.* 805), which does not appear to have become popular in the moral sense. Another is *σύνεσις*, 'understanding,' used by Euripides to describe the remorse of Orestes (*Or.* 396), by Menander (fr. incert. 86, Meineke), who says that 'conscience doth make cowards,' and by Polybius (XVIII. xxvi. 13). The last passage is to this effect: 'There is no more terrible witness, or more formidable accuser, than the conscience that dwells in each man's soul.' But the most

common term is the verb *σύνοιδα*, with its participial substantive *τὸ συνειδός*, meaning either (*a*) 'to be cognizant,' or (*b*) 'to share in the knowledge of another.' This verb expresses at once the intellectual character of a judgment of conscience and the dual nature of human personality. It is impossible to decide when the term first acquired its moral meaning, but it is used of a clear conscience by Sophocles (*ap.* Stob. *Flor.* xxiv. 6) and (with a negative) by Plato (*Rep.* 331 A, *τῷ μηδὲν ἑαυτῷ ἄδικον ξυνειδότι ἡδεῖα ἐλπίς*), and of a guilty conscience by Euripides (*Or.* 396) and by Aristophanes (*Wasps*, 999, *Thesm.* 477). Stobæus has collected a number of passages dealing with *τὸ συνειδός* in his *Florilegium*, ch. xxiv., and it is interesting to note that he attributes to Pythagoras an exhortation 'to feel shame most of all before oneself,' and the statement that conscience deals more cruel blows than the lash. We are reminded that the Pythagoreans laid stress upon self-examination, not as an exercise of memory, but as a moral discipline.

One other word for conscience may be noted here. A scruple is sometimes called *ἐνθύμιον*, 'something lying heavy on the heart' (Herod. viii. 54; Thuc. vii. 50; Antipho, *Tetral.* ii. 1, 2, 4, 9; Soph. *Œd. Tyr.* 739; Eurip. *Her. Fur.* 722).

9. **Shame before the self.**—A clearer distinction now begins to be drawn between the shame which results from fear of punishment or disgrace, and the shame which accompanies loss of self-respect. Democritus, a profound moralist without an ethical system, looks for happiness in serenity of soul (fr. 9–11, ed. Natorp). Sin should be avoided, not through fear, but because it *ought* to be avoided (*διὰ τὸ δέον*, fr. 45). Even when alone, a man ought not to do or say anything base. He should be ashamed before himself rather than before others (fr. 42). He should no more do evil when nobody will learn about it than when everybody will do so; it is best to reverence oneself (*ἑαυτὸν μάλιστα αἰδεῖσθαι*, fr. 43). The Attic orators not only emphasize the uneasiness of conscience resulting from the fear of discovery, but also extol the life that is free from self-reproach, although the two ideas are sometimes combined. Antipho (*Tetral.* i. 3, 3) mentions as moral checks both fear (*φόβος*) and dread of sin (*ἀδικία*), and he thinks that a jury will be influenced by respect for 'the gods, piety (*τοῦ εὐσεβοῦς*), and themselves' (*Or.* vi. 3, cf. also vi. 1). Isocrates (*Nic.* 39 A) bids us envy not the rich, but those conscious of no sin. Fear of punishment or of disgrace may be implied here, but a clearer note is sounded in [Isocrates] 5 B: 'Never expect to hide a sin. Even if others learn nothing of it, you will be conscious of it yourself.' Lysias (*Or.* xix. 59) speaks of one who thought that a good man ought to help his friends, even though nobody should know about it. In the pseudo-Demosthenic speech against Aristogiton, the writer says (780) that 'there are altars of justice, discipline, and honour (*αἰδοῦς*) among all men; the fairest and holiest are in the soul and nature of the individual.' Socrates is made in the Xenophontic *Apology* (§ 5) to avow that in the past he has enjoyed the most pleasant possession a man can have, the consciousness that his life has always been holy and just (cf. also Xen. *Apol.* § 24, and Stob. *Flor.* xxiv. 13). Finally, a fragment of the comic poet Diphilus (*ap.* Stob. xxiv. 1) denies that a man who is not ashamed before himself when he has done wrong can be ashamed before others who are ignorant of it.

10. **Philosophy and conscience.**—It has been maintained, and as energetically denied, that this clearer realization of the shamefulness of sin is to be attributed to the work of the philosophers. Both seem to have been due to the same cause, namely, the decay of old beliefs, but it is perhaps unreasonable to deny a real, though indefinite, influence to philosophic ethics. It should be noticed, however, that *σύνοιδα* and *τὸ συνειδός* are popular, not philosophic, expressions.

There are plenty of examples throughout the course of Greek literature and Greek history of the individual deliberately following the dictates of his better self, but such acts are rarely associated with the words employed to designate 'conscience.' The latter (*τὸ συνειδός*, etc.) generally refer, not to the law-making conscience, but to an adverse decision of the judging conscience, and to the self-dissatisfaction which accompanies it. Now, it was with the enlightenment of morality that Greek ethical philosophy chiefly concerned itself. As a rule it passed over the shame that accompanies wrong-doing, and never tried to make it the highest moral motive. Convinced that vice is ignorance, both Socrates and Plato devoted their lives to educating the moral sense; and Plato constantly insists that mere conscientiousness, like that, for example, of Euthyphro, is not sufficient. But if sin is nothing more than a mistaken notion of what is good, no place is left for shame and remorse. Carried to its logical conclusion, the doctrine denies either the existence or the reasonableness of moral praise and moral blame. Socrates trusted to reason to guide him aright in moral questions, and doubtless fathered any scruples he might occasionally feel on his *δαιμόνιον* —probably a hallucination of the sense of hearing.

(1) *Plato.*—Plato regarded as true morality only that which springs from knowledge of the idea of good. Morality founded on fear he continually disparages, especially if the fear be that of public opinion (cf. *Crito*, 47 C, *Phædo*, 82 A B, and *Euthyphro*, 12 C), though he admitted that the majority of men were incapable of 'philosophic' virtue, and should be compelled to obey, not the fluctuating general conscience, but the dictates of philosophic rulers (*Rep.* 519, 520). Consequently, *αἰδώς* is for the many rather than for the few, and it and fear form the two warders of the ideal State (*Rep.* 465 B). Towards the end of his life, Plato emphasized more the value of awe and reverence. Every legislator, he says in the *Laws* (647 A), will hold moral fear in high honour: fear, law, and true reason are the principles that keep the appetites in check (783 A); strong public opinion restrains a man from incest, the fear of committing which, even unknowingly, makes a man ready to kill himself (Œdipus, Macareus, 838 C). But what Plato valued was the fear that checks crime, not the shame that follows it, and he therefore set little store by the popular conception of *τὸ συνειδός*; it is the old man Cephalus in the *Republic*, the representative of the old morality, who is made to sound the praises of a 'conscience void of offence,' and to enlarge on the terrors of the wicked.

Conscience the lawgiver, though working in the hearts of men, was as yet but feebly apprehended as an idea, and herein the work of Plato bore fruit. The keynote of his ethical philosophy is that the really virtuous man must know what the good is, *i.e.* must have an educated morality. And when a man knows what virtue is, he cannot help acting virtuously; for no one is voluntarily wicked. Sin is a disease of the soul (*Gorgias*, 479 B), and he who sees this will submit to anything, even to death, to rid himself of the plague. Even though the gods and men are unaware who is righteous and who is not, righteousness accompanied by all the punishments of sin is better than unrighteousness accompanied by all the rewards of virtue (*Rep.* 366 D E). Plato felt that the enlightened soul, brought face to face with sin in all its nakedness, would turn from it in disgust.

(2) *Aristotle.*—Aristotle, taking the end of man to be a full and virtuous life, the result of habituation and practical wisdom, never discusses conscience. The first principles of the science of human conduct, he thought, were perceived immediately, by a kind of intuition (*αἴσθησις*, *Ethics*, 1142 a). He values highly self-respect, and the beauty and desirableness of virtuous actions; *αἰδώς* he regards sometimes as modesty, befitting only the young

(1128 b), sometimes as a shrinking from the ugliness of sin (1116 a, 1179 b). Emphasizing as much as Plato the necessity of an enlightened intelligence for truly virtuous conduct, Aristotle did good service by insisting (again with Plato, *Laws*, 653 B) upon the importance of training youth by habituation to love good and to hate evil (*Ethics*, 1104 b).

(3) *Stoics.*—It has been held that the Stoics, with their individualism, their doctrine of the self-sufficiency of man, their neglect of public opinion, their elaboration of the idea of duty (*προσῆκον*, *κατόρθωμα*), and their exhortations to live a life according to the Divine reason implanted in the heart of man, did much to develop the notion of conscience. Some believe that they coined the word *συνείδησις*, but this is more than unlikely. By *συνείδησις* conscience is described in the (of course apocryphal) sayings of Bias and Periander recorded by Stobæus (*Flor.* xxiv. 11, 12), in Wis 17^{11}, in the NT, in Diodorus (iv. 65. 7: *διὰ τὴν συνείδησιν τοῦ μύσους εἰς μανίαν περιέστη*), in Lucian (*Amores*, 49), and in the proverbs assigned to Menander (*Monosticha*, 654: conscience is a god to all mortals). Chrysippus (Diog. Laert. vii. 85) used the word, but he meant, not conscience, but consciousness. Even the later Stoic writers, Epictetus and Marcus Aurelius, though they constantly mention the action of conscience, seem purposely to avoid the word *συνείδησις*. The fact is that all the Greek words for 'conscience' look, with scarcely an exception, to conscience the judge, and are associated with shame. Plutarch, in his famous description of conscience (*Moralia*, 476 F), says, in wonderfully modern language, that it wounds and pricks the soul. Thought, which softens other pains, only increases this; the guilty mind punishes itself. The Greeks, familiar as they were with the working of conscience the legislator, had no special word to describe it, although its emotional side is hinted at in *αἰδώς*. Now, the Stoics attributed 'absence of emotion' (*ἀπάθεια*) to their wise man; yet, though he would not entertain fear of disgrace (Diog. Laert. vii. 112, 116), he would feel *αἰδώς*. It was the legislating conscience, *ὀρθὸς λόγος*, that the Stoics emphasized; but, while Roman Stoicism came to express this by *conscientia*, among the Greeks it had no generally recognized name.

(4) *Epicureans.*—Perhaps it was the Epicureans who developed the idea of a guilty conscience, and this would account for the Stoics avoiding the term *συνείδησις*. At any rate, Epicurus held that sin is an evil only because of the fear of discovery (Diog. Laert. x. 151), and a graphic description of conscience the accuser is to be found in the poems of the Epicurean Lucretius (*de Rer. Nat.* iii. 1014–1023, cf. iv. 1135). Probably, however, philosophy, whether Stoic or Epicurean, had less influence than the facts of moral experience, which were more and more consciously realized by the popular mind.

II. Summary. — From the earliest times the Greeks had terms referring to the emotional side of conscience in most of its aspects. From the end of the 5th cent. *σύνεσις* and *σύνοιδα* were used to denote the intellectual aspect of conscience the judge. Orphism had emphasized the dual nature of human personality, while the gradual decay of the State religion and of State discipline, along with the intellectual movements of the 5th cent., forced men to realize that they had a judge in their own hearts. The idea, present from the first, that a man should feel shame before himself grew clearer; the hatefulness of sin was more acknowledged, and is urged with unsurpassed moral force in the writings of Plato. From the first it was felt that man owes allegiance to his better self; that he must obey, not only the traditional code, but the dictates of an inner law. Hinted at occasionally in *αἰδώς*, this feeling was not crystallized into a special term; but the philosophers laid stress upon educating this better self, and thereby enlightening morality. Of the individualistic schools, the Stoics insisted on obedience to an inner law of reason, the Epicureans on the fears that follow wrong-doing. The growth of the idea of conscience was due to the development of the people; philosophy merely tried to inspire higher ideals by which conscience might judge. As the notion of conscience developed, morality appears to have declined. The relaxation of the bonds of external discipline, while it caused the few to acknowledge an inner judge and lawgiver, allowed the many to sink into superstition and moral degradation.

It should be noticed in conclusion that among the Greeks conscience was as yet scarcely connected with religion. The Christian's conscience accuses the sinner before God; the Greek's conscience accused him before himself. Cf. general art. CONSCIENCE.

II. *ROMAN.*—The Greeks, although they had many words denoting the emotions connected with moral self-criticism, failed to bring into common use any term summing up all their experience of the action of conscience; the Romans, richer in words denoting obligation, crystallized into *conscientia* the different aspects of conscience soon after Stoic teaching began to be effective.

1. Common moral terms.—*Pietas*, one of the commonest moral terms, signifies a sense of duty, not only towards the gods (Cicero, *de Nat. Deor.* i. 115, *Top.* 90), but also towards country, parents, and friends. It combines the notions of loyalty, respect, and (sometimes) affection. *Fides* (faithfulness, trustworthiness), 'the foundation of justice' (Cic. *de Off.* i. 23), was thought to be a virtue peculiarly characteristic of the early Romans. It is combined with *pudor* and *probitas* in Cicero (*de Rep.* iii. 28), and moralists insisted that it meant loyalty to intention rather than to the spoken word (*de Off.* i. 40). The formula *ex animi sententia* was used of conscientious fulfilment of an oath, while *pudor* denoted the shame which prevents or follows a violation of the moral law. But in no term is the notion of conscience more clearly implied than in *religio*. Originally used of a feeling of awe towards an unknown object, it came to mean a scruple as to the proper means of propitiating a divinity. Cicero distinguishes it from *superstitio*; and though, when applied to the worship of the gods, it contains little moral meaning, when used metaphorically it often denotes or implies the action of conscience. Thus Cicero combines it with *auctoritas*, *æquitas*, *fides*, and *timor* in describing the character of certain witnesses, and it often denotes conscientious carrying out of a duty (*ad Fam.* xi. 29, *pro Font.* xiv. [40], *pro Roscio Com.* xv. [45]; Livy, xxiii. 11). The remorse caused by conscience is not infrequently described by such phrases as *morsus animi* (Livy, vi. 34), *tormenta pectoris* (Tac. *Ann.* vi. 6), and *flagella mentis* (Quint. *Declam.* xii. 28; cf. Juv. xiii. 194, 195).

2. Obligation to external, and to internal, law. —In early times obligation was felt to an external moral law; it was only when the Republic was tottering to its fall, and the State religion ceased to hold the hearts and minds of men, that the inner voice of conscience was heard more clearly. We cannot trace the development of the idea so well as in the case of Greece, because, with the exception of Plautus and Terence (who adapted or translated Greek originals), there is very little Latin literature of earlier date than the 1st cent. B.C. But it cannot be doubted that much of the change was due to the teaching of the Stoics, especially of Posidonius and Panaetius, who exhorted men to follow the deity within them, *i.e.* the Divine reason, of which a portion has been given to each

individual. The conception of this deity (δαίμων), this fragment of the Divine mind, this guide and protector, must have helped to develop the notion of conscience; indeed, Epictetus (fr. 97) speaks of God handing men over to be guarded by 'their innate conscience.' Cicero, in speaking of the sanctity of an oath, warns us (*de Off.* iii. 44) that he who takes an oath summons as witness God, 'that is, his own mind'; and the same writer is the first to employ the noun *conscientia* (*pro Roscio Am.* 67).

The verb *conscire* occurs only once (Hor. *Ep.* i. i. 61), and is there used (with a negative) of a clear conscience. *Conscius* is often used without any moral meaning, but once in Plautus (*Most.* 544) *animus conscius* has the sense of a guilty conscience; this phrase and *mens conscia* are occasionally found with the same meaning in later writers (Lucret. iii. 1018, iv. 1135; Ovid, *Fasti*, i. 485; Sallust, *Cat.* 14). Ovid (*Fasti*, iv. 311) uses *conscia mens recti* of a clear conscience that laughs at slander; but in Virgil (*Aen.* i. 604), *mens sibi conscia recti* probably refers to conscience the guide, which leads men to differentiate between right and wrong.

In the sense of 'consciousness,' *conscientia* is rare, but it is exceedingly common in most writers after Cicero with the meaning 'conscience.' The first time it occurs it is joined to *animi* (Cic. *pro Roscio Am.* 67, 'conscientiae animi terrent'—the writer's rationalistic interpretation of the Furies), and, as Mulder remarks (*De conscientiæ notione*, p. 97 f.), the expressions *animi conscientia*, *mentis conscientia* (the latter in Cic. *pro Cluent.* 159) are intermediate between the vague *pectus*, *animus*, *mens*, on the one hand, and plain *conscientia* with its full moral meaning on the other.

From Cicero onwards the idea of conscience grows more distinct and more full of meaning. It is regarded as Divine (Cic. *Parad.* iv. 29); it accuses and judges (Livy, xxxiii. 28; Tac. *Hist.* iv. 72; Sen. *de Ben.* vi. 42); it is a witness (Sen. *Ep.* 43; Quint. *Inst. Or.* v. xi. 41; Juv. xiii. 198). *Bona conscientia*, *mala conscientia*, 'clear conscience,' 'guilty conscience,' are terms which do not appear to be used by Cicero, but are common enough in Seneca and other later writers. But *conscientia* (with a genitive case added) not infrequently occurs in Cicero with the meaning of 'a clear conscience,' which he calls 'fruit' (*Phil.* ii. 114), 'a reward' (*de Rep.* vi. 8), 'a joy' (*ad Fam.* v. 7), and 'a comfort' (*ib.* vi. 6, 12).

3. **Conscience the lawgiver valued as a guide.**—The Stoic teaching, insisting as it did upon obedience to the Divine reason in the heart, led men not merely to fear conscience, but to value it highly as a director of life. Cicero recognizes conscience as a lawgiver (*ad Att.* xiii. 20), and so does the younger Pliny (*Ep.* i. 22), while the idea is especially common in Seneca. Conscience, from Cicero onwards, is considered a better guide than public opinion (Cic. *de Fin.* ii. 71, *ad Att.* xii. 28; Livy, xxxiii. 28; Pliny, *Ep.* i. 8, iii. 20; Sen. *de Ben.* vi. 42), though it is difficult to decide whether these are cases of the judging conscience or of the legislating conscience; indeed, it is impossible to keep these quite distinct, as a judgment on a past act is, of course, a guide to future conduct.

4. **Summary.**—Conscience, then, was always acting, but at first it took the form of a strong feeling of obligation to an external moral law that was sanctioned by tradition, religion, and the State. As the influence of these grew weaker, men transferred their allegiance to their own hearts, and realized that they had within them an accuser, a judge, and a guide. The Stoic doctrine of a Divine reason immanent in each individual was a most powerful aid to a clearer conception of conscience; the writings of Cicero and Seneca, who were both imbued with Stoicism, afford the best evidence of the way in which the notion of conscience developed.

The ethical terms used by the early Greeks emphasized chiefly the emotional side of conscience; those used by the early Romans laid stress on moral obligation. Among both peoples the development of the idea of conscience was due to the decay of the State religion and of the State discipline, and the consequent turning of men's thoughts inwards; but, whereas the Greek philosophers made little use of the popular term τὸ συνειδός, and devoted their energies to improving the moral ideal according to which conscience judges, the Roman Stoics appear to have adopted the term *conscientia*, and to have made it express far more than its Greek equivalent. The Greek word nearly always stands for a guilty conscience; the Latin word, although very often associated with guilt, not infrequently denotes moral self-satisfaction or the inner promptings of conscience the lawgiver. Neither word is associated with the State religion; but, while philosophic religion neglected τὸ συνειδός, *conscientia* was naturally used as an equivalent of the Stoic 'guardian,' the fragment of Divine reason implanted in the heart of each individual. Hence Christianity found in *conscientia* a term whose fuller meaning it could develop by its doctrine of the Holy Spirit accusing, exhorting, and 'leading into all truth.' But it should be noticed that the ancients made no attempt to analyze psychologically the conception of conscience, which remained to the last popular rather than philosophic, in spite of its adoption by Roman Stoicism.

W. H. S. JONES.

CONSCIENCE (Jewish).—Conscience is an essential element in the system of Jewish ethics. It is the motive power and the last arbiter for the moral rectitude of man; it is the judge, and at the same time the highest standard by which his actions in his relation to God and to his neighbours are measured. Conscientiousness in the fulfilment of duties is a moral heightening of the principle of duty, and is the necessary preparation for the virtues of mercy and love. The principle of righteousness which underlies conscience may be of a purely legal and ceremonial character, whereas conscience goes beyond simple legal forms, and springs from higher motives than those of obedience to the law and the performance of ceremonies. The motive force is a truer conception of the relation between man and God, and the acknowledgment of the principle that human perfection can be attained only by imitating, as far as human power allows, the ways of God. The 'hallowing of life' is the real object of all the laws, and still more so of the moral injunctions and acts of conscience which supplement them and assist in achieving the purpose of making the Jewish nation 'a kingdom of priests and an holy nation' (Ex 19⁶). More than once is the sanctification of life enunciated in the Pentateuch, and the reason given is 'because I am holy.' The holiness of God is the ultimate reason and explanation of the laws which would cause man, who had been formed

'in the image of God,' to reach a higher standard, and place him almost on a par with the angels (Ps 8^8). As explained by the Rabbis, the various instances recorded in the Bible of God's direct communion with the Patriarchs were intended to teach their descendants how to act. 'Just as God clothes the naked (Adam and Eve), so should man clothe the naked; just as God visits the sick (Abraham), so should man make it his duty to visit the sick; just as God buries the dead (Moses), so must man bury the dead; just as God comforts the mourners, so must man comfort the mourner' (*Gen. rabba*, viii., *Pirḳe R. Yehudah*, § 25); in fact, all acts of charity and benevolence, all those duties which a man is bound to perform, not in virtue of a direct command or a legal prescription, but prompted by his 'heart,' are to conform to the Divine standard and promote the hallowing of life —the sanctification of God's name. And all the blessings that follow from it—peace, happiness, charity, goodwill, love—make man approach the Divine. The seat of this higher conception of moral duty—self-imposed duty, not duty imposed from without—was placed in the 'heart,' which stands in Hebrew for mind, sentiment, feeling, conscience.[1] Hence 'a pure heart,' 'a clean heart,' as mentioned by the Psalmist, means a clean conscience, a pure mind, a noble conception of duty fulfilled without any other motive than the desire of self-sanctification.

In Jewish teaching, however, the legal and the purely ethical have never been really separated, but have been treated as concomitant principles. For, as remarked above, the justification and explanation of the former were sought in the latter, and both were to lead to the sanctification of life. Thus we read: 'And the heart of David smote him' (1 S 24^5). In Isaiah 58 these ethical principles are summed up in a masterly manner, and show us the workings of that spirit of holiness in the practical walks of life. The other books of the Prophets teem with denunciations against 'hardness of heart,' harsh treatment of widows, orphans, and slaves, and dishonest dealings with one's neighbour. Moral perfection is thus defined by the prophet Micah (6^8): 'He hath showed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?' 'To do justly' was the particular realm of the mind, the work of conscience for God's sake, the work assigned to 'the heart' (cf. Concordance, *s.v.* 'Heart'; and the expressions 'with all thy heart,' 'with the whole heart,' etc.).

These ethical principles and guides of life, in addition to the legal prescriptions, found terse expression in proverbs and maxims, saws of wise men, and teachings left by venerated persons—a kind of moral compendia like the Books of Proverbs and Ecclesiastes. The authors of some of the apocryphal books followed these examples, and the Books of Sirach and the Wisdom of Solomon, as well as Fourth Maccabees, are nothing other than such moral compendia. Direct reference to conscience we find in Sir 42^8 and Wis $17^{10\,(11)}$, which are in the spirit of Jewish ethical teaching. A special class of ethical literature starts from the same period, *i.e.* before the destruction of the Temple, and it has continued to our day—the literature of 'Testaments,' or ethical wills of some great personage. These circulated afterwards far and wide, and became recognized moral guides independent of the codes of laws which regulated the strictly formal mode of life. It would be out of place here to discuss the whole range of ethical teaching; hence we must limit ourselves to those passages that refer to 'conscience,' uprightness, moral responsibility, in the daily relations between man and man—references found scattered throughout these books. A brief survey of this branch of literature, however, is imperative for the historical sequence of such teachings, and in view of the fact that ethics had not been reduced to a system, or split up into sections differentiating the moral value of one principle as opposed to another. All stand on the same footing, and demand the same attention. There is no room for eclecticism in these collections. The oldest example is perhaps the *Testament of Tobias*, which emphasizes, as he had done in his lifetime, the moral duty of burying the dead—one of those pious duties and works of charity which the law does not prescribe, and neglect of which is not punishable by its letter, but whose fulfilment was a matter of conscience for every pious Jew. More important is the reference (To 14^{10}) to the *History of Achiacharus* (Aḥiḳār), since recovered and restored to its place at the end of the Book of Tobit. This is a collection of wise maxims and guides to proper deeds and moral actions, though in the versions preserved it is more in the nature of worldly practical wisdom of not too elevated a type. Its interest lies also in another direction; the form of address, 'O my son,' etc., is repeated in a large number of treatises to be mentioned later on. Richer is the harvest yielded by the *Twelve Testaments*, in which apparently the very word 'conscience' occurs for the first time in Palestinian texts: Reub. 4^3 'Even until now my conscience causeth me anguish on account of my impiety' (cf. Charles, *ad loc.* p. 9). In other testaments the same idea occurs: Jud. 20^5, where the corresponding word is 'heart,' and similarly Gad 5^3. To this category of testamentary teaching the present writer would assign also the famous collection of the 'Fathers of the Synagogue,' called 'The Chapters' (*Pirḳe Aboth*) after they had been grouped together in chapters. They can only be properly understood as such testamentary injunctions, the last wills of the leading men of the Great Synagogue and their successors in the high position of spiritual guides and leaders of the people during the period of the Second Temple. The authors have been grouped chronologically, and these chains of ethical maxims served the purpose of being a chain of tradition. In reality they are the principal ethical teachings representing the ethical wills of those sages, and as wills they fall naturally into their place, whilst hitherto they had been a riddle. A few examples may suffice:

'Rabban Gamaliel, the son of R. Judah the Prince, said: "An excellent thing is the study of the Torah combined with moral discipline (*derekh ereṣ*), for the practice of both causes sin to be out of remembrance"' (ii. 2).[1]

'Hillel said: "Judge not thy neighbour until thou art come into his place"' (ii. 5). According to R. Eleazar, the good way to which a man should cleave is 'the possession of a good heart,' and the evil to be shunned, 'a wicked heart' (ii. 12, 13), where 'heart,' no doubt, is to be taken in the Biblical sense. 'R. Eliezer said: "Let the honour of thy friend be dear unto thee as thine own"' (ii. 14). 'R. Jose said: "Let the property of thy friend be dear to thee as thine own"' (ii. 16). Among those who have no share in the world to come, R. Eleazar the Muddaite places the man who puts his fellow-man to shame in public. It is the moral and not the legal sin which is to be shunned, and if committed it is to be expiated by 'repentance and good deeds,' as is often repeated here (iv. 15; cf. Taylor, *Sayings of the Jewish Fathers*[2], Cambridge, 1897, *ad loc.*).

Round this collection of maxims grew up a whole cycle of similar teachings, accretions, and additions from other sources, and examples drawn from the lives of other sages. It also was commented upon by the most prominent writers of subsequent ages. One of the oldest is a small collection known as the 'Work (or Story) of R.

[1] As will be seen, there is no Hebrew word which corresponds entirely with 'conscience'

[1] The phrase *derekh ereṣ* has hitherto been wrongly translated 'worldly business.' It can only mean, at least in this passage, 'moral discipline,' and one of the later compilations intended to serve as a 'moral guide' bears the title *Derekh ereṣ*.

Judah the Prince' (*Ma'aseh R. Yehudah ha-Nāsī*), and later on developed into the 'Chapters of R. Judah the Prince' (*Pirḳe di Rabbenu ha-Ḳaddosh*). Another is 'The Will of Eliezer the Great,' or 'The Ways of the Pions' (*Ṣavaath R. Eliezer ha-gadol*, or *Orḥoth Ṣaddiḳim*), agreeing in many points with the history of Achiacharus. It shows exactly the same development as other collections of maxims, apologues, and saws in universal literature, inasmuch as, to one portion, or to a small, old, and genuine section, other elements of a similar tendency are added. The names of the reputed authors vary, and a compilation ascribed originally to Talmudic authorities, *i.e.* Eliezer ben Hyrkanos, is then transferred to a much later Eliezer of the year 1050. The substance, however, is the same; and most of these collections merely repeat older materials, increased in later times by some similar maxims from other sources. The burden of the message of these collections is to seek the judge in one's own conscience, and to find the punishment for moral guilt in remorse of conscience, in the consciousness of a fall from a moral height, and in the desecration or profanation of the Sacred Name. In a much more elaborate manner the theme is enlarged upon in the 'Chapters *or* Maxims of R. Nathan' (*Aboth di R. N.*) of the 7th–8th cent., into which much of the accumulated matter had flowed; and in the book called *Derekh ereṣ*, 'Moral Guide' (of which two recensions have been preserved—'Major' and 'Minor'), and in the *Tanna debe Eliahu*, in which the prophet Elijah is the teacher. The feeling of inner responsibility for moral faults and the glory in conscientious performance of ethical deeds have found in this book a powerful, and at the same time an elevating, poetical expression. The way to shun sin, to lead a pious, modest, exemplary life, full of humility and charity, and to accomplish 'the duties of the heart' is here expounded in simple and withal dignified language. This book belongs still to the Talmudic period, and is certainly anterior to the 9th century.

But the postulates of ethical teaching were not limited to mere maxims, highly appreciated and honouring to those who had formulated them, but still of a purely theoretical value. On the contrary, as far as possible, they were introduced into the fabric of consistent legislation, and, though many of the acts in question were not indictable before the regular tribunal, the conscience and religious principles of the individual remaining the ultimate forum before which they could be brought, some of them at least were brought within the four corners of the Law, and were made offences amenable to its rigours. Starting from the prohibition of oppression, fraud, and violence against widows, orphans, and strangers (Ex $22^{21f.}$, Lv 19^{33}), and, more especially, of fraud and overreaching in business transactions (Lv $25^{14.\ 17}$ 'And if thou sell aught unto thy neighbour, or buy of thy neighbour's hand, ye shall not wrong one another'; 'And ye shall not wrong one another; but thou shalt fear thy God'), the Rabbis have extended the effects of these prohibitions very far, and have very clearly defined the principle of overreaching, and also established the rule that it applied to Jew and non-Jew alike. They have shown a high conception of moral duty and obligation, and have applied a lofty standard of moral rectitude in the interpretation of these commands, which are called 'subjects left to the discretion of the heart' (*Debārîm ha-mesurim la-leb*; the 'heart,' of course, stands for 'conscience'). The law is called *Ona'ah*, from the hypothetical root of the Heb. word *hōnāh* in the above Biblical passages. They have made this law very severe, and any deviation from its strict application makes the sale or purchase void. To take advantage in any way of favourable legal circumstances, or of ignorance, or of quibbles, is sufficient to annul the transaction.

Oppression by means of word alone and not by deed is considered even worse than overreaching in the matter of money (*Bab. meṣ.* 58*b*): 'If a man repents, he must not be reminded of his sins'; 'If a man is a proselyte, he must not be told of his heathen ancestry, for money can be restored, but spiritual agony can never be made good.' 'Nor is a man to ask for the price of an object unless he has the intention of buying,' for he is thereby deceiving the vendor, who is unable to read the man's heart (Mishn. *Bab. meṣ.* ch. iv.; see also Lampronti, *Paḥad Yiẓḥaḳ*, *s.v.* 'Ona'ah' [the whole of the Rabbinical literature on the question of overreaching, from the Mishna down to the 17th cent.]). 'If a man, under a flimsy pretext, withdraws from a bargain, they say: "May He who obtained redress (by punishment) from the men of the Flood and the men of the Dispersion (of Babel) be sure to obtain redress from (*i.e.* to punish) the man who does not keep his word"' (Mishn. *Bab. meṣ.* iv. 2). In addition to overreaching, the Sages also inveigh strongly against obtaining a good opinion under false pretences, which they call 'stealing a good opinion' (*Genebath Da'ath*): 'Of seven kinds of thieves, those who steal a good opinion [create a false impression in their favour] are the worst, for, if they could, they would attempt to deceive the Almighty' (Tosefta, *B. ḳamma*, vii.). 'He who deceives man by such devices is like unto him who attempts to deceive God' (*Kallah rab.* fol. 18*a*). 'Do not invite a man to dine with thee when thou knowest that he is not then inclined to eat'; 'one must not open a jar of oil or wine pretending to do it in honour of a guest, if it [has to be opened as it] is already sold to a customer, and thereby create a good opinion by false appearance of consideration, be it a Jew or a Gentile' (*Ḥullin*, 94*a*; *Shulḥan Arukh Ḥoshen Mishpat*, ch. 228; and Maimonides in his *Principles of Ethics*).

The reason for all these precepts is that they are inimical to the sanctification of life, and cause the defamation of the Divine Name, which are in the keeping of man's conscience, and left to the 'discretion of the heart.'

'A queen having lost her jewels, it was announced by royal proclamation that whoever should find and return them within thirty days would obtain a rich reward, but if after thirty days, he would be put to death. R. Samuel b. Sosarti, having found them, returned them after thirty days. When asked why he did so, as he was exposing himself to suffer capital punishment, he replied: "If I had returned the jewels within the thirty days, the people would have said that I had done so for the reward; I have therefore kept them till now, so as to show, even at the risk of severe punishment, that one is bound to return the property found even if it belonged to a Gentile"' (Jerus. Talm., *Bab. meṣ.* ch. ii.). Again, 'R. Shimeon b. Shetaḥ bought an ass from an Ishmaelite. When his pupils examined it more closely, they found a jewel hanging round its neck, and they said to him: "O master, it is a blessing from above, thou hast become rich!"; whereupon he replied: "I bought the ass and not the jewel," and he returned the jewel to the Ishmaelite owner' (*ib.*).

It would be easy to multiply examples and maxims of an ethical character from the Talmudic literature.

The Talmudic Sages coined a word for moral obligation which affords us a glimpse into the working of their mind. They use the verb *ḥayyab*, from the Bibl. root *ḥob*, which means 'material debt,' and employ it to designate man's moral 'indebtedness,' his moral 'obligation,' which he must fulfil, lest by neglect he become 'guilty.' The moral duty stands at least on a par with his legal obligations, and most of the ethical duties mentioned in the Talmud are regularly introduced by the formula *ḥayyab ādām*, 'a man is bound' (of course by moral conscience) to do this or that. This formula has since become stereotyped, and is never used in connexion with legal commandments.

In this ethical Haggada the material is not arranged according to any system, starting, as it were, from the fundamental principle of the love of God or of His Unity, and then deducing from it those secondary principles which form the subject of a moral life. The teaching was of a purely practical nature; the people did not care to follow it up to its theoretical beginnings. The Bible set the example. There also the laws and commandments are not arranged in any systematic order, and some of the fundamental principles are placed next to matters of relatively minor importance. At the end of the 9th cent., however, a great change took place. Under the influence, indirectly

of Greek, and directly of Arabic, philosophic speculations, the Jews began to develop systems of religious philosophy in which special attention was often paid to the ethical side of the Jewish faith. Whilst, in the older period of Hellenism, Jewish thinkers were influenced by Plato and the Stoa, such as Philo and the author of the pseudo-Josephus 'On the Rule of the Intellect,' and were more or less guided by allegorical interpretations of the Bible, the philosophers of later times were mostly under the influence of Aristotle and his Arabic commentators, such as al-Fārābī († 950), Ibn Sīnā (Avicenna, † 1038), Ghazālī († 1111), and Ibn Rushd (Averroës, † 1198), while the purely theological speculation of the adherents of the *Kalām* (the Mutakallimun) also found followers among the Jews.

Before referring to the Jewish philosophers, it is of interest to mention a fact hitherto entirely ignored in connexion with the dissemination of their moral teachings. Such collections of maxims as are mentioned above were also put into verse, and formed terse epigrams or long didactic poems —a form better adapted to render them popular, for the masses do not care for historical or theoretical investigations, and still less for philosophical justifications of moral conduct. Fragments of the ancient saws of Ben Sira were then collected, and other collections of a similar nature were made. It is owing to this tendency that about that period (9th–10th cent.) the Book of Sirach was re-translated into Hebrew, as the language of the newly discovered version testifies. It is the period of 'Achiacharus' in its modern recension (Luḳman, etc.). A century later no less a person than the last of the great *Gĕonîm* of Babylon, Hai (940–1039), wrote his rhymed didactical poem *Mūsar Haskel*—also a kind of moral *vade-mecum* adapted to the understanding of the people, and probably taught in the schools and otherwise learnt by heart. It agrees also with the 'will' of Eleazar, Achiacharus, etc. A few examples must suffice.

'My son, my first word is: Fear the Lord; and with each of thy deeds give praise unto Him' (vv. I. 3). 'Forgive the sin and transgression of thy neighbour, and be ready to accept repentance and regret.' 'Be not treacherous or seek strife, and foster not rebellion' (vv. 75 ff.). 'When thou hearest the defamation of thy neighbour, cover it up and pretend not to have heard it' (vv. 88–89). 'Wisdom is to walk in the path of faithfulness and of the fear of God; and true understanding (character) is to avoid evil.' 'Be an (honest) judge among thy people' (vv. II4 ff.). 'In all thy transactions choose righteousness; have pity on the poor and miserable, and appoint an adviser and admonisher to thy soul' (vv. I35 ff.). 'Let thy heart (mind) beware of pride (proud insolence)' (I68). 'Do not say to thy neighbour, Come to-morrow, when thou canst give to-day; give and do not tarry.' 'Judge thyself as thou wouldst judge others' (I76).

His contemporary Samuel Ha-Nagid imitated Hai in Spain, in his *Ben Ḳoheleth* ('Son of Ecclesiastes'). On other didactic poems we need not dwell.

To return to the Jewish philosophers, we note that, though they were all bent on finding in Judaism the highest expression of Divine truth, and aimed at leading to the highest good, yet they differed in their definition of the *summum bonum* and in the means of attaining it. To cultivate all the virtues was the road which led to the knowledge of God, and in this knowledge was to be found the ultimate goal of human perfection, *i.e.* nearness to God. Hence sometimes the intellect and moral conscience were not clearly distinguished from one another. This is not the place to discuss the various systems of ethics evolved by these Jewish philosophers. It may suffice to point out that every system of thought among Arabs and mediæval Scholastics is to be found among the Jews. Of those thinkers some—like Saadya, Gabirol, Ibn Zaddiḳ, and Maimonides—are more rationalistic, assigning to the knowledge of God and to Wisdom the highest potentiality for good, and considering that the highest aim is to be attained by moderation, by the rule of the intellect over the actions and thoughts of man, while others incline more to the mystical side. To the latter category belongs Behay, the first philosopher to write a special work on the 'Duties of the Heart' (such is the title of the book, *Ḥoboth ha-Lebaboth*). He recognizes human conscience as the last arbiter and the true inward prompter and guide in all moral actions which lie outside the specifically legal injunctions. He lays special stress on the elevating and purifying influence of moral consciousness, and therefore leads up to a kind of religious asceticism or Quietism, by recommending retirement from life, abstinence, and prayer as means for attaining perfection. Without being morbid, he exhibits a high moral sensitiveness, and has had a lasting influence upon succeeding generations. One can trace his influence especially in a whole series of subsequent writings.

These philosophical writings, being almost all composed in Arabic, had to be first translated into Hebrew, and only then could they gain a wider circulation. The writings of Saadya thus reached France and Central Europe, through the medium of the Hebrew anonymous translation which was used by Berechyah ha-Naḳdan (second half of 12th cent.) in his two ethical compilations—the 'Compendium' and the 'Refiner' (*Ḥibbur* and *Maṣref*, ed. H. Gollancz, London, 1902). He eliminated the entire speculative part, and retained only the ethical, which he augmented with excerpts from the writings of Ibn Gabirol, Behay, and Nissim.

Of sin and repentance he says: 'From the passage Hos $14^{1f.}$ "Return, for thou hast stumbled," we learn that we should have an inward regret at our guilt, and that we should reflect that our sins have proved unto us a wretched stumbling-block' (p. 71, ed. Gollancz). He speaks most emphatically of the 'duties of the heart.' All action rests upon the heart's intention and upon the secret thoughts; their study must necessarily precede the study of the physical, practical performance of the commandments. And he goes on to relate the following: 'A pious man once said to his disciples, "If you had no sins whatever, I should be afraid lest you had something worse than sins." And they asked, "What can be worse than sins?" He answered: "Insolent pride, for it is written, Every one that is proud in heart is an abomination unto the Lord"' (Pr. 16^{5}) (ch. cxxii. p. 113 [Heb.]). Very beautiful is the chapter devoted to 'the heart' (ch. iii. in the *Maṣref*), in which the author has skilfully collected verses of the Bible, teachings of the Sages, and philosophical speculations, to show that Reason, Law, and Tradition demand of a man the performance of those actions by which human perfection can be attained, and that man must be guided by an enlightened understanding and a pure heart, *i.e.* by pure conscience.

Of the same way of thinking as Behay was Abraham b. Ḥiyah (middle of 12th cent.), although he was more emphatic about fasting and repentance to assuage the pangs of stricken conscience, and to serve as the means of avoiding sin. Like Behay, he shows points of contact with the teaching of Ghazālī and of the *Ṣūfīs* (the pure brethren). Of the Intellectuals, or, better, of those who derive all the moral virtues—charity, piety, energy, loving-kindness, love of God, moral rectitude, etc. —from the knowledge of God, and seek the road to that knowledge in the 'middle way,' the most prominent is Maimonides. He enunciates his views in his commentary on the 'Chapters of the Fathers,' in the chapters on the 'Knowledge of God' in his great Compendium of the Law, in his 'Guide of the Perplexed,' and in other writings. The problem which agitated the philosophers of that time, and, one may add, the philosophers of religion at all times, was that of human free will, with the concomitant problem of reward and punishment, of virtue and vice, of human perfection and debasement. He decides unhesitatingly, in accordance with the general consensus of Jewish opinion, that man is a free agent in all his moral actions. Man's soul is the seat of know-

ledge, and from it alone emanates the impulse to action or inaction (Introd. to *Aboth*, ch. viii.). It is his moral conscience which causes reward or punishment for deeds which are neither commanded by the Divine legislation nor forbidden by it (*Guide*, iii. 17, fifth theory). In ch. liii. Maimonides defines the meaning of the Heb. words *ḥesed* ('loving-kindness'), *mishpāṭ* ('judgment'), and *ṣĕdāḳāh* ('righteousness'), and says of the last:

'The term *ṣĕdāḳāh* is derived from *ṣedeḳ*, "righteousness." It denotes the act of giving every one his due, and of showing kindness to every being according as it deserves. In Scripture, however, the expression *ṣĕdāḳāh* is not used in the first sense, and does not apply to the payment of what we owe to others. When we, therefore, give the hired labourer his wages, or pay a debt, we do not perform an act of *ṣĕdāḳāh*. But we do perform an act of *ṣĕdāḳāh* when we fulfil those duties towards our fellow-men which our moral conscience imposes upon us, *e.g.* when we heal the wound of the sufferer.' And again: '*ṣĕdāḳāh* is a kindness prompted by moral conscience, and is a means for attaining perfection of the soul.'

He also insists on the harmony between good action and good thought: in the exercise of human free will the good must be sought for its own sake; and the evil must be shunned because of its inherent wickedness, not out of fear of punishment or in the expectation of reward (Com. to *Aboth*, i. 3, on the passage: 'Be like servants who minister to their master without the condition of receiving a reward'). He rebukes men who, though they do not possess a certain virtue, yet, appreciating its perfection,

'sometimes desire to make others believe that they possess that virtue. Thus people, *e.g.*, adorn themselves with the poems of others, and publish them as their own productions. Also in various branches of science, ambitious yet lazy men appropriate the opinions expressed by other persons, and boast of them that they have originated these notions' (*Guide*, ii. 40).

And he condemns men who seek honour at the expense of others and spread insinuations and slanderous statements (*Hilch. Teshubah*, iv. 4). He is no less emphatic in his condemnation of those who try to overreach Jew or Gentile, or create a false opinion in their favour. Such men are an abomination before the Lord,[1] for the aim and object of a moral life is to approach the Divine.

'Having acquired the true knowledge of God, the knowledge of His Providence, and of the manner in which it influences His creatures in their productions and continued existence, he (*i.e.* man) will then be determined always to seek loving-kindness, righteousness, and judgment, and thus imitate the ways of God' (*Guide*, iii. 54, *ad fin.*; cf. Jer $9^{23f.}$). With this sentence Maimonides concludes his *Guide*.

The next period, which commences almost with the close of the philosophical era at the end of the 13th cent., shows the deep impress of those two streams of thought reaching down from the past. The ethical and the philosophical, the mystical and the rationalistic, the purely practical and the deeply spiritual, moral, and unselfish teaching were caught up in one current and gathered into one stream (cf. Berechyah, above). A new word is used to denote this new ethical literature—*Mūsar*, 'Moral Discipline,' foreshadowed in Hai's poem, and occurring already in the Proverbs as 'moral teaching' (1^{2}, cf. 4^{13} 5^{12} etc.). Henceforward it denotes 'piety,' 'religious-moral life,' embracing the legal in a narrower and the ethical in the largest sense. The works belonging to this period inculcate the practice of virtue, honesty, piety, resignation, charity, love of one's neighbour, and saintliness of life. There is a psychological reason for the abundance of such books from the 13th cent. onwards. It was the time of the direst persecution of the Jews in many lands, and, unless the Sages and teachers of those generations had fortified the moral courage of the harassed and unfortunate people, every trace of consciousness of the moral duties of man would have been obliterated. The sense of sin and chastisement, of Divine visitation justified by inward backsliding, was deepened by these books of *Mūsar*, in which the best teaching of the past was placed before the readers in as simple a language as could be commanded. Each author, following the bent of his own inclination, laid stress now on one side of the moral life, now on the other. Thus, some would exhort to fasting and ascetic practices; others to works of unselfish love of God and men; others would teach wisdom, moderation, patience, and freedom from passion; but all were united in the conviction that human life is worthily lived only when it is placed in the service of God, for the benefit of mankind, and for the glorification of His name. A man's conscience must be pure, and every one is equally responsible for thought as for deed, whether prescribed by the Law or left to the discretion of one's own heart, for God sees everything, and nothing is hidden from Him. We are, and ought to be, the judges of our actions, and to us is left free choice to decide which way to turn.

What lends special importance to this *Mūsar* literature is the fact that most of these books of *Mūsar* were translated at an early date into the vernacular language for the benefit and instruction of the middle-class Jews, who were not sufficiently acquainted with the Hebrew to read them in the original language. These books became the literature *par excellence* of Jewish women; they were translated into the Jewish-German and the Jewish-Spanish languages, and parts also into Arabic and Persian, thus becoming real 'household treasures.' Shabbethai Bass gives a list of no fewer than 120 such books in his bibliography (*Sifthei Yeshenim*, printed in the year 1680, fol. 15*a*), exclusive of the numerous commentaries on the 'Chapters of the Fathers' (*ib.* fol. 18*a*). A few of the more prominent may be mentioned, for, besides reminiscences of, and direct quotations from, the older literature, the authors have added some more instructions—personal expressions of their own conceptions of the duty and moral obligation incumbent on every Jew. Here, of course, the notions of the fear of God and the love of God prevail, for everything must be done out of that love and for the sake of hallowing His name by moral actions, and thereby sanctifying human life.

Nahmanides, in 1267, writes to his son from Acco a 'moral epistle,' in which he enjoins, among other things, that he be modest and humble: 'When thou speakest, bend thy head and lift up thine heart (*sursum corda!*), and speak quietly, and consider every man whom thou addressest as being greater than thou art. If he be poor and thou rich, or thou a greater scholar than he is, then think that thou art more full of guilt; or, if he be sinning, that he is doing it out of ignorance, unintentionally, and not deliberately. In all thy deeds and thoughts remember Him of whom it is said that His glory filleth the world.'

Jonah of Gerona (†1263), known as the *Ḥasid* and *Ḳaddosh*, *i.e.* Martyr, wrote, in the strain of Behay, his famous *Sha'arei Teshubah*, 'Gates of Repentance,' and *Sefer ha-Yir'ah*, 'Book of the Fear of God,' where the feeling of consciousness of the gravity of sin and the duty of repentance are expounded in a masterly manner. He says: 'There are people who believe that, if you do not transgress any of the written laws, you cannot commit sin, for it is connected with active work. And yet there is no greater loss for the soul than to imagine that purity consists only in not having gone the way of active sin, and not also in the neglect of the performance of deeds of charity and of good works. For the highest perfections can be achieved only by carrying out injunctions (which are not direct legal commandments, but ethical demands), such as the exercise of free will, love of God, contemplation of His loving-kindness, the recognition of God's ways in His visitation of man, and, above all, in the sanctification of His name by worship, fear, and by cleaving unto Him' (*Sha 'arei Teshubah* ii. §§ 14, 17). 'Do not pretend that thou art not able to help by word or deed, for, if thou refusest, thy strength will wane' (*ib.* § 70). 'Thou shalt not take a bribe (Ex 23^{8}) means also, Thou shalt not allow thy judgment to be influenced by flattery,' for the purity of conscience will thereby be clouded (*ib.* § 98).

Almost contemporary with these were Yehudah the Pious in Germany (12th cent.), and his pupil Eleazar of Worms († 1238), and Yeḥiel b. Yeḳutiel in Rome (1278), as well as Moses of Coucy in France (1233–45), who wrote ethical treatises and guides for a moral life—the 'Book of the Pious,' *Sefer Ḥasidim* (Yehudah); the 'Perfection of Human Conscience,' *Ma'alath*

[1] He refers, of course, to the Talmudic passages quoted above (*Ḥullin*, 94*a*, and *B. ḳamma*, 113*a*).

ha-Middoth (Yeḳutiel); and the great Code of Laws, *Sefer Miṣwoth ha-Gadhol* (Moses of Coucy). Each of these men represents a special school of thought. The first two are of a mystical disposition, Quietists; the writer in Rome follows, on the whole, the philosophical writers; while the codifier of the Law, like Maimonides, introduces chapters on ethical duties into the very Code: 'Be fair to every one, be he a Jew or a Gentile.' 'Money obtained by sweating the workman, or by buying stolen goods and idols as ornaments, brings no blessing.' 'Draw the attention of the Gentile to his mistake (in any business transaction); and better live on charity and begging than appropriate the money of others, which will be a disgrace to Judaism and to the Jewish name.' 'Be honest with every one, no matter to what faith he belongs.' 'Those who clip the coin, who sell short measure, who practise usury, are a curse; and there is no blessing in their money.' 'Do not say, "I will repay evil," but trust in God, and He will help thee.' 'If any one has defrauded thee or brought false witness against thee, or has ruined thee, do not avenge the injustice by doing the same to him.' 'Do not listen to slander' (Yehudah Ḥasid). 'Act in such a manner that thou needst not be ashamed of thyself.' 'Keep thine imagination pure, so that thy deeds may be likewise.' 'Know that the reward from the Lord is in accordance with thy resistance to sin.' 'The highest aim and ambition of man should be to fulfil the commandments, to sanctify His name, and to sacrifice himself for God's sake' (Eleazar). 'A Sage said: "Whoever sows hatred reaps regret."' 'Be true and honest, as our Sages say: "Let your yea be yea and your nay nay."' 'If a Gentile trusts you and relies upon your word, you must in all your transactions justify his confidence and be true and honest, so that the name of God be sanctified' (Yeḳutiel). 'Whosoever is a novice in the fear of God shall say every morning on rising: "To-day I will be a faithful servant of the Lord; I will beware of wrath, lying, hatred, strife, and envy; I will not look (lustfully) upon women, and I will forgive those who hurt me."' 'Whoever forgives is forgiven; hard-heartedness and implacability are grave sins unworthy of a Jew' (Moses of Coucy).

The mystical philosophy of religion embodied in the *Zohar*, the chief exponent of the later Ḳabbālā, recognizes no less emphatically the call of conscience. The fulfilment of moral duties is not only a reward in itself, but it is the main cause of the harmony of the world and of the uninterrupted flow of Divine grace from the highest spheres down to the mundane sphere. 'Woe unto the sinners, for they keep the Divine glory in exile,' is a constantly recurring phrase. The mystical philosophy has in this case not contributed to weaken the moral fibre, and a high tone of ethical loftiness pervades the pages of the *Zohar*.

In conclusion, a few wills may now be mentioned. That of Asher b. Yeḥiel is of special interest on account of the fact that his code of the Law, with slight modifications, is the direct source of the recognized standard religious Jewish Code. He died in 1327, and by his will continued the old tradition, which was carried on to the end of the 18th cent. and even later. Among the authors are men like his son, Yehudah b. Asher († 1349), Abraham, and his grandson Sheftel Hurwitz (17th cent.), and the founder of the sect of the modern *Ḥasidim*, Israel Ba'al Shem-Ṭob (end of 18th cent.). Differing somewhat in their views on Divine worship, they are at one in the conception of moral duty and human responsibility, as lying not in the fulfilment of legal commandments alone, but to a greater degree in the performance of moral obligations for which there is no incentive by the promise of reward, and no threat of punishment for neglect.

Last, not least, the 'Shining Lamp,' *Menorath ha-Mā'ōr*, of Israel ben Joseph Alnaqua († 1391), preserved partly in the *Reshith Ḥokhmah*, 'Beginning of Principles of Wisdom,' of Elijah de Vidas (16th cent.), and the compilation of Isaac Aboab under the same name, *Menorath ha-Mā'ōr*, contain the gist of the ethical and Haggadic teaching of the Rabbis. Though a rather large volume, this book has been the household book of Jewry from the time of its compilation (*c.* 1300) to the present day. It has been translated into many languages, and, together with the Book of Elijah de Vidas, it is the Golden Treasury. The love of one's neighbour, and the principles of moral rectitude, of moral duty, of the heinousness of clandestine sin and open hypocrisy, of the happiness wrought by repentance and a clean conscience, of loving-kindness and mercy as Divine attributes to be imitated by man, of moral perfection to be attained not only by outward ceremonial law or by fulfilment of prescribed legislation, but by following the inner voices of the soul and the unwritten commands of the Divine in man, of the hallowing of life and the sanctification of the name of God—of all this the book is full. Its aim is summed up in exemplifying the words of the prophet, in the light of Maimonides' interpretation that the highest duty of man is to fulfil acts of *ḥesed*, 'loving-kindness,' *mishpāṭ*, 'judgment,' and *ṣĕdāḳāh*, 'righteousness': 'For I am the Lord which exercise loving-kindness, judgment, and righteousness, in the earth: for in these things I delight, saith the Lord' (Jer 9^{24}). This has remained the guiding principle for 'conscience' in Judaism.

M. GASTER.

CONSCIENCE (Muslim).—**1. Names for the phenomenon.**—The normal manifestations of the conscience, whether in individuals or in communities, are to be found in uneasiness about acts perpetrated in the past, and the desire to make amends for them, or in refraining from perpetration, on grounds of abstract right and wrong. These manifestations are to be found among moral agents with few or no exceptions, but they are not always labelled with a name. Probably the nearest equivalent in Arabic is the word *al-zājir*, 'the restrainer,' defined as 'God's preacher in the heart of the believer, the light cast therein which summons him to the truth'; but it obviously refers to the second group of manifestations only, and its limitation to 'Believers' is due to the fact that in a sense, according to the Islāmic system, the unbeliever can do no wrong, as being outside God's covenant. For the first group probably the word *sarīra*, 'the secret,' *i.e.* the secret self, would be the nearest synonym; this is the word used in the maxim 'God concerns Himself with your consciences,' embodied by Omar I. in his *Instructions to a Judge*. The modern Islāmic languages employ conventional translations of the European words; in Turkish *vijdan* (properly 'sensation') is employed, in Arabic *ḍamīr* ('the hidden being'). But for the adjective 'conscientious' it is probable that a paraphrase would have to be used.

2. The conscience in law.—The maxim quoted above was of the highest importance for the development of Islām. Whereas St. Paul says, 'he is not a Jew who is one outwardly' (Ro 2^{28}), the Prophet's doctrine was, 'he is a Muslim who is one outwardly,' *i.e.* who pronounces a certain formula and pays a certain rate. In virtue of this principle, and another to the effect that Islām cancelled all that was before it, the Prophet's most stubborn opponents and persecutors might be admitted to the privileges of Islām without any atonement for their former conduct being necessary, or any guarantee that their conversion was dictated by anything but fear. The phrase 'union of hearts' was applied to the winning over of opponents by bribes. The inquisition into people's private character and opinions, carried on by some Islāmic sovereigns, was in open contradiction to the Prophet's principles, and confession of secret sin was so far from being encouraged by the Prophet, that, in a tradition of fair authority, he is represented as doing his utmost to dissuade a man from confess-

ing. In the maxim quoted from Omar the reference is to the credibility of Muslim witnesses, into which no inquiry may be made. Provided they are not notorious evil-livers—a term which is clearly defined—all Muslims are credible. On the other hand, to religious performances the maxim 'acts are by their intentions' applies. And Omar held that the Divine power would intervene to expose cases of shameless hypocrisy which would seriously interfere with the course of justice.

3. Conscience as a guide to the individual.—So far as the conscience is identical with the moral sense, or instinctive notions of right and wrong, the Prophet's system took little account of it; indeed, its tendency was to make the Prophet's revelations and practice the sole source whence knowledge of right and wrong could be obtained. His followers constantly handed their consciences over to his keeping, being unwilling to set their opinion against his. The fact that he claimed obedience only *in licitis et honestis* shows that he did not really claim the infallibility which logic compelled his followers to ascribe to him. That logic was, however, irresistible; for, if the right of private judgment were once allowed, clearly people could not be compelled to accept Islām at all. Although, then, there are occasional attempts at basing a system of ethics on either reason or the natural sense of right, these are not really in accordance with the spirit of the religion. The reference is regularly to the Qur'ān, the practice of the Prophet, and the sayings of his followers: 'Whoso makes them his model goes right' is a common saying. The scope allowed to the conscience in private affairs by Muslim writers is similar to that indicated by the maxim *noblesse oblige*. So the formula, 'I appeal from you to yourself,' *i.e.* 'your better self,' is occasionally heard.[1] Hence the word *abiyy*, 'refusing,' is often applied by poets to a soul which declines of itself to enter humiliating courses.

4. The public conscience.—In Oriental despotisms the sovereign does not, as a rule, pay much regard to public opinion, and it might be hard to find any case in Muslim history in which the conduct of the sovereign had been of itself actively resented; neither parricide nor fratricide, debauchery, nor even heresy, appears to have of itself stirred up such indignation among the subjects as to cost a sovereign his throne. The assassination of the monster al-Ḥākim, the Fāṭimid Khalīf (A.D. 1021), seems to have caused more indignation than his long catalogue of atrocities. Cases are therefore of interest in which concessions are made by the sovereign to the public conscience, to the extent of salving it; for such concessions imply that the sovereign thought it worth salving. A fiction with which we meet in Egyptian history more than once is the discovery of buried treasure, enabling the sovereign to build a mosque—there being a doubt whether the Muslims would attend worship in one which had been built out of ill-gotten gains. The murder of a brother was occasionally explained in an official document as an accidental death,[2] etc.; but, on the other hand, clever usurpers not infrequently gathered followers by stirring up public indignation against those whom they wished to overthrow. The Umayyad and 'Abbāsid dynasties both won their first triumphs in this way. It was at times thought worth while to murder a saintly man and make it appear that a sovereign had perpetrated the crime, with the view of getting him dethroned.[3] Similarly, in our time there have been suspicions of atrocities being engineered in the Ottoman empire for the purpose of rousing the conscience of Europe. The best-informed political writers in the East insist on the maxim, 'the people follow the religion of their kings,' and the maxim, 'even in your conscience curse not the king' (Ec 10^{20}), represents the prevailing practice.

5. Noteworthy manifestations of the conscience.—Although the lives of the Muslim sovereigns, as told by their chroniclers, frequently, if not ordinarily, display absolute ruthlessness, yet in their relations with those persons who played the part of the Hebrew prophets, conscientiousness seems to have been the rule rather than the exception. Cases in which the sovereign, however arbitrary, permitted himself to be rebuked by a saint, and even followed the saint's advice, are quite common.[1] A saint might even denounce the doings of a Khalīf from the pulpit.[2] The following anecdote of the Ghaznavid Maḥmūd b. Sabuktakīn illustrates the conscientiousness of an Oriental despot. A traditionalist was summoned to repeat edifying matter before the Sultan. The man commenced his discourse before he had been asked, and a slave was told to box his ears. The blow rendered the preacher permanently deaf. The Sultan was deeply distressed at this result, and offered abundant gifts in compensation; the traditionalist declined them all, saying he would accept nothing but what had been taken from him, the power of hearing. Requests from the Sultan for pardon were met merely with a reference to the final judgment. To this stubborn reply the Sultan answered with an embrace.[3]

There is a considerable literature on the desirability of cleansing the 'inner man,' of which Ghazālī's 'Scrutiny of the Hearts' may be mentioned as an example.[4]

LITERATURE.—This is given in the article.

D. S. MARGOLIOUTH.

CONSCIENTIOUSNESS.—Conscientiousness (from 'conscience' [*q.v.*]) may be described as an attitude within the moral life, a source of virtue, rather than one of the virtues. Judgment, with its intellectual reference, and integrity, with its emotional reference, are involved, imparting direction to conduct, and tending strongly to the adaptation of habit on the basis of new values.

Developed morality presupposes two main groups of elements which interact with each other. These are the objective and the subjective, often termed the universal (or social) and the individual (or personal). The former consists of customs and usages, of conventions, observances, and legal or quasi-legal codes, of social and political institutions. All, in turn, are integral to a cultural organization such as a race, a people, or even an epoch. The latter, though inseparable from the former, consists of the peculiar contribution resultant upon the reaction of individuals to the norms of the social unity. So long as this response remains unconscious or unreflective, personal character misses complete distinctiveness, and tends to keep the level of the general, customary average. But when, thanks to a subtle admixture of intellect and emotion, men place themselves in a reflective attitude towards the norms of the communal spirit, conscientiousness supervenes, and obligation acquires an enhanced, because positively recognized, influence upon character.

'Conscientiousness, then, is reflective intelligence grown into character. It involves a greater and wider recognition of obligation in general, and a larger and more stable emotional response to everything that presents itself as duty; as well as the habit of deliberate consideration of the moral situation and of the acts demanded by it' (J. Dewey, *Outlines of a Critical Theory of Ethics*, 1891, p. 200).

In a word, conscientiousness is marked by the

presence of a reinforced requirement of conscience, and by the effort to meet it. Yet, even so, the condition of moral anxiety, accompanied by habitual introspection, can hardly be accepted as an equitable account of the matter. This view savours too much of temporary circumstances, associated, say, with such supposititious entities as the 'Nonconformist conscience,' the 'New England conscience,' or the like. Possibly the Puritan strain led Green to formulate his over-subjective analysis:

'There remain the cases (1) of reflexion on past actions of our own, (2) of consideration whether an act should be presently done, which it rests with ourselves to do or not to do. In both these cases, the question of the character or state of will which an action represents may be raised with a possibility of being answered. Given an ideal of virtue . . . a man may ask himself, Was I, in doing so and so, acting as a good man should, with a pure heart, with a will set on the objects on which it should be set?—or again, Shall I, in doing so and so, be acting as a good man should, goodness being understood in the same sense? . . . The habit in a man of raising such questions about himself as those just indicated, is what we have mainly in view when we call him conscientious' (*Prol. to Ethics*, 1883, p. 322 f.).

But conscientiousness is not to be identified with conscience 'in its extreme form of self-reflectiveness,' which 'investigates with the searching power of an expert, in order to discover the slightest deflection from what it holds to be good. It is because of its personal or individual character that it is able to put forward a claim to independence of the State or of any social order' (S. Alexander, *Moral Order and Progress*, 1889, p. 157 f.). Accordingly, one may accentuate the subjective aspect of conscientiousness readily, and thus minimize the objective reference. If it be reduced to a mere analysis of internal moods, it may very well indicate weakness rather than strength of character.

'The simply ethical temper is related to spiritual productiveness as mere good taste is to creativeness in poetry and art. With so circumspect a step it makes no way; and, though it never wanders, never flies. For ever occupied in distinguishing, it acquires the habit of fear instead of love—nay, above all things, *fears to love*. Its maxims are maxims of avoidance, which shape themselves into negatives, and guard every avenue with the flaming sword of prohibition, "Thou shalt *not*." In apprehension of possible evil, it dares not surrender itself to any admiration and fling itself into unrestrained action for any haunting end: the admiration must first be scrutinized, till it has cooled and its force is gone; the end in view is traced through a thicket of comparisons, till it is lost in the wood. Nothing, accordingly, is more rare than a character at once balanced and powerful, judicial and enthusiastic; and faultless perception is apt to involve feeble inspiration' (James Martineau, *Types of Ethical Theory*[2], 1886, ii. 60).

Thus the division of opinion regarding conscientiousness has its roots in the two groups of elements inseparable from morality. If the objective factor be emphasized, knowledge of social demands, or insight into their nature, is viewed as the dominant feature. If, on the other hand, emphasis be laid on the subjective factor, self-examination, with anxiety about personal moods and feelings, assumes primary importance.

In the Greek world, where our sense of conscientiousness had not developed, but where 'wisdom' (*σοφία*, *σύνεσις*, not yet *συνειδησις*) played a parallel rôle, the community-aggregate of predispositions and tendencies in the realm of values (cf. Grote, *Plato and the Other Companions of Sokrates*, 1865, i. 249) furnished plentiful material which was regarded as neither good nor bad. The 'wise man' was likened to an artist, who shaped this raw stuff into the masterpiece of a model life. For example,

'Aristotle presents us with the general type of a subtle and shifting problem, the solution of which must be worked out afresh by each individual in each particular case. Conduct to him is a free and living creature, and not a machine controlled by fixed laws. Every life is a work of art shaped by the man who lives it' (G. L. Dickinson, *The Greek View of Life*[6], 1907, p. 137).

Accordingly, paradox though it may seem, virtue was knowledge, in the sense that the superior, and therefore thoughtful, citizen superimposed a conscious (reflective) attitude upon the traditional custom of the *πολιτεία*. In this way the 'higher law' of wisdom was made manifest. But, leaving the imperfect Socratics out of account (cf. CYNICS, CASUISTRY), it bore rather upon group-norms than upon the independent 'conscientious' judgment of the individual. The internal thrust of the principle had to await Stoicism and the Christian consciousness.

Nevertheless, the classical moralists of Greece did originate the idea of inward principle, of individual reaction upon the cultural situation, with the result that, consequent upon profound civil vicissitudes, the Stoic conception of 'conscience,' based on the independence of the 'wise man,' grew up and acquired fixity. In this way, dynamic progress in morality, as contrasted with static custom, was enlivened—not, however, without pathological accompaniments, because the restraints of the old society weakened. Despite this, two heritages had been prepared for the Christian consciousness: the conception of inner principle, mediated individually; and the doctrine that, in the sphere of morality at least, whatever might be said of religion, this inward principle must be adjudged by the mind. Thus the contrast between the two elements—the objective or social and the subjective or individual—took definite shape. And successive conceptions of conscientiousness witnessed, if not a struggle, then a lack of balance, between them. At one time, as in the mediæval view of 'prudence,' the objective tended to assert itself; at another, as in the Puritan emphasis on 'righteousness,' the subjective exercised primacy. In a word, men constructed their description of the source of virtue on the basis of current relative evaluation of the virtues.

The very fact, then, that the Christian consciousness has substituted 'conscientiousness' for the 'wisdom' of the Greeks—and this finally—suffices to show that the internal and individual had won full recognition. The conscientious man must use discernment, according to the inward principle, with reference to the norms of social custom. Moral progress and initiative pivot upon this. On the other hand, this initiative is concerned about these same customs—to discover how they may be preserved lively. And yet, of necessity, this process means that, because they are subjects of concern and of consequent new estimate, they must alter.

Conscientiousness, then, may be described as genuine concern, mediated intelligently, for all such values. This cannot but result in approval and disapproval; and these attitudes are traceable in part to emotional convictions about an inward ideal. So far as the conscientious man has made this ideal his own, being able to say, 'This one thing I do,' it has become 'the way and the truth' for him. Accordingly, in the issue, conscientiousness turns out to be an energetic pursuit of an individual-social ideal—an ideal that appeals to emotion mainly through objective associations, and to intellect mainly through intelligent personal reactions to those associations. The conscientious man is at once responsive to social achievements and ends, and considerate of the one principle whereby these ends are relegated to their due places in a harmonious whole. He *feels* that his own goodness is bound up with that of others, hence personal assertion of the norm as he envisages it; he *knows* that his own progress must depend ultimately upon the clearness of his apprehension of the inward principle. Thus reflective insight, on the basis of affective conviction, grasping and transforming group-norms, constitutes the moral attitude known as conscientiousness. For this reason, the latter is held to be the source and guardian of virtue. It serves itself *the* central factor to be reckoned with in an active moral consciousness.

But, further, this implies that conscientiousness

is characterized by disinterestedness. Otherwise, it would not include a concrete estimate of the entire import of an action. Self-assertion here becomes a species of self-forgetfulness. For by this quality the self-reference of conscientiousness is merged in a larger whole. So, if this quality be emphasized, conscientiousness may find a place in the list of virtues. It would then stand as the chief of the cardinal virtues, thus becoming more or less identical with what modern moralists have termed the 'good will.' This implies that it is the guarantee, not of mental acumen or of æsthetic taste, but of goodness realizing itself throughout the entire circle of a life which, in turn, draws sustenance from the norms of the community. In these norms the conscientious man discovers new stimuli to the inner principle. But the necessity for reflexion rules out suppositious automatic deliverances of an equally suppositious 'internal tribunal'—'conscience.' Briefly, vital interest in the good, as the principle reveals it, at once sets problems, and points the conditions of their solution. Fusion of sober judgment with earnest aspiration, and fusion of restraint, mediated socially, with fervent desire, both passing over into will, constitute the modern counterpart of the Greek 'wisdom.' And this species of ethical apperception which imports our experience into a moral order, and also perceives that it is originated from a moral order, is true conscientiousness. It is the pre-requisite and accompaniment of any end which moral beings can adopt for the completion of their well-being. Hence its inevitable relation to questions which pass over into the field of religion.

R. M. WENLEY.

CONSCIOUSNESS.—What is consciousness? From the dawn of modern philosophy the question has been discussed, and psychology and philosophy have endeavoured to find a reply. The answers have been very various, but we may not summarize them in this article. To summarize those given from the time of Descartes onwards would be to write a history of modern philosophy. And at present the question is more widely and more incisively discussed than ever before. Some philosophers and psychologists almost insist on discarding the name altogether, while others make the results of the analysis of consciousness the whole of their philosophy. For example, A. E. Taylor writes:

'This is perhaps the place to add the further remark that, if we would be rigidly accurate in psychological terminology, we ought to banish the very expression "consciousness" or "states of consciousness" from our language. What are really given in experience are attentive processes with a certain common character. We abstract this character and give it the name of "consciousness," and then fall into the blunder of calling the concrete processes "states" or "modifications" of this abstraction, just as in dealing with physical things we make abstraction of their common properties under the name of "matter," and then talk as if the things themselves were "forms of matter." Properly speaking, there are physical things and there are minds, but there are no such things in the actual world as "matter" and "consciousness," and we do well to avoid using the words when we can help it' (*Elements of Metaphysics*, p. 79 n.). In the text, with all the emphasis of italics, Taylor says: 'We cannot too strongly insist that if by "self-consciousness" is meant a cognitive state which is its own object, there is no such thing, and it is a psychological impossibility that there should be any such thing as self-consciousness. No cognitive state ever has itself for its own object. Every cognitive state has for its object something other than itself' (*ib.* p. 79).

Taylor makes short work of consciousness; and if we took his view, the writing of an article on consciousness might be dispensed with. But, as we are hardly able to conceive what is meant by a cognitive state which has an object which is something other than itself, we may be permitted to go on. It is scarcely consistent with the ordinary use of language, and certainly quite inconsistent with the use of psychological language, to speak of a cognitive state in active relation with an object. For whom is the state, and who is aware of it? But this question may be better discussed at a later stage. Meanwhile it may be safely said that the word 'consciousness' denotes some phase or aspect of our mental life, and that it is not identical with any of the other aspects which we apply to particular mental processes or states. It is not feeling, nor is it willing, nor is it thinking; but these states or processes have this at least in common, that they are conscious states. The contrast does not lie between feeling and consciousness, or between willing and consciousness, or between thinking and consciousness. The contrast lies between consciousness and unconsciousness. For the characteristic of every mental state, or of every mental process, seems just to consist in the fact that they are states of a conscious subject, and that they are for that subject.

While this is so, many questions of interest and importance arise as to the relations of the subject to its states, as to the distinction, if there is a distinction, between the phrases 'states of consciousness' and 'consciousness of states.' Is consciousness to be identified with the sum of its states? Can we neglect the reference to a subject, and proceed to analyze, compare, classify, and arrange these states according to the laws of their growth, their interrelations, and so on, leaving out of sight, as common to them all, their relation to a common subject? This has been done, and, in fact, it is the ordinary psychological procedure. But there is always a sort of uneasiness about proceeding in this way; for many inconvenient questions arise as to the subject for whom the experiences are, and the unity to which they are referred. Ideas, processes, and states come and go; they cluster together, they occupy our attention, and they seem to pass into the unconscious. It is natural that the scene of their appearance should be likened to a theatre, and that, while they have passed from the scene, they should have a sort of existence behind the scenes. It may be well to quote the classic illustration of Hume:

'For my part, when I enter most intimately into what I call *myself*, I always stumble on some particular perception or other, of heat or cold, light or shade, love or hatred, pain or pleasure. I never can catch *myself* at any time without a perception, and never can observe anything but the perception. When my perceptions are removed for any time, as by sound sleep, so long am I insensible of *myself*, and may truly be said not to exist. And were all my perceptions removed by death, and could I neither think, nor feel, nor see, nor love, nor hate, after the dissolution of my body, I should be entirely annihilated, nor do I conceive what is further requisite to make me a perfect non-entity. If any one, upon serious and unprejudiced reflexion, thinks he has a different notion of *himself*, I must confess I can reason no longer with him. All I can allow him is, that he may be in the right as well as I, and that we are essentially different in this particular. He may, perhaps, per-

ceive something simple and continued, which he calls *himself*; though I am certain there is no such principle in me.

But, setting aside some metaphysicians of this kind, I may venture to affirm of the rest of mankind, that they are nothing but a bundle or collection of different perceptions, which succeed each other with an inconceivable rapidity, and are in a perpetual flux and movement. Our eyes cannot turn in their sockets without varying our perceptions. Our thought is still more variable than our sight; and all our other senses and faculties contribute to this change; nor is there any single power of the soul which remains unalterably the same, perhaps for one moment. The mind is a kind of theatre, where several perceptions successively make their appearance; pass, re-pass, glide away, and mingle in an infinite variety of postures and situations. There is properly no *simplicity* in it at one time, nor *identity* in different; whatever natural propension we may have to imagine that simplicity and identity. The comparison of the theatre must not mislead us. They are the successive perceptions only that constitute the mind; nor have we the most distant notion of the place where these scenes are represented, or of the materials of which it is composed' (Hume's *Works*, ed. Green and Grose, Lond. 1909, i. 534 f.). Or, again, a little further on: 'What we call mind is nothing but a heap or bundle of different perceptions united together by certain relations, and supposed, though falsely, to be endowed with a certain simplicity and identity.'

It is a curious passage, and the more we study it the more curious it appears. There is the suggestion of a theatre, so often made since by other psychologists, and no sooner is it made than it is withdrawn. Yet it has fulfilled its aim. It has directed our attention to the stage, and has so far served its purpose. But a theatre suggests a stage, and players, and spectators. These suggestions, however, are somewhat inconvenient, and raise awkward questions. So we are told that 'the comparison of the theatre must not mislead us.' For it is 'the successive perceptions only that constitute the mind.' One is compelled to ask, What is a perception, and what is a succession? Above we were told that 'several perceptions successively make their appearance—pass, re-pass, glide away, and mingle in an infinite variety of postures and situations.' The perceptions make their appearance—to whom? Hume had formerly spoken of 'what I call *myself*.' So it is to what he calls himself that the perceptions appear, and all the passing, re-passing, and other movements are perceived by himself. And yet the mind that perceives, that looks on at the gliding show, is nothing but the bundle or collection of different perceptions. Is the mind aware that it is a bundle? Or that it is a collection? Whence came the bundle or collection? And how does it recognize itself to be a unity? In the passage before us, Hume is unable to state his argument without the implication, in every sentence, of what he formally denies. He is in the presence of a unique fact—the fact of a succession of perceptions which recognizes itself as a bundle or collection. How is it so? We are careful to state it in his own language, for that language implies the unity of the conscious subject to which all the gliding appearances are referred. It would appear that we are face to face with a unique kind of thing—a thing which seems at the same time to be knower and known, actor and spectator, a show and the spectator for whom the show is. For all these passing, re-passing, and gliding appearances, so felicitously described by Hume, had an existence only for himself; and, while other people may have similar experiences, these particular experiences were for him alone. And he was something more than the bundle of perceptions, he was the self for whom the perceptions were. We do not require here to discuss the relation of body and mind (see BODY AND MIND, BRAIN AND MIND, MIND), or of physiology and psychology. Nor can we dwell on the attempts to deduce the unity of consciousness from the unity of the nervous system. There is a parallelism between the growth of mind and the growth of an organized nervous system. Physiology has often given useful hints to psychology. There are parallels between the evolution of the organism and the evolution of consciousness. But, while that is so, the fact of consciousness remains without parallel, and its nature must only be described and not explained. It is interesting, for example, to follow Herbert Spencer through his works setting forth the Synthetic Philosophy, from the First Principles, through Biology and Psychology to Sociology and Ethics. It is of special interest to mark the description of the origin and growth of these, and then to notice how psychology enters in. After he has described the evolution of the nervous system, he seeks to correlate the stages of evolution with a corresponding mental growth. How about consciousness? Whence did it come?

'In its higher forms, instinct is probably accompanied by a rudimentary consciousness. There cannot be co-ordination of many stimuli without some ganglion through which they are all brought into relation. In the process of bringing them into relation, this ganglion must be subject to the influence of each—must undergo many changes. And the quick succession of changes in a ganglion, implying, as it does, perpetual experiences of differences and likenesses, constitutes the raw material of consciousness. The implication is that, as fast as instinct is developed, some kind of consciousness becomes nascent' (*Psychology*, Lond. 1885, sect. 195).

So far we obtain only a raw material of consciousness and some kind of nascent consciousness. Another passage from the *Psychology* seems to show how a consciousness must arise:

'Separate impressions are received by the senses—by different parts of the body. If they go no further than the places at which they are received, they are useless. Or, if only some of them are brought into relation with one another, they are useless. That an effectual adjustment may be made, they must be all brought into relation with one another. But this implies some centre of communication common to them all, through which they severally pass; and as they cannot pass through it simultaneously, they must pass through it in succession. So that, as the external phenomena responded to become greater in number and more complicated in kind, the variety and rapidity of the changes to which this common centre of communication is subject must increase—there must result an unbroken series of these changes, there must arise a consciousness. Hence the progress of the correspondence between the organism and its environment necessitates a gradual reduction of the sensorial changes to a succession; and by so doing evolves a distinct consciousness—a consciousness that becomes higher as the succession becomes more rapid and the correspondence more complete' (sect. 179).

It is interesting to note how, in the description of the process, Spencer is constrained to assume, as in existence, the consciousness whose genesis he is seeking to describe. He speaks of 'perpetual experiences of differences and likenesses' in the ganglion through which the numerous stimuli are co-ordinated. If these exist, then we submit that the work supposed to be effected by consciousness is already being done. If these stimuli can be co-ordinated by a ganglion, what is the need of a consciousness to do a work already sufficiently provided for? As we read on, the wonder increases. The impressions received by the senses must be adjusted, and the adjustment is made through a centre of communication through which they pass in succession. But this centre, through which the impressions pass in succession, does a business which is ever on the increase, and, in order that its work may be done, a consciousness must arise. Why? As a matter of fact, a consciousness has arisen—something which is aware of the various changes within itself, which also has a certain power of intervention. But in the description of the whole process no place is left at which a consciousness can enter in. Either one must hold that consciousness has been implicitly present from the beginning, or it can never appear on the terms assigned to its entrance by Spencer.

That there is a relation between consciousness and the nervous states of the organism is unquestionable. But the origin and character of that relationship are not sufficiently described by Spencer. From the above account of the origin of consciousness, it appears as altogether a superfluous addition to a nervous system. The work of co-ordination has been already accomplished, and has, indeed,

automatically proceeded until the stimuli have learned how to pass through a centre, and to pass in orderly procession. Yet, on the whole, consciousness is greatly needed in the system of Spencer. For 'all mental action whatever,' we are told a little further on, 'is definable as the continuous differentiation and integration of states of consciousness' (*op. cit.* ii. 301). Are the states of consciousness determined by the states of the organism? Are they part of the integration and differentiation of matter and motion? Or is there only a parallelism between the two? Is psycho-physical parallelism the ultimate word on the relationship between the two? Or is the consciousness simply an epiphenomenon, a mere accompaniment, or, in the metaphor of Huxley, is it simply the ticking of the clock which is mistaken for its function?

Leaving on one side the questions of the origin of consciousness as unanswerable, and the further questions of the relations of mind and body as too large for our proper theme, let us ask, What is really meant by conscious life, or, in other words, by consciousness? As we reflect on what happens when we attend to the processes of our inner life, we note three main characteristics: (1) There is the fact of change; without change, or without the entrance of a new fact into consciousness, there is no consciousness. Continued sameness would mean unconsciousness. (2) There is the preservation or reproduction of previously given elements, with some connexion between elements formerly given and those that are new. (3) There is the inward unity of recognition. In the stream of the inner life there are always present those three factors. Thus synthesis is the fundamental fact of all consciousness. But the synthetic activity of consciousness has always a certain end in view. This will become abundantly clear as we look at the mental attitude towards an object. This attitude is threefold, corresponding to the three aspects of mental activity. Consciousness is always occupied with some object. It is not needful to define the object for our present purpose. But, be it what it may, (1) it is an object of knowledge; we seem to know it, or to know something about it. (2) It brings to us some pleasure or pain; it affects us in some way. (3) We tend to alter it, transform it, take possession of it, and master it. We desire to have a clearer view of its character, or to make it serve our purpose. An object is thus related to us in three ways; and these three are the fundamental aspects of conscious activity—knowing, feeling, and striving, which are three aspects of the same mental state, not to be separated from each other, not to be thought of as successive in time, but elements of one concrete experience. From any of these points of view we arrive at the conclusion of the unity of the subject, which recognizes all these attitudes as its own. Cognition, recognition, or any other name descriptive of the cognitive attitude, presupposes the unity of the subject. The feeling of pleasure in activity, or of pain in the interruption of the activity, presupposes a central point into relation with which the changing elements of consciousness are brought. Similarly, it may be shown that all conative activity presupposes the unity of the subject, for it is the attempt to bring the object into harmonious relations with the other objects formerly or presently held together in our experience.

Thus from many points of view, as we look at the living, moving, thinking, willing, concrete being, we are presented with the fact of a unitary consciousness, of a real self, capable of a real experience. Yet it has been possible for systems to be constructed, theories of knowledge to be promulgated, psychological theories to be set forth, and views to be argued, from which personalism has been excluded, and all reference to self and the unity of the self avoided. It is worth while to see how this has been possible. The possibility of it has not been without advantage in the interests of science. What does science desire to accomplish? A man of science does not know anything, does not desire to know anything, save the objects in their causal relation to one another. He seeks to look at things as parts of Nature, strives to construct and to model them until he has arranged them in their sequence as causes and effects. He strives to find the linkages, and, when he has linked all things together in a scheme which seems to include the whole, he is satisfied with his work. But, in order to fulfil this purpose, he has to make himself a martyr to science. He is no longer a man with his will and his purpose, a living, breathing man with a life of his own; he has become what we may call an abstract spectator, a consciousness which simply becomes aware of the ongoings and the linkages of the energies of the universe. Such a personality is not a real man. The standpoint of the spectator involves certain abstractions. He has put aside all interests, all living attitudes, and all the varied manifoldness of his concrete life, and has converted himself into a mere onlooker, whose whole aim is to understand the ways in which things are linked together. It is so far an artificial attitude, but in this abstraction from all that relates to personal will and purpose lies the enormous strength of the scientific attitude. It enables the onlooker to regard the processes of the world as the outcome of laws, to bring them into relations, to master them, and harness them to the fulfilment of his purposes. In fact, the scientific spectator who desires simply to know and to master the system of the world, abstracts altogether from his own life-interests, even from his own individuality, becomes merely a spectator of processes which are not for this individual or for that, but the same for every one. Further, not only does he abstract from all personal interests and from all individual proclivities, he finally comes to abstract from the activity of the knowing subject itself, and to look at the world as a system complete in itself, and independent of any subject. This mere abstract knower, who has detached himself from every personal characteristic, attitude, and interest, who simply watches the processes of Nature and registers them, is a useful creature for many purposes, but he can scarcely be taken as a complete and adequate representative of what consciousness, or self-consciousness in the fullness of its concrete being, means.

Science must proceed after the fashion described, if it is to do its work. But we ought to remind ourselves of the limitations prescribed by this attitude. In particular, we are not to put this abstract spectator, who has reduced himself to the stature of a mere spectator, in the place of the living man. The synthetic unity of apperception, to use Kant's phrase, may be all that is required for the purposes of explaining and describing the world, but this abstract attitude of the subject is not sufficient when we seek to speak of consciousness or of self-consciousness as it is in living experience. In the science of psychology we have also to assume this abstract attitude. Before the psychologist are the perceptions and thoughts, the feelings and emotions, the judgments and volitions, which he is to study and describe. He is well aware that the only key to the understanding of them lies within himself. No one save himself is aware of these conscious states, so far as they are his own. They are for him part of his own individual experience, and no one else has these particular experiences. But he has to take them as typical, and the subject

which has the experience becomes an abstract detached subject, a spectator who stands outside of the skull of everybody, and is supposed to have the manifold life of every conscious subject open to his gaze. It is necessary to make these abstractions; to make them is indispensable for the solution of particular problems, and helps us to attain to that mastery of the world which is essential for the fulfilment of the tasks of life. It is not needful to quarrel with the abstract attitude of every science, or to accuse it of wilful neglect of many elements in conscious life; our quarrel arises only when these special scientific aspects are set forth as complete and exhaustive accounts of the world.

To deal rightly with the question of consciousness which we have in hand, we must not be content to regard it as it appears in abstract science—merely as that which is aware of the processes of the world's ongoing, or merely as the abstract subject which meets us in psychological treatises. To neglect the subject and all its individual experiences, hopes, fears, and wishes, is quite right on the part of the physicist, the chemist, and the naturalist; and so to exclude the individual, and to declare that biography forms no part of psychology, is quite legitimate when the psychologist is seeking to understand the process of consciousness in general. But if the aim is to understand the fullness, the manifoldness, the complexity, as well as the unity, of mental life, the method is inadequate. The psychologist looks at the inner life as mere contents of consciousness. This consciousness only becomes aware of what is going on, and from this point of view it is nothing more. All contents are of equal value, or, rather, they are of value simply because they have a place in the stream of consciousness. But this view of consciousness is of value only to the psychologist, whose business is to describe and explain the contents of consciousness, and to organize them into a system. When we look away from the peculiar business of psychology, and speak of men in their habit as they live, we are aware of a great deal of which psychology takes no notice. There is the life which the poet sees, expresses, and interprets; there is the life of which the historian writes, which he seeks to interpret and to understand; there is the world of political, social, moral, and religious interests; and all of us are in that world—each a separate personality, characterized for selves and others as personalities, with the power of looking before and after, of foreseeing ends, and adopting means to realize them, of forming ideals, and of living up to them. Again, in every act of ours, in every feeling, every volition, and every thought, we are conscious of a self which expresses itself in aims and meanings. We see ourselves girt about with duties, laden with responsibilities, and we feel that we have a meaning in ourselves, and a place in the world.

We are not called on to explain here the different meanings which the self has for the psychologist, and for all others, such as the poet, the historian, the jurist, the artist. In the works of all these we are in a field of personal will and personal interest; in the company of the psychologist we are merely in the presence of a consciousness which is reduced to the aspect of being only aware of its contents, and has no special interest in, or preference for, any of these contents. Such a potentiality we may leave on one side as we proceed to deal with consciousness. What is it? Well, it is not to be identified with the sum of all its states, or with the sum of all its real or consistent presentations. It is not the stream of changes which goes on within it, or merely the awareness of the contents of that stream. It is not knowing, or willing, or feeling, for outside of it there is no feeling, no willing, no knowing. Consciousness is the condition of all mental life; without consciousness there is no mental life. A psychical fact is simply a fact in consciousness, and it is nothing else. Unconscious knowing is a phrase to which we can attach no meaning. Just as little can we interpret a willing of which we have no consciousness.

Consciousness, therefore, is undefinable. Like all ultimates, we must simply accept it as the condition of the explanation of all else, itself remaining unexplained. It may not be identified with the sum of its states, any more than we can identify a real whole with the sum of its parts. For, after we have summed up the parts, there remains unaccounted for the wholeness of the whole. A machine is not the sum of its parts, and an organism is something more than the sum of its structures and functions. This statement, true of every whole, is uniquely true of the whole of consciousness. It is not a faculty in addition to other faculties, as memory is different, say, from imagination; it is implied in all the faculties of the mind. It is an essential property of every process that goes on within the mind. The simplest view is that which regards consciousness as the sphere in which immediate experience goes on. We are baffled by the very simplicity of the immediate operation of consciousness. We are baffled also by the fact that out of this simplicity are evolved all the results of the activity of consciousness in relation to the world and to self. Sciences, poems, histories, all the outcome of human endeavour, are due to the activity of consciousness. But what we are conscious of at any given moment is simply the mental states, activities, and passivities, and the presentations with which they work. What we insist on here is that consciousness cannot be deduced from anything else.

Certainly it cannot be deduced from the play of unconscious forces, or from the elaboration of correspondences between the growth of consciousness and the evolution of a nervous system. It may be well to dwell for a little on the attempts made to deduce consciousness from the play of unconscious forces. 'Latent mental modifications,' 'unconscious cerebrations,' are among the phrases used in this connexion. W. James, in discussing the 'mind-stuff' theory, thus deals with the distinction between the unconscious and the conscious being of the mental state:

> 'It is the sovereign means for believing what one likes in psychology, and of turning what might become a science into a tumbling-ground for whimsies. It has numerous champions, and elaborate reasons to give for itself. We must therefore accord it due consideration' (*Principles of Psychology*, i. 163 f.).

In answer to the question, Do unconscious mental states exist?, James enumerates no fewer than ten proofs,—an almost exhaustive list,—submits them to a drastic criticism, and returns the verdict, 'Not proven.' Of one proof he says:

> 'None of these facts, then, appealed to so confidently in proof of the existence of ideas in an unconscious state, prove anything of the sort. They prove either that conscious ideas were present which the next instant were forgotten; or they prove that certain results, *similar* to results of reasoning, may be wrought out by rapid brain-processes to which no ideation seems attached' (*ib.* 170). The tenth proof may be quoted more fully: 'There is a great class of experiences in our mental life which may be described as discoveries that a subjective condition which we have been having is really something different from what we had supposed. We suddenly find ourselves bored by a thing which we thought we were enjoying well enough; or in love with a person whom we imagined we only liked. Or else we deliberately analyze our motives, and find that at bottom they contain jealousies and cupidities which we little suspected to be there. Our feelings towards people are perfect wells of motivation, unconscious of itself, which introspection brings to light. And our sensations likewise: we constantly discover new elements in sensations which we have been in the habit of receiving all our days, elements, too, which have been there from the first, since otherwise we should have been unable to distinguish the sensations containing them from others nearly allied. The elements must exist, for we use them to discriminate by; but they must exist in an unconscious state, since we so

completely fail to single them out. The books of the analytic school of psychology abound in examples of the kind. Who knows the countless associations that mingle with his each and every thought? Who can pick apart all the nameless feelings that stream in at every moment from his various internal organs, muscles, heart, glands, lungs, etc., and compose in their totality his sense of bodily life? Who is aware of the part played by feelings of innervation and suggestions of possible muscular exertion in all his judgments of distance, shape, and size? Consider, too, the difference between a sensation which we simply *have* and one which we *attend to*. Attention gives results that seem like fresh creations; and yet the feelings and elements of feeling which it reveals must have been already there—in an unconscious state' (*ib.* 170 f.).

Thus far the statement of the proof of unconscious mental states is real and existent. Of this argument, or proof, so fully stated, James says:

'These reasonings are one tissue of confusion. Two states of mind which refer to the same external reality . . . are described as the same state of mind or "idea," published, as it were, in two editions; and then, whatever qualities of the second edition are found openly lacking in the first are explained as having really been there, only in an "unconscious" way. It would be difficult to believe that intelligent men could be guilty of so patent a fallacy, were not the history of psychology there to give the proof. The psychological stock-in-trade of some authors is the belief that two thoughts about one thing are virtually the same thought, and that this same thought may in subsequent reflexions become more and more *conscious* of what it really *was* all along from the first. But, once make the distinction between simply *having an idea* at the moment of its presence, and subsequently knowing all sorts of things *about it*; make, moreover, that between a state of mind itself, taken as a subjective fact, on the one hand, and the objective thing it knows, on the other, and one has no difficulty in escaping from the labyrinth' (p. 172).

He deals with the latter distinction first, and thus concludes:

'There is only one "phase" in which an idea can be, and that is a fully conscious condition. If it is not in that condition, then it is not at all' (p. 173).

His language in dealing with the distinction between simply having an idea and knowing all sorts of things about it we quote fully, as it is of the highest importance in view of what we must discuss presently:

'The truth is here even simpler to unravel. When I decide that I have, without knowing it, been for several weeks in love, I am simply giving a name to a state which previously *I have not named*, but which was fully conscious; which had no residual mode of being, except the manner in which it was conscious; and which, though it was a feeling towards the same person for whom I now have a much more inflamed feeling, and though it continuously led into the latter, and is similar enough to be called by the same name, is yet in no sense identical with the latter, and least of all in an "unconscious" way. Again, the feelings from our viscera and other dimly-felt organs, the feelings of innervation (if such there be), and those of muscular exertion which, in our spatial judgments, are supposed unconsciously to determine what we shall perceive, are just exactly what we feel them, perfectly determinate conscious states, not vague editions of other conscious states. They may be faint and weak; they may be very vague cognizers of the same realities which other conscious states cognize and name exactly; they may be unconscious of much in the reality which the other states are conscious of. But that does not make them, *in themselves*, a whit dim or vague or unconscious. They *are* eternally as they feel when they exist, and can, neither actually nor potentially, be identified with anything else than their own faint selves. A faint feeling may be looked back upon and classified and understood in its relations to what went before or after it in the stream of thought. But it, on the one hand, and the later state of mind which knows all these things about it, on the other, are surely not two conditions, one conscious and the other "unconscious," of the same identical psychic fact' (p. 174).

Apart from the somewhat curious phraseology, which would seem to imply that a state is conscious of its own object—which is rather startling—the argument seems conclusive. Yet it may be well to note that a reference to the conscious subject, when we speak of a conscious state, is always in order. But it is misleading to speak of conscious states cognizing faintly or fully, when we mean that the subject cognizes through these states more or less fully. But, as we follow James through the subsequent evolution of his thought, we feel that he seems to have departed from the conclusion reached in the passages we have quoted. At all events, he writes as follows:

'I cannot but think that the most important step forward that has occurred in psychology since I have been a student of that science is the discovery, first made in 1886, that, in certain subjects at least, there is not only the consciousness of the ordinary field, with its usual centre and margin, but an addition thereto in the shape of a set of memories, thoughts, and feelings, which are extra-marginal and outside of the primary consciousness altogether, but yet must be classed as conscious facts of some sort, able to reveal their presence by unmistakable signs. I call this the most important step forward, because, unlike the other advances which psychology has made, this discovery has revealed to us an entirely unsuspected peculiarity in the constitution of human nature' (*Varieties of Religious Experience*, p. 233). Again: 'The *sub-conscious self* is nowadays a well-accredited psychological entity; and I believe that in it we have exactly the mediating term required. Apart from all religious considerations, there is actually and literally more life in our total soul than we are at any time aware of. The exploration of the trans-marginal field has hardly yet been seriously undertaken; but what Mr. Myers said in 1892 in his essay on the Subliminal Consciousness is as true as when it was first written: "Each of us is in reality an abiding psychical entity far more extensive than he knows—an individuality which can never express itself completely through any corporeal manifestation. The Self manifests through the organism; but there is always some part of the Self unmanifested, and always, as it seems, some power of organic expression in abeyance or reserve." Much of the content of this larger background against which our conscious being stands out in relief is insignificant. Imperfect memories, silly jingles, inhibitive timidities, "dissolutive" phenomena of various sorts, as Myers calls them, enter into it for a large part. But in it many of the performances of genius seem also to have their origin' (p. 511 f.).

The sub-conscious self can, according to Sanday, do even more wonderful things than these:

'Besides the upper region of consciousness, there is a lower region into which the conscious mind cannot enter. It cannot enter, and yet it possesses a strange magnetic power by which the contents of the lower region are, as it were, drawn upwards and brought within the range of its cognition. This lower region is a storehouse of experiences of the most varied kinds; in fact, all the experiences that make up human life.' Having described these experiences, the author goes on: 'All these things are latent. The door of that treasure-house, which is also a workshop, is locked, so far as the conscious personality is concerned. For it there is no "harrowing of hell," no triumphant descent into the nether world, followed by a release and return of captives on any large scale. The door is locked against any such violent irruption. And yet, in some strange way, there seem to be open chinks and crevices through which there is a constant coming and going, denizens or manufactured products of the lower world returning to the upper air of consciousness, and once more entering into the train and sequence of what we call active life, though, indeed, the invisible processes of this life are just as active as the visible. It appears to be the function of the sub-conscious and unconscious states to *feed* the conscious. There is that continual movement from below upwards of which I have been speaking. A never-ending train of images, memories, and ideas keeps emerging into the light. But only in part are they subject to the will and conscious reason. Only in part do they come *at call*. And only in part do they come in fully organized form. . . . The wonderful thing is that, while the unconscious and sub-conscious processes are (generally speaking) similar in kind to the conscious, they surpass them in degree. They are subtler, intenser, further-reaching, more penetrating. It is something more than a mere metaphor when we describe the sub- and unconscious states as more "profound"' (*Christologies, Ancient and Modern*, Oxf. 1910, pp. 142–145).

The wonderful passage just quoted prompts one to ask a number of questions. We are told that the door of the treasure-house is locked; yet Sanday seems to have obtained the key, for he describes the treasures which are there, and the work which is done there, and is able to compare it with the work done in the upper air. He is able also to declare that the processes down below are subtler, intenser, further-reaching, more penetrating. How has he come to know all this? If it be so, what is the use of a consciousness if the sub-conscious and the unconscious can do so much better work, and at so much less cost? As for ourselves, we are inclined to say of these fancies that they are 'whimsies'—the word Professor James himself employed when dealing with the question of the existence of unconscious mental states. James has seemingly changed his view on the matter, and we submit that he was bound to answer his own arguments as these are set forth in his *Principles of Psychology*. These seem to us as cogent as they were before what he calls the discovery in 1886. When he declares that 'the sub-conscious self is nowadays a well-accredited psychological entity,' we are surely entitled to ask what meaning he attaches to the word 'self' in this connexion. In the interesting chapter on the consciousness of self in the *Principles of Psychology*, he speaks of the constituents of the self as the material self, the social self, the spiritual

self, and the pure ego. In the course of the discussion he says that the substantialist view of the soul '*is at all events needless for expressing the actual subjective phenomena of consciousness as they appear.* We have formulated them all without its aid, by the supposition of a stream of thoughts, each substantially different from the rest, but cognitive of the rest and "appropriative" of each other's content. At least, if I have not already succeeded in making this plausible to the reader, I am hopeless of convincing him by anything I could add now. The unity, the identity, the individuality, and the immateriality that appear in the psychic life are thus accounted for as phenomenal and temporal facts exclusively, and with no need of reference to any more simple or substantial agent than the present Thought or "section" of the stream' (*op. cit.* i. 344).

It is true that this passage relates only to the active subjective phenomena of consciousness as they appear. Are we to have one method and one form of process as applied to the phenomena of consciousness, and another when we apply them to the sub-conscious and the unconscious? Under what heading are we to place the entity called 'the sub-conscious self'? Is it material, social, spiritual? Or is it the pure ego? Yet the sub-conscious self is 'a well-accredited psychological entity.' Are we to lay stress on the adjective 'psychological,' or on the substantive 'entity'? We should like to know a little more regarding the sub-conscious self, but it seems that it is really outside the scope of psychological investigation. The door is locked, and no one can find the key. The effects of this doctrine of the sub-conscious self on psychology, ethics, and theology are so far-reaching, and to us so disastrous, that a thorough investigation of it and its claims is urgent. That investigation cannot be made here and now; we are concerned with it only so far as it bears on our present theme.

What are we to make of this wonderful sub-conscious self, which does such marvellous things? Are we to take it as a positive conception, and with Hartmann use it as an explanatory principle, when all other sources of explanation fail? Then we say with Höffding: 'Psychology is on secure ground only when it confines itself to the clear and certain phenomena and laws of consciousness' (*Psychology*, Eng. tr. p. 73). True, Höffding immediately adds: 'But, starting from this point, it discovers the unconscious, and sees, to its astonishment, that psychological laws prevail beyond the province of conscious life. In what follows we shall adduce some examples to make this clear.' Reference is made to memory, to the physiology of the senses, to instinct, and to tact, to the fact that an unconscious activity can be carried on simultaneously with a conscious, as 'when a spinner turns the wheel, and draws out the thread, while her thoughts are far away.' But, as the outcome of the whole discussion, Höffding cautiously says:

'Notwithstanding the intimate connection and close interaction between the conscious and the unconscious, the latter remains for us a negative conception. The unconscious processes are cerebral processes just as much as the conscious, but whether, like these, they are of several kinds, we do not know. Instead of speaking of unconscious thought or unconscious feeling, it would be safer—if we wish to avoid all hypotheses—to speak with Carpenter and John Stuart Mill of unconscious cerebration, were not this expression unsuitable, as suggesting, in the first place, the mistaken notion that there may be consciousness of cerebration, properly so called, and because, in the second place, it might appear to affirm that there is nothing at all in unconscious activity related to what we know in ourselves as conscious states' (p. 81).

While mental activity may extend beyond consciousness, and while self may have a larger range than the consciousness is aware of at any one time, it is not possible for psychology, or for clear science, to seek for the principles of rational explanation anywhere save in the conscious life itself. The unconscious must remain a negative conception. It is simply metaphor, and bad metaphor at that, to speak of 'invasions,' of 'rushes' and 'uprushes,' from the lower world, and it is vain to seek for explanations of the ongoing of our mental life from what is supposed to have gone on in the sub-conscious self. We must exhaust the possibilities of consciousness, as the source of explanation, ere we seek to bring in the sub-conscious and the unconscious as a positive principle of explanation, as, from the very nature of the case, it is impossible to bring these into clear consciousness, or into consciousness at all. Instead of saying, with Sanday, that the function of the unconscious is to feed the conscious, it would be more consistent with the facts to say that the unconscious and the sub-conscious are storehouses of products manufactured by consciousness, and kept *in retentis* until they are needed. Habit has been described as lapsed intelligence, and is the outcome of repeated conscious processes, so often repeated that they have become automatic. Similarly it may be possible to deal with all the evidence of sub-conscious and unconscious activity of the self so as to show that all or most of these activities had conscious beginnings, and, in any case, that they are not unrelated to conscious activity either in the past or in the present.

At all events, it is not from these unconscious or sub-conscious experiences that our evidence is derived, out of which are built up those conclusions which make up the science, the poetry, the history, and the philosophy of the world. For the principles which underlie these achievements of the human mind, the linkages which bind them together, and the certainty which they attain to are derived from the conscious and not from the unconscious activity of the mind. The basis of certainty lies in consciousness. Its affirmations, its intuitions, are the foundations on which we build. Not on invasions from the sub-conscious, nor on uprushes from the unconscious come those convictions of truth, reality, and necessity, which turn the raw material of our experience into the organized knowledge of the race.

'The necessity of thought which is manifested in the certainty of particular acts of judgment owes its distinctive character in the last instance to the unity of self-consciousness. Every particular judgment may be repeated, with the consciousness of the identity of subject and predicate as well as of the act of judgment; starting from the same data, it is always the same synthesis which takes place, and our self-consciousness cannot exist apart from this invariability. Thus our judging ego, with its unvarying activity, is opposed to particular acts of judgment as a universal, as the same and the permanent which binds together the different and temporarily separated acts of thought. With the confidence of the movement in each particular case is connected the consciousness of unvarying repetition, of return to the same point. In this constancy, which presents a general law in contrast with the particular act, we are conscious of judgment as something withdrawn from the sphere in which we have a subjective choice and are free to bring about alterations; we are conscious of it in the same way as when it maintains itself in some particular act against contradiction. Because this identity and constancy of our action is the condition of our consciousness as one and undivided, it is also the final and fundamental basis upon which we can fall back' (Sigwart, *Logic*, Eng. tr. i. 187).

It is one of the merits of Sigwart's great treatise on Logic that he brings all the logical judgments into close relation to the unity and identity of self-consciousness. We know no work in which this has been done so thoroughly and so convincingly. Take another passage, dealing with certainty:

'The certainty that a judgment is permanent, that the synthesis is irrevocable, that I shall always say the same—this certainty can be forthcoming only when it is known to depend, not upon momentary psychological motives, which vary as time goes on, but upon something which is immutably the same every time I think, and is unaffected by any change. This something is, on the one hand, my self-consciousness itself, the certainty that I am I, the same person who now thinks and who thought before, who thinks both one thing and another. On the other hand, it is that about which I judge, my thought itself as far as regards its invariable content, which I recognize as identical each time, and which is quite independent of the state of mind of the individual thinker. The certainty that I am and think is final and fundamental, the condition of all thought and all certainty whatever. Here there can be none but immediate and self-evident certainty; we cannot even say that it is necessary, for it is prior to all necessity. In the

same way, the certainty of my consciousness that I think this or that is immediate and self-evident; it is inextricably interwoven with my self-consciousness; the one involves the other' (p. 240).

The form under which consciousness exists is that of the distinction of subject and object. As factors in the synthesis of consciousness there are to be distinguished the object of which we are conscious, and the subject which is conscious of the object. The object is for the subject, and is either a state of the subject, or an activity of it, or a quality of external things. When this distinction is clearly made, there is a clear consciousness; when vaguely made, there is a vague consciousness; when it is not made at all, there is no consciousness. When we are conscious, we are conscious of something, and we are conscious of that something only as we distinguish it from self, and place it over against self as its object. We are not to enter into the age-long controversy as to whether there can be a merely sensitive consciousness which is neither subject nor object, but consists only of particular feelings. It has been widely contended that a purely sensitive consciousness is possible, and that the reference to subject and object, which all admit as characteristic of full-grown consciousness, arises out of associated experiences. These are classified as vivid and faint, the vivid coming from the object, and the faint from the subject. Out of these particular feelings association builds up the conception of both subject and object. But Hume does not allow any validity to this conception; it is only a fiction of the mind. Herbert Spencer, while he strives to account for the distinction of subject and object by the associationalist theory eked out by the theory of evolution, does admit, or rather lays stress on, the distinction between subject and object, as a cardinal principle of his synthetic philosophy. But the mere addition of units of conscious feeling could never reach a unitary consciousness. For these units of feeling are each different from all the rest, and, as they begin in time, they perish as soon as they appear, unless they are held together by reference to the self whose they are. States of consciousness can never be without a consciousness of states. If there is to be a consciousness of states, there must be a subject which discriminates itself from the states, can hold them together for discrimination or comparison, and can distinguish all of them as states of itself.

Consciousness may range from the simplest awareness to the closest discrimination. It may be vague and narrow, or it may be clear and comprehensive. The lowest range of consciousness may be dim and indefinite, as when we are dropping off to sleep, or when our attention is directed to something else. In fact, many impressions may be made on our senses which rise only to the threshold of consciousness, and perhaps may not rise even to the threshold.

'In these cases, consciousness approaches a vanishing point, and often reaches and passes it. The object exists for us only as a vague objectivity without definite significance. They emerge from this state only by a voluntary or involuntary direction of our attention towards them. If, now, we choose to call this state unconscious, and reserve the name of consciousness only for clear or distinct consciousness, we should say that very many mental states exist below consciousness. This has often been done, and the theory maintained that we may have manifold sensations and feelings without being conscious of them. But this is simply the extravagance of confounding a vague and imperfect consciousness with none, the truth being that we may have vague and unobtrusive sensations without directing our attention to them; the lower limit of consciousness does not admit of being definitely fixed' (Bowne, *Introd. to Psychological Theory*, p. 239 f.).

The truth is, that we are unable to express consciousness save in the form 'I am thinking this or that, I am feeling pain, I am doing this act, or I am intending to take such a course of action.' It is quite true, as Hume says, that we always find ourselves in some particular state, but in every state, whatsoever it may be, we find ourselves. It is not possible to interview a blank self, or to abstract the ego, so as to have an idea of it as we have of external objects, or of events of a particular kind in consciousness, nor can we make our self completely an object, for, even if that were possible, there is always that subjective activity of the subject which goes on while we seek to make the ego completely objective. While this is so, yet the further step which is so often taken, namely, to abstract altogether from the subject, and to make conscious activity only a stream of thought, or a mere aggregate, seems altogether illegitimate. Can we have a stream of thought, without a single permanent subject of our psychic activities? Even a stream has its identity, and anything which we can call a unity is something more, as already observed, than the sum of its parts. But can we really think of a feeling in abstraction from something that feels, or of a willing without a subject that wills, or of a thought without a thinker? Can we really think of our psychical life in an impersonal way? It is possible to describe, as in fact we do, the outward happenings of the world, and in an impersonal way to say 'it rains,' 'it thunders,' 'it hails,' 'it storms,' 'it is dark,' or 'it is a stormy night.' Try this in describing the psychic life, and immediately we feel how incongruous it is. 'It thinks,' 'it wills,' 'it feels,' 'it is in pain,' 'it is full of joy'—we can write so, as we can write nonsense, but the incongruity is too obvious, when plainly put, to allow us for one moment to regard it as an adequate account of the facts.

Even when a psychologist reduces the phenomena of consciousness to a stream of thought, he is constrained in unguarded moments to speak of our will, our psychical states, thus adding to the stream that factor without which it could not have been even a stream. In the mere statement of the case—a statement which seems at first to eliminate the necessity of a subject—one is forced to imply the subject in every statement. One is compelled to imply a subject. For ideas, feeling, or will are not there in a vacuum; they are, after all, only modes of consciousness. We may neglect a pain which nobody feels, a pleasure which is pleasant to nobody, or a will and a purpose which is the activity of no one. Is it possible to imagine or conceive a perception of these inner experiences where there is no perceiver, a perception which is only the bare object perceived, a mere subjectless feeling? How are we to account for the connexion of all the events of seeing, hearing, feeling, and for the recognition we have that we have had these experiences before, and that we have a memory of them, without the supposition of a subject whose experiences they were? Is it possible for any one really to think of an impersonal stream of thought, which binds into unity all the particular psychical events of our experience, and to suppose, further, an additional impersonal event, by which all the other impersonal events are gathered into one, while yet this additional event is only a phantom, an illusion, although it has the strange power of seeming to itself identical through all the successive moments of its experience? Can we really think so? Is it not easier, more consistent with the facts, to assume the subject as real, as present to all its states, and as able somehow to hold them together, and to group them according to their real resemblances. Can any one think of himself as the sum of the events of his experience, only with the inexplicable addition that it is he who thinks them so? Hume boldly calls this a fiction, and Stuart Mill calls it a 'final inexplicability,' and neglects it as a source of explanation. Is it not the easiest solution simply to acknowledge

that the ideas of persistence and duration find their simplest explanation from the supposition that we are, and know ourselves to be, identical in time?

While we have thus to postulate continuity of the conscious subject—for on any other supposition we should be unable to account for the ideas of change, continuity, or permanence—there are many questions which remain for discussion and for settlement. It is almost a matter of course to say that psychical events as such exist only in so far as they are present in consciousness; their distinctive character lies in the fact that they are conscious. A seeing, of which we know nothing, a pain of which we are not aware, an act of volition which takes place without our being able to notice it, are not possible, for the seeing, etc., is only by means of consciousness. While this is true, it is also true that there are different degrees and modes of becoming conscious. When a consciousness has attained to some fullness of self-possession, and is in possession of the results of experience, there is for such a consciousness a fund of experience organized into masses, and any new experience can take up a new feeling or idea into such an ideal mass already formed. The process is so fully described in many psychological textbooks that we need not dwell on it here. Thus, we refer any new experience of colour to the class of colours we already know, and, being in possession of these names, we name the new experience of colour accordingly. But there was a time in the growth of the subject when names were not in our possession. These names of general ideas are formed gradually from particular perceptions, which at the beginning had no name. But even for the particular perception, or for the particular experience, there is this indispensable condition, that there should be a discrimination of the particular elements which co-exist at every moment, and some notice taken of them. These two conditions must be present before we can properly speak of consciousness at all.

At this earliest stage of conscious life, ere the subject is in possession of the wealth of organized experience, the subject is, as it were, lost in the object.

'Our immediate consciousness of objects seems at first to be a mere presentment of them to the passive subject, to a self that is not in any way occupied with itself, or even conscious of itself at all. The outwardly directed gaze seems simply to admit the object, and not to react, still less to be aware of itself as reacting, upon it. But, in the *first* place, we have learned to recognise that, whether we are conscious of it or not, there *is* always a reaction, an analytic and synthetic activity of thought, even in our simplest perceptive consciousness; for, without this reaction, no idea of any object as distinct from, and related to, other objects could ever arise to trouble the self-involved sleep of sense. Apart from such reaction, we might say that the sensitive subject would remain for ever confined to itself, were it not that in that case there would properly be no self to be confined to; for where there is no outward, there is, of course, no inward life. It is thus the mental activity of the subject that creates for him a world of objects, or, to put it more simply, that enables him to become conscious of the world of objects in which he exists. . . . In the *second* place, not only is the subject active in perception, but he necessarily and inevitably has an inchoate consciousness of himself as a subject, in distinction from the subjects which that activity enables him to apprehend. For to apprehend an effect, as such, is to distinguish it from, and relate it to the self that is conscious of it. It is to refer an idea or feeling to that which is other than the self, to reject it from the self and to objectify it; and such a rejection or repulsion necessarily involves, on the other side, a withdrawal of the self from the object. The simplest outward-looking gaze, which seems to lose itself in the object to which it is directed, yet recognises that object as other than itself or its own state; and, indeed, all its absorption in the object may be said to be its effort to heal the breach, of which, in the very act of perception, it has become conscious. Hence we come to the result that, even in its utmost apparent *passivity* of perception, the mind is *active*; and even in its utmost absorption in the *object*, it is conscious of the *self* in distinction from it. It is true that the subjective aspects of the consciousness of objects are at first latent, or they are present only in an imperfect and inchoate form. Attention is not specially directed to them; and in any description which the individual would give of his own consciousness, they would generally be omitted. But they are always there. For it is not possible, in the nature of things, that there should be an object, except for a subject, or without that subject distinguishing the object from itself, and itself from the object. In this sense there can be no consciousness of objects without self-consciousness. Even, therefore, if the word "I" be delayed for a little, the inchoate thought of it cannot be wanting to one who is conscious of objects as such' (Edward Caird, *The Evolution of Religion*, i. 183–185).

As we know consciousness in ourselves, it has a beginning, a growth, and a history. Thrust into the midst of conditions not realized, slowly learning to find itself at home in the world, and gradually coming to the knowledge that there is an external order to which it is related, the self-conscious being, in intercourse with things, comes, so far, to the knowledge of the world and of itself. The story need not be told here, but there is a story, for the finite personality does come to the knowledge of itself. It learns to distinguish between itself and the world. But consciousness becomes clear and definite when it recognizes that there are distinctions among its objects, and relations into which these can be gathered up. These relations become ever more clear and definite, and, as knowledge progresses, consciousness finds itself in an ordered world, and, just in proportion to its recognition and mastery over the order of the world, is its recognition of itself as the counterpart of the order of the universe. Its own rational principles are realized there, and it becomes more rational as it recognizes the objective value of its own rational nature, as embodied in a rational world. But we may not regard the distinction of self and not-self as if it were identical with the distinction of subject and object. The first may be called an ontological distinction, for it relates to the distinction between two things which make up the whole sphere of being, whereas the distinction between subject and object describes a mental function. The contents of the two are constantly changing. At one moment the object may be this table, with its shape, colour, material; and the next moment it may be the mental process which passed through the mind when the table was the object. The object may be things in the outward world, or it may be the state of consciousness by means of which we deal with the outer world. It may be the thing I see, or it may be the vision through which I see it. The distinction between subject and object is the form under which consciousness always takes place; subject and object are a relation within one experience, and they are essential to the reality of that experience.

It may be observed that the conception of self, like all other conceptions, is one of gradual growth, and the time of its full realization is, for us, not yet. We are not to look for the self as if it were laid on a shelf, a thing among other things. It is the subject of all experience, and usually it is the last conception which is reached by the conscious subject itself. This late recognition of the conception of itself may be paralleled by the late emergence, in the history of thought, of the problem of thought itself. Nothing is nearer to us than thought, and yet the problem of thought is one of the very hardest to grasp. Spontaneous thought deals with objects rather than with itself, and reflexion is hard. Thought hides behind itself; it is so occupied with its processes and problems that it does not reflect on them, and, having reached conclusions unreflectingly, often takes these as original data given from without. Knowledge is taken for granted, and the knowing process was for a long time utterly neglected. Nor had knowledge any suspicion of the complexity of the knowing process, nor did knowledge find it necessary to submit itself to an analysis of the process of knowing or to inquire into its own validity. It was

inevitable that in the long run the question of the possibility of knowledge should arise, but it could not arise until knowledge had been at work for a long time, and had attained to some mastery over itself and its work. So is it with the problem of the self. As shown by Caird in the quotation above, the consciousness of the self in the consciousness of objects is at first latent; it may be delayed, but it is always implicitly there. As a matter of fact, it may always be latent and never come into clear consciousness at all. Self-experience may be the only form which self-consciousness may assume. The self may be so lost in the process of experience, so absorbed in its feelings, desires, and thoughts, that it may never reflect on itself, and never ask consciously what it is. It may remain on this level all through life. Absorbed in its object, living out its experience of pleasure, engrossed in its own pursuits, and interested in the success of its plans, it may never seek to reflect on its own nature or on the order implied in the most simple experience. One may be active, energetic, far-sighted, wise, and yet may have never given a single hour to the thought of that self which has all these characteristics, for in the history of human thought and its evolution the simplest and most fundamental of all problems are the latest to emerge into the light.

The two factors—subject and object—which always represent the form which experience has, are not, at the outset, explicitly distinguished, and experience may go on all through life without any clear consciousness of the distinction. Yet the two inseparable factors are always there. It is always possible, however, to focus our attention on the one factor or on the other. The mind may direct attention on the object or on the subject. The consciousness of self may remain at the level of mere self-experience; it may be so absorbed in the object as never to ask itself about itself. It may, indeed, neglect itself altogether, and may so seek to formulate its experience as to make the subjective factor disappear. Thus it may seek to become a philosophy, and find a sufficient explanation of experience in a something which does not require a subject of knowledge at all. But such a philosophy, though it constantly reappears, is after all inadequate to answer the questions which constantly recur and which we need not here restate. For immediately the question arises as to the subject for whom all experience is possible, and, when we ask this question, the answer must be that a self which is conscious at all has implicitly within itself the possibility of a complete self-consciousness. Focusing our attention, then, on this factor of experience, we can regard it as the subject of experience which takes up all particular experiences, rules them, binds them into a system, and makes them elements in one consistent experience. In this event self-consciousness would have attained its ideal, for it would have reached the goal of self-knowledge and self-control. The conception of a perfect self-consciousness consists in the fact that it is in possession of itself, and can set the bounds of its own experience. Self-knowledge, self-reverence, self-control—in these, and not in finitude or infinitude, lies the conception of a perfect selfhood. But for finite beings, for us men, this ideal is a goal, and cannot be an actual attainment. For we do not set the limits of our own experience; we are subject to inrushes from without, we have experiences which are inherently irrational, and we have feelings which are sometimes uncontrollable, and generally there is so much of our experience which is simply given that we cannot be said to be masters of ourselves. Yet the growth of a rational personality is measured by the progress of the mastery which it has over the elements of its own experience, and the power of placing every impulsive and merely emotional element under the guidance of reasonable self-consciousness.

Thus, then, we may regard the self as conscious of itself in all its manifold experiences. Knowledge is possible, because all the objects of knowledge can be brought into relation to the self. Objects out of all relation to the conscious self are for that self non-existent. Whether we look at the self-conscious being from the point of view of knowledge, or from the ethical, or the æsthetic, or the religious point of view, the result is to raise our estimate of the self-conscious being to the highest. For each of these affirms that the self-conscious being is the postulate without which truth, beauty, goodness are without meaning or worth. The conscious subject is the subject for whom all objects are; it is also the subject in which goodness is realized, and ethics affirms that the self is that in which goodness is to be realized through a continual process of self-realization and self-determination. The world of beauty has no meaning without the seeing eye and the ideals which the self in intercourse with the world builds up for itself.

We do not require to follow out the results of the analysis of self-consciousness into its further issues, or to enter into the discussion regarding an absolute, all-inclusive self-consciousness. Whoever seeks to follow out that argument into all its consequences may find it fully unfolded in the works of Hegel and his followers, as well as in the works of Green, of the two Cairds, of Royce, and of many others. It may, however, be said that it is scarcely possible to describe the totality of things according to the analogy of one self. The Hegelian philosophy is a perfect description of the way in which an inchoate self arrives, or may arrive, at self-consciousness. It is of the highest value from that point of view. But to make it absolute seems too great a demand. For this is a universe of many selves, and the unity of the universe cannot be construed after the fashion of the growth and evolution of one self. While, therefore, the world is indebted to the Hegelian idealists for the analysis of self-consciousness, and for the far-reaching results of that analysis, the attempt to construe the life of the universe after that analogy cannot be regarded as final.

Ere we close, it may be well to notice the argument of Bradley, because it would make all the contendings of this article invalid. We quote his summary:

'We had found that our ideas as to the nature of things—as to substance and adjective, relation and quality, space and time, motion and activity—were in their essence indefensible. But we had heard somewhere a rumour that the self was to bring order into chaos. And we were curious first to know what this term might stand for. The present chapter has supplied us with an answer too plentiful. Self has turned out to mean so many things, to mean them so ambiguously, and to be so wavering in its applications, that we do not feel encouraged. We found, first, that a man's self might be his total present contents, discoverable on making an imaginary cross section. Or it might be the average contents we should presume ourselves likely to find, together with something else which we call dispositions. From this we drifted into a search for the self as the essential point or area within the self; and we discovered that we really did not know what this was. Then we went on to perceive that, under personal identity, we entertained a confused bundle of conflicting ideas. Again the self, as merely that which for the time being interests, proved not satisfactory; and from this we passed to the distinction and the division of self as against the not-self. Here, in both the theoretical and again in the practical relation, we found that the self had no contents that were fixed; or it had, at least, none sufficient to make it a self' (*Appearance and Reality*[2], p. 101 f.).

In his own ironical way Bradley had said elsewhere:

'There remains still left a third moral, which, as I am informed, has been drawn by others, that if we are not able to rest with the vulgar, nor to shout in the battle of our great schools,

it might be worth our while to remember that we live on an island, and that our national mind, if we do not enlarge it, may also grow insular; that not far from us there lies (they say so) a world of thought, which, with all variety, is neither one nor the other of our two philosophies, but whose battle is the battle of philosophy itself against two undying and opposite one-sidednesses; a philosophy which *thinks* what the vulgar believe; a philosophy, lastly, which we have all refuted, and, having so cleared our consciences, which some of us at least might take steps to understand' (*Ethical Studies*, p. 38).

Perhaps *Appearance and Reality* is the endeavour to think what the vulgar believe. But there is left in it no shred of belief of what the vulgar believe. Of the whole work set forth with such amazing ability in the last named treatise this much may be said, that it amounts to a demonstration of the uselessness of the attempt to interpret experience from a mere abstract point of view. Bradley finds that all the categories and relations of thought abound in contradiction. Inherence, predication, quality, identity, causality, unity, space, and time are full of contradictions. When we arrive at the question of the self and its reality, contradictions swarm more and more. What is the way out of this network of contradictions? They are somehow removed in the Absolute. These contradictions are Appearance, and Reality has somehow absorbed them into itself. But it would be quite possible to show that the same method used by Bradley to discredit Appearance would work havoc also with the Absolute. That is on the supposition that his logical procedure could be carried out in the Absolute. The greatest contradiction we know is the contradiction between the rigour of his logic as applied to Appearance, and the slackness of it as applied to the Absolute. Apart from this, is not the method of Bradley simply an illustration of a wrong conception of the categories, and of their application?

'The epistemological interest makes us unwilling to admit anything that cannot be conceptually grasped. Accordingly it seeks to make ideas all-embracing. At the same time it is clear that this view is a tissue of abstractions. The impersonal idea is a pure fiction. All actual ideas are owned by, or belong to, some one, and mean nothing as floating free. We have already seen that the various categories of thought, apart from their formal character as modes of intellectual procedure, get any real significance only in the concrete self-conscious life of the living mind. Apart from this, when considered as real, they become self-destructive or contradictory. The idealism of the type we are now considering assumes that these categories admit of being conceived in themselves, and that they are in a measure the pre-conditions of concrete existence, and in such a way that we might almost suppose that a personal being is compounded of being, plus unity, plus identity, plus causality, etc. Thus personal existence appears as the outcome and product of something more ultimate and fundamental. The fictitious nature of this view has already appeared. When we ask what we mean by any of these categories, it turns out, as we have seen, that we mean the significance we find them to have in our self-conscious life. In the concrete the terms have no meaning except as it is abstracted from our own personal experience. The only unity we know anything about, apart from the formal unities of logic, is the unity of the unitary self; and the only identity we know anything about is no abstract continuity of existence through an abstract time; it is simply the self-equality of intelligence throughout its experience. And the change which we find is not an abstract change running off in an abstract time, but is simply the successive form under which the self-equal intelligence realizes its purpose and projects the realizing activity against the background of its self-consciousness. Similarly for being itself; in the concrete it means the passing object of perception, or else it means existence like our own' (Bowne, *Personalism*, p. 253 ff.). Again, 'The notion of the self can easily be taken in such a way as to be worthless. We are asked of what use the self is, after all, in explaining the mental life. How does its unity explain the plurality and variety of consciousness?, and the answer is that it does not explain it, and yet the unity is no less necessary. For the consciousness of plurality is demonstrably impossible without the fact of conscious unity. This unity does not, indeed, enable us to deduce plurality, and hence the plurality must be viewed as an aspect of the unity, but not as an aspect of an abstract unity without distinction or difference, but a living conscious unity, which is one in its manifoldness and manifold in its oneness. Taken verbally, this might easily be shown to be contradictory, but, taken concretely, it is the fact of consciousness, and none the less so because our formal and discursive thought finds it impossible to construe it' (*ib.* p. 261 f.).

The unity of consciousness, the identity of the self-conscious life, the progressive realization of the self in intercourse and in interaction with the world and with its fellows, are thus among the most sure of our beliefs, and among the most indispensable of our postulates. Many further questions arise which cannot be discussed here, for the adequate solution of any one problem involves the solution of every other. But no problem can be solved on a merely impersonal plane, and no category is of value except as a function of the concrete personal life.

LITERATURE.—The following is a selection from the vast literature dealing with the question: Adamson, *The Development of Modern Philosophy*, 1903; Bowne, *Introd. to Psychological Theory*, 1886, also *Personalism*, 1908; Bradley, *Appearance and Reality*, 1893 (2nd ed. 1897), also *Ethical Studies*, 1876; Edward Caird, *The Evolution of Religion*, 2 vols. 1893; Höffding, *Outlines of Psychology*, Eng. tr. 1892; James, *The Principles of Psychology*, 2 vols. 1891, also *Varieties of Religious Experience*, 1902; Green, *Works*, ed. Nettleship, vol. i. (1885); Külpe, *Outlines of Psychology*, Eng. tr. 1895, also *Introd. to Philosophy*, Eng. tr. 1897; Lotze, *Metaphysic*, Eng. tr. 1884; Ladd, *Philosophy of Knowledge*, 1897; Münsterberg, *Psychology and Life*, 1899; Shadworth Hodgson, *The Metaphysic of Experience*, 4 vols. 1898; Stout, *Manual of Psychology*, 2 vols. 1898–9; Sigwart, *Logic*, 2 vols., Eng. tr. 1895; Ward, art. 'Psychology,' in *EBr*[9], also *Naturalism and Agnosticism*, 2 vols. 1899; Taylor, *Elements of Metaphysics*, 1903; Wundt, *Human and Animal Psychology*, Eng. tr. 1894; Villa, *Contemporary Psychology*, 1903; Royce, *The Spirit of Modern Philosophy*[2], 1897, also *The World and the Individual*, 2 vols. 1900–1; see also the Histories of Philosophy, such as Ueberweg, Höffding, Erdmann. JAMES IVERACH.

CONSECRATION.—'Consecration,' or 'dedication,' may be defined as the solemn setting apart of persons or things for some particular religious work or use. The essence of any such rite or ceremony is to be found in the performance, whenever possible, of some act which is typical, or symbolical, of that for which the setting apart or consecration takes place. This act, either from the first or in process of time, is naturally accompanied by some announcement to the congregation of what is being done or intended, and by forms of prayer asking for the Divine approval and blessing; but no such accompaniments are really essential to the consecration itself, though they increase the dignity of the occasion and tend to general edification. This is, indeed, true of all symbolical rites and ceremonies in their ultimate simplicity, and the Biblical narrative well illustrates the truth in its account of the marriage of Adam and Eve (Gn 2^{22}), where the essence of the marriage rite is described in the simple statement that 'the Lord God brought unto the man' the woman whom He had made of the rib taken from his side.

With regard, however, to the consecration of persons or things in the stricter sense with which we are now dealing, we see traces of the original idea in various instances. The ordination of a lector (reader) consists in permitting him for the first time to read the Gospel in the course of the service.[1] A priest is made by permitting him (as in the modern Roman Pontifical) to celebrate the Holy Mysteries simultaneously with the consecrating bishop;[2] and in the same way an altar, and even a church itself,[3] are consecrated by being first used for Holy Communion, and so on. Again, there are cases where the act is more conveniently and suitably symbolical rather than typical: *e.g.*

[1] Cf. Cyprian, *Ep.* xxxiii. 2, where he speaks of a young lector Aurelius thus: 'Dominico legit interim nobis, id est, auspicatus est pacem, dum *dedicat lectionem*' (while he acts in his new capacity as lector).

[2] See Procter and Frere, *New Hist. of Book of Com. Pr.*, Lond. 1901, p. 669 note.

[3] Cf. the letter of Pope Vigilius to Profuturus of Braga (A.D. 538): 'consecrationem cuiuslibet ecclesiae in qua sanctuaria non ponuntur celebritatem tantum scimus esse missarum.' See J. Wordsworth (*On the Rite of Consecration*, p. 6 f.), who points out the significance of the fact that the words κυριακόν and *Dominicum* are used both for the Lord's House or Temple and for the Lord's Supper or Sacrifice; see also Duchesne, *Origines du culte chrét.* p. 404 (Eng. tr.).

the doorkeeper of the church receives the keys of the church doors, the sub-deacon receives the chalice and paten (the vessels of his office), the virgin is veiled to signify her marriage with Christ (or His Church), the lector himself actually receives a copy of those Gospels which he is henceforth privileged to read, and so on. The Greek word commonly used to denote dedication of buildings (ἐγκαίνια; cf. καινίζειν and καινοῦν[1]) itself suggests that the idea here emphasized lies at the root of the ceremonies employed.

It is hardly necessary to say that the Christians were not the first to introduce the practice of thus consecrating, or dedicating, persons or things to religious purposes. Apart from the well-known custom of the Jews (*e.g.* in dedicating houses, Dt 20^5, Ps 30 [title]; or city-walls, Neh 12^{27}; or the Temple, 2 Ch. 5. 6; Jos. *Ant.* XI. iv. 7 f., XV. xi. 6), both the Greeks and the Romans (and other nations as well) observed such ceremonies for their priests and sacred buildings. But for Christians, during a considerable period after the foundation of their faith, anything but the simplest and least imposing ceremonies in connexion with consecration would have been both out of place and practically impossible. This article does not deal (except incidentally thus far) with the ordination of the clergy (see ORDINATION). We proceed, therefore, to consider the cases (chiefly those of buildings) to which the word 'consecration' is more usually applied in the present day.

During the first three centuries of the Christian era we have little evidence, if any, of regular rites or ceremonies being in use when places or buildings were set apart for Divine service. Of course, such places or buildings gradually became more and more numerous, and more and more carefully restricted to religious purposes, as persecution decreased and the affairs of the Church became more settled. But we can easily imagine that, almost from the first, forms and ceremonies grew up in connexion with their dedication; for instance, as J. Wordsworth has reminded us,[2] the two primary conditions were probably 'a transference of previous ownership on the part of the Founder, and an acceptance of the trust by the Bishop of the Diocese'; and the only essential ceremony was the solemn celebration of the Holy Eucharist.[3]

'The part played by the Founder or Builder would, in accordance with Jewish and heathen precedent, be a considerable one; and Christian custom, acting in accordance with the principles of Roman law, would prescribe the dedication by solemn and ceremonial use. The *usurpatio juris* of the Christian Society in its new home could hardly be otherwise exemplified than by the Sacrament in which believers, gathered under the presidency of their chief pastor, came together to meet their Lord in His new house, to plead His sacrifice, and to feast upon it.'[4]

We have to dismiss as evidence the quotation from Philo Judæus, *de Vita Contempl.*, given by Eusebius (*HE* ii. 17. 9) and adduced by Bona (*de Reb. Liturg.*, Rome, 1671, I. xix.): ἐν ἑκάστῃ δὲ οἰκίᾳ [of the Therapeutae in Egypt] ἔστιν οἴκημα ἱερὸν ὃ καλεῖται σεμνεῖον καὶ μοναστήριον κ.τ.λ., because Eusebius's identification of the Therapeutae with the Christian ascetics of S. Mark in Alexandria is baseless and next to impossible. And the statement in the Calendar from the Library of the Queen of Sweden, quoted by Baronius (*Annal.* A.D. 57, no. 100), 'Kal. Aug. Romae dedicatio primae ecclesiae a beato Petro constructae et consecratae,' is unhistorical;[1] and so, no doubt, is the assertion attributed to Euodius (Niceph. ii. 3), who was the first bishop of Antioch, that James was consecrated first bishop of Jerusalem, and that the seven deacons were ordained in that house in which Christ instituted the Lord's Supper, and where the Holy Ghost descended on the Apostles.

It is not till the cessation of the persecution of Diocletian that we are on safe ground with regard to any actually recorded service of dedication. Eusebius (*HE* x. 3) speaks of the restoration of peace at that time being marked by the founding of new churches, and, among other signs, mentions ἐγκαινίων ἑορταὶ κατὰ πόλεις καὶ τῶν ἄρτι νεοπαγῶν προσευκτηρίων ἀφιερώσεις, a notable instance being the dedication of the Church at Tyre (in the name of Paulinus), which took place A.D. 314, and at which the historian himself preached the inaugural sermon.[2] There was a large concourse of bishops, clergy, and people on the occasion, and the Holy Mysteries were apparently celebrated, but no other distinctively initiatory ceremony is mentioned. This occasion is historically important, because it seems to be the first recorded instance, both (1) of a kind of consecration service, and (2) of a church with what is now commonly called a 'dedication,' *i.e.* consecrated under the title of a patron saint. Subsequently, instances of both sorts become more and more frequent.

As Duchesne (*loc. cit.*) has pointed out, the church of S. Paulinus at Tyre is a representative of one out of two types of church in the first ages, viz. what we should now call the parochial church of a town or district. Of this type there would sometimes be more than one needed and provided in any single town or district, the principal one of which would, of course, be the 'cathedral,' as we now call it, where the bishop's throne was set up. Churches of this type seem often to have been known by the names of their founders or other great persons connected with the place (*e.g.* at Tyre above, S. Denys and others at Alexandria [Epiph. *Hær.* lxix. 2; *PG* xlii. 205], and S. Ambrose at Milan);[3] or by some great Christian doctrine or event (*e.g.* Ἁγία Σοφία at Constantinople [A.D. 360], or the Ἀνάστασις at Jerusalem).[4] A church called *Dominicum aureum* was dedicated at Antioch by Constantius in 341 (Socr. ii. 8; Sozom. iii. 5).

The other type of church was that which was connected with the tombs of martyrs and other saints. In the catacombs (*q.v.*) at Rome, and in the burying-places (*cœmeteria, polyandria*) generally, the custom gradually grew up (1) of keeping the anniversary of such persons' death (*natalis*) or burial (*depositio*) by a service at their grave, their very tombstone often forming the altar for the consecration of the Sacred Elements; and then (2) of holding services there more frequently than once a year.[5] After a time a church was built over the spot, and called after the name of the martyr or confessor who lay buried under its altar (hence the term *martyrium*, and the like, applied to churches). As churches had to be

[1] ἀφιέρωσις is another noun, and ἀναθεῖναι another verb.

[2] *Op. cit.* p. 6.

[3] Cf. the two corresponding regulations from the letter of Pope Vigilius, quoted above: 'omnes basilicae cum missa debent semper consecrari, et nullus presbyter missas celebrare praesumat nisi in sacratis ab episcopo locis.' These, though not so early as they claim to be, probably embody ancient tradition (Wordsworth, *l.c.*). The *Liber Diurnus*, which gives us very early Roman usage, speaks of dedications without *missæ publicæ* or *publica processio*, but these are (according to Duchesne, *op. cit.* p. 404) 'cases of mouastic oratories not open to the public,' so that the inaugural *missæ* would be of a *quasi*-private nature.

[4] Wordsworth, *loc. cit.*

[1] Cf. *Mart. Hier.*; D'Achéry, *Spicileg.* (Paris, 1655–67) tom. iv. The Church of S. Peter ad Vincula on the Esquiline was dedicated in the name of both S. Peter and S. Paul on Aug. 1, in the episcopate of Felix IV. (432–440). There may, however, have been some church-building there before that date.

[2] Quoted by him at length (*loc. cit.* 4).

[3] The *Gel. Sacramentary* (ed. Wilson, Oxford, 1894, p. 140 f.) contains 'orationes et preces in dedicatione basilicae quam conditor non dedicatam reliquit,' and also '[missa] in ejusdem conditoris agendis.'

[4] The mediæval cathedral at Aix in Provence is said to be dedicated to the Transfigured Saviour; and in later times we have dedications like the Ascension, Corpus Christi, etc., or even Holy Cross, House of Prayer, and the like.

[5] Hence what are called the 'stations,' and the 'station days' of early Roman service-books and calendars.

more numerous than martyrs' tombs, it also became sufficient to have some portion of a saint or some small personal relic of him (*pignora, sanctuaria*), perhaps only a piece of linen dipped in his blood, or even portions of the Gospel or of consecrated bread, to represent or symbolize the 'patron' in each case; and eventually this second type of church was adopted, though very gradually, and not so universally as is sometimes imagined, at all events throughout Western Christendom.[1] See, further, art. COMMEMORATION OF THE DEAD.

Perhaps we may at this point distinguish yet a third type of church of which we sometimes hear in ancient history, viz. buildings which were adapted from secular or heathen purposes to Christian. It used to be held that this was the origin of the *basilica* form of church, the Roman law-court or business-exchange being turned into a Christian building; but this theory has been, we think, successfully disproved of late years.[2] We do, however, hear of heathen temples being so converted, though it is probable that in many cases the old building was pulled down and a new one erected with the old material; *e.g.* the Pantheon at Rome was consecrated by Boniface IV. (608–614) under the title of S. Mary ad Martyres on May 13; and Martène (*de Ant. Ritt.*, Antwerp, 1700, II. xiv. 4–5) gives other instances in both East and West.[3] Jewish synagogues were also subjected to the same treatment.[4]

As to the *ceremonies* connected with the dedication of churches, considerable diversity must have prevailed from the first, if we are to judge by such scanty evidence as we possess; and this diversity lasted in the West well into the Middle Ages. At Tyre in 314, as we have seen, the ceremonial is of the simplest; a large assembly of bishops, clergy, and laity from the town and neighbourhood assisted at the first celebration of the Holy Mysteries, and a dedicatory sermon was preached. More than 200 years later the essence of dedication was still distinctly recognized as consisting in the public celebration of the Holy Communion and nothing else. In 538, Vigilius, Bp. of Rome, writes to Profuturus of Braga (in Spain) to the effect that, in the case of ordinary churches, it is not even necessary to sprinkle holy water by way of consecration,[5] since this is sufficiently effected by the celebration of Mass; in the case of churches of the second type above described, the relics of martyrs (*sanctuaria*) must be previously deposited in the church, or, if they have been removed, they must be replaced. The 'Leonine' Sacramentary contains a 'missa in dedicatione [ecclesiae]'; but this is, of course, for use either after the dedicatory rite itself or on the anniversary day.[6]

It is noticeable that, while the earliest form of the 'Gregorian' Sacramentary does not provide for the dedication of churches, the 'Gelasian'[1] does; and this, combined with other evidence or indications given and discussed by Duchesne (*op. cit.*), suggests that, in this as in other cases, the local Roman church was originally inclined to a severe simplicity in matters of ritual, and that the fuller ceremonies and forms of prayer which afterwards obtained and are still in use in the Roman Communion are traceable to foreign or 'Gallican' influences.[2] It seems not unlikely also that those ceremonies in the Western rite which are distinctive of consecration proper are ultimately derived from the East (*e.g.* from the Byzantine ritual), and that only the part relating to the deposition of relics in the new building is originally Roman. The student cannot fail to be struck, as Duchesne and others have pointed out, with the fact that this deposition of the relics, as given in its fullest form in the two most ancient *Ordines Romani*,[3] partakes distinctly of a funeral character, while the 'Gallican' ceremonies all point to the idea of adapting the Christian baptism of persons to the dedication of buildings. The modern Roman service is a combination of the two types of ceremony, but in it the deposition of the relics is to some extent outbalanced and overshadowed by the consecration rites proper.

A concise description in detail of the regulations and order of service as now provided in the Roman Pontifical is subjoined, and will be found useful, both because it exhibits most of the rites that have gradually gathered round the occasion in Western Christendom, and because it is the basis on which, since the Reformation, the Bishops of the Anglican Communion have, with varying degrees of exactness, drawn up their Consecration Offices.

The similar description of the modern Eastern rite, with which this article concludes, will be likewise interesting both in itself and as illustrating much that has been said during the course of our discussion.

i. *MODERN ROMAN USE.*—1. Preparatory regulations.—(1) Consecration may take place any day, but by preference on Sunday or a Saint's day. (2) The archdeacon is to give notice of the day fixed beforehand. (3) The consecrator, the clergy, and the people should fast before the service. (4) On the evening before, the consecrating bishop prepares the relics which are to be deposited in the church, placing them under seal in a suitable casket, with three grains of frankincense and a written record of the consecration, and laying the

[1] See on this point a valuable paper by Wickham Legg, in no. lxxiii. of *Ch. Hist. Soc.'s Tracts*, p. 53 ff., and another by J. Wordsworth in no. liii. of the same series, p. 19 ff. (already quoted). Cf. also P. Lejay's article on the Ambrosian Rite in *DACL*, pp. 1437–9. 'I would venture to suggest that the reason of the absence of the rite from this [English] form of consecration was that the early British and Irish Churches only dedicated their churches to living saints. In this case no relics could be had, and therefore the rite was of necessity omitted' (T. Olden on the *Leabhar Breac*, 1900, vol. iv. pt. ii., S. Paul's Ecc. Soc. p. 99).

[2] *E.g.* by G. Baldwin Brown, *From Schola to Cathedral*, App. i. p. 217 ff.

[3] Cf. Bede, *HE.* i. 30.

[4] Cf. *Gel. Sacram.* p. 141 f. (ed. Wilson), which gives 'orationes et preces in dedicatione loci illius ubi prius fuit synagoga.'

[5] This, which is now such an important part of the Roman rite, seems originally to have been practised by Christians to purify their private houses rather than their churches (see Duchesne, *op. cit.* p. 407 [quoting *Lib. Pontif.* i. 127]).

[6] P. 15, ed. Feltoe, Camb. 1896; the collect here speaks of 'hostias quas maiestati tuae in honore beati apostoli Petri cui haec est basilica sacrata deferimus,' and each of the other formulæ also mentions S. Peter.

With regard to the first point, it will be well to bear carefully in mind what J. Wordsworth has remarked in the valuable treatise (*On the Rite of Consecration*, p. 13) to which reference has already been made: 'I conjecture that (here), as usual, in process of time, diverse ceremonies were heaped together without much regard to their congruity.' Wordsworth makes this remark with special reference to the ceremony of the *abecedarium* (see below), but one feels its applicability to a good deal of the present overloaded service. As to post-Reformation forms of consecration, the student will find a list of those 'in use in the 17th century' on p. 27 f. of the same treatise, and the present Sarum Form on p. 30 ff. (with the music). This is much the most satisfactory adaptation of ancient forms and uses, Eastern as well as Western, that the present writer is acquainted with. The S.P.C.K. also publish the forms authorized for the dioceses of London, Truro, Worcester, Wakefield, and Winchester; and of these the first three more or less follow the old lines, whilst the last two are based on Bp. Andrewes' Form (1620). It may be added that no Form would seem to be really adequate which does not provide that the consecrating bishop shall conclude the consecration with a solemn Eucharist, either at the time itself, or, if the service take place in the evening, at a reasonably early hour the next morning.[4] This provision is made in the Form of the modern Irish Church, and in that of the Church of the United States of America.

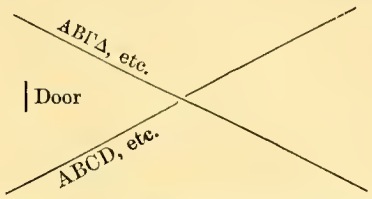
[2] On this point, see E. Bishop, *Genius of the Roman Rite*, 1899; and Wickham Legg, *Rec. Lit. Research*, p. 3 ff.

[3] One, that of S. Amand (Paris, 974) of the late 7th cent. printed by Duchesne (*op. cit.* p. 456 ff.); the other, that of Verona, edited by F. Bianchini (*Anast. Biblioth.* iii. 48).



[4] See Wordsworth's remarks (*op. cit.* p. 9 f.).

casket on a bier with lighted candles under a tent before the principal door.[1] Vigil is kept, and Nocturns and Lauds are sung before the relics that night.[2] (5) Inside the church a large number of articles have to be prepared for various purposes during the service, and care has to be taken that the church has a free passage round it outside. (6) On the morning of the day itself the bishop enters the church in ordinary dress, and sees that everything is in order, and that the 12 candles over the 12 consecration crosses on the inner walls are lighted.[3] He then leaves the church empty, save for one deacon vested in amice, alb, girdle, and white stole, who stands behind the principal door, when it is closed upon him.

2. The ceremony.—(1) The service proper is now begun. The bishop, having fully vested himself, and being attended by another deacon, a subdeacon, acolytes, and other ministers, goes to the place where the relics are reposing, and the seven Penitential Psalms are recited. He then proceeds to a faldstool before the church door, and, kneeling there, after an antiphon and collect ('Actiones nostras, quaesumus, Domine,' etc.),[4] says with the choir the first portion of the Litany.

(2) The next ceremony is the exorcizing and blessing of salt and water, which, being afterwards mixed and again blessed, are made use of in the following manner: First the bishop sprinkles himself and his assistants, whilst the choir sing the usual antiphon, 'Asperges me,' etc.; he then marches three times, preceded by two candle-bearers, round the outside of the church, sprinkling the walls as he goes,[5] the choir singing an appropriate responsory; each time he reaches the principal door, he first kneels and says a collect, and then performs this very ancient and dramatic ceremony:[6] he stands on the threshold and strikes the door with the butt end of his staff,[7] saying, 'Attollite portas, principes, vestras,' etc. (Ps 23[7] Vulg.); the deacon from within (see above) inquires, in the words of ver. 8, 'Quis est iste rex gloriae?' and the bishop answers, 'Dominus fortis et potens,' etc.; at the third time those who stand by call out 'Aperite,' the bishop makes the sign of the cross on the threshold, the door is opened, and the procession passes in, the bishop proclaiming, 'Pax huic domui,' and the deacon from within replying, 'In introitu vestro.'

(3) Whilst the bishop goes to the centre of the building, two antiphons are sung, the use of the second of which is very ancient, 'Zacchæe, festinans descende' (see above). Then, during the singing of the 'Veni, Creator Spiritus,' one of the ministers sprinkles ashes[8] in the form of a S. Andrew's cross (*decussis*) on the floor of the nave, thus:

The second part of the Litany is next said to the end, but with special petitions by the bishop, standing, for the church and its altar now in act of being consecrated. After this the bishop says two collects, the second an ancient one ('Magnificare, Domine,' etc.),[2] and then, whilst the choir sings the song of Zacharias (Lk 1[68ff.]), with antiphon 'O quam metuendus,' etc., between every two verses, he occupies himself in writing with the end of his staff the letters of the Greek alphabet on the cross aforesaid, from the left Western corner to the opposite Eastern corner, and of the Latin alphabet from right to left.[3]

(4) This done, the bishop approaches within a fair distance (*spatio congruenti*) of the high altar, and says three times: 'Deus, in adiutorium meum intende, ℟ Domine, ad adiuvandum me festina,' with the 'Gloria Patri.' Hereupon salt and water are for a second time exorcized and blessed (with new formulæ); ashes also are blessed and mixed with the salt and water; then wine is blessed and added to the mixture.[4] Finally, two prayers are uttered: (i.) that the Holy Spirit may be sent down upon the mixture;[5] and (ii.) that all kinds of

[1] The origin of this rite, which is probably Gallican, has puzzled the learned. It has been connected with the cross drawn by the Roman augurs in laying out a *templum*, and by the surveyors (*agrimensores*) in measuring out land for a colony (*e.g.* de Rossi, *Bullet. di archeol. christ.*, 1881, p. 140 ff.). The application of the second usage is approved by Duchesne (*op. cit.* p. 417), and by H. le Clercq and P. Lejay (*DACL*, p. 58, 1438). On the other hand, Wordsworth (*op. cit.* p. 11 ff.) criticizes the applicability of either usage to the rite in question. The surveyor's cross was, he says, 'one of 4 right angles,' 'like the St. George's cross on our flags, cutting the four sides into equal portions,' and the letters they used were in no way attached to these lines, but 'scattered all about the plans.' It is therefore, of the two, more likely that the peculiar Christian rite came from 'a vague memory' of the old laying out of a heathen temple than from the other; and he prefers de Rossi's suggestion that the figure is really a Greek χ and the initial of our Lord's name in that language. 'To write His name' symbolically upon the new church floor 'would be a very fitting mark of His ownership.' He further conjectures that the ceremony originally belonged to the laying out of the first sketch or foundation of the building rather than to the actual consecration (see note 5 above); cf. the Gr. σταυροπήγιον and the modern laying of the foundation-stone. The antiphon, 'Fundamentum aliud nemo potest,' etc., and the Psalm 86, 'Fundamenta eius,' etc., which are found at this point in *Bened. of Archbp. Robt.*, tend to corrohorate the view suggested. It may be added that the ceremony, as at present practised, is rather ineffective, and does not appear to fit at all well into the rest of the service.

[2] Duchesne thinks that this and two other prayers which occur later on (*Deus qui loca*, etc., and *Deus sanctificationum*, etc.) may have been borrowed by the Gallican Rite from some Roman *Missa Dedicationis*. This first one occurs in the *Gelasian Sacram.* (p. 140, ed. Wilson) in such a *Missa*, but in the Missal of Gellone, *Egb. Pont.*, *Greg.* (472 Mur.), etc., in the same place as now. The other two are both found in *Pont. of Egbert* and *Bened. of Archbp. Robt.*

[3] In some early Sacramentaries it seems as if the Latin alphabet was written on both the intersecting lines, and we hear also of the Hebrew alphabet being likewise sometimes used. To Wordsworth (*op. cit.* p. 12) 'the alphabet seems to be another symbol of Christ as the word of God, not only Alpha and Omega, but all that lies between,—every element, in fact, of human speech.'

[4] This holy water is technically called in later times 'Gregorian,' as though instituted by Gregory the Great; its use seems to have been common to both the Roman and the 'Gallican' Rites, though in the letter of Bp. Vigilius to Profuturus (A.D. 538) it is mentioned only to be disapproved of ('nihil iudicamus officere si per eam [ecclesiam] minime aqua exorcizata iactetur'). The *ordo* of Verona (see note 3 on p. 60[b]) mentions the use at the end of the service, but this may be a later addition.

[5] Gell., *Egb. Pont.*, *Bened. of Archbp. Robt.*, etc.

[6] This is most conveniently the west door, if the structure has one.

[2] All this is in accordance with very ancient use, probably Gallican (see *Sacramentary of Drogon, Bishop of Metz* [826–855], quoted by Duchesne, *op. cit.* p. 487 ff., and described by Delisle, *Mém. sur d'anciens sacramentaires*, Paris, 1886, p. 100 ff.).

[3] Gallican. These crosses are still often to be found in our English churches. 'It is said that the English use differed from the foreign in having crosses both within and without. The Irish use shows its primitive character in ordering the crosses to be cut with a knife, no doubt on wooden posts,' etc. (J. Wordsworth, *op. cit.* p. 16; cf. Wickham Legg, *op. cit.* p. 54).

[4] *Pontifical of Egbert*, 1853 (Surtees Soc.), *Benedictional of Archbp. Robert* (H. Bradshaw Soc.); cf. *Gel. Sacr.* (p. 327, ed. Wilson, 1894). The antiphon now is 'Adeste, Deus unus omnipoteus,' etc.; in the above-named Pontificals it is 'Zacchæe, festinans descende,' etc., which now comes later in the service.

[5] This is the first of two sprinklings that occur; see note 1 on next col. for comments on the origin of the practice.

[6] Gallican. *Egb. Pont.*, *Bened. of Archbp. Robt.*, etc.

[7] The earliest word for 'staff' here is *cambuca* (or *cambuta*), 'shepherd's crook,' perhaps derived from κάμπτειν.

[8] The introduction of ashes on which to write looks very like a later artifice to enable the 'bishop to do something which at first he would have been able to do without difficulty' (J. Wordsworth).

benefits typified by it may accrue to the newly consecrated building. The bishop then signs the inside of the church door with two crosses, using his staff, and uttering another prayer suitable to the action. Returning to his former position, he invites the congregation to pray for a blessing upon the building, 'per aspersionem huius aquae cum vino, sale et cinere mixtae.'[1]

(5) *Consecration of the altar.*—The choir begins by singing Psalm 92 ('Judica me,' etc.), with the antiphon ('Introibo,' etc.),[2] while the bishop, standing before the altar, dips his thumb into the 'Gregorian' water and makes a cross first in the middle of the *mensa* and then at each of its four corners, saying, 'Sanctificetur hoc altare,' etc., each time. At the conclusion of the introit, the bishop, having said the prayer 'Singulare illud,' etc., goes seven times round the altar, sprinkling the holy water with a branch of hyssop, whilst the antiphon ('Asperges,' etc.) and Psalm 50 ('Miserere mei,' etc.) are said.[3]

(6) All the walls and pavements of the church inside are sprinkled in the same manner three times, during the singing of Psalms 121, 67, and 90, with various antiphons. Two prayers[4] (both ancient) and a preface follow, the bishop standing with his face towards the door.

(7) The bishop now goes up once more to the altar, mixes some cement with holy water, which he duly blesses, and throws what remains of the water away at the base of the altar.

(8) His next duty is to go and bring the relics solemnly to their new resting-place in, or under, the altar that has been prepared for them.[5] This he does with much ceremony while the choir sings Psalm 94 ('Venite, exultemus,' etc.), with several antiphons. But, before entering the church with his sacred burden, he carries it once round the building outside, and delivers a set oration at the principal door, on the duty of treating churches with reverence[6] and on the importance of endowments, after which the archdeacon reads two decrees of the Council of Trent. The bishop next addresses the founder of the church as to his intentions in maintaining it and the clergy attached to it, and, on being satisfied with regard to them,[7] asks for the people's prayers on his behalf, whereupon the responsory ('Erit mihi Dominus in Deum,' etc., Gn $28^{21.22}$) is sung. The bishop also signs the outside of the door with chrism, which he has brought down with him from the sanctuary. At last the procession enters the church itself bearing the relics, while Psalms 149 and 150 are sung, with various antiphons. After a collect ('Deus, qui in omni loco,' etc.),[8] the bishop first signs with chrism the receptacle[1] in which the relics are to be laid, and then places the vessel containing them therein.[2] While the antiphon 'Sub altare Dei,' etc., is sung, he censes the relics, and fixes with the cement he has previously prepared (see above) the slab upon the *confessio*. Further antiphons are sung, and other collects ('Deus qui ex omni cohabitatione [or coaptione],'[3] etc., and 'Dirigatur oratio nostra,' etc.) are said while this work is carefully completed.

(9)[4] The *mensa altaris* (*i.e.* the upper slab) is then censed, anointed, and blessed with a number of antiphons, collects, and Psalms (83, 91, 44, 45, and 86). In this part of the ceremony *oleum catechumenorum* as well as *sanctum chrisma* is used for anointing, to typify the right of confirmation as the completion of the initiatory rite.

(10) After this the 12 consecration crosses on the inner walls of the building (see above) are each separately visited to be anointed, censed, and blessed, after the singing of Ps 147, an antiphon, and two responsories.

(11) Incense is now specially blessed, and has then by the bishop's own hands to be formed into 5 crosses, placed with holy water, oil, chrism, and wax on the 5 crosses of the *mensa*, and lighted with antiphons and prayer ('Domine sancte,' etc.).[5] The ashes are carefully removed, the bishop says another prayer and preface,[6] and Ps 67 is sung, with an antiphon. The altar is yet again anointed in silence, and, after two more prayers ('Majestatem tuam,' etc.,[7] and 'Supplices te deprecamur,' etc.), the bishop goes to his throne near the altar and cleanses his hands with bread, while the subdeacons wipe the *mensa* with coarse towels.

(12) The other vessels and ornaments of the church and altar are then similarly dedicated with antiphons, responsories, Ps 62, and collects, and at last, when the altar has been properly vested and prepared, the *Missa dedicationis* is solemnly celebrated.

At the end of the service the ashes on which the alphabet was traced are removed, and the whole church is cleansed.

ii. *MODERN EASTERN RITE.*—For this we must take the Orthodox Greek Church as the norm. Here there is a general resemblance to the Western rite; but, though there has been a certain amount of elaboration introduced into the service during the last 200 years,[8]—partly, perhaps, in the direction of assimilation to Western usage,[9]—yet it is, on the whole, a simpler ceremony, and there are important divergencies.

To begin with, there is a short and simple form

1 This ceremony seems to be somewhat delayed by the intrusion of the consecration of the High Altar and others if required, though, no doubt, that ceremony consists in part of sprinkling with the water.

2 The usual introit at Mass.

3 The rite may be derived from the Christian practice of sprinkling holy water in their dwellings (see Duchesne, *op. cit.* p. 407, and cf. *Gel. Sacr.* p. 285 ff. [ed. Wilson], which provides two forms of 'Benedictio aquae spargendae in domo'). See note 5 on p. 60a above.

4 These are the prayers mentioned in note 2 on p. 61b above. The preface is in *Pont. Egb.* and *Bened. of Archbp. Robt.*

5 It seems probable that this might at one time take place on another day or even, as has already been mentioned, not at all in certain cases. In the *Ambr. Pontifical* (ed. Magistretti, Milan, 1897), *Pont. Egb.*, and *Bened. of Archbp. Robt.*, the deposition of relics is placed later in the service, after the blessing of the linen and other apparatus; in the *Pontifical* of Dunstan there is a separate heading here: 'Incipit ordo quomodo in sancta Romana ecclesia reliquiae condiuntur'; and similar evidence is supplied by other Pontificals; see Dewick's remarks in a footnote to Wordsworth, *op. cit.* p. 22.

6 For an early instance of reverence for churches in a hitherto neglected portion of Christendom, cf. canons 38 and 58 of Rabbûla, Bp. of Edessa (A.D. 411–435), quoted by F. C. Burkitt, *Early Eastern Christianity*, London, 1904, p. 148 f.

7 All these (exhortation, decrees, and address) or any of them may be omitted now.

8 *Bened. of Archbp. Robt.*, *Greg.* (481 Mur.), etc.

1 This is now called 'confessio, id est, sepulchrum altaris. The term *confessio* is found also in many early books; it is equivalent to *martyrium*, and means the hollow place beneath the altar which is still to be seen in some of the oldest Roman churches, and which is the origin of the later and larger crypts, marking the place of burial of the martyrs over whom the church was first raised.

2 The only direction now is that this should be done 'veneranter,' but in the *Ambr. Pontif.* and *Pont. of Egb.*, as also in *Greg.* (481 Mur.), the rubric requires that a veil should be stretched in front of the altar at this point ('extensa velo inter eos [*sc.* clericos] et populum'). Both the *Bened. of Archbp. Robt.* and the *Pont. Egb.* characterize a prayer at this part of the service as 'oratio post velatum altare,' but it is not quite clear whether the word does not here mean 'vested' rather than 'veiled.' What this veil was which Duchesne considers 'Gallican' is uncertain; perhaps it was only the ordinary altar curtain, which there is reason to believe used to be drawn before the altar at the consecration in the Mass (see Wickham Legg, *op. cit.* p. 9).

3 *Gel.* (p. 139, ed. Wilson) and *Greg.* (482 Mur.), *Bened. of Archbp Robt.*, etc.

4 Sections (9), (10), and (11) seem each to be of 'Gallican' origin.

5 *Greg.* (485 Mur.).

6 Both of these are found in *Greg.* (484–5 Mur.) and *Bened. of Archbp. Robt.*

7 *Greg.* (486 Mur.) and *Bened. of Archbp. Robt.*

8 See Neale, *Gen. Introd. to Hist. of East. Ch.*, London, 1850, p. 1043, etc.

9 But see what is said on p. 60b above.

provided for laying a foundation-stone. This consists of first censing the site, the choir going in procession with the bishop round the foundations, singing the ἀπολυτίκια of the saint in whose name the church is to be dedicated. Then, after a prayer on the site of the future altar, the bishop takes a stone, makes the sign of the cross with it, and lays it somewhere on the foundation, saying, 'God is in the midst of thee,' etc.

In due time, when the church is built and ready for use, the dedication (ἐγκαίνια) itself takes place. The following articles have to be prepared beforehand: 4 drams of pure wax, 20 drams each of mastic, myrrh, aloes, incense, resin, and ladanum, 2 vessels, some paper and twine, a litre of finely powdered marble, relics of martyrs with a little silver receptacle, holy chrism, 10 cubits of linen cloth, 2 napkins, 4 pieces of white soap, a new sponge, a vessel of wine, 4 pieces of cloth embroidered with the figures or names of the Evangelists, the κατασάρκιον[1] and as many ἀντιμίνσια[2] as the bishop intends to consecrate (see below, p. 63[b]).

Then, on the evening before the day fixed for the consecration, the bishop and clergy meet in the new church. The relics are placed upon the δίσκος (paten) in three parts on the altar, and covered with the ἀστερίσκος and the ἀήρ. A short service is conducted, consisting of the Blessing, the Trisagion, the Lord's Prayer, certain τροπάρια, and the Dismissal (ἀπόλυσις).

Next, if the church is to be fully dedicated (*i.e.* not as a mere oratory or for temporary use),[3] the relics are taken out into some neighbouring consecrated church, and laid upon the altar there; otherwise, this adjournment does not take place, and whatever service there is, is performed in the new building. Vigil is kept that night in presence of the relics. (1) There is a special ἑσπέρινος (Vespers), with proper ἰδιόμελα and three proper lessons (viz. 1 K 8^{22-61}, Ezk 43^{27}–44^{4}, and Pr 3^{19-35}). (2) Later on, again, there is a special ὄρθρος (Lauds), in which the Gospel is that of the saint of the dedication; the proper canon, with its nine odes, is attributed to John of Damascus. This service is concluded with the great Doxology.

Next day, after a short rest, the bishop and clergy assemble once more in the new church. In one vessel the wax, mastic, etc., are all melted together in a fire. In the other water is heated. The *mensa* is taken off its supporting pillars, and paper is wrapped round the latter, projecting an inch above the top, so as to hold the powdered marble when it is poured in. Thereupon the priest begins the office of the Prothesis, while the bishop proceeds to the old church, where he dons his episcopal robes, and orders the Liturgy proper to be begun. A procession is formed, in which the people carry lighted tapers, the clergy the Gospels, and the bishop the relics on his head. They start for the new church, singing various τροπάρια, and marching round the precincts, till they reach the doors, outside which the relics are deposited on the τετραπόδιον.[4] After the προκείμενον, the Epistle (ἀπόστολος; He $2^{11\text{-end}}$) and the Gospel (Mt 16^{18-20}) are read.

After this, another procession takes place round the outside of the church, whilst they sing the 3rd ode of the canon mentioned at ὄρθρος above. This is followed by a second Epistle (He 9^{1-8}) and Gospel (Lk $10^{38\text{-end}}$).

For a third time they march round the walls, while the 6th ode of the canon is sung. Then the relics are laid upon the τετραπόδιον as before, the bishop prays, and a τροπάριον is sung. Standing before the closed church doors, the clergy sing Ps $24^{7ff.}$, some from within demanding 'Who is the King of Glory?' and those without answering.[1] Thereupon the doors are thrown open, and the procession enters the church; the bishop, passing up the nave, solemnly places the relics in their receptacle, pours chrism on them, and prays. The powdered marble and the hot mixture of wax and other ingredients are then poured round the base and at the top of the pillars of the altar, and the *mensa* is securely replaced and fixed thereon. While the cement cools and dries, Pss 145 and 23 are sung.

They then swathe the bishop in the 10 cubits of linen which have been provided, and fasten the 2 napkins over his arms, so that his vestments are entirely protected from being soiled in the ceremonies which ensue.[2] After this he kneels down (this being an unusually solemn attitude for prayer in the East) and recites a long prayer of dedication, and the deacon says the litany (ἐκτενῆ). Then the bishop washes the *mensa*, first with the soap and warm water during the singing of Ps 84, next with the wine[3] while Ps $51^{7ff.}$ is sung, using the ἀντιμίνσια to wipe it off; lastly, he makes three crosses with the chrism (or oil) on the *mensa*, spreading the oil from them all over the top, and also on the pillars, while Ps 133 is being sung.

The vesting of the altar next takes place. At the corners of the *mensa* the 4 cloths with the Evangelists' names or figures on them are fixed with the cement; over them the κατασάρκιον, with its four tassels at the corners, is spread, during the singing of Ps 132; then, after washing his hands, the bishop takes the outer covering (called ἐπενδύτης) and unfolds it over the *mensa* while they sing Ps 93. Lastly, he takes all the new ἀντιμίνσια which are to be consecrated, and spreads them out, one on top of the other, on the altar; and on the top of all he puts an ἀντιμίνσιον which has already been consecrated; meanwhile Ps 26 is sung.

After this, first the altar, then the whole church, is censed. Next the ἀντιμίνσια are anointed, where they lie, with chrism into which the relics or something which has been in contact with them have been pounded, so as to communicate their virtues to the ἀντιμίνσια. Each pillar in the body of the church is likewise anointed with the sign of the cross. The deacon says a συναπτή, and the bishop recites another long prayer. Finally, the Liturgy proceeds to the end as usual, the Epistle now being He 3^{1-4}, and the Gospel Jn $10^{22ff.}$

The Liturgy must be repeated for 7 successive days on the new altar, and the new ἀντιμίνσια remain there as before. After that they are all regarded as fully consecrated, and may be distributed as occasion requires.[4]

It will thus be seen that at a consecration chief stress is laid on (*a*) the erection of the altar in the new church, and (*b*) the hallowing of the ἀντιμίνσια, which can never be a separate service, and is

[1] A linen cloth, the length of the Holy Table, forming the middle one of its three coverings.

[2] The bottom cloth upon the Holy Table is so called. The natural derivation of the word would be as if it were a substitute (ἀντί) for the *mensa*, and this seems to accord with the use of the article; but it is always spelt with ι, not ε, and μίνσος is said to be a canister (Neale, *op. cit.* p. 186).

[3] The word for this is ἐντεθρονισμένος, which is said to imply the setting up of the bishop's throne in it, because every church in his diocese is potentially his cathedral, and becomes so for the time when he is present (see Neale, *op. cit.* p. 1043, note, and Fortescue, *Orth. East. Ch.*, London, 1907, p. 404, note 2).

[4] This four-legged table usually stands near the *iconastasis* for the use of the clergy (see Neale, *op. cit.* p. 1044).

[1] Neale (*op. cit.* p. 1044, note) thinks this dramatic way of singing these verses is a modern interpolation from the Roman rite, and that it was not known to Goar or his editors in the 17th or early 18th century. But this is somewhat doubtful.

[2] S. Simon of Thessalonica interprets this as symbolizing the grave-cloths of our Lord (see Neale, *in loc.*).

[3] It has been suggested as probable that a blooming vine-spray or rose-branch was originally used at this point, and that the idea of the wine was borrowed from the West.

[4] Their proper position in future is below the κατασάρκιον, next to the surface of the *mensa* itself.

peculiar to the East. The Syrians, however, are said to use slabs of wood instead of cloths for this purpose, and in cases of necessity permit the Eucharist to be offered on a leaf of the Gospels, or even on the hands of a deacon.[1]

C. L. FELTOE.

CONSENT.—The usual meaning of the noun 'consent' is voluntary agreement to, or acquiescence in, another's proposal. The verb is used similarly: 'to consent' is voluntarily to accede to, or acquiesce in, what another proposes or desires; to agree, comply, yield. The original meaning of the word (from Lat. *consentire* = 'to feel, think, judge, etc., together') is almost obsolete. It is rarely used to denote agreement in sentiment, opinion, or judgment, though this meaning is preserved in the phrases 'common consent,' 'universal consent' (*consensus gentium*). Thus we find it in Sidgwick's *Methods of Ethics*[6] (1901), bk. i. ch. viii. § 3. We are led, he says, to endeavour to set at rest doubts as to the validity of the particular moral judgments of men 'by appealing to general rules, more firmly established on a basis of common consent.' And in Matthew Arnold's *Mixed Essays*, 1879 ('Equality'), we find the sentence: 'As to the duty of pursuing equality, there is no such consent among us' (p. 49). Most of the primary, and some secondary, meanings of the word have, however, been taken by other words, so that we now speak, *e.g.*, of *assenting* to statements, doctrines, and creeds, and of *consenting* to proposals. Examples of this use of the word are to be found as early as the 12th cent. (see *OED*, *s.v.*).

A stage logically intermediate between the primitive and modern uses is the employment of 'consent' to denote agreement in a course of action. 'When the wills of many concur,' says Hobbes, 'to one and the same action and effect, the concurrence of wills is called consent' (*Works*, IV. xii.), and in Lk 14[18] we read that 'all with one consent began to make excuse.' There is no reference to the sentiment, opinion, or judgment of the persons concurring to act.

But in its modern prevalent use 'consent' denotes a type of volition which implies acquiescence in what is proposed by another, an acquiescence, not in the proposer's sentiment or judgment, but merely in his proposal.[2] The state of mind preceding consent seems to include some reluctance to the action proposed. The reluctance may be of any degree, from mere indifference, through definite disinclination (which may be due simply to lack of light), to decided aversion. In the typical case of consenting, the reluctance is overcome without ceasing to exist. When reluctance ceases, the end takes on a more or less desirable character. An end desired is our own, whatever be the psychological origin of the idea of the end. It may have been suggested by another because he approved of it or desired its realization; but, while the end is his only, and not attractive to us, there may be an indifference, at least, if not a more positive reluctance, to adopt it. When it touches us and creates desire or wins approval, it becomes to that extent our own end, and ceases to be what we acquiesce in. We consent to, that is, voluntarily acquiesce in, an end which is not our own in the sense explained. Consent so defined raises difficult moral problems.

The fact that a deed is done reluctantly does not do away with the fact that it is willed, nor, according to John Stuart Mill (*Utilitarianism*, 1901, ch. ii.), does it affect the morality of the action. It may affect our judgment of the character of the person doing it, but the morality of the volition depends upon the nature of the whole result which was foreseen to depend upon the volition. The apothecary in selling poison to Romeo said, 'My poverty, not my will consents,' but he could not disclaim responsibility for the poisoning proposed by Romeo. He did not wish the poisoning, yet 'the consent, though said not to be of the will, might have been enough to hang for' (T. H. Green, *Prolegomena to Ethics*, 1890, bk. ii. ch. ii.). A man who consents to a wrong action may plead poverty, compulsion, etc., as extenuating circumstances, but would these affect our judgment of his culpability, except in the same way as similar considerations would affect our judgment of an action which he conceived and carried out entirely on his own initiative?

It is difficult to fix the nature and the degree of responsibility attaching to consent, since acquiescence in any particular case may signify much or very little. It may mean, *e.g.*, anything between non-interference and full co-operation. Would we give as much credit to one who permits a good deed to be done as to another who actively helps to perform it? Would we blame equally persons who allow an evil to be done, assist in doing it, or do it entirely themselves? Salome consented to the proposal of Herodias that John the Baptist should be beheaded, and demanded his head of the king. Herod consented and ordered the execution (Mt 14[8ff.]). Herodias, Salome, and Herod willed the death. Were they equally responsible and reprehensible? Again, acquiescence in the same deed may have a different moral significance in the case of different persons. Pilate consented to the demand of the people to crucify Jesus Christ. Jesus consented to die. The consent of the one showed him to be a weak and unjust ruler; the consent of the other revealed Him as a Saviour of men. It is clear, therefore, that, in order to determine the moral significance of an act of consent, the whole complex result willed must be analyzed into its elements and considered in their relation to one another, and also in relation to the concrete conditions in which the person willing finds himself. The situation is often very complicated. The acquiescence of Jesus in His own death, *e.g.*, was an act of obedience to His Father's will, yet consenting to that will involved the committing of a crime by the Jews and Pilate. Matheson (*Studies of the Portrait of Christ*, 1899–1900, bk. ii. ch. iii.) thinks that the agony of Gethsemane was largely due to His aversion to allow such a crime, and to doubt whether it could be in accordance with the will of God. 'Taking up the cross' for a Christian frequently means consenting to a course of action which he does not desire, and cannot see the reason for, or the reasonableness of; nevertheless he acquiesces, in the belief that he is doing the will of God, and that the will of God is good.

Submission of the will to authority of any kind amounts, directly or indirectly, to acquiescence in what is proposed by others. Obedience is consent, so is compromise; co-operation involves it. We cannot live in social relations with others without

[1] See art. 'Antimensium,' in *DCA* i. 91 f.

[2] 'There is a distinct difference in consciousness between the consent of belief and the consent of will. The consent of belief is, in a measure, a forced consent,—it attaches to what stands in the order of things whether I consent or no. The consent of will is a forceful consent—a consent to what shall be through me' (Baldwin, *Handbook of Psychology*, 1891, 'Will and Feeling,' p. 171).

having, now and again, to do things for them which we do not ourselves desire, and on which we may not be able to pass judgment. For it is not easy to know whether the ends which our fellow-men set themselves to realize with our help are, on the whole, good. The goodness of particular ends is, within limits, relative to the individual. An end which is good for one to aim at may be bad for another. This is true irrespective of our conception of the ultimate ideal of life. Even if the ultimate good be one and the same for all, it is individualized in a different form for every life, and each claims the right to realize it in his own way. This seems a legitimate claim, and consequently the good man may feel called upon to regard consent to special ends which he does not desire, and is not in a position to approve or disapprove, as a normal duty. By recognizing the claims of his neighbours to his love and help, he admits also their right to expect him sometimes to acquiesce in their purposes and to trust their judgments. He must act, not on his own insight, but in dependence on that of others. His will must consent to theirs. The appeal of many proposals may depend not so much on their intrinsic reasonableness, as on the persons making them. Therefore the wise man is only partially able to realize the ideal of a life according to reason. He can scarcely hope that the ends which his fellow-men seek are always good. Moreover, good men often come into apparent conflict with one another, and co-operation is limited by competition.

A more difficult problem is raised by a consideration of the fact that man's life is lived in a world over whose course he has very little control. If the world is the result of blind forces utterly indifferent to human ends, the wise man has no ground for hoping that life will ever be satisfactory. He cannot acquiesce in such a world. His mind and heart must protest against it, however useless the protest may be. If these forces form a mechanical system, whose operations can be traced and related, man's intelligence may bow to the inevitable order, and seek to understand it, but his conscience does not consent to such a scheme. The moral will would be inevitably opposed to a merely mechanical cosmical process. It cannot acquiesce in a world which is not based on moral principles, and which is not ultimately amenable to human ends.

And even on this assumption a completely rational life is an ideal which is scarcely realizable by any one in the present state of existence. And, therefore, Kant (cf. *Critique of Practical Reason*) maintained that immortality is a necessary moral postulate. He maintained, moreover, that the existence of the supremely Good Will must be postulated as creator and governor in order to secure complete harmony between the perfect moral will of man and the conditions of his happiness. There appeared to be no other way of guaranteeing the realization of the *bonum consummatum*.

Many of the higher religions teach submission to this sovereign will, whose ways are often inscrutable, as the highest duty. The Christian position is that we should will that God's will be done, and consent, therefore, to all that is involved in the operations of that will, whether we like and approve them or not; knowing, in the words of St. Paul, that 'all things work together for good to them that love God' (Ro 8^{28}). In a sense such a view effects a partial synthesis between the two attitudes of acting from rational insight and consenting to the order of the world. For, if its fundamental assumptions are true, a man acts autonomously and rationally in willing continuously the realization of the supremely good and reasonable will; and also by consenting, in detail, to particular events, and to particulars of conduct, even when unable to desire and approve them. The practical problem then reduces itself to knowing what that will intends us to do.

A synthesis of a different kind is attempted in some metaphysical systems, such as that of Spinoza (cf. his *Ethics* and *Treatise on the Improvement of the Understanding*). Everything that exists, Spinoza thought, follows eternally and necessarily from the being of the One Substance. The end of life is to obtain rational insight of an intuitive kind into this being, to see self as one of its modes, and to acquiesce in the order of things. When the order of the Universe—Substance, Nature, God, Truth, are Spinoza's terms—is understood, we more than acquiesce in it; we find satisfaction in the knowledge. Supreme and enduring happiness consists in the intellectual love of God (*amor intellectualis Dei*).

For consent in marriage, see MARRIAGE.

LITERATURE.—This is sufficiently indicated in the article.

DAVID PHILLIPS.

CONSEQUENCE.—If a proposition p implies a proposition q, but q does not in turn imply p, then p is called the antecedent and q the consequent; whereas, if each implies the other, they are preferably called equivalents. *Logical consequence* is thus the relation obtaining between a conclusion and its premisses, such that if the premisses are true the conclusion is true. The reverse of this relation—the relation holding between the consequent and an antecedent—is logical presupposition. That is, the consequent is logically presupposed by the antecedent; for only if it be true can the latter be true, whereas the antecedent might be false and the consequent still true.

By *causal consequence*, on the other hand, is meant the relation between an antecedent event and its effect; and the philosophically important question at once arises, Are the two types of consequence the same? For a century it has been believed that Hume and Kant proved successfully that the relation between cause and effect is not that of logical consequence, by showing that we discover causal relations not by deduction, but by observation and experiment, or inductively. But this does not follow; for, though it is true that our discovery of causal relations is usually made inductively, the relations discovered are logical. Moreover, many causal relations have been deduced, to wit, those inferred in mechanics and mathematical physics. Indeed, all causal laws can be explicitly formulated as propositions of the type p implies q. Perhaps what confuses us is that the temporal relation between an antecedent cause and its effect is foreign to logical consequence, and that the antecedent event seems to us, for practical reasons, necessary for the effect, and not the effect for it. But the effect is quite as necessary for the cause as the cause for the effect; and, though in a temporal system, such as the world is, events must be related in time, still this relation is logically accidental to the generic relation whereby from the nature of one part of the world-system we are enabled to infer the nature of another part. This generic relation is that of logical implication, and is either the causal relation or a class of which the causal relation is a member. See CAUSE, CAUSALITY.

WALTER T. MARVIN.

CONSISTENCY (Ethical).—In so far as ethics is a theory, we must ask whether such a theory is open to the test of consistency; and in so far as ethics bears upon conduct, we must inquire whether consistency also applies to the practical sphere. In

regard to its *theoretical* aspect, the question arises whether ethics is simply knowledge of moral facts, or whether it must fashion an ideal to serve as a rule for conduct; whether, that is to say, it merely describes, or also enjoins and commands. If it be merely descriptive, its sole aim will be to discover the characteristic and essential features of morality. The latter view has very largely come into favour in modern times.

1. Consistency in naturalistic ethics.—*Utilitarianism*, *Eudæmonism*, or the *Ethics of Feeling*, proposes to explain the origin of morality. It starts from phenomena; it examines the native capacities of mankind, and even tries to trace the development of these. It occupies itself with the psychological analysis of impulses, feelings, and emotions, with man's relations to his environment, and his dependence upon, or relative independence of, this environment; with his relations to Nature, to his fellows, and to the communities in which he finds himself; with suffering and his reaction against it; with his estimate of things by means of a 'value-judgment,' which may itself be variously construed, and with the origin of these value-judgments. In so far as ethics bears this empirical character, its business is to subject the conduct of men to historical and psychological investigation, to analyze it, to discover, if possible, the laws which actually regulate human life and which furnish a standard of value for conduct, and to determine the class of actions most conformable to this standard. For this school, in fact, the only important matter is to draw from the boundless mass of material such general truths as will be valid within this particular sphere.

It is impossible on these lines ever to get beyond probability or merely relative points of view. An ethical theory of this sort is inevitably tied down to the relative. Consistency can find no footing here. All that is required is to bring the manifold data under general categories by induction. Empirical thinkers, and more especially sceptics, who place their mark of interrogation upon everything, will even tell us that the endeavour to introduce consistency into ethics is a mere futility, and really prevents us from doing justice to the facts. A moralist like Bentham, for instance, will have nothing to do with consistency. For, though he admits the validity of the general proposition that morality is concerned with the good of the whole, he yet holds that experience alone shows what makes for this good. Laws derived from the facts are only of relative value. A change in the facts will necessarily involve a change in the laws. Those who favour the historical method give special prominence to the fact that ethical ideas undergo extensive modifications, and that every age has its own particular assortment of such ideas, won from the most heterogeneous points of view, and therefore quite incapable of being reduced to unity. Effete conceptions—vestiges of earlier modes of thought—still continue to operate in certain circles, or in the general consciousness, at a time when other usages and ideas, by no means reconcilable with the old, have come to the front. Hence, it is said, the collision of duties and the existence of contradictory views of moral life are just what we might anticipate, and accordingly the demand for consistency is sheer folly. Moral judgments are thus the result of a psychical and historical process—the mere temporary compromise between the competing interests of the day. To look for consistency under such conditions is to shut one's eyes to the facts. A like judgment must be passed upon the theory which finds morality in the spontaneity of our nature, which builds upon instinct and unconscious tendency, and which, as wholly averse to rational principles, would trace moral action to the impulse of an inherent goodness in mankind, or of partly conscious, partly unconscious, propensity; or, again, would even bring in the operation of a natural creative potency. On this theory, also, the entire function of ethics is to describe the impulses as they appear in experience.

The explanation of this antipathy on the part of empirical ethics to the idea of consistency is that the system merely registers and describes the various types of ethical thought and action, classifying them under general headings, and refraining from any attempt to harmonize these, on the ground that the moral ideas and phenomena emerge in the most diverse departments of human life, in the most disparate phases of culture, and in ages most remote from one another, and that accordingly they cannot well be brought into organic unity. Indeed, many even maintain that the sphere of practice is the proper arena for the irrational, for a power quite impervious to reason. Here, it is said, we encounter the fact of personality; here the concrete, the merely particular, comes into play—that which in the last resort eludes the grasp of thought. All general principles are therefore but bare abstractions, drawn from a limited field of experience, and as divergent as the data they refer to.

2. Consistency in religious ethics.—Frequently, too, even *religious* ethics gives no more consideration to the idea of consistency than does empirical ethics. The ethics of religion has usually been content to give sacred sanction to a traditional morality, which has grown up amongst a people under the most heterogeneous influences; or it has, at most, added sundry directions regarding ceremonial observances, ecclesiastical duties, and especially works of piety. We need not expect to find a harmonious consistency under such conditions.

We have an instance of this in *Jewish* ethics, with its multifarious precepts regarding individual conduct, and regarding social, ceremonial, and political affairs. The ethics of the *Persian* religion embraces a vast array of ceremonial and moral ordinances, together with injunctions regarding social duties, such as planting trees, killing noxious animals, and the like. Jewish and Persian ethics, however, so far agree in resolving all the various regulations into a formal *unity*, namely, the will of God, as the source of all; and it is the same will which fixes the penalty of transgression and the reward of obedience.

A second type of religious ethics is that which admits a dualistic morality. In *Buddhism*, for instance, there is one morality for the monks and another for the laity. The universalism of this religion was not carried to its final issues: thus, woman was placed in a lower rank than man, and the system of caste was left undisturbed; and, while the leading principle of Buddhistic ethics was the complete surrender of desire in a life of patience and contemplative wisdom, this was subsequently enjoined in different degrees for layman and monk respectively. The monks were required not only to eschew adultery, but to abstain entirely from sexual intercourse, to avoid luxury, and to give themselves to meditation. A distinction was also made between venial and mortal sins. Rules of propriety were added to moral obligations. A consistently developed ethical theory is thus clearly out of the question.

The same is true of the ethics of *Brāhmanism*. The Law Book of Manu contains an exposition of duties, as also injunctions regarding the retention of the caste system and regarding submission to the Brāhmans. On the other hand, there is, as early as the Upaniṣads, the formula *Tat tvam asi*, 'That (the Cosmos) art thou,' which bids each find himself in his fellowman; and, while asceticism, solitary meditation, and withdrawal into the forest count for more than family or business life, yet a compromise is made between the two by the regulation that the forest life shall be adopted only after a man has lived in a family and brought up a son.

Consistency is likewise alien to the ethics of *Roman Catholicism*. For one thing, morality is here made to rest upon the isolated fiat of an external authority; for another, a distinction is drawn between obligations and counsels. Moreover, the sacrament of penance prescribes a series of external works; while, finally, the monastic ethics of the *religiosi* is severed from the ethics of the laity.

Nevertheless, it would be wrong to imagine that religious ethics must necessarily assume this double form, or that it can be no more than a mere aggregation of contingent and isolated commands, and must in consequence lack consistency.

As a matter of fact, the ethics of *Confucius*, who put a check upon belief in spirits, soothsaying, and exorcism, and who read a Divine revelation in the natural and social order, exhibits a more homogeneous and self-consistent character than any of the above. 'The wise man obeys the law and awaits his destiny; that is the sum-total of duty.' This law sets forth the right hierarchy of social relationship in the subjection of the wife to the husband, of children to parents; in family affection, which is to be nurtured by ancestor-worship; in the separation of the sexes, as providing a 'barrier for the people'; in the subordination of the younger to the older, and of the subject to the ruler.

The law also decrees that this social order shall be represented in the ritual. Kindness to the poor, the friendless, the widow, and the orphan, is commended, and great stress is laid upon faithfulness in friendship. The governmental system should aim at nurturing a peaceful, industrious, and contented people. It quite accords with all this that Confucius sets great store by ancient tradition and history, as exhibiting the decrees of heaven in punishment and reward. Observance of this moral order is at the same time a religious duty. It is obvious that, notwithstanding the aphoristic form which this moral teaching tends to assume, nearly everything is dominated by a single thought.

Finally, the ethics of *Christianity* exhibits certain features which not only imply that the entire moral life is brought under one point of view, but also set forth a consistent moral ideal.

3. **Consistency in rational ethics.**—(*a*) *As the application of an abstract law.*—While religious ethics, therefore, either as giving formal sanction to incongruous usages, or as massing together arbitrary laws, or as separating the moral interests of religion from those of the secular life, tends *in the main* to dispense with consistency, the case is quite different with *rational* ethics. The fundamental tenet of the latter school is that the moral is grounded in the rational; and, even if a distinction be made, as by Kant, between practical and theoretical reason, the test of consistency holds good in either. When Kant wishes to prove that a breach of the universal moral law is indefensible, he points to the contradictions which such a breach involves. If we would test the validity of a maxim, we have but to ask how it would work as a universal law. Thus, for instance, the refusal to implement a promise, were it made a universal rule, would result in a state of things where no promise was accepted, *i.e.* the maxim would defeat its own purpose. The criterion applied here is therefore that of logical consistency. Similarly, in his *Critique of Practical Reason*, Kant resorts to the logical categories as furnishing a more precise definition of freedom. In one form or another, rational ethics makes out a case for an unconditional factor in morality, and it must vindicate the claim of this unconditional and universal principle to be supreme, *i.e.* to determine everything that comes within its province; in a word, it demands consistency.

Consistency in rational ethics is, primarily, the requirement that the practical side of life in its entirety shall be brought to the test of the universal moral law, and made subject to it.

Thus the *Stoics* maintained that all morality lay in the one supreme virtue, namely, harmony with the law of nature or of reason. From the same standpoint *Kant* treated morality in a purely formal way, taking reverence for the law as the sole motive. This law, however, being as yet wholly abstract, is incapable of positively determining the concrete materials of conduct. *Given* conditions are brought within the scope of the law; they are not, however, derived from the law, but only tested by it. For example, the institution of marriage is not deduced from the law, nor is its place in the ethical economy assigned by the law; the sole question is whether, marriage being assumed, the universally valid law can take effect in the relationship. Strictly speaking, in such a case we can say only that the law must not be infringed; we cannot determine the actual duties of marriage. It is, in fact, precisely on this account that Kant distinguishes between duties of perfect and those of imperfect obligation. Thus, for instance, the obligation of developing one's natural powers is an imperfect one, because, while the maxim of such effort is undoubtedly a law, the mode and degree of the effort are in no way defined by it, but are left to personal choice. Even on Kant's view, therefore, there is a certain permissive sphere in morals, to which the consistency of the moral law cannot be extended—a sphere for casuistry, in which particular cases cannot be decided by the law.

Kant's mode of applying the test of consistency in the field of rational ethics stands in contrast with that of *Herbart*. On the one hand, the unifying principle from which Herbart starts is an æsthetic *a priori* judgment regarding relations of will, and from this judgment proceed the ethical ideas. On the other hand, he enumerates five such relations of will (recalling the five axioms of Whewell), which he simply places side by side. To look for consistency here is apparently out of the question, as these five ideas are neither traced to, nor derived from, a single principle. Closer examination, however, reveals that these ideas are in fact held together by the thought of a harmony in all the principal relations of will, while a similar unifying potency is attributed to the conception of living society, which combines all the ideas in harmonious unity, embracing both individual and social relations of will. Looked at in this way, the ethics of Herbart presents us with a much more concrete ideal than Kant's universal abstract law, and so exhibits a higher degree of consistency.

(*b*) *Consistency in the structure of the concrete moral ideal.*—The criterion of consistency is applied even more cogently by those who seek by speculative methods to give the ideal a concrete form. It was on these lines that *Plato* fashioned his ideal Republic, which he regarded as the highest image of the Good upon earth, though his dualism stood in the way of a perfectly consistent theory. In the main, however, he sought to delineate a harmonious antitype of the Idea of the Good; and it was his conviction of the universal supremacy of this Idea that moved him to incorporate in his scheme the concrete conditions of human life and the special faculties of the soul. In the *Laws*, it is true, he somewhat lowers the Ideal in favour of the existent civic situation, yet this does not so much imply a surrender of consistency as a desire to actualize his ideal State amid given conditions. The Idea of the Good which manifests itself in the individual (as virtue) and in the State—the macrocosm of man—is set forth by Plato with the strictest consistency as the unifying principle of morals. This is even more true of *Aristotle*. With him, the one νοῦς is supreme in man, laying down just proportions for all emotions and all goods; and, although he gives an empirical tabulation of the particular virtues rather than a classification dominated by a universal principle, yet his guiding thought is that the dianoetic virtues are concerned with the development of the practical intelligence, while the ethical virtues have to do with reason's mastery of the passions by exercise. In effect, therefore, according to Aristotle, virtue is one, viz. the supremacy of reason, which, however, can be adequately realized only in the State—the State itself, again, being founded upon the home. Aristotle also agrees with Plato in linking his doctrine of virtue to the Idea of the Supreme Good, but he concedes a much wider scope to the operation of reason in practical life, and thus carries out his ethical doctrine in a more consistent way.

In modern times, *J. G. Fichte* and *Schleiermacher* have urged the importance of unity in ethical theory, and have given complete consistency to the moral ideal. True, Schleiermacher discarded imperative ethics and advocated the descriptive method. In his opinion, however, ethics is not an empirical or inductive, but rather a speculative, science. The moral ideal is not an ideal of obligation, but it is described as the ideal by which men act—duty; or in terms of the faculty which manifests itself as lawful—virtue; or in terms of the result of action—the highest good. In all this Schleiermacher applies the ideal with such rigorous consistency as to demand that every man, with due allowance for his individual nature, shall construct and realize his ideal concretely and in full detail. He gives no place to the distinction between perfect and imperfect obligations, or to the collision of duties, since at every moment only one mode of action is ethically possible—that, namely, which in the circumstances best furthers the entire moral process. Morality being an integral whole, every action is in its degree a reflexion of this whole. The distinction he draws between symbolizing and organizing action he admits to be relative only, since each includes the other in smaller compass; the same is true of the universal and the individual factor. Each ethical province therefore in a measure embraces the other, and, when combined, they constitute the highest good—*a unity absolutely complete in itself*. The ideal has no gaps, and, consequently, nothing

is merely permissive. The ideal embraces the entire range of human conduct; in fact, even the mode of action in any given situation is determined by fixed rules.

According to Schleiermacher, reason is a power which moulds nature to new issues; and among modern thinkers it is he who has most consistently developed the thought that the whole spiritual life of man is ethically determined, no phase whatever being left out. His *Theological Ethics* bears the same character. It simply describes how the religious impulse—the Divine spirit operating as the intensified power of reason—works as the constraining motive in the determination of moral action in its details, and how it strengthens this rational action (as it is called in his *Philosophical Ethics*) without running counter to it or altering its content. The man who is in harmony with the Spirit of God is, in thought and feeling, an integral concentrated force, which manifests itself in the moral ideal, and effects the highest good. This concrete form of the ideal exhibits a far more strict consistency and uniformity than does the abstract idea of universally valid law.

(*c*) *Consistency in the historical development.*—We can scarcely look for a more exigent standard of consistency in ethics than that of Schleiermacher, but we may give more consideration to the fact of *development*. Schleiermacher's ideal is really timeless. No doubt he holds that the speculative view of ethics may be brought into relation with historical science and practical life by means of critical and technical studies, and he desiderates that full account be taken of the individual's special place in the Kingdom of God; he even grafts upon the ideal the laws by which the whole course of conduct must be directed; but, nevertheless, he practically overlooks the factor of development in the moral consciousness. In his *Kritik der bisherigen Sittenlehre* he submits the history of ethics to a searching investigation, but from a purely critical point of view. This defect was made good by J. G. Fichte, and notably by *Hegel*; subsequently also by *Chalybäus*,[1] *Harms*,[2] and *von Hartmann*.[3] These thinkers took account of the successive stages through which morality had passed, and contended for consistency in the ethical idea. As an example we may take Hegel's *Rechtsphilosophie*, which also comprises his ethics.

In the history of moral experience Hegel sees a logically necessary process of development. He argues that the component factors of the moral idea are exhibited in the several stadia of the developing moral consciousness; that they are all conserved in the highest stadium, and incorporated in the all-embracing unity of the moral organism. From the *pre-moral condition* of the natural life, with its impulses, out of which, in process of time, grows a system of wants, Hegel differentiates the stage of *abstract law*, in which man is subject to an external arbitrary norm, expressed primarily in the regulation of property and contract. Next, consciousness passes, by an inner necessity, from this purely outward phase of freedom to the stage of *morality*, which lays stress upon inner feeling in an abstract and one-sided way. Advance is then made to the stage of *Sittlichkeit*, or *established observance*, in which moral thought allies itself with an objective content embodied in the moral community. This content manifests itself first of all in the family, which forms an expression of natural feeling, and in which individual property becomes family property; it then appears as civil society, with its system of wants, police regulations, and corporate institutions; finally comes the State, which assimilates the results of the whole development. The State conserves the family and civil society, in which the individual finds his satisfaction; it conserves the inner disposition, which now acquires a concrete ethical content; it conserves the sphere of abstract law, and even the life of natural impulse together with its system of wants.

Now we may possibly take exception to some of the details of this sequence, but we cannot well ignore its leading idea, viz. that man advances from a state of nature to a state of average morality characterized by statutory law; that, passing from the stage of positive enactment, he formulates the law abstractly as good disposition; and that, finally, he transforms this abstract morality into concrete established observance, thus arriving at a Supreme Good which recapitulates in itself all the preceding stages. The idea of consistency in ethical knowledge is thus extended to the process of development, and at the final stage we are brought to a provisional harmony in which the consistency of the ethical idea is revealed as the economy of the moral organism.

(*d*) *Consistency in the relation of Ethics to the ultimate principle of Philosophy.*—Speculative moralists, however, carry consistency to still further lengths. Not only do they assign to ethics, as a special science, its proper place in the system as a whole—as even Kant does, in his distinction of theoretical and practical reason—but they either trace it to, or deduce it from, an ultimate unity, a supreme integral principle, thus *fitting it organically into a complete philosophical rationale of the universe*. Such is the procedure of *Plato*, who holds that true knowledge involves morality, and that morality carries with it insight into truth, and who therefore regards the science of knowing, or dialectics, as the cardinal science, embracing not only knowledge but also the supreme content of knowledge, *i.e.* true being or the Ideas, of which the highest is that of the Good and Beautiful. These Ideas Plato deems to be realities, so that the True and the Good and the Beautiful are one. The subject-matter of metaphysics or dialectics, which embraces the knowledge of being, is identical with the Good and Beautiful; and, as this highest Idea is Deity, metaphysics, religion, and morality are in the last resort one—just as truth, goodness, and beauty cannot be dissevered. Plato's differentiation of physics and ethics from dialectics is due to the fact that the good and beautiful of the actual world is only a copy of the real—a mere representation in material form, since the world is the sphere of becoming.

Although *Aristotle* and the *Stoics* likewise aspired to place ethics in its right connexion with philosophy as a whole, yet their endeavours after unity, their ideas of consistency, were not carried out so fully as Plato's, the reason being that their interest in experience and the special sciences was greater than his, and so far deranged their philosophical views. On the other hand, we have a striking instance of consistency in the work of *Spinoza*. Even his mathematical method, which in reality is logical rather than mathematical, supplies an illustration of this. He regards metaphysics, ethics, and religion as constituting an integral whole; and, further, his theory of the parallelism of thought and extension enables him to incorporate physics into this unity. Here, therefore, we have an attempt on a grand scale to connect ethics organically with the entire system, and to enforce the principle of consistency to its extreme limit. A similar course is followed by the *Absolute Philosophy* of Germany, as exemplified by Fichte, Schelling, and Hegel, and, as they take the historical process into account, their system is even more comprehensive than that of Spinoza. Hegel looks upon man's whole moral experience in its several gradations as a phase of development in the self-manifestation of the Absolute, or the Idea, which actualizes itself in moral life in order to attain, in æsthetic intuition, in religious conception, and, finally, in philosophic thought, a survey of the whole process. Moral life is thus an aspect of the Idea, a stadium in its development. Here consistency reaches the acme of rigour. *Schleiermacher*, too, endeavoured to bring ethics into organic connexion

[1] *System der spekulativen Ethik* (Leipz. 1850).
[2] See his admirable work *Die Formen der Ethik* (Berlin, 1878), afterwards incorporated in his *Ethik*, ed. Wiess (1889), 12, 47 ff.
[3] *Phänomenologie des sittlichen Bewusstseins* (Berlin, 1879).

with his whole philosophy. For him, as for Schelling, the highest principle was indifference, *i.e.* the absolute unity of opposites. This principle is confronted by the world, where, in virtue of the underlying unity, the several opposites of thought and being, real and ideal, manifest themselves as diverse, indeed, yet not inconsistent. This interfusion of real and ideal, if the former preponderates, is nature; if the latter preponderates, it is reason. Reason and nature, however, tend towards a state of mutual adjustment, reason becoming nature by its activity, and nature likewise labouring to become reason. Thus ethics becomes physics, and physics ethics. Still another opposition confronts true scientific knowledge. Our thought is at once speculative and conditioned by experience. Hence the science of reason and the science of nature have each a speculative and an empirical side. The speculative science of reason is ethics; the empirical is history. The speculative science of nature is *Natur-philosophie*, while the empirical embraces the special natural sciences. Ethics and history are interlinked by technical and critical studies. Such is Schleiermacher's way of making ethics an organic part of universal science.

4. General investigation.—It appears from the foregoing synopsis that moralists differ very greatly in regard to consistency as applied to ethical theory, the main cleavage corresponding to that between the empirical and the rational interpretation of morality. If morality be regarded as merely a means to the greatest possible good, then reason itself must be similarly interpreted, and, on this view, consistency comes into consideration only in so far as it is conducive to the same end. This general good, it is alleged, is best served by obedience to rules which have been inferred from experience. But absolute laws, laws permitting of no exception, are scarcely within the scope of such a hypothesis. General rules are deduced from limited empirical data, and, if such data be augmented, the rules will be correspondingly modified. They are, by their very structure, incompatible with absolute validity. Should it be asserted, for instance, that a man must, with a view to his own happiness, subordinate his personal interests to those of others, this law will be recognized by him only so long as he finds it to his own advantage. Thus ethics, if it be but a means to a relative end, cannot itself get beyond relativity, and must renounce consistency.

The same result follows when a purely empirical theory of development is applied to morality. Altered conditions or the progress of civilization will necessitate a change in moral laws. Since, on this theory, ethics merely summarizes the best directions for human well-being under given circumstances, and since the variability of such directions and maxims is held to prove the relative character of the science, strict consistency is put out of court. As corroborative of this view, it is alleged, in particular, that ethics must needs keep within the limits of the attainable, and that it is impossible to apply the idea of consistency at all hazards. If we bear in mind the way in which men really act, the way in which impulses, feelings, and passions are adjusted by the psychical mechanism, and in which we become conscious of this adjusting process, we can formulate rules which, so far from remaining mere ideals, take account of men's actual capacities and circumstances, and are therefore capable of being put into practice.

But even the most extreme empiricism must allow that morality emerges only when certain demands are made in reference to the data of experience—demands which this school finds so little self-explanatory that it has recourse to all manner of 'sanctions' to establish their authority. Without the antithesis of an ideal confronting the data of experience as a regulative law, morality is impossible. It may, indeed, be said that this ideal is simply the resultant of our empirical value-judgments, a product derived from experience by abstraction. Thus, for instance, the law of altruism, as against egoism, may be traced to the experience that other-regarding conduct brings an increase of satisfaction. But the question then arises whether this generalization is universally valid; and, again, whence comes the faculty by which such generalizations are made. The truth is, this faculty of abstraction is that by which we colligate the manifold in a unity, on the assumption that it is amenable to law. The ideal set up by the moral reason is something more than an aggregate of rules, derived by abstraction from value-judgments; it is in reality reason's own craving for unity, which it seeks to realize in the ethical judgment it applies to the facts of volition. The unity which is not overtly given in our various impulses, feelings, and passions is demanded by reason, and the demand cannot be met by anything relative. It is a fact that a number of moralists take their stand upon the unconditional character of morality; and this fact can neither be explained nor explained away by the empirical school. Reason cannot rest till it has moulded the manifold into a unity, and in the ethical field this means not only that reason constructs ideals, but that its ideals are consistent. It is, of course, true that different epochs have different ideals, but this by no means implies that the ideals of any period were defective in the matter of consistency. Reason has built up its ideals in ever-enlarging form; it has in ever-increasing measure incorporated therein the various spheres of conduct; and, by defining the mutual relations of these spheres, it has attained perfect symmetry in its ideal. Indeed, reason has at length reached a point where it can survey the whole historical sequence of ideals in a single view, and where it seeks to grasp the process of development by which the approved elements of the earlier ideals are taken up into the ampler range of the later. In short, if by an inherent necessity the moral reason is to carry out its task of ideal-making, and if its demand for unity is put forward unconditionally, then the entire field of voluntary action must be subjected to its authority, and its ideal must seek to effect the complete organization of moral life. In ethics, therefore, consistency is an unconditional requirement. Since the whole spiritual life of man is touched by the will, it must of necessity fall under the moral ideal.

It has been said, indeed, that the concept can never reach the concrete, the particular. But, while this is the case, we can nevertheless form the *concept of the particular*, and can accordingly assign the particular to its proper place in the ethical system, subordinating it to the whole in such a way as to make it an organic part thereof—a component which, so far from causing any dislocation, really works with all the rest as mutually complementary, and is thus wrought into the harmony of the whole. If it be deemed pedantic thus to bestrew the whole way of life 'with man-traps of duty,' it must be frankly conceded that there are sections of life where movement must be free, as, for example, the sphere of recreation, of sociality, of imagination, or the æsthetic sphere. But the moral ideal encompasses these tracts in such a manner as to permit a certain freedom therein, provided that there be no over-stepping of the limits laid down by the moral system as a whole. Here, therefore, we have no exception to

the moral law, but simply an application of the ethical principle that each sphere shall be dealt with in its own way, while ever remaining a constituent part of the moral organism, and keeping within its own bounds. Here too, therefore, the unifying formative reason may manifest itself in constructing ideals.

Further, consistency, to be effective, must be complete. No doubt, it is at present a prevalent view that a narrow and one-sided policy achieves the best results. An oppressed class, for instance, demands its rights: these are not to be won, it is said, by deliberations as to how that particular section of society is to be fitted into the social organism; nothing but the ruthless enforcement of its claims can secure for it improved conditions of life, though eventually, of course, such amelioration may benefit the whole. Again, it is asserted that a State attains prosperity not by enthusiasm for the ideal of humanity, but by a self-centred struggle for a recognized place in the council of the nations. Or, again, the individual who has formed new religious views must, it is held, not walk softly or make compromises, but must carry his views into effect ruthlessly, *i.e.* consistently. Mankind, in short, makes progress only by the one-sided pursuit of narrow aims. Society is so constituted that, while one man is carrying out his ideals with inexorable consistency, his action is being circumscribed by the interests of others. The whole process culminates in the mutual adjustment of interests. Thus the striving of reason for unity at length attains its end unconsciously, although the several parts seemed to be inharmoniously distributed. Progress is secured by mutual conflict. It is wrong, therefore, to lay the burden of this final adjustment upon the individual; all that we can expect from him is consistency in his own particular sphere, and in the advocacy of his special interests.

Plausible as such a theory may seem, and numerous as are its champions, it is nevertheless untenable. Were it consciously put into practice, it would forthwith plunge nations, classes, municipalities, and individuals—in fact, human society at large—into embittered strife, without a single reconciling element. Passions would become rampant, and animosities more virulent. We must preferably hold to the other view, viz. that the individual shall recognize the rights of others; that each class, each group, shall feel itself to be an organic part of the larger whole, the State; and each nation a section of the human race; and that in the conflict of opinion every man shall take pains to apprehend what is good in the view of others. As a matter of fact, it is not laid upon men to prosecute their individual aims with relentless consistency, but rather to realize those aims in a manner compatible with the ideal, so that personal interests may be advanced without detriment to the larger whole. Such a mode of apprehending the moral task demands, without doubt, a higher degree of intelligence. But a consistency which is merely sectional is no consistency at all, and is incapable of securing true progress, for it carries within itself the seed of reaction, which will sooner or later germinate. Moral development proceeds from the more simple conditions to the more complex; but, for that very reason, the prime necessity is to gain control of these complicated conditions by taking into account the various relevant elements which they contain, and by subordinating them to the unifying and moulding power of reason. Our abiding problem is to systematize the whole ethical data in harmony with the ideal, for only such an issue can adequately meet the unconditional demand for unity which reason makes.

5. Consistency between the moral ideal and practice. — The more perfectly consistency is attained in the formation of ideals, the less possible is it to ignore the discrepancy between the ideal and the actual moral situation. When the reality is compared with the ideal, it appears incongruous, contradictory, one-sided, narrow, circumscribed, rent by antitheses—in a word, bad; while the ideal itself seems but a futile and impracticable demand. In particular, it is rational ethics, with its special insistence upon a logically constructed ideal, which is mainly affected by the discrepancy, so that its boasted consistency would here seem to become abortive. Plato traces the defects of the empirical world—as compared with the Idea—to matter, and thus ends in dualism. Spinoza deduces not only the inadequate ideas and affections, but also the adequate ideas—not only human servitude, but also human freedom—from the same mathematical necessity, and can therefore make his ideal avail at most only for the favoured few. Nor could Hegel dislodge this discrepancy; for, though he held the antithesis to be the very mainspring of progress, and as such to be subject to logical sequence, the contradiction was not thereby removed. Above all, Kant felt the opposition between the practical reason and the natural propensities so intensely that he went to the very verge of dualism. Even Schleiermacher was forced to recognize a difference between the speculative moral ideal and actual moral practice, and accordingly he introduced—in his *Christian Ethics*—a 'purifying activity,' which was in reality a confession of the discrepancy. Now this contradiction seems to turn the consistency of the moral ideal into a mere abstraction. Consequently many thinkers of to-day would have us recognize a certain irrational factor in the world, a factor which necessarily precludes a consistent application of the moral ideal to the facts of life. According to von Hartmann, the will is non-logical, and the sole task of ethics is to evince this fact, moral action being in the end simply an anodyne to the will, which finds no satisfaction in any moral result. Here the antagonism is carried to such a point that moral action is made a means to its own ultimate abrogation. From all this it would appear that the consistent formation of ideals, as essayed more especially by the rational school of moralists, comes to grief upon the incongruity between the ideal and the actual.

Now this would undoubtedly be true, were the construction of ideals the final task of ethics. Such, however, is not the case. Nature, and especially human nature, is so constituted that it must have recourse to reason as a means to its own harmony and perfection. The first stage, therefore, is the idealizing activity of reason, the outcome of which is the rationally harmonized image of nature. But this is *only* the first stage; and, when once consistency has been realized here, a further advance is made, for now practice is to be moulded into conformity with the ideal. Thus the contradiction above noted is simply a necessary point of transition—necessary, that is, if we are to have ethical life or action at all. In other words, if moral results are to be achieved by the rational activity of the soul, then the end, the task set before us, must first of all be known; and only when it is known can we proceed to the task of realizing it. The antithesis between the rational ideal and human nature, as it is, is not an absolute one. The truth is rather, that life, as we know it, awaits the rational action of the soul as the medium by which it is to be harmonized and transfigured. The initial, or idealizing, stage of the moral process of reason is therefore responsible for no more than the harmonious, consistent for-

mation of the ideal. Once this has been attained, consistency makes the further demand that the ideal shall not remain a bare ideal, but shall be realized. It is impossible to rest satisfied with the mere self-consistency of the ideal: consistency must also govern its practical application to life.

Now, as regards this practical accomplishment of the ideal, we must bear in mind that there are two factors in the process. There is, first of all, the application of the ideal to the concrete facts of life; and, secondly, its realization on the part of the will. In either aspect we must take account of consistency, *i.e.* of the requirement that the unifying impulse of reason shall operate throughout with absolute authority.

The application of the ideal to the concrete case implies the faculty of taste or judgment,—Kant's *Urtheilskraft*,—the instinctive form of which is conscience. In accordance with what has already been said, this immediate judgment of conscience cannot be self-sustaining, but, in so far as it is valid, it pre-supposes knowledge of the moral ideal, as well as the right use of the concrete ideas of the end which have been grafted upon the ideal by education. Now, since practical life sets particular tasks before us, and since a particular task requires a particular time for its performance, the question arises, what action ought to ensue at a given moment—for, of course, the ideal, as something concrete, has various sides. But it is impossible to act consistently with reference to more than one side at a time, and, if we take the one nearest to us as the most important, our act will be consistent in a partial sense only. The ecclesiastic, for example, may fix his mind so intently upon the interests of his church as to be oblivious of other duties. Such a one-sided consistency is the result of limitation, and leads to fanaticism: *fiat justitia, pereat mundus*! We may, in fact, find a consistency which is so rigid as to verge upon puerility, as, *e.g.*, when some positive law, such as Sabbath-observance, is over-emphasized in the manner of the Pharisees. The vital matter is rather to keep the ideal before the mind in every act. Every act must be of such a kind as will, in its degree and place, further the entire moral process; only so can the ideal be realized in each particular case. This may seem too great a burden to lay upon the generality of mankind. How many, it may be asked, are so far advanced in ethical knowledge, or so proficient in the exercise of their judgment, as to be capable of subjecting every case to such thorough-going reflexion? The majority trust to their conscience, which may be said to express the average ethical culture of the day, and at best they plead for some modification of the universal law in view of their personal circumstances. For instance, in regard to the obligation of philanthropy, they point to the state of their resources, or to their responsibility to those that have the first claim upon them; and, on the whole, they fare wonderfully well with this instinctive judgment, for they are in this way making a genuinely consistent application of the ideal. The explanation is, of course, that every man finds himself in a certain situation, in certain definite relationships; and a whole array of actions —provision for one's family, assiduity in one's calling, etc.—have become matters of use and wont. With respect to such things there grows up a certain moral conviction, which requires no special preliminary consideration, since, so to speak, it has become transformed into flesh and blood. Thus the immediate judgment of conscience is, in general, the consistent application of the ideal to the particular case.

It is different when one takes an active part in public life. Exact knowledge will then be required, so that one's decisions may be of the right kind; and a mature reflexion upon one's own faculty of judgment will be no more than proper. The same thing applies when we are confronted with important issues. Here also a man must carefully weigh all the salient facts of the situation, so that his action may in its own measure meet the entire moral demands of the occasion. The realization of the ideal will in such instances call for a developed tact and foresight, while these qualities will also be needed in order to understand the faculties by which, and the conditions in which, we must act, as well as the laws of the objects we wish to work upon. Self-knowledge and knowledge of facts are the pre-requisites of framing right ends and applying appropriate means. No relaxation of consistency is discernible here, for it is precisely the world as *given* which is to be transformed by the moral ideal. On the contrary, consistency demands that everything necessary to the accomplishment of that great end shall be done.

When, however, the intelligence has been thus brought to bear consistently upon particular cases, it is then required, first, that the will shall harmonize with the intelligence, and, secondly, that the appropriate mental and bodily organs shall be at the disposal of the will. The former desideratum is in this instance the fundamental union of the will with the moral ideal, *i.e.* the good will combined with love or enthusiasm for the ideal. This good will is also of crucial importance for particular volitions. But, in the second place, the volition can be carried into effect only by the exercise of the relative organs, and here the significance of psychology and psychophysics for ethics comes into view. We need not, however, speak of this aspect in detail. Enough has been said to show that in ethics the idea of consistency, alike in the formation and in the practical realization of the moral ideal, is of decisive importance.

A. DORNER.

CONSOLATION, COMFORT (Christian).—*Consolation* is an act or process of giving comfort; the state of being comforted; or the condition and consciousness of relief from anxiety and distress, or of support in sorrow and affliction. *Comfort* is a complex emotion induced by means of consolation, or the act or process of comforting; but, although it is to be classed among the emotional states, it has certain well-defined presentational aspects. In its fullest, and especially in its religious, sense, there is the consciousness of a person whose presence, words, or acts are the source of the feeling of comfort, and constitute the consoling element. Although there are several weakened uses of the term 'comfort,' and it is often employed in an abstract and derived sense, the personal (or quasi-personal) source is always implied. The immediate effect upon the will is that of solace or soothing, restraint from agonizing or neurotic effort, and the inhibition of excited acts. The subconscious effect is that of a tonic, and the will is braced thereby for healthful exercise.[1] Whilst the consciousness of a personal presence and influence is the dominant feature in religious consolation, there is always, in the background at least, the presentation of something that produces pain,

[1] See W. James, *Varieties of Religious Experience*, p. 505.

distress, or anxiety. Probably in most cases the cause of the painful feeling is at first the focus of attention, but the process of consolation forces it into the background as the comfort is being experienced. The consciousness of personal help and support is the positive element in the case, whilst the negative is the sense of relief and mitigation.

As consolation and comfort play an exceedingly important part in the Christian consciousness and in the offices of religion, the connotation of these terms in devotional literature is in general identical with Scripture usage, from which it is derived. The Heb. word נֶחָמָה (Ps 119[50], Job 6[10]) has its root-meaning in the act of breathing pantingly or sighing, probably as the expression of deep, sympathetic feeling on the part of the consoler. It especially refers to God as the Comforter of His people in their affliction, calamity, or persecution, or even in their repentance. In most cases, as in Ps 119[50. 76], comfort is given to the righteous, as such, in their tribulation, but in some other instances, as in Is 40[1], the comfort follows upon repentance, and Jahweh is represented as having changed from His state of anger to that of pity and compassion for His people. The richest form of comfort in the OT is probably what is often designated 'the motherhood of God' (Is 66[13]).[1]

The NT conception of consolation and comfort in general has no reference to sin, but refers rather to the persecution, distress, and tribulation to which the faithful are exposed. The word most frequently employed is *παράκλησις*, whose primary significance is that of the ministrations of one called to assist, counsel, or relieve. *παραμυθία* (1 Co 14[3] only) refers to comfort given by word or speech, whilst *παρηγορία* (Col 4[11] only) brings out the aspect of soothing. The presence of God is the dominant feature in Christian consolation, together with the promises, assurances, and pledges of support and ultimate victory through Christ. God as manifested in Christ is the Comforter of His children; but more specifically the presence and power of God realized in the Spirit, through whom Christ returned to His disciples at Pentecost, indicate the significance of the Holy Spirit being designated the Comforter (*παράκλητος*, Jn 14[16. 26] 15[26] 16[7]).

There are two instances in the NT where comfort may be considered to have reference to repentance and forgiveness. The first instance is that of the second Beatitude (Mt 5[4]), but it is by no means certain that the 'mourning' (*οἱ πενθοῦντες*) refers to one's own sin. The other case is in 2 Co 7[10], where it appears that St. Paul experiences the comfort on account of the godly sorrow which is felt by the Corinthian converts. The most familiar instance in devotional literature of the function of comfort in remission of sin is in the Book of Common Prayer immediately after the Absolution, in the Office of Holy Communion: 'Hear what comfortable words our Saviour Christ saith,' etc. The personal ministrations of sympathy, love, and support in the midst of sorrow and pain are far more prominent in the NT and in Christian literature than deliverance from the evils themselves. It is as though the inevitableness of suffering were recognized, especially the forms of it that Christians are called upon to bear for their Master's sake and as incidental to their work of extending the Redeemer's kingdom. 'All that would live godly in Christ Jesus shall suffer persecution' (2 Ti 3[12]). In the sense, therefore, in which tribulation is regarded as partaking of Christ's sufferings, and as the result of well-doing or endured for righteousness' sake, consolation is not given in the form of the removal of such grievances, but in the consciousness of the Divine presence and approval, and the grace of God to support and sustain throughout all these experiences.

Whilst the Divine Being is the ultimate source of comfort, the 'Father of mercies and God of all comfort' (2 Co 1[3f.]), it is explicitly taught by St. Paul that Christian believers should in their turn become comforters of those who need sympathy and strength. In harmony with this injunction, the consolations of religion may be administered by the officers of the Church and by all who have had to pass through such experiences themselves. They are to be the instruments whereby the Divine comfort is mediated and brought to bear upon other souls and lives. Barnabas, who was exceptionally gifted in this respect, was fitly surnamed 'son of consolation' (*υἱὸς παρακλήσεως*, Ac 4[36]).

The circumstances under which the administration of consolation is needed by the Christian and generally commented upon in devotional and in homiletical literature will now be summarized.

(1) *Physical or mental limitations, pain, or distress.*—The comfort consists in the knowledge of the disciplinary value of suffering, the consciousness of the transcendent power of the spiritual in the realized infirmity of the flesh, and the acquisition and development of the gifts and graces of sympathy, tenderness, and gentleness with other sufferers, together with patience and fortitude. 'Tunc non est melius remedium quam patientia, et abnegatio mei in voluntate Dei' (à Kempis, *de Imit. Christi*, lib. ii. c. ix. 6). The classic example of this form of consolation is that of St. Paul's 'thorn in the flesh,' and his comment thereupon, 'Most gladly therefore will I rather glory in my weaknesses, that the strength of Christ may rest upon me . . . for when I am weak, then am I strong' (2 Co 12[9f.]).

(2) *Anxiety, perplexity, and care.*—Here the Christian needs the assurance that he is in the hands of an All-wise and All-loving Heavenly Father, and that, so long as he makes God's cause and kingdom his chief interest and aim, all that is necessary for the effective discharge of his duty and the accomplishment of his work will be secured to him (Mt 6[33]). As God is in the whole environment of our life, so shall those who trust in Him be under His direction, as they are beneath His protecting hand.

(3) *Depression and spiritual desolation.*—The best consolation under these conditions is the exhortation to continue in the prayerful and persistent discharge of duty and Christian work, and to wait patiently for the revealing of God's face and favour, and especially not to rely too exclusively upon one's feelings. Von Hügel points out the need for the 'sober and stable, consistent and persistent, laborious upbuilding of moral and religious character, work, and evidence,' instead of yielding to 'fierce and fitful,' 'wayward and fleeting feelings,' in the hours of darkness and isolation of soul (*The Mystical Element of Religion*, i. 5 f.). The exercise of faith strengthens the Christian in the consciousness that prayer for light and joy will sooner or later be heard, and that the inner witness will be given.

(4) *Difficulty in Christian work, opposition and persecution.*—Here the conflict of wills comes into play, and the determination of the heart against God and in defiance of the gracious influences that are brought into operation. This is particularly distressing when, as in the time of persecution, the opposition assumes an aggressive form. Christians are exhorted in the NT not to grow faint-hearted or weary in bearing their testimony even though they may have to seal it with their blood

[1] The Arab. تَعَزَّى signifies the act of 'being kind to,' or 'patient with' (a person), and consequently 'comfort.'

They are encouraged to take comfort in the prospect and promise of the ultimate triumph of the truth and the all-conquering power of love which refuses not to suffer and to die. Moreover, they are to regard their sufferings borne in love on behalf of others as the means whereby the hearts of their opponents and persecutors are to be reached, and they are taught to pray and hope that the opposition will be ultimately broken down. The line of consolation adopted by the Fathers in encouraging the Churches to endure persecution was in general to remind them of the predictions of our Lord and the Apostles (Irenæus, *adv. Hær.* lib. iv. c. xxiii.); to point to the notable examples of martyrdom, from the death of Abel to the passion of our Lord (Cyprian, *Ep.* lv.); and also to seek to win the hearts of men by 'Christ's new way of patience' (Tert. *adv. Marcion.* lib. iv. c. 16).

(5) *Bereavement.*—Those who are bereaved are comforted by the blessed memories of the past, which ever remain as a sacred treasure, and by the promises that they shall meet again those who die in the Lord, for their life is assured in the Resurrection life of the Conqueror of death and the grave. St. Ambrose stated the ground of the Christian's hope thus: 'Habent gentiles solatia sua, quia requiem malorum omnium mortem existimant. . . . Nos vero ut erectiores praemio, ita etiam patientiores solatio esse debemus; non enim amitti, sed praemitti videntur, quos non assumptura mors, sed aeternitas receptura est' (*de Excessu Fratris sui Satyri*, lib. i. c. 71). St. Paul refers to the state of the sainted dead, and their final triumph through their Lord, and admonishes the Thessalonians to 'comfort one another with these words' (1 Th 4^{18}).

(6) *Death and the fear of death.*—Beyond all other consolations the consciousness of the presence and power of Christ—the Resurrection and the Life, who has triumphed over the last enemy—is assured to the believer. So closely related is the dying saint to his Lord, that St. Paul speaks of him as being amongst those who are asleep in (or through) Jesus (διὰ τοῦ Ἰησοῦ, 1 Th 4^{14}), and as dying unto the Lord (Ro 14^{8}). This thought is also carried out by St. John in the Apocalypse: 'Blessed are the dead which die in the Lord' (ἐν Κυρίῳ, Rev 14^{13}). This relationship ensures to Christian believers the hope of heaven, eternal life, and a glorious resurrection.

Whilst the experiences here summarized call for consolation, and that consolation is found in the promises of Scripture and in waiting upon God, there is always an implicit reference to the Divine Being Himself as the primary source of comfort. Thomas à Kempis clearly expresses this when he says: 'Unde non poteris, anima mea, plene consolari nec perfecte recreari, nisi in Deo, consolatore pauperum ac susceptore humilium' (*de Imit. Christi*, lib. iii. c. xvi.). In a secondary or derived sense, the words of God, His attributes, and His gifts are often referred to as being in themselves comforts, just as, in ordinary affairs, material things are designated 'comforts' if they minister to our well-being, not being luxuries on the one hand, or necessaries on the other. Also it is one of the duties and privileges of Christian believers to be the means of communicating the comfort they have received of God to other souls, by sympathy and tenderness, and by the support of collective faith and intercessory prayer. In the exercise of this function of consolation, the reflex action is experienced, which, in no slight degree, brings a sense of satisfaction, and even of joy, in being of service to suffering humanity.

Further, comfort is realized by Christians in the consciousness of community with their Lord in His sufferings, in being partakers with Him in the work of redemption, in drinking of the cup from which He drank, and in being baptized with His baptism. In tribulation incurred in the service of humanity, and incidental to the accomplishment of His work, there is, as St. Paul expressed it, the filling up what is lacking of the afflictions of Christ (Col 1^{24}). The Mystics of all schools have always been accustomed to direct the attention of the persecuted to the cross of Christ as the chief source of consolation, especially where sufferings have resulted from devotion to His cause. In contemplating thus the marks of His pain and anguish and the sense of desolation that He endured upon the cross, they have realized that they were one with Him in bearing reproach and ignominy, even though they could not suffer as He did in expiation of human guilt. Moreover, the thought of the transcendence of Christ's sufferings inspired a feeling of gratitude and an inspiration to the believing soul to endure 'the contradiction of sinners' without complaint or impatience. John Newton, in his well-known hymn, 'Begone, unbelief,' etc., dwells upon this thought—'Did Jesus thus suffer, and shall I repine?' These considerations inspired the hymn of John Keble, in *The Christian Year*, for Good Friday, that to the cross the mourner's eye should turn 'with softer power for comfort' in earth's darkest hour than on any bright day.

The full meaning of Christian consolation is not exhausted apart from the conception of the mystic union of Christ with the believer. There is a sense in which the Church has ever been conscious that, as Christ is the head of the body of believers, He suffers not only for their sins, but in all the sorrows and tribulation that God's people have to endure. God's consolation is, in this mystical sense, the realization of Christ's presence with us in all life's painful experiences, in His humanity and His eternal priesthood. The realization of God's presence in Christ bears the promise of ultimate triumph, and, although Christ's disciples shall have tribulation in the world, their final conquest is secured and guaranteed in His victory over all.

LITERATURE.—There is no subject more frequently referred to in the whole of devotional literature than consolation, but the specific treatment of it is somewhat slight. For psychological treatment, see W. James, *Varieties of Religious Experience*, London, 1902 (chapters on 'Saintliness' and 'Mysticism,' and the Conclusions); Fr. von Hügel, *The Mystical Element of Religion*, 2 vols., London, 1908–9 (esp. the Introduction and pt. iii.). Devotional works: Thomas à Kempis, *de Imitatione Christi* (in various editions and Eng. translations); St. Francis de Sales (frequent references scattered throughout his writings); J. H. Burn, *Manual of Consolation*, London, 1902; Père Huguet, *The Consoling Thoughts of St. Francis de Sales*, Dublin, n. d.; Frassinetti, *Consolation of a Devout Soul*, London, 1875; Cowper, Newton, Doddridge, etc., *Comfort for the Mourner*, London, 1822; R. Buchanan, *Comfort in Affliction*, Edin. 1871; C. H. Spurgeon, *Twelve Sermons for the Troubled and Tried*, London, 1896; J. H. Jowett, *The Silver Lining*, London, 1907–8; E. Romanes, *The Hallowing of Sorrow*, London, 1896; H. Black, *Comfort*, London, 1910. Cf. also Chrysostom, *ad Stagirium* (*PG* xlvii.); Honoratus, *Ep. consolatoria* (*PL* l.); J. Hinton, *The Mystery of Pain*, London, 1866, ^{4}1870; C. Kingsley, *Out of the Deep*, London, 1880; S. A. Brooke, *Sunshine and Shadow*, London, 1886; J. E. Hopkins, *Christ the Consoler*^{2}, London, 1879, ^{4}1884.

J. G. JAMES.

CONSOLATION (Greek and Roman).—In Greece the germs of a literature of consolation can be traced to ancient times. The dead were commemorated in threnodies, which were designed also to console the bereaved, and a great vogue was enjoyed by a *threnos* of Pindar, in which the ideas of the Orphic eschatology were drawn upon for consolation, and which is made use of in the pseudo-Platonic dialogue *Axiochos*. In Athens it was customary, probably after the Persian wars, to engage a rhetor to deliver a funeral oration—like that, *e.g.*, which Thucydides puts into the mouth of Pericles—regarding those who had fallen in battle; and it was usual at the close to address the relatives in consoling terms. Several of these

orations are still extant; one, the *epitaphios* of Hyperides, is known to have been delivered in 322 B.C. The grounds of consolation are set forth in ch. 20 of the *Menexenos* of Plato, which is a parody upon the sophistic *epitaphios* of the type seen in that composed by Gorgias. Philosophy likewise had at an early stage wrought out certain consolatory lines of thought, and it is possible that the writings of Antisthenes the Cynic may have suggested what Xenophon makes Socrates say in the *Apology*. Aristotle's dialogue 'Eudemus on the Soul,' and the 'Callisthenes on Mourning' of Theophrastus, were also well stored with consoling sentiments. But the standard work of the kind was that of Crantor the Academic (*c.* 270 B.C.) 'On Mourning,' which was sent by the author to a friend whose children had died, and which Cicero calls 'aureolus et ad verbum ediscendus libellus' (*Acad.* ii. 135). As it treated of sorrow not as a reprehensible emotion—in the manner of the Stoics—but rather as a natural impulse, requiring only to be kept within bounds, the book found many readers; and, when Cicero, in 45 B.C., essayed the composition of his *Consolatio* for his own comfort after the demise of his daughter Tullia, he made Crantor's work the basis of his own, while he reproduced its ideas a little later in the *Disp. Tusc.* (esp. i. 19–72). Plutarch does the same thing in the piece addressed to Apollonia. Epicurus also had elaborated many comforting sentiments, as he was specially concerned to deliver men from the fear of death; he sought to convince them of the painlessness of dying, and of the absolute cessation of perception thereafter, thus grappling with the popular superstitions about the terrors of the under world (Lucret. *de Rer. Nat.* iii., with Heinze's com.).

Nor had the rhetoricians neglected the consolatory oration, and in the Hellenistic period—perhaps even from the time of Isocrates—they had framed for this species of composition certain rules, which in their later form are found in the *μέθοδος ἐπιταφίων* of pseudo-Dionysius and the *περὶ παραμυθητικοῦ* of Menander (4th cent. A.D.). These rules are followed not merely by heathen, but even by Christian, funeral discourses (cf. F. Bauer, *Die Trostreden des Gregor v. Nyssa*, Marburg, 1892). It is specially worthy of note that the plan of composition elaborated by the rhetoricians was taken over by poetry, the most outstanding instance of this being the *Consolatio ad Liviam* which bears the name of Ovid, and which is neither a fabrication of the Renaissance period nor, as was long believed, a product emanating, under Seneca's influence, from the later school of rhetoric, but a poem actually presented to Livia upon the death of Drusus in 9 B.C. The rhetorical scheme had also an influence upon the work of Statius (esp. *Silvæ*, ii. 6: 'Consolatio ad Flavium Ursum').

Among the elements of a consolatory oration a special place is given to the praise of the deceased. According to the detailed rules for the *ἐγκώμιον*, this permitted of great amplification. The discourse likewise described the way in which the departed would be received by his ancestors and the heroes of antiquity. The bereaved were also shown that their experience was common to mankind, that not only individuals but whole kingdoms had perished, that life is simply a trust from the Deity, and that excessive grief can profit neither the mourner nor the dead. Instances were also given of men who, like Priam, would have been happier had they died earlier.

A distinct species of this literatnre appears in the 'consolations' addressed to those who had been banished, as, *e.g.*, Seneca's letter to his mother Helvia, and Plutarch's *περὶ φυγῆς*. In these, as in works of consolation generally, special use is made of the ideas expressed in the popular diatribe of the Cynics, emphasis being laid upon the thought that the home of the wise man is not a particular city but the whole world. Here, too, the writers drew extensively upon the examples of celebrated exiles, such as Antenor, Evander, and Diomedes.

LITERATURE.—K. Buresch, *Leipziger Studien*, ix. (1886) 1; A. Gercke, in *Tirocinium Philologum* (Bonn, 1883); Skutsch, 'Consolatio ad Liviam,' in Pauly-Wissowa, iv. 933; A. Giesecke, *De philosophorum veterum quæ ad exilium spectant sententiis* (Leipzig, 1891).

W. KROLL.

CONSTANCY.—This quality is most clearly manifested by instinct (*q.v.*)—the innate tendency to respond similarly to similar influences. Reasoning introduces variations. As a large part of the experience of savages is dne to instinct, their conduct can be predicted till they are moved by thought, and then they are erratic; for guiding principles are lacking, with the result that waywardness and fickleness are conspicuous. Attention is irksome to them (as to children), and tasks that are readily begun are swiftly abandoned. The civilized man criticizes and often resists instincts, while he compels the various choices that are open to him to move in directions favourable to his designs. Constancy may belong to a single thread of a life, or it may be characteristic of the entire collection of activities. An affection of love or hate may abide for years without having occasion to display itself and without affecting the ordinary conduct; at length the opportunity comes, and the fires that had been hidden blaze out. In other cases there are purposes which day by day mould all the circumstances and call into their service every power of body and mind.

(1) *Social influences and the necessity of obtaining a livelihood* account for many sorts of constancy. Personal tendencies to variation are subject to limitations imposed by the opinions and plans of others. To a large extent we must all comply with demands made upon us, and it is so hazardous to forsake the career to which one has been bred, that the trade or profession chosen secures the service of the entire life. Success requires patience and perseverance. Hand and mind gain facility by continuous endeavours, the spur to which is often the necessity of providing for domestic needs. Nevertheless, in the most mechanical calling there may live affections and aspirations due to an ever fresh willingness; in the moss-covered well there is spring water. The soul can steadily rise, though outwardly the man appears to be treading a mill-round. Fidelity to persons and to causes frequently makes music in what appear to be monotonous histories.

(2) *Tendencies to constancy are not equally strong in all natures.* There are weather-cock, and there are stubborn, souls; for flexibility and firmness are partly to be ascribed to constitution. Undisciplined no one can be satisfactory, but the discipline required differs in each case. Some vessels drift to and fro and are in danger of foundering, while others stick fast on the rocks and look as if they would be battered to pieces by the waves; the Christian religion would guide the one class and release the other. To change the constitution is a miracle of which Christianity believes itself to have the secret. Shallow soil can be deepened and rock can be dissolved; hence there may appear corn-producing fields, and gardens lovely and fragrant with flowers.

(3) *When is constancy admirable?* Only when it is a quality of aims that enrich human experience, when it belongs to a purpose to convert moral ideals to the actual, to acquire and spread truth, to respond gladly to whatsoever is pure and lovely,

to love men and to labour for their good, to make one's life valuable to humanity. Such purposes admit minor changes, whereas evil motives, such as pride, may lie behind some forms of constancy. In order to maintain a vitally important consistency, superficial inconsistency is often imperative. There cannot be a righteous adhesion to opinions the falsity of which has been demonstrated, for 'constancy in mistake is constant folly.' Would not a resolution never to vote differently, never to espouse another faith, imply that in youth infallibility had been acquired? An abiding loyalty to truth necessitates changes in beliefs, habits, and allies. But serious men cannot alter easily or without pain. The lower consistency is abandoned for a higher, and the abandonment is often accompanied by loss of what is dear, without any apparent compensating gain.

(4) *The conditions of constancy.*—Failing the predominance of one idea or affection, the ideas and affections must be of a kind to work together with a good measure of harmony. 'A double-minded man is unstable in all his ways' (Ja 1^{8}). Serious and deep contradictions are ruinous. A commanding purpose (or purposes that harmonize with one another) will consolidate and organize the impulses and desires, so that, from being a mob, they are converted into an army. Noble aims will gather about themselves the strength and warmth of the lower impulses: and after a time the habit of beating down sensual and unsocial impulses will cause the soul to move more and more easily on the higher than on the lower paths. Courage will be required, and sacrifices also. Devotion to the interests of persons can survive the discovery of unworthiness in those whom one loves; and the cause espoused can still be served, though it fails to gain popular approbation; 'many waters cannot quench love' (Ca 8^{7}). Generally there is the sympathy of some companions whose support helps to keep the fires of zeal burning. Especially is constancy promoted if the general plan of life or some particular design or way is believed to have the favour of heaven; for then there is the assurance of supernatural assistance, and all the rills and streams of one's purposes seem to be drawn into the river of God's will. The human will is never so firm as when it thinks itself to be merged in God's, and great confidence possesses the aspirant to sanctity who reads, 'This is the will of God, even your sanctification' (1 Th 4^{3}).

(5) *The effects of constancy.*—In Oliver Cromwell's Bible was the inscription, 'O. C. 1644, Qui cessat esse melior cessat esse bonus.' Mere visits to realms of thought, or occasional excursions into any sphere of activity, are insufficient to make deep marks on character, or to give skill in any handicraft or profession. A few warm days in winter can produce no harvest. Who can be an accomplished musician, scientist, linguist, without persistent toil? Great are the differences between the results of *κατοικέω* and *παροικέω*. A favourite word in the Fourth Gospel is *μένω*: the branch that 'abides' in the vine bears much fruit (Jn 15^{5}). No wonder that Bunyan had an aversion to the lives of Mr. Pliable and Mr. Temporary, seeing that such men not only fail to reach the Celestial City, but even discourage other pilgrims. By constancy power is accumulated and capitalized, skill is acquired, and the soul makes for itself a tradition which it is ashamed not to honour. While the man becomes a law to himself, observers can rely upon him and infer his future from his past conduct, for there is logical connexion between the past and the present. Constancy makes the good better and the bad worse. See also PERSEVERANCE.

W. J. HENDERSON.

CONSTANTINE.—I. Life.—Flavius Valerius Aurelius Constantinus was born on 27th Feb. of a year uncertain, generally given as 274, but probably a little later.[1] The place was Naissus (Nisch) in Dardania (Servia) (Anon. Valesii, 2; Constant. Porphyrogenitus, *de Thematibus*, ii. 9 [in Migne, *PG* cxiii.]). The fiction of his birth at York, current in all mediæval English historians (the silence of Bede, *HE* i. 8, should be noted), arose from a misunderstanding of the phrase 'illic oriendo' (*Panegyr.* vi. 4), which refers to his accession, not his birth. Constantine's father, M. Flavius Valerius Constantius (the surname Chlorus is not found until late Greek writers), was a noble Dardanian soldier, whose mother was the niece of the emperor Claudius. His mother, Flavia Helena (b. about 250; Euseb. *Vita Constantini*,[2] iii. 46), was the daughter or servant (Ambrose, *de Obitu Theodosii*, 42) of an innkeeper of Drepanum in Bithynia, a city rebuilt by Constantine in 327 in her honour and re-named Helenopolis. Her marriage to Constantius was probably irregular (Anon. Vales. 1; Zosimus, *Res Gestæ*, ii. 8; these passages should not be pressed as more than morganatic [see *Digest.* xxv. 7]) until after the birth of her son (cf. Constantine's legislation, *infra*, V. i. *d* (2)). When Constantine was about 14, his father was promoted by Diocletian to the rank of 'Cæsar' (1st March 293), with the government of Gaul and Britain, on condition that he divorced Helena and married Theodora, daughter of the emperor Maximian. Constantine did not accompany his father, but was left at Diocletian's court at Nicomedia, possibly as a hostage, until the growing jealousy of Galerius, after the abdication of Diocletian and Maximian (1st May 305), compelled him to a memorable ride across Europe to his father's camp at Boulogne (Lactant. *de Mortibus Persecut.*[3] 24; Anon. Vales. 3, 8), where he arrived in time to share his father's victories over the Picts (Eumenius, *Panegyr.* vii. 7).

The death of Constantius at York (25th July 306) was followed by the proclamation by the army of Constantine as 'Cæsar' (Zos. ii. 9; 'Augustus' in Euseb. *HE* viii. 13, *VC* i. 22, though this higher honour was not ratified by Galerius until the following year [*Panegyr.* vi. 5; coins in Eckhel, *Doct. Num. Vet.* viii. 72; Lact. *MP* 25]). His seat of government was Trèves, which he embellished with many buildings. In 307 he strengthened his position by his marriage at Arles to Fausta, the daughter of Maximian. The Empire was thus divided between six rulers: in the East, Galerius, Licinian (Valerius Licinianus Licinius), and Maximin Daza; in the West, Constantine (Gaul and Britain), Maximian, who had reassumed the purple, and his son Maxentius. But Maximian, after a crafty intrigue against Constantine, was captured and forced to strangle himself in Feb. 310 (Lact. *MP* 29, 30; Eumen. *Panegyr.* vii. 20), while the death of Galerius at Sardica (Anon. Vales. 3, 8) in May 311 led to the division of the Empire between Constantine, Licinian, and Maximin Daza. The three refused to recognize Maxentius, whose tyranny in his province of Italy, Africa, and Spain, gave Constantine an excuse for the invasion of Italy (Euseb. *HE* ix. 9. 2, *VC* i. 26; Nazarius, *Panegyr.* x. 19, 31; Zos. ii. 14 says Maxentius was the aggressor). He

[1] Seeck, *Gesch. d. Untergangs d. antik. Welt*, i. 435 n., gives 280 as the date, but his reference, *CIL* i.^{2} p. 302, seems inaccurate.

[2] Hereafter cited as *VC*.

[3] Hereafter cited as *MP*.

crossed the Alps (Sept. 312) either by Mt. Cenis or by Mt. Génèvre (see the contemporary [A.D. 333] *Itin. Anon. Burdigalense*, ed. Geyer in *CSEL* xxxix. 5), captured Susa and Verona (Oct.), and within 58 days of declaring war defeated the sluggish Maxentius at Saxa Rubra, about 9 miles N.W. of Rome. The drowning of Maxentius in attempting to escape over the Milvian Bridge (Ponte Molle) completed his triumph, 28th Oct. 312 (Anon. Vales. 4, 12; Lact. *MP* 44; Euseb. *HE* ix. 9; there is a full account in Seeck, *op. cit.* i. 109–137).

Constantine's victory was followed, early in 313, by a conference at Milan with Licinian, and by the marriage of Licinian to his sister Constantia. The defeat of Daza by Licinian near Adrianople (30th Apr. 313) and his death in August at Tarsus left Constantine and Licinian in sole possession—the ex-emperor Diocletian dying probably that same summer (Seeck, *op. cit.* i. 459 f., following as his source Idatius, *Consulares Fasti*, dates 3rd Dec. 316) at Salona. But the concord of the two was hollow. The first civil war between them was ended by the triumphs of Constantine at Cibalis (Vinkovci in Hungary), 8th Oct. 314, and Mardia in Thrace (Anon. Vales. 5; Zos. ii. 18–20), after which a truce was patched up, Constantine leaving Licinian in possession of Thrace, Asia Minor, Syria, and Egypt. Constantine now devoted himself to internal reforms, from which he was called away by the war with the Goths and Sarmatians in Illyricum and Dacia (322) and the final struggle with Licinian. The victories, in spite of Licinian's superior forces, of Adrianople (3rd July 323) and Chrysopolis (Scutari, 8th Sept. 323) were followed by the humiliation and enforced death of Licinian in 324 (Soc. *HE* i. 4; Euseb. *VC* ii. 18; Zos. ii. 28; Eutrop. *Brev.* x. 6) and the re-union of the Empire under one head.

The foundation by Constantine of a new capital (4th Nov. 326 [Anon. *de Antiq. Constant.* i. 3, in A. Banduri, *Imperium Orientale*, Paris, 1711]; see Burckhardt, *Die Zeit*, etc. 415; but de Broglie, *L'église*, etc. i. 440 f., dates in 328) at Byzantium is one of the great events of history. In reality it continued Diocletian's policy of ruling from Nicomedia. It was dedicated on 11th May 330 (Gibbon, ed. Bury, ii. 157 n.), under the title of New Rome. The removal of the seat of government was completed by an entire re-organization of the Empire, the new absolute monarchy of Diocletian which had taken the place of the old principate being consolidated and systematized (see Seeck, *op. cit.* ii.). Constantine's last years, though years of peace, were unfortunate. His character degenerated (Eutrop. *Brev.* x. 7), his expensive building operations drained the Empire of its resources (Zos. ii. 32, 35, 38; Schiller, *Röm. Kaiserzeit*, ii. 230), his habits became effeminate, and his jealousy of a rival made his family life miserable. His eldest son Crispus, the offspring of an early irregular marriage with Minervina, had shown great ability in forcing the straits of Hellespont against the superior fleet of Licinian (323), yet he was executed (July 326) at his father's command (Amm. Marcell. xiv. 11), though the reason for this act is obscure. This was followed, possibly a year or two later, by the execution of his wife Fausta on the charge of adultery.[1] In 331 Constantine was forced to attack the Sarmatians, who had encamped near the Danube. His victory—for his supposed defeat is a curious error of Gibbon (ii. 217)—was the last of his successes. He died near Nicomedia on Whitsunday, 22nd May 337, though he nominally reigned for four months (until 9th Sept.) after his death.

[1] For detailed investigation of this domestic tragedy see Görres and Seeck, 'Die Verwandtenmorde Constantin's des Grossen,' in *ZWT* xxx. [1887], 343 ff., xxxiii. [1890] 63 ff.

In spite of the claims of Rome, he was buried at Constantinople in the great church of the Trinity (later called 'Holy Apostles'), which he had completed for the purpose the previous Easter. At Rome the heathen senate enrolled him among the gods (V. Schultze, *Untergang d. gr.-röm. Heidentums*, 1887–92, i. 66), though the medal struck to commemorate this was made of a Christian type (King, *Christian Numismatics*, 1873, p. 53). In 1204, his tomb was destroyed by the Latin crusaders on their capture of Constantinople.

Constantine's life, like that of Charles the Great, has become legendary, and was one of the favourite romances of the mediæval Church. On these see the critical studies of E. Heydenreich, esp. 'Constantin der Grosse in den Sagen des Mittelalters' in *Ztschr. f. Geschichtswissenschaft*, ix. [1893] 9. 1 ff.

II. Extent of the Church at the time of Constantine's 'conversion.'—At the outset of an inquiry into the great change brought about by Constantine, it is of importance to understand the extent and influence of the Church and its attraction for any statesman.

(*a*) *Numbers.*—Materials for forming an estimate of the strength of Christianity under Diocletian will be found in Harnack's elaborate survey (*Expansion of Christianity*, Eng. tr. ii. [1904] 240–456). From a careful study it would appear that in the East the Christians, except in a few towns, were still only a small minority, at the most—one-ninth or so of the whole (H. Richter, *Weström. Reich* [1865], p. 85)—and in the West they would be considerably less. Unfortunately we do not know the population of the Empire. The figure of Gibbon (i. 42), 120 millions, is absurdly large; J. Beloch (*Bevölkerung d. gr.-röm. Welt*, 1886) gives it under Augustus at 54 millions, but this seems too small. If we take it at 60 millions under Nero, the great famines, etc., in the middle of the 3rd cent. would have reduced it to slightly less under Constantine. At the outside, therefore, the Christians would scarcely number five millions (Gibbon's proportion, $\frac{1}{12}$ [ii. 65], thus comes to the same result), or less than the Jews, who numbered over six millions, of whom one million were in Egypt. In Rome in 250 we calculate from Eusebius, *HE* vi. 43. 11, that the Christians numbered between 40,000 and 50,000 in a city of nearly a million, *i.e.* $\frac{1}{20}$, though this proportion would be higher in the time of Constantine. In the country districts the Christians were far less numerous than in the towns.

(*b*) *Influence.*—But what the Christians lacked in numbers they more than made up by their organization, unity, wealth, and driving power. In these matters only the Jews could equal them, but Judaism was hindered by its Law from ever becoming an international religion. The Christians, shut off from the pleasures of the world, had grown immensely rich, while their morality, sobriety, and enthusiasm would attract any statesman who looked deeper than popular rumour. For any statesman anxious to infuse new life into a dying world Christianity had no rival except, possibly, Mithraism, for Neo-Platonism, etc., had no value for the vulgar; nor must we overlook the value to the statesman of the Christian doctrine of immortality (Burckhardt, *op. cit.* p. 140).

III. **Personal relation to Christianity.**—The personal relation of Constantine to Christianity is a subject of much importance, as upon its decision many questions, both theological and ecclesiastical, depend. As to the date of his 'conversion' the earliest authorities are contradictory. Lactant. *Instit. Div.* vii. 27, a work finished before 311, would be conclusive, but the passage has been shown by its editor, Brandt (*CSEL* xix. 668), to be an interpolation. Equally

conclusive would be sentences in the letter of Constantine to the bishops at Arles in 314 or 316 (Optatus Milev. *Mon. Vet.* [*CSEL* xxvi. 208]), but these probably reflect merely the opinions of Hosius (see *infra*, IV. (*b*)). Zos. ii. 29 (cf. Soz. *HE* i. 3) dates the conversion after the execution of Crispus, to the remorse for which he attributes it. For our part we first detect a warmer note as to Christianity about 314, in Constantine's letter to Chrestus (Euseb. *HE* x. 5). As regards his whole relation to Christianity, the data are involved and have been variously interpreted, while the difficulty has been increased by the delay of his baptism until his death. The whole problem has been rendered additionally obscure by the complex imperfect character of Constantine himself—calculating, shrewd, superstitious, often cruel, cynical—whose one great instance of consummate foresight alone entitles him to be called 'Great.' Brieger (*Ztschr. f. Kirchengesch.* iv. [1881] 163 ff.) and Gibbon make it altogether a question of politics; but, as Bury has pointed out (Gibbon, ii. 566), this is to ascribe to Constantine a freedom from superstition which, though natural in an English deist of the 18th cent., was altogether unknown in the 4th. Schiller (*op. cit.* ii. 213) believes that his ideal was a syncretistic fusion of the best elements of Christianity and paganism. But Constantine's powers of observation must have shown him the impossibility of any such syncretism; the refusal of precisely such syncretism lay at the root of the whole persecution of Diocletian. As a summary of the following survey we incline to think that Constantine at first leaned to toleration for political reasons, as a system of balance or equal opportunity for heathenism and Christianity; and that the success of his arms and the identification of his vanquished foes with heathenism (cf. Constantine's *Oratio ad Sanct. Coetum*, 23–26, of which this is the concluding thought) led to a policy of self-interest passing into an intellectual, possibly even a moral, conviction; with the consequent effort, but without unstatesmanlike haste, to supplant heathenism by Christianity, and in certain directions (see *infra*, V. i.) to alter the laws accordingly. The relapse of his last years was rather moral degeneration than any reaction (Burckhardt) towards paganism, while at its best his religion was probably a 'strange jumble' (Niebuhr, *Rom. Hist.*, Eng. tr. [1828 ff.] v. 449) of creed and superstition.

(*a*) *In early life.*—That Constantine's mother Helena was a Christian before her divorce has been asserted (Theodoret, *HE* i. 17); but Eusebius (*VC* iii. 47) ascribes her conversion to her son. While there is no reason to identify his father Constantius' leaning towards Monotheism (Euseb. *VC* i. 17, ii. 49) with a belief in Christianity, it is of importance to note his tolerant disposition. During the great persecution of Diocletian it was only in Constantius' provinces of Gaul and Britain that there was any safety for Christians (Optat. Milev. i. 22),[1] though even Constantius thought it well to conform to the edict of Diocletian to the extent of destroying the churches (Lact. *MP* 15, as against Euseb. *HE* viii. 13. 13). Here and there also there were one or two martyrs—not necessarily, of course, by Constantius' orders.[2] To the tolerant practice and disposition of his father we must add the influence of Nicomedia, at the palace of which Constantine was brought up. The power of the Christians, whose great basilica towered up against the palace, the fact that, in the court itself, Prisca the wife and Valeria the daughter of Diocletian, the influential eunuchs Dorotheus and Gorgonius, and Lucian the chamberlain, were Christians (Lact. *MP* 15), the resistance of the Christians to Diocletian's edicts, and the chaos produced by attempts to carry out the edicts—all must have impressed him with the folly and impossibility of a policy of persecution (cf. Constantine's *Orat. ad Sanct. Coet.* 25). Yet, while in Gaul, his personal cult appears to have been that of Apollo or the sun-god (Eumen. *Panegyr.* vii. 21), and even late in his reign he was still under its influence, so that, *e.g.*, his statue at Constantinople was a mutilated sun-god from Athens (cf. *infra*, V. ii. (*c*) 'Sunday').

(*b*) *In his struggle with Maxentius.*—Rumours of the persecution in the East under Galerius and Maximin Daza would confirm Constantine in his conception of its folly and in his policy of toleration (Lact. *MP* 24. 9). He was therefore a willing party in signing, with Licinian, Galerius' edict of toleration (30th Apr. 311). In his struggle with Maxentius, the plea of Constantine's invasion was the deliverance of Rome from his tyranny and vices (Euseb. *HE* ix. 9. 2, *VC* i. 33; *Panegyr.* ix. 4; Julian, *Cæs.*, ed. Hertlein, pp. 405, 422), and the Christians as such were tolerably treated (Optat. Milev. i. 18). As regards the famous vision at the Milvian Bridge opinion will always be divided. In our earliest authority (Lact. *MP* 44, written in 314, probably by the tutor of Crispus), Constantine was warned in a dream on the night before the battle to draw the monogram of Christ (☧) upon the shields of his soldiers.

For the form of the monogram and *labarum*, see Smith-Cheetham, *DCA* i. 494. We may note that the *labarum* (derivation unknown), or standard with this monogram, appears on Græco-Bactrian coins of the 2nd and 1st cent. B.C., and also on Tarantine coins of the 3rd cent. B.C. (cf. Soc. *HE* v. 17, and Soz. *HE* vii. 15, for symbols of the cross as a sign of immortality on temples of Isis; see also Schiller, *op. cit.* ii. 205 n.; Madden, *Num. Chron.*, 1877, p. 17 ff.). According to E. Rapp (*Das Labarum und d. Sonnencultus*, Bonn, 1865), there is no well-attested use of the *labarum* as a Christian symbol before 323 (see below, p. 78[b], top).

The familiar story is not found in Euseb. *HE* ix. 9, which is silent on the subject, but occurs in the later *VC* i. 28 (cf. also *ib.* ii. 55; Soz. *HE* i. 4), where Eusebius states that Constantine told it him 'long afterwards and confirmed it with an oath,' but gives no date. The value of this personal statement is discounted by the silence of Constantine in his *Orat. ad Sanct. Coet.*, where surely of all places he would have dilated upon it. Oaths with Constantine were also very common. Allowing for exaggerations in the intervening years, we may take it that something external happened, possibly a solar halo, which not unfrequently assumes the form of a cross,[1] and that this was interpreted by Constantine as an augury of Divine intervention. There is proof of the dream in the inscription by the Senate on the arch of Constantine, dedicated in 315. The 'instinctu divinitatis' (*CIL* vi. 1139) there alleged as the cause of victory (cf. Constantine, *Orat. ad Sanct. Coet.* 26) has been shown to be original and no later addition (cf. Lanciani, *Pagan and Christian Rome*, 1892, p. 20 f.; Garrucci, in King, *op. cit.* p. 20). Additional proof is found also in the pagan *Panegyr.* ix. (written in 313) ch. 4 'te divina præcepta,' ch. 11 'tu divino monitus instinctu.' Whether this 'cæleste signum,' as Lactantius,

[1] Spain, where persecutions abounded, was not, as is often stated, in his government, but was under the charge of Datian, an officer of Maximian.

[2] For the martyrs in Britain—St. Alban (very doubtful), Aaron, and Julius (more doubtful still)—see Beda, *HE*, ed. Plummer, ii. 17–20; Haddan-Stubbs, *Councils*, Oxford, 1869–78, i. 6; Harnack, *Expansion*, ii. 410, n. 4.

[1] This explanation was first given by Fabricius (*Bib. Græc.* vi. 8–29. Stanley (*Eastern Church*, p. 181) refers to the Aurora Borealis of 1848 and its curious popular interpretations; cf. Nazarius, *Panegyr.* (written in 321), ch. 14, of the hosts in the sky in 312–313 that were 'the talk of all Gaul.'

loc. cit., calls it, was a miracle[1] brings in considerations beyond our scope.[2]

We are told (Euseb. *HE* ix. 9. 10, 11, *VC* i. 40) that, after the victory of the Milvian Bridge, Constantine erected at Rome a statue of himself, with the spear he usually carried in his right hand shaped like a cross. As evidence the *VC* is almost valueless, and Brieger thought that the passage in *HE* was an interpolation. But Eusebius mentioned this statue in a speech at Tyre in 314 (*HE* x. 4. 16), and this seems to decide its existence and the general belief in the East in 314 as to Constantine's position, though the popular Christian rumour might not be a correct interpretation of the artist's work.[3] The spear-cross was probably designedly ambiguous. A more important evidence of Constantine's favour for the Christians is his handing over to the Roman bishop (before Oct. 313; see *infra*, p. 79[b]) of the 'domus Faustæ,' a palace possibly of his wife, formerly belonging to the Lateran family (Gregorovius, *Rome in Middle Ages* [Eng. tr. 1894 ff.], i. 88), which became the residence of the Bishops of Rome (*Lib. Pontif.*, ed. Duchesne, i. 191). The erection of the churches commonly attributed to him (Lateran, St. Peter's) is probably a little later, if we may judge from the fact that they were built with pagan spoils (Greg. *op. cit.* i. 92), though the small St. Paul's (*fuori le muri*), the foundation of which was wrongly attributed to Constantine, would come under the head of the oratories restored after the edict of Milan (Duchesne, *op. cit.* i. 178, 195; Lanciani, *op. cit.* p. 150 ff.; Greg. *op. cit.* i. 100). On the whole the evidence of Constantine's churches in Rome (the list of which in the *Lib. Pontif.* is very exaggerated) is inconclusive as to the date of his conversion.

(*c*) *Between 312 and 323.*—After the victory of the Milvian Bridge, Constantine and Licinian promulgated at Milan, in the spring of 313, a second edict of toleration—'free liberty to choose that form of worship which they consider most suitable'—and restoration of forfeited churches and property.

For this edict see Euseb. *HE* x. 5, and for its original Latin form, Lact. *MP* 48. Note the non-committal religious references—'Quidquid est divinitatis in sede caelesti.' This edict was second to that of Galerius, to which the 'hard conditions' (αἱρέσεις) of § 4 refers. Mason (*Persecution of Diocletian*, 1876, p. 327 ff.) has exploded the older idea (still held in *DCB* i. 638) that Constantine issued a second edict of toleration at Milan, before the Milvian Bridge, and that this was the third.

But, until 323, Constantine kept a balance between Christianity and heathenism, though inclining more and more to the former (see *infra*, IV. (*c*)). About 317, he selected the Christian Lactantius to be the tutor of his son Crispus (b. 306[?]; Jerome, *de Vir. Ill.* 80). From 315 onwards, pagan emblems (Mars, 'Genius Pop. Rom.,' Sol) disappeared from his coins, and indifferent legends ('Beata tranquillitas,' etc.) took their place. This period of neutrality was ended by his conflict with Licinian. In 319, Licinian had begun to oppress the Christians, especially in his army (Workman, *Persecution in Early Church*, 1906, p. 187 n.), though without much bloodshed (Euseb. *HE* x. 8; *VC* i. 49–56, ii. 1, 2; Sozomen, *HE* i. 7; for a clear examination see F. Görres, *Die Licin. Christenverfolgung*, Leipzig, 1875, esp. p. 29 ff. To this persecution belong the Forty Martyrs of Sebaste [see O. v. Gebhardt, *Acta Mart. Selecta*, 1902, pp. 166–181]). This foolish move gave Constantine the opportunity of appearing as the advocate of the Christians (323), who were really far more numerous in Licinian's domains than in the West. The struggle thus became a crusade, and the *labarum* was stamped on most coins (Euseb. *HE* x. 9, *VC* ii. 6–12; Schiller, *op. cit.* ii. 211; Madden, *Num. Chron.*, 1877, p. 53 ff.).

(*d*) *From 323 to his death.*—After his conflict with Licinian, Constantine, according to Eusebius, put his hand seriously to the work, forbidding pagan sacrifices in general (see *infra*, p. 81[a]), and building churches (*VC* ii. 44–46). But, on the whole, his attitude to paganism was cautious, though his aversion to the old faith would be increased by his unfortunate reception in heathen Rome in 326, which led to his abandoning it for Constantinople. After this he seems to have increased the privileges of the clergy (Soz. *HE* i. 8, 9), and he rewarded towns that turned temples into churches (Soc. *HE* i. 18; Soz. *HE* ii. 5), in several cases because of immoral rites (cf. Euseb. *Laud. Constant.* 8). Many temples were also despoiled for the founding of Constantinople, and by his expressed wish the new city was free from organized heathenism (Euseb. *VC* iii. 48). At the same time the existing temples of Byzantium—Cybele, Castor and Pollux, etc.—were not destroyed, and the city itself was dedicated to Tyche (Fortuna), though without temple services (Zos. ii. 21; Schultze, *op. cit.* ii. 281; for this Tyche, Bury refers to a study of J. Strzygowski, 'Die Tyche v. Konstant.' in *Analecta Graeciensia*, Graz, 1893). By this time Constantine's 'conversion,' hitherto chiefly political, had become an intellectual belief in Christianity as an historical religion capable of proof (see Constantine's remarkable sermon, *Orat. ad Sanct. Coet.*, esp. chs. 4, 11, 18, 19, where the Sibyl and Virgil's 4th *Eclogue* are appealed to). The return of his aged mother Helena from her pilgrimage to Palestine (undertaken in 326, possibly because of her son's execution of Crispus), with two nails from the Cross, one of which he turned into the bit of his war-horse,[1] led to his foundation at Jerusalem of the Church of the Holy Sepulchre on the site of a temple of Venus (Soc. *HE* i. 17; Euseb. *VC* iii. 30), and he also prepared a form of common daily prayer for the army (Euseb. *VC* iv. 20).

Though not even a catechumen, Constantine delighted in preaching sermons, in Latin, to the applauding crowds; one of these has been preserved to us by Eusebius (*VC* iv. 29). But at the same time his alienation from Catholicism towards Arianism was increasing (see *infra*, p. 80), helped probably by the death of his mother Helena (*c.* 330 [Euseb. *VC* iii. 47]; buried at Constantinople [Soc. *HE* i. 17]). The fact that he did not take any steps either to become a catechumen or to be baptized until he felt near to death, may be explained as due either to political balancing, or to lack of decision, or, more probably, to the belief that baptism, like the heathen lustrations, ensured the remission of sins, and to the growing dread of post-baptismal sin. He was finally baptized by the Arian bishop Eusebius of Nicomedia (Euseb. *VC* iv. 62–63; Jerome, *Chron.*, ann. 2353 [in *PL* xxvii. 680]). In the Greek Church he has practically been canonized by the title Ἰσαπόστολος, 'Equal to the Apostles.'

Into the large question of the advantage or otherwise to the Church of Constantine's adoption of

[1] J. H. Newman (*Essays on Eccles. Miracles*, 1843, p. 103 ff.) and de Broglie (*op. cit.* i. 216 ff.) give the best defence of this view.

[2] It may be of interest to note that the signs would probably be read in Latin—'in hoc signo vinces'—and not Greek—τούτῳ νίκα—as Constantine spoke Latin. The annalists are divided on the subject.

[3] Cf. Eusebius' mistake (*HE* vii. 18) of a statue of Æsculapius at Paneas for one of Jesus.

[1] Soc. *HE* i. 17; Soz. *HE* ii. 1; too characteristic to be an invention. But the rest of the chapter—'the Invention of the Cross'—must be discredited owing to the complete silence of Euseb. *VC* iii. 26, 30, and of the *Itin. Burdigalense* (written 333 [in *CSEL* xxxix.]). The story is first found in Cyril of Jerusalem (b. 315), *Ep. ad Const.* 3, the genuineness of which is, however, doubtful.

Christianity as the State religion, we cannot enter. The familiar lines of Dante (*Inferno*, xix. 115),

> 'Ah! Constantine! to how much ill gave birth,
> Not thy conversion, but those rich domains
> That the first wealthy Pope received of thee,'

have really a wider significance than the false donation; and the judgment of Mill (*Essay on Liberty*, ch. 2) deserves to be pondered: 'It is a bitter thought how different the Christianity of the world might have been, had it been adopted as the religion of the Empire under the auspices of Marcus Aurelius, instead of those of Constantine!' For a contrary judgment cf. Newman, *Arians*, 1871, p. 248.

IV. **Constantine and the Church.**—(*a*) *Relations of Church and State.*—Nothing was further from the intention of Constantine than to abandon to the Church any portion of his Imperial prerogative, and this determination would be increased by the sycophancy of the Court clergy. Into his adoption of the new religion he carried all the old Roman ideas, for his 'conversion' was not a revolution in the political genius of the Empire. Whatever crudity there may have been about his religious opinions, his views as an official were clear. To the Roman governor religion was a department of the civil service. The consequences of this are apparent in the after history of the Church. The Emperor, it is true, could not be the Pontifex Maximus of the new religion—this title, retained by Constantine, was dropped by Gratian (Zos. iv. 36), and in time lapsed to the Bishop of Rome—but the new autocracy founded by Diocletian and himself (on this see Gibbon, ch. xvii., with Bury's appendix) made this of less moment than for the early Cæsars. For that matter, the official title of the new monarchy was the higher 'deus' (Schiller, *op. cit.* ii. 33, 34). In consequence, in the Eastern Church the Emperor was always the supreme head, as his modern representative, the Czar, is to-day; but in the West the abandonment by Constantine of Rome for his new capital gave the bishops of Rome their great opportunity.

Thus Constantine and his successors, while giving the Church Councils full liberty of discussion, insisted that their own consent was necessary to confer validity on the canons; and they regulated the business by Imperial commissioners, often laymen. So, at the Council of Arles, Constantine deputed Bishop Marinus to preside (Euseb. *HE* x. 5. 19; Mansi, ii. 469); at the Council of Nice, Bishop Hosius of Cordova (on this complicated question see *DCB* i. 168, and, for the Rom. Cath. view, Hefele, *Councils*, Eng. tr. 1871, i. 37 ff.); while at the Council of Tyre (335) he sent the consular Dionysius as commissioner (Euseb. *VC* iv. 42; *PL* viii. 562). The doctrine asserted by Constantine was never wholly lost even in the Roman Catholic Church, and was of great influence as late as the Council of Constance (cf. also Articles of the Anglican Church, no. 21).

(*b*) *Constantine and heresy.*—To the Roman magistrate religious recusancy was tantamount to political disaffection. Constantine and his successors were therefore driven, almost before the ink on the decree of toleration was dry, to deal with heresies and schisms within the Church itself. To allow the Church to be rent into diverse parties would be to destroy the very solidarity and universality ('catholic') which had marked it out to the politician from all other religions as destined to become supreme. Hence the anxiety of Constantine to secure the peace of the 'legitimate Catholic Church' (Euseb. *HE* x. 5. 20).

(i.) Constantine's first intervention was in regard to the Donatists (*q.v.*).

For Constantine and the Donatists we have Optatus Milev. *de Schismate Donatist.* (written about 375) i. 22 f.; but Optatus is neither complete nor altogether trustworthy. We also possess a valuable collection of anonymous documents, *Decem Monumenta Vet. ad Donatist. hist. pertinentia*, usually bound up with Optatus (best ed. of both by C. Ziwsa in *CSEL* xxvi. [1893]; also by Dupin [1702] and Migne, *PL* viii. 674 ff.). Certain letters of Augustine (*Epp.* 88, 43) add to our knowledge. For a critical examination see O. Seeck, 'Quellen u. Urkunden über die Anfänge des Donatismus' in *Ztschr. f. Kirchengesch.* x. [1889] 505–568, and L. Duchesne, *Le Dossier du donatisme*, Paris, 1889.

In answer to the appeal of the Donatists (15th Apr. 313) forwarded by Anulinus, proconsul of Africa, Constantine summoned Cæcilian, bishop of Carthage, and the ten accusing bishops to appear at Rome before a synod over which he instructed Pope Miltiades to preside (Euseb. *HE* x. 5. 18; August. *Ep.* 88, *c. Crescon.* iii. 81). At the same time, prompted by Hosius, bishop of Cordova, he gave Cæcilian certain marks of his esteem (Euseb. *HE* x. 6). The synod met (2–4 Oct. 313) in 'the *casa* of Fausta on the Lateran,' and the decision was given against the Donatists (Optat. *op. cit.* i. 23–24; Aug. *contra Ep. Parmen.* i. 10; *Ep.* 43, 5 [14]). On the further appeal of the Donatists, Cæcilian was detained at Brescia (*ib.* i. 26), and two bishops were dispatched by Constantine to Africa to make inquiries 'ubi esset Catholica.' As they reported in favour of Cæcilian, the Donatists pressed the appeal, and Constantine ordered the case to be re-tried at Arles (Euseb. *HE* x. 5. 21; Optat. *op. cit.* i. 26; *Decem Mon. Vet.* iii. iv. v.).[1] About the same time (Feb. 15, 315) a commission was appointed by Constantine to inquire into the guilt of bp. Felix of Autumni.[2] Of the decisions of Arles we have only fragmentary evidence (F. Maassen, *Quellen des canon. Rechts*, Graz, 1870, p. 188 ff.), and its date, 1st Aug. 314 or 316, is uncertain, though probably the latter.[3] As the Donatists were still not satisfied, Constantine heard their appeal at Milan (10th Nov. 316; Augustine, *c. Crescon.* iii. 16, 67, 82, iv. 9, *ad Don.* 19, 33, 56), and confirmed the decisions of the Councils (August. *Brev. coll. Carth.* d. iii. c. 12 ff., *contra Ep. Parm.* i. 11; cf. *PL* viii. 750). Constantine thereupon issued edicts confiscating the churches of the Donatists (August. *Ep.* 105, 2, 9; 88, 3), though within a few years (5th May 321) he adopted a policy of toleration or indifference (Optatus, *Dec. Mon. Vet.* viii., *Brev.* iii. 40, 42; cf. Aug. *ad Don.* 56, *Ep.* 141, 9).

(ii.) As regards other heretics, Eusebius (*VC* iii. 63–65) tells us of his zeal against 'Novatians, Valentinians, Marcionites, Paulians' (*i.e.* followers of Paul of Samosata), those 'who are called Cataphrygians' (*i.e.* Montanists) and the confiscation of their meeting-places to 'the Catholic Church.' Thus, as Eusebius puts it, 'the savage beasts were driven to flight.' Constantine's refusal to 'heretics' of the privileges granted to the Church became part of the law of the Empire (*Cod. Th.* xvi. 5. 1; *Cod. Just.* i. 5. 1; in 326).

(iii.) To the greater Arian difficulty which distracted the Eastern Church [see art. ARIANISM, vol. i. p. 777] the attention of Constantine seems to have been drawn about the year 319. As a majority of the bishops of Asia appeared to support Arius' cause, Constantine, in the hope of ending the dispute, first sent his confidential adviser Hosius, bishop of Cordova, to Bishop Alexander of Alexandria and the presbyter Arius, with a characteristic letter begging them to lay aside 'this insignificant subject of controversy' and co-operate

[1] If no. v. is genuine, it was either dictated by Hosius or shows interpolations. It does not seem to the present writer that it can be safely used with reference to Constantine's character and Christianity at this period.

[2] This is the correct form, not *Aptungi*. For the text of this trial see *Dec. Mon. Vet.* ii., in *CSEL* xxvi. 197, and for its date L. Duchesne, *op. cit.* p. 644.

[3] So Seeck, *op. cit.*; but Duchesne, *op. cit.* p. 640, argues for 314; time for the events seems to the present writer to demand the later date. For the decisions see *Dec. Mon. Vet.* iv. (*CSEL* xxvi. 206), also in *PL* viii. 818; August. *Ep.* 43. For the council see *PL* viii. 815; Hefele, *Councils*, Eng. tr. i. 180 ff.

with him in restoring unity (Euseb. *VC* ii. 64–72). As this failed, Constantine, on the advice of Hosius (Sulpic. Severus, *Chron.* ii. 40, 5 ed. Halm in *CSEL* i.), summoned a Council which met at Nicæa (19th June–25th Aug. 325). The 'ecumenical' (οἰκουμένη, *i.e.* 'of the Empire,' cf. Lk 2^1 and *CIL, passim*) character of the Council—about 10 bishops from the West, and 308 from the East (Athanasius, *ad Afros*, 2; cf. Soc. *HE* i. 9)—and its importance alike mark the beginning of a new era for Christianity. Its controversies do not concern us; but for our present purpose it should be noted that the influence of Constantine for peace was considerable (Theod. *HE* i. 11), that the Council was summoned in his name (Euseb. *VC* iii. 6), that Constantine presided at the opening (*ib.* iii. 10 ff.) and addressed it at its close (*ib.* iii. 21), and that he communicated its decision to the Church of Alexandria (Soc. *HE* i. 9). But in 328 there was a change of policy. Whether owing to the influence of his sister Constantia, the widow of Licinian, who had herself been influenced by Eusebius of Nicomedia, or because Constantine was now more in touch with the speculative East than in his earlier years, he sought a less stringent enforcement of Nicene doctrine. The Arianizing Eusebius of Nicomedia, who had been banished at the close of the Council, now reappeared and gained the Emperor's ear. The result was seen in the deposition of Athanasius (cf. vol. ii. p. 169, or W. Bright in *DCB* i. 186) by the Council of Tyre (335), his banishment by Constantine (336) to Trèves, the rehabilitation of Arius by Constantine (Soc. *HE* i. 26), and the order that he should be received back into fellowship at Constantinople (336). The death of Constantine left the Arian trouble to his successors, under whom Arianism became still more identified with Court circles.

We may point out that Constantine's whole policy as regards heresy and unity fastened upon the Church for sixteen hundred years a policy of intolerance. The result was soon seen in the case of Priscillian (see PRISCILLIANISM).

(*c*) *Endowments.*—The supposed 'Donation of Constantine,' all-important historically as this falsehood proved, need not detain us. It carried with it the story of Constantine's leprosy, and baptism by Sylvester at Rome.

The story will be found in *PL* viii. 567–578. Its date was probably the 8th century. In 1229 two men who ventured to doubt its genuineness were burnt at Strassburg, and as late as 1533 it was deemed heresy to dispute it (Lea, *Inquisition in Middle Ages*, 1888, iii. 568 n.). Its overthrow by L. Valla (*in Donat. Const. Declam.* in Brown, *Fascic. Rerum Expetend.* [1690] i. 132) was one of the first results of the Renaissance.

The benefactions of Constantine were, however, considerable. For instance, he sent Cæcilian, bishop of Carthage, 3000 *folles* (φολλεῖς), or purses, *i.e.* nearly £18,000 (Euseb. *HE* x. 6; cf. *VC* iv. 28). Great sums were also spent on the building of churches (Euseb. *HE* x. 2. 3. 4), especially at Jerusalem (Holy Sepulchre [Euseb. *VC* iii. 34–40]), Bethlehem (*ib.* 43), Nicomedia (*ib.* 50), and Rome. Of his benefactions to the great basilicas at Rome we possess a list that seems authentic (*PL* viii. 803 ff.), though many of the gifts mentioned are later accumulations (Duchesne, *Lib. Pont.* i. Introd. p. 152). Of great importance from another standpoint is his order of fifty copies of the Scriptures 'legibly described and of a portable size' (Euseb. *VC* iv. 36).

V. Influence of Constantine's establishment of Christianity upon legislation.—The following are the most important evidences of the growth, during the reign of Constantine, of specifically Christian laws or of the influence of Christian sentiment.

i. *MORALS.*—(*a*) *Slaves.*—There was no abolition of slavery; this was not a burning question in the Early Church. But slaves condemned to games or to the mines must not be branded in the face, 'which is fashioned in the likeness of the Divine beauty' (*Cod. Th.* ix. 40. 2, March 315; *PL* viii. 119). In dividing estates, families of slaves must not be separated (*Cod. Th.* ii. 25, in 334; *PL* viii. 376). Masters must not kill or wantonly torture their slaves (*Cod. Th.* ix. 12, chs. 1, 2 in 319 and 326; *Cod. Just.* ix. 14; *PL* viii. 161). But the wording of this last law left many loopholes of escape, while fugitive slaves must not only be given up (*Cod. Just.* vi. 1. 4, in 317; *PL* viii. 150), but could be examined by torture (*Cod. Just.* vi. 1. 4. 6, in 317 and 333) or deprived of a foot (*ib.* vi. 1. 3, undated). The abolition of crucifixion (Soz. *HE* i. 8) and the breaking of legs (Aur. Victor, *Cæs.* 41) would chiefly apply to slaves. But the illegality of Christians being held as slaves by Jews (Euseb. *VC* iv. 27; *Cod. Th.* xvi. 9. 1, 2, 4, xvi. 8. 6; cf. *Cod. Just.* i. 10) witnessed rather to the growing hatred of the Jews (cf. *Cod. Th.* xvi. 8. 1; *Cod. Just.* i. 9. 3; *PL* viii. 130, in Oct. 315).

(*b*) *Gladiators.*—Gladiatorial shows were prohibited in 325 (*Cod. Th.* xv. 12. 1; *PL* viii. 293; *Cod. Just.* xi. 44; cf. Euseb. *VC* iv. 25; Soc. *HE* i. 18), though the law was certainly not enforced in Italy. That at Constantinople there were never any gladiatorial shows may be ascribed to the influence of Christianity, when we remember Constantine's bloody slaughters at Trèves in his early life (Eumen. *Paneg.* 12).

(*c*) *Adultery*, etc.—(1) Concubinage was disallowed for married men (*Cod. Just.* v. 26 in 326; cf. *Digest.* i. 25. 7). (2) Rape, etc., was to be severely punished, the woman, even if not a consenting party, by disinheritance; abettors, if slaves, by burning, if freemen, by banishment (*Cod. Th.* ix. 23. 1; *PL* viii. 195–198, in April 320).

(*d*) *Children, debtors*, etc.—(1) Poor parents were forbidden to kill their infant children, the care of whom was henceforth to be an Imperial charge (*Cod. Th.* xi. 27. 1, 2; for Italy first in 315 [*PL* viii. 121], then for Africa and other provinces in 322 [*PL* viii. 236]). The Christian sentiment of this law (cf. Lactant. *Instit.* vi. 20) is more obvious than its correct political economy. Exposure of children was not forbidden until 374 (*Cod. Just.* viii. 51. 2, ix. 16. 7). The growing poverty of the Empire alone was responsible for Constantine's allowing the sale of infant children by poor people (*Cod. Th.* v. 8. 1; v. 7. 1, in 329 and 331; cf. *Cod. Just.* iv. 43)—a practice forbidden in 294 by Diocletian (*Cod. Just. l.c.*). (2) Illegitimate children were legitimized by after-wedlock in the case of free-born women (*Cod. Just.* v. 27. 1, 5, in 336; cf. *PL* viii. 387–389). (3) Debtors must not be scourged, or, except in special cases, imprisoned (*Cod. Th.* xi. 7. 3, in Feb. 320; *PL* viii. 189). Prisoners were not to be confined without air and light, or with 'chains that cleave to their bones,' or to be imprisoned before trial (*Cod. Th.* ix. 3. 1, 2; *Cod. Just.* ix. 4. 1, 2, in 320 and 326; *PL* viii. 199, 299).

ii. *CLERGY AND CHRISTIAN WORSHIP.*—(*a*) The 'Catholic' clergy were freed from the discharge of civil duties (*Cod. Th.* xvi. 1, 2, in Nov. 313, Oct. 319; *PL* viii. 102, 180), but in July 320 the abuse of this led to its restriction (*PL* viii. 200), as was also the case in June 326 (*Cod. Th.* xvi. 2, 6; *PL* viii. 314). (*b*) Exception was made to the *lex Papia Poppæa* against celibacy in favour of the clergy, thus allowing them to inherit (*Cod. Th.* xvi. 2. 4). (*c*) Public works and the sitting of the courts were forbidden on Sundays, 'dies solis' (*Cod. Th.* ii. 8. 1; *Cod. Just.* iii. 12. 2, in July 321; *PL* viii. 224; note the balanced 'dies solis,' which would suit Mithraism also). (*d*) Mann-missions were permitted to be solemnly made in

churches as well as in temples (*Cod. Th.* xvi. 2. 4, iv. 7. 1; *Cod. Just.* i. 13. 1, 2, in 316 and Ap. 321; *PL* viii. 214 f.). As these manumissions were made on Sundays, and especially at Easter, Christianity became associated in the public mind with the release of slaves.

iii. *PAGAN WORSHIP AND RITES.*—(*a*) Prohibition of pagan sacrifices in general (Euseb. *VC* ii. 44, 45, iv. 23, 25).

That there was such a law may be inferred from *Cod. Th.* xvi. 10. 2, 'law of our divine Father,' but it was certainly not carried out in the West, where the progress of Christianity was but slow (S. Dill, *Roman Society in the Last Century of the W. Empire*, 1898, vol. i. ch. i.; cf. A. Beugnot, *Hist. de la destruction du paganisme* [Paris, 1835], i. 106 ff.). Moreover, Constantine more than once proclaimed liberty to the pagans to enjoy their temples (Euseb. *VC* ii. 56, 60; Constant. *Orat. ad Sanct. Coet.* 11; cf. Libanius [c. 384], *Orat. pro Templis* [ed. Foerster], iii. xxx; Symmachus, *Ep.* x. 4). The question is well discussed in de Broglie (*op. cit.* i. 446–451). Beugnot (*op. cit.* i. 100) takes the prohibition to refer to nocturnal and private sacrifices only.

(*b*) The re-enactment, Feb. and May 319, of the law of Tiberius against divination (*Cod. Th.* ix. 16. 1, 2; *PL* viii. 155, 162). In Dec. 319 the consultation of *haruspices* was allowed when public buildings were struck by lightning (*Cod. Th.* xvi. 10. 1; *PL* viii. 202).

LITERATURE.—(*a*) *SOURCES.*—The estimate we form of Constantine depends chiefly upon the value we attach to the conflicting authorities. Some of the Latin sources may conveniently be read in Migne, *PL* viii., 'Opera Constantini'; but, as this is both incomplete and uncritical, and contains much that is false, it should be used with care, especially as regards Constantine's correspondence. For the Life of Constantine we gain most from the following: *The Panegyrists*, inflated Gallic orations delivered on state occasions, but with a valuable residuum of fact. Two, delivered in 307 and 313, are of unknown authorship, three are probably by Eumenius (297, 310, 311), and one by Nazarius (321); in Migne, *PL* viii. 581 ff., or, better, A. Bähren's *XII Panegyrici Lat.* (1874), to which edition references have been made by number and chapter. Another work of special pleading, though from a different standpoint, is the *de Mortibus Persecutorum* (best ed. by S. Brandt, in *CSEL* xxvii. [1897]). This work, ascribed in the MS to an unknown L. Cæcilius, was attributed before the close of the 4th cent., *e.g.* by Jerome in 393 (*de Vir. Illust.* 80), to L. Cæcilius Firmianus Lactantius. The genuineness of this ascription has been assailed by his editor, S. Brandt (*SWAW* cxxv. [1892]), and justified by Bury (Gibbon, ii. 531–532). The date is probably about 315. Of the works of Eusebius of Cæsarea, the *HE*, published early in 325, is of great value, but the *Vita Constantini* (*VC*) in four books, written between 337 and 340, is a pious eulogy (see Socrates, *HE* i. 1) rather than serious history (best ed. of Eusebius by Heinichen [1868–70]; good Eng. tr. by McGiffert and Richardson [New York, 1890]). Of contemporary non-Christian writers we may mention Constantine's secretary Eutropius, *Breviarium ab urbe condita* (ed. F. Ruehl, 1887, or H. Droysen in *MGH* ii. [1878]). A most valuable source is the anonymous fragment first printed by H. Valois, hence called *Anonymus Valesii* (best ed. by Mommsen in *Chronica Minora*, *MGH* [1892] i. 7–11). As the clerical passages in it have been shown by Mommsen (*op. cit.* pref. p. 6) to be interpolations from Orosius, it was probably written before the establishment of Christianity. The valuable contemporary pagan history of Praxagoras is known to us only in a brief summary of Photius (in C. Müller, *FHG* iv. 2 [Paris, 1851]).

Of later writers we may single out Eunapius of Sardis (347–414). His *History* (ed. C. Müller, *ib.* iv. 7–56) was one of the main sources of the anti-Christian Zosimus, whose *History* (ed. L. Mendelssohn, 1887) was written towards the close of the 5th cent., and is of great value in spite of its bias. The *Oration on Constantine* of Julian the Apostate (ed. F. C. Hertlein, 1875–76) is always of value for what it concedes. Ammianus Marcellinus (b. 330) in his great work *Res Gestæ* (ed. V. Gardthausen, 1874, Eng. tr. Ph. Holland, 1609), though a pagan, treats Christianity without bitterness. Another important source is the *Chronicon Paschale* (ed. T. Mommsen in *MGH* i. [1892] 199 ff.). Of the Christian historians, Socrates (*HE*) and Sozomen (*HE*), who both wrote about 440, add little to Eusebius, while the later Greek chroniclers may safely be neglected. For Constantine and the Donatists see *supra* IV. *b.* (1), p. 79.

The Laws of Constantine, an important source, must be studied in the *Codes of Theodosius* and *Justinian*, especially the former. As the *Code of Theodosius* is very bulky (ed. Godfrey, with valuable commentaries, 6 vols., Leipzig, 1736–45; also ed. Hänel, Bonn, 1842), the student may content himself with the chronological excerpts in Migne, *PL* viii. 92–400. For the *Code of Justinian* reference should be made to the ed. of P. Krueger (Berlin, 1877). Almost as important as the written sources is the evidence of Constantine's coins and medals. The value of these has been well brought out by Schiller (*op. cit. infra*). For further study reference may be made to the well-known works of H. Cohen, *Descr. hist. des monnaies frappées sous l'empire romain* (Paris, 1863); J. Eckhel, *Doct. Num. Vet.* vol. viii. (Vienna, 1797). Garrucci's *Numismatica Constantiniana* (Rome, 1856) does not seem to be in the Brit. Mus. (1910), but is partly translated in C. W. King, *Early Christian Numismatics* (Lond. 1873). M. Madden's 'Christian Emblems on the Coins of Constantine the Great' (in the *Numismatic Chronicle*, London, 1877–78) is of great value.

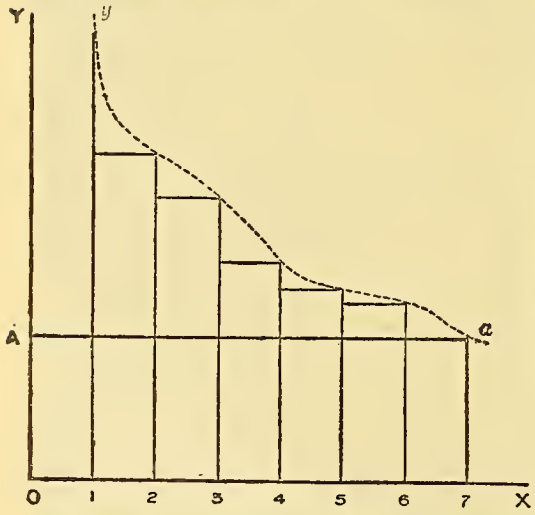
(*b*) *RECENT WRITERS.*—Constantine has been treated with great fullness in all Church Histories and Dictionaries (the art. by J. Wordsworth in Smith's *DCB* is of special value), and in numerous monographs. (For a good list of these up to 1890 see Richardson's Introd. in Schaff, *Ante-Nicene Library*, 'Eusebius,' pp. 455–465.) The following works are essential for the general history: E. Gibbon, ed. J. B. Bury (1896; new edition, 1910 ff.), with valuable notes and appendixes; and H. Schiller, *Gesch. d. röm. Kaiserzeit*, 2 vols. (Gotha, 1887). Of special monographs mentioned in this study the following may be singled out: J. Burckhardt, *Die Zeit Constantin's des Grossen* (Basel, 1853; 2nd ed., Leipzig, 1880); O. Seeck, *Gesch. des Untergangs der antiken Welt*, 2 vols. (Berlin, 1895–1901); V. Schultze, *Gesch. d. Untergangs d. gr.-röm. Heidentums*, 2 vols. (Jena, 1887–92). Of older works, the conservative J. V. A. de Broglie, *L'Église et l'empire rom. au ive siècle*, 3 vols. (Paris, 1856), A. P. Stanley, *Eastern Church*[5] (1876; brilliant portrait of Constantine), and G. Boissier's *La Fin du paganisme*, 2 vols. (Paris, 1891), should not be overlooked.

H. B. WORKMAN.

CONSUMPTION (Economic).—Since *The Wealth of Nations* gave the consumer rather than the producer or the merchant the first right to consideration, questions relating to consumption have always been prominent in Economics, though, especially in English books, they have not been formed into a separate branch of doctrine. It was thought that general questions about desire and utility were matter for Ethics, and should have a place in the preface, but not in the body, of Economics. This is still a common view, even when it is held that 'a true theory of consumption is the keystone of political economy' (Keynes, *Scope and Method of Polit. Econ.*, Lond. 1891, p. 107). And the special or more practical questions of consumption are then taken up under the familiar heads of production (*q.v.*), distribution (*q.v.*), and public finance or policy. The place which the general doctrine of consumption is now likely to hold is due to a better systematizing of the matter of Economics—as a science rather than into a series of co-ordinate divisions. The theory of value is made the centre, and from it come two questions, viz. the conditions of demand and the conditions of supply. The question of demand is that of consumption.

Its topic is utility, and its cardinal notion the Law of Diminishing Utility. An object or service has utility so far as it satisfies a desire. When bought it is bought for its utility; when consumed it is only the utility that is destroyed; when produced it is utility that is given to it.

The Law of Diminishing Utility is: other things being equal, there is always a point beyond which the utility of a commodity diminishes for every additional quantity of it that one possesses. It might be called the Law of Diminishing Desire. Its basis is the familiar fact that as a desire becomes satisfied it becomes exhausted for the time being. This is true not merely of appetites, but of higher desires whose satisfaction begets others. And it is true for indirect consumption (when commodities are used as means of production) as well as for direct consumption (when they directly satisfy a desire). Simple though the law is, it has (1) an important theoretical use, and (2) still more important practical applications.



1. *Theoretically* it accounts for the price which a buyer is willing to pay—(*a*) for different quantities of the same goods, and (*b*) for different goods, and so it accounts (*c*) for the prices that have to be paid in any market.

(*a*) The first case is directly contemplated in the law, and is best illustrated in the price that one is willing to pay for any necessary commodity. Necessaries have the greatest utility because they are necessary, and in the pinch of famine they command the highest prices. But beyond a certain quantity they are not necessary, and then their

utility is limited by the simple desire of consuming them. As this desire becomes satisfied, the pleasure in consuming diminishes, and with it the utility of the commodity, till it vanishes altogether, because the desire is satisfied.

(*b*) Similar considerations are apparent when we ask what we are willing to pay for different commodities. It depends, of course, on our desires. But the interest of the question is that these are in competition, since we cannot satisfy them all even if we had the means; and the special economic interest of the question is that our means are limited. It is the question how a given income is spent. And in terms of the general law we have these two answers: (1) every one seeks to secure the greatest Total Utility from his income, and (2) he does this by looking to the Marginal Utility of his various purchases in order to make it equal in them all. The first statement is obvious, but the second needs explaining. By marginal utility is meant the utility of any commodity, or quantity of it, that a buyer is just willing to take at a certain price. His debate with himself is always whether he could do better with his shilling now or in the future; and, if he buys and regrets, it is always because he might have had a greater utility for his shilling if he had bought something else with it, or if he had kept it. To spend well is not to buy the same degree of utility with every shilling, for infinite or necessary utilities are usually cheap. The difference between the price for which one gets them, and the price that one would be willing to pay for them, is called the Consumer's Surplus.

These notions of surplus utility, total utility, and marginal utility are most clearly presented in diagram. For every commodity there can be drawn a curve representing all three. The shape of the curve is different for different commodities and for different consumers; but in accordance with

the general law of diminishing utility it shows in all cases a more or less regular fall in utility with every addition to the quantity bought. Annexed is the general curve for any necessary commodity. On O X are marked the units of quantity bought, and so of the price paid; and the diminishing areas drawn on them represent the diminishing utilities, the first being infinite, representing the infinite utility of that unit. The areas having equal bases, their difference may be represented by their height, and a curve drawn as in the figure. If a consumer buys 7 units, the marginal utility is that of the last portion, and he makes this his marginal purchase, because for the same unit of money he expects a greater utility of spending it on something else than on an eighth unit of this commodity. The total utility is represented by the total area of the figure, and the surplus utility by the area A Y *y a*. Taking all his purchases into account, it is clear that he will have nothing to regret (except, of course, the nature of his desires) if his marginal purchases have all an equal degree of utility. For he will thus have the greatest total utility from his income.

(*c*) A commodity has a different marginal utility for different consumers, the difference being due to the difference in their incomes and their desires. Hence with every price at which a commodity is offered there corresponds a certain demand; and, in general, the greater the price the less the demand, and the less the price the greater the demand. It is in expectation of a sufficient demand at a profitable price that commodities are produced, and it is on the correctness of his expectations, and not on the cost of production, that a producer relies for his price and profit. This is the essential consideration in the familiar law of supply and demand which accounts for all values that are fixed by competition (*q.v.*).

2. As the ultimate aim of economic effort is to consume what is produced, the *practical* questions regarding consumption may run into great detail; and their answers easily run to one-sidedness if the questions are not systematic. This is seen in the conflict of popular opinions about the spending of the rich. It would be hard to say whether people approve more of the rich man who spends much, and so spreads his wealth, or of the rich man who spends little, and appears, therefore, not to give work to others. And whatever may be thought of the spendthrift, the miser, and the philanthropist as individuals, there is great diversity of opinion about the first two, and some about the philanthropist, as members of the body economic. And not all professional economists appear to have reconciled the truth in the two opposite statements that 'demand for commodities is not demand for labour,' and that 'want of work is due to under-consumption.'

The aim of economic organization and effort is, under conditions, to produce the greatest total utility; and, if we ask how economic progress is to be estimated, we ask the conditions on which this total utility depends. First it depends on the quantity and quality of wealth produced, and so on the full and the most efficient use of the labour and the natural and acquired resources of a country. And in looking at the economic progress of a country we are apt to look no further than at the amount and quality of wealth that is thus produced, and at its distribution with a view to further production. But the amount of utility in wealth depends on the intensity and variety of the desires for whose satisfaction the wealth is consumed. This is the head under which all practical questions of consumption find their place. It is conveniently divided into two by considering, first, the satisfaction of desires that all seek to satisfy, and then the satisfaction of other desires. Regarding the former, it is apparent that the total utility from a country's produce is greater when the margin at which the very poor cease to purchase is extended, and the margin of others is contracted so as to exclude waste and gluttony. A country of great houses and vile hovels is so far not making so much of its wealth as one where the houses are less great and the hovels less vile.

But it is when we turn from more or less necessary desires that we see the complexity of the question that may be organized from the point of view

of consumption. It is here that there is the nearest connexion between Economics and Ethics. The moral ideal is that of complete living, and requires a character having variety and depth of interests or desires, quite as much as one having these in unity or system, and so in harmony. In economic progress there must be this variety and depth if the utility of wealth is to grow with its increase; and an obvious point is that many desires—most of the higher desires, intellectual, æsthetic, and social—are very little destructive of utility. The cost of creating them, *e.g.* by education, is greater than the cost of gratifying them, and is therefore much the more important consideration. The most destructive desires need no learning.

It is also obvious from the nature of consumption that no comment on an economic system can be more severe than that it makes, or even lets, the poor grow poorer while the rich grow richer. The comment is often made, but it is made mainly on the erroneous ground that the gain of one must always be the loss of another. It has not been true in fact of our present economic system (see DISTRIBUTION); still the comment might with advantage be more absurd on the face of it. From the same point of view it would be a very adverse comment on the progress of invention if it could still be said that the labourer has not been spared any of the severity and exhaustion of muscular work that he had before the revolution in industry. For nothing tells more against a wealth of life. But, on the contrary, the saving in mere hardness of toil has been one of the best fruits of invention (see PRODUCTION).

While there is ground for charging defects in consumption not to thriftlessness merely, but to the bad distribution of wealth and the struggle to have rather than to enjoy, there is a source that is at least as serious. So long as individual wealth is devoted to the service of a few desires, its increase must be consumed with diminishing utility. Luxury is for the most part such a spending, both when it is for self-indulgence and when it is for ostentation (see LUXURY). But the evil is not so much in the presence of luxury as in the absence of the desire for better things. The pursuit of wealth has been far more eager than the pursuit of desires wherewith to give it the fullest utility. There is not yet any general belief that they can become so absorbing as those that need no learning. The common view of education is much more concerned with giving power to acquire than power to enjoy; and we are all children enough to enjoy no property of a thing so much as that it is our own. Such reflexions do not point to a want of progress but to the long way to go, and to the fundamental way in which economic depends on moral progress.

The statistics of consumption that have most practical interest are concerned with the expenditure of small incomes. There are two methods of collecting them. One, the 'intensive' method, makes a minute study of individual families and their mode of life. It is most completely represented in the work of Le Play (1806–1882) and his school. Examples of it—though not so minute—are to be found in Booth, *Life and Labour of the People in London* (1889–97); Rowntree, *Poverty* (1901); and in *Family Budgets* (1896), collected by members of the Economic Club. The other, the 'extensive' method, looks rather to the quantity of its facts. Its chief expositor was Ernst Engel (1821–1896), who formulated a law, usually called Engel's Law, of which the main part is that as income rises the proportion of it spent on food diminishes. And later statistics from various countries give a general support to his view that this proportion may be used as a comparative measure of well-being, viz. the higher the proportion of earnings spent on food, the poorer a community, and any class in a community. An excellent example of the method is to be found in the U.S. *Bulletin* for 1903 of the Bureau of Labour. 'The figures of income and expenditure furnished in detail by 2567 families in 33 States, representing the leading industrial centres of the country, comprise the material for the detailed study of the cost of living. Certain data which do not enter so much into detail were collected in regard to the cost of living in 25,440 families.' For the United Kingdom the Board of Trade carried out an inquiry, and published an interesting memorandum on it in its *Second Series of Memoranda* with reference to British and Foreign Trade (1904), and within the last few years it has published extensive Reports on the *Cost of Living of the Working Classes* in the principal towns of the United Kingdom (1908), of Germany (1908), of France (1909), and of Belgium (1910). The German Imperial Statistical Office published in 1909 a report on the cost of living of 892 families with a small income. A full account of it will be found in the U.S. *Bulletin of the Bureau of Labour*, May 1910.

LITERATURE.—A general treatment of the statistics of consumption is given in R. Mayo-Smith, *Statistics and Economics* (=pt. ii. of *Science of Statistics*), Lond. 1899, with a bibliographical note on p. 19; and a fuller treatment and note are to be found in art. 'Konsumtionsbudget' in J. Conrad's *Handwörterbuch der Staatswissenschaften*[2], Jena, 1900. There is a 'Bibliography of Studies on the Cost of Living' in the *Bulletin of the Bureau of Labour*, May 1910.

W. MITCHELL.

CONTEMPT.—This word is used either (*a*) in the subjective sense of the act of despising, or (*b*) objectively of the condition of being despised. In illustration of (*a*), Murray (*OED, s.v.*) quotes from Marbeck's *Book of Notes* (1581) the following passage: 'Contempt consisteth chiefelie in three things: for either wee contemne onelie in minde . . . or lastlie when we adde words or deedes, which have ignominie or contumelie ioined with them.' One of the most familiar usages of the word is in the technical expression 'contempt of court,' as referring to any failure to recognize or obey the ruler of a court of justice or other legal authority. In the passive sense (*b*), the expression 'bring into contempt' may be adduced; more rare is the use of 'a contempt' as equivalent to 'an object of contempt' (Gn 38^{23} AVm).

1. **Terminology.**—In the primitive ages the superiority of the physically strong over the physically weak was accompanied by a feeling of scorn, which readily reflected itself in speech. The defeat of a foe, or the successful outwitting of inferior skill or cleverness by force of arms or cunning, tended to create a vocabulary of contempt (see art. BOASTING for similar phenomena). The word δειλός ('coward') in Homer came to mean 'worthless' and 'insignificant' (cf. the apostrophe ὦ δειλέ, 'poor creature'). All languages exhibit the interjectional forms of contempt. Sometimes the same monosyllabic exclamation is used to express other emotions, so that its exact force can be determined only by the context (cf. 'tush!' 'pish!' 'pshaw!' or Lat. *phy* or *phu*). There are also dissyllabic words such as *atat* (or *attat*) in Latin, οὐά (Mk 15^{29}, of derisive joy or horror), 'avaunt!' and the like. Then we have phrases like ἐς κόρακας of Greek comedy, and *I in malam crucem* of Plautus and Terence. These suggest obvious analogies in English and other languages. Argumentative scorn expresses itself in the Latin use of *scilicet*, ironical or contemptuous assertion of what is obviously false (cf. *nisi vero*). More obvious still, as exhibiting the feeling of scorn or disgust, is the opprobrious apostrophe

common to all languages (cf. *carcer, crux, patibulum,* ῥακά [Mt 5[22]], μωρέ [*ib.*], 'dog,' 'cur,' 'cullion' [Shakespeare, *Taming of Shrew,* IV. ii. 20], 'geck and gull' [*Twelfth Night,* V. i. 351], 'John-a-dreams' [*Hamlet,* II. ii. 595], 'zed' [*Lear,* II. ii. 69, a term of contempt, because last letter in the alphabet], *et hoc genus omne*). 'The Philistine said to David, Am I a dog, that thou comest to me with staves?' (1 S 17[43]); cf. 'After whom dost thou pursue? after a dead dog, after a flea?' (1 S 24[14]). 'The Eastern street dog is a type of all that is cowardly, lazy, filthy, treacherous, and contemptible' (*HDB, s.v.* 'Dog').

Both in the Heb. of the OT and in the Greek of the NT the verbal forms expressing various degrees of scorn, derision, or disparagement are remarkably rich. In the OT we find בּוּז and גָּוָה [original meaning dub.]; קָצַף with the root idea of rejection; לוּץ where the idea of scorn is connected with the mimicry of a foreigner's speech; and רָטַשׁ, 'smile.' In the NT we have ἀτιμάζω, ἀθετέω, ἐξουθενέω, καταφρονέω, περιφρονέω, ὀλιγωρέω, and the expressive ἐκμυκτηρίζω (Lk 16[14] 23[35] = 'turn up the nose at'). The mimetic or descriptive verb is as conspicuous in exhibiting the feeling of disgust as in other cases (cf. 'strut,' 'swagger'); and the word ἐκμυκτηρίζω recalls Shakespeare's 'I will bite my thumb at them' (*Romeo and Juliet,* I. i. 48 f., a contemptuous action for beginning a quarrel); 'to give her the avaunt,' *i.e.* to send her away contemptuously (*Henry VIII.* II. iii. 10); or Pistol's expression (*2 Hen. IV.* V. iii. 124), 'Fig me, like the bragging Spaniard' (thumb thrust between first and second fingers as a mark of contempt and insult). The word ἐμπαίκτης (2 P 3[3], Jude [18]; in 2 P 3[3] ἐμπαιγμονή is also found) suggests rather more obviously external act or gesture than καταφρονητής (Ac 13[41]). It may be noted in passing that contempt takes in literature the form of satire, in art that of caricature (see art. 'Satire' in *EBr*[9] and 'Caricature' in *EBr*[10]).

From Lucilius down to the present day scorn is an ingredient of satire. 'Facit indignatio versum,' said Juvenal (*Sat.* i. 79); and it was a wholesome loathing of decadent morals that inspired such a satire as the Sixth, his 'Legend of Bad Women' (Mackail). The contempt of satire is fierce and bitter; but it can also be genial, as in Don Quixote, where the follies of mediæval chivalry are held up to derision. There is a similar distinction in the art of the caricaturist.

2. Psychology.—The psychological analysis of contempt has not often been attempted. It obviously belongs to the category of what Wundt calls the objective emotions (*Outlines of Psychology,* ed. 1908, p. 197), and is generally to be classified as a species of anger, finding a place in what the same writer distinguishes as the 'excitement-depression' series of emotions, or in what Royce prefers to call 'the restlessness and quiescence' series (*Outlines of Psychology,* 1903, p. 178). Macdougall, in his *Introduction to Social Psychology,* draws a distinction between scorn as a binary compound of anger and disgust, or a tertiary compound, if positive self-feeling is added to these, and contempt, which he regards as 'a binary compound of disgust and positive self-feeling, differing from scorn in the absence of the element of anger.' In ordinary usage, however, scorn (*q.v.*) and contempt are used interchangeably; and, while some kinds of contempt are notably free from anger and suggest serene self-esteem, *e.g.* the attitude of the educated towards the illiterate, there are other forms in which one may detect the element of indignation, *e.g.* the loathing which a noble mind feels towards a cruel or ignoble deed. In Shakespeare's *Twelfth Night,* III. i. 157 f., Olivia remarks:

> 'O, what a deal of scorn looks beautiful
> In the contempt and anger of his lip!'

where obviously contempt is regarded as of close kinship with anger.

Disgust, aversion, and shrinking from an object are undoubtedly marked features of contempt; sometimes this is accompanied by facial and other physical reaction, sometimes it is merely intellectual, as when Horace remarks: 'Odi profanum vulgus et arceo' (*Od.* III. i. 1). While, then, we can distinguish the main elements which make up the emotion of contempt, its quality is capable of multitudinous subtle gradations and internal shadings, corresponding with the objects and situations which call it forth.

3. Ethics.—(1) *In the OT.*—Contempt, as an emotion which, like anger, finds expression in word and deed, or as part of a mental condition, naturally passes into the sphere of ethical judgment. It is an element in the character of the Psalmist's God, as when he says, 'The Lord shall have them in derision' (Ps 2[4], referring to the rebellion of His disaffected subjects; so of the heathen, Ps 59[8]). In both passages the conception of contempt is associated with laughter. Such graphic anthropomorphism is not obsolete: *e.g.* R. Browning's lines,

> '. . . Happy that I can
> Be crossed and thwarted as a man,
> Not left in God's contempt apart . .
> (*Easter-Day,* xxxiii.),

where a failure of ideal is associated with the sense of Divine rejection and wrath. The monotheistic contempt for idol-making and idolatry (cf. Is 40[19f.]) in prophetic literature is an expression of the belief in God's unique and unapproachable righteousness. In the OT, especially in the Wisdom literature, the 'scorner,' or contemptuous man, (לֵץ) is a familiar figure. He not only does evil, but scoffs at the good (Ps 1[1]), seeks wisdom and finds it not (Pr 14[6]), dislikes reproof (15[12]), is an abomination (24[9]), and is punished (21[11], Is 29[20]). The 'scorner,' in fact, belongs to the class 'fool,' which is so conspicuous in the teaching of Proverbs: the fool despises wisdom (Pr 1[7]), his neighbour (14[21]), and the duty of obedience to parents (30[17]). Esau's despising of his birthright (Gn 25[34]) was the indication of 'profanity' (He 12[16]) or spiritual apathy, in the same way that Israel's contempt for Jahweh's statutes and judgments (Lv 26[15. 43], Ezk 20[13. 16. 24], Am 2[4]) or for 'the word of the Holy One' (Is 5[24]) was the sign of an evil heart. Objectively, national failure brings a nemesis of derision (Jer 48[26f. 39]), or such derision may be an element of persecution (20[7], La 3[14]).

(2) *In the NT.*—We have already cited the passage (Mt 5[22]) where Jesus deals with the contemptuous terms 'Raca' and 'Thou fool,' and condemns them on the ground that they indicate a defective disposition of the heart and are therefore to be judged under the new law before the same tribunals and punished by the same penalties as were offences, like homicide, under the old dispensation. Thus, our Lord's treatment of contempt is in harmony with the principles of His general ethical teaching. Moreover, so far as contempt was an anti-social sentiment and opposed to the recognition of the claims of a common humanity, the law of compassion, and the sense of the infinite dignity of the individual soul, it was to be sternly repressed. 'Take heed that ye despise not one of these little ones' (18[10]), *i.e.* the humble and helpless of humanity. The idea of scornful rejection of the truth is contained in the warning, 'He that rejecteth (ἀθετῶν) you rejecteth me' (Lk 10[16]). Jesus thought of the Pharisees as those that 'trusted in themselves that they were righteous, and despised (ἐξουθενοῦντας) others' (18[9]).

He did not hesitate to use the language of contempt respecting the unreality of Pharisaic morals on the ground 'that their whole life was an acted play,' and that their zeal for righteousness was unwarmed by love for their brothers, for men as such; nor did He scruple to use the term 'that fox' (13[32]) of Herod Antipas as summing up his moral cowardice and cunning. But contempt of man for man, of class for class, the disparagement of lowly conditions, even of sinners (as opposed to their sins), is ruled out by the example and teaching of Christ. Christ's view of man was 'a transvaluation of all values.' The first promise of the changed view of humanity is given in the *Magnificat*, 'He hath exalted them of low degree' (1[52]).

The Greek contempt for humility, the arrogance (*ὑπερηφανία*) which Theophrastus (*Characters*, § iv.) defined as 'a certain scorn for all the world beside oneself,' was excluded for ever from the higher ethics of Christianity. Evolutionary ethics, of which the extreme is reached in the thought of Nietzsche, still glorifies brute strength and satirizes the 'slave-morality' of the crowd, but the 'super-man' who alone will be tolerated by the world is not the embodiment of strength, physical and intellectual, but the embodiment of perfect love. Aristotle's 'lofty-minded man' looks down upon others 'justly (for he judges truly); but most people do so at random' (*Ethics*, iv. 3). Even the limitation of the parenthesis, however, fails to convince us; for in the same context we are told that 'he is not lavish of praise: for this reason he speaks no evil, not even of his enemies, *unless it be to show his scorn.*' Contrast this with Christ's teaching, which enjoins the love of one's enemies and exalts meekness. The noblest character of ancient teaching 'walks, like contempt, alone' (*Timon of Athens*, IV. ii. 15), and views his fellows (to quote Shakespeare again) through the 'scornful perspective' which contempt lends him (*All 's Well*, V. iii. 48). He is quite oblivious of the claims of human brotherhood. In fact, his snobbery is hardly distinguishable from that satirized by Thackeray, and is equally out of harmony with the Christian spirit. Pride of birth, intellect, and dominion is by Dante (*Purg.* x. xi. xii.) consigned to the first terrace of purgatory, from which the poet is escorted by the angel of Humility to the sound of celestial voices, singing, 'Blessed are the poor in spirit' (xii. 3 ff.).

The haughtiness which despises its inferiors, whether it take the form of reserve (*εἰρωνεία*) or of active scorn (*ὕβρις*), is as incompatible with the humanitarian ideal of Christianity as the institution of slavery. The treatment of any human being as a chattel or instrument is no longer tolerable. 'Base things of the world and things that are despised did God choose' (1 Co 1[28]). The scorn of the man of the world for piety is an index of an oblique moral vision (cf. the Master of Ballantrae's contempt for his steward's strict and puritanical notions ['my evangelist,' he calls him ironically] in Stevenson's *Master of Ballantrae*). St. Paul warns the Thessalonians (1 Th 5[20]) against contempt of 'prophesyings,' implying that manifestations of the Spirit have to be judged with careful discrimination, and that they are not to be distrusted because fanaticism or unreality accompanies them in particular instances. Contempt is often a form of bigotry, and the symptom of defective charity or tolerance; and not seldom it is implicit in a cold rationalism or in the materialism which rejects immortality and religion. On the other hand, to be despised by the general conscience is no mean punishment. 'Let no man despise thy youth' (1 Ti 4[12]), or 'Let no man despise thee' (Tit 2[15]), is a summons to the cultivation of moral dignity, which at all stages of our life, and not in youth alone, is the fine flower of a Christian personality. If, on the one hand, contempt is opposed to humility, reverence, compassion, and love, it is, on the other hand, a legitimate element of the moral indignation of which the Founder of Christianity is the noblest exemplar.

R. MARTIN POPE.

CONTENTMENT.—Contentment—the condition of being satisfied—is a state of mind which may be regarded as a purely ethical product, or as a phase of religious experience. In the philosophy of life we are able to differentiate three types of contentment: Oriental, Græco-Roman, and Christian; and we propose to treat the subject under these heads. Royce, in his *Outlines of Psychology* (1903), has classified emotions under two dimensions, namely, restlessness and quiescence. If this classification be accepted, it is obvious that the virtue of contentment gathers up into one experience the emotions of the quiescent order.

1. **Oriental.**—The essential element in the Oriental scheme of life is the suppression of desire. This is common to Brāhmanism and Buddhism. Barth (*Religions of India*, Eng. tr. 1882, p. 84) has remarked that the Hindu mind recognizes 'no medium between mental excitement and torpid indifference.' Pantheism, fatalism, the denial of personality and of any real immortality but that of the act—these impress upon all that the Oriental produces 'a certain monotonous character compounded of satiety and ungratified zeal.' So far as we can arrive at any conception of *nirvāṇa*, we may think of it as the serenity of the monk, exempt from all desire, contemplating without passion all that the average man holds dear—love and hate, power and oppression, riches and poverty, fame and contempt—and awaiting with complete *ataraxia* the advent of death. The *nirvāṇa*-on-earth reached by the *arhat* is a pledge of the *nirvāṇa*-after-death, his 'refreshment from the fire of passion' being the earnest of his 'refreshment from the fire of existence' (cf. Poussin, *Bouddhisme*, p. 103 [*Buddhism*, p. 14]). Some exponents of Buddhism point out that, while *nirvāṇa* is negatively the destruction of selfish desire and ignorance, it is positively universal sympathy or love for all beings. Cf. 'A Vow of the Bodhisattva' (Suzuki, *Outlines of Mahāyāna Buddhism*, p. 398):

'For the sake of all sentient beings on earth,
I aspire for the abode of enlightenment which is most high;
In all-embracing love awakened, and with a heart steadily firm,
Even my life I will sacrifice, dear as it is.

In enlightenment no sorrows are found, no burning desires;
'Tis enjoyed by all men who are wise.
All sentient creatures from the turbulent waters of the triple world
I'll release, and to eternal peace them I'll lead.'

When it is objected that contentment can find no place in a scheme of life in which *karma*, or the law of moral causation, prevails, the reply is made that the selfishness of the rich will bear inevitable retribution in a future existence, while the sufferings of the poor, if the poor do not despair of them and yield to temptation, will bring them a future fortune. On the other hand, it is argued that human inequalities are not to be ascribed to the diversity of the individual *karma* (Suzuki, *op. cit.* p. 189 f.). Poverty is not the result of evil deeds. The economic sphere is not that in which the law

of *karma* operates. If a man lives in obscurity and misery, he is not concerned to find the explanation of these things in the past, nor is he anxious about the future. Social injustices and economic inequalities are inevitable in the present order.

'A virtuous man is contented with his cleanliness of conscience and purity of heart. . . . In point of fact, what proceeds from meritorious deeds is spiritual bliss only,—contentment, tranquillity of mind, meeknesa of heart, and immovability of faith' (*ib.* p. 190 f.).

Again, the true conception of *karma* is not merely individualistic; that is, it is not true that our deeds affect only our own fate. These deeds

'leave permanent effects on the general system of sentient beings, of which the actor is merely a component part; and it is not the actor himself only, but everybody constituting a grand psychic community called "Dharmadhātu" (spiritual universe), that suffers or enjoys the outcome of a moral deed' (*ib.* p. 192 f.).

In this way the inherent contradictions of the Buddhist view of life are modernized by an enthusiastic exponent; nevertheless, the denial of a Supreme Being and of personal immortality leaves us with a scheme of life so mechanical and cold that contentment becomes merely a fatalistic joyless acceptance of things as they are. Granting the admirable and even noble idealism of the Oriental, we miss the cheerfulness of the Christian saint who rests in the belief that a Universal Love dwells at the heart of creation and 'sweetly orders all that is.' Moreover, the ideal of contentment proclaimed by Buddhism is remote from life: it is too abstract and academic; it is the offspring of the cloister, and consequently eclectic and esoteric. Even when it glorifies compassion and charity, it loses itself in vagueness, and, except in some rare passages of the teaching of Śākyamuni, proclaims a universal benevolence rather than specific acts of sympathy. If love be 'the fulfilling of the law' and the condition of true contentment, it has no real place in a philosophy which denies the reality of the ego, or in a religion in which saintliness is synonymous with impassibility.

At the same time, it is but just to remember that, whatever its stress on extreme renunciation of all the joys of life may have been, Brāhmanism was far more human in its concept of contentment than was Buddhism. Thus the *Mahābhārata* (iii. 92, xii. 12502) can say that 'no end is there of greed [lit. "of thirst"], (but) contentment is the highest good' (*santoṣaḥ paramaṁ sukhaṁ*), or we may read in the collection of quatrains attributed to Bhartṛhari: 'Poor be he whose greed is great; if the mind be content, who is rich (or) who is poor?'

2. Græco-Roman.—While in Eastern thought the extinction of desire is the *summum bonum* of the ethical or religious life, a quite different idea of personality was held by the thinkers of Greece. They were frankly humanistic in their outlook. The glory and power, the gifts and virtues, of the individual life, the supremacy of reason and wisdom, and the harmony and perfectibility of the soul were cardinal points in their system. We begin with the Socratic identification of virtue and knowledge. For a man to know what he is doing and why—in a word, wisdom—this is his supreme possession. Without claiming to have discovered an abstract theory of the Good or the Wise, and while on the whole sceptical as to the possibility of such a discovery, Socrates provisionally conceived of the Good or the Wise as the faithful performance of the customary duties of life, and proclaimed that therein lay the secret of happiness. But what impressed his contemporaries was his independence of judgment and fearless criticism of conventional notions, rather than his love of knowledge. The result was the appearance of two opposing schools of thought—the Cynics, of whom Antisthenes and Diogenes were the notable figures, and the Cyrenaics, of whom Aristippus was the head. The watchword of the first was self-mastery—the practice of endurance and asceticism; that of the second, pleasure—the serene and untroubled pursuit of the pleasure of the moment, regardless of consequences. Neither to Plato nor to Aristotle was the practical conduct of life of such moment as the pursuit of truth and the ideal interpretation of the universe. With the advent of the Hellenistic period, about 300 B.C., the interest of the State or community became subordinated to that of the individual. The realism of Cynic and Cyrenaic was succeeded by the systems of Zeno and Epicurus, in which once more 'ethics is the end and goal; and an ethic, moreover, which looks only to the interest of the individual.' To Stoics and Epicureans the supreme interest is the possession of individual independence, the saving of one's own soul, and the ordering of life nobly and happily. The Epicurean doctrine (see EPICUREANS) was far from being a mere glorification of voluptuousness and immoral living. The picture given by Seneca of the Epicurean garden leaves on us the impression of a life of frugality and leisure—'plain living and high thinking.' The pleasure which Epicureanism regarded as the end of existence was not mere sensuality; it rather consisted, in its finer forms, of freedom from pain or disturbing elements (*ἀταραξία*). The pleasures of mind were nobler than those of body. It is not material enjoyments that are the givers of pleasure; 'it is sober reasoning,' says Epicurus in his letter to Menœceus, 'searching out the reasons for every choice and avoidance, and banishing those beliefs through which the greatest tumults take possession of the soul.' Another word that sums up the contented life is *αὐτάρκεια* ('self-sufficiency'), which was afterwards to be used in Christian ethics. 'We consider self-sufficiency a great good in order that, if we do not possess much, we may be satisfied with little' (Diog. Laert. x. 130 on Epic.). Nowhere do we find the spirit of Epicurean contentment so charmingly expressed as in the odes of Horace, the poet who, enamoured of his Sabine farm ('satis beatus unicis Sabinis,' *Odes*, II. xviii. 14) far from the haunts and din of city life, urges his friends to 'sweet content' ('desiderantem quod satis est,' *Odes*, III. i. 25), to calmness of outlook ('quid sit futurum cras fuge quaerere,' *Odes*, I. ix. 12) or to patient endurance:

'Aequam memento rebus in arduis
servare mentem' (*Odes*, II. iii. 1 f.).

In such phrases we discover the fascination of the Epicurean ideal 'of withdrawing from political and dialectical conflict to simple living and serene leisure, in imitation of the eternal leisure of the gods apart from the fortuitous concourse of atoms that we call a world' (H. Sidgwick, 'Ethics,' *EBr*[9]).

The Stoic conception of contentment may be summed up in the word *ἀπάθεια* ('impassivity'). The Stoic sage did not, like an Oriental *yogi*, regard all phenomena as illusions; nor did his essentially Pantheistic view of the universe destroy his sense of personal freedom and volition. Man can enter, by virtue of his gift of reason, into relationship with the Eternal reason. His one aim, indeed, is to live a life of reason, or, as the Stoic phrased it, a life 'in conformity with Nature.' Such a life is the true virtue, and is its own reward, quite apart from external goods or advantages. The average man conceives of pain, sickness, and death as evils; to the sage living the life of reason they are merely 'indifferent.' Human passions are only diseases of the reason. The sage 'will strive to keep the mastery over such faulty fancies, and be true to the consummate virtue,

which is passionless and calm.' Such is the Stoic *apathy*.

'It postulated,' says Capes (*Stoicism*, p. 49), 'not only the absolute supremacy of reason, but its rightful claims to be the only motive force within the soul, for it would make a solitude of all besides and call it peace; but it implied no torpor of ecstatic reveries and mystic contemplation, such as those which Eastern ascetics have enjoyed, in their attempts to close every pore and inlet of emotion, and to end almost in pure nothingness of individual being.'

This type of contentment is illustrated *passim* in the writings of the Roman Stoics—Seneca, Epictetus (see esp. the latter's chapter on 'Contentment,' *Diss.* i. 12 [Long's tr.])—and also in the *Thoughts* of Marcus Aurelius (cf. esp. bk. viii.).

3. **Christian.**—Before considering the Christian ideal of contentment, with which the Stoic found itself confronted in the early ages of Christianity, we may glance for a moment at the OT. The pure monotheism of the Hebrew saint and his unswerving belief in a Divine Providence shaped for him an experience widely different from those which we have considered above. The possession of God is his true wealth. 'The Lord is my shepherd; I shall not want' (Ps 23^{1}). Sadness, pain, exile, loss of wealth and property, drought and disease, were nought compared with his unshaken sense of God's presence and reality. Cf. the magnificent psalm of cheerful submission in Hab 3^{17-19}, which Cowper has reproduced in the well-known hymn, *Sometimes a light surprises*, or the memorable cry of resignation, 'The Lord gave and the Lord hath taken away; blessed be the name of the Lord' (Job 1^{21}). In the Wisdom books we find happiness associated closely with a common-sense view of life's limitations; *e.g.* Pr 15^{17} 17^{1} 19^{1} etc., or, more nobly, with the possession of wisdom (Pr 3^{13-19}). So far as the Prophetic writings are concerned, a clear apprehension of evils, social and political, a remorseless unveiling of injustice and oppression, and fierce invectives against idolatry, meaningless ritual, and false materialism, are combined with unswerving faith in the Divine guidance and in the ultimate victory of the Divine righteousness. The panic-stricken despair of the materialist is nobly contrasted with the calm of the monotheist in Is $30^{15ff.}$ (cf. art. 'Contentment' in *HDB*). Generally speaking, in the writers of the OT contentment is the fruit of faith.

In the NT the same association of contentment with belief in God is evidenced in the teaching of our Lord. The new feature is the sublime conception of God's Fatherhood. It is the Fatherhood of God which points Christ's warning against anxiety and adds an immortal beauty to the words in Mt. 6^{24-34}. Christ does not proclaim insensibility to the ills of life. He recognizes them, but calls upon us to live as children, to believe that God cares for us, and perfectly to trust the love, the wisdom, and the power of our Heavenly Father. This conception dominates the whole of His teaching. He uttered warnings against the love of wealth (Mt 6^{19}), against self-seeking (Mk 10^{40}), against social discontent (Lk 12^{13-15}),[1] and against selfish slothfulness (Mt 25^{24-28}). The last passage shows that Christ condemned inertia, while He praised activity when its end was not selfish but 'the Kingdom of heaven.' It was no part of His plan to encourage agitation against social and political evils, or against public institutions which were inimical to the highest interests of humanity; but He proclaimed the positive conception of the Kingdom of heaven, as an ideal of human life wherein the interest of the individual became one with the interest of the community; in other words, a corporate righteousness, the foundation of which was love binding individuals and classes together. The Christian conception of contentment never makes resignation to life's limitations and ills a mere passive attitude of the soul; submission to God's will in life and death is an energy or act of a sanctified will. Such it was in our Lord's acceptance of the cross as the will of His Father. Dante's words (*Par.* iii. 85), *e la sua volontate è nostra pace* (see the wonderful exposition of these words in Morley's *Life of Gladstone*, i. 215), give the secret of Christian calm.

[1] Cf. Paulsen, *System of Ethics*, p. 491, for relation of contentment to covetousness.

It is also to be noted that contentment in the NT is closely associated with the truth of immortality. St. Paul can cheerfully bear 'the sufferings of this present time' as 'not worthy to be compared with the glory which shall be revealed in us' (Ro 8^{18}). And it is this belief that differentiates his *αὐτάρκεια* ('self-sufficiency') from that of the Epicurean. 'His steadfast equanimity does not spring from contemplation of the great negative that life must soon end, but from the great positive that true life has no end' (Medley, *Interpretations of Horace*, 1910, p. 58, and cf. Lucretius, v. 1117 f.,

> 'Quod si quis vera vitam ratione gubernet,
> divitiae grandes homini sunt, vivere parce
> aequo animo').

Moreover, if, as Lightfoot suggested, there was a reference in St. Paul's epistles to the Stoic ideal of the sage and citizen of the world as alone possessing absolute wealth and freedom, that ideal is transfigured in the Christian experience. 'Already are ye filled, already ye are become rich, ye have reigned without us. We are fools for Christ's sake, but ye are wise in Christ; we are weak, but ye are strong; ye have glory, but we have dishonour' (1 Co 4^{8-10}). Cf. also the passage in 2 Co 6^{10} 'as sorrowful, yet alway rejoicing; as poor, yet making many rich; as having nothing, and yet possessing all things.' St. Paul's sublime inner resources, as being one with Christ and the sharer of His crucified and risen life, render him independent of outward conditions—'in everything at every time having every self-sufficiency . . . in everything enriched' (2 Co $9^{8.11}$); and finally, 'I have learnt in whatsoever circumstances I am to be self-sufficing . . . I have all strength in Him that giveth me power . . . I have all things to the full and to overflowing' (Ph $4^{11.13.18}$). The Stoic attains his universal kingship 'by self-isolation: the other by incorporation' (Lightfoot, *Philippians*, p. 305). 'Godliness with contentment (*αὐταρκείας*) is great gain' (1 Ti 6^{6})—thus does the Apostle sum up the wealth of the Christian saint. Heroism, patience, courage, endurance, whether we look for them in the annals of persecution and martyrdom, or in the daily round of common life with its constant cares and trials, may be regarded as the fruits of contentment, the *αὐτάρκεια* which inhabits what Wordsworth calls the

> 'central calm subsisting at the heart
> Of endless agitation.'

LITERATURE.—For the Oriental aspects of the subject two recent volumes, written from quite opposite points of view, may be consulted: L. de la Vallée Poussin, *Bouddhisme: Opinions sur l'histoire de la dogmatique* (Paris, 1909), and D. T. Suzuki, *Outlines of Mahâyâna Buddhism* (London, 1907). Of the former there is a concise summary in English: *Buddhism*, a tr. published by the C.T.S. in the series *Lectures on the History of Religions*. Besides works quoted there are also to be named: W. W. Capes, *Stoicism* (Lond. 1880); W. L. Davidson, *The Stoic Creed* (Edin. 1907); W. Wallace, *Epicureanism* (Lond. 1880); R. W. Dale, *Laws of Christ for Com. Life* (Lond. 1885), p. 157 f.; F. Paulsen, *Syst. of Ethics* (Eng. tr., Lond. 1899), pp. 491 and 503; H. Sidgwick, art. 'Ethics,' in *EBr*[9] and *Outlines of Hist. of Ethics*, Lond. 1886 (where *EBr* art. is considerably altered and enlarged); J. B. Lightfoot, *Philippians*[4], Lond. 1878 (Essay on St. Paul and Seneca).

R. MARTIN POPE.

CONTINGENCY.—The term *contingentia*, as applied to that which is actual and accidental in contrast to that which is logically necessary and in accordance with law, originated with the Schoolmen. The idea involved goes back, however, to the problems of Greek philosophy. The thinkers

of Greece, once they had discovered the significance of general conceptions, and of the order of things typified thereby, came to distinguish between the world which moves in accordance with these conceptions and that which is not wholly determined by them. The former, at this stage of thought, was identified with the sphere of the heavenly bodies, the latter with the sublunary world, where the rigid sway of law—the authority of form and conception—was circumscribed by accident and anomaly. It was only upon a basis of materialism that Democritus was able to trace a rational order throughout the entire universe, while Heraclitus, the Eleatics, and the Stoics did the same only in virtue of their pantheistic principles. The philosophy of the Church, on its metaphysical side, attached itself, not to the two last-named schools, but to Aristotle and the Neo-Platonists. In this way it also took over the idea of 'contingency'; and accordingly we find it urging, now, with Aristotle, the imperfection of the lower sphere, and now, with Neo-Platonism, the disorganization of the pure Idea by matter and sense. In the ecclesiastical philosophy, moreover, the term 'contingency' acquired a new meaning from its connexion with Judæo-Christian Theism. It was now used to express the volitional nature of the Creator, who is not limited by universal laws, but actually reveals the most profound elements of His being in the contingency of what eludes these laws. Thus, as Conceptual Realism (*universalia ante res*) evoked counter-movements of an empirical character, and interest in maintaining the freedom of the Divine will tended to strengthen them, there arose in Scholasticism various attempts to reconcile the validity of the pure Idea with a recognition of the actual—compromises which ranged from the specifically Aristotelian systems to Mysticism and Nominalism.

Not until the dawn of modern philosophy was there a revival of the pantheism of Heraclitus and the Stoics, as represented in the philosophies of Nature that sprang up with the Renaissance; and, as it came to be recognized, in consequence of the newer investigation of Nature, that the laws of the sidereal world are identical with those of the lower sphere, there arose a fresh wave of pure Rationalism which excluded contingency. Then the mathematico-physical interpretation of the world, with the system of Spinoza in the forefront, made this revived Rationalism supreme. All the more vigorous, however, was the reaction of that Empiricism which, with its insistence upon the fact of contingency, took shape in the hands of Locke and Hume, of Leibniz and Kant; for, in spite of the fundamental Rationalism of the latter two thinkers, the one distinguished between the *vérités de raison* and the *vérités de fait*, the other between the rationality of the categories and the contingency of the matter of experience. The problem having thus been placed upon the new basis of a universal cosmic order, the Aristotelian view of contingency as confined to the sublunary world was, of course, discarded, as was also the Neo-Platonic identification of contingency with the irrationality of matter and sense. But contingency emerged once more in connexion with a general cosmical movement in epistemology and metaphysics, as the term was now used to signify the irrational factor beside and within the rational, and as the idea came into immediate touch with the questions regarding the conception of Deity; the thought of a creative will which acts without motive was pitted against that of a logical necessity by which the world proceeds from the Idea. It was in these controversies that the full significance of the conception of contingency was at length realized.

The various aspects of the problem must be considered in detail, as follows:

1. The difference between the universal and necessary categories of thought and the facts embraced, unified, and controlled by these categories.—The facts, as such, are irrational and contingent. We cannot comprehend why this or that should exist; and, even if any particular thing be rationalized in virtue of its derivation from another, yet that other itself remains contingent. Should it be affirmed, however, that the whole manifold of phenomena can logically be deduced from the fact of the world as a whole,—a consummation which as yet is not even remotely possible, and remains at best a logical postulate,—nevertheless, the existence of the world itself would still remain irrational and contingent. The truly incomprehensible thing, as D'Alembert puts it, is that anything should exist at all. Here, in fact, we have the reason why metaphysics must, in the ultimate resort, refer the existence of the actual to the arbitrary fiat of Deity, precisely as was done by Augustine and the Nominalists, and, in another form, by the modern theories of Schelling and von Hartmann. Yet even so decided a rationalist as Descartes fell back upon the same explanation of the world as a whole.

2. **The contingent elements in rational and logical necessity itself.**—The so-called 'cosmic law,' 'cosmic idea,' and 'cosmic unity' are never more than phantasms of the mind, or postulates, and are incapable of actual realization. The objective fact is in reality a number of laws operating together, by the simultaneous application of which to the particular the latter becomes intelligible. But this very plurality of laws makes the laws themselves contingent, alike in relation to one another and to the ideal of the one supreme cosmic law. Then there is the further difficulty of depicting the manner in which the real is controlled by the laws. If we are not prepared to fall back upon the myth of Plato's Ideal world, or of Scholastic Realism,—as is instinctively done nowadays by most of those who make much of the idea of law,—we must interpret the laws of Nature as primarily of subjective import, *i.e.* as lending order, form, and perspicuity to the facts—an import which is undoubtedly involved in the orderly nature of the world, though we cannot see how. This procedure, however, introduces an excessive degree of arbitrariness and contingency into the idea of law. And if we seek, with the modern idealism of Kant and Fichte, to explain the agreement of law with reality on the theory that the world is generated by consciousness, yet the fact remains that the application of the laws which regulate the world, and are to be regarded as forming an organized unity, is in all cases gnided by some particular interest of the mind engaged, and consequently furnishes a rationale, not of the entire reality, but only of that special aspect favoured by the interest in question. Such a selective and isolating procedure, however,—and no other is possible,—also involves an element of contingency.

3. **The idea of individuality.**—Even if we assume the existence of a universal rational order, yet we must admit that every single concrete phenomenon found in this network of rationality has a certain individual content, *i.e.* it cannot be fully explained by universal laws, but always exhibits some special and distinct element not derivable therefrom. This holds good alike of the simplest natural event and of the most delicate complex of psychical life. As a matter of fact, the universe itself and its development do not form a particular case of a general conception, but are absolutely unique. The problem of individuation is therefore identical with the problem of contingency in its general sense. The fact of individuality plays havoc with every

system of thoroughgoing rationalism, which accordingly usually endeavours to deny or ignore the existence of the particular, or to interpret it as something else. This is what Leibniz means when he says that Spinoza would be right if there were no monads.

4. The problem of the new.—On the principles of a purely rational system, nothing new could ever emerge in the world of the real. Everything would be involved in the existence of the whole, and therefore eternally present therein; or the apparently new would be only a phase and form of forces always present in unvarying quantity. It is clear, however, that on either alternative the new is got rid of by a mere evasion. In the first case, it still persists as something that has emerged in the process of development, as that which distinguishes the actual from the potential; in the second, as appearance and manifestation. A thoroughgoing rationalism must, like the Eleatic school, repudiate movement and becoming altogether, for, if it does not, then the admission that something has come into existence which was not contained in the antecedent situation implies an element of contingency. Hegel, in importing into the rationality of the Idea the principles of negation and transition to the antithesis, and in basing metaphysics on the principle of becoming, really, though surreptitiously, provides a place in his system for the contingent and irrational. Metaphysically expressed, this contingent element is the idea of creation and 'positing,' which is here applied to the particular in the same way as to the universe in § 1 above. Epistemologically expressed, it is the idea of a causality of non-equivalence, as opposed to the causal equivalence with which alone a consistent rationalism can be satisfied. In the causality of equivalence the nexus signifies identity of essence, with a mere change of form. In causal non-equivalence the nexus provides a place for the new. The endeavour to reduce all our knowledge of causes to the former category is hopeless, and accordingly an element of contingency clings to the conception of causality itself.

5. The connexion between contingency and freedom.—Freedom, in the sense of self-determination by universal laws, and our concurrence therewith, as contrasted with the haphazard of a purely psychical motivation, involves *per se* no contingency whatever. On the contrary, as determination by universal moral and social law, it forms the true germ of the conception of law in general, which is first of all realized in the personal sphere, and then transferred to the uniformities of the world-process. In reality, however, the causal 'must' of the process of things, when judged by the absolute standard of ideal values, manifests itself as something contingent. For, if these values represent the true significance of the existent, it is impossible to see why they should demand for their realization this particular sphere of causality. Moreover, freedom, in the sense indicated, implies the exclusion of absolute rational necessity from that sphere of objectivity which is at once the base and the theatre of its activity, since it demands, in the order of things, a certain elasticity, in virtue of which it may intervene in the manifold and mould it to its own ends. From this side also, therefore, an element of contingency insinuates itself into the conception of universal laws—a conception which is thus once more shown to include an element of the merely actual, and to be no longer a conviction of the absolutely valid. In relation to the ideal of universal necessity, interrupted or variable laws are contingent. Here, in fact, we touch the grounds, as well as the limits, of determinism, which is never more than a deduction from the axiom of the absolute rationality of things, and never reaches the level of a truth scientifically proved.

6. Contingency in the ideas of freedom themselves.—While the ultimate cognizable source of the idea of law, and, therefore, of unconditional necessity also, lies in the ideas of freedom, absolute value, and validity, yet the particular elements of that ideal order cannot be regarded as in themselves necessary. Our observation does not carry us beyond an actual control of the soul by ideas bearing this or that interpretation, but we can never derive these from the conception of absolute necessity. As regards their form, moral ideas may be unconditionally necessary, but their content is dependent upon the actual conditions of human life. Here we come upon the root of the old Scholastic controversy whether the moral laws are good because God wills them, or whether God wills them because they are good. We thus see that the idea of contingency pierces even to the deepest sources of all ideas of necessity.

The problem of contingency, then, in its various aspects, contains *in nuce* all the problems of philosophy, just as from the opposite side they are all contained in the problem of Rationalism. The question of contingency is in reality the question as to the relation of the irrational to the rational, of the actual to the logical, of creation to the eternity and necessity of the world. The reconciliation of these opposites is impossible. The actual thinking activity of man consists in a continuous combination of the antitheses. Absolute Rationalism, with Pantheism as its logical conclusion, and absolute Irrationalism, with its logical consequence of the irrelation and incoherence of things, or Polytheism, are alike impossible. The final synthesis does not lie within the scope of human thought, and all attempts to reach it lead to contradiction.

In its religious aspect, the idea of contingency implies the vitality, multiplicity, and freedom of the world in God, and, indeed, the creative freedom of God Himself; while Rationalism, on the other hand, signifies the unity of the world, the supremacy of the super-sensuous, the comprehension of all things in a universal Divine law. Here, again, the logical solution lies beyond us. In actual practice, it is true, Judæo-Christian Theism takes cognizance of both sides at once, and is therefore, speculatively, the most fertile religious principle. Even that interpretation, however, has its incoherences and its contradictions. But, in the last resort, it remains to be said, such antinomies are ineradicably present in every anti-theistic system as well—in Pantheism and Nominalistic Empiricism alike.

E. TROELTSCH.

CONTINUITY (Gr. *συνέχεια, τὸ συνεχές*; Lat. *continuatio, continuum*).—We may perhaps distinguish three stages in the history of the notion of continuity: (1) a pre-scientific stage, in which the notion is no more than a simple description of certain obvious facts of sense-experience; (2) a second stage, in which scientific philosophy first arrives at an apparently clear and distinct conception of the continuous as a peculiar kind of magnitude which cannot be divided into units. This stage of reflexion makes its appearance for the first time in the Eleatic criticism of the assumptions of Pythagorean Geometry, and culminates in the Philosophy of Aristotle, in which the conception of a 'uniform continuous motion' is central for the whole doctrine of Nature.

Mathematically, it leads to the sharp contrast between Arithmetic as the science of non-continuous, and Geometry as the study of continuous, magnitude, which we find carried out in the elements of Euclid. (3) The third stage, represented by the labours of the 19th cent. mathematicians, and embodied in such theories of the continuous as those of Dedekind and Georg Cantor, consists essentially in the attempt to develop, by means of an extension of the notion of number, a purely arithmetical conception of the continuum, and so to restore the correspondence, broken down by Eleatic criticism, between Geometry and Arithmetic. That the new mathematical conceptions must, as they become more widely known, exercise an important influence on the development of philosophical thought in general is clear, though it is perhaps yet too early to predict the precise form which that influence will take.

1. The primary notion of continuity.—Here, as in all study of the technical concepts of science, we have to begin by going back to the history of Greek thought in its expression in language. As abundant evidence proves, the primary notion implied by *συνεχές* is 'having nothing between,' 'presenting no sensible gap,' 'hanging together.' Thus, with reference to space, we find Thucydides speaking of the siege-works at Platæa as *ξυνεχῆ οἰκήματα*, 'buildings without a gap,' which, as he goes on to say, looked like an unbroken wall (iii. 21). So, with reference to time, in the medical writers of the 5th cent. *συνεχεῖς πυρετοί*, 'non-remitting fevers,' are distinguished from *διαλείποντες πυρετοί*, 'periodical fevers,' and in Thucydides (v. 85) a *ξυνεχὴς ῥῆσις*, or 'uninterrupted address,' is contrasted with a free conference, in which each point made by one party is immediately answered by the spokesman of the other. In all these cases we are dealing with a simple experience not yet coloured by scientific reflexion. Every one knows the difference between an unbroken line and a series of dots with sensible intervals between them, between a steady persisting pain and one which comes and goes, between the flight of a missile and that of a bird. The former seem to 'hang together,' the latter do not; and it is this sensible 'hanging together' which the plain man has in mind when he speaks of the former as 'continuous.' So far no distinction has been made between a 'continuous' and a 'discrete' kind of magnitude, one which cannot, and one which can, be broken up into ultimate units, themselves indivisible. The plain man, for instance, would not object to talking of a 'continuous' series of integers (*e.g.* those from 1 to 10), though he commonly looks on an integer as a 'collection of ones' (exactly as Aristotle did). He would call the series 'broken' only if one of the members were left out.

2. The Pythagorean Mathematics and the Eleatic criticism; views of Plato and Aristotle.—Serious reflexion on the presuppositions involved in the notion of the 'unbroken' first meets us in the criticism of the Eleatic philosophers of the 5th cent. on the mathematical and cosmological views of their Pythagorean neighbours. Amid all the uncertainty which surrounds the reconstruction of early Pythagoreanism, one thing seems certain. The Pythagoreans were primarily interested in Arithmetic because they saw in it the key to the interpretation of Nature. In particular, they looked on Geometry, the foundation of all genuine physical science, as an application of Arithmetic. 'Things are made up of numbers' because they are endowed with geometrical form and magnitude, and are therefore ultimately made of points, and a point is simply a 'unit having position' (*μονὰς θέσιν ἔχουσα*). The point differs from the 'unit,' or 'number 1,' only in the additional peculiarity that it 'has position.' Hence, since a whole number (*ἀριθμός*) is simply a 'collection of units,' and since a geometrical figure is a collection of 'units having position,' there is an absolute correspondence between Arithmetic, the science of number, and Geometry. This is why, in the Pythagorean scheme of the sciences, retained by Plato in the *Republic* and *Epinomis*, Arithmetic is made to take precedence of Geometry. The later arrangement, followed by Euclid—in which Geometry, so far as it can be pursued without the study of incommensurables, comes first (bks. i.–iv. vi.), Arithmetic next (bks. vii.–ix.), and then the theory of surds (bk. x.)—is due to the effects of the criticism of which we have now to speak.

The Pythagorean doctrine itself led very directly to consequences which were fatal to its own assumptions. If lines are simply made up of an integral number of 'units,' it ought to be possible in theory to answer the question how many points there are in any given terminated line. In other words, all lines ought to be commensurable, since the 'unit' measures them all without remainder, just as any two integers, even if prime to each other, yet have 1 as their G.C.M. But an immediate consequence of the 'Pythagorean theorem' (Eucl. i. 47) itself is that there is no assignable whole number of 'units' in the base of the equilateral right-angled triangle. In other words, $\sqrt{2}$ is incommensurable with any integer. If the Pythagoreans employed a strictly scientific method for their crowning achievement—the inscription of the dodecahedron in the sphere—they must likewise have known the construction of the 'golden section' (Eucl. ii. 11), which introduces us to another 'irrational' magnitude, $\sqrt{5}$. The legends which assert that Hippasus of Rhegium was drowned by the brotherhood for revealing one or other of these facts show how acutely the Pythagoreans felt the contradiction between their assumption and their conclusion. Hence, it is not wonderful that their critics should have pressed it to the utmost. Parmenides (fl. *c.* 475 B.C., according to Plato) had already attacked their fundamental position by asserting in his poem that, since *μὴ ἐόν* ('what is not,' 'empty space') is a pure unreality, *τὸ ἐόν* ('what is,' 'body') cannot be divided at all, because it is *ξυνεχὲς πᾶν* ('all hanging together'), and *ἐὸν ἐόντι πελάζει* ('what is touches what is'). In other words, a body cannot be made up of 'units.' Similarly he had denied the reality of all temporal succession. Time is not made up of 'moments,' because what is 'never was and never will be, since it is *now*, all at once, one, unbroken' (*ἐπεὶ νῦν ἔστιν, ὁμοῦ πᾶν, ἕν, συνεχές*). This conclusion would be immeasurably strengthened by the discovery of surd or 'irrational' lengths (*i.e.* lengths which have not, to the unit of measurement we assume, the *λόγος*, or *ratio*, of one whole number to another). We may put the difficulty thus. The Pythagorean conception of the point as a 'unit' of length involves the view that, if on a terminated straight line AB we mark off points corresponding to the successive integers, we have only to make our unit of length sufficiently small (*i.e.* to take our successive points near enough together) to exhaust all the points of the line. The discovery of a single 'surd' length is enough to show that this is false. However close together we take our points, we shall never have included one which lies from the origin at a distance equal to the diagonal of a square on the 'unit' length; or again, there will not be among them any point at which a straight line is divided in 'extreme and mean ratio.' Such a conclusion would, of course, be destructive of Geometry, because it would invalidate some of its most fundamental constructions. How far the study of surds was advanced

in the 5th cent. we do not know, but probably not far, since in the *Theætetus* (p. 147 D ff.) Plato assumes the discovery of the successive quadratic surds from $\sqrt{3}$ to $\sqrt{17}$ to have been a recent achievement of his friends, Theodorus, Theætetus, and the younger Socrates. Plato and his school are known to have given much attention to the subject, which was especially advanced by Theætetus, and an incidental reference in the early Peripatetic tract on 'Indivisible Lines' shows us that they had already examined and named at least two of the types of surd expressions studied in Euclid x.—the ἀποτομή and the ἐκ δυοῖν ὀνομάτοιν.

But, even without the explicit study of surd magnitudes, results equally fatal to the Pythagorean identification of Geometry with applied Arithmetic can be derived from the argument from infinite divisibility, and it was this argument which was specially pressed home by Parmenides' pupil, Zeno of Elea (fl. *c.* 450, according to Plato). To appreciate Zeno's employment of the argument, we need to bear in mind that what the Greeks called ἀριθμός is always a natural whole number or integer. (Even in Euclid, the notion of a rational fraction does not occur. What we regard as rational fractions he always treats as *ratios* of one integer to another.) Now, argued Zeno, any length, however small, can be bisected, but no number of repeated bisections will ever leave us with an indivisible 'unit,' but only with a length which can be bisected again. Or, since the argument shows that the 'units' in any length must be infinitely numerous, if the 'unit' has any magnitude at all, every length will be infinite, while, if we take the 'units' to be zeros, every length will be infinitely small, since the sum of an infinity of zeros is still zero. Yet again, if a point has magnitude, the addition or subtraction of one point will alter the length of a line, while, if the point can be added or subtracted without affecting the length of the line, it has no magnitude, and is nothing at all (see the fragments of Zeno in Diels, *Vorsokratiker*[2], i. [1906] 130, 133 f.). The famous 'paradoxes' of Zeno, dealing with the concept of motion (for which see Diels, *loc. cit.* p. 131 f.; Burnet, *Early Gr. Philosophy*[2], pp. 366–369; Milhaud, *Les Philosophes-géomètres de la Grèce*, pp. 130–140), are all aimed at the same notion of space and time as made up of minima of length and duration, and, as against this conception, are unanswerable. They do not, however, really prove all that Zeno meant they should.

From Plato (*Parmenides*, 128 D) we learn that Zeno's object was to 'reinforce' the doctrine of Parmenides that 'the All is One,' by showing that the rival theory that it is Many leads to absurd results. He meant, then, to show that space and time cannot be continua of points or moments. All that he really proved was that they cannot consist of points or moments which themselves have magnitude, that the 'elements' of a continuum cannot be 'units' homogeneous with the continuum constructed out of them. He has, in fact, shown that there must be more points on the line, more moments in the shortest lapse of time, than there are members of the series of natural numbers, or, what comes to the same thing, that, though every continuum is infinitely divisible, infinite divisibility is not an adequate criterion of continuity. He has not shown that the number-system itself is not capable of an extension which would make it possible to establish a genuine one-to-one correlation between its members and all the points of a terminated straight line. Since, however, the Greeks had no conception of any method of constructing numbers other than the adding of successive units to an aggregate, the effect of Zeno's criticism was, in time, to effect a complete revolution in their conception of Geometry. Plato, indeed, clings to the old view of number as the foundation of Geometry, but that was probably, as we shall see, merely because he did not share the common view which identified number with whole number. But the Academy, whose results are represented for us by the work of Euclid (the last of a series of στοιχειωταί, all whose predecessors seem to have been connected with the Platonic school), re-arranged the curriculum of Mathematics in a way which can have been due only to the Eleatic criticism. In the final form given to the στοιχεῖα, or A-B-C, of the subject by Euclid, Plane Geometry comes first (bks. i.–vi.), embracing the theory of Proportion as re-cast by Eudoxus, so as to make it applicable to incommensurables and commensurables alike (bk. v.), then Arithmetic (where all the magnitudes are *ex hypothesi* commensurable [bks. vii.–ix.]), then the study of Incommensurables (which, for the Greeks, meant expressions involving quadratic surds [bk. x.]), finally Solid Geometry, culminating in the inscription of the dodecahedron (bks. xi.–xiii.). The effect is that the question of the commensurability or incommensurability of the lines dealt with is never raised in the books which treat of Plane Geometry. Only once does Euclid in these books explicitly undertake the construction of a surd magnitude—viz. in ii. 11, the construction of the 'golden section,' which had to be dealt with early because it is required for the inscription of the pentagon (iv. 11), and this in its turn for that of the dodecahedron (xiii. 17). In ii. 11 alone is it tacitly presupposed that a straight line possesses a continuity which is more than the capacity for being infinitely divided into aliquot parts, and it is interesting to see that the scholia to the proposition (Euclid, ed. Heiberg, v. 248–251) specially call attention to the fact that the 'problem cannot be represented by numbers,' 'is not explicable by counters.' We may note that the researches of the Academy into 'irrationals,' as represented by Euclid x., do not go beyond the consideration of various types of surds involving the extraction of a square root. This limitation is, in fact, the theoretical counterpart of the practical restriction to constructions which can be carried out with ruler and compass, for 'an analytical expression is capable of construction by ruler and compass only when it can be derived from given magnitudes by a finite number of rational operations and square roots, since the intersection of two straight lines, of two circles, of a straight line and a circle, is always equivalent to a rational operation or the extraction of a square root' (F. Klein, *Vorträge über ausgewählten Fragen der Elementargeometrie*, Leipz. 1895, *ad init.*). A further discovery of the 5th cent., which, if it could have been followed up, would have been even more fatal to the old arithmetical treatment of Geometry, was that of the so-called *quadratrix* (τετραγωνίζουσα), made by Hippias of Elis. This curve, which gets its name from the fact that, if it could be mechanically described, it would solve the problem of 'squaring the circle,' has for its equation in polar co-ordinates $\rho = \frac{\omega}{\sin \omega} \times \frac{2R}{\pi}$, and is thus the first example in Greek mathematics of a transcendental function.

Summing up, we may say that the actual effect of the Eleatic criticism was to establish a sharp distinction between number, as composed of 'units,' and μέγεθος ('continuous magnitude'), which has no 'unit' or 'minimum.' A number is simply πλῆθος μονάδων, an 'aggregate of ones' (Euclid vii., def. 1, 2), and consequently any two numbers have a 'common measure.' The straight line, being infinitely divisible into lesser straight lines, has no 'unit,' and hence two such lines often have no

'common measure,' and are therefore incommensurable. The point is put very clearly in the introductory scholium to Euclid x. (Heiberg, v. 415):

'The Pythagoreans first began to investigate commensurability, being the first to discover it from their study of numbers. For, whereas the number 1 is a common measure of all numbers, they failed to find a common measure of magnitudes (μεγεθῶν). The reason is that any number, however you divide it, leaves you with a least part which admits no further division. But no magnitude, though you divide it *ad infinitum*, leaves you with a part which is a minimum . . . but only with a part which can itself be divided *ad infinitum*.'

Thus, owing to the criticism of Zeno, infinite divisibility came to be regarded as the sufficient criterion of continuity. In language the effect of the polemic was that the old definition of the point as a 'unit with position,' which we know to be Pythagorean, was replaced by that which now stands at the opening of Euclid's *Elements*, 'A point is that which has no parts' (σημεῖόν ἐστιν οὗ μέρος οὐθέν). In thus being indivisible the point does not, of course, differ from the 'unit,' or 'number 1' (μονάς) (cf. Plato, *Republic*, 525 E), but it can no longer be called μονάς, because it is now clearly seen that, unlike the 'unit,' the point cannot be a 'measure' of anything. Hence in Plato and Aristotle μονάς always means the *number* 1; for 'point' Aristotle always says σημεῖον or στιγμή, while Plato (see Aristotle, *Metaph.* A 992^a, 21) employed the designation ἀρχὴ γραμμῆς, 'the beginning of the line.' There are perhaps still perceptible traces of 5th cent. opposition to the consequences which Zeno had drawn from infinite divisibility. Protagoras, like Zeno, a member of the Periclean circle, argued, in 'refutation' of the geometers, that a circle and tangent have a stretch, not a single point, in common (Aristotle, *Metaph.* B 997^b, 35). This looks like an attempt to deny the infinite divisibility of the line, and to identify the *minimum visibile* with the unit of extension, and thus to get rid of the notion of incommensurability. Hence it may be, as Burnet has suggested (*op. cit.* 188), that the formula Protagoras chose for his relativism, 'Man is the *measure* of all things,' was influenced by opposition to the new doctrine of magnitudes which have 'no common measure.' The anti-mathematical argument of Protagoras led to a rejoinder from his greater townsman Democritus, in the catalogue of whose works drawn up in the 1st cent. A.D. by Thrasyllus we find one on 'the contact of the circle and the sphere,' and another on 'irrational lines.' According to Plato and Aristophanes (*Clouds*, 144 ff.), who are unwillingly confirmed by Xenophon (*Mem.* IV. vii. 3, 5), Socrates, too, was among the mathematicians, and it may be noted that in the three chief places where Plato makes him exhibit mathematical interests (*Meno*, 82–85 B, *Theætetus*, 148 AB, *Republic*, 546 BC) a problem involving surd magnitudes is, in each case, under consideration.

Plato's attitude towards the problem raised by the discovery of surds, and the recognition that the infinitely divisible cannot be made of 'units,' is, at first sight, perplexing. He is deeply interested in the study o surd expressions, and fully aware of the infinite divisibility of μεγέθη, but refuses to take the step of severing Geometry from Arithmetic, and of selecting elementary Plane Geometry (which can be studied without any reference to the existence or non-existence of 'units') as the subject with which Mathematics should begin. To the last he insists that Arithmetic, the theory of numbers, is the foundation on which all other branches of Mathematics should be based, and the clue to their meaning. We can exempt him from the charge of inconsequence only by supposing that his retention of Arithmetic as the corner-stone of Mathematics was due to a conviction that 'number' is not exhausted by the series of the natural numbers, the μοναδικοὶ ἀριθμοί, or numbers made up of units, which Aristotle always asserts are the only numbers there are. If the concept of number be widened so as to take in the surds, so Plato probably thought, we may still adhere to the notion of one-to-one correspondence of the points on a terminated line with the members of the number-series, without incurring any of the difficulties which were fatal to the old Pythagorean geometry. (Just so, our ordinary Analytical Geometry rests on assuming such a correspondence of the points of the line with the complete series of the real numbers.) That Plato had formed some such conception of a possible extension of the concept of number seems clear from more than one consideration. The suggestion, as Milhaud has shown (*op. cit.* bk. ii. ch. 5), explains why Aristotle regards it as a capital point against Plato to insist that there is no way of generating numbers except by the addition of units, and why so much is made in *Metaphysics* M of the complaint that the 'numbers' of which the Platonic 'Ideas' are composed are not all συμβλητοί, commensurable with one another. Aristotle is, in effect, complaining that Plato's theory presents us with expressions like $\sqrt{2}$, $\sqrt{3}$, $a+\sqrt{b}$, and the like; whereas he himself holds that there is no place for them in the number-series, just as Euclid is always careful to speak of such magnitudes as μεγέθη, and to symbolize them by straight lines and rectangles. Positive evidence to the same effect is furnished by a remarkable passage of one of Plato's latest works, the *Epinomis*, the point of which is to maintain that all Mathematics is really the study of the generation and properties of numbers (*Epin.* 990 C ff.). We are particularly told here that the names 'geometry' and 'stereometry' are altogether misleading, and the former is said to be 'extremely absurd.' 'Geometry' is 'manifestly an assimilation, effected by reference to surfaces, of numbers which are not in their own nature similar'; and 'stereometry' is the 'study of numbers raised to the third power, and similar to the nature of the solid, where again those which are dissimilar are made similar by a further device.' (The passage should be read in Burnet's edition, the only one in which the text has not been perverted by editorial dullness.)

The passage just quoted represents the highest development of the Platonic theory of number. It is clearly an attempt to vindicate for the number-series itself the same character of a continuum as that which belongs to the straight line, by finding room in it for numbers answering to the irrational lengths of Geometry. If we followed out Plato's suggestions in his own spirit, what they would lead to would be something of the following kind. Taking a terminated straight line, we might first assign the co-ordinates 0 and 1 to its end-points. Then, by infinitely repeated division, we should get one and only one point corresponding to each rational fraction between 0 and 1. Then, by inserting further points corresponding to all the irrationals between 0 and 1, we should obtain points corresponding to the whole series of algebraic numbers. The resulting number-series would not, however, exhaust the points on the line, and would therefore not possess the continuity of the point-series, since it would contain no terms whose co-ordinates are transcendental numbers, though it would contain an infinity of points not obtainable by the process of repeated division.

Aristotle's statement that Plato refused to speak of 'points,' but called them instead 'the beginning of the line,' seems to indicate another attempt to face a difficulty inherent in the current conception of whole number. From the earliest times of Pythagoreanism downwards, we find it regularly assumed that the number-series must begin with 1,

the 'unit.' But the criticism of Zeno had shown that we cannot think of the 'point' as a 'unit length.' If the correspondence between Geometry and Arithmetic is to be kept up, as Plato wished it to be, we must begin our number-series with something which answers to a zero of magnitude in Geometry; the first number must be 0, not 1. It was, no doubt, this character of the point as a zero which led Plato to avoid recognizing it as a distinct entity, and to call it 'the beginning of the line.' It seems most probable, however, that he did not clearly draw the right conclusion that, in the same way, 0 is the beginning of the number-series. More probably he thought of the point, as Xenocrates is known to have done, as an 'infinitesimal line,' and must be added to the list of thinkers like Leibniz, who have been led astray in their theory of the continuous by this phantasm of a thing which is somehow at once something and nothing.

Further interesting contributions are made to the theory of continuity in the puzzling dialogue *Parmenides*. Without raising the question of the purport of the dialogue as a whole, we may note the references made in its antinomies to the difficulty of regarding a continuum as constructed out of real elements. We may take first the treatment of 'contact' (p. 148 D ff.). When a number of things are in contact, each 'lies next to' (*ἐφεξῆς κεῖται*) that which is in contact with it; *e.g.* if a straight line is made up of distinct 'units' in contact with one another, the units must leave no gaps between them, and each must have a definite 'next adjacent' unit. In modern phraseology, the line must be a 'well-ordered' assemblage of points. Hence, in a series of n members there must be $(n\text{-}1)$ contacts. It is therefore inferred that, 'if there is not *number* in *τὰ ἄλλα*' (the things 'other than the One,' 'the Many'), the 'One' cannot 'be in contact with them.' For Geometry this plainly means that, if the points on the line are not 'units' (and the criticism of Zeno had shown that they are not), no point on a line has an immediately adjacent or next point. Since every integer *has* a *next* integer in the actual number-series, this means that the points on a terminated straight line, taken in the order of their distances from one of the end-points, cannot be symbolized by the series of integers. Continuity, as exhibited in the line, must be something other than the mere unbroken succession of the whole number-series 1, 2, 3, . . . n, . . . Later on (155 E–157 B), we have an argument to show that the very concept of change leads to the thought of time as a series of 'moments' which have no duration, just as the points on a line have no extension. When a body which was moving comes to rest, or *vice versa*, there is a transition from the one state to the other. This cannot take place 'in time,' *i.e.* there is no interval, however small, in which the body is neither moving nor at rest, but passing out of motion into rest; in any given interval it is either moving or stationary. Hence the transition occupies no duration, but happens instantaneously, and we are compelled to form the 'paradoxical' (*ἄτοπος*) conception of the 'instantaneous' (*τὸ ἐξαίφνης*). The paradox seems to lie in the fact that it is hard to decide whether the moment at which the velocity 0 is reached should be counted as the last moment of motion or as the first moment of rest. We must, in the one case, think of the time during which the body moves as having no last moment, in the other of the time during which it is stationary as having no first moment—an immediate consequence of the consideration that no moment has a 'next' moment.

In Aristotle we meet with none of the anticipations of a riper thought which fascinate us in Plato, but we have, by way of compensation, a very explicit account of continuity, in so far as infinite divisibility may be taken as a sufficient criterion of it. The notion is fundamental in the Aristotelian system, because the steady and uninterrupted process of the development of latent potentialities into actualities, which, for Aristotle, constitutes 'Nature,' depends in the last resort upon the uniform and continuous movement of the heavens, and continuous movement demands the continuity of time and space. Hence any denial of the continuity of extension, duration, and movement is fatal to Aristotle's whole *Naturphilosophie*. The tract on the *Categories* gives us the general view current in Academic circles and presupposed by the more special discussions in Aristotle's discourses on 'Physics.' *τὸ πόσον* (*quantum*) has two species —*τὸ διωρισμένον* (elsewhere also *τὸ διαιρετόν*), 'the discrete'; and *τὸ συνεχές*, 'the continuous.' The vital difference between them is that the 'parts' (*μόρια*) of the 'discrete' *quantum* have no *κοινὸς ὅρος*, or 'common boundary,' at which they join; *e.g.* 10 (for Aristotle always confuses the number *of* a collection with the collection itself, and many of his attacks on Plato arise from inability to see that, though there are many pairs of things in the world, there is only one number 2, and this number itself is not a 'pair') consists of 7 + 3, but no one of the 'units' of the 7 is identical with any unit of the 3. But the 'parts' of a 'continuous' *quantum* always have such a 'common boundary,' which, in the case of the line, is a point; *i.e.* when the terminated straight line AB is divided at C, the writer reckons C as belonging both to AC, of which it is the last point, and to CB, of which it is the first, thus illogically counting the one point C twice over. Similarly with time: the present moment 'joins on' (*συνάπτει*) both to the past and to the future. It may be taken either as the first or as the last moment of an unbroken time-series. This is the really important point in the distinction drawn for us between the two kinds of *quanta*, since it implies, of course, that the *συνεχὲς πόσον* or continuum is infinitely divisible, and therefore does not consist of units or minima. It is added that not all continua are composed of parts which 'have position'; *e.g.* since the past, present, and future are not all co-existent, no part of time is 'anywhere' relatively to the rest. The parts have not position, but only 'order' (*τάξις*), and *so* far resemble the members of the whole number-series. (We must not, of course, press this analogy too far, since it would lead to the view that the 'parts' of time form a 'well-ordered' aggregate, in which each term has an immediately next term. Time would then be made up of minima of duration, and would *not* be continuous in the writer's sense [*Categories*, 5^b–6^a].)

More characteristic is the account given in *Metaphysics* Δ 1020^a, 7 ff. — *πόσον* (*quantum*) means 'that which can be divided into constituents inherent in it, whereof each is one and "this"' (*τὸ διαιρετὸν εἰς ἐνυπάρχοντα ὧν ἑκάτερον ἢ ἕκαστον ἕν τι καὶ τόδε τι πέφυκεν εἶναι* [1020^a, 8]). Such a *quantum* is a *πλῆθος*, or assemblage, if it can be numbered; a *μέγεθος* if it can only be measured. Thus a *πλῆθος* can be divided into countable non-continuous elements, but a *μέγεθος* only into continua. (We cannot, *e.g.*, divide a line into points, but only into lesser lines, so that infinite divisibility is taken as the criterion of *μέγεθος*, 'continuous quantity.') A delimited (*πεπερασμένον*) *πλῆθος* is a whole number; a delimited *μέγεθος* is a line, surface, or body, according to the number of its dimensions. Thus there is only one kind of magnitude which is continuous in its own right (*καθ' αὑτό*) —extension. Time and movement are continua, not in their own right, but derivatively (*κατὰ συμβεβηκός*), in virtue of their connexion with the *μέγεθος per se*, extension. Since the trajectory of

a moving body is a continuum, the motion is a continuum also, and therefore also the time occupied in the transit. A fuller, but logically unsatisfactory, account is given in the *Physics*. The Eleatics had held that the continuous is indivisible (a theory which meets us again in Spinoza). Aristotle points out that, on the contrary, only the continuous is infinitely divisible (185^b, 10). So we are told in bk. Γ that 'motion' (the fundamental category of a science of 'Nature') is generally held (δοκεῖ) to be one of the continua, and it is in the continuous that the 'infinite' first makes itself noticeable. Hence, those who give definitions of continuity commonly presuppose the concept of the infinite, on the ground that 'what is divisible *ad infinitum* is continuous' (200^b, 18). The point that the one primary continuum is spatial recurs in bk. Δ, ch. xi. Time is relative to change (μεταβολή), since it is only where we perceive change that we are conscious of duration. If the 'seven sleepers' woke up, they would not be aware that time had elapsed during their sleep. They would 'connect the former *now* with the subsequent *now*, and make one of them.' To know what time is, we have to ask in what way it is related to *motion* (τί τῆς κινήσεώς ἐστιν). But what moves, moves *from* somewhere *to* somewhere. The character of motion depends on that of the path it traverses. Motion is thus continuous because its path is so, and time is continuous because motion is. Time is 'the *number* of motion in respect of before and after' (220^a, 24). The use of the word 'number' is unhappy, since Aristotle is never tired of insisting that there are no numbers but the μοναδικὸς ἀριθμός, the whole numbers made by addition of *units*; and the definition, taken strictly, is thus inconsistent with the view that there is no minimum of duration. The Platonic account (see *Timæus*, 37 D, and the Academic collection of ὅροι) that time is the *measure* (μέτρον) of motion, which Aristotle sometimes repeats, is thus much more accurate.

We finally reach Aristotle's own formal definition of τὸ συνεχές in *Physics* E 227^a, where it is given as the last resultant of a whole series of previous definitions. Things are 'together' (ἅμα) when they are in 'one and the same primary place' (ἐν ἑνὶ τόπῳ πρώτῳ), *i.e.* enclosed in the same circumambient surface. Two things of which the extremities are 'together' are 'in contact,' or 'touch' each other. A thing is 'between' (μεταξύ) two others, when something which is continuously changing arrives at it 'before it reaches the end of the process of change' (*i.e.* C is between A and B, if, in moving continuously from A to B, you pass C before reaching B. Thus the 'derivative' notion of continuous movement is illogically employed to define the 'primary' continuum of extension!). We now define 'next after,' and 'immediately adherent.' A term in an ordered series is 'next after' (ἐφεξῆς) another when there is no term of the same kind between them. The phrase 'adherent to' (ἐχόμενον) means both 'next after' a given term and 'in contact' with it (ὸ ἂν ἐφεξῆς ὂν ἅπτηται). Finally, continuity is a special case of immediate adherence, which arises when the two 'ends' (πέρατα) of things which immediately adhere become one and identical (λέγω δ' εἶναι συνεχὲς ὅταν ταὐτὸ γένηται καὶ ἓν τὸ ἑκατερον πέρας οἷς ἅπτονται). Alexander of Aphrodisias, as we learn from Simplicius, found this passage hard to interpret, and with good reason. Apart from the logical *hysteron proteron* already noted, there is a further difficulty involved in the definitions of 'together' and 'contact.' What is meant by 'the same primary place'? Simplicius escapes from Alexander's uncertainty as to whether the notion of continuity is not tacitly presupposed by such a phrase only by giving it a purely relative sense; it may mean at will 'in the same town,' 'the same house,' 'the same room,' etc. In fact, it has no definite meaning at all. The same defect attaches to the subsequent definitions, which depend on that of 'together.' Two things are 'in contact' when their extremities are 'together.' And such contact may exist without continuity. The extremities, as in the case of things which are merely 'adherent,' may be 'together' and yet remain distinct. Such a definition does not satisfy our geometrical notion of 'contact.' However small we take the 'primary place' of the two extremities to be, so long as the extremities remain distinct, there is no contact. However small the distance between a straight line and a circle may be, so long as it remains finite at all, the straight line is not a tangent; it becomes a tangent only when there is one point, and only one, which lies both on the circle and on the straight line. Thus, surfaces which 'adhere' must be absolutely identical. Aristotle is, in fact, assuming (with an eye to his astronomical theories) that we can have a set of concentric spheres enclosed within one another so that no space is left between the convexity of one and the concavity of the next outermost, and yet that the convexity and the concavity remain distinct surfaces. But this is geometrically impossible.

The one point of real interest which emerges from the discussion is the hint of a connexion between the notion of continuity and that of series. As Aristotle states the connexion, it is open to unanswerable criticism, since the very impossibility of dividing the continuous into 'units' shows that a continuum, as given, cannot consist of members each having a 'next following term,' but the main idea has borne remarkable fruit in our own days in Cantor's 'ordinal' definition of the continuum, and a striking attempt has been made by Zermelo (in *Mathematische Annalen*, LIX. iv. 514 ff.) to show that any continuous series (*e.g.* that of the points on a terminated straight line) permits of *an* arrangement of its members such that every one has a 'next following' member. That no member of such a series as given in experience has a 'next' member is, with laudable inconsistency, insisted on by Aristotle himself. 'Nothing continuous can be made out of indivisibles, *e.g.* a line cannot be made out of points' (*Phys.* Z 231^a, 24). For, by definition, the extremities (ἄκρατα) of things which are continuous coalesce, but an indivisible point or moment has *no* extremities. The consequence is that the line cannot 'consist of' points, since even by infinitely repeated division we can only break it up into lesser lines, which are, again, divisible. συνεχῆ can be divided only into συνεχῆ, or, as Bradley has put it, space (and time) are 'lengths of lengths of—nothing that we can find' (*Appearance and Reality*^{2}, London, 1897, p. 37). On the straight line, *e.g.*, we can find nothing but points, yet it *is* not a series or class of points, but something more, though what that something is we cannot say. This leads Aristotle to break with the Platonic view that Arithmetic, Geometry, and Kinematics form a single science with a single body of postulates. 'Physics,' so he unhappily concludes, is distinct from Mathematics, and Mathematics itself falls into two distinct doctrines, each with its own peculiar postulates—the theory of the διωρισμένον πόσον, or number, Arithmetic; and Geometry, the theory of the συνεχὲς πόσον—and it is a logical fallacy to attempt to prove a conclusion which belongs to the one science from the postulates of the other (οὐκ ἄρα ἔστιν ἐξ ἄλλου γένους μεταβάντα δεῖξαι, οἷον τὸ γεωμετρικὸν ἀριθμητικῇ, *Anal. Post.* A 75^a, 38). Zeno has at last come by his rights, in spite of Aristotle's personal failure to appreciate his historical significance.

To consider the way in which Aristotle goes on to develop the view that the regular and continuous development from potentiality to actuality which makes up the life of Nature, as we see it in the evolution of the adult organism from the germ, and of the germ, in turn, from the adult organism, or even in any steady qualitative change from one 'opposite' (*e.g.* white, hot, dry) to its contrary (black, cold, moist), depends upon the domination of Nature by the unending 'uniform' and continuous circular revolutions of the celestial spheres—would take us too far from our immediate subject. We may merely note that it is an indispensable feature of this view that these revolutions are 'irreversible,' and always take place not only with uniform velocity, but in the same sense, since a sudden reversal would be equivalent to a momentary breach of continuity. The moving body would, Aristotle thinks, have to be twice at the same point X, if X is to be both the goal of the movement in one direction and the starting-point for the movement in the other. Motion in a straight line without reversal is excluded by the assumed finitude of the universe, and thus, according to Aristotle, only the circle remains, since it is the only curve of which 'every part is congruent with every other,' *i.e.* the only curve of constant curvature. (For all this, see *Physics* Θ, *de Cœlo*, and *de Generat., passim*; *Metaph.* Λ, chs. vi.–viii.)

From the special tract against Xenocrates and his assumption of infinitesimal lines which are indivisible (*de Lineis Insecabilibus*, a work of some early Peripatetic, apparently not Aristotle himself) nothing can be drawn for our purpose, though it is historically interesting, as showing that the study of at least some of the irrationals examined in Euclid x. goes back to Plato and his immediate followers, as does also the notion of the 'infinitesimal.' Some interesting notices are preserved to us by Sextus Empiricus, in bk. x. of his attack on Dogmatic Philosophers, which reveal the fact that the polemic of the Megarian formal logicians against Aristotle's whole conception of the gradual development of potentiality into actuality, of which we read, *e.g.*, in *Metaphysics* Θ 1046^b, 29–32, was connected with a revival of Zeno's arguments against motion. Diodorus Cronus (Sextus, *contra Mathematicos*, x. 86) specially attacked the notion of a 'state' of motion, *i.e.* a time at which one cannot say of a moving material point (an ἀμερὲς σῶμα, *i.e.* a 'material point,' not an 'atom' in the sense of Democritus or Epicurus, since the atom was *not* ἀμερές) that it *is* at any position, but only that it is moving *from* one position *to* another, though one can, Diodorus admits, say that such a body must *have* moved, when it is seen first at A and afterwards at B. The view of the reality of a 'state of movement' here attacked is, in fact, one of the chief difficulties inherent in Aristotle's whole treatment of continuity.

Nothing would be gained by following the history of the notion of continuity in Greek philosophy beyond the time of Aristotle. The Stoics, to be sure, influenced later thought considerably by their vigorous insistence on the idea of the absolute continuity of *matter*, but neither they nor the Neo-Platonists, whose doctrines may be called the final outcome of Greek speculation, added anything to what Aristotle had laid down as to the logical analysis of the concept of the continuous itself. The sharp division between the two kinds of πόσα, those which are divisible into ultimate 'units' (the 'discrete' *quanta*) and those which are not (the συνεχῆ, or continuous πόσα), the adoption of infinite divisibility as the criterion of continuity, and the consequent view that incommensurables belong to Geometry and have no place in Arithmetic—were the permanent legacy from the ancient to the modern philosophy of the continuous.

3. Modern attitude.—The general acquiescence in Aristotle's distinctions makes it unnecessary to treat at any great length of the views of most modern philosophers on the nature of a continuum. For the most part these views have been determined by the conception of infinite divisibility as the sufficient and necessary condition of continuity. Even Descartes seems to have been blinded to the real difficulties of the subject by his familiarity with the practice of employing the symbols of Algebra indifferently to denote rational and irrational magnitudes. He appears never to have asked himself what conception must be formed of number, if we are to recognize such expressions as $\sqrt{3}$, $\sqrt[3]{2}$, and the like as numbers, and thus his *Géometrie*, with all its historical importance, can scarcely be called a contribution to the philosophy of Mathematics. Nor does it appear that the continuity which he claims for matter amounts to more than infinite divisibility, the absence of real 'atoms' or 'units' of extension. Hobbes explicitly accepts the Aristotelian definition, 'Continua inter se tum spatia tum tempora duo dicuntur, quorum *est aliqua pars communis*' (*de Corpore*, vii. 10); 'Corpora etiam duo . . . continua dicuntur eadem ratione qua duo spatia' (*ib.* viii. 9). Spinoza even reverts to the Eleatic position, according to which extension, because continuous, is not really divisible at all, and is supposed to have parts or elements only by an illusion: 'Substantia absolute infinita est indivisibilis' (*Ethica*, i. 13); 'ex his sequitur . . . nullam substantiam corpoream, quatenus substantia est, esse divisibilem' (*ib.* corollarium). Hence he infers that *quantitas* is divisible only so long as we merely *imagine* it—*i.e.* think inaccurately about it; when we form the *concept* of it, we see it to be 'infinita, unica, et indivisibilis' (*Ethica*, i. 15, schol.). It should follow that we can form no *concept* of a plane, a straight line, or a point—a conclusion which would be the *reductio ad absurdum* of Spinozism. Similarly Kant's critical philosophy throws no real light on the nature of a continuum. Indeed, if we take seriously the *Aesthetik*, with its account of the way in which the mathematical concepts of space and time are generated, we shall clearly be led to think of both as composed of minima, and therefore not continuous, though, to be sure, this account conflicts with the repeated assertion that both are 'infinite *given* wholes.' (The 'synthetic unity of apperception' cannot help us here, since it is just as much manifested in the counting of the units of a group of 'discrete' *quanta* as in that 'drawing' of a line of which Kant has so much to say.) So, when we are told in the account of the 'Schematism of the pure Concepts of the Understanding' that if we think of any number, *e.g.* 5 or 500, this thought is 'the representation of a method for representing in an image an assemblage conformably to a certain concept,' we see at once that Kant is thinking exclusively of the natural integers, which do *not* form a continuum. How it can be true that 'the pure image of all magnitudes (*quantorum*) of the outer sense is space, and that of all objects of the senses in general is time,' and that 'the pure *schema* of magnitude (*quantitatis*) as a concept is number, which is a representation which comprehends in one the successive addition of one to one,' remains an unsolved mystery, unless space and time are to be non-continuous; and the difficulty is only increased when Kant goes on to say that both space and time are '*quanta continua* because no part of them can be given, . . . except in such a way that the part is once more a space or a time.' Nothing can conceal the fact that Kant is trying to combine Aristotle's denial that a συνεχές can consist of minima with a theory which requires the construction of space and time out of such minima. He even repeats in this very connexion the old criterion of continuity, that it is 'that property of magnitudes in virtue of which no part of them is the minimum (no part simple).' It is, therefore, not to be wondered at that the 'antinomies' of the *Transcendental Dialectic* have really nothing to do with the problems of continuity. What their *theses* presuppose is merely the summation of infinite series, and the difficulties Kant professes to find in such a summation exist just as much where every term of the series has a next term as where it has not; *e.g.* the difficulty, if there is one, about the completion of the synthesis exists just as much when we consider 2 as the sum of the series $1 + \frac{1}{2} + \frac{1}{2^2} + \ldots \frac{1}{2^n} + \ldots$ as when we ask whether the 'world had a beginning in time,' as Hegel correctly saw. In principle, Kant,

like Aristotle, identifies the infinitely divisible with the continuous.

Hegel's own account is so largely coloured by metaphor, and so distorted by his determination to prove that every concept is precisely what it is *not* (that, *e.g.*, perfect continuity and absolute discreteness are the same thing), that it is far from easy to say what his real meaning is. Since, however, he supposes Kant's second antinomy (everything must be, and yet cannot be, composed of simple elements) to be concerned with continuity (*Werke*, iii. 216), he, too, presumably means by continuity no more than divisibility *ad infinitum*. His enthusiastic praise of Zeno, and of Aristotle's treatment of the problems of space, time, and motion, points to the same conclusion (*ib.* p. 227). The vagueness of Hegel's notions may be seen from the fact that he actually regards the *Anzahl*, or cardinal number, of a group as itself a group of 'units,' and asserts that it is at once 'continuous' (because it is *one* group among others) and 'discrete' (because it is a *group* of units [*ib.* p. 233 f.]).

Leibniz may fairly demand separate consideration, in virtue of the peculiar stress which he lays on the Principle of Continuity as fundamental, not only for Mathematics, but for Metaphysics. This principle, as stated by him, is much more than an assertion of the continuity of space, time, and motion. Since his philosophy requires a denial of the validity of a vacuum, he is led further to maintain the continuity of matter against all forms of the atomic theory. Further, the conception is regarded as holding not merely of *phenomena*, but of the substances or 'monads,' whose interrelations and internal self-development are the reality of which the extended and temporal world is symbolical. Real substances form a continuous hierarchy, in which each member differs from some other by a purely infinitesimal difference. Or, as Leibniz himself states the principle in a letter to Malebranche, dated 8th Dec. 1692, 'datis ordinatis etiam quaesita sunt ordinata et consentanea.' Hence the absolute continuity of the series of monads has the continuity of the various μεγέθη as an immediate consequence (Couturat, *Logique de Leibniz*, p. 233 ff.). A special case of this principle is the correspondence between soul and body, which Leibniz describes as follows Couturat, *Opusc. et frag.* p. 521): 'God has from the beginning constructed soul and body with such skill that . . . omnia quae in uno fiunt per se perfecte respondeant omnibus quae in altero fiunt.' As to the nature of the continuity thus asserted, we learn much from the dialogue on motion composed by Leibniz on his journey of 1676 to visit Spinoza (*op. cit.* pp. 594–627). The question there raised is whether the moment at which a man dies may be regarded as at once the last moment at which he is alive and the first at which he is dead (as it must be, according to the Aristotelian account of τὸ συνεχές). To say that Aristotle's view is correct seems to violate the law of contradiction; to reject it seems to imply that two moments—the last of life and the first of death—are immediately adjacent, and, if moments can be immediately adjacent, why not points? (*ib.* p. 601). But we are thus led to conceive of extension and time as made up of series of indivisible points and moments (*ib.* p. 608), and find ourselves involved in the 'labyrinth of the continuum.' For we are forced to say that the number of points in the side of a square is infinite, and, since we can draw one and only one parallel from any point in the diagonal to a given side, and since this parallel cuts two of the sides of the square in determinate points, the diagonal will contain the same number of points as the side, and will therefore be equal to it. This Leibniz regards as a proof that the line cannot be an aggregate of points (*ib.* p. 611). The number of points in each will, in fact, he argues, be identical with the 'number of all numbers,' since in both cases it is infinite. Leibniz's way out of the difficulty is to deny that there is a 'number of all numbers,' since, as he holds, such a number, if there were one, would be the greatest possible integer, but there *is* no greatest possible integer. Hence there is no such thing as a *ratio* of one infinite to another (*ib.* p. 612 f.), and no assignable number of points on a line. There are as many as we choose to take, but we never take all there are to take. It is, indeed, true that every portion of extended matter is actually infinitely divided, but it is divided into portions which are themselves continua, not into points, and no portion is actually divided into all the minor parts possible. Thus, in the end, Leibniz adheres to the position that the continuous cannot be composed of simple elements, and it is for this very reason that space and time and motion are regarded by him as merely phenomenal, since the real, as we read at the beginning of the *Monadology*, must be composed of *simple* elements. How these views are to be reconciled with the further positions that there is at least one continuum, that of the monads themselves, which does consist of simple elements, and that order in space is phenomenal of the order of real monads, it is not very easy to see.

4. **The number-continuum in modern Mathematics.**—Under this head it is impossible to say more than a few words in the present article. The reader who wishes for more information may be referred to the works mentioned in the annexed bibliography, especially to the brief and luminous chapter on the continuum in Couturat's work, *Les Principes des mathématiques*. As we have seen, the first discovery of the continuum was due to the discovery of incommensurable magnitudes in Geometry, which led to the age-long severance of the originally united studies of Arithmetic and Geometry. It has been the great achievement of the modern Theory of Assemblages to show that the number-system is so far from being inadequate to cope with the continuity of the points of the straight line (the so-called 'linear continuum') that the only precise definition of continuity we can obtain is one which can be stated in terms involving nothing but the properties of ordered numerical series, and that the only certainly known linear continuum is that of the 'real' numbers. In other words, it is no immediate datum of intuition that the straight line is absolutely continuous. Its continuity is postulated, not intuited, and means no more than the *assumption* that there are on every terminated straight line as many distinct points as there are distinct real numbers in a given segment of the number-series, such as that composed of all the 'real numbers' $>0<1$. To begin with, we have to see that none of the old familiar criteria of continuity is really adequate to express the property which we have in mind when we speak of the continuousness of this number-series. It is clear that infinite divisibility is no such criterion, since it gives us only a series corresponding to that of the *rational* fractions. By no process of infinite division of a unit length could we ever arrive at such quotients as $\frac{1}{\sqrt{2}}$, $\frac{1}{\sqrt{3}}$. This corresponds to the arithmetical consideration that the complete assemblage of rational fractions between 0 and 1 does not form a continuous series, since it omits all the fractions which have surds for their numerator or denominator or both. Even the inclusion in the series of all fractions having algebraical

surds in their numerator or denominator would not make it completely continuous, since we should still have no place left for the infinitely numerous fractions involving 'transcendental' numbers in their numerator or denominator. In fact, it is possible to make such an arrangement of the series of rational fractions, and even of algebraical fractions, that each term of the series has an immediately next term. In other words, both series can be so arranged that each member corresponds in order to one and only one member of the series of natural integers, 1, 2, 3. . . . Their ordinal number, or 'type of order,' is thus the same as that of the series of integers itself. Nor, again, is the number-continuum adequately defined by the property that no term of the series as taken in ascending order has an immediately adjacent term. For this would obviously be true of the assemblage of rational numbers, and again of that of all algebraic numbers, though neither of these exhausts the whole of the number-series. The task of the modern theorist is thus a twofold one. He has first to formulate a satisfactory definition of the concept 'real' number, showing not only how the assemblage of 'real' numbers is logically related to that of integers or 'natural' numbers, but also how the existence of the 'real' numbers follows from that of 'natural' numbers. Secondly, he has to identify the peculiar characteristics which distinguish the whole assemblage of 'real numbers' from those of 'natural' or 'rational' or 'algebraic' numbers; that is, he has to point out the criterion of the continuity of a series.

It is the achievement of Cantor to have first stated this criterion exactly, and afterwards to have re-cast it in terms involving nothing but the notion of serial order, and entirely independent of any appeal to our intuition of space. We can here do no more than give Cantor's two definitions of the linear continuum with such brief explanation as is necessary for their comprehension. To understand his original definition we have first to make clear the meaning of the terms 'point manifold,' 'limiting point,' and 'derivative.' By a 'point manifold' is meant any aggregate of numerical values whatsoever. Any 'point' X is said to be a 'limiting point' of such a manifold M, if, given a finite number ϵ, however small, there is always at least one 'point' of the manifold M which is at a finite 'distance' less than ϵ from X. (Such a limiting point may, or again may not, be itself a 'point' of M.) The 'derivative' of M is the assemblage formed by all the limiting points of M. When every 'point' of M is one of the limiting points of M, and every limiting point of M also a 'point' of M, that is, when the manifold M is identical with its own 'derivative,' M is said to be *perfect*. Further, M is said to be *zusammenhängend*, or 'cohesive,' when, if any two points of M, p_0, p, be given, it is always possible to find in M any finite number of points $p_1, p_2 \ldots p_n \ldots$ intermediate between p_0 and p such that the distances p_0–p_1, p_1–p_2 . . . p_n–p are each less than a given finite number ϵ, however small ϵ may be. The definition of the linear, or one-dimensional, continuum is, then, that it is a 'point manifold' which is both perfect and cohesive. It is manifest that the series of 'real' numbers between 0 and 1 satisfies these conditions, and that the removal of even a single term from it would prevent this realization. The series of 'rational fractions,' on the other hand, would satisfy the demand for cohesiveness, but would not be 'perfect,' since the surd fractions are obviously limiting points of the series of rational fractions. With the postulate that to every real number from 0 to 1 we can assign one and only one corresponding distance on the straight line, the straight line is also obviously a linear continuum satisfying the definition (Couturat, *Principes*, p. 91 f.). It still, however, remains the fact that Cantor's first definition retains the appearance of an appeal to geometrical intuition. The notion of 'distance,' in however metaphorical a sense, is employed in explaining both cohesion and perfectness. And this means, as Couturat says, that the definition is essentially relative. 'It defines a continuous manifold only by reference to another manifold (metaphorically called space), which is already continuous, in which it may have limiting points not contained in itself' (*op. cit.* p. 92). Hence it is only in Cantor's second definition, where no notions but those of serial order are presupposed, that we get 'an absolute definition of a continuum by means of its intrinsic properties.' To obtain the definition, we start again with certain auxiliary conceptions. We consider the type of order exhibited by the rational numbers which are >0 and <1. This series has three peculiarities: (1) it is *denumerable*, that is, we can rearrange its terms so that they correspond one to one with the successive integers; (2) it has neither a first nor a last term; (3) between any two terms there is always a third; and these three characteristics are proved sufficient for the complete determination of the type of order exhibited by the series. Any series possessing them may then be called a series of the type of order η. Next we have to introduce the notion of what Cantor calls a 'fundamental series.' We may confine our attention to the case of an ascending fundamental series. By this is meant a series in which the terms have the type of order η just defined. Such a series S is said to have a limit in η, if there is a term in η which is the *first* after all the terms of S. We then call any manifold *perfect* if all the 'fundamental series' contained in it have a limit in it, and if all its terms are limits of 'fundamental series' contained in it. With these presuppositions, the type of order θ, belonging to a one-dimensional continuum, is defined as follows: 'The manifold θ (1) is perfect, and (2) contains within itself a denumerable manifold E, such that there is always at least one term of E between any two terms of θ.' The definition is manifestly satisfied by the series of 'real' numbers, since it can readily be shown that the series is 'perfect' in the sense defined, and that, moreover, there is always at least one term of the series of the 'rational' numbers between any two 'real' numbers (Couturat, *op. cit.* p. 93 f.; B. Russell, *Principles of Mathematics*, London, 1903, vol. i. ch. 36).

The two definitions are not exactly equivalent, since we can construct series which satisfy the second without satisfying the first (*e.g.*, to take an example from Couturat, the manifold composed of the real numbers <1, together with those from 2 to 3 inclusive, satisfies the requirements of the 'ordinal' definition, but not those of the other, since there is always a finite interval >1 between the number 2 and any of those which precede it). But every assemblage which satisfies the first, or 'relative,' definition clearly also satisfies the second, or 'absolute.' This might be regarded as a ground for doubting whether Cantor's final result is quite the same thing as an analysis of what is implicitly contained in the simple pre-scientific notion of continuity as unbrokenness. But it remains true that his analysis succeeds in defining for us, by means of purely intrinsic properties, the continuity of the 'real' numbers, and that we have no reason to think that Geometry requires us to ascribe any different kind of continuity to the straight line. We are thus finally enabled to remove the apparently insuperable barrier established by the Eleatic criticism be-

tween Geometry and the theory of number. Every geometrical proposition can once more be stated in terms which involve only the notions with which the study of number has already made us familiar. 'This fact,' as Couturat says (*op. cit.* p. 97), 'finally refutes all the doctrines which regard the notion of the continuous as arising from sensuous intuition and refractory to the understanding.'

LITERATURE.[1]—i. *FOR ANCIENT PHILOSOPHY AND MATHEMATICS*: *Euclidis Opera, edidit et Latine interpretatus est J. L. Heiberg*, Leipzig [the *Elements* and the scholia on them form vols. i.–v. of this, the only critical edition, 1883–1888]; *Procli Diadochi in primum Euclidis Elementorum Librum Commentarii ex recogn. G. Friedlein*, Leipzig, 1873; H. Diels, *Fragmente der Vorsokratiker*[2], 2 vols., Berlin, 1906–1910; Aristotle, *de Lineis Insecabilibus*, tr. H. H. Joachim (pt. 2 of *The Works of Aristotle*, Eng. tr., Oxford, Clarendon Press, 1908); J. Burnet, *Early Greek Philosophy*[2], London and Edinburgh, 1908; G. Milhaud, *Les Philosophes-géomètres de la Grèce: Platon et ses prédecesseurs*, Paris, 1900; O. Apelt, 'Die Widersacher der Mathematik im Alterthum' (in *Beiträge zur Gesch. der gr. Philosophie*, pp. 253–287), Leipzig, 1891; H. G. Zeuthen, *Hist. des mathématiques dans l'antiquité et le moyen âge*, Paris, 1902 (original in Danish, Copenhagen, 1893). Reference may also be made to the various standard works on the history of Mathematics generally, or on Greek Mathematics in particular, especially to the great work of Moritz Cantor, *Vorlesungen über Geschichte der Mathematik*, Leipzig, 1880 (new ed. vol. i. 1909).

ii. *FOR MODERN PHILOSOPHY*: Besides the collected editions of the works of philosophers, special mention may be made of L. Couturat, *Opuscules et fragments inédits de Leibniz*, Paris, 1903, also *La Logique de Leibniz d'après des documents inédits*, Paris, 1903; B. Russell, *Critical Exposition of the Philosophy of Leibniz*, Cambridge, 1900, also 'Recent Work on the Philosophy of Leibniz' (in *Mind*, new series, no. 46, April 1903).

iii. *MODERN DEVELOPMENTS*: G. Cantor, 'Grundlagen einer allgemeinen Mannichfaltigkeitslehre' (*Mathematische Annalen*, xxi. [1883]), also 'Beiträge zur Begründung der transfiniten Mengenlehre' (*ib.* xlvi. xlix. [1895, 1897; French tr. by Marotte, *Sur les fondements de la théorie des ensembles transfinis*, Paris, 1899]); R. Dedekind, *Stetigkeit und irrationale Zahlen*[2], Brunswick, 1892; P. du Bois-Reymond, *Die allgemeine Funktionentheorie*, Tübingen, 1882; L. Couturat, *De l'Infini mathématique*, Paris, 1896 (see esp. Appendix 4, on Cantor), also *Les Principes des mathématiques*, Paris, 1905 (with specially valuable Appendix on Kant's Philosophy of Mathematics); A. Schönflies, 'Die Entwickelung der Lehre von den Punktmannigfaltigkeiten' (*Jahresber. der deutschen Mathematiker-Vereinigung*, viii. 2, Leipzig, 1900); B. Russell, *The Principles of Mathematics*, i. Cambridge, 1903; G. Vivanti, *Teoria delle funzioni analitiche*, Milan, 1901 [pt. i. contains a very simple and lucid exposition of the main principles of the Theory of Assemblages]; E. W. Hobson, *Theory of Functions of a Real Variable*, Cambridge, 1907. The progress actually made in the re-arithmeticizing of pure mathematics, due partly to modern research into the notions of infinity and continuity, and partly to the development of symbolic logic, can be traced in the successive volumes of G. Peano, *Formulaire de Mathématiques*, Turin, 1901. The latest edition, reckoned as vol. v. of the complete work, appeared in 1908 with the title *Formulario Matematico*, the necessary verbal explanations and annotations to the logical symbols in which the propositions are written being now given in what the author calls an 'uninflected Latin,' and not in French, as was the case in the earliest editions.

A. E. TAYLOR.

CONTRACT.—i. *DEFINITION.*—If one makes an engagement to go to dinner at a friend's house, no contract arises, because the purpose of the engagement is not such that the law will deal with it; or again, if one buys an article in a shop for ready money, that is not usually termed a contract, because there the whole transaction is terminated, as it were, on the instant; but, if one undertakes to pay for the article afterwards, a continuing contract emerges, because, in this case, the agreement gives rise to an undertaking which *can* be appropriately enforced by law. From these examples we see that contract is really the combination of two legal ideas—that of *agreement* and that of *obligation*. In the case of the invitation to dinner there is agreement, but no legal obligation connected with it; in the case of the sale of goods for ready money, the obligation fades away as soon as it arises. But, according to the Indian Contract Act, for example, 'an agreement enforceable by law is a contract' (Sect. 2 (h)); and, where we find such an agreement, we find a legal tie, an obligation, something for the law to take hold of, directly affecting the contracting parties. In other words, the agreement, as it has been put, 'contemplates something to be done or forborne by one or more of the parties for use of the others or other,' to which the law can attach itself; and it is generally said that it must be the intention, or implied intention, of the parties that the relation should have a legally binding effect. Sir Frederick Pollock, writing with reference to the English law, adds to the word 'agreement' the word 'promise' (*Principles of Contract*[7], 1902, pp. 2, 3, 5). But that is a minor subtlety. Theoretically, at least, we can fix our attention on an agreement as the starting-point in which there must be, as it is frequently stated, the meeting of two minds in one and the same intention. And thus the more technical treatment of contract fits into those statements of the doctrine in which it is regarded as a phase of the legal will, constantly to be found in the works of philosophical jurists—especially German jurists. The relation represents the meeting of individual wills in one intention, as opposed to the individual's endeavours to realize his will by means of the materials found in the world around him, which gives rise, logically, to the conception of property. In the former case, the individual meets his fellows; in the latter, the external, material world.

It has, however, been suggested that it is not necessary, in order that a contract should be entered into, that the wills of the parties should be really at one (Holland, *Jurisprudence*[10], 1906, ch. xii.). Should we not say, it is argued, that here emphatically the law regards not the will in itself, but the will as manifested voluntarily? There are well-founded expectations which the law endeavours to protect by its enforcement of contract, and these do not always arise from expressions which truly represent the intention. What of the case in which a party enters into a contract, resolved all the time not to perform his part, yet inducing another party to enter into it on the contrary supposition? Surely the contract will hold good. Is it not the will, as expressed, and nothing more, that the law regards, leaving the question of a true *consensus* on one side, as beyond its province altogether? The language of positive systems of law, it is said, moreover, is ambiguous on the point; for the question is practically a new one, and it has not till recently been seriously considered how far a true *consensus*, in the significance explained above, is needed. In answer to this doctrine, it may be maintained that, although the inner agreement is a fact to be proved, and in some cases is not allowed to be disproved, the agreement itself is vital to the theory of contract. The inference drawn is that there was an agreement; and such inferences depend for their reasonableness and usefulness on the fact that in the vast majority of cases they are sound. Without reference to the will—to the inner intention, if one chooses—the expression of agreement would be meaningless. It must in the last resort be connected with the man, with the personality; and not merely attach itself to outward forms of expression. Unless this is done, we obtain a view of contract which is too scholastic to be satisfactory.

The two main aspects of the agreement by which the tie is created find their typical form in the ideas of offer and acceptance, which give rise to a large body of law in a developed system. On the other hand, such facts as error, fraud, misrepresentation, undue influence, and force operate on the consent embodied in the agreement, and may vitiate it wholly, or create a flaw which renders it reducible from one side. These are most usefully studied in relation to some definite legal

[1] The ordinary collected texts of ancient and modern philosophers have been omitted from this list.

system. Again, the State itself places certain legal restraints upon contract generally, with regard to its subject-matter; these are more important from the standpoint of the general reader. In Pollock's work on *Contract*, agreements are said in English law to be unlawful and void (1) if the matter or purpose with which they deal is contrary to positive law; (2) if it is contrary to positive morality recognized as such by law; (3) if it is contrary to the common welfare, as tending to prejudice the State in its external relations, or in its internal relations, or as tending to improper or excessive interference with the lawful actions of individual citizens (*op. cit.* 275). And we may say generally that the State will refuse to recognize a contract not only when it is simply illegal (without further explanation being offered), but also when the object is *contra bonos mores*, or when it is against 'public policy' and cannot be allowed free scope in the State's own organization. In the case of public policy, the disputable points which arise are numerous, and the dividing lines between what the State should, and what it should not, do are extremely difficult to find. Then we may couple with such restraints the complicated subject of *form*. The modern tendency is towards simplicity of form. Complexity is undoubtedly repugnant to the spirit of our own days, when the bustle of commercial enterprise demands essentials and nothing but essentials. A complicated form, however, prevents a bargain from being rashly made, and it renders it easier to prove afterwards what has taken place. The tendency to reduce the 'solemn form' can have free scope only so far as is possible with a due regard to the exigencies of proof.

ii. *CLASSIFICATION.*—Contracts have very frequently been divided into *principal* and *accessory*; and this division is a good one. It is not so clear that the division of the first class into *onerous* and *gratuitous*, often made, is equally useful (although Kant declared that it was the rational one); for principal contracts seem rather to fall into several distinct groups. The following list will afford the reader a bird's-eye view of the field of modern contract. It follows mainly the arrangement given by Holland in his *Jurisprudence*.

1. Principal contracts.—Principal contracts are those which are entered into, so to speak, for their own sake, as opposed to accessory contracts.

(1) *Contracts of alienation.*—These may be gratuitous, when they are contracts to give, but are not generally so. In fact, a contract to give is generally enforceable by law only in certain limited cases. But gifts made in view of marriage are not considered as mere gifts, for marriage is an onerous consideration. Then under this head fall barter and exchange, when regarded as contracts; and, more important, sale. A distinct line should be drawn between barter and sale; the essence of sale seems to be, in the simplest words, the giving of something for *money*. Specific formalities are generally imposed upon contracts for sale of certain important classes of property, such as the *res mancipi* of the Roman Law, 'real property,' immoveables. Apart from these, perhaps the most important variation in the views taken of the contract by different legal systems is connected with the transfer of the property sold. Sometimes a contract of sale, in the usual case, *per se*, transfers the property—it has the power of transference by itself. Sometimes it has no such legal consequence; it remains an agreement to transfer merely. The parties to the contract, again, may have various duties, but two of them are generally recognized. The duty of the seller is to deliver the goods, and the duty of the purchaser is to accept and pay for them These duties, regarded from the point of view of rights, yield the main rights of purchaser and seller.

(2) *Contracts dealing with hiring, loan*, etc.—Hiring has largely superseded gratuitous loan; and the law of hiring has been extended in many directions. Two important branches of it in the commercial world are contracts for carriage and agency. Both in commercial and in domestic life we find contracts for the hire of servants engaging much attention. As regards immoveables, hiring is generally guarded by specific restrictions. In a loan for consumption, we find money or certain kinds of things given to the opposite party on the undertaking that he shall on a future day return, not necessarily the things themselves, but their equivalent in kind. It is in connexion with this branch of the law that the interesting problems of how to treat usury from the legal point of view arise. In a loan for use, again, which is in essence gratuitous, the identical thing lent is returned. In deposit, one gives a thing to another in order that the latter may keep it for him gratuitously and restore it upon demand.

It will be observed that this group of contracts is very miscellaneous. Holland has attempted to minimize the confusion by making the two principal divisions of (*a*) contracts for permissive use, and (*b*) contracts for service. In the first class (*a*) he places (1) loan for consumption; (2) loan for use; and (3) 'letting for hire.' In the second (*b*) he places contracts (1) for care-taking; (2) for doing work on materials; (3) for carriage; (4) for professional or domestic services; (5) for agency; (6) for partnership. Then, under a separate head (*c*) he places contracts for negative services, in which one party undertakes to abstain from certain acts—a mode of contract somewhat grudgingly recognized by law. This procedure helps to introduce some order into the mass of almost intractable material; although, for example, it places contracts for partnership under contracts for service—a doubtful arrangement. The reader, however, may certainly begin by taking the whole of the large class of contracts with which we are dealing as capable of being split up into three divisions—permissive use, service, negative service—although he may afterwards come to consider the principles of grouping somewhat strained. Partnership, which is thus disposed of under 'service,' is said to be the relation which subsists between persons carrying on a business in common, with a view of profit (Partnership Act, 1890); and the law of partnership widens out into the whole law of Joint Stock Companies.

Agency deserves special notice. It is itself a contract, as has been pointed out; but it is also an important instrument in extending the power of contract. It enables us, as it were, to move objects at a distance. Through it, the contractor can work at the other side of the world. In the ordinary use of the term, agency is constituted where one person is employed to act for another —to represent him in dealings with third persons. A distinction between a general and a special agent is often made; but it is of doubtful value logically; it seems to be most consistently drawn between an agent whose business has a defined scope and character, apart from the terms of his agreement with his principal, and one who is merely empowered to do certain specific acts. The main logical point to be noticed in the law of agency is that, when the agent contracts as an agent with third parties, he binds his principal, and then, so to speak, drops out of the transaction. If he binds himself, he is something more than a mere agent; and any exceptions are modifications of the general principle. On the other hand, it must be noticed that the agent does not really act

as the blind instrument of his principal, as the pen or the hand acts. His real usefulness arises from his being an intelligent instrument, and without the help of such intelligent instruments many of the tasks of modern commerce would be quite impossible.

(3) *Contracts of marriage.*—But marriage is only technically and in a somewhat strained sense a contract. No doubt it cannot be entered into without the consent of at least two parties. But the relationship stands by itself; and even in a system of law, like that of Scotland, which favours the contractual construction, there are grave difficulties in regarding it as a contract in anything more than a very technical sense. In contract, the tendency is to allow the contracting parties to attach what conditions they please to their bargain, provided these are not against 'good morals' or 'public policy'; it may be conditional in its origin, and its duration is dependent on the will of the parties. In marriage these features are not present. When it is entered into, it is not governed by private contract in its most important particulars, but by the fixed rules of the law of husband and wife. It cannot be entered into on condition that a certain event shall happen, or that it shall be dissolvable at pleasure, or that it shall last for a certain fixed period of time. The relation between the two persons, also, extends an influence to their relatives and maintains that influence even after death ends the marriage. The husband and wife create not only their own *status*, but the *status* of their children; and that *status* can never be taken away or infringed by the acts of the parties (Fraser, *Husband and Wife*[2], 1876, ch. ii.). Such considerations, primarily applicable to Scots Law, show us how marriage must be differentiated from an ordinary contract. Of course, it may be said that all these restrictions are made merely with the object of maintaining 'good morals' and furthering 'public policy.' But the whole tendency of contract is to leave the parties as far as possible to shape their own bargain; and, where we have a relation so governed in its essentials by the law —so restricted to meet the needs, as the law conceives them, of family life—as marriage is, it is only in a very peculiar and, as we have said, technical sense that it can be called contractual. It derives its type not from the contracting parties, but from moral and social considerations, which are held to be superior to their wishes; and these considerations not only *restrict* it, but *shape* it.

A distinction must, of course, be drawn between an engagement to marry in the future—an 'engagement' in popular language—and an engagement which actually amounts to a marriage. The former more nearly approaches a contract of the ordinary type than the latter, provided it is recognized by the system of law which governs it as a fit subject for legal interference. When that is the case, we find unfulfilled engagements frequently giving rise to actions for breach of promise of marriage. On the whole, such actions seem to be discouraged by the systems of law in vogue on the Continent; and many jurists are of opinion that they ought to be abolished in our own country. But this opinion, it should be noted, does not imply that actions for *seduction* should be discontinued.

(4) *Wagering contracts.*—This is an unfortunate name for an important group. In these contracts, one of the effects of the contract, as regards profit and loss, either for all the parties, or for some of them, depends upon an uncertain event. But it is almost impossible to define them satisfactorily; and that statement must be taken as merely explanatory. Broadly, bets and stakes are not enforceable in modern law. And the most important group under the general head is formed by contracts of insurance—marine, fire, and life insurance, and less important types. Of course, these are not logically gambling transactions, but are rather attempts to eliminate the risks of the unforeseen.

2. **Accessory contracts.**—There is a large number of contracts which may be entered into as accessory to the main transaction; and these form, as previously stated, a second main branch of the subject. It may suffice to name a few of them—indemnity, suretyship, warranty, ratification. A promissory note forms such a contract. Suretyship is in many systems a formal contract; and the guarantee may sometimes support an obligation which is merely natural, *i.e.*, which itself cannot be enforced—a curious point.

3. There are certain legal relations placed on the borders, as it were, of contract proper, which must not be forgotten. Thus the Indian Contract Act speaks of certain relations resembling those created by contract. Broadly speaking, they correspond to the Roman division of obligations which arise not *ex contractu*, but *quasi ex contractu*. They may, therefore, be described as *quasi-contracts*; they have also been called 'implied contracts'; but it is perhaps better to reserve this name for those cases where the implication is most clearly seen. They are, at any rate, analogous to contract; for it is necessary, in following out the ramifications of a legal system, to hold that a *nexus* analogous to that of contract is sometimes created from force of circumstances, though not by express agreement. Often the person bound may reasonably be held to have agreed to the formation of the tie, but that is not perhaps essential in all circumstances. Thus the doctrine of *negotiorum gestio* consists, in principle, in the management of the affairs of an absent person (or sometimes of a person merely unable to attend to his affairs himself) by one who undertakes that task without the knowledge of the other; and, it is not infrequently stated, on the presumption that the other, had he known the circumstances, would have approved. There does not seem to be any peculiar difficulty in treating of such relations, except that they do not yield very readily to analytic classification.

iii. *EXTINCTION OF CONTRACTS.*—Contracts may be extinguished in various ways—by performance, by such legal facts as events which excuse performance, or by release of performance. Or there may be a substitute for performance interjected; or it may simply happen that the non-performance of the contract alters the whole aspect of affairs and gives rise to a new set of rights. Performance is the natural, and undoubtedly also the usual, mode of closing the transaction.

iv. *SOCIAL BEARING OF CONTRACTS.*—Contract, standing as it does at the centre of the great department of Private Law, has many important bearings on the general problems of society. It forms an endeavour made by the State to set up a sanction for expectations of good faith which have grown up through the dealings of the averagely fair-minded man. True, it has been suggested that contract is merely the taking of a risk, since the only universal consequence of a contract is to make the defaulter pay damages; but, as already pointed out, it is the observance of contract that is usually contemplated; it is performance, and not payment of damages, that makes the social wheels go round. And the State, having brought its sanction to bear on this enormous mass of relations, finds itself compelled to interpose certain restrictions—to lay down those limitations of which we have spoken before. What precisely these ought to be, and how they ought to operate, depends on

many different social considerations. Is the exploitation of the individual by his fellows—the driving of a hard bargain wrung from a man's necessity, when his poverty, but not his will, consents, or the over-reaching of one not worldly-wise—a fit matter for State interference? Are combinations of 'labour' to be recognized wholly or partially, or altogether condemned? Are contracts for service to be regulated, when the claims which arise under them bid fair to reduce one party to the position of existing merely as an instrument for the realization of another's personality instead of being an end in himself? Slavery, it is certain, cannot now be tolerated; but how far will the law, if it attempts to abolish various forms of so-called practical slavery, accomplish good, or how far will it merely afford encouragement to laziness and fraud? These questions and many others are among the implications of contract, though doubtless they lead us far beyond the subject of contract itself. Probably most of them must be answered, not abstractly, but in relation to the particular community with which we have for the time being to deal. What is one man's freedom is another man's ruin. The character and state of social advancement of the community must always be taken into consideration. But, however that may be, the importance of the great branch of law which deals with the right to another man's conduct can never be safely ignored.

LITERATURE.—In addition to the works mentioned in the text, the following may be consulted: W. R. Anson, *Principles of the English Law of Contract*[11], 1906; G. J. Bell, *Principles of the Law of Scotland*[10], 1899, for the Scots Law; F. Pollock, *First Book of Jurisprudence*, 1896, pt. i. ch. 8; Kant, *Philosophy of Law*, Eng. tr. 1887, sect. 31; W. A. Watt, *Theory of Contract in its Social Light*, 1897. W. A. WATT.

CONTROVERSY.—1. The term 'controversy' is not exclusively applied to the weapon with which battles have been fought in the field of theology and philosophy, and skill in disputation has not been valued by professed dialecticians alone. Professor Edward Caird tells us that the philosopher Kant was keenly alive to the uses of controversial methods as a mental training, and that in the year 1758 he announced to his class on metaphysics that on two days in the week he would treat polemically the doctrines expounded on previous days, this being 'one of the most excellent means to attain to profound views of any question' (*Critical Philosophy of Kant*, i. 162). This polemical method consisted in first proving a proposition and then trying to prove its opposite—an exercise of the intellect to which attention has often been devoted in schools of learning, with a view to cultivating a high standard of controversial ability. To Kant it did not so much bring dialectic skill as rivet into the attitude of criticism a mind already critical, even sceptical. The essential thing for him, as for Socrates, was the problem of knowledge, the limitations of our knowing, the question how far we can know anything at all. So throughout life he practised earnestly the polemical method which he recommended to his students, using it as a touchstone to test what is knowable and expose the illusions of the understanding. To this attitude of mind, this deep-seated love of inquiry and discussion, we owe what is considered the greatest system of philosophy of modern times—a philosophy critical alike in spirit and in name.

2. The Kantian 'dialectic,' however, is not a new phenomenon in the history of philosophical thought. In the connotation which it bears for him, that of an arguing for and against, Kant inherited the term from the Stoics and Aristotle. But the practice of dialectic is to be connected with the name of Socrates. As friendly discussion in the market-place about the ethical problems which alone were of interest or moment to him, Socrates held it to be the ideal method of philosophizing. He thought that there *were* answers, more or less definite, to these questions, and that this was the way in which the answers were to be got. This earnest conviction, this seeking after truth in the belief that it is to be found, is one of the essential respects in which Socrates is to be distinguished from the class of professional Sophists to which, in the eye of the ordinary Athenian, he undoubtedly belonged. These men were in the first place teachers of argument and rhetoric, and regarded disputation of this kind as an end in itself. They argued in order to show their pupils how arguing should be done; they talked for victory. But they did not stop here. They were from some points of view extremists in philosophy, and they often took up a concept or idea with the deliberate purpose of showing it to be full of contradictions, and hence unthinkable. The Sophist did not hesitate to tackle any question, or, as Aristotle would say, to 'talk persuasively' on any subject. As the exponents and popularizers of an esoteric philosophy—they were not for the most part originators of new doctrine—they raised problems in the spheres of ethics, politics, and religion, debating freely, in a spirit of tolerant scepticism, questions the mere discussion of which in the eyes of the old-fashioned was not only new, but impious and depraving. Like Abelard, who has been called the mediæval counterpart of such a teacher as Protagoras, the Sophist at his best, they thought that every question could be argued for and against, or in Abelard's phrase, *sic et non*. To them none was sacred. At the first glance, criticism of this kind seemed wholly destructive; many of its immediate effects were undeniably pernicious. But this beating about, this disputing and overturning, was of supreme value, not only in the interests of education, but also in the narrower field of dialectic. It was owing to the Sophists mainly that Aristotle was able to draw attention to a clearly marked difference in the matter of our thought. He saw that relatively few problems belong, like those of mathematics, to the sphere of what is strictly demonstrable, and that beyond this, on the vast mass of questions which puzzle and interest mankind, we can have discussion, but can never have certainty.

3. It was, however, in the Middle Ages that dialectic or discussion in the Platonic and Aristotelian sense became professedly the vehicle of philosophical inquiry. Bound as they were at every step by tradition and authority, the methods of the Schoolmen were formal and pedantic; in this respect they were less fortunate than the thinkers of antiquity. At the same time the mediæval method of exposition, in so far as it was a method of argument, was that of Hellas. To write dialogues in the Platonic manner was no longer the fashion, nor was it, perhaps, within the powers of men of that age; but, though the written word was untouched by the finer graces of poetry and imagination, yet never in the history of philosophy and theology—a sphere of learning at that time co-extensive with literature—have skill in controversy and dialectical ability brought wider fame to their possessors; never were these talents enthroned higher among the objects of intellectual ambition than in the time of Abelard and his rivals. These wandering teachers of the Middle Ages, whose mission it was, after the manner of the ancient Sophists, to popularize the learning of the schools, were also in the most literal sense gladiators in the arena of philosophical controversy.

4. Turning from the sphere of history and

speculative thought to that of everyday life, we find that here the uses of controversy are less obvious, but not less real. In the ordinary sense of the word it may be nothing more than negative criticism, the mere raising of objections to a doctrine or theory brought forward. But, even so, it is of practical value in sharpening the faculties and clearing up confusion in the mind. For contradiction, whether it proceeds from conviction or not, is always stimulating, and even a superficial discussion of most questions is enlightening. When, however, controversy is fairly carried on, that is, with candour and moderation, in a spirit of honest inquiry, it is of great ethical and educative value. The prejudices of the fair-minded rarely withstand the presentation of fact or the persuasion of sincere conviction. We start, most of us, knowing but one side of controverted questions; an argument with an intelligent opponent will show us the other side, and expose the weaknesses of both positions. If our conclusions are sound, we shall realize their value; if they are faulty, light will be thrown on the premisses on which they are based. John Stuart Mill, in his eloquent defence of liberty of thought and discussion, says that every one ought to make a habit of seeking this experience, and that outside the sphere of mathematics no man's opinions deserve the name of knowledge except in so far as he has gone through the mental process which would have been required of him in carrying on an active controversy with opponents (*On Liberty*, ch. 2).

5. The benefit to the individual of such a knowledge of most subjects no open-minded person is likely to deny. But there is a deeper aspect of the question. It has often, and rightly, been said that controversy is the battlefield upon which truth comes into collision with error, and that by means of it alone we can acquire new truth. The progress of the race is thus best served by unlimited freedom of discussion, by such a right 'to argue freely according to conscience' as Milton held to be among the first of human liberties. Mill lays stress upon another point. It is a matter of history that the ethical and religious doctrines of the world owed their preservation and development to the fact that they were vigorously defended against attack in the earlier stages of their existence. What is true of sects and nations applies equally to the spiritual life of individuals. It is the convictions for which we must fight that we are in least danger of losing. It is beliefs which are most universally accepted, most rarely questioned, that are apt to become least full of meaning to us, even to be accepted by us mechanically. It would be easy to multiply instances of this. Can the precepts of Christianity, for example, be said to bear the same literal meaning for us as they did for the Founder and the persecuted of the early Church? Or, to take the case of religion in Scotland, is there in Scotsmen of to-day the fire, the blind devout faith, the love of the Church, which animated their forefathers? Most people, even allowing for change of circumstances and conditions, are inclined to answer these questions in the negative. Certainly creeds and opinions do seem to draw the breath of life from the heat of battle, to grow faint and languid when the struggle is over. This is one sense in which peace and harmony do not make for progress.

6. Every theory, however sound, has its limitations. All doctrines may be, in the main, erroneous; at the best they can contain only a part of the truth, for the truth lies always somewhere between the extreme positions on which man takes his stand. While the progress of knowledge, in spite of apparent disheartening retrogressions, bears always onward and upward its course is, as Hegel says, a zigzag movement, tending now in the direction of one of these opposite poles of thought, now in the direction of another. Dogmatism (to use Kant's expression for these extremes), criticism, and scepticism follow one another, and are succeeded by dogmatism—a new dogmatism—again. But in this struggle of theory with theory, of half truth with half truth, the way is gradually becoming clearer, the fresh starting-point is always a little higher, and, human intelligence being limited and fallible, all this can come about only in this way.

LITERATURE.—The reader will find the source of most of the ideas suggested above in such works as: E. Caird, *Critical Philosophy of Kant*, 1889; Hegel, *History of Philosophy*, Eng. tr. 1892–96; and J. S. Mill, *On Liberty*, 1859, pt. ii. See also well-known Histories of Greek Philosophy, such as that of Zeller, of Ueberweg, of Erdmann, and of Schwegler. On the significance of the work of the Sophists, the student may be referred to G. Grote, *History of Greece*, new ed., 1870, pt. ii.

M. CAMPBELL SMITH.

CONVENTICLE.—The word is derived from Lat. *conventiculum*, dim. of *conventus*. According to Bingham (*Orig. Eccles.*), it originally signified no more than an assembly, and was frequently used by ancient writers for a church. It came to be applied specifically to meetings of religious associations, particularly private and secret gatherings for worship. Later it became a term of depreciation or reproach, implying that those of whom it was used were in opposition to the ruling ecclesiastical authorities; for example, it was applied to a cabal of mutinous monks in a convent or monastery. Ultimately it came to mean religious meetings of dissenters from an Established Church, held in places that were not recognized as specially intended for public worship or for the exercise of religious functions. It implied that a condition of affairs obtained in which the State made a distinction between a form or forms of religion whose practice and propagation were authorized by statute, and such as were expressly prohibited by enactment. This usage has received legal sanction in Britain.

In this sense the term 'conventicle' may be, and has been, widely applied. Harnack (*Mission and Expansion of Christianity*[2], 1908, ii. 318) uses it of the meetings of the adherents of Mithraism in the Eastern parts of the Roman Empire throughout the domain of Hellenism (Greece, Asia, Syria, Egypt, etc.), in which regions it was a banned cult, while those who professed it were regarded as belonging to a barbarous and illicit sect (F. Cumont, *Mystères de Mithra*[2], Brussels, 1903). To attend 'conventicles' was the hall-mark of fanaticism, according to Celsus, who represented the contemporary opinion which cherished a lively contempt for all who attached themselves to religious competing with the Imperial cultus.

In accordance with the accepted usage of the word, Church historians properly assert that Christianity took its rise ecclesiastically from a conventicle. Such was the meeting in the Upper Room of the first disciples of Christ after the Ascension (Ac 1^{13}). This gathering was the type of those which soon began to meet for prayer, mutual edification, and memorial observances, in private houses such as that of Mary, the mother of John (Ac 12^{12}). Within a short time they drew upon themselves the suspicions of the Jewish ecclesiastical authorities, who branded the new faith as impermissibly heretical, and instituted a persecution directed to the harrying and suppression of these conventicles, one of their most zealous agents being he who became the Apostle Paul.

When Christianity became a world-religion and spread in all directions throughout the Roman Empire, it was at first tolerated, and enjoyed Government protection, along with many other cults in vogue. Religions had to receive licence from the State, which was jealous to secure itself against the danger of conspiracies maturing under the guise of religious confraternities. Largely through the influence of political considerations

(see Gwatkin, Harnack, Dill, Weinel, etc.) Christianity soon became suspect, and a *religio illicita*. Its meetings thus became strictly conventicles. Harnack applies the term to characterize such house-meetings as that mentioned in Col 4^{15}, and Schaff uses it in his account of the primitive period as descriptive of the 'ecclesiolae in ecclesia,' the independent separate units of the Church as they existed in the various centres in which it had found footing—Rome, Corinth, etc. (*Kirchengesch.*, 1851, i. 454). In the succeeding century the catacombs (*q.v.*) were the scene of Christian conventicles (Withrow, *The Catacombs of Rome*, new ed., London, 1895, p. 104).

With the establishment of Christianity by Constantine as the State religion, all its meetings were legitimized, and the term of odium could no longer be rightly applied. In the 4th and 5th centuries the description again became applicable to the meetings of such Christian nonconformists as the Montanists and the Donatists, which were prohibited by the State under penalty of proscription and death. This policy was rigorously encouraged by the leaders of the Churches enjoying State recognition and support.

When the corruptions of the Church of Rome aroused a growing hostility in the 13th and 14th centuries, those who were united in the attitude of protest began to abandon the churches and to associate themselves in private or secret meeting-places. Against these the machinery of suppression was quickly put into operation, and once more conventicles entered into history. In England the word was early applied to the meetings of the followers of Wyclif, who, recognizing the incompetence and neglect of the regular clergy, sent out peripatetic preachers to meet the spiritual needs of the people. Both the practice and the word were carried by the Lollards (as the most determined supporters of Wyclif were called) to Scotland, where they did much to initiate or strengthen the movement of revolt from the ecclesiastical domination of Rome.

It was not, however, till after the Reformation that 'conventicle' became a term with a legal connotation, according to which it was descriptive of the meeting-place or assemblage for worship or consultation of those who departed from the Established Church of England. Queen Elizabeth, in her contest with Puritanism, strenuously asserted the royal supremacy in matters religious and ecclesiastical, and insisted upon the rigorous application of the Act of Uniformity, which demanded that all subjects of the realm must conform to the usages and tenets of the Church established by law. Clerical nonconformity was punished by deposition. As the result of the inquisition that followed, so many ministers were deprived of their livings that their places either could not be filled at all or were filled by incompetent and unpopular substitutes. Large numbers of the people refused to accept the ministrations of these substitutes, and gathered together for worship in private houses or other suitable places. These conventicles were, under that name, expressly declared illegal. The 11th Article of the Book of Canons (drawn up in 1603) censures 'the maintainers of conventicles'; the 12th, 'the maintainers of constitutions made in conventicles,' and the 73rd runs thus:

'Forasmuch as all conventicles and secret meetings of priests and ministers have ever been justly accounted very hateful to the state of the Church wherein they live, we do ordain that no priests or ministers of the Word of God, nor any other persons, shall meet together in any private house or elsewhere to consult upon any matter or course to be taken by them, or upon their motion or direction by any other, which may any way tend to the impeaching or depraving of the doctrine of the Church of England, or the Book of Common Prayer, or any part of the government or discipline now established in the Church of England, under pain of excommunication *ipso facto*.'

Under these enactments the adherents of Anabaptism (*q.v.*), which had been propagated in England by refugees from the Continent, were ordered to leave the Kingdom. Even during the subsequent reign of Puritanism, the meetings of this particular body were regarded and treated after the same fashion by the Protector Cromwell, who was incensed by their aggressive fanaticism. For other persecuted sects, with only one or two exceptions, there was a breathing-space of toleration and freedom.

After the Restoration of the Stuart dynasty, established Episcopacy once more became intolerant under the ægis of Charles II. An Act of Uniformity was promulgated in 1662, which ordained the expulsion from his charge of any clergyman who refused to subscribe to everything contained in the Book of Common Prayer and to the doctrine of the King's supremacy in matters ecclesiastical, and held by the Solemn League and Covenant of 1643, prohibiting such from exercising his religious functions in private houses. 2000 clergymen were ejected from their livings in one day for declining to comply with these tests. This enactment was reinforced in 1664 by a statute called 'the Conventicle Act,' which rendered illegal any gathering in a private house for religious worship attended by a number exceeding by five the regular members of the household, under penalty of fine, imprisonment, or transportation. A second version of this Act deprived these outed ministers of the right of trial by jury, and empowered any justice of the peace to convict them on the oath of a single informer, who was to be rewarded with a third of all fines levied (D. Neal, *Hist. of the Puritans*, new ed., Lond. 1822, iv. chs. 7, 8). Large numbers of nonconformists were put in jail. Pepys, in his diary of August 7, 1664, observes: 'I saw several poor creatures carried by, by constables, for being at conventicles . . . I would to God they would conform.' He refers to Quakers, who were amongst the worst sufferers during the persecution consequent on the passing of the Acts. Bishop Burnet, in his *History of his own Time*, 1724–34, i. 471, admiringly describes how they resolutely declined to obey the law, and openly and fearlessly continued their prohibited meetings. They would hold them in the street before the closed doors of their meeting-houses, when these were shut by order. The children, who might not be arrested because of their youth, would also hold conventicles in the street in the absence of their parents in jail, suffering patiently the jeers and cuffs of magistrates and unsympathetic onlookers (F. S. Turner, *Quakers*, London, 1889, p. 164).

Identical measures were taken during the same reign to secure the suppression of Presbyterianism in Scotland, where it had been the popular and dominant form of religion since the Reformation. From 1662 to 1678 various Acts were passed by the Privy Council and the Court of High Commission, prohibiting conventicles and imposing penalties of increasing severity upon those who attended them, masters being made responsible for their servants, landlords for their tenants, magistrates for the citizens of the burghs over which they presided. It was forbidden to supply denounced persons with meat or drink, or to harbour or have intercourse of any kind with them. These measures proving unavailing to effect their purpose, it was ultimately enacted that attendance should incur the penalty of death. Those in command of the military, and even the common soldiers themselves, were given authority to inflict it immediately on the spot of capture, without the formality of a legal trial—an authority which was used without scruple or mercy in numerous instances by such as

Claverhouse. This policy proved, however, quite abortive. The bulk of the religious population in the south and south-west districts continued to attend the conventicles, which were arranged and conducted by the outed ministers. Where the congregation was too large for any suitable private house, resort was had to barns, granaries, or such like commodious buildings. Frequently, however, the number of those who flocked to these illegal gatherings amounted to thousands, and the result was the institution of field-conventicles—meetings held, sometimes under cover of night, in the open air, on moors or hills, or in glens and ravines, or wherever safety and suitability could be combined. These frequently lasted for hours, the preaching taking up a large portion of the time. At such conventicles, the ordinances of the Church according to Presbyterianism were faithfully observed. Baptism was administered, and Communion was dispensed, often to hundreds together, and even thousands, the rite taking days to celebrate, several ministers officiating in turn. When repressive measures became more severe and attendance at these gatherings was enacted to be a capital offence, the men came armed with such rude weapons as were obtainable—scythes, flails, etc. Sentinels were posted at look-out points; for the royalist soldiery, aided by spies and informers, often succeeded in surprising these meetings. It was the attack upon such a conventicle that precipitated the battle of Drumclog, 11th June 1679, which issued in the only victory gained by the Covenanters (as the upholders of Presbyterianism were called), and the only defeat sustained by Claverhouse (known in song as 'Bonnie Dundee'), the most zealous and efficient of the military persecutors. During the years of persecution culminating in the 'Killing Times,' it is calculated that some 18,000 people suffered in one way or another for attending these conventicles. Yet they kept alive and deepened an intense religious faith in the land, while greatly raising the moral tone of many districts in which they were held, as, *e.g.*, at places on the borders where pillagers and moss-troopers became peaceful and honest. Their impressive solemnity, intensified by the conditions under which they were held, frequently turned the hearts even of enemies present in disguise (A. Smellie, *Men of the Covenant*, 1904; R. Simpson, *Gleanings among the Mountains*, 1846; W. H. Carslaw, *Heroes of the Covenant*, 1900).

After the Revolution of 1688 and the accession of William of Orange to the British throne, an Act of Toleration was passed, relating to England, which exempted from the penalties of the laws against conventicles those who took the oath of allegiance and subscribed to the doctrinal sections of the Thirty-nine Articles. Meeting-houses were required to be registered, and then came under protection of the law. In Scotland all the repressive Acts were abrogated; Presbyterianism was restored by the State to its ecclesiastical supremacy.

Similar measures of suppression in Continental countries resulted in the resort of the persecuted to similar kinds of meeting. During the merciless and prolonged attempt of Philip II. of Spain in the Netherlands to compel conformity to the Roman Catholic Church, the Protestant party headed by *Les Gueux* ('The Beggars') were forbidden free exercise of their worship, and immediately field-preachings were organized all over the country, of the same character as those in Scotland—conducted by the excommunicated ministers and surrounded by armed guards and sentinels (Lindsay, *History of the Reformation*, Edinburgh, 1906–7, vol. ii. bk. iii. ch. v.). The same scenes were enacted in the southern districts of France during the heroic struggle of the Huguenot Camisards ('les Enfants de Dieu,' as they called themselves [see CAMISARDS]) to assert religious freedom against the suppressive measures of Louis XIV., inspired by Cardinal Richelieu's vision of a unified France, spurred by the incitements of Madame de Maintenon (herself once a Huguenot), and encouraged by the eloquence of the great preacher Bossuet. Their field-conventicles were called desert-preachings—the name 'desert' being borrowed from the Bible as descriptive of the solitary places, in wild mountain-regions, in which the meetings were commonly held. A peculiarity of these Camisard gatherings was the large part played by the 'prophets'—men and women, and occasionally children, generally quite uneducated and often normally of small capacity for speech or thought—who spoke or were accepted as speaking under the direct inspiration of the Holy Spirit, after the manner of the prophets in the primitive Church (Peyrat, *Hist. des pasteurs du désert*, Paris, 1842; C. Tylor, *The Camisards*, London, 1893).

In the history of German Protestantism the conventicle played a part in Pietism (*q.v.*). The *collegia pietatis*, established by Spener and his followers, provoked the opposition of the strictly orthodox Lutherans, and considerable disturbance was the result, as at Frankfort, where the police interfered. All sorts of scandal were rife about these conventicles, and the over-enthusiastic manner in which some of them were conducted lent colour to the charges. In Württemberg a wise middle course was adopted. Those conventicles in which the great principles of Lutheranism were respected received legal sanction, while the more radical assemblages were banned (cf. *PRE*[3] xv. 790, xviii. 612). In Sweden, Pietism roused similar opposition, and a law of 1726 forbade all conventicles conducted by laymen, though private devotional meetings under the direction of the clergy were permitted, this law not being repealed until 1858 (*PRE*[3] xviii. 33, 36).

At the present time, it is perhaps only in Russia, with the Greek Church in a position of ecclesiastical supremacy recognized by the State, that conventicles in the strict sense can still be said to continue. Measures of repression are from time to time directed by the Government against dissenting sects which have incurred its suspicion and hostility, such as the Stundists (*q.v.*) and the Doukhobors (*q.v.*), who were denied the liberty of private meetings for worship. The spirit of tolerance seems, however, to be rapidly gaining ground, and nonconformists of any kind, on giving satisfactory assurances to the police, are generally permitted liberty of worship according to their accepted mode. The signs of the times point to the spirit of religious toleration soon becoming universal, with the consequent cessation of that hostile and repressive attitude of State or Established Church to any form of religion which resulted in conventicles.

LITERATURE.—This is sufficiently indicated in the article.

A. MITCHELL HUNTER.

CONVERSION. — 1. **Ethnic Conversion.** — Conversion, the greatest of moral events, is not the monopoly of one religion. It is a human as well as a Christian fact. As there is one blood in the veins of all nations, and one breath in all nostrils, so there is one Divine Spirit brooding over and striving within all souls. God has made all men with a capacity for conversion, with possibilities of response to the highest call (Ac 17[27]). And in every age and race there have been minds that have turned to the light, hearts that have felt the 'expulsive power of a new affection,' wills that have striven, and not all in vain, to attain the ideal. We need not grudge the name or the idea

of conversion to many experiences recorded in non-Christian literature. 'Faciasne quod olim *mutatus* Polemon?'[1] (Hor. *Sat.* II. iii. 253 f.).

The movement which was initiated by the religious teachers of Greece led to many conversions from polytheism to monotheism, and it had its saints and martyrs. Dill has shown that, towards the beginning of the Christian era, Græco-Roman philosophy became evangelical; it sent out an array of preachers to convert men to a higher and purer ideal (*Rom. Society from Nero to M. Aurelius*, London, 1904, bk. iii. ch. ii.). 'Some of the schools even developed a true pastoral activity, exercising an oversight of their members, and seeking to mould their moral life and habits according to the dictates of true wisdom' (Menzies, *Hist. of Religion*, London, 1895, p. 301). 'I regard myself,' said Seneca, 'not so much as a reformed, but as a transfigured man' (*Ep.* 6). The science of Comparative Religion is proving the truth of the intuition that there is 'a light which lighteth every man' (Jn 1^{9}). The conversion of Gautama, afterwards known as the Buddha, is as real a fact as that of Saul of Tarsus, Francis of Assisi, or any other spirit that has ever obeyed the heavenly vision. This pampered child of fortune turned from his pleasures and palaces as illusion and vanity; he sought and found, as he believed, the cause of sorrow and the way to subdue it; and he drew a vast stream of mankind after him to the religion of renunciation. It was the best they could do; they followed the gleam; they loved the highest when they saw it. Similar phenomena are found in Confucianism, Islām, and all other great religions. God has not left Himself without witness in any nation, and the same choice between good and evil, between self-seeking and self-sacrifice, presents itself in some form or other to every human being. The spiritual ascent of man has been accomplished by a long series of conversions, from the lowest fetishism to the highest theism. To Christian philosophy, every upward movement of the human mind suggests that 'Christ, in His universal relation to humanity, may be able to pour His new life into open hearts, even when there is complete ignorance concerning the facts of His history and work' (Clarke, *Outline of Christian Theology*, Edinburgh, 1898, p. 398). And yet, so great is the difference between all such movements and the experience which is called Christian conversion, that one cannot but acclaim the essential truth of a well-known passage in Carlyle's *Sartor Resartus*:

'Blame not the word [conversion]; rejoice rather that such a word, signifying such a thing, has come to light in our modern Era, though hidden from the wisest Ancients. The Old World knew nothing of Conversion; instead of an *Ecce Homo*, they had only some *Choice of Hercules*. It was a new-attained progress in the Moral Development of man: hereby has the Highest come home to the bosoms of the most Limited; what to Plato was but a hallucination, and to Socrates a chimera, is now clear and certain to your Zinzendorfs, your Wesleys, and the poorest of their Pietists and Methodists' (bk. ii. ch. 10).

2. Conversion in the Bible.—The term 'conversion' (ἐπιστροφή) occurs but once in the Bible (Ac 15^{3}). At the close of his first great mission, St. Paul went to Jerusalem to take counsel with the Apostles and elders, and he and Barnabas passed through Phœnicia and Samaria 'telling the whole tale (ἐκδιηγούμενοι) of the conversion of the Gentiles, to the great joy of all the brethren.' It was a momentous event, pregnant with the mightiest issues, marking an epoch in the history of the world. In the LXX the verb ἐπιστρέφω stands for שָׁפַךְ, שָׁבַב, and שָׁחַם, and times without number for שׁוּב and הֵשִׁיב. In AV of the OT 'convert' occurs five times—in Ps 19^{7} (Vulg. *convertens animas*), where RV uses 'restoring'; in Ps 51^{13}, where RV retains 'sinners shall be converted,' while the margin has 'shall return'; in Is 1^{27}, where RVm changes 'her converts' into 'they that return of her'; in Is 6^{10}, where RV has 'turn again'; and in Is 60^{5}, where 'converted' becomes in the RV 'turned.' In the NT ἐπιστρέφω appears very frequently, and in AV it is nine times rendered 'convert'; but this word appears only twice in RV (Ja $5^{19.20}$), being everywhere else changed into 'turn' or 'turn again.' But, wherever the Gr. word is followed by ἐπὶ τὸν κύριον, ἐπὶ τὸν θεόν, or the like, it undoubtedly connotes all that is commonly signified by 'convert,' *e.g.* in Ac 9^{35} 11^{21} 14^{15} 26^{20}, 1 P 2^{25}.

The Bible is the drama of the conversion of the world, of the turning, or rather the return, of man to God. The sacred writings must, in the last resort, always determine and control our conception of the origin, growth, and nature of the spiritual life. Without them there would be no Christian conversion, for there could be no adequate knowledge of God as revealed by Christ Jesus. If we are able to trace the lineaments of the soul of a Christian, it is because we have in the Bible the gradually perfected norm of the new life.

i. THE OT.—The OT is a mine of gold for the inductive study of the facts of conversion, but the prospector has to encounter certain initial difficulties. The subject of conversion is often the nation as a whole, and the part played by the individual is usually left to be inferred instead of being directly expressed. Again, the Oriental mind is not analytic; it reasons *a priori*; it is noumenal rather than phenomenal. Where the West says, 'Felix qui potuit rerum cognoscere *causas*,' the East is content with '*causam*.' To search for secondary causes, to pry too curiously into the subjective conditions of spiritual experience, seems to it not only superfluous, but even a little profane. 'This is Jahweh's doing' (Ps 118^{23}), 'The king's heart is in the hand of the Lord as the watercourses: he turneth it whithersoever he will' (Pr 21^{1}), 'None can stay his hand' (Dn 4^{35}), are characteristic Eastern utterances. Once more, the Hebrew habit of thinking in pictures—due in great measure to the absence of abstract terms from the language—causes many spiritual experiences to be clothed in a figurative or symbolical garb. The psychologist must be a very skilful as well as reverent exegete who would re-tell in modern scientific phraseology the story of the conversion of Jacob at Bethel, of Moses in Arabia, of Solomon at Gibeon, of Isaiah in Jerusalem. The last of these experiences, enshrined in an incomparably vivid and illuminating page of autobiography (Is 6^{1-8}), presents a type of conversion in Israel which is no doubt, in some respects, unique and incommunicable, but in its broad outlines may be regarded as normative. Four distinct momenta are enumerated in the thrilling and transforming experience. There is a *vision*, flashed upon the young Hebrew's inner eye, of the King, Jahweh of hosts, whose glory fills the earth. There is a *conviction* of sin, personal and national, concentrating itself like a subtle poison in unclean lips. There is the unutterable comfort of *absolution*, which comes in the hand of a Divine messenger, by the way of the altar, to a heart wrung with anguish. And there is a *mission*, Divinely offered and humbly accepted, to live in the service of God for the welfare of men.

Just because Israel's moral and spiritual ideal—

[1] 'Polemon was a youth of Athens, the son of Philostratus, who spent the greater part of his life in riot and drunkenness. He once, when intoxicated, entered the school of Xenocrates, and was so struck with the eloquence of the academician, and the force of his arguments, that from that moment he renounced the dissipated life he had led, and applied himself totally to the study of philosophy. After the death of Xenocrates he succeeded in the school where his reformation had been effected' (Lemprière, *Class. Dict.*, ed. 1839, *s.v.* 'Polemon').

their conception both of God and of man—was so much higher and purer than that of any other nation of antiquity, conversion was to them a more real and radical experience than elsewhere. Theologically construed, conversion was, in their eyes, always a reversion, not to a low but to a high type, not to an animal but to a Divine pattern. This was not a movement contrary to nature; it was man finding himself, realizing his own true nature. But the general point of view was intensely ethical rather than speculative. Historically, the one aim of the spiritual leaders of Israel was to constrain the backsliding nation to 'return,' to 'be converted,' unto Jahweh. 'Let the wicked return unto Jahweh,' 'Return ye, and turn yourselves from all your transgressions,' 'Turn yourselves, and live,' 'Take with you words, and return unto Jahweh' (Is 55[7], Ezk 18[30. 32], Hos 14[2]). The Prophetic literature rings with the clear call to a definite change of spiritual attitude. Conversion is always equivalent to repentance and faith. But the same Hebrew word (שׁוּב) expresses both the turning to and the turning again from Jahweh, conversion and perversion, and the two movements form the perpetual systole and diastole of the heart of Israel. The possibility of conversion is based upon the consciousness of Divine redemption in the past and the hope of Divine co-operation in the present. 'Return unto me; for I have redeemed thee,' 'Turn thou me, and I shall be [or, that I may be] turned' (Is 44[22], Jer 31[18]). God alone can replace the old antagonism by a new disposition, can change the stony heart into one of flesh. The command, 'Make you a new heart and a new spirit' (Ezk 18[31]), would be a mockery if it were not accompanied by the promise, 'A new heart also will I give you, and a new spirit will I put within you' (36[26]), and unless there were a Divine response to the prayer, 'Create in me a clean heart, O God, and renew a right spirit within me' (Ps 51[10]).

The Book of Psalms gives lyrical expression to the joy of conversion, to the triumph of the soul's return unto its rest in God. The Psalms have many authors, and it matters little whether any singer describes his first or a subsequent spiritual experience, or whether 'the I Psalms' are intended to mirror the heart of the nation as well as the individual. Be that as it may, no human document has greater value for the psychologist of conversion. Here (especially in the Penitential Psalms, 6. 32. 38. 51. 102. 130. 143) he finds 'the sick soul' sighing, groaning, despairing, sure that God has hidden His face, spending nights in sleepless agony, tossing wearily to and fro, watering the couch with tears. Here is the tortured conscience, whose sins are exposed in the light of God's countenance, gnawed with remorse, seized with the pains of Sheol. Here is the sense of inward uncleanness, of hereditary sin, the horrible feeling of being sunk in the miry clay of a deep pit from which there is no deliverance. Here is the piercing cry out of abysmal depths, the prayer for Divine mercy and forgiveness. And here is the glimmering light in the darkness, the blaze of spiritual illumination, the clear vision of God, the sense of His redeeming love; and, lastly, the rapture of deliverance, the gratitude that words can never utter, the desire to tell to others what Jahweh hath done for the soul, that sinners may be converted unto him.

At an early period the Hebrew nation began to devote much care to the training of the young. There was an enthusiasm for education (see EDUCATION [Jewish]), and the discipline was never merely intellectual, but always primarily ethical and spiritual. 'The fear of Jahweh is the beginning [or, it may be, 'the chief part'] of wisdom' (Pr 1[7]). Here 'wisdom' is almost equivalent to 'religion.' It was often personified by its lovers, and praised as a mother or a bride (Pr 2. 3), and even as the eternal companion of Jahweh (Pr 8). The great aim of Hebrew parents—no mention is made of schools—was so to 'train up a child' in the service of God and in the atmosphere of healthy piety, that in his manhood he should need no sudden, violent, convulsive return unto Jahweh from a life of sin and shame. How entirely such pædagogy corresponds with our latest ideals of education, we shall see later. That the end was often realized, we cannot doubt. Some of the noblest servants of God knew that they were sanctified from their mother's womb (Jer 1[5], Lk 1[15]). There was no time when they did not reverence and love Jahweh, no time when they played the fool, no time when they needed to hear the arresting trumpet-voice, 'Turn ye, turn ye . . . why will ye die?' (Ezk 33[11]). But there are incalculable elements in human nature as well as defects in the best education, and the sons of many servants of Jahweh—such as Eli, David, Josiah—showed that it is always in man's power to abuse the mystery of his freedom and defeat the grace of God.

Conversion in the OT was often a profound and radical change. The desire for God—the hunger, the thirst, the panting, the fainting—was pathetic as it was passionate, and the response to the human cry was the outstretching of a strong arm that not only wrought deliverance from evil, but drew men into close and satisfying fellowship with God. Yet the joy of conversion was never quite full. It was for a long period troubled by the idea that spiritual restoration must necessarily be followed and attested by material prosperity. To the end it awaited a fuller revelation of the Fatherhood of God, the atonement of sin, and the hope of immortality. There was to be a final answer to the oft-repeated prayer, 'Turn us again, O God, and cause thy face to shine, and we shall be saved' (Ps 80[3. 7. 19]).

ii. THE NT.—In the NT, conversion is the chief end of all teaching and preaching. It has rightly been called (*Ecce Homo*[11], London, 1873, p. 243) 'the true *articulus stantis aut cadentis ecclesiae*.' Jesus began His ministry by preaching repentance and faith (Mk 1[15]), which are together equivalent to Christian conversion. The call of the early Church was, 'Repent ye, therefore, and be converted, that your sins may be blotted out' (Ac 3[19]). The language in which conversion is described varies greatly, as do the subjective experiences of individuals; but the root or core of the change is always the same. It is figured as a translation out of darkness into marvellous light (1 P 2[9]), as a being born again, or 'from above' (Jn 3[3]), as a redemption from all iniquity (Tit 2[14]), as a passing out of death into life (Jn 5[24]), as a turning from the power of Satan unto God (Ac 26[18]), as a new creation (2 Co 5[17]), as putting off an old and putting on a new man (Col 3[9]), as becoming children of God (Ro 8[16]), as having Christ dwelling in the heart by faith (Eph 3[17]), as a dying and rising again (Ro 6[2-8]). Practically, it is a new life which turns all the forces of one's being into a new channel. All the energies that formerly made a man a sinner are now employed to make him a saint. His carefulness, indignation, zeal, and revenge are directed against his sin (2 Co 7[11]). The converting power is never the mere force of truth, or the beauty of holiness, but always the fascination of a Person. The whole life of the convert organizes itself anew around Christ living, dying, rising, and reigning; He is the power of God unto salvation (Ro 1[16]). The NT tells of multitudes who have been reclaimed from vice, and never gone back. Science regards all facts with reverence, and the NT abounds in such transfigured realism as the fol-

lowing: 'Neither fornicators, nor idolaters, nor adulterers, nor effeminate, nor abusers of themselves with mankind, nor thieves, nor covetous, nor drunkards, nor revilers, nor extortioners, shall inherit the kingdom of God. And such were some of you: but ye were washed, but ye were sanctified, but ye were justified in the name of the Lord Jesus Christ, and in the Spirit of our God' (1 Co 6^{9-11}). NT conversions have been classified as moral, spiritual, intellectual, and practical (John Watson, *Inspiration of our Faith*, p. 79 ff.); and such groupings are useful, if not logically perfect. There are conversions from sin to holiness, from doubt to faith, from legality to grace, from selfishness to service. But we must beware of analyzing the indivisible self into so many faculties, and ascribing conversion to the exercise of one of them, to the exclusion of the others. Conversion is the response of the whole personality—whether regarded as mind, or heart, or will—to the personal Christ. It is man's meeting with Christ, believing in Christ, gaining new life in Christ. Intelligence, emotion, volition are all mastered by the Author and Finisher of Christian faith. The harmonious functioning of every energy of the mind is the perfect spiritual life.

Jowett, in a fine essay on 'Conversion and Changes of Character,' calls attention to the fact that 'with the first believers the influence of Christianity was almost always sudden.' He finds that this lay in the nature of things. The earliest converts had no Christian training in childhood and youth. When they heard the gospel, they were pricked with the sense of sin, they were melted with the love of Christ, and they needed no time of probation. But their conversion, however sudden, and however wonderful the attending circumstances, was none the less sincere and lasting. They became the very opposite of their former selves; their spiritual nature came again like the flesh of a little child (Jowett, *Theological Essays*, p. 40). Sometimes the change was violent and dramatic, as in the case of St. Paul, whose conversion is the most momentous in history; sometimes it was quiet and unsensational, as in the instances of Zacchæus, Matthew, Lydia, Timothy. But, whether the type was explosive or gentle, the change was radical and complete. And it is important to note that it was always the opposite of a gradual and laborious reformation.

'Easier to change many things than one is the common saying. Easier, we may add, in religion or morality, to change the whole than the part. Easier, because more natural, more agreeable to the voice of conscience and the promises of Scripture. . . . Take care of the little things of life, and the great ones will take care of themselves, is the maxim of the trader. But more true is it in religion that we should take care of the great things, and the trifles of life will take care of themselves. Christianity is not an art acquired by long practice; it does not carve and polish human nature with a graving tool; it makes the whole man; first pouring out his soul before God, and then casting him in a mould' (Jowett, *op. cit.* 55).

For certain purposes, theology distinguishes conversion from regeneration. They are the human and the Divine side of the same experience. Regeneration is the gift of God's grace, the power or principle of the new life implanted by His Spirit; conversion is the act of human freedom, the voluntary turning of the heart to God. The one is a necessity—'ye must be born again' (Jn 3^{7}); the other, a duty—'repent and be converted' (Ac 3^{19}). Regeneration occurs but once, conversion may have to be repeated. 'Convert your conversion' is the keen counsel of Adolphe Monod (*Saint Paul*[3], Paris, 1859, p. 114). St. Peter's faith never failed, for his Master prayed for him, and his love never grew cold; but in a moment of temptation he denied his Lord, and his need to be re-converted was painfully evident (Lk 22^{32}). And if there is any truth in the *Domine, quo vadis?* legend, he had yet another conversion at the very end of his life, and it was again a look on the face of Christ that wrought the change. 'And Peter turned, and rushed on Rome, and died.' Conversion plays too important a part to be exhausted in a single decision.

'The whole life of a man,' says Fraser of Brea, 'is a continued conversion to God, in which he is perpetually humbled under sense of sin, and draws nearer and nearer to God, with more fervent faith and love, and daily walks closer with the Lord, endeavouring at perfection. And God doth, as it were, act over and over again His work in the heart, forming His people more exactly than before: and therefore no wonder they meet with something like a second, yea, and a third and fourth conversion, especially where there are backslidings' (*Memoirs*, Edinburgh, 1738, ch. v. 3).

St. Paul describes his own conversion objectively in the Acts, and subjectively in his Epistle to the Romans. Ro 7 is the most searching analysis ever given of the divided self, the *homo duplex*. Whether it mirrors a first or second or still later spiritual conflict is immaterial, for each crisis is in many respects the same. How forcibly the Apostle's self-dissection illustrates the teaching of the modern psychologist!

'The . . . basis of the twice-born character seems to be a certain discordancy or heterogeneity in the native temperament of the subject, an incompletely unified moral and intellectual constitution. "Homo duplex, homo duplex!" writes Alphonse Daudet. . . . Heterogeneity may make havoc of the subject's life. There are persons whose existence is little more than a series of zigzags, as now one tendency and now another gets the upper hand. Their spirit wars with their flesh, they wish for incompatibles, wayward impulses interrupt their most deliberate plans, and their lives are one long drama of repentance and of effort to repair misdemeanours and mistakes. . . . The higher and the lower feelings, the useful and the erring impulses, begin by being a comparative chaos within us—they must end by forming a stable system of functions in right subordination' (James, *Varieties of Religious Experience*, London, 1902, lect. viii. p. 167 ff.).

While the battle rages in the Apostle's soul, while his heart is a kingdom divided against itself, and in all the chambers of his being his moral ideal is torn between friends and foes, his anguish is pitiful. 'O wretched man that I am,' he cries, 'who shall deliver me?' (Ro 7^{24}). But in the end, by the power of Christ, his higher self triumphs over his lower; his divided spirit is healed; peace and harmony take the place of civil war and turmoil; and the most tragic lament in the Bible is followed by the finest pæan-song.

3. **Conversion in Church history.**—The supreme task of the Church is the conversion of the world—the making disciples of all nations (Mt 28^{19}). The apostolic and evangelic continuity of spiritual life is to be maintained, the Christian faith is to be propagated, the Kingdom of God is to come, through an unbroken succession of conversions. All the preachers who have profoundly moved the heart of mankind—master-spirits like Chrysostom, Savonarola, Luther, Wesley—have made conversion their theme. And, from a scientific point of view, the evidential value of conversions is the highest.

'St. Augustine,' says Romanes, 'after thirty years of age, and other Fathers, bear testimony to a sudden, enduring, and extraordinary change in themselves, called *conversion*. Now this experience has been repeated and testified to by countless millions of civilized men and women in all nations and all degrees of culture. It signifies not whether the conversion be sudden or gradual, though, as a psychological phenomenon, it is more remarkable when sudden and there is no symptom of mental aberration otherwise. But, even as a gradual growth in mature age, its evidential value is not less' (*Thoughts on Religion*[6], p. 162).

The theology of the Church was early caught in the meshes of the problem of the relation of Divine grace to human freedom in the experience of conversion. Thought has moved between two extremes. On the one hand, the sovereignty of God is emphasized, grace is irresistible, the number of the elect is certain and must be made up, the Divine good pleasure is certain to take effect. Under such conditions, man, impotent in the grip of original sin, is converted almost against his will. He is scarcely more than an automaton; his salvation appears to be due to his mere good

fortune; he chances to be a vessel unto honour. On the other hand, human liberty is accentuated; conversion is viewed as the outcome of forces resident in man himself; he has a native power to repent and believe, and the new life is from first to last a hard-earned, self-obtained, personal possession. The age-long controversy between Augustinian and Pelagian, Calvinist and Arminian, regarding the fact of conversion has now spent much of its force. With the help of a better psychology we can do justice to both the Divine and the human initiative. God is all-operative love, and man's whole equipment is His gift. All the conditions of human life are Divinely ordered, and man has an intense consciousness of dependence. He has nothing that he has not received. But part of his equipment is his freedom. He is above the mechanical order of nature. He has a real and not an illusive sovereignty. He is conscious of acting of his own accord, and of using the causal order for ends which he himself chooses. He is a free, self-determining personality, and his conversion can only mean that under the impulse of love he voluntarily and joyfully surrenders himself to God. A German theologian illustrates the interaction of Divine sovereignty and human freedom in conversion by the familiar process of persuading and being persuaded—*Anregung und Ueberzeugung* (Seeberg, art. 'Bekehrung,' in *PRE*[3]). Every man is constrained by the love of Christ; but every man is fully persuaded in his own mind. If the convert calls the grace or fascination of Christ 'irresistible,' he speaks with the enthusiasm of a lover; but it is bad theology to change the warm logic of the heart into a cold dogma of the intellect. Man may after all use the Divine gift of freedom to oppose—it may be to thwart—the will of God. The wise use of individuality is to make Divine ends personal ends, and to pour forth all the energy of one's being in the service which is perfect liberty.

Conversion meant in the Middle Ages, as it still does in Roman Catholicism, the adoption of a creed and submission to the authority of the Church. In Protestant theology it always means the re-birth of the soul, but in the Anglican Church there is a strong tendency to regard regeneration and conversion as independent experiences, separable in time, and different in important aspects. Certainly, if regeneration is mediated by baptism, the subject of which is usually unconscious of the rite, while conversion is the deliberate turning of the will to God, the personal acceptance of Christ by faith, then the second process is often separated from the first by a long interval; and it is possible to contend, as Anglican theology sometimes does, that 'a regenerated man is not necessarily a converted man.' If the effect of baptism is that 'it remits all sin, original and actual; that it bestows sanctifying grace, and endues the soul with the heavenly virtues of faith, hope, and charity; that it makes the recipient a member of Christ, the child of God, and an inheritor of the kingdom of heaven' (V. Staley, *The Catholic Religion*, London, 1893, p. 243), there can be little need for another religious phase called conversion. But this view appears to lose all touch with the central truth and vital experience of the NT, to empty the Christian religion of its moral and spiritual contents, and to reduce it to the level of a magical formula.

4. **Conversion in the light of science.**—Professor Henry Drummond was an eye-witness of the facts of conversion, as the youthful comrade of Mr. Moody in a great revival of religion. From that time he never ceased to advocate a scientific treatment of the phenomena of the spiritual life, which he happily called 'the contemporary activities of the Holy Ghost.' There can be nothing presumptuous in the endeavour to classify the facts and discover the laws of the new life. To the man of science all facts are sacred, and before the fact of conversion, as before any other, he will sit down 'as a little child.' Far too scanty attention has been given to the human side of soteriology. In order to understand the Saviour better, we must look more to the saved. Christ asked that He might be believed 'for the very works' sake' (Jn 14^{11}), and He worketh hitherto (5^{17}). The serious study of the facts of conversion may be the best present-day mode of handling the Word of life. The Christ of history may be reached through the Christ of experience. Christianity, as Harnack reiterates, is 'eternal life here and now in the power of God and in His presence.' Its best evidence is the logic of life. *Solvitur ambulando*, it is proved by its present spiritual movements and triumphs. In the realm of experimental theology, the twentieth century may join hands with the first.

During the last dozen years there has been a remarkable response to the plea for a science of conversion, for an empirical study of 'the soul of a Christian.' It has fittingly come from the psychologist rather than the theologian; and the new quest has characteristically been urged with special keenness in America. The publication of Starbuck's *Psychology of Religion* in the 'Contemporary Science Series' (1899) marked an epoch in the modern Church. In this book and its numerous successors the whole spiritual realm has been annexed by science. Religious experiences without number have been collected, classified, and described. 'That cruel reticence,' whereof Ruskin complained, 'in the breasts of wise men which makes them always hide their deeper thoughts,' has to a great extent been overcome. Law and order have been introduced into an apparent chaos. Theology, which has been too long metaphysical, has become experimental; it has been brought into line with the whole scientific movement; it has found a concrete basis in the facts of the spiritual life. Dynamics have taken the place of statics. Conversion is no longer regarded as a mere mystery or portent, before which we must stand in silent amazement. It abides our question and becomes articulate. It expresses itself in the language of the modern mind. It welcomes the application of the canons of science, and yields up many of its secrets to patient and reverent research. It has a rationale. It is seen to have discoverable relations to other known psychological facts. And, in the spiritual as in the natural world, God is a God of order. He arranges everything upon definite principles. The law of cause and effect controls the spiritual life. Arbitrariness must once for all be eliminated from the fortunes of the soul. God's action is always causal, never casual. His sovereignty is as different from the 'mere good pleasure' of an Eastern despot as day is from night. The science of conversion is still in its infancy, but certain conclusions seem to have been securely won.

(1) *There is a conversion period.*—The re-birth does not take place with the same frequency in all the seven ages of human life, though a man may be born again when he is old. Conversion is in general a fact of adolescence. It is closely related to those great physical and mental changes which mark the transition from childhood to youth and manhood. It is the time of storm and stress, in which Nature calls for readjustment all along the line. As reason, feeling, and moral sense mature, they precipitate a spiritual crisis. The soul awakes and aspires. The spiritual development proceeds, as a rule, *pari passu* with the physiological and

psychological development, and a wide induction proves that

'among females there are two tidal waves of religious awakening, at about 13 and 16, followed by a less significant period at 18; while among males the great wave is at about 16, preceded by a wavelet at 12, and followed by a surging up at 18 or 19' (Starbuck, *op. cit.* p. 34). 'Feeling plays a larger part in the religious life of females, while males are controlled more by intellection and volition' (*ib.* 65). 'Conversion for males is a more violent incident than for females, and more sudden' (*ib.* 95). And 'one may say that if conversion has not occurred before 20, the chances are small that it will ever be experienced' (*ib.* 28).

(2) *Conversion is often sudden.*—This statement is sometimes received with incredulity and even contempt, but psychology completely justifies it by bringing it into relation with other well-known mental processes. There are moments, as Browning says in his *Cristina*,

'When the spirit's true endowments
Stand out plainly from its false ones.'

Our best thoughts are often startling intuitions, 'flashes struck from midnight.' The seeker after truth utters his sudden 'Eureka,' and so does the seeker after a Saviour (Jn $1^{41.\ 45}$). Love, both natural and spiritual, is often love at first sight; when two souls, like two dewdrops, rush into one, the time element counts for nothing; the psychological moment has in it the quality of eternity. Our wills and our hearts are ours to make them God's, and life's most momentous decisions may be swiftly over.

'The world and its laws,' to quote Jowett again (*op. cit.* p. 53), 'have nothing to do with our free determinations. At any moment we can begin a new life.' R. L. Stevenson prays the Celestial Surgeon to *stab* his spirit broad awake (*Underwoods*, p. 46). 'A word did it,' said Savonarola of his own conversion.

Even those who have never avoided God, never dishonoured Christ, often become suddenly and profoundly conscious of their need of conversion; and there are creative periods of the mind when the repulsion from evil and the attraction to good are tremendously strong. While, however, the actual change is frequently swift, there is almost invariably a season of preparation for it. Conversion is the climax of a gradation, the crisis of a process more or less drawn out. The evidence on this point is all but unanimous. We may even accept Vinet's strong statement: 'Rome might more easily be built, than a man converted, in a day. Such a prodigy is possible with God; but in a thousand, in ten thousand cases to one, we may safely predict that He will not perform it' (*Outlines of Theology*[3], 1870, p. 84). Vinet is here perhaps misusing language, confounding the means with the end, the way with the goal. He does not for a moment deny that the final *coup* is often instantaneous. In such cases conversion is the firing of a slowly-laid train, the bursting of a silently-maturing bud, the transformation scene in the life-long drama of the soul. It is evident that much is lost by the deliberate postponement of decision.

'Convert me, but not yet,' was Augustine's prayer. 'Men are quick to feel, and keen to know; but they are not only slow, they are averse to decide. Yet it is for decision that Christianity calls, it is for decision that the energetic universe calls, far more than for a mere impression in reponse. A crisis has from time to time to be forced, a crisis of the will' (P. T. Forsyth, *Preaching and the Modern Mind*, 1907, p. 131).

(3) *Conversion may be unconscious.*—There is a happy class of Christians who cannot tell when or how they began to believe; who have 'no bitter regrets, no broken lives, no ugly memories.' Theirs is the *anima naturaliter Christiana*, the *schöne Seele* that has always been on the side of the angels. It was the teaching of Bushnell that, under the pervasive influence of the Christian family, the child should grow up a Christian, and never know himself to be otherwise. The Christian life, being natural to man, should begin with the beginnings of conscious experience; and a great wrong is done to a child when he is led to imagine that he must wait till he comes to years of discretion and then have an experience which will make him a Christian. If God's will for him is realized, there will be no rude break, but a beautiful continuity, in his spiritual life. 'Of such is the kingdom of God' (Mk 10^{14}), said Jesus of the children of Galilee, and the prevention of a fall from the grace vouchsafed to childhood should be the aim of all education.

'That is the ideal type of conversion in a Christian land; and it is the scandalous neglect of duty by Christian parents and by the Church which has made it less frequent than it should be' (D. W. Forrest, *The Christ of History and of Experience*, 358).

'The child is father of the man;
And I could wish my days to be
Bound each to each by natural piety.'

Some, indeed, deny that in this experience there is any conversion at all. Francis Newman distinguished the 'once-born' from the 'twice-born' Christian, and this idea—legitimate enough as a protest against an exclusively revivalistic type of conversion—has been taken seriously by some psychologists and greatly overworked. It is not a Christian idea. Jesus assumes in many indirect ways the natural sinfulness of the human heart and its need of regeneration. Even the child who is 'sanctified from his mother's womb' is twice-born. The most 'sky-blue' and 'healthy-minded' Christian is regenerated. Science is here rendering a valuable service to theology. It has proved that every man has a sub-conscious as well as a conscious self, and that changes both small and great occur in the subliminal region of the mind.

'Consciousness is a very poor witness to what takes place in the abysses of soul life. The remembered experiences of individuals are pitifully fragmentary and puerile, and often absurdly mistaken as to cause, process, issue, and object' (Hall, *Adolescence*, p. 341).

We are largely the creatures of instinct and unconscious imitation, and, if many things are wrought into the fabric of our being without our knowledge, why not the grace of God?

'Think you, 'mid all this mighty sum
Of things for ever speaking,
That nothing of itself will come,
But we must still be seeking?'

God 'giveth his beloved in sleep' (Ps 127^{2}), and His beneficence is as wonderful in an unconscious as in a conscious regeneration. But see, on this whole subject, art. CONSCIOUSNESS, p. 53.

(4) *Conversion must not be stereotyped.*—The phenomena of the spiritual life are marvellously complex, and psychology teaches us to resist every attempt to standardize, normalize, conventionalize it. Every individual has his own ancestry, his own history, his own idiosynerasy, and therefore his own spiritual experience. The variety of grace is like the variety of nature. God does not repeat Himself; He loves originals more than duplicates. The conversion on the way to Damascus cannot be a pattern for all men. There need not always be the same tragic intensity, the same high lights, the same deep shadows. The diversities of operations of the selfsame Spirit must all be orthodox. But every man is tempted to make his own experience a kind of law for other people. Schleiermacher thinks that the religious life is, in its inception and growth, the product of feeling; Herrmann believes that 'greater and higher than all the emotions within the Christian, there rises and towers religious thought.' The type of religious experience that seems native to a cultured community is calm and restrained; but the fervours of the Salvation Army and the Methodist meeting are to the psychologist no less natural.

Théodore Monod tells of a French friend who thus described his conversion: 'I cannot say that I had a very strong sense of sin. I just felt happy in the love of God. God did to me as a mother will sometimes do to her child who has overslept himself: he woke me with a kiss' (Moody, *Sovereign Grace*, Lond. 1899, p. 116). The Christian of the unconscious type, who has never felt a single reaction or upheaval, may join hands with the convert who knows himself to be a brand plucked from the burning, to whom conversion is a thing volcanic or cataclysmic, in whom 'habits of years' standing are overthrown in as many

moments,' and whose 'very organic impulses and desires are so utterly transformed that he can scarcely recognize himself' (Pratt, *Psychology of Religious Belief*, p. 251).

(5) *Conversion is still a mystery.*—In being studied scientifically, spiritual phenomena lose none of their Divine significance. Psychology has done much and will yet do more; it even asserts that, 'if we know the person psychologically, we can prophesy quite correctly the type of his conversion, whether sndden or gradual, quiet or excited' (Cutten, *Psych. Phen. of Christianity*, p. 255). But, after all, psychology can see only the under side of conversion. Spiritual life, like natural life, is in its final cause and real nature inscrutable. Nothing can be more crude than the notion that to discover the reign of law is to eliminate God and mystery. Law is only God's uniform method of working, and 'He is in the field when He is most invisible.' We have not to deal with a God remote from the world and manifested only through occasional interferences with the order of Nature, but with a God whose dwelling and working are in the lives of men. Just as the correlation of brain states with mental states does not prove the case of the materialist, so the correlation of conversion with certain mental and physical forces is far from proving that the inception and growth of the spiritual life is not a Divine act.

'That it [conversion] may all be due to so-called natural causes,' says Romanes, 'is no evidence against its so-called supernatural source, unless we beg the whole question of the Divine in Nature' (*op. cit.* p. 163). Even Ritschl, with all his dislike for mysticism, never denies that God Himself is present and operative in regeneration, using the religious community as His medium, not His substitute. 'This wonderful change,' says Pfleiderer, 'is not arbitrarily brought about by man himself, but experienced as a thing that has happened to him; it appears to him as the operation of a higher power, as the gift of undeserved divine favour or *grace*. And is not this in truth the case? Careful thought, in fact, can do nothing but confirm what the believer holds as a truth requiring no proof' (*Philosophy of Religion*, Eng. tr. iv. [1888] 128).

Froude complains that conversion, like other Christian doctrines, has been 'pawed and fingered by unctuous hands for now near two hundred years. The bloom is gone from the flower. The plumage, once shining with hues direct from heaven, is soiled and bedraggled. The most solemn of all realities have been degraded into the passwords of technical theology' (*Life of Bunyan*, London, 1880, p. 34). But all that is needed to bring back the bloom to the flower and the plumage to the wing is a new springtime. Human errors and caricatures do not alter Divine facts, any more than the mists extinguish the stars. A wide survey of the data of the spiritual life leads to the conclusion that the majority of conversions have little of the picturesque or dramatic in them; that some take place beneath the threshold of consciousness; that others are but dumb yearnings of penitence and faith towards God; that the memorabilia of soul-life are usually very brief, the convert sometimes limiting himself to the wondering exclamation, 'Whereas I was blind, now I see' (Jn 9^{25}). Yet every conversion enfolds in itself a Divine secret—the mystery of life—whose power and beauty will gradually be unfolded to the eye, but whose inner significance no mind can penetrate. The psychological study of the New Life will probably do more than anything else to convince the twentieth century of the immanence and the transcendence of God.

JAMES STRACHAN.

CONVICTION.—1. *Conviction in relation to belief.*—Conviction that certain doctrines of religion are true is seldom or never the result of a rational process: it rather springs from a feeling in the mind that the doctrines suit a mental and emotional condition and bring peace to the soul. As Schopenhauer has well said:

'Man has, as a rule, no faculty for weighing reasons and discriminating between what is false and what is true; and, besides, the labour which nature and the needs of nature impose upon him leaves him no time for such inquiries, or for the education which they presuppose. In his case, therefore, it is no use talking of a reasoned conviction; he has to fall back on belief and authority' (*Religion: a Dialogue*, tr. by T. B. Saunders, 1889, p. 19).

Conviction implies active acceptance of propositions as indubitably true. It is not in itself any proof of truth, because different people may have diametrically opposite convictions, and some convictions have led to most lamentable results in persecutions, and in denial of equality in human rights and liberties. Bagehot remarks, in discussing 'The Emotion of Conviction':

'Nor is this intensity a sign of truth, for it is precisely strongest on those points in which men differ most from each other. John Knox felt it in his anti-Catholicism; Ignatius Loyola in his anti-Protestantism; and both, I suppose, felt it as much as it is possible to feel it' (*Lit. Studies*, 1879, ii. 414).

All experience shows that the personal equation, idiosyncrasy, or state of development of each ego is a prominent factor in the determination of convictions. The convictions of the two clever men, Cardinal Newman and his brother F. W. Newman, were widely apart, although their heredity was the same, and their upbringing was under identical general circumstances. In the case of these two thinkers, the divergence, of course, could only have been due to their different emotional and mental natures in different stages of development, for the same subject-matter of conviction was before the mind of each of them.

Conviction, then, as a feeling of reality indicating truth, is not fully trustworthy in respect of propositions as a whole, yet we may be assured that when the feelings are stirred, there are elements in the doctrines believed which are true relatively both to some universal principles and to the corresponding principles in man. For man is potentially, though not actually, the measure of the universe. The outer form of beliefs is often false, while the inner life—that which awakens emotional response—is true either for higher or for lower stimulation to development. Convictions suitable and useful to low stages of human evolution are eventually outgrown and seen to be erroneous. They are then replaced by others more true to outer and inner conditions, and more efficacious in promoting the growth of the soul.

There is also what may be called a coercive element in belief and conviction. This proceeds from pressure of environment, eventuating in the imposing of the customary opinion of those around on the unresisting and undiscriminating mind. G. F. Stout has said:

'There must . . . in the framing of a belief be always some endeavour to conform to conditions other than, and independent of, our own subjective tendencies. Our inability to attain ends otherwise than through certain means constitutes a restriction of mental activity within more or less definite channels' (*Manual of Psychology*[2], 1901, p. 567 f.).

It is only the thinker who can stand alone; most people do not think, but readily come under the

personal influence of those who confidently and plausibly proffer doctrines and statements for the acceptance of ill-equipped minds.

Respecting conviction as the result of a mental process, and determined by evidence, there is usually a change of belief and of mind-content. Here we have the force of evidence driving out old belief and substituting new; conviction then leaves old opinion and clings to new. In this case the feeling of reality comes as a response to the force of evidence applied by comparison and judgment.

'What is believed to be real (and so said to be known) is indeed mainly a matter of intellection; but it is also a matter of both feeling and will. In respect of all the higher intellectual, æsthetical, ethical, and religious realities, feeling and choice largely determine knowledge through the dependence of this belief on them. Yet we have spoken of this belief as feeling, not because it is a special form of affective phenomena, but because as conviction—having that warmth of colouring which the word implies—it may be regarded as a sort of universal affective accompaniment of the intellectual and voluntary aspects of all knowledge' (G. T. Ladd, *Psychology*, 1894, p. 514).

Convictions are beliefs accepted and vitalized by the emotions of those convinced that realities are indicated by them. The acceptance of beliefs is partly determined by the absence of contradictory beliefs in the mind when the new propositions are tendered. This fact Buckle long ago pointed out.

'The sense that anything we think of is unreal can only come when that thing is contradicted by some other thing of which we think. *Any object which remains uncontradicted is ipso facto believed and posited as absolute reality*' (W. James, *The Principles of Psychology*, 1905, vol. ii. p. 283 f.).

The absence of antagonistic ideas in the mind permits indiscriminately the acceptance of true and of false forms of belief. Children may be brought up to believe almost anything religious. In the same way the presence of beliefs antagonistic to proffered ideas may as often keep out the true as the false. Bias towards false forms, and erroneous prejudice, make impossible the advent of certain truths to the soul. Hence it is that new general truths are seldom acquired after mental maturity. Minds usually become hopelessly biased long before middle age. While credulity may sometimes permit the truth to enter, constant incredulity resists the truth and hugs old errors.

The test of actuality we find in our own consciousness and life. '*Whatever things have intimate and continuous connexion with my life are things of whose reality I cannot doubt*' (James, *op. cit.* p. 298). Doctrines strongly stirring the higher emotions, and not conflicting with prejudice, appeal with a force which carries conviction with it, though the doctrines may vary with all the religions of the world. Truth hides under many forms. We may be sure that, in all these varying doctrines as applied to the human heart, there is a living element of eternal truth. God does not forsake the beings that have emanated from Himself. Each soul has the conditions and the knowledge it can bear and make use of under the religion it is born to or adopts.

2. *Conviction of sin* is usually present in the state of consciousness known as conversion (*q.v.*), or change of heart. It is a 'sense of sin,' a feeling of unworthiness and general wretchedness, accompanied by a strong desire to lead a better life. It is shown by a more or less sudden distaste for accustomed thought, language, and conduct, and by a new-found yearning within for an improved state of being. Conviction may last for days, months, or years before the crisis, or conversion, supervenes, and this is followed by restfulness of mind and lightness of heart. Conversion is described by Starbuck as a sudden forsaking of the lower for the higher self:

'A process of struggling away from sin, rather than of striving toward righteousness; . . . it seems to be a step in growth which calls into activity the deeper instincts. . . . The feelings, which are the primal elements in consciousness, function so strongly. In the tendency to resist conviction we see, also, an indication that the new life is forcing its way even against the person's will' (*The Psychology of Religion*, 1899, p. 64).

Though the proximate cause of conviction of sin is often fear of torments to come, yet we may be sure that behind this fear there are certain emotional and mental conditions ripe for a change to a higher state.

Viewing the phenomena observable at great religious revivals, such as the movement among the Welsh people in the years 1904–1905, we may recognize, despite certain objectionable features and mistaken views and conduct, the action of the Holy Spirit in meeting the aspirations of those who are struggling amid the difficulties and illusions of the lower planes of emotion. It is through the power of the Spirit, which is the life-force of the universe, that the transmutation of the emotions is effected, and this must be at the bidding of the lower nature. The raising of the emotions to higher levels is part of the process of evolution, and, when accomplished, is a sign of the soul's development, or growth in grace.

LITERATURE.—The literature is given in the article.

G. A. GASKELL.

CONVOCATION.—This is the name given to the general assembly of the clergy of the Church of England. The older name was 'synod,' of which 'convocation' became the equivalent when English began to take the place of Latin in the official documents of the Church. We read of the 'Synode of London' in 1553, but of the 'convocation holden in London' in 1562. The synodal activity of the Christian Church is coeval with her life. It gradually took form in diocesan, provincial, and national synods, and these different forms of synods were held wherever Christianity was established. The British Church, in common with the rest of Christendom, was familiar with conciliar action—witness the Council of Verulam in A.D. 446. In Anglo-Saxon times, Church Councils were assembled 'acourse with our Parliaments' as national synods, while the bishops and clergy in addition were constituent members of the 'great council' of the nation.

In Norman times the conciliar activity of the Church became still greater. Bishops, abbots, priors, archdeacons, and deans were summoned; but the first known instance of the representative element occurs in 1225 under Langton. Later in this century, however, we have proof of direct representation in a provincial synod, for in 1273 we find Archbishop Kilwarby issuing his mandate to the Bishop of London in these terms:

'You are to direct on our part each of the suffragan bishops of our Church to call and bring with him to the aforesaid synod three or four of the greater, more discreet, and prudent persons of his Church and diocese, that by the assistance of their common counsel such important affairs of the Church of God by His aiding mercy may be brought to a happy conclusion.'

Four years later 'proctors of all clergy of each diocese' were specifically named in a similar mandate. In 1283, Archbishop Peckham ordered the attendance of two proctors for the clergy of each diocese as well as one for each cathedral and collegiate church, and this seems to have become the rule for the Province of Canterbury. In the Province of York, the rule, dating from 1279, was that two proctors for the clergy should attend from each archdeaconry. Side by side with provincial synods were diocesan synods, which were held under their several bishops to enforce the decrees of the provincial synods. National synods fell into disuse through the jealousy felt by the two Archbishops of their respective claims.

It is to be noted that this synodal action of the Church preceded the attempt made by Edward I. in 1295 to incorporate the clergy into his newly-

devised parliamentary system. The king hoped that the clergy would not only meet, as heretofore, as the spiritual councillors of the Archbishops, but that they would also add to their spiritual duties the further duty of sitting in Parliament as his council, especially to make it easier for him to raise money by taxation. The king's attempt, however, failed through the refusal of the clergy to obey the royal summons addressed to them, through the Archbishops, in the famous *præmunientes* clause. The Crown acquiesced, after 1340, in the rule that the clergy should tax themselves in their Convocation, and in consequence the attendance of proctors in Parliament did not outlive the following century. The writ with the *præmunientes* clause is still issued at the summoning of every Parliament, but is never obeyed. Convocation, however, is still summoned in both Provinces whenever Parliament is summoned, though it would seem that there is nothing to hinder its meeting at other times 'if the existence of affairs shall so require.'

Convocation, in common with the Church of England as a whole, lost much of its independence, and at the same time much of its power and influence, at the Reformation. The Act of Submission (25 Henry VIII. c. 19) embodies in its preamble an Act of Convocation abjuring all power to make or act on any canons without the king's consent; and it affirms that Convocation always had been, and ought always to be, assembled only by the king's writ. Accordingly, Convocation was reduced to an instrument of the 'Supreme Head' or 'Supreme Governor' for ecclesiastical purposes, and was given the duties of considering forms of public worship, articles of religion, and canons, though not as possessing any independent effective authority. Indeed, it is now an established rule of law that canons made by the clergy in Convocation are of no binding power over the laity.

After the Restoration, Convocation prepared in 1661 the Act of Uniformity, revised the Prayer-Book, and re-modelled the canons. The same Convocation is remarkable as being the last to grant a clerical subsidy—acting, it is said, in dropping the custom, upon a verbal agreement made between the Lord Chancellor Clarendon and Archbishop Sheldon. This has been declared to be 'the greatest alteration in the constitution ever made without an express law.' Since this change Convocation has ceased to enjoy any political importance.

After the Revolution, the history of Convocation is a story of bitter conflicts between the two Houses, in which Atterbury, Wake, and Burnet played leading parts. This conflict culminated in 1717, when the Lower House was about to censure the writings of Bishop Hoadley, whereupon Convocation was prorogued by royal writ, and met no more (except formally till 1741) until it was again summoned for business in 1852, through the efforts of Bishop Wilberforce and others.

Convocation now assembles concurrently with Parliament, being summoned by a royal writ addressed to the Archbishops. In Canterbury the Upper House consists of 23 members, the Lower of 154. In the Province of York the corresponding numbers are 9 and 69. The custom of separating into Upper and Lower houses dates from the end of the 14th cent., when the inferior clergy began to withdraw into a lower room, viz. one under the chapter-house of St. Paul's Cathedral, or a school-room in the crypt.

Though Convocation is described in Canon 139 of 1604 as 'the true Church of England by representation,' it remains an unreformed body. The official element is preponderant, and the large body of stipendiary curates is without any voice in the election of clergy-proctors. It is not surprising, therefore, that Convocation exercises but little influence over the minds of the majority of the members of the Church of England, though it affords an excellent opportunity for the more highly-placed clergy to discuss affairs as they affect the Church, and though its debates and reports are of a uniformly high order, and are frequently of permanent value. See also art. CHURCH OF ENGLAND.

W. F. COBB.

CO-OPERATION.—Co-operation (*i.e.* literally 'working together') might express any combined action of two or more persons for any purpose. It is used in general, and will be employed here, to denote the combinations of working men for production or distribution of commodities, including incidentally some other forms of mutual help. In 1794, Dr. Shute Barrington, bishop of Durham, established a co-operative store at Mongewell, in the county of Oxford, for the benefit of the poor of that and three small adjoining parishes. A quantity of bacon, cheese, and other articles was procured from wholesale dealers to be subdivided and sold at prime cost for ready money. The salesman was an infirm old man who could not read or write, but his honesty was unimpeached, and he was allowed a shilling a week as well as the benefit of the shop. The transactions of 1796 amounted to £223. The net saving to the poor in the cost of their supplies was 21 per cent. In 1800, the Rev. Dr. Glasse opened a similar village shop at Greenford in Middlesex. The receipts for six months exceeded £150, and the margin of saving was from 15 to 25 per cent according to the nature of the article sold. A third was established about the same time at Hanwell, by the Rev. G. Glasse, vicar of that parish, with like success. In all three cases, great good was done by avoiding the burden of debt.

In 1795, a co-operative saw-mill was established at Hull, and it continued in operation for a hundred years. In 1796 a parish windmill was erected by subscription on Barham Downs in the county of Kent, and in 1797 one at Chislehurst. A co-operative society at Nottingham has existed for more than 100 years.

In 1844, a few workmen of Rochdale joined in establishing a society called the 'Equitable Pioneers,' and that Society was so successful that their example was followed in many parts of the country. It now has more than 16,000 members holding £300,000 in shares, and its sales amount to £340,000 a year. A portion of its profits is yearly applied to educational purposes. The paid up capital consists largely of accumulation of past profits. No credit is given. By its means the workmen of Rochdale have been enabled to supply themselves with necessaries of life, genuine in quality and at a cheap price, and to accumulate out of their savings and the profits of their trade a capital sum averaging nearly £20 for each shareholder. This Society was registered as a Friendly Society under the Act of 1846.

In 1850, the Rev. F. D. Maurice, the Rev. Chas. Kingsley, Mr. J. M. Ludlow, Mr. T. Hughes, Mr. E. Vansittart Neale, and others, joined in the formation of a Society for promoting Workmen's Associations, and commenced a Working Tailors' Association. The excellent motives and aspirations

by which they were actuated had been eloquently set forth in a series of tracts by those accomplished men; and, if they could have found a body of members and officers capable of carrying out their ideas in a business-like manner, the associations which they formed might have done lasting good. As it was, their enterprise greatly impressed the public mind and rendered it familiar with the idea of co-operation. Though their initiative as patrons of co-operation was a failure, they remained the true friends, and in some sense the apostles, of the co-operative movement, and to their advice and counsel is due much of the success that has attended that movement under the direct management of the working men themselves.

The undertakings which experienced this early check were productive; those which followed the lines laid down by the Rochdale pioneers were distributive, though, in the long run, it has not been unusual for a distributive store to find it worth while to undertake productive business as well. It is obvious that a productive enterprise has elements of difficulty that are absent from a mere distributive store. The essential principle of co-operation seems to be that the man who contributes his labour to the production of the commodity is entitled to share in the produce after a sufficient sinking fund to replace the capital expended in the plant has been set aside, and hence a system of profit-sharing has been introduced, upon which, of late, attempts have been made to establish productive businesses. There is reason to think, however, that the distributive element in co-operation will remain its more prominent feature.

The sharing of profit implies logically the sharing of loss; and this is the rock upon which some productive enterprises have split. Yet it is evident that the social reforms which were in the minds of the early promoters of co-operation are to be realized rather by the productive element of it than by mere distribution, useful as that is in many respects.

A further development of co-operation has arisen in the union of a number of stores to form a wholesale society; and the wholesale societies of Manchester and Glasgow are striking examples of the power of associations of working men to carry on gigantic undertakings by means of small savings. The Manchester society (to which more than 1000 societies contribute) effected sales of goods for nearly £25,000,000 and earned profits exceeding £600,000 in the last year recorded. It acts as the banker of the smaller stores, and transacts a vast business in that capacity. It owns a fleet of ships, and has warehouses both at home and abroad in which a variety of industries are carried on. The total number of societies registered under the Industrial and Provident Societies Act in the United Kingdom is 2800; the number of members exceeds 2,500,000; the amount of funds, £58,000,000. It will be readily inferred from these figures how great has been the influence of these societies upon the welfare of the industrial population. The same inference may be drawn from the fact that, according to a previous return, 344 societies had built or aided in building 37,000 houses for their members, while more than £8,000,000 had been expended in building those houses or been advanced to the members to enable them to do so.

Another branch of co-operative enterprise has had more success abroad than in this country. People's Banks and agricultural credit societies flourish in Italy and in Germany, and are now being actively promoted here. In Ireland, Sir Horace Plunkett has established a number of co-operative creameries with excellent results.

COPTIC CHURCH. — *Introductory.* — When Christianity was first introduced into Egypt, it found itself confronted not only by the religious environment common to all Hellenistic provinces of the Roman Empire, but also by the influence of the old native religion. The latter, although beginning to show signs of the rapid decay which was soon to overtake it, was still immensely powerful, especially in the towns and villages situated at some distance up the Nile, away from Alexandria. In certain ways it had scarcely been touched by Hellenic influence, and had, indeed, rather itself influenced Hellenic thought. It had certainly impressed itself strongly on the imagination of the Platonic idealists of Alexandria, as is evidenced by Plutarch's treatise *de Iside et Osiride* and by bk. xi. of the *Metamorphoses* of Apuleius. But, although at the beginning of the Roman period the native priests still kept alight the sacred lamp of religious knowledge, the general mass of the people had become ignorant of a great number of the lesser-known deities, and of the meaning of much of the ceremonial. Nevertheless, the main doctrines of the old religion were as firmly rooted as ever. The worship of the gods of the dead was still paramount, and especially there remained unshaken the belief in the dead man-god Osiris, who had been slain by the power of Evil, but who lived again as king of the dead. The people still believed in the so-called 'resurrection,' that is to say, they thought it was possible that the dead might live for ever if the same ceremonies were carried out which enabled Osiris to escape corruption. Also, if we may rely on such papyri as that containing the tale of Setne Khaemuas and Si-Osiri, not only was the weighing of the dead man's good and evil deeds still thought to be necessary before the soul could pass the judgment-hall of Osiris, but very elevated notions of morality and justice played an important part in the hopes pertaining to eternal felicity. On the other hand, the Greek syncretists of Alexandria had adopted the cult of Osiris and Isis, and had transcendentalized it out of all knowledge, to suit the current Platonic doctrines of the day; according to them, the *mysteries* of the Egyptian religion were to be understood only by the esoteric, after long study and strict asceticism. Platonism had also involved the large Jewish community in Alexandria, and demanded from its devotees, as we know from Therapeutic ideals, the practice of asceticism and contemplation. There can be little doubt that these two things—(1) the belief in a future life to be obtained through a god who had himself overcome death, and (2) the transcendentalized form of Osiris- and Isis-worship adopted by the Greeks, which demanded asceticism and abstention from the desires of the flesh—largely influenced the early Christian communities in Egypt.

1. **Introduction of Christianity into Egypt.**—The tradition that St. Mark was the earliest to preach the gospel of Christ in Alexandria is first related by Eusebius, but prefaced by the word *φάσι*. In spite of the tradition being firmly rooted to this day, it has little historical value. When and by whom the gospel was introduced into Egypt is unknown, and, indeed, the whole history of the Alexandrian Church is enveloped in obscurity until the episcopate of Demetrius (A.D. 189–231), when it appears as a flourishing institution, with a school of philosophic learning attached to it which must already have made its influence felt far beyond the city itself. Eusebius (*HE* vi. 11–13) states that 'thousands' were martyred from Egypt and all the

Thebaid during the persecution of Septimius Severus in 202; and Clement (*Strom.* vi. 18), writing at about this date, tells us that Christianity had spread to 'every nation, village, and town,' so that, even allowing for exaggeration, there can be no doubt that the new faith had made great progress during the first two centuries of our era. Harnack (*Expansion of Christianity*[2], 1908, ii. 166 ff.) has collected a list of districts where we have definite evidence of Christian communities prior to the persecution under Diocletian in 303. Archæological research has borne out the literary evidence in several of the localities. They are as follows: the districts of Prosopitis, Athribis, Sais and Arsinoë, Antinoë, Thmues, Philadelphia in the Arsinoite nome, Alexander Insula in the Fayyum, Hermopolis Magna, Nilopolis, Ptolemais in Pentapolis, Berenice in Cyrenaica, Oxyrhynchus, the oasis of Khargeh, and Esneh (Latopolis). As to the form of Church government during the earliest period little is known. It is possible, though by no means certain, that the *Didache*, or *Teaching of the Twelve Apostles*, was compiled in Egypt, and may represent the primitive form of Church government in that country. From this work, generally assigned to the earliest age of the Church, the order of bishops and deacons would appear at first to have been entirely subordinate to that of the 'apostles' and 'prophets,' and to have been, at the time of the writer, a comparatively recent organization. The 'apostles' were itinerant missionaries and evangelists, while the 'prophet' alone was allowed to have a fixed abode in any locality. The latter commanded extraordinary reverence, and the first-fruits of the community were his by right. He spoke in ecstasy, and presided at the *Agape*. Nevertheless, both from the warnings uttered in the *Didache* against false prophets, and from the *Shepherd of Hermas*, we know that the office of prophet was frequently abused by fraudulent persons, and it gradually lost prestige until the more thorough organization of bishops and deacons eventually supplanted it. By the time of the episcopate of Demetrius the form of government represented by the *Didache* would have disappeared (if it ever had been in force in Egypt), and we know that Demetrius himself was the first to appoint other bishops (three in number) outside Alexandria, thus probably bringing the scattered communities for the first time under his central jurisdiction. Hitherto they had probably been under the direction of deacons and presbyters.

It is probable that the earliest Gospels in circulation in Egypt were not the canonical ones. In Clement's day, besides the four canonical sources for the life and teaching of Christ, there were still in general use two other Gospels known as the *Gospel according to the Hebrews*, and the *Gospel according to the Egyptians*. There is every reason to suppose that these two documents preceded the four Apostolic Gospels in Egypt, and were in all probability the ones used by the earliest Christian community there, for it is not likely that they would have forced themselves into popularity if the four sources bearing more authoritative names had been in the field from the first. Clement, however, sharply distinguishes between these two Gospels and the four canonical ones; and, although they were apparently used side by side, it is evident that the two earlier were beginning to be dropped by the more orthodox at the commencement of the 3rd century. The *Gospel according to the Hebrews* was read chiefly by Jewish converts, either in Aramaic or in a Greek translation. It appears to have had Ebionite tendencies, in spite of its close parallelism with canonical sources. The *Gospel according to the Egyptians* implies by its title that it was intended for use either by the native Egyptians, as distinct from the Alexandrians, or else by the Gentile converts in distinction from the Jewish. The latter inference is the more probable, as there seems to have been little attempt at first to reach the masses of the native Egyptians, the appeal of the new faith being made almost entirely to those of Hellenic birth or education. Here again we find that, in spite of the close parallel between the known fragments and the canonical sources, there is not only a tendency to Modalism, but also a strong tinge of Encratism. The latter was the doctrine of the Encratites (*q.v.*), a very early sect within the Church, which set up extreme asceticism and abstinence from sexual intercourse as the Christian ideal. There can be little doubt that the asceticism affected by the devotees of Isis and the Jewish Therapeutæ had become thus introduced in very early times into the Christian communities of Alexandria. Clement, however, defends the *Gospel according to the Egyptians* from the charge of extreme Encratism.

It was hoped that the finding of the now famous 'Sayings of Jesus' at Oxyrhynchus by Grenfell and Hunt would have thrown some light on these early uncanonical versions; not only have they not done so, but their own origin is extremely uncertain.

The first series of these 'Sayings' (eight in number) was found in 1897 with a host of other valuable literary fragments, and their date, on palæographical grounds, is to be assigned to about the year 200 or shortly after. Each saying is prefaced by the words 'Jesus saith'; four have their equivalent in the canonical sources; one is too fragmentary to be made out; and three are new, with a tendency to mysticism and a harsh and severe judgment of mankind. Harnack saw in them excerpts from the lost *Gospel according to the Egyptians* (*Expositor*, Nov., Dec. 1897), but other theologians and the finders themselves were not by any means unanimously in agreement with him. The second series, found in 1903 on the same site, written on the back of a land-survey list, is attributed to Thomas and another disciple whose name is missing. This, however, may only be a bold claim on the part of the writer. They agree in form and in date with the first series, but differ in being less akin to canonical sources. One of the sayings is almost exactly parallel with a quotation of Clement's from the *Gospel according to the Hebrews*, and can therefore be assigned to that work without hesitation. But whether each series is a selection of sayings from any one Gospel or from different Gospels is a matter of considerable doubt; Grenfell and Hunt themselves came to the conclusion that the find was a collection of 'sayings' as such, and that the theory of extracts was unjustifiable.

There was also found at Oxyrhynchus a fragment of an uncanonical Gospel, which unfortunately breaks off just where it appears to be closely parallel with the known passage from the *Gospel according to the Egyptians*, in which Jesus is represented as advocating extreme asceticism as the Christian ideal. Altogether it must be admitted that the Oxyrhynchus finds have served to puzzle rather than to enlighten us with regard to the early Christian documents of Egypt.

But we are at least able to surmise that there was considerable uncanonical competition with the canonical sources, and that the uncanonical Gospels were strongly tinged with the ascetic ideals prevalent at the time in Alexandria; also, incidentally, that a Christian community flourished as far south as Oxyrhynchus in A.D. 200, if not earlier.

Archæology also helps to throw light on this early period of Christianity in Egypt, although here again the evidence is scattered and obscure. It was the custom at this time to ferry the mummies of the dead down the river, with wooden tickets, or *tesseræ*, tied round the neck, bearing the name of the deceased and of the cemetery to which the body was to be consigned. A large number of these *tesseræ* exist in museums to-day. One at least (in the Berlin museum) from Akhmim was that of a Christian; and, although the symbol ☧ on it has caused it to be considered post-Constantinian in date, there are good reasons for assigning it to an earlier period. There are also other tickets couched in phraseology known to be Christian, but which cannot be absolutely identified as such. They at least prove that in this neighbourhood Christians were mummified and buried in the same

cemeteries as their pagan brethren—from which we may presume that these early Egyptian Christians still believed in the necessity of preserving the body in order that the existence of the soul might be assured (see DEATH, etc. [Coptic]). From the same site there came the fine collection of tapestry, some of which dates from the earliest times of the Roman empire. The symbols of the fish and the cross occur as patterns, and these have been thought to have come from very early Christian burials. If this be so, it points to a Christian community existing in Akhmim early in the 2nd century. We also have as evidence the *libelli*, several of which have been preserved to us. These were certificates issued, during the persecution of Decius (A.D. 250), to those who had recanted by sacrificing publicly to the gods. Those to whom they were issued were known as *libellatici*; and, although it is not always certain that it was a Christian to whom the *libellus* was granted, the probability that it was so is very strong. Mention must be made of the *Epistle* of Psenosiris (a presbyter who had fled to the oasis of Khargeh, probably during the Decian persecutions), in which he commends a female exile Politike to a fellow-presbyter. It is also probable that one at least of the mummies found at Antinoë is the remains of a Christian burial that may be dated as early as the close of the 2nd century.

The name of the deceased, according to Gayet, was Euphemiaan, a devotee of some Gnostic sect. The evidence for the latter supposition is, however, slender. The cords which bound the shroud were sealed with a curious mixture of pagan and Christian sealings, including the ☧; but, if the contention that this symbol is evidence of a post-Constantinian age be correct, the early date assigned must be abandoned. Another remarkable object from the same site is a shroud, with the figure of a handsome woman painted on the exterior, in the manner of the beginning of the 2nd century. The hand is represented as clasping a peculiar form of gilt 'crux ansata,' or symbol of life. Whether this is Christian there must be considerable doubt.

2. Gnosticism and Arianism. — Although our knowledge of the early Christian communities in the upper country is so remarkably slight, when once the Church became well established in Alexandria the Christians began to form an important part of the community of that city, while the works of Clement and Origen prove that the intellectual stimulus of the pagan Hellenic schools was not lost upon the Christians. The famous 'catechetical' school, founded, according to Eusebius (*HE* v. 10), in the earliest days of the community, and presided over in turn by Pantænus, Clement, and Origen, was designed not only to teach catechumens, but also to appeal, by a system of philosophy, to cultivated pagans. In an age of apologists its influence was very considerable, but confined entirely to those of Hellenic education. Such a propaganda was useless to the natives of the upper country. The power, too, of Demetrius, as sovereign bishop of all Egypt, was very great; and he must have occupied a position similar to that of the pagan 'Chief Priest of Alexandria and all Egypt,' and the Jewish Ethnarch. This powerful position was retained by his successors until it reached its highest point under Athanasius, and lasted, indeed, until the Council of Chalcedon. On the whole, too, at first the Alexandrian Church had good opportunity of developing itself free from interference; for, with the exception of the persecutions of Severus in 202 and of Decius in 250, there was little or no external pressure brought to bear on the Christians. The real enemy at this time lay within the Church itself in the shape of the Gnostic sects. The earliest record of the conflict between those who professed a higher *gnosis* and the preachers of the simple gospel is the dispute between St. Peter and Simon Magus, the latter of whom appears to have been the first to associate Christianity with Gnostic mysteries. From Palestine the esoteric cult quickly spread to Egypt by what was called a 'counter-Apostolic succession' of famous Gnostic teachers, and perhaps reached its height in the systems promulgated by Basilides and Valentinus, both of whom laboured in Egypt (Epiphanius, *Hær.* xxiv. 1, xxxi. 7). See BASILIDES, GNOSTICISM, PISTIS SOPHIA, VALENTINUS.

We know from the Christian writers and apologists, chiefly from Hippolytus and Epiphanius, how wide-spread Gnosticism became in Egypt, and how it threatened to become a menace to the Church in the early part of the 3rd century. Perhaps the so-called letter of Hadrian to Servian (in reality a 3rd cent. document) may be interpreted in this light when it speaks of

'people who worship Serapis being Christians, while those who call themselves bishops of Christ are adherents of Serapis. . . . No Christian presbyter but is an astrologer, a soothsayer, a vile wretch. When the Patriarch himself visits Egypt, he is forced by some to worship Serapis, by others to worship Christ.'

In spite of the venom which characterizes this attack on the Alexandrians, it points to the fact that the syncretism rife at the period had attacked the Christian religion also. This is borne out to a considerable extent by archæological discoveries in Upper Egypt. The excavations at Antinoë conducted by Gayet have revealed Christian burials of a very peculiar type. Some of the rock-cut tombs had chapels built before the entrance, stuccoed inside and covered with frescoes, most of which have unfortunately perished, but what fragments have been discovered are typical of the earliest forms of Christian symbolism. Two of the bodies at least in this cemetery were equipped with wine-jars and baskets for bread, perhaps intended for a mystic Eucharist for the dead, while another burial contained a model in terra-cotta of several persons seated at a table, the whole forming a group, supposed to represent the *Agape*. Many peculiar objects were found, including a kind of primitive rosary, or board for counting prayers, surmounted by a cross. It is possible that the old Egyptian idea that the welfare of the soul depended upon the nourishing of the body by magical food still survived. The bodies of Christians at this time were always mummified, and in some cases the remains of martyrs were preserved in the houses, for the gaze of the faithful, in accordance with the pagan custom of the time (Athanasius, *Vita Antonii* [*PG* xxvi. 967]). The chapels and provisions of food may therefore be a continuation of the old pagan custom whereby the soul of the deceased was nourished by the mystic food of the Eucharist. This is borne out not only by one of the Acts of the Council of Hippo (393), which forbade the burial of the holy elements with the dead, but also by the fact that in the oasis of Khargeh a number of Christian tombs were provided with a chapel containing a niche for food-offerings after the pagan manner (Myres, *Man*, 1901, No. 91). On the other hand, we may perhaps see in these peculiar customs traces of some Gnostic rite, such as the mystic sacrament mentioned in *Pistis Sophia*, performed for the remission of sins. Syncretism can go no further than the mummy of the so-called Christian priest from Dêr el-Bahari. It is probably of very early date—possibly the beginning of the 3rd century. On the shroud the deceased is represented holding in one hand a cup, in the other corn-ears—according to Naville (*Deir el Bahari*, 1898–1901, ii. 5), emblems of the Eucharist. On his left shoulder is the *swastika* emblem, and below is the barque of Socharis adored by the gods Anubis and Apuat.

Although, during the persecution of Decius in 250, large numbers of Christians appear to have recanted, the persecution of Diocletian in 303 found the Church stronger and resistance much more stubborn. Many were martyred, and the

Copts reckoned their dates from this stormy period —'the era of martyrs.' In the succeeding reign, numbers languished in the dye factories of the Thebaid, and in the porphyry mines of the desert ('Mart. Pal.' in *TU* xiv. 4); but with the accession of Constantine to sole power, Christianity was adopted as the State religion, and thus placed in a stronger position than ever before. But, although, within the Church, Gnosticism was fast waning, and the more fantastic sects had become objects of ridicule, a new trouble broke out in 319, owing to the preaching of Arius, a presbyter of the Church of Saint Baucalis in Alexandria, on the relationship of Christ to the Father.

This is not the place to go into the full details concerning the doctrinal struggle which shook the Church to its foundations. It is sufficient to say here that Arius implied that the Son was inferior to the Father. He argued that, as the Son was begotten of the Father, there must have been a time when the Son did not exist. Therefore the Son was not co-eternal with the Father, and not of the same nature, but of like nature. The Son was not God, or eternal, or omniscient, but a creature (*κτίσμα*), although, as such, beyond all mortal comparison. The opposition to this doctrine was headed by a young deacon in the household of the patriarch Alexander, named Athanasius. The quarrel proceeded with unprecedented bitterness and intriguing on both sides. The Emperor was appealed to, but, rather than give a decision, he summoned a council of bishops at Nicæa to formulate a creed. Their decision led to the formulation of the famous creed of the orthodox party and to the excommunication and banishment of Arius; but, on his offering a written explanation, the Emperor directed that he should be received back into the Church. Athanasius, who had meanwhile (328) succeeded Alexander as bishop of Alexandria, refused to obey the Emperor's order, and, at a council of bishops held at Tyre, he in his turn was deposed and banished. On the death of Constantine in 337, Athanasius returned to Alexandria with the support of Constantine II. and Constans; but, on the death of the former in 340, Constantius III., partner in the Empire and an Arian, succeeded in deposing him, and had Gregory elected as patriarch by a council of bishops held at Antioch. Athanasius withdrew only when an armed escort and threats of violence on the part of its commander, who conducted the Arian patriarch to the city, compelled him to retire. In the absence of Athanasius his supporters kept up constant rioting, and burnt the metropolitan church. A temporary peace was later patched up, and Athanasius returned as bishop; but the death of Constans enabled Constantius again to depose him—not without violence, for the Athanasians resisted vigorously. The bishop escaped into hiding with his friends, and George of Cappadocia was chosen as Arian patriarch. The succession, however, of the pagan emperor, Julian, led to more rioting, and George was murdered. Athanasius returned again, in spite of opposition at first on the Emperor's part, and succeeded in holding his office through this and the following reigns of Jovian and Valens (although the latter was an Arian) until his death in 373. See, further, ARIANISM, ATHANASIUS.

But the seeds of discord had already been sown in the Egyptian Church before the Arian controversy broke out. During the persecution of Diocletian, Peter, who was then bishop of Alexandria, and was in the end martyred, fled from Alexandria. During his absence, Meletius, bishop of the important see of Lycopolis, ordained and intruded priests into other dioceses, and assumed the character of primate. He has also been charged by Athanasius and Socrates, but without good reason, with having denied the faith under persecution. When affairs had settled down somewhat under Alexander, Meletius's case was brought before the Council of Nicæa, and that assembly severely censured him. During the life of Alexander, Meletius acquiesced quietly, but on the accession of Athanasius he flung himself into the ranks of the opposing party, seemingly not so much because he sympathized with the Arian doctrines as out of dislike to Athanasius, and, as he possessed a considerable following, the quarrel was thereby embittered and intensified.

3. Eremite movement.—The foregoing tends to show that, as soon as Christianity began to get the upper hand in Egypt, the Church itself was rent with violent factions, which led to the disorder and turbulence which characterized the 4th and 5th centuries. Meanwhile a new factor had appeared on the scene—a new movement which was to have world-wide influence throughout the whole of Christendom. We have seen how, even in the early days of the Church, when Christianity was confined mainly to those of Hellenic birth or education, there was a tendency to asceticism or mysticism. In their extreme forms these two movements led to fantastic Gnostic systems, but the more sober and quiet side manifested itself among those Christians who carried out their ascetic ideals, not by withdrawing from the world, but by living in the midst of their own households, observing fasts, abstaining from marriage, and devoting themselves to prayer and the care of the sick and the poor. But, although these ascetic ideals, which affected the Egyptian Church to such a remarkable degree, and, through it, in later times the Church throughout the world, seem to have had their origin in Egypt, it is curious to note that the native Egyptian character in the past had exhibited little or no tendency either to asceticism or to mysticism. Magic in pagan Egypt was, and had always been, of an eminently practical kind, and, so far as we can judge, never included philosophic mysticism of any sort; indeed, the native mind was incapable of any of the higher subtleties of thought. It seems, therefore, that these two potent forces were introduced into Egypt by the Greeks, through the medium of Platonic and Pythagorean philosophers, and associated with the native Egyptian religion by the Platonizing of the Osiris and Isis cult. We know that the Jewish community in Egypt was subject to an identical process. The fragments of lost Gospels, as well as the works of Clement and Origen, prove how these ideals, prevalent in the pagan and Jewish communities of Alexandria, exercised their influence on the early Christian Church. During the 3rd cent., however, Christianity began to make many converts among the native worshippers of Osiris and Isis, among those of the population who were little influenced by Hellenic ideas, had little or no Greek blood in their veins, and were quite as incapable of understanding Clement's or Origen's conception of Christianity as Plutarch's theories about Osiris and Isis. Nevertheless, the ascetic side of the new faith seems to have appealed strongly to them, although the mystic and philosophic ideas interwoven with asceticism were not in the least comprehended. The literal practice of asceticism became at once a thing of paramount importance, and its wide-spread influence was due in the first place to the example of one man—Anthony, the first to cut himself off from intercourse with the world, and to perform those extraordinary feats of endurance which appealed so strongly to the Egyptians, and produced countless hosts of imitators.

Our chief authorities for the history of this movement are *The Life of Anthony* (a work attributed to Athanasius), Cassian, and especially the *Lausiac History*. The arguments of the school of Weingarten, that these are monastic works of the 6th cent., may be said to have been finally disposed of by Dom Cuthbert Butler in his admirable edition of the *Lausiac History*. From these sources we draw a wealth of material concerning the ascetic movement, which is supplemented by the later Coptic documents. The first man who actually led the ascetic life, cut off from his fellow-men, was one Paul, who was driven into the desert during the Decian persecutions in 250, and there may well have been others who were forced to lead solitary lives owing to the same circumstances; but it is to Anthony that the world looks as the founder of eremitic solitude.

Born probably about the year 250, of *fellah* parents, Anthony was converted to Christianity as a boy by hearing the Gospels read in a church. (As he is said to have known no Greek, this presupposes the existence of a Coptic version at this early date.) For fifteen years he lived with ascetics, who at that time practised the ascetic life in huts built outside the town;

but, deeming this insufficient, he withdrew to the desert, and endured a life of strict solitude in a cave for upwards of twenty years. During this period large numbers were fired with his enthusiasm, and the burning deserts of Lower Egypt, especially those of Scete and Nitria, swarmed with solitaries who were following his example. About the year 305 he was induced to quit his cave and organize these bands of monks, and, later, he was even persuaded by Athanasius to come to Alexandria to preach against Arianism. He died at an advanced age, and left special directions that his body should not be preserved by mummification, as he had expressed his detestation of the Christians continuing this pagan custom. The ideals of monachism that he left as a heritage are remarkable for the fact that they possess little system. There was no particular Rule of Life in the Antonian communities, although the elder and more leading ascetics were looked to for advice, and sought as arbiters in disputes. The monks would visit one another frequently, and discourse on the Scriptures and the life of the Spirit, but there were also those who dwelt in the further desert of 'cells,' who were hermits indeed, living out of sight and hearing of their fellow-men and one another, enduring the most extraordinary physical deprivations, and warding off absolute intellectual stagnation by repeating long passages from the Psalms and other Scriptures learnt by heart. Although the monks assembled on Saturdays and Sundays in the great church, the other days of the week were spent mostly in solitude. The whole system was individualistic, each working for his personal advance in virtue, contending against his fellows in severities and mortification of the flesh, and striving, as Dom Butler says, 'to make a record' in austerities, and to outdo the others in the length of his fasts, and his general observance of the ascetic life.

About the same time that Anthony left his desert cavern to organize his followers, Pachomius, another Egyptian, founded a more cohesive system of monachism in the south, at Tabennisi. Pachomius also was born of pagan parents, and, according to the Coptic 'Life,' was for some time a member of one of the communities of Serapis at Shenesit (Chenoboscium). These communities, although hardly ascetic in the stricter sense of the word, were priestly organizations bound by definite rules; and it is quite possible that Pachomius may have utilized some points in their system when, after he had been converted to Christianity, he founded his cœnobitic monastery of monks. Briefly, the Pachomian organization was as follows. In place of the friendly and almost family relation of the monks to one another in the Antonian communities, he substituted a much more definite system. The monastery was divided into houses presided over by a superior and steward, in each of which the monks carried on a particular trade—gardening, husbandry, carpentry, iron-work, dyeing, tanning, and so forth; and these trades were carried on, not as penances, but as a useful occupation in life. It would appear that the austerities of the northern monks were not attempted, although any one monk could practise especial severities if he pleased. Food was to be eaten in sufficient quantities for a man's daily need, and meals were to be taken in common, although the cowl was to be drawn over the head so that each should be invisible to his fellow while eating. They learnt the Scriptures by heart, and assembled in the great church only on the more solemn festivals. So rapid was the extension of Pachomius's system, that at his death (c. 345) it included eight monasteries and many hundreds of monks, while his sister had founded a similar institution for women.

It is difficult to give a just estimate of this movement, which is the most outstanding, not only in Egypt, but in the entire Church of the time. That the monks offered in many cases examples of great patience, self-denial, and singleness of heart and spirit is not to be denied. On the other hand, few of his followers seem to have been possessed with the kindliness and shrewdness that are generally attributed to Anthony. Many of them outdid one another in the severity of their ascetic self-discipline, but it would appear in many cases that the general result was a stunting of the intellect and a narrowing of the outlook on life. Amélineau, whose acquaintance with the documents of this period is very extensive, has said that it has been customary to hold up the monks of the pre-Chalcedon days as a pattern of virtue, and the Jacobite as a picture of vice, whereas, as a matter of fact, there is little to distinguish between the two; that the Egyptian monk, although given to asceticism, was at times a very ordinary mortal, 'mangeant net, buvant sec,' and prone to irregularities of life. Certainly even the most admiring chroniclers relate with perfect frankness sad lapses from virtue on the part of individual ascetics. This, however, does not imply that all were bad, and there is no doubt that at first the ascetics were, on the whole, animated by a high ideal. They threw themselves passionately on the side of Athanasius during the Arian controversy, and sheltered him in their desert communities while he was in exile. It is highly improbable that they understood the complicated doctrinal point involved; it was sufficient for them that Arius seemed to desire to dethrone the Son from His equality with the Father. But, as time went on, they became fiercer, more bigoted, and a prey to the inherent superstitions of their race. Childish miracles and belief in innumerable devils took the place of the old magic and demonology which had fascinated the Egyptians in pagan times, while in the following century the fact that hordes of fierce monks could be summoned to Alexandria by the patriarch led to the increase of religious turbulence and sectarian strife.

There is no doubt that the adoption of Christianity as the State religion and the rise of monasticism were the immediate forerunners of a period of steady deterioration throughout the Egyptian Church. The death-knell of paganism was already rung, and with it that of the culture and freedom of philosophic thought that had made Alexandria the intellectual centre of the Hellenistic world. In 379 the Emperor Theodosius attempted to force the Christian faith on the entire population of the Roman Empire, and this was followed in 385 by the sack of the temple of Serapis and the conversion of other pagan temples into churches. Meanwhile the character of the illiterate monks began to assert itself, and their child-like faith in angels and demons led to the communities of Scete being accused by the patriarch Theophilus of Origenism, while the unscrupulousness of the latter's methods, as revealed in the incident of the Tall Brothers, led to recriminations and unedifying quarrels. In fact, the power of the patriarch had risen to such a pitch that he did not hesitate to consider that those who were his theological opponents were rebels against the Emperor, and, acting in accordance with this idea, he took some troops and destroyed several of the Nitrian monasteries. During the reign of his successor, Cyril, turbulence and disorder increased rather than diminished. The Christians organized a wholesale plundering of the Jews in Alexandria, whose quarters were sacked by hordes of monks and fanatics, and the richest element of the community was driven into exile. This was followed by the murder of Hypatia, a young and beautiful woman, who strove to keep alight the lamp of pagan culture by lectures on Neo-Platonic philosophy. The bigotry and turbulence of the Christian mob at this period seem to have known no bounds. But, as the Patriarchs grew more powerful, and the Christians more fanatical, the relations between the Egyptian Church and Constantinople became more and more strained, until open rupture took place on a question of doctrine, which was decided at a Council held at Chalcedon in 451.

4. **Monophysitism.**—The controversy which had been the cause of the Council of Nicæa was concerned with the relationship of the Son to the Father. The fresh divisions that were taking place in the Church were now due to disputes on the nature of the Son—whether that nature was human or Divine, or both. Cyril, who had already been on bad terms with the See of Constantinople when it was occupied by John Chrysostom, had later taken a violent part in opposing the doctrines of Nestorius, which implied that the Divine nature was not incarnate in Christ, but subsidiary to the human nature. The chief opponent of the doctrine of Nestorius was a young priest named Eutyches, who, in his zeal to assert the Divine nature of Christ, went further than the Alexandrian school and Cyril were prepared to go, by asserting that, after the Incarnation, Christ had

only one nature—the Divine. Meanwhile, Cyril had died in 444, and Dioscuros, his successor, warmly supported the cause of Eutyches, backed by the majority of the Egyptian monks. Eutyches was finally declared excommunicate and banished, at the Council of Chalcedon, but he counted among his adherents the majority of the Egyptian Christians. Added to the ever-increasing friction between Constantinople and the Alexandrian See, due to the turbulence and fierce independence of the Christians of Egypt, was the peculiar bent of the Egyptian mind, unable to appreciate the subtleties of argument indulged in by the Greeks and Levantines. The attempts of the Arians to dethrone Christ from His equality with the Father they could understand, but two natures which were yet one nature—this was beyond their comprehension. Henceforward the cry was 'One Nature,' and it has remained so to this day. Egypt at this time might be described almost as one vast monastery, and the fierce ascetics of the desert stoutly maintained the doctrine of the single nature of Christ. The power of the monastic institutions was now almost paramount, and the authority exercised by such monks as Shnoute and Bgoul was enormous. The tendency was to unite the systems of Pachomius and Anthony by combining the cœnobitic or true monastic organization with the strict asceticism of the Antonian eremites, and the network of monasteries was fast extending all over the country.

5. During the 6th century.—The century following the separation of the greater part of the Egyptian Church from the orthodox at the Council of Chalcedon is remarkable in Alexandria only for the unedifying disputes between the Monophysite patriarchs and the orthodox, or *Melkites*, as they were called because of their adherence to the Imperial influence of Constantinople, and, in the upper country, to the growing power of the monastic system. The land was held largely by the monasteries, whose ruins now are not the least remarkable feature all over Egypt. The cultivation was chiefly in the hands of the monks. It is stated in the Life of Shnoute that his monastery fed the prisoners captured from a raid of the Blemmyes for three months at a cost of 265,000 drachmæ, with 85,000 *artabai* of wheat and 200 *artabai* of olives. The numerous inscribed *ostraka*, and the commencement of a vast Coptic literature, consisting chiefly of Lives and Sayings of holy men and monks, show the commercial and literary activity of the monks. They were strong enough to prevent Imperial pressure for the over-exaction of taxes, and in this way maintained to a certain extent the dwindling prosperity of the country, although the minority who were not connected with the monastic institutions were crushed by cruel burdens. But religious life was gradually sinking to a low ebb, and was distinguished by little spirituality. While the Alexandrians were occupied with the opposing factions of Melkites and Monophysites, the monks of Upper Egypt were engrossed in petty squabbles between monastery and monastery, or the enumeration of absurd miracles wrought by the foremost ascetics. Religious life, like political, was fast losing all dignity and depth.

6. The Persian and the Arab domination.—In the year 616 the break-up of the Imperial power in Egypt began with the occupation of the country by the Persians on behalf of the Sasanian king Chosroës. For ten years they held sway in Egypt. Whether the Copts welcomed their new masters is a matter of some doubt. That they hated the Byzantine domination is certain. Ever since Justinian had given the Melkite Patriarch the military authority of a prefect, in the futile hope of coercing the Monophysites into orthodoxy, the Copts had been harried and oppressed by the Imperial power. The whole nation now looked to their own elected Patriarch, not so much as the champion of the Monophysite doctrine, but as the leader of the nationalists against the minions of Imperial bigotry and corruption. The wonderful victories of Heraclius, who drove out the Persians and re-conquered Jerusalem and the Holy Sepulchre, were a cause of rejoicing to orthodox and Monophysite alike throughout the Eastern Empire, and it is possible that a wiser statesman than the Emperor might, amid the universal rejoicings of Christendom, have secured some kind of reconciliation. But Heraclius would extend no tolerance to heretics, with the result that a few years later, when a sterner and more implacable enemy was at the gate, the Copts of Egypt were ready to welcome him. In 642, Egypt was ceded to 'Amr ibn al-'Asi, who had conquered it in the name of Islām.

The Arab tradition is that the conquest was aided by the treachery of one called Muḳauḳis (probably the Byzantine honorific title μεγαυχής), who is generally supposed to have been the Coptic Patriarch. It must be mentioned, however, that it has been ably argued by A. J. Butler in *The Arab Conquest of Egypt* (1902), that the Copts were intensely hostile to the Arabs, and that the treacherous 'Muḳauḳis' was none other than Cyrus, the Melkite Patriarch. It is probable that the Copts, after years of oppression on the part of the orthodox and Imperial party, welcomed their new masters as a change which, as they thought, could not in any case be for the worse.

From the doctrinal and ethical point of view, the Coptic Church has little history of interest during its long subjection to the rule of Islām. The Arab invaders imposed a poll-tax on all infidels, and it is probable that from the first many were converted to the faith of Muhammad in order to avoid payment. For the first three centuries or more, it is true, considerable activity is evinced by Coptic literature, which is represented during this period by countless MSS, chiefly of a homiletic character, or containing Lives of holy men, although such important historical works as the *Chronicles* of John of Nikiou must not be overlooked. Such art as was still possessed by the Christian workman was either suppressed or forced into the service of his masters. The Copts, as they gradually became a smaller and smaller section of the population, were ostracized by the Muhammadans and cut off from all intellectual stimulus and growth. They do not seem to have shared in any way in the artistic and intellectual triumphs characteristic of certain periods among the Muslims. It is true that under some rulers individual Christians rose to high office, but their position was usually even more precarious than that of their Muhammadan colleagues. Frequently they were subjected to severe persecution, and were forced to wear dark cloaks; and under Hakim, since Muslim and Christian were much alike when naked in the public baths, they were compelled to have a cross branded on their bodies in order that none of the faithful might wittingly be polluted by contact with the infidel. Such a system was bound in time to crush the Christians almost out of existence. The monasteries dwindled, and finally, in the 17th cent., the Coptic language itself ceased to be spoken, although certain portions of the Scriptures are still read in the churches to this day in the ancient language. The Copts seem to have been little influenced by the victories of the Crusaders, and, indeed, as Crusaders and Copts looked on each other as hereties, little co-operation would have been possible. It is interesting to note that the surrender of Constantinople to the Turks seems to have reacted badly on them even in their then wretched state of ignorance; for in the correspondence, so long after that event as 1617, addressed by Cyril, then Coptic Patriarch, to George Abbot, archbishop of Canterbury, we

read: 'On account of our sins we are become the most contemptible of all nations; and with the overthrow of the Empire have lost the liberal arts' (Neale, *Hist. of the Eastern Church*, ii. [1850] 385). From the 16th cent. onwards the Roman Church has made intermittent efforts to convert the Copts to Roman Catholicism, but with little success. They have clung to their own Monophysite doctrine, and to their ritual of St. Mark, with the same doggedness with which they have resisted Islām.

7. The Coptic Church of to-day.—After centuries of oppression and ostracism, the Copts to-day are naturally a people apart. The males having intermarried little with the Arabs, they are supposed to represent more faithfully the old Egyptian type; but this is doubtful. Several of their fine churches, some of them dating from Byzantine times, are still in use, although stripped for the most part of their woodwork and pictures. The liturgy and ritual of St. Mark are in use. The Eucharist is in one kind, only the priests taking the wine; the bread is given to the communicants in wooden spoons, and confession is obligatory before receiving the Eucharist. Women are not allowed into the body of the church, but confined to the narthex. There are five great fasts: (1) the Fast of Nineveh, for three days and three nights before Lent; (2) the Great Fast (Lent), occupying 55 days; (3) the Fast of the Nativity, during the 28 days before Christmas; (4) the Fast of the Apostles, following the Festival of the Ascension; (5) the Fast of the Virgin, for 15 days prior to the Feast of the Assumption. The Festivals are those of the Nativity, *el Ghitâs*, or Baptism of Jesus, the Annunciation, Palm Sunday, Easter (the Great Festival), Ascension, and Whitsunday. Baptism is universal, and, though attempts have been made by the Patriarchs in the past to enforce its early application, boys, as a rule, are not baptized till they are 40, and girls till they are 80, days old. Circumcision is general. The hierarchy to-day consists of the Patriarch, 12 bishops, and priests and deacons. The Patriarch is always elected from among the monks of the Monastery of St. Anthony. In recent years the Copts have acquired considerable wealth, and in some districts have become important members of the community. Their willingness to be educated is shown by the fact that, though they are only 6 per cent of the population of Egypt, 17 per cent of the children at school are Copts. This education is enhanced by the schools of the foreign missionaries, which supply teaching of a sort that enables the Copts to become clerks and book-keepers—occupations to which their talents are admirably adapted; but attempts to turn them into Protestants or Roman Catholics are of doubtful wisdom. The monastic system is still in force, and some of the ancient monasteries are inhabited by a few monks; but the monks themselves are narrow and ignorant, while in a few cases they have not a very good reputation for an orderly life. With regard to marriage, and more especially death, the Copts have adopted many of the customs of their Muslim neighbours.

This article cannot be closed without some mention of the Copts as missionaries. During the 6th and 7th centuries the whole of Nubia was Christianized, and for many years the Arabs were opposed by the Christian kingdoms which had their centres at Dongola, Alwa, and Soba. But the missionary efforts of the Copts did not stop here, for Christianity was afterwards introduced into Abyssinia. In connexion with this, mention may be made of the recently found gravestone of a Coptic bishop of the island of Sai, beyond the second cataract, probably dating from the 9th cent.; the ruins of churches between Kasr Ibrahim and Wadi Halfa, the subject of a recent monograph by Mileham (*Churches in Lower Nubia*, Univ. of Pennsylvania, 1910); and also the newly discovered Nubian version of the Life of St. Menas, published (1909) by Budge for the Trustees of the British Museum. The Christian communities of Nubia, which at one time extended from Assuan to the Blue Nile, gradually crumbled away, from pressure exerted either by the neighbouring heathen tribes, or by the Muslims, until they were finally exterminated by the powerful Fung dynasty of negro kings at the end of the 15th century. Abyssinia, however, remained Christian and Monophysite, and its Metropolitan is still a Coptic bishop appointed by the Patriarch of Alexandria.

CORN, CORN-SPIRIT.—See HARVEST.

CORNERS.—Among the Semitic peoples, as among others also, an especial sacredness or significance was supposed to pertain to the corners of structures, fields, and other objects. The evidence for this conception can be most widely traced among the Semitic peoples in connexion with buildings.

1. Bab.-Assyrian.—Among the Babylonians and Assyrians it took the form of making a deposit of inscriptions and images under the corner or corners of a temple, palace, or tower. The inscriptions were, in the Assyrian and Neo-Babylonian periods, usually in the form of hexagonal, octagonal, or decagonal cylinders, or cylinders in the form of barrels. Such deposits, placed under the corners or built into them, were found by Taylor at Mugheir, Loftus at Senkereh, Rawlinson at Birs Nimroud, Botta and Oppert at Khorsabad,[1] and Rassam at Kouyunjik. The great cylinder of Ashurbanipal was found at the corner of a room, not at the corner of a building. Many of the chronicles of the Bab. and Assyr. kings were prepared and deposited in little receptacles of masonry at the corners of walls. At Telloh, de Sarzec found similar receptacles which contained bronze statuettes of human figures,[2] both male and female, and of animals.[3] The making of these deposits was probably, as in Egypt, accompanied by sacrifice. Thus Sargon of Assyria (722–705 B.C.) says (Cylinder Inscription, l. 60): 'To the brick-god, the lord of brick foundations, and to the chief architect, Bel, I offered a sacrificial lamb, I poured a libation, I raised the lifting up of hands.'[4]

In emphasizing the importance of this custom, Perrot and Chipiez are led into one slight error. They state that king Nabu-na'id (555–538 B.C.) says that he sought for the corner-stones of Hammurabi and of one of the Kassite kings, digging until he found them. The impression is that he identified the corner-stones of the respective kings by reading the inscriptions deposited in connexion with them—an idea which is gained from a translation of an inscription of Nabu-na'id made by Oppert when the science of Assyriology was young. We now

know that a *temenu* was not a corner-stone, but a paved court or terrace. Since such pavements were usually made of bricks, each one of which was stamped with the name of the builder, they were easily identified.

2. Egyptian.—In Egypt, foundation deposits have been found at several places. One made by Thothmes IV. of the XVIIIth dynasty is reported from Memphis;[1] another set was found at each of the corners of a temple at Nebesheh built by Aahmes II. of the XXVIth dynasty;[2] another, under a XXVIth dynasty building at Defenneh founded by Psametik I.;[3] a complete set belonging to a building of Hophrah, at Naukratis;[4] and at three corners of a temple of the Ptolemaic period, at Gemaiyemi.[5] At Thebes, foundation deposits showed that a temple built by Queen Tausert of the XIXth dynasty once stood on a spot south of the Ramesseum, although the temple itself had entirely disappeared.[6] At Abydos, foundation deposits, or the receptacles for them, were found from Thothmes III. and Amenophis III. of the XVIIIth dynasty,[7] Sesostris III. of the XIIth dynasty,[8] and Pepi of the VIth dynasty.[9] At Koptos, a box (though robbed of its contents) was found under a threshold;[10] at Kahun, a receptacle (still full) under the middle of a building of Sesostris II. of the XIIth dynasty;[11] and, at Illahun, deposits at the corners of a temple also by the last-mentioned monarch.[12] At Gizeh no such deposits were found under the temples belonging to the IVth dynasty.[13] These deposits in Egypt consisted of plaques of copper or stone on which the name of the builder was inscribed, together with models of the tools and materials which were used in the construction. At Defenneh, however, the bones of birds and animals offered in sacrifice were also found, together with the ashes of sacrifices which had been consumed. These showed that the sacrifice was the important feature connected with the deposits, and that the other objects were incidental to it. A similar deposit has recently been found under the corner of the castle of a Nubian chieftain of the time of the XVIIIth dynasty in Egyptianized Nubia. This differed, however, from the Egyptian deposits in that it consisted of ten mud-sealings. These represent a conqueror wearing the Nubian ostrich feather, who holds a crouching captive by a cord. On a level with the chief's shoulder is the figure of an animal like a dog.[14]

3. Canaanite.—The evidence for the sacredness of corners and for foundation sacrifices in ancient Palestine is of a more grim nature. At Gezer the skeleton of a woman was found built into the wall of a house at the corner.[15] More numerous, however, were the skeletons of children found under the corners, children having been used for such sacrifices oftener than adults.[16] The sacrifices at Gezer, like the Egyptian deposits, were not always placed at the corners. The skeleton of a man, and sometimes those of children, were found buried under the middle of a house or a room.[17] With these sacrifices, vessels to contain food for the victims were also buried, as sometimes were lamps. Later, the sacrifices themselves were omitted, but the bowl and lamp were still used as foundation deposits.[18] At Megiddo and Taanach, foundations were apparently consecrated by human sacrifices, but those reported were not found at the corners, but in the centre of the houses or rooms.[1]

4. Hebrew.—From the sacred nature and importance of corner-stones, which in the earlier time led to such ceremonies as have been described, certain literary uses have survived in the Old Testament. Thus Jer 51^{26} and Job 38^{6} use 'corners' and 'corner-stones' as synonyms for 'foundations.' In Jg 20^{2} and 1 S 14^{38} 'corners' is used figuratively for 'chiefs'; in Zec 10^{4} 'corner-stone' is apparently a synonym for 'ruler.' In Is 28^{16} it occurs in an enigmatic passage, where, whether the 'corner-stone' is a figure for a king or a kingdom, or for trust in Jahweh or the relation of Jahweh to His people, the result is righteousness. Such figurative uses of 'corner' led in two late passages to the thought that it was the crowning stone of a corner, not the foundation stone, which was important (see Ps 118^{22}, Zec 4^{7}).

In Zec 9^{15} the 'corners of the altar' are mentioned as being 'filled.' These were projections which were sometimes called 'horns' (see ALTAR [Semitic], § 17). Possibly, like the corners of buildings, the corners of the altar were thought to be specially sacred.

The sacredness which attached to corners was applied by the Hebrews to the hair. Lv 19^{27} reads, 'Ye shall not round the corners of your heads, neither shalt thou mar the corners of thy beard.' As under certain circumstances hair was regarded by the Semites as sacred to Jahweh (see W. R. Smith, pp. 323–331), possibly the corners were all considered to be sacred to Him. One might infer from the statement of Herodotus (iii. 8) about the hair of the Arabs that they sacrificed the 'corners' of their hair to their god. Whatever the motive of the Levitical regulation,—whether to differentiate their custom from that of the heathen Arabs, or simply to keep locks sacred to Jahweh untouched,—it has produced among the Jews of modern Palestine and elsewhere in the Orient and in Eastern Europe, as well as among the strictly orthodox Jews of Russia and Poland, the curious custom of permitting the lock at each side of the forehead to grow long. These locks are curled and permitted to bang down in front of the ears, presenting a peculiar appearance, and distinguishing the Jew from all other religionists in that land (cf. Mannheimer, in *JE* ix. 595).

Another Hebrew regulation, arising from the sacredness of corners, was the law which forbade a man in harvest to reap the corners of his field (Lv 19^{9} 23^{22}). Because the corner of the field was sacred to Jahweh, the grain which grew in it must be left, that the poor might come and gather it. This regulation was generally observed in OT times, as the Book of Ruth shows. Since the law was indefinite, however, just what this law demanded of a farmer became a matter of debate when the oral law developed. The results of these discussions were afterwards embodied in the Mishnic tract *Pe'ah*, or 'Corner.' Perhaps because the Bab. Jews were nearly all engaged in commerce, this tract is copied in the Bab. Talmud without additions. But in Palestine, where the Jews were still agriculturists, the law of the 'corner' was still vital and developing, so that the Jerusalem Talmud contains a Gemara upon the Mishnic text.

The first problem to which the Rabbis addressed themselves was how much the owner of a field must leave for the poor in order to satisfy the law. It was agreed that a just man would leave one-

sixtieth of the field as a 'corner,' though the amount might vary with the size of the field, the number of the poor, and the richness of the yield. If a man left one stalk standing, he could not be held to have broken the law, for the sacred text did not define the size of a corner. Seemingly all possible questions were raised and decided by the Rabbis. For example, they decided that a man fulfilled the law if he left the proper amount in the middle of the field instead of in a corner; that the law applied to leguminous plants as well as to grain; that it applied to the following trees: tanners' sumac, the carob tree, nut trees, almond trees, vineyards, pomegranates, olive trees, and the date palm. They had to decide when the 'corner' should be estimated before the tithes were paid, and when after; when two men shared a field, whether they must both leave a 'corner'; if a man raised two kinds of grain in his field, whether he must leave a corner for each; if a man left a 'corner' for the poor and they did not take it, how long he must wait before he could take it himself; whether, if something more than what was intended were left in the field through forgetfulness, the owner could return for it, or whether it must be counted as a 'corner'; whether a rich man, who, when on a journey, had been compelled to avail himself of *pe'ah*, was obliged to restore it; and many other points such as arose in administering the law.

GEORGE A. BARTON.

CORRUPTION AND BRIBERY.—1. Ancient Rome.—For first-hand information on bribery in ancient Rome we naturally turn to the speeches of Cicero, *pro Cn. Plancio* and *pro L. Murena*. As we study these, we feel inclined to subscribe to the dictum of Montesquieu upon the condition of Rome and her provinces under the Republic: 'La liberté était dans le centre, et la tyrannie aux extrémités.' The provinces were the farm of the Roman people, and the provincials were the live stock to be fleeced by the governor. Whether a Cæcilius or a Cornelius obtained a province, it is at once clear that the main aim of the governor, during the year of his provincial life, was to acquire enough money to purchase that supreme object of his ambition—the consulship. In order to ingratiate himself with the people, he therefore supplied the citizens of Rome with large quantities of corn below cost price, the deficiency being made up by the province. When the rivalry for the consulship grew acute, it became usual for a candidate, anxious to secure his election, to give the people a *munus*, or 'treat,' in the way of a gladiatorial show. A *munus*, it may be remarked, sometimes cost the candidate a matter of seven thousand pounds. All this expense came out of the amount accumulated during the year of provincial life, and an ample margin had likewise to be provided to bribe the jury who should try the successful candidate for bribing the tribes. This indirect bribery of the people dated from the beginning of the 6th cent. of Rome.

'For five hundred years,' writes Mommsen (*Hist.* iii. 40), 'the community had been content with one festival in the year, and with one circus. The first Roman demagogue by profession, Gaius Flaminius, added a second festival and a second circus [in the year 220 B.C.]; and by these institutions—the tendency of which is sufficiently indicated by the very name of the new festival, "the plebeian games"—he probably purchased the permission to give battle at the Trasimene lake.'

In 159 B.C. the *lex Cornelia* punished with exile those found guilty of bribing the electors with money; it is, therefore, evident that the direct purchase of the votes of the electors must have existed a considerable time before the passing of that law. Indeed, as early as the year 432 B.C., we meet with the first law against *ambitus*, forbidding persons to add white to their dress to signify that they were candidates. 'Ne cui album,' Livy informs us (IV. xxv. 13), 'investimentum addere petitionis liceret causa.' This measure reminds us of the (English) Corrupt Practices Act of 1854, prohibiting the giving of cockades to voters. The *lex Poetelia* (358 B.C.) forbade candidates to carry on their canvass anywhere save in the Forum and Campus Martius. 'De ambitu,' writes Livy (VII. xv. 12), 'ab C. Poetelio tribuno plebis auctoribus patribus tum primum ad populum latum est; eaque rogatione novorum maxime hominum ambitionem, qui nundinas et conciliabula obire soliti erant, conpressam credebant.' The laws against *ambitus* increased in number, but decreased in value. In 181 B.C. the *lex Cornelia Baebia* was passed (Liv. XL. xix. 11). Attempts were made to remedy the corrupt practices of the day by the *lex Gabinia*, or Ballot Act (139 B.C.), and the *lex Maria*. In the former it was enacted that in elections voting should be by ballot, *i.e.* by writing the name of the candidate on a ticket or tablet (*tabella*). By the latter, C. Marius, in his second consulate (104 B.C.), established the *pontes*, or narrow passages to the voting-booths, by which he designed the protection of the voters against the evil influence of the astute electioneering agents. Regular agents (*interpretes*) were employed to arrange the bargain with the elector, and the money promised (*pronuntiata* [cf. Cic. *pro. Planc.* 45; *Ep. ad Att.* I. xvi. 13]) was paid by the candidates themselves, either directly to the paymasters (*divisores* [cf. *Ep. ad Att.* IV. xvi. 7; *pro Planc.* 55]) for distribution, or to trustees (*sequestres*) appointed by the parties, who held it until the elections were over. Cicero, in the *de Lege Agr.* (ii. 4), terms the *lex Gabinia* the law whereby 'Liberty can assert herself without a word'; but in practice the voice of Liberty was as much stifled then as it was afterwards in the case of the English boroughs. In Rome, as in England, electors appear to have habitually adhered to their contracts.

By the *lex Ælia Calpurnia* (67 B.C.), a heavy fine was imposed on the candidate who should use bribery, whether successful or not; and this law deprived him for ever of the right of holding an office or sitting in the Senate, in this respect surpassing in stringency even the Corrupt Practices Prevention Act, under which the disability to sit in the House of Commons or to vote at an election to Parliament lasts only seven years. This just law contains a provision which grates somewhat harshly on our ears. If a person convicted of bribery secured the conviction of another on the same charge, in the eyes of the law his guilt was wiped out. The *lex Ælia Calpurnia* seems to have inflicted a fine on *divisores* and other agents, thus recognizing a principle which was long ignored in English legislation. The law in question was repeated, with additional rigour as to its penal clauses, in the *lex Tullia de ambitu*, which was passed in Cicero's consulate (63 B.C.). The purport of this measure is given in the *Scholia Bobbiensia* (p. 309) and in Dio Cassius (xxxvii. 29), as well as by Cicero himself in several passages of the speeches *pro Murena* (47, 89), *in Vatinium*, and others (*pro Sest.* 133; *Interr. in Vat.* 37; *pro Planc.* 83).

In his desire for reform, Cicero was supported by all true patriots, amongst others by Servius Sulpicius, who wished for some change of the laws

relating to elections under certain conditions, viz. to establish *confusio suffragiorum*, or 'mass-voting,' as a means of preventing bribery, whenever a fresh election took place in consequence of an elected magistrate having been convicted of *ambitus*. We also begin to hear of *iudices editicii* to try cases of bribery. The Senate, on Cicero's motion, declared by a *senatus-consultum* the provisions of the *lex Ælia Calpurnia* applicable to any candidate who should keep about him hired followers, or who should entertain the people with gladiatorial shows —except under the peculiar circumstances of its being required by a testamentary disposition—or refreshments of any kind. The last clause is perhaps the earliest law against 'treating' of which we find record. In the provinces the *lex Coloniæ Genetivæ* likewise forbade treating at municipal elections. By it—and the provisions sound wonderfully modern—no candidate is to give, or cause to be given, dinners; he is not to have more than nine any day at dinner; nor is he to give, or cause to be given, bribes or gifts; nor is any one else to give dinners or bribes for him. The penalty for the violation of this statute is five thousand sesterces. The *lex Tullia* of Cicero's consulate confirmed the provisions of the *lex Ælia Calpurnia*, punished corrupt candidates with ten years' exile, and inflicted severe penalties on corrupt electors. It prohibited the candidate from exhibiting gladiatorial shows or public amusements within two years of the commencement of his candidature.

If efficiently enforced, the *lex Tullia* should have stamped out bribery. Roman history, however, shows how little effect this law exercised in putting an end to corruption. The price of the consulate showed no tendency to fall. The quotations for the year 54 B.C. show the enormous figure of ten million sesterces—practically £100,000—offered for the first voting division alone. A few facts about some of the chief men speak eloquently as to the spread of bribery. In the year 62 B.C., Cæsar owed nearly £250,000 sterling. When twenty-four years of age, Marcus Antonius owed £50,000; fourteen years later his liability was no less than £300,000. Cicero (*Ep. ad Att.* IV. xv. 7) writes to Atticus: 'Bribery is at boiling point. *Ecce signum*! On 15th July interest on money rose from 4 to 8 per cent.' This means that money was so much in demand for the electors that the rate of interest doubled. The Senate felt impelled to take action, and in 61 B.C. two noteworthy decrees were passed. By one it was rendered lawful to search the houses of magistrates suspected of having money deposited with them to be used for corrupt purposes (*ib.* I. xvi. 13). By the other it was enacted that any magistrate in whose house bribing agents should be harbonred should be held guilty of a State offence. When Cicero (*pro Planc.*) speaks of a sum of money hidden in the Flaminian circus, and seized by the authorities, he clearly implies that the concealers thereof meant the voters to find it.

This ancient plan has been imitated in modern times. For example, in 1868 each freeman in the city of Dublin received his £5 note from a hole in the wall. At Shaftesbury, in 1774, an alderman of the town, disguised as Punch, passed through a hole in the door twenty guineas to each voter, for which each was obliged to sign a bill payable to a fictitious Glenbucket, in order to disguise the nature of the transaction.

The two decrees of 61 B.C. were as ill obeyed as their predecessors. In the year 59 B.C. was carried the *lex Licinia de Sodaliciis*, which forbade the corruption of the tribes by means of the illegal organization of clubs. This law brings before us the difference between legal and illegal canvassing, and at times the border line between the two was thin. For example, it was right and proper to give treats or public shows to the voters in their tribes (*tributim*), but it was illegitimate if given to the people *en masse* (*vulgo*). It was right and proper to employ *liberalitas* in the conduct of the election, while it was wrong and improper to use *largitio* (*pro Mur.* 77). It was fitting that candidates should look to their *sodalicia*, or 'brotherhoods,' for assistance at the time of election; but, if they employed the *sodales* to mark off the tribe into small companies (*decuriæ*), each to be brought by the wiles of one of the brotherhood to favour a particular candidate, then the Licinian law pronounced this candidate guilty of using undue influence (on the *modus operandi*, cf. *pro Planc.* 44–47, also 37, 39). Unsuccessful candidates could be punished for ordinary *ambitus*, but only successful ones could be tried under the provisions of the Act *de Sodaliciis*. In 52 B.C. Pompeius introduced a measure against bribery, intimidation, and illegal influence, which applied to offences committed so far back as 20 years before his third consulship. That the offenders were many is evident from the letters of Cicero. In *Fam.* VII. ii. 4 he writes: 'I am kept incessantly at work by the number of trials under the new Act.' The retrospective clause proved of grave importance, and in the issue hastened the fall of the Republic. Julius Cæsar perceived the hopelessness of attempting to suppress corruption by statute, and he endeavoured to minimize its effects by reserving to himself the choice of half the candidates. Under the Empire the all-important power of the Princeps left no room for *ambitio*, save in the restricted sphere of election to municipal office. The attention of Augustus was directed not against electoral corruption, but against the bribing of jurymen. Cicero's reference to this is well known. Clodius had been acquitted on the charge of violating the rites of the Bona Dea, when Cicero gave evidence against the *alibi* which he set up. 'The jury,' sneered Clodius, 'did not give you credit on your oath.' 'Yes,' retorted Cicero, 'twenty-five out of the fifty-six did; the remaining thirty-one refused you credit, for they took the bribe in advance.'

When we bear in mind the scanty amount of legislation in early times, it is obvious that strenuous efforts—at least on paper—were made to put down corruption. In practice, however, little was done, and we feel inclined to think that many of these laws savoured of the pious resolutions often passed at public meetings nowadays. The laws, like the resolutions, looked well. An unenlightened electorate like the Roman may have a vague sense of public duty which we may call Imperialism. Unless moved by this spirit, or unless highly organized by the party system, it is almost inevitable that bribes will be employed with such voters. The Roman lacked this sense of Imperialism, and he certainly lacked the party spirit.

'Party phrases,' writes Mommsen (iii. 300), 'were in free circulation: of the parties themselves there was little trace in matters really and directly practical. Throughout the whole seventh century the annual public elections to the civil magistracies, especially to the consulship and censorship, formed the real standing question of the day, and the focus of political agitation; but it was only in isolated and rare instances that the different candidates represented opposite political principles; ordinarily the question related purely to persons, and it was for the course of affairs a matter of indifference whether the majority of votes fell to a Cæcilian or to a Cornelian. The Romans thus lacked that which outweighs and compensates all the evils of party-life—the free and common movement of the masses towards what they discern as a befitting aim—and yet endured all those evils solely for the benefit of the paltry game of the ruling coteries.'

2. **Ancient Greece.**—Greek history discloses a purer state of affairs than Roman, and this is due, *inter alia*, to the fact that Imperialism and party spirit prevailed to a large extent in Greece. Nicias knew that he could reckon on the spirit of Imperialism when he reminded his soldiers, in dire straits in the harbour of Syracuse, of τὸ μέγα ὄνομα τῶν Ἀθηνῶν. The democracy of Athens possessed

a political education superior to the Roman, and her citizens developed a sense of duty to the City of the Violet Crown, not possessed to the same extent by him who owed allegiance to the City of the Seven Hills. When no longer moved by these better feelings, party spirit (ἐριθεία) exercised much influence. Solon saw the useful aspect of loyalty to party when he punished the citizen who, on the outbreak of any sedition or attempt at revolution, should stand aloof and take part with neither side—an enactment that we find in some Continental constitutions. Aristotle (*Pol.* v. ix. 11) records the terms of an oligarchical oath taken on assuming office. 'And I will be malignant,' it runs, 'against the people, and I will devise against them whatever evil I can.' In order to meet with a parallel to this frank statement of one's duty to his party, we must refer to the notorious remark of President Andrew Jackson when he proclaimed the doctrine, 'To the victors belong the spoils.' The dependence of office on lot, the mode of electing the elders in Lacedæmon (Plutarch, *Lycurg.* 26), rendered electoral corruption impossible in Greece. One fact is highly significant. The word δεκάζειν, the only Greek word for 'to bribe,' is a very rare verb indeed, and its normal use is for tampering with juries rather than with electors. Aristotle does not recognize electoral corruption at all, unless such be his meaning when he says that in Carthage the most important offices, including even the throne and the command of the forces, were 'purchasable' (ὠνηταί, *Pol.* II. xi. 10), adding the outspoken reflexion, 'It is natural that a man should make money of his office if he has to pay for it.' Perhaps his meaning is that it may have been possible to purchase high office in Carthage, just as it was possible, till our own day, to purchase commissions in the British army or judicial positions in France. If his meaning is that office was accessible only by bribery,—and this seems to be the view of Polybius (VI. lvi. 4),—then in this respect Carthage, in the opinion of Aristotle, was unique in the ancient world.

The payment of persons invested with public functions to induce them to use them unjustly, and of juries to procure verdicts against the evidence, were, however, grave forms of corruption. The quarrels of Demosthenes and Æschines show how untrustworthy the public functionaries became, and the history of Sparta illustrates the same matter (Herod. ix. 87, 88).

Pausanias, for example, when attainted of treason, returned to Sparta in the certainty that he could buy off his punishment (Thuc. i. 131). Laotychides, Pleistoanax, Astoychus, Cleandridas, and Gylippus all took bribes. Thucydides tells us (viii. 45) that the trierarchs and generals of the Lacedæmonian and allied fleet—all save Hermocrates—took money from Tissaphernes to betray the interests of their country. Themistocles (Herod. viii. 4, 5) took and administered bribes; but it was to save, not to betray, his country. Aristotle evidently thought that the ephoralty in Sparta was corrupt. 'The ephors,' he remarks, 'are chosen from the whole body of the people, so the office often falls into the hands of very needy persons, who accordingly have shown themselves corrupt' (*Pol.* II. ix. 19). As he terms the ephoralty 'the keystone of the constitution,' we may infer that Sparta was more corrupt than the majority of the Greek States.

One remark of Aristotle shows clearly how little electoral corruption prevailed in Greece. He condemns canvassing; he condemns even the candidate's application for office. 'The man,' he informs us, 'who is fit for the place should have it, whether he wants it or not. No one would apply for office if he were not ambitious; and ambition and covetousness are the most common motives to crime' (*Pol.* II. ix. 27). With regard to corruption, Aristotle was plainly afraid of the embezzling of public moneys, and the dishonest discharge of public functions. To meet the former abuse, he proposes (V. viii. 19) that transfers of public money should be made in the presence of all the citizens, and that duplicates of the accounts should be deposited with certain bodies; and, to counteract the latter, that there should be 'certain distinctions ordained by law for those who have a good name for probity.' In England and other countries the latter provision is customarily observed. Aristotle holds that public officials should be absolved from the necessity of supporting themselves while serving the State. They must have leisure to govern. But at the present time, he writes (*Pol.* III. vi. 10), 'for the sake of the profit to be made out of the public purse and official position, men want to be always in office. They hunt after places with such eagerness that one might imagine they were invalids to whom health was impossible except when in office.' These official salaries, however, must not be so great as to excite cupidity. A mere competence was not the goal of that 'ambition' which Aristotle regarded with such alarm.

3. **The East.**—In the West we are accustomed to speak of the dangers of democracy; but in this, as in so many other particulars, no such language prevails in the East. In India—till lately, at least—the people are not to be feared. 'Blessed are the poor and needy' is the familiar account of Holy Writ. St. James, however, stands in some dread of the influence of the rich and powerful (cf. chs. 2. 5). In the East the masses are never the objects of attempts at corruption, but the classes are; whereas in the West the exact reverse holds good. The corruption in the East assumes the terrible form of being directed from below upwards. The aged Samuel, when he invites the closest examination of his conduct, exclaims, 'Whose ox have I taken? or whose ass have I taken? or whom have I defrauded? whom have I oppressed? or of whose hand have I received any bribe to blind mine eyes therewith?' (1 S 12^3). Amos, in his denunciation of the rule of Jeroboam II., exclaims, 'They afflict the just, they take a bribe, and they turn aside the poor in the gate from their right' (Am 5^{12}).

In the OT the acceptance of a bribe is expressly forbidden (Ex $23^{1.\,6.\,8}$, Dt 16^{19}), and one of the grievous woes of Isaiah is launched at them 'which justify the wicked for reward, and take away the righteousness of the righteous from him' (Is 5^{23}; cf. Job 15^{34}, Am 2^6), while 'he that despiseth the gain of oppressions, that shaketh his hands from holding of bribes . . . shall dwell on high' (Is $33^{15f.}$). Accordingly, Jehoshaphat forbade his judges to accept bribes (2 Ch 19^7; cf. Ex 18^{21}), though it is only too obvious that the Hebrews were by no means unfamiliar with corruption (Is 1^{23}, Ezk 22^{12}, Mic 7^3, Mt $28^{12ff.}$), among the cases being the betrayal of our Lord by Judas. Talmudic Judaism was very severe on bribery, though it seems to have been permissible, before the time when the judge received a regular salary, for him to accept an equal amount from each of two litigant parties before trying a case (*JE* iii. 379–381).

Zoroastrianism, with its intense horror of falsehood, was naturally strongly opposed to bribery, though no specific mention of corruption occurs in the extant Avesta texts. According to the late Pahlavi vision of *Arṭā-Vīrāf* (ch. lxxix., ed. Haug and West, Bombay, 1872, p. 194), the soul of the bribe-taker suffered horrible torture in the world to come. Both in China and in Japan the corrupt judge is severely punished; and it may here be noted that in ancient America, among the Aztecs, such a judge suffered the death penalty in grave cases of bribery, while for lighter forms of venality he was degraded from office, with the additional contumely of having his head shorn (Post, *Grundriss der ethnolog. Jurisprudenz*, Oldenburg, 1894–95, ii. 328).

In the East it is always the people who bribe, it is always the officials who are bribed; and in India

the difference between East and West is conspicuous. It is perfectly true that the Hindu law-books rank bribery in the class of 'open thefts,' and that the crime was punishable by fine, confiscation of property, banishment, loss of the case, etc. (Jolly, *Recht und Sitte* [=*GIAP*, ii. 8], pp. 125, 142); but, in spite of this, the native Indian under British rule is greatly puzzled by the apparent purity of the English officials. That they are really incorruptible he cannot believe. He looks on incorruptibility as Charles II. looked on honour and virtue. Yet he knows that he could not dare to offer a bribe to the 'Burra Sahib' directly. It must, he thinks, be conveyed through successive grades of native servants about the Court, and it will surely—for, after all, an Englishman is not different from other mortals—be accepted, if offered with sufficient discretion. No experience can teach him that pure administration of justice is an existing fact, or anything else but a means subtly devised for making small bribes ineffectual.

A native became an Indian Civil Servant, and, as such, accepted presents. His principle in so doing was that of Francis Bacon. He gave his judgment on the merits of the case. If the plaintiff won, he kept his gift and returned that of the defendant, and *vice versa*. The hard thing is that the Indians understood and admired the attitude of this judge, while that of his British colleague was incomprehensible to the native mind. That incorruptibility is regarded as a rare virtue is clearly shown in a memoir of the Hon. Onoocool Chunder Mookerjee, who attained the position of a judgeship in the High Court. 'Such was the integrity of this remarkable man,' writes his nephew, 'that, having taken a brief from one party in a case and read it, he invariably refused a fee from the other side.'

4. Great Britain and Ireland.—We turn from the East to the West, and we find the whole situation changed. With us the tendency is to corrupt the people in many insidious ways. In Stuart days the members of Parliament were corrupted because they were not easily amenable to public opinion. It was then thought necessary to lubricate the wheels of political machinery with golden oil; but, as the people gained more control, this bribery of their representatives slowly passed away. Tampering with judge and jury was once common in England.

A statute of the reign of Henry VII. in the year 1494 recites that 'perjury is much and customarily used within the city of London among such persons as passen and been impanelled upon issues joined between party and party.' *The Dance of Death*, translated from the French in the same reign by John Lydgate, and adapted to the England of his day, mentions a juror who had given a false verdict for money. Stowe tells us that in 1468 many London jurors were punished by having papers fastened to their heads, setting forth how they had been tampered with in such and such a suit. A letter from the Bishop of London to Cardinal Wolsey, given by Grafton in his *Chronicles*, says that a London jury would find Abel guilty of the murder of Cain. Jardine, in his *Criminal Trials*, p. 8, maintains that the 'proceedings against persons accused of State offences in the early periods of our history do not deserve the name of trials; they were a mockery of justice.'

The impeachment of Bacon made possible the long line of incorruptible judges and immaculate juries that justly forms the glory of England, though the want of publicity gave a longer duration to the existence of bribery by bestowal of office and valuable consideration. This state of affairs is painfully apparent in the reign of George III. For example, 388 peers were created, nearly all for political jobbery (May, *Constitutional History of England*, i. 282). Bad as matters were in England, in Ireland they were a great deal worse.

'I long,' wrote Lord Cornwallis, Lord-Lieutenant of Ireland, to the Duke of Portland on 12th Dec. 1798, 'to kick those whom my public duty obliges me to court. My occupation is to negotiate and job with the most corrupt people under heaven. I despise and hate myself every hour for engaging in such dirty work, and am supported only by the reflexion that without a union the British Empire must be dissolved.'

Corruption in England, as in Rome, assumes the shape of bribery of the electorate. This reached its widest development in the days of George III. Writing to Lord North, 16th Oct. 1779, the king said, 'If the Duke of Northumberland requires some gold pills for the election, it would be wrong not to satisfy him.' Aristotle laid down that man was a political animal, but the evidence of election petitions goes to prove that man is an aurivorous animal. If Rome gave her citizens bread and circuses, England was no whit less lavish to her electors. Charles II. held that every man had his price, and the perusal of the details of electioneering almost tempts us to agree with him. If the struggle for the consulate in the 700th year of the Roman Republic produced an offer of nearly £100,000 for the vote of *prærogativa*, it is humiliating to reflect that a little over a hundred years ago, in 1807, when Wilberforce contested Yorkshire against Lord Milton and the Hon. Henry Lascelles, the total expenses of the candidates exceeded a quarter of a million. In the same year, at Wootton Bassett, the price of a single vote rose from twenty guineas to forty-five. From the will of Lord Vernon, £5000 seems to have been the recognized sum paid in 1812 for a seat in Parliament. At so recent a date as the General Election of 1874, corruption was organized on a large scale. 'The moment the trumpet is sounded for a General Election,' deposes a witness before a Norwich Election Commission, 'there seems to spring from the ground, as it were, a host of employment-seekers.' This form of corruption, the bribing of voters by offering good wages for the discharge of nominal functions during the period of election, is now the subtlest form of bribery, except perhaps the bribery which takes the form of munificent donations to local charities. The days are gone when the beautiful Duchess of Devonshire could buy a butcher's vote with a kiss, when the genial Dick Steele could win over the women with an apple—stuffed with guineas—as a prize for the best wife.

5. America.—In the far Western world, our cousins do not seem to have got rid of corruption. Parts of the United States are no better than the small boroughs of Southern England were before the Corrupt Practices Act of 1883. Venality occurs, according to J. Bryce (*American Commonwealth*, ii. 238), chiefly in connexion with private legislation. Foreign missions and consulates, department bureaus, custom-house and revenue offices, army and navy contracts, postmasterships, agencies, and places of all sorts are the spoils of the victors. The essence of the United States system is that paid offices are given and taken away for party reasons. In England, less than sixty men vacate their places with a change of ministry; in America, all officials do so, except those who are appointed after passing the Civil Service examinations. Corruption, of course, is not confined to the taking or giving of money bribes, for by graft there is the taking or giving of bribes in kind. Thus the person corrupted may receive the allotment of a certain quantity of stock or shares in a company, or of an interest in a profitable contract, or of a land grant. Another form may be the doing of a job, *e.g.* promising a contractor that he shall have the clothing of the police or the cleansing of the city thoroughfares, in return for his political support; giving official advertisements to a particular newspaper which puffs you; promising a railroad president, whose subscription to party funds is hoped for, to secure the defeat of a bill seeking to regulate the freight charges of his road, or threatening its land grants.

The effects of Andrew Jackson's famous doctrine of 'To the victors belong the spoils' can perhaps best be seen in the operations of the Tammany Ring in New York City. The cost of erecting and furnishing the County Court House was estimated in 1868 at $250,000, but before the end of 1871 about $13,000,000 had been expended upon it, and it was still unfinished. The items of $404,347 for safes and $7500 for thermometers show how the extra money had disappeared. The total price which the city paid for the privilege of being ruled by Tammany from the beginning of 1869 to Sept. 1871—that is, thirty-two months—amounted to no less a sum than $81,000,000.

6. France.—France believes as thoroughly as America in the creed of Andrew Jackson. As in Greece, so in France, direct tampering with the electorate hardly exists. The Wilson scandals showed that political corruption was wide-spread in the Republic. The public and private bribery of the supporters of the Second Empire left many evil traces behind it. The embellishment of the capital fostered a spirit of jobbery, infecting all the departments of the State. The most dreadful of all the scandals was the Panama affair. The thrift of France had subscribed fifty millions sterling for the piercing of the Isthmus of Panama, undertaken by M. de Lesseps. In 1892 it was known that most of the money had disappeared, and at the trial it was clear that corruption accounted for the disappearance. Floquet avowed that, when Prime Minister, he had laid hands upon £12,000 of the Panama funds, and had utilized it in combating the enemies of the Government on questions unconnected with the Canal (Bodley, *France*, p. 503). He based his defence on the perilous doctrine that, under normal circumstances, it was the right and the duty of the Ministry to supervise the distribution of such subsidies so as to prevent them from being used to the prejudice of the Government (Chambre des Députés: Séance du 23 Décembre 1892). This principle has been followed by ministers both before and since the days of Floquet. The party system is probably the strongest purifying agent in Parliamentary government under extended suffrage. But, as in Rome, so in France. In neither country did the party system exist, and consequently, in both, corruption prevailed. No doubt, the general working of the Parliamentary system assists the operation of a corrupt policy. It is, however, clear that the absence of government by parties means the presence of bribery. 'The great motive power,' concludes Bodley (p. 515), 'to keep wavering members on the path of parliamentary integrity is the party system, and this is wanting in France.' Indirect tampering with the electorate can always be observed There is a bridge to be built, or a *lycée* to be instituted, especially in the *arrondissement* which shows itself faithful to the Government. Here we must meet with the kind of corruption we are certain to encounter in the future.

'Perhaps we are not at liberty to forget,' writes Sir Henry Maine in his *Popular Government* (p. 106), 'that there are two kinds of bribery. It can be carried on by promising or giving to expectant partisans places paid out of the taxes, or it may consist in the directer process of legislating away the property of one class and transferring it to another. It is this last which is likely to be the corruption of these latter days.'

Corruption used to appeal to individuals; now it appeals to classes. The farmer is bribed with an anticipation of prairie rent, and the artisan is bribed by the prospect of protective legislation. The future alone can disclose whether the old form or the new form of corruption is the more dangerous.

LITERATURE.—T. C. Aostey, *Election Trials*, 1870; Aristotle *Politics*; Bolingbroke, 'On Bribery and Corruption,' in *Collection of Political Tracts*, 1769; J. É. C. Bodley, *France*, 1898; J. COSMOGONY AND COSMOLOGY (Introductory).—By cosmogony is meant the theory of the origin of the universe. The existence of a developed cosmogony seems to be characteristic of a somewhat advanced degree of thought. Among the Australians, for example, such careful observers as Spencer, Gillen, and Howitt record no cosmogonic myths, and the South American Indians and even the Finns have but scanty legends of this type. On the other hand, the Polynesians and North American Indian stocks have cosmogonies of considerable elaboration. The reason for this deficiency in certain parts of the world evidently lies in the amount of abstract thought required for the development of a cosmogony; for, though the existence of living beings, especially those of human kind, presents a creation problem which even primitive man endeavours to solve in many ways long before attempting to account for the beginning of the universe, these solutions do not come, strictly speaking, within the scope of cosmogony, but rather within that of creation (*q.v.*). Yet it must be remembered that at least the rudiments of cosmogonic ideas may exist among tribes which are not now known to entertain them. A further element of difficulty is introduced into the study of primitive cosmogonies by the unconscious absorption of foreign elements derived from Christian missionaries, just as is the case with legends of the Flood.

Throughout all cosmogony run certain basal principles, and it is also noteworthy that legends of this character, at first discordant and contradictory, gradually become harmonized and unified with the progress of religious speculation. Cosmogonic myths, almost without exception, seek to explain the creation of the world from the fewest possible elements. Among the Babylonians, where at least two divergent systems of cosmogony may be traced, the primal element of the universe was water, symbolized and ruled by Tiamât, the personification of 'chaos,' until she was slain by

the god Mardnk. This cosmic ocean recurs in other systems as well, notably in some of the Hindu cosmogonies and in the Egyptian legend of the Creation. Yet in various parts of the Nile Valley different cosmogonies were held; at Elephantine it was believed that Khnum had made the cosmic egg from the mud of the Nile; while at Memphis, Ptah was said to have carved the earth, like a statue, into its present form. Among the Greeks, with their highly developed philosophic and abstract thought, a large number of cosmogonies were devised, the prime component of the universe being ocean, according to Homer; earth, according to Hesiod; air, according to Epimenides; ether, according to the rhapsodic cosmogony; water and earth, according to Hieronymus and Hellanicus; water and slime, according to Athenagoras; and water, according to Thales. The Greek cosmogonies may be divided into three classes: those beginning with a spiritual principle, as Zeus; those beginning with an abstract principle, as Chaos, Time, and Night; and those beginning with a material principle, such as water, earth, and ether. Of these, the third category is doubtless the most primitive, although even the Hesiodic cosmogony is so highly developed that it is a system of philosophy rather than of religion. An almost equal degree of speculative thought appears in the earliest record of India's cosmogony. The late 129th hymn of the tenth book of the Rigveda describes the 'That,' or abstract universe, as fired with inward meditation that resulted in the creative *Kāma*, which corresponds strikingly and curiously with the cosmogonic Eros of the Greeks. Other Vedic hymns vaguely ascribe the creation of the world to various deities, while a late hymn of the Rigveda (x. 90) declares that the world was formed from the different members of the body of a giant. In the later development of Hindu thought the universe is the creation of Brahmā (or of Prajāpati or some other All-God), while the universe itself is conceived as a cosmic egg—a legend as early as the *Brāhmaṇas*, and recalling the cosmic egg of Egypt, the Polynesian creation-myths, and the Greek Orphic mysteries. It is also noteworthy that creation is ascribed to sexual congress in cosmogonies so diverse as the Hindu, Maori, and Taoist.

The Greek and Hindu cosmogonies may be termed *quasi*-philosophic, while the Babylonian creation-myth is rather one of opposition. In the Iranian legend of the origin of the universe the same element of opposition appears, and at the same time it may possibly illustrate the bond which links the two. The earliest form of the legend is marked by a conflict between Ormazd and Ahriman, and the entire cosmic process is a series of beneficent creations by the former and of maleficent counter-creations by the latter, thus affording an analogue, in a certain sense, with the conflicts of the children of Papa and Rangi in the New Zealand creation-myth. At a later period, however, philosophic speculation evolved the doctrine of 'boundless time,' from which both Ormazd and Ahriman, represented by Light and Darkness in Manichæism, were sprung. It is clear that this unitarian tendency is a later development; and if one may argue from analogy it would seem that the earliest Greek cosmogony, instead of being philosophic like the Hesiodic version, was based on opposition, as Hesiod's account itself seems in places to imply.

The order of creation naturally varies in different cosmogonic legends. In one of the numerous systems of Egyptian cosmogony the primal spirit and primal matter co-exist from all eternity in indissoluble union. The primal spirit longs to create, thus recalling the cosmic Desire (*Kāma*, Ἔρως) of the Hindu and Greek systems. This results in motion of the primal material, whose basal qualities thus become visible. With the aid of one of them the cosmic egg is formed, from which arises Rē, the god of light, who forms the world and all that it contains. In the Iranian account, as given by the *Būndahišn*, the order of earthly creation is sky, stars, moon, sun, land, sea, river, plants, animals, and man. A certain similarity with the Greek cosmogonies, as represented by Hesiod, is shown in the Germanic version given by the *Vǫluspá*, in that the creation of the gods, to which the Babylonian creation tablets also refer, is elaborately described. The basal elements are primeval time, Ginnungagap (which corresponds, in many respects, to the Greek Chaos), and primeval matter. The gods Odin, Hoenir, and Lódhur raise aloft the sun and moon (or the earth). After this Midhgardh, the home of mankind, is built; the plants are produced by the warmth of the southern sun; the seasons are ordained. The home of the gods is then built, and the three Norns, or Fates, appear, while the cosmogony closes with the creation of dwarfs and men. In this last system the cosmic egg, which plays so prominent a part in many creation-legends, is replaced by the cosmic tree, which is, at least to a certain extent, paralleled by the golden lotus of the Hindu *Purāṇas*.

A curiously isolated cosmogony is found in Chinese Taoism, which derives the four seasons from the conjunction of the male and female principles Yang and Yin. The four seasons, in their turn, produce the eight *kwa*, or phenomena of Nature, which are the source of the universe. Equally isolated is the general type of the North American Indian cosmogony, which is essentially one of opposition. It presupposes the prior existence of another world before the earth of man. In this world dwelt the gods, who gradually came into conflict with each other, and in the struggle all, with a few exceptions, were transformed into those objects, both animate and inanimate, to which they were in disposition most closely akin, thus giving rise to beasts, birds, reptiles, trees, rocks, and everything else. Meanwhile, the divinities who had escaped metamorphosis departed to other regions, the present world being occupied by American Indians.

In entire keeping with the late development of cosmogony and its pre-eminently philosophic character, there is almost no instance of an ethical import being attached to it. Few peoples seem to have thought of a design for which the world was brought into being. The Iranians, however, held that the universe was created for the glory of Ormazd, who should finally triumph completely over the machinations and creations of the evil Ahriman. In conclusion, it must be noted that the concept of creation *ex nihilo* was practically unknown to the ancient world. It is present neither in Babylonian, Egyptian, nor Greek; and its existence in Iranian thought is at least problematical. On the other hand, the keenest philosophers of antiquity, the Hindus, evolved the idea as early as the Rigveda, even though but vaguely, declaring in a late hymn (x. 72. 2): 'in the primal age of the gods being was born of non-being' (*devānāṁ pūrve yuge 'sataḥ sad ajāyata*).

LOUIS H. GRAY.

COSMOGONY AND COSMOLOGY (North American).—**1. Athapascan family** (widely distributed in many tribes from Hudson's Bay to the Pacific).—The Athapascans of the North-west attribute the phenomena of creation to a raven,

whose eyes were fire, whose glances were lightning, and the clapping of whose wings was thunder. On his descent to the ocean, the earth instantly rose, and remained on the surface of the water. From this being, also, the Athapascans traced their descent.[1] Yetl by name, it saved their ancestors from the flood, and succoured them by bringing them fire from heaven. It probably sprang, with the Mexican god Quetzalcoatl, from some common original form. The more eastern Athapascans believe their ancestors to have sprung from a dog, probably an eponymous totemic being.

2. Iroquoian family (Hurons, Mohawks, Oneidas, etc., situated from the St. Lawrence to the Roanoake, and the Cherokees in Eastern Tennessee).—The Iroquois tribes believe in a similar myth. Their original female ancestress fell from heaven. There was as yet no land to receive her, but presently it 'suddenly bubbled up under her feet, and waxed bigger, so that ere long a whole country was perceptible.'[2] Some Iroquois tribes, however, believed that amphibious animals, such as the otter, beaver, and musk-rat, beholding her descent, hastened to dig up sufficient earth from beneath the waters to provide her with an island upon which she might dwell.[3] Several Iroquois tribes regarded a mountain near the falls of the Oswego River in New York State as the locality in which their forefathers originated, and the name of the Oneida ('People of the stone') is held to indicate some such relationship.

3. Algonquian family (formerly distributed over an area embracing a space from Newfoundland to the Rockies, and from Churchill River on the north to Pamlico Sound on the south).—The words for 'light' and 'rabbit' in the Algonquian tongue are the same, so that Manibosho or Michabo, the sun, their creative agency, has become confounded by them with the rabbit. The myth relates that one day, when Michabo was hunting, the wolves which he used as dogs entered a great lake, and disappeared there. He entered the lake to rescue them, but it rose suddenly, overflowed its banks, covered the land, and destroyed the world. Michabo dispatched the raven to find a piece of earth wherewith to rebuild the land; but, after having searched everywhere, the bird returned, and reported that it could find none. Then he ordered the otter to dive for some, but the animal returned to the surface without any. At last he sent down the musk-rat, which returned with a small piece, which sufficed for Michabo to re-create the solid earth as it now stands. The trees having lost their branches, he shot arrows at their bare trunks, and the arrows became new limbs. He then avenged himself upon the malevolent beings who had caused the flood, and married the musk-rat, by whose aid he peopled the world.

4. Muskhogean family (Creeks, Choctaws, Chickasaws, Seminoles, etc., confined chiefly to the Gulf States east of the Mississippi).—The Muskhogees believe that before the Creation a great body of water alone was visible. Over the dreary waste two pigeons flew to and fro, and at last espied a blade of grass rising above the surface. Dry land gradually followed, and the mainland and islands took their present shapes. In the centre of the hill *Nunne Chaha* was the house of Esaugetuh Emissee, the 'Master of Breath,' who moulded the first man from the clay which surrounded his abode. The waters still covered the earth, so that he was compelled to build a great wall to dry the mud-fashioned men upon. When the soft mud had hardened into flesh and bone, he directed the waters to their present places, and gave the dry land to the men whom he had made. Here we cannot doubt that the appearance of the two pigeons signifies the brooding of the creative spirit upon the waste of waters. The similarity of this myth to the Creation story of Genesis is most remarkable.

5. Siouan family (Dakotas, Winnebagoes, Mandans, etc., dwelling on the right bank of the Mississippi and Missouri valley).—The Mandan branch of the Sioux possess a very complete creation-myth, which bears a strong resemblance to those of the Karaya Indians of the Amazon and the Warrau Indians of Guiana. They affirm that the entire nation resided in an underground village near a great subterranean lake. The roots of a grape-vine penetrated to their habitation, and some of the more adventurous of them climbed up the vine, and were rewarded with a sight of the earth, which they coveted because of its richness in fruits and the plentifulness of buffalo meat. The pioneers returned laden with grapes, the taste of which so enchanted the people that they resolved to forsake their subterranean dwelling for the delights of the upper world. Men, women, and children clambered up the vine; but, when about half the nation had ascended, a corpulent woman who was climbing up broke the vine with her weight, and by her fall filled up the gap which led to the upper world. At death, the Mandans expect to rejoin their forefathers in their original seat, the good reaching the ancient village by way of the lake, which the burden of the sins of the wicked will not allow them to cross. The cognate Minnetarees had a tradition that their original progenitor emerged from the waters of a lake, bearing in his hand an ear of maize—a typical example of the culture-hero myth. As regards the actual creation of the earth, the Mandans had a vague tradition, resembling that of the Muskhogees, concerning the brooding of pigeons upon the primeval waste of waters.

6. Californian sub-families.—California was, and is now, sparsely peopled by a number of Indian tribes belonging to as many as twenty-one distinct linguistic families. The mythologies of these tribes were, however, very similar to one another, and were characterized by unusually well-developed and consistent creation-myths, which are perhaps best typified by that of the Maidu, formerly dwelling in the Sacramento Valley and the adjacent Sierra Nevada. Their mythic era appears to fall into a number of periods, each of which is dealt with by a group of myths. It is in the first of these that their creation-myth makes its appearance, with the coming of Kodoyanpe the Creator, and Coyote. They discovered the world, and proceeded to place it in fitting order for its first inhabitants. These they made from small wooden images, but, as they engaged in violent conflict, they were metamorphosed into animals. Kodoyanpe conceived an antipathy to Coyote, whose evil desires clashed with his beneficent wishes, and resolved upon his destruction. In this he was assisted by a being known as 'the Conqueror,' who destroyed many monsters and evil beings which later would have endangered the life of men who were yet unborn. In the last scene of the cosmic drama Kodoyanpe is defeated by Coyote, and takes his flight eastwards—which shows, at least, that he is not a sun-god. The Indians then spring from the places where the small wooden figures of the 'first people' had been buried. Unlike most American creation-myths, this is a veritable creative act, not a mere re-construction of the universe. In the beginning was only the great primeval waste of waters upon which Kodoyanpe and Coyote dropped in a canoe. Of the origin of these supernatural beings the Maidu were ignorant; but a neighbouring people, the Achomawi, pushed their cosmogonic legend much

[3] *Relacion de la Nouvelle France*, 1636, p. 101.

further back. According to them, at first there existed only the shoreless sea and the clear sky. A small cloud appeared thereupon, which gradually increased in size, and then condensed until it became the silver-grey fox, the Creator. Then arose a fog, which, condensing, became Coyote. The Ashochimi of California told of the drowning of the world so that no man escaped. But, when the waters retired, the Coyote went forth and planted the feathers of various birds, which grew into the various tribes of men.[1]

7. Chinookan family (a distinct family, formerly dwelling on Columbia River).—The creation-myth of the Chinooks is practically the same as that of the Maidu, and relates how Italapas, the Coyote, encountering a heavy surf at a place called Got'at, was afraid that he might be drifted away, and threw sand upon the surf, saying, 'This shall be a prairie, and no surf. The future generations shall walk on that prairie.' The Chinookan mythology is rich in myths of the other world, and in cosmogonic sun-, moon-, and star-myths, which are dealt with at length in art. CHINOOKS.

8. Caddoan family (Pawnees, Kichai, Wichita, etc., dwelling in Nebraska and Arkansas).—The Caddo believed that they came originally from the under world, and related that the first individual to emerge into the light of day was an old man, carrying in one hand fire and a pipe, and in the other a drum. He was followed by his wife with corn and pumpkin-seed. They spoke of a creator, Atius Tirawa, intangible and omnipotent, whose house was the heavens, and whose messengers were the eagle and the buzzard. He it was who called sun, moon, and stars into being, and ordered them their various circuits.[2]

9. Shoshonean family (Hopi or Moqui, Comanches, etc., inhabiting a tract from Oregon to Texas, and from Nevada to Colorado).—The Shoshonean stock had originally no conception of a Great Spirit. They speak of the earth as always having existed, and of the human race as having emerged through an opening in the earth called the *Sipapu*, which was identified with the Grand Cañon of the Colorado. The dead they suppose to return to the under world. The Sky-father and Earth-mother they hold as responsible for the upkeep of the universe.

10. Pueblo Indians of New Mexico (Zuñis, etc.).—The Zuñis believe that the Creator—Awonawilona, Maker and Container of all—existed before the beginning of time, in the darkness which knew no beginning.[3] He then conceived within himself, and, projecting his creative thoughts into the void of night, evolved fogs potent with growth. He next took upon himself the form of the Sun, the father of men, who thus came into being, and by whose light and brightness the cloud-mists resolved themselves into water, gradually evolving into the primeval sea. Then from his flesh, 'outdrawn from the surface of his person,' he made the seed of two worlds, and fecundated the sea therewith. By the heat of his rays green scums formed, which became the 'Fourfold containing Mother-earth,' and the 'All-covering Father-sky.' Terrestrial life sprang from the embraces of these, and they separated. These twain were described as 'transmutable at thought, manifesting themselves in any form at will, as dancers may by mask-making' (Cushing, *op. cit.* 379 f.). Then, from the lowest of the four wombs of the world, the seed of men and living things took form and grew, until the lowest cave or womb grew over-full of living and half-finished creatures, men among them, and the press became so great that Poshaiyankya, the wisest and foremost of men, arising from the nethermost sea, obtained egress from the first world-cave through such a dark and narrow pathway that movement was difficult. Alone did Poshaiyankya come from one cave to another into this world, then island-like, lying amidst the world-waters, vast, wet, and unstable. He sought and found the Sun-father, and entreated him to deliver the men and the creatures from that nethermost world. In another variation of the legend the people were delivered by one Janauluha, a master magician, who, bearing a staff plumed and covered with feathers, guided imprisoned humanity upward to the light. He then created birds of shining plumage, the raven and the macaw, who were the spirits of winter and summer, and the totems of the two original clans of men.

LEWIS SPENCE.

COSMOGONY AND COSMOLOGY (Babylonian).

— The cosmology generally accepted in Babylonia had its origin at Eridu, the primitive seaport of the country, on the shores of the Persian Gulf. Here the land was constantly growing through the deposition of silt, and the belief consequently arose that the earth had originated in the same way. The water of 'the great deep,' accordingly, came to be regarded as the primordial element out of which the universe was generated. The 'Deep' was identified with the Persian Gulf, which was conceived as encircling the earth, and as such was called the *Nâru Marratu*, the 'Bitter' or 'Salt River.' On its inner bank in the extreme north was 'the Mountain of the World,' on which the sky rested and the gods had their seat. An early Babylonian map of the world (*Cuneiform Texts*, xxii. 48) places at certain distances from one another on the outer bank a number of *nagê*, or 'coastlands,' which, however, seem to owe their origin to the discovery of the existence of countries beyond the region of the Euphrates and Tigris, made subsequently to the period when the primitive system of cosmology first became an article of belief. In one of the islands off the months of the Euphrates and Tigris the Babylonian Paradise was located, where the Chaldean Noah and other ancient heroes were supposed to dwell.

Apśu, 'the Deep,' belonged to the orderly framework of Nature; the waters of the annual inundation which irrigated the Babylonian plain poured into it, and the trading vessels which brought wealth and culture to Eridu passed over its bosom. Hence it became the home of Ea, the culture-god of Eridu; his palace was within it, and his throne, *Du-azagga*, 'the holy mound,' was identified with an island which had been formed on the eastern side of the Gulf. But there was another aspect under which the watery element could be regarded; the thunderstorm and the whirlwind rose out of the Gulf, carrying destruction in their path, and the deep itself had once burst its bonds and destroyed mankind with a deluge. Under this destructive and anarchic aspect the watery element was known as *Tiamtu* or *Tiamât* (Heb. *Tĕhôm*), which was mythologically pictured as a dragon, the enemy of the gods of light and law. While Apśu, the Deep, had been the origin of all things in the present orderly universe, Tiamât was a yet older principle, whose anarchic waters still existed beyond the limits of the universe, in the waters above the firmament and the waters below the earth and sea, which were always ready to break forth once more as soon as the barriers of law that confined them were removed. The conception of Tiamât

probably emanated from Nippur in northern Babylonia, and was harmonized with difficulty with the cosmology of Eridu (Sayce, *Religions of Ancient Egypt and Babylonia*, pp. 376, 377).

The cosmological beliefs of Eridu are embodied in a bilingual (Sumerian and Babylonian) poem, discovered by Pinches (*JRAS*, 1891, pp. 393–408), which, however, in its present form has been much modernized by the introduction of lines referring to Babylon and the other chief cities of later Babylonia, and the substitution of Merodach, the god of Babylon, for Ea, the god of Eridu. The original version began as follows:

'No holy house, no house of the gods in a holy place had as yet been built,
No reed had grown, no tree been planted,
No bricks been made, no brick-mould formed,
No house been built, no city founded,
No city built, no man (*adam*) made to stand upright;
The deep was uncreated, Eridu unbuilt,
The seat of its holy house, the house of the gods, unerected:
All the earth was sea,
While within the sea was a current' (literally 'watercourse,' *pišannu*).

Then we are told how

'[Ea] tied (reeds) together to form a weir in the water,
He made dust and mixed it with the reeds of the weir,
That the gods might dwell in the seat of their well-being;
The cattle of the field (*Edinnu*), the living creatures in the field, he created;
The Tigris and Euphrates he made and set them in their place,
Giving them good names.
Moss and seed-plant of the marsh, rush and reed he created,
He created the green herb of the field,
The earth, the marsh, the jungle,
The cow and its young, the calf, the sheep and its young, the lamb of the fold.'

Of far later date is the so-called Epic of Creation, which is really a hymn in honour of Merodach and his overthrow of Tiamât and the powers of chaos. As this involved the creation of the existing world, the poem is prefaced by an account of the origin of the universe as it was conceived in the schools. The cosmology is frankly materialistic, abstract principles taking the place of the gods who are themselves the offspring of the principles, in flagrant contradiction of the rest of the Epic, in which the god Merodach appears as the creator. The Semitic idea of generation is invoked in order to explain the creation, which thus becomes a process of evolution, the old animistic objects of Sumerian worship being introduced to form the links in the chain of development. Water remains the primordial element, but an attempt is made to reconcile the antagonism between the two conceptions of this element, according as it is regarded as anarchic or as under the dominion of law, by making Apśu (the Deep) and Tiamât (the watery chaos) complementary principles whose union resulted in starting the evolutionary process. The first lines of the Epic run thus:

'When above unnamed was the heaven,
(And) earth below by a name was uncalled,
Apśu (the deep) in the beginning (*rištû*) being their begetter,
(And) the flood (Mummu) of Tiamât the mother of them all,
Their waters were embosomed together (in one place),
But no reed had been harvested, no marsh-plant seen;
At that time the gods had not appeared, any one (of them)
By no name were they called, no destiny [was fixed].
Then were the gods created in the midst of [heaven?],
Lahhmu and Lahhamu appeared (the first).
The ages multiplied, they . . .
Anšar and Kišar (the Upper and Lower Firmaments) were created . . .
Long were the days, forth came . . .
Anu the[i] [Bel and Ea].'

The cosmogony of the Epic is reproduced by Damascius, a contemporary of Justinian (*de Prim. Princip.* 125 [p. 384, ed. Kopp, 1826]).

'The Babyloniane,' he says, 'like the rest of the barbariane, pass over in silence the one principle of the universe and constitute two, Tavthê (Tiamât) and Apasôn (Apśu), making Apasôn the husband of Tavthê, and denominating her "the mother of the gods." And from these proceeds an only-begotten son Môymis, which, I conceive, is no other than the intelligible world (νοητὸς κόσμος) proceeding from the two principles. From them also another progeny is derived, Lakhê and Lakhos (corrupted in the MSS into Dakhê, Dakhos); and again a third, Kissarê and Assôros; from which last three others proceed, Anos and Illillos (corrupted into Illinos) and Aos. And of Aos and Davkê (Damkina) is born a son called Bêlos (Bel-Merodach), who, they say, is the fabricator of the world.'

Here Mummu, 'the flood' or chaos, who is identified with Tiamât in the cuneiform text, becomes the son of Tiamât and Apśu, and is accordingly explained by Damascius as the ideal world—that is to say, the world as it exists in the mind before it is realized externally. Such an explanation, however, is excluded by the Epic, where Mummu would rather correspond with the 'darkness' which in Gn 1[2] is said to have been 'upon the face of the deep.'

According to the Babylonian legend, the appearance of the gods of light and order was followed by the revolt of Tiamât (or, as it would seem, according to another version, of Apśu). But the powers of darkness and chaos were overthrown by Bel-Merodach, who cut Tiamât in two, and stretched the sky across one of the two halves, thus preventing the waters which were in her veins from breaking forth again, while the other half was similarly confined under the earth and sea, the springs of which it feeds. The conquest of Tiamât was followed by the creation of man, who was brought into existence in order to build temples and altars and offer sacrifices and prayers to the gods. The world, however, had to be prepared for the reception of man by fixing the movements of the celestial luminaries, and so regulating the sacred calendar, and then by creating plants and animals which could be offered or used in the service of the temple. The heavenly bodies had existed before the war with Tiamât, since the deities with whom they were identified had been the offspring of the trinity or triad of Anu, En-lil, and Ea. Indeed, Bel-Merodach himself was originally a Sun-god.

In the Epic, allusion is made to another system of cosmology, which ascribed the universe to the creative word. Merodach is described as destroying and creating by his word alone, and so proving his fitness to destroy the forces of anarchy and create a world that should be governed by law.

Another system of cosmology was that which emanated from Nippur (now Niffer) in northern Babylonia. In this Tiamât, the dragon of the subterranean waters of chaos, was the elementary principle, the earth having risen out of it in the form of a mountain. The brood of chaos, composite creatures who belonged to a first and imperfect creation, continued to exist in the dark underground, which was also the dwelling-place of the ghosts and demons of night. How the world-mountain was believed to have been formed we do not yet know. At the Syrian Hierapolis (Membij) the waters of the deluge of the Babylonian Sisythes were believed to have drained off into a cavern beneath the temple, which was accordingly kept securely closed, and Simi, the daughter of the supreme god Hadad, was said to have put an end to the attacks of a demon by filling the pit in which the monster lived, with the water of the sea (Cureton and Renan, in Pitra, *Spicilegium Solesmense*, ii. p. xliv).

A. H. SAYCE.

COSMOGONY AND COSMOLOGY (Buddhist).—1. Preliminary notes.—

(1) In the earliest times, speculations on the universe were apparently regarded as wrong. We may recall the attitude of the Buddha towards (heretical) doctrines of the infinity or non-infinity of the world (see AGNOSTICISM [Buddhist], vol. I. p. 221), and his efforts to give a moral or psychological meaning to

the researches of natural science: when a monk wants to know where the material elements (earth, water, etc.) stop in their extent, the Buddha explains, by way of answer, how people are delivered from desire and from existence. Obviously that is where the problem lies; the exterior world, in fact, exists only as long as one is conscious of it (*Dīgha*, i. 215).[1]

It is probable that a large number of Buddhists, imbued with the 'moralism' of their master, avoided frivolous curiosities,—'non-Buddhist' 'mundane' disciplines (*lokāyata*),[2]—and were content with denying, on the one hand, a supreme personal creating power (a lord, *Īśvara*), against the theists, the Brāhmans; and, on the other, the innate independent power of things (*svabhāva*), against the *svabhāvavādins*, the materialists. The formula, 'The diversity of the world comes from the act,'[3] contains for a well-informed Buddhist the Alpha and Omega of the necessary cosmological information.

But, long before the time when the Mahāyānist books demanded that the learned Buddhist, the preaching Bodhisattva, must have a knowledge of lay sciences,[4] a Buddhist cosmology was formed, constituting a very well developed collection of various opinions and systematizations; and, in fact, accurate information on cosmological questions seems to have been as ancient as the statements defending or ridiculing the speculations of this kind which we recalled above.

The aim of the present article is to give an outline of Buddhist cosmology, without entering into details (except on a few points which have not yet been published, or are obscure), and without spending time over variants. It should prove interesting, and profitable for the history of the sects, to study the history of the various theories, to distinguish the most ancient elements and aspects of them, and to note the succession of borrowings, inventions, and arrangements. Such a study, however, is possible for only a limited number of the theories; we shall endeavour to pursue it wherever we can with prudence.

(2) *Meaning of the word.*—'Cosmology' seems to be the most accurate translation of *lokaprajñapti*, 'world-teaching,' a term denoting that part of the Sarvāstivādin *Abhidharma* ('summaries and systematization of matters of doctrine' [see ABHIDHAMMA, vol. i. p. 19]) which deals with cosmological problems—the origin, arrangement, and destruction of the universe.[5]

But the *lokaprajñapti* deals also with questions that we do not include as cosmological: the Buddhists, in fact (at least the Sarvāstivādins), distinguish two 'worlds' (*loka*)—the *bhājanaloka*, 'receptacle-world,'[6] the universe as the abode of beings (*sattva*), and the *sattvaloka*, 'world of beings,' *i.e.* the mass of living beings. There are, accordingly, two *lokaprajñapti*, the first a 'cosmology,' the second a 'zoology' (*sattva* = ζῷον).[7]

There are, naturally, close connexions between these two 'worlds,' for the first is made for the second, being created and arranged to form a shelter for it. The whole of demonology, anthropology, and theology (*i.e.* pantheology) is connected with cosmology. Although it is difficult to separate the two, we shall give special prominence to the facts considered by our sources as relating to the 'receptacle-world' (*bhājanaloka*); *e.g.*, the abodes of the gods, the length of their lives, the dimensions of their bodies, and their 'non-embryogeny' are 'cosmological,' while their psychology and the right they possess or do not possess to the exercise of virtue are 'zoological' (*sattvalaukika*). The beings, likewise, in one and the same class, inhabiting the same part of the 'receptacle-world,' may differ in their method of generation; men, serpent-dragons, and *garuḍas* (mythic birds) are not always born from the womb or the egg; the *chakravartin* kings (see art. CHAKKAVATTIN, vol. iii. p. 336 f.) resemble gods far more than men, etc.—none of this is cosmological.

Nevertheless, in order to understand the cosmological system, we must know the main lines of the distribution of beings (*sattvaloka*). There are (1) 'immaterial' beings, who form the 'immaterial' category (*dhātu*), the *ārūpya*; they are nowhere; they have no place in the 'receptacle-world' (but see below, § 8); (2) beings called 'material' (*rūpin*),[1] but of a subtle material; they inhabit the higher part of the 'receptacle-world,' *i.e.* the *rūpadhātu*, or 'material category or region,' according as we regard the beings or their habitation (see § 7); and (3) material beings, of grosser substance the lower they are in the scale, living in a world of gross material, concupiscent (*kāmāvachara*, *kāmabhuj*, *kāmaprabhāvita*), and subject to sensual and especially sexual desire (men alone are capable of continence, *saṁvara*, in this respect); these beings occupy the lower part of the 'receptacle-world,' the *kāmadhātu*, or 'concupiscence category or region.'[2]

On the other hand, beings are divided into five categories, two good and three bad, called *gati*, 'destinies,' 'kinds of existence,' themselves further subdivided into numerous sub-*gatis*: (1) the gods (*devas*) of three classes, according as they constitute the first *dhātu* (four kinds), or inhabit the second *dhātu* (sixteen kinds and sixteen 'places,' *āvāsa*), or inhabit the third *dhātu*, the *kāmadhātu* (six kinds and six 'places') (see below, § 6); (2) men, who are allotted four places, the four continents (see below, § 4); (3) ghosts (*pretas*), one place [see below, § 5 (iii.)]; (4) animals, one place [see below, § 5 (ii.)]; and (5) the damned, eight places: eight hells [see below, § 5 (i.)]. According to this division, there would be twenty places in the *kāmadhātu*. Indeed, it is not at all a satisfactory division,[3] for there are numerous categories of beings who have no place in it, notably the *asuras*.

Many treatises, some of them of ancient date, regard the *asuras* as a sixth *gati*, placing them between men and ghosts (see *JPTS*, 1889, p. 105 [this is the opinion of the *Andhakas* and several *Uttarāpathakas*]; Burnouf, *Lotus*, 1852, p. 309 [*SBE* xxi. 7]; Pitāputrasamāgama, ad *Bodhicharyāvatāra*, ix. 73; *JPTS*, 1884, p. 158, etc.). But the authorities on *Abhidharma*[4] (*Kathāvatthu*, viii. 1; the Sarvāstivādin *Saṅgītiparyāya* [in *JPTS*, 1905, p. 102]; Chandrakirti's *Pañchaskandhaprakaraṇa*)[5] hold that the *asuras* are not a *gati*. Some of them have the same colour, pleasures, and length of life as the gods or the ghosts, and intermarry with them.[6] Nevertheless, the *asuras* have a well-defined place or places (see below, § 5 (iv.)).

As regards the numerous demi-gods, good and bad genii, vampires (*rākṣasas*), dragons (*nāgas*), divine birds (*garuḍas*), and celestial musicians (*gandharvas*, cf. *Mahāvyutpatti*, § 166), some of them have a definite place in hell (demons of torture), at the foot of Meru, or near the deities whose followers or commensals they are (see below, § 5 *ad fin.*); others have the position rather of magician-ghosts. Popular mythology had shrewd theories concerning them, but they do not appear to have much importance in 'cosmology' (*lokaprajñapti*).

(3) *Sources.*—The most systematic work on Buddhist cosmology is undoubtedly the second

[1] Rhys Davids, *Dialogues of the Buddha*, London, 1899, i. 280; cf. the 'foolish questions' in *Milinda*, p. 295 (*SBE* xxxvi. 153).

[2] Rhys Davids, *op. cit.* i. 166, and Bendall's review in *Athenæum*, June 30th, 1900; also *Śikṣāsamuchchaya*, p. 192, 7.

[3] *Karmajaṁ lokavaichitryam* (*Abhidharmakośa*, iv. st. 1). On *karma* as the cause of the universe, see art. KARMA.

[4] e.g. *Bodhisattvabhūmi*, ch. viii.

[5] This last part, the destruction of the universe, has been treated in the art. AGES OF THE WORLD (Buddhist), vol. i. p. 189. The *Abhidharma* of the Pāli language does not seem to include any *lokapaññatti*.

[6] This expression does not appear to exist in Pāli, where we find *saṅkhāraloka*, 'material world' (including trees, etc.) (see Childers, *Dict. of the Pali Language*, London, 1875, p. 453), and *okāsaloka* (= *avakāśaloka*), 'room-world.' Spence Hardy (see Childers, p. 299) translates 'the world of space,' 'the far-extended vacuum' (see *Visuddhimagga*, vii. [*JPTS*, 1891–3, p. 99]).

[7] The *puggala paññatti*, which constitutes one of the sections of the Pāli *Abhidharma* (*JPTS*, 1883), is the enumeration and definition of the various categories of "individuals," 'noble individuals' (*āryapudgalas*), etc., from the moral standpoint, particularly from the point of view of their progress in the 'way' of *nirvāṇa* (*JPTS*, 1905, p. 133).

[1] *Rūpa* is usually translated 'form,' *arūpa*, 'formless,' and *ārūpya*, 'formlessness.' But, although 'matter' is far from being to us what *rūpa* is to the Buddhists, the present writer prefers the translation 'matter' (see C. A. F. Rhys Davids, *Buddhist Psychology*, London, 1900, p. xliii; *JPTS*, 1884, p. 27 f.; *Mahāvyutpatti*, § 101, etc.).

[2] Generally translated 'desire-sphere,' but 'desire' is inaccurate. There is desire, attachment (*rāga*), in the 'region of matter,' but only 'attachment to life' (*bhavarāga*); in the 'region of concupiscence' there is also 'attachment to sensual pleasures' (*kāmarāga*), 'concupiscence.'

[3] Cf. al-Birūni on 'the different classes of created beings and their names,' *India*, tr. Sachau (1910), ch. viii.

[4] Buddhaghoṣa refers to *Majjhima*, i. 73; see *Dīgha*, xxxiii.; *Avadānaśataka*, xli.; *Madhyamakavṛtti*, p. 269, 9 and note.

[5] Tanjur, *Mdo*, xxiv.

[6] See *Kathāvatthu*, *loc. cit.*; cf. *JPTS*, 1884, p. 158.

treatise of the *Abhidharma* (*Abhidharmaśāstra*) of the Sarvāstivādin school, entitled *Prajñaptiśāstra*, the first section of which is the *Lokaprajñapti* (Tanjur, *Mdo*, lxii. ; see Takakusu, *JPTS*, 1905, pp. 77, 117, 142).[1] On this section is based the *Abhidharmakośa* of Vasubandhu[2] (ch. iii. st. 1–44 *sattvaloka*, 45–102 *bhājanaloka*), known particularly for the commentary of Yaśomitra, *Abhidharmakośavyākhyā*.[3]

A Tibetan work of the end of the 18th cent., *Dpag-bsam-ljon-bzaṅ* (= *Kalpadruma*), ed. by Śarad Chandra, Calcutta, 1908, refers to the same *Abhidharmakośa*, which is quoted by Georgi, *Alphabetum Tibetanum* (Rome, 1762), p. 470, and used, along with other Sarvāstivādin sources and the Chinese literature of the two vehicles, by S. Beal, *Catena of Buddhist Scriptures* (London, 1871), p. 15 f., the most complete work that we have on the subject as yet.

The ancient sources (Pāli and Skr. 'Little Vehicle'), which are the most interesting of all, are somewhat scanty and scattered; they will be mentioned *ad locum*.

The Pāli commentaries have had little attention from this point of view. Probably most of the information they contain has passed into the works of Spence Hardy, *Manual of Budhism* (London, 1860), and *Legends and Theories of the Buddhists* (London, 1866).[4]

2. Foundation of the universe: the 'great elements.'—(*a*) An important cosmogonical feature can be traced in the earliest Buddhist texts, and is evidently pre-Buddhistic. When Ānanda inquires as to the causes of earthquakes, Buddha answers as follows: 'This great earth, Ānanda, is established on water, the water on wind, and the wind rests upon space. And at such a time, Ānanda, as the mighty winds blow, the waters are shaken by the mighty winds as they blow, and by the moving water the earth is shaken.'[5] Another *sūtra* relates the questions of the Brāhman Kāśyapa: 'On what rests the earth?'—'On the circle of water.' 'And the circle of water?'—'On the wind.' 'And the wind?'—'On the ether.' 'And the ether?'—'You go too far, O Brāhman. The ether does not rest on anything; it has no support'[6] (see below, § 9).

[1] By the kindness of Dr. Cordier, the present writer has been enabled to use extracts from this work, for the *dvīpas* in particular (see below, § 4). Prof. Takakusu seems to be mistaken when he says the section does not exist in Chinese (see p. 118 of his art.).

[2] On this work see the article in vol. i. p. 20; Burnouf, *Introduction à l'hist. du bouddhisme indien*, Paris, 1844, pp. 563–574 ff.; and the article of Takakusu. The present writer is indebted to Mr. F. W. Thomas for a copy of ch. iii. (Tibetan tr.).

[3] This source will be quoted as *A.K.V.*, and the folio in the MS of the 'Société asiatique' will be given; sometimes reference will be made to the MS of Burnouf (Burn.) in the 'Bibliothèque nationale.'

[4] The European works most frequently referred to in this art. are: Warren, *Buddhism in Translations* (Cambridge, Mass., 1896); Burnouf, *Lotus de la bonne loi* (Paris, 1852), and *Introduction à l'hist. du bouddhisme indien* (Paris, 1844); Rémusat, *Mélanges posthumes* (Paris, 1848); Georgi, *Alphabetum Tibetanum* (Rome, 1762); Köppen, *Religion des Buddha* (Berlin, 1857–59); Waddell, *Buddhism of Tibet* (London, 1895); C. A. F. Rhys Davids, *Buddhist Psychology* (London, 1900). See also literature at art. AGES OF THE WORLD (Buddhist).

[5] See *Dīgha*, ii. 107 (*SBE* xi. 45), and cf. *Divyāvadāna*, p. 204; also *Aṅguttara*, iv. 312; *Milinda*, p. 68 (*SBE* xxxv. 106); Beal, *Catena*, p. 47. The authorities of Rémusat, *Mélanges posthumes*, p. 79 f., sometimes add a circle of fire between water and wind, and a circle of diamond (where the relics of the Buddhas are enclosed) between wind and ether.

[6] Quoted in *A.K.V.*, and translated by Burnouf, *Introd.* p. 148 (see *SBE* xxxv. 106); cf. *Madhyamakavṛtti*, p. 166, n. 5; Śaṅkara, ad *Brahmasūtras*, II. ii. 4; Rāmānuja, ad II. iii. 1. For the Vedic origins of this notion, spoken of by Burnouf, cf. *Bṛhadāraṇyakop.* iii. 6; *Aitareyabrāhmaṇa*, xi. 6. 4: 'The sky rests on the air, the air on the earth, the earth on the waters, the waters on the reality (truth, *satya*), the reality on the *brahman*, the *brahman* on the *tapas* (creative fervour)'; *Chāndogya*, i. 9. 1: 'It is the space whence all these creatures proceed and into which they again descend' (see Oltramare, *Théosophie brahmanique*, Paris, 1906, i. 292; Deussen-Geden, *Phil. of the Upanishads*, Edin. 1906, p. 214 ff.).

(*b*) The Buddhists admit four 'great elements' (*mahābhūta*),[1] called great because they are the substance of all material things; they are earth, water, fire, and wind, or, as Mrs. Rhys Davids expresses it, earth-element, fluid-element, flame-element, and air-element (for their specific qualities reference may be made to *Dhammasaṅgaṇi*, § 962 [= C. A. F. Rhys Davids, *Bud. Psych.* p. 241], and to *Visuddhimagga*, xi. [tr. by Warren, *op. cit.* p. 157], where their functions in the human body are especially treated. Cf. also *Majjhima*, i. 185 and iii. 240 [quoted in *A.K.V.*, Burn. 42a], and *Sikṣāsamuchchaya*, p. 244, a re-cast of *Majjhima*, iii. 240). The 'great elements' constitute the *bhūtarūpa*, 'element-matter,' whence is derived 'elementary matter,' 'dependent matter' (*bhautikaṁ rūpam, upādāya rūpam*), *e.g.* the sense-organs, in so far as they are distinct from 'the eye of flesh,' etc. This kind of matter is subtle and refined, in contradistinction to the elements that are solid and gross (*sūkṣma, praṇīta; audārika, hīna*).

The common Indian belief that there is a fifth great element, viz. ether (or space, *ākāśa*),[2] is accepted by the Vaibhāsikas, who quote the *sūtra* mentioned above [2 (*a*)]; and it would not be difficult to find documentary or logical arguments in their favour. [*Ākāśa* is reckoned a *dhātu* (a term that often denotes 'element': *pṛthivīdhātu*, 'earthy-element,' etc.), and the *Abhidharma* ranks it in the category of *rūpa* (matter).] But for the Sautrāntikas and Mādhyamikas *ākāśa* is simply 'space' (not 'ether'), 'void' (*vyoman* = sky), not a thing (*artha*), but simply the absence of anything tangible, that which gives place to things, whence its name (*avakāśaṁ dadātīty ākāśam*).[3] This is only a name, as the past, *nirvāṇa*, and the person (*pudgala*) are only names (says a *sūtra*). But the Buddhists do not deny a 'far extended vacuum,' eternal, infinite, not made (*asaṁskṛta*), the great nonentity to which, according to the materialists (*Dīgha*, i. 35; *Saṁyutta*, iii. 207), the senses and intelligence return at death.

3. The small universe: general notions.—We shall see below (§ 9) that the Buddhists imagined great 'cosmol,' or 'chiliocosmoi,' but we shall first consider the 'small universe,' the creative unit of these great combinations, which extend to the farthest limits of space.

The starting-point of the 'small cosmology' is the old Indian and Brāhmanic geographical notion: in the centre of the world is a great mountain (Meru, Sumeru = Himālaya), where the gods dwell, and round which the sun moves. To the south lies India (*Jambudvīpa*); to the other sides, the other continents. The following is the Buddhist description, in its most systematic form (*Abhidharmakośa* and commentary). When the time has come for a new creation, after chaos, when everything is burnt up or 'volatilized' (see art. AGES OF THE WORLD [Buddhist]), the heaven of Brahmā appears first of all (and the gods who had been reborn in higher heavens come to be re-born here); then the heavens of the gods *Paranirmitavaśavartins, Nirmāṇaratis, Tuṣitas*, and *Yāmas* (see § 6); next, much lower, come (1) the wind-circle (*vāyumaṇḍala*), infinite in surface, resting on space, and 1,600,000 *yojanas* (or leagues) in thickness.[4] On this wind-circle, the cloud of the creation pours a sea of 1,120,000 leagues of golden water in a circle of 1,203,450 leagues' diameter. This sea, set in motion by the wind, gives (2) the water-circle (*āpmaṇḍala*), of 800,000 leagues' thickness, and (3) the golden earth (*kāñchanamayī bhūmi*), which rises to the top like cream on milk, 320,000 leagues in thickness. The cloud then pours on this golden earth gold, precious stones,

[1] C. A. F. Rhys Davids (*op. cit.* pp. 166, 197, 205) translates *mahābhūta* 'the things-that-have become, die grossen Gewordenen, τὰ γιγνόμενα, a far more scientific term than elements or στοιχεῖα'; but possibly the expression *mahābhūta* is pre-Buddhist, and is used in a sense that is not specifically Buddhist. What is not matter (*rūpa*)—thought, etc.—although 'becoming' *par excellence*, is not *bhūta*.

[2] There is a good summary on *ākāśa*, 'space' or 'ether,' in Vasudev Anant Sukhtankar, *Vedānta according to Rāmānuja* (Vienna, 1908), p. 52. See also Burnouf, *Lotus*, p. 515; *Ślokavārttika*, pp. 380, 770 (Chowkhambā Skr. Ser.), tr. pp. 196, 435 (*Bibl. Indica*, 1907); Śarad Chandra, *Tib. Dict.* (Calcutta, 1902), p. 425; *Sikṣāsamuchchaya*, pp. 249, 323; *Madhyamakavṛtti*, pp. 129, 271, 389, 413, 505, 528; *Aṅguttara*, i. 176; *Majjhima*, iii. 241; *Kathāvatthu*, vi. 6. 7; and C. A. F. Rhys Davids, *op. cit.* p. 193 (cf. *Visuddhimagga*, *JPTS*, 1891, p. 124, and *JPTS*, 1884, pp. 27, 29).

[3] '*Ākāśa* is great, since it gives place to the production (*bhava*?) of all *rūpa*, but it is not a *bhūta*' (Chandrakirti, *Pañchaskandhaprakaraṇa*, p. 275a).

[4] Certain sources give the names of the whirlwinds of this wind-circle; see Beal, *Catena*, p. 101; cf. below, p. 137. According to *Abhidharmakośa*, iii. 87, the *yojana* = 8 *krośa* (= the length the voice can carry) = 4000 'arcs' (*daṇḍa* ?) = 16,000 hands (*hasta*, i.e. 'cubits') = 16,000 × 24 fingers (*aṅguli*).

earth, water, iron, etc., which form (*a*) in the centre of the system, Mount Meru; (*b*) eight mountains, or concentric chains of mountains, seven of which (of gold) are quite near Meru and near each other, while the eighth (of iron) is almost at the very edge of the system; (*c*) oceans flowing between the concentric mountain-chains; and (*d*) islands, notably four great islands or continents situated in the largest of the oceans—the 'exterior' ocean, between the 7th and 8th mountains.[1]

The outside mountain is called Chakravāla, and this name is also applied to the entire 'small universe,' *lokadhātu*, or *chāturdvīpakalokadhātu*, 'four-continents-universe.'

Chakravāla (*ᵒvāṭa*, *ᵒviḍa*, the *Sakwala* of Sp. Hardy)='circle,' 'bracelet,' 'horizon' (see E. Senart, *Essai sur la légende du Buddha*, Paris, 1882, p. 6 ff.). In the northern sources there are a *chakravāla*-mountain and a great-*chakravāla*-mountain, called 'black mountains' or 'time-mountains' (*kālaparvata*; see Maheśvara, ad *Amarakośa*, 2, 2, 2; *Dharmasaṅgraha*, § 124; *Lalitavistara* [Halle, 1902], p. 152; *Lotus*, in *SBE* xxi. 233; *Śikṣāsamuchchaya*, p. 246). Perhaps the 'great *chakravāla*' envelops a group of small universes (see below, § 9). Between three universes, which form three tangent circles, there is a dark region, 'intramundane darkness' (*lokāntarikā*), a special hell—a cosmic abyss, which recalls the *anārambhaṇam tamas*, 'unsupported darkness,' of *Rigveda*, i. 182. 6, vii. 104. 3 (see *Dīpa*, com. on ii. 12; Sp. Hardy, *Legends*, p. 110; Burnouf, *Lotus*, p. 832; and Beal, *Catena*, p. 64).

The iron-mountain-range, Chakravāla, like the continents, rests on the golden earth. It is 312½ leagues high and 312½ broad, and 312½ leagues above the level of the exterior ocean which it surrounds. This ocean is 322,000 leagues in extent,[2] and is bounded on the inner side by the *Nemiṁdhara* range ('felly-bearing'), 625 leagues in height and breadth, and 312½ leagues in projection (above the ocean's level). Then there is an ocean of 1250 leagues;[3] then *Vinataka*, 'inclined,' 1250 in height and breadth, 625 in projection; an ocean of 2500 leagues; *Aśvakarṇa*, 'horse-ear,' 2500; an ocean of 5000; *Sudarśana*, 'beautiful,' 5000; an ocean of 10,000; *Khadīraka*, 'acacia (?),' 10,000; an ocean, 20,000; *Iṣādhara*, 'plough-pole-bearing,' 20,000; an ocean, 40,000; *Yugaṁdhara*, 'yoke-bearing,' 40,000; an ocean, 80,000; Mount Meru, 160,000 leagues high, 80,000 leagues above the level of the ocean, 80,000 leagues broad, and 320,000 leagues in perimeter. The distance, therefore, from the axis of Meru to the Chakravāla-mountain is 600,437·5 leagues; the diameter of the whole is 1,200,875 (*Abhidharmakośa*).

As regards the order of the mountains, we have followed *A.K.V.*, *Divyāvadāna* (p. 217), Beal, Eitel (*Handbook of Chinese Buddhism*, London, 1888); there are curious variations in *Mahāvyutpatti*, § 194; *Dharmasaṅgraha*, § 125; *Mahāvastu*, ii. 300; *Śikṣās.* p. 246; *Visuddhimagga*, and *Nemijātaka* (*Jātaka*, vi. 125). Cf. a curious discussion in Burnouf, *Lotus*, p. 844, on the commentators on some of these divergencies; cf. also Sp. Hardy, *Legends*, p. 82. The names of the mountains are sometimes doubtful, e.g. *Isidhara*, *Isādhara*, *Iṣidhāra*, *Iṣādhara*, *Iṣāṁdhara*. The dimensions of the mountains and oceans also differ. The Pāli documents have, as the starting-point of their calculations, a Meru of 168,000 leagues high, with base 84×84, and 80,000 above sea-level (ancient source, *Aṅguttara*, iv. 100); from this, if we adopt a scheme that appears as classical in all sources, we get 42,000 for the first ocean, and the same for the first circular chain of mountains, then 21,000. . . . This would give a greater total diameter than that which we got according to the *Abhidharmakośa*. Now, the Pāli *Jinālaṁkāra* has for the diameter of Chakravāla 1,119,440 (Sp. Hardy, *Legends*, p. 86, seems inaccurate), and the *Visuddhimagga* has 1,203,450, *i.e.* the number attributed by the *Kośa* to the water-circle, which, according to *A.K.V.*, exceeds Chakravāla by 2575.

The seven concentric mountain-ranges have the generic name of *Kulāchala*, 'principal, noble mountains.' They are composed of gold, being excrescences of the golden earth. They are 'like walls,' their height and thickness being equal. One may ask, however, whether they are perpendicular, or, like our mountains, inclined. The answer is that they are really a little broader at the base (*A.K.V.*). It is not clear whether they are circular or form squares. They are often represented as square. Hsüan-tsang believes the earth to be square, like Buddhist convents. It is quite certain that, in the Sanskrit *Abhidharma*, Meru is a parallelepiped.[1]

4. *Dvīpas*, 'islands' or 'continents,' (abodes of mankind).[2]—In the 'exterior' ocean, facing the eastern, southern, etc., sides of Mount Meru, and lit up in succession at distances of 6 hours after each other by the sun turning round Meru, are four islands (*dvīpa*, *dīpa*). They are formed of excellent earth, and rest on the golden earth, or circle of gold (*kāñchanachakra*), with a depth of 80,000 leagues of water (cf. *Divyāvadāna*, p. 197, 7). These islands are supposed to be on a level with the ocean, and it appears that, in this general definition, the small variations that constitute our earthly mountains are not taken into consideration.[3]

(1) In the east is the *Pūrvavideha*, 'Eastern Videha,'[4] in the form of a half or crescent moon, to which are attributed, nevertheless, four sides: three 2000 leagues (*yojana*) long, the fourth 350 leagues (perimeter, 6350 leagues). The men in this continent dwell in towns and villages, and live for 250 years; they are 8 cubits (*hasta*) in height, and their faces, like the continent itself, are half-moon-shaped.[5]

(2) In the south is *Jambudvīpa*,[6] 'Rose-apple-tree's continent,'[7] our continent, the continent where the Buddhas are born. It is a chariot in form, with four sides: three 2000 leagues long, the fourth 3·5 leagues (perimeter, 6003·5). The men there live 100 years at most;[8] their height is from 3·50 to 4 cubits; they resemble the continent in shape. (3) In the west is the *Aparagodāna* (or *ᵒgodānīya* or *ᵒgoyāna*), 'Western pasturage.'[9] It

[1] See an excellent map of the Chakravāla (100,000 leagues to an inch) in Gogerly, *Ceylon Buddhism*, Colombo, 1908.

[2] There are numerous legends on this 'great ocean': see Sp. Hardy, *Legends*, p. 121. On the *Mahāsamudra* we may refer to *Saṁyutta*, v. 441.

[3] The generic name of the seven 'interior' oceans is *sidanta* (?), Tibetan *rol-mtsho*, 'lakes with gentle waves.' For their particular names, see *Dharmasaṅgraha*, § 126; Childers, *s.v.* 'Sāgaro'; Sp. Hardy, *Legends*, p. 84; Rémusat, *op. cit.* p. 80.

[1] The present writer does not know the source of Sp. Hardy's curious description (*Manual of Buddhism*, p. 10): Meru is round; at the summit and at the base it is 10,000 leagues in diameter, halfway up (at the sea-level) 50,000, and halfway up the projecting part 30,000 leagues. On Brāhmanical authorities concerning Meru, see Böhtlingk-Roth, *s.v.* 'Meru'; Faussöll, *Indian Mythology*, 1903; E. W. Hopkins, *JAOS*, 1910, p. 366; Al-Bīrūnī, *India*, i. 242, 327.

[2] The Pāli canonical sources seem very scanty; thus the enumeration of the *dvīpas* is missing in the chapter of the 'Fours' in the *Aṅguttara*, while the *Saṅgīti* speaks of four *dīpas*, the possession of which is not so precious as that of the four verities. See Spence Hardy, *Manual*, pp. 4, 14, *Legends*, p. 85; Warren, pp. 40, 64; *Mahāvyutpatti*, § 154; *Dharmasaṅgraha*, § 120; *Divyāvadāna*, p. 214 ff.; *Lalitavistara*, p. 149; Georgi, *Alph. Tibet.* p. 473; Köppen, *Buddhism*, i. 233; Waddell, *Lamaism*, p. 397; Rémusat, *Fo-koue-ki*, Paris, 1836, p. 81, *Mélanges posth.* p. 71; Beal, *Catena*, pp. 21, 35. The Brāhmans have various nomenclatures for the continents, and notably one of four: *Bhadrāśva* ('good horses'), *Jambu*, *Ketumāla*, *Uttarakuru* (see E. W. Hopkins, *JAOS*, 1910, p. 368, and art. Cosmogony and Cosmology [Indian]).

[3] Śarad Chandra (*Tibetan Dict.* p. 1173 ff.) gives the names of the mountains of the several continents—six, four, five, and two respectively—with the names of the wild beasts inhabiting them.

[4] *Videha*=the modern Tirhut; Tibetan *lus-ʾphags*, 'noble body' (play on the Skr. word *deha*, 'body'), 'because the human height there is double what it is in our continent,' *i.e.* in the *Jambudvīpa*.

[5] *Bhūmivaśāt*, 'because of the influence of the place, as well as the inhabitants of the Himālaya or the Vindhya mountains, have particular characteristics' (*A.K.V.* 256a; cf. Sp. Hardy, *Legends*, p. 85). Notice the good foundation for this ethnographical observation. The inhabitants of these parts of India are really of Tibetan race or 'autochthonous.'

[6] Also *Jambusaṇḍ(ḥ)a*, 'thicket of *jambu*-trees' (*Aṅguttara*, iv. 90; *Suttanipāta*, 552; *A.K.V.* 252a).

[7] On this name, see art. Cosmogony and Cosmology (Indian), *Aṅguttara*, i. 104 (1883). According to Śarad Chandra (*Tib. Dict.* p. 1043), this continent is also named 'from the *jam-jam* sound made by the falling from heaven of the leaves of the wishing-tree into the river Ganges.' We are not concerned with the Buddhist geography of this continent (Sp. Hardy, *Manual*, p. 15, etc.).

[8] The *Vibhaṅga* (*PTS*, 1904, p. 422) knows only one length of human life (which is the same as that of *Jambu*): *vassasataṁ alpaṁ vā bhiyyo vā*. Life differs in one and the same continent according to the period of the age of the world (see Ages of the World [Buddhist], vol. i. p. 189).

[9] This is, at least, the meaning of the Tibetan *Nub ba-las-rgyas* but *godā* is a geographical name.

is round, *i.e.* it has three sides of 2500 leagues (perim. 7500);[1] length of human life, 500 years; height, 16 cubits. (4) In the north, the *Uttara-kuru*, 'Northern *Kuru*-land'[2] (*Auttarakakaurava*), is an oblong, 4 × 2000 leagues. There are neither villages nor towns; length of life, 2000 years; height, 32 cubits.

The above dimensions are those of the *Lokaprajñapti* and the *Abhidharmakośa* (ii. 53 *f.*). The *Lalitavistara* has them arranged in this order—9000, 7000, 8000, and 10,000 leagues; Sp. Hardy has 7000, 10,000 (in length and breadth), 7000, and 8000.

In the diagrams which the Buddhist cult (Great Vehicle and Tantrism) uses for the 'offering of the universe,'[3] the continents are represented: (1) half-moon (*ardhachandra*) and white, (2) triangular (*tryaśra*) and golden, (3) circular and red, and (4) square and dark blue.

According to the 'northern' sources, there are alongside of each continent two small continents (*upadvipas*), of the same shape but half the size, in the following order, starting from N.E.E.: Deha and Videha, Chāmara (Chowrie [?]) and Apara-chāmara (Western Chowrie), Śāṭas-island and Uttaramantriṇa-island, Kurus-island and Kauravas-island. Their inhabitants are monstrous creatures with three eyes, legs, and ears (*Kalpa-druma*). According to *Jātaka*, i. 63 (Warren, p. 64), there is an archipelago of 500 islands round each continent.

The *Mahāvyutpatti* names the last four 'little continents' according to the names of their inhabitants (cf. *uttarāḥ kuravāḥ* [*Mahābhārata*, vi. 208])—*Śāṭa*, an inhabitant of Śaṭa, an ancient geographical name, although the readings *Śāṭā* and *Śāṭhā* have a feminine appearance; Tibetan *gyo-ldan*, 'deceitful' (= *śaṭha*); *Uttaramantriṇa* = *lam-mchog-ḥgro*, 'best-way-going.' For *kurus* and *kauravas* (*sgra-mi-sñan* and *sgra-mi-sñan-zla*, according to Desgodins), see Waddell, p. 399.

5. **Unhappy existences** (*apāya*).—(i.) THE DAMNED.[4]—(*a*) *Hot hells.*—Twenty thousand leagues under *Jambudvīpa* (the southern part, or part under Bodh Gāya) is the *Avīchi* hell ('no release' [?]), forming a cube of 20,000 leagues. Above it are seven other hot hells, called (in descending order): (1) *Sañjīva*, 'reviving,' because winds re-animate the dying damned; (2) *Kālasūtra*, 'black string,' which cuts the damned into pieces (cf. *JPTS*, 1884, p. 76); (3) *Saṅghāta*, 'dashing together,' between mountains, etc.; (4) *Raurava*, 'weeping'; (5) *Mahāraurava*, 'great weeping'; (6) *Tāpana*, 'heating'; and (7) *Pratā-pana*, 'greatly heating' (*A.K.V.* ad iii. 58).

Some authorities (cf. *A.K.V.* and Beal, *Catena*, p. 57) think that the hells are pyramidal in shape, each of them being smaller towards the upper part, 'like a heap of grain.' We are told also that each hell is 4000 leagues deep. According to the *Kalpadruma*, there is, first of all, a layer of 500 leagues of white clay, then 500 leagues of black clay, then the *Sañjīva* and the other six hells occupying 10,000 leagues, the last of them, *Pratāpana*, reaching 19,000 leagues underneath the surface of the *Jambudvīpa*; then the *Avichi* is 20,000 leagues.[5]

No name seems to exist in the earliest Pāli texts for the burning 'great hell' of *Majjhima*, i. 337, iii. 167, 183 (cf. *Aṅguttara*, i. 138), which is also the hell in which schismatics suffer for an 'age of the world' (*kalpa*) (see *Chullavagga*, vii. 5, 4; *Aṅgut-tara*, v. 76, etc.). This hell is clearly the *Avichi* of the later literature.[6] See, *e.g.*, the description in *Majjhima* of the *ma-hāniraya*, which has three names: (1) *chhaphassāyatanika* (cf. *Saṁyutta*, iv. 126), 'six organs (suffering)'; (2) *saṅkusamāhata*, 'reunion of javelins,' because every thousand years (or every hundred years) two javelins pierce the heart of the damned, and meet inside it; and (3) *pachchattavedaniya*, 'to be known only by personal experience.' After innumerable centuries the guilty one passes into the *utsada*, a zone which surrounds the great hell, and where there is access through four gates to the four cardinal points, and there suffers the pain called *vuṭṭhānima*.

On each of the four sides of each hell there are four *utsadas* (*ussada*; *osupat* in Sp. Hardy, *Manual*, p. 27), excrescences (cf. *narakakumbha*, 'hell-jar,' 'hell-prominence'), ante-chambers, or rather 'post-chambers,' of hell, in which the damned in succession are tortured on leaving hell (in which they are sometimes finally rejected). They are: (1) *kukūla* (*kukkūla*), 'fiery pit,' 'chaff-fire'; (2) *kuṇapa*, 'corpse-quagmire' (cf. *gūthaniraya*); (3) *kṣuramārga*, 'razor-road,' etc. (etc. = *asipattravana*, 'sword-leaved forest,' and *śālmalīvana*, 'seemul-forest' with cruel birds); (4) the *nadī*, 'river,' by its name Vaitaraṇī, the Indian Styx, which is conjectured to be as early as the Brāhmaṇas (cf. *Khārodakā nadī* [*Majjhima*], *A.K.V.* iii. 59).[1]

Hell contains sixteen *utsadas* (*brgyad-po kun-la lhag bcu-drug*, 'to each of the eight, sixteen *utsadas*' [*A.K.V.*]). A primitive idea, which is more satisfactory, is to regard the four *utsadas* as so many zones surrounding the igneous cage in the centre.

The damned of the *Sañjīva* live there for 500 years of 12 months of 30 days, but each day is equal to the length of the life of gods in the heaven of the Four Kings (see below, § 6), and so on, life in the *Tāpana* being calculated as a function of the life of the *paranirmitavaśavartin* gods (see *ib.*). In the *Pratāpana* life lasts for half of an *antarakalpa* (see art. AGES OF THE WORLD [Buddhist], vol. i. p. 188), in the *Avīchi* one *antarakalpa* (*A.K.V.*). The interpretation of the *Kośa* is, therefore, similar to Buddhaghoṣa's (*Kathāvatthu*, xiii. 1), which fixes the existence of the damned, called *kalpaṭṭha*, 'lasting a *kalpa*,' at $\frac{1}{20}$ of a (great) *kalpa*, while the *Rājagirikas* understand a great *kalpa* here (see the texts concerning schismatics quoted above).[2]

(*b*) *Cold hells.*—According to the northern sources, eight cold hells are distinguished: (1) *Arbuda*, (2) *Nirarbuda*, (3) *Aṭaṭa*, (4) *Hahava*, (5) *Huhuva*, (6) *Utpala*, (7) *Padma*, (8) *Mahā-padma*. (1), (2), (6), (7), and (8) are named from the shape of their inhabitants; in (1) and (2) the damned are like *arbudas*, 'a round mass' ('bubble,' 'tumour,' 'first-month fetus'); in (6), (7), and (8) they resemble lotuses. The names of (3), (4), and (5) are onomatopoetic: the teeth of the damned, knocking against each other with the cold, produce the sound *aṭaṭa*, etc. (*A.K.V.*).[3]

These hells, which are 2000 leagues deep, are arranged in stages, like the hot hells, and near them (*Kalpadruma*); or—a view which seems preferable—they are placed in the 'intra-mundane darkness' (*lokāntarika nirayā*), among the Chakravālas (Beal, *Catena*, p. 64, according to *Abhidharmaśāstra*; *Dialogues*, ii. 9). Sp. Hardy (*Manual*, p. 59) places the ghosts (*pretas*) in this darkness.

The ancient Pāli texts, *Saṁyutta*, i. 152, *Aṅguttara*, v. 172, and *Suttanipāta*, p. 123 (*SBE* x. 119), give the same nomenclature with a few variants and additions (Kern, *Manual of Ind. Buddhism*, Strassburg, 1896, p. 58); but the names, originally at least, did not refer to distinct hells. They denoted the periods, increasing by the multiple 20, during which the damned person lives in hell: 'If there were a load of sesamum seed containing sixty bushels (20 *khārīs*), and a man after the lapse of

[1] π=3 in the *Abhidharmakośa*. Sp. Hardy has 3·14285 (*Manual*, p. 10).

[2] Different from the Kurus (Central India) and the Southern Kurus. It is Ptolemy's *Ottorokorra* (see art. BLEST, ABODE OF THE [Buddhist], vol. ii. p. 687, and [Hindu] *ib.* p. 698 *f.*, and also *Aṅguttara*, iv. 396, on the moral and spiritual characters of the *Uttarakurukas*). The Tibetan translation of this word, like several others, is onomatopoetic, *sgra-mi-sñan*, 'disagreeable sound' (*ku-rava*; *ku-√ru*, *ku*, a pejorative, *ru*, 'to make any noise'), 'for during the seven days before death, one hears the disagreeable sound of the death.'

[3] See 'Ādikarmapradīpa,' in Poussin, *Bouddhisme*; *Études et Matériaux*, Brussels and London, 1898, p. 224; Waddell, *Lamaism*, p. 398 (with plate); Georgi, *Alph. Tibetanum*, p. 472.

[4] See art. HELL (Buddhist). The chief sources for the Buddhist hells are *A.K.V.* fol. 256; *Kalpadruma*, p. 5; *Mahāvastu*, i. 4; Nāgārjuna's 'Epistle,' in *JPTS*, 1886; Chandragomin's 'Epistle,' in *Zapiski*, iv. 29 ff.; *JPTS*, 1884, p. 154; Beal, *Catena*, p. 57; Waddell, *Lamaism*, p. 92; and on the pains, *Aṅguttara*, i. 138 (Warren, p. 257); *Divyāvadāna*, p. 375; *Majjhima*, no. 129; *Kathāvatthu*, xx. 3. A comparison with the Brāhmanical and Hindu sources is instructive and necessary (see especially Feer, '*L'Enfer indien*,' in *JA*, 1892, ii. [partly translated in the *JBTS* of India, 1894, pt. iv. app. ii.]).

[5] Cf. Sp. Hardy, *Manual*, p. 27. Waddell makes the hells begin 11,900 leagues below the surface.

[6] *Avichi*, 'no refuge,' 'no release.' The Chinese sources mention various regions in the *Avichi*; cf. the *Saddharmasmṛtyupasthāna* (Nanjio, *Catalogue*, 1883, pp. 679, 804) quoted in *Śikṣāsamuchchaya*, p. 69 *f.*, the 'terrible-birds' (8000 leagues), 'the infernal precipice,' 'the hole with wheels,' etc.

[1] On the *utsadas*, see Morris, in *JPTS*, 1887, p. 144; *Mahāvyut-patti*, § 215; Burnouf, *Lotus*, p. 568; E. Senart, *Mahāvastu*, i. 6, 372 note, iii. 369, with which cf. *Majjhima*, iii. 185 (Neumann, iii. 354, translates *kukkūlaniraya* wrongly as 'dogs' hell'), *JPTS*, 1884, p. 155, 1887, p. 47; Śarad Chandra, *Tib. Dict.* p. 933; Waddell, p. 96; *Suttanipāta*, v. 670.

[2] Buddhaghoṣa gives a different interpretation (ad *Kathā-vatthu*, xi. 5).

[3] *Arbuda* = Tib. *chu-bur*, 'water-bubble'; *nirarbuda* = *chu-bur-rdul-ba-can*, 'dust-bubbles' (but elsewhere *rdol-ba-can* [?]); then *so-tham-pa*, 'chattering of teeth,' and *a-chu . . . zer-ba*, 'where one says "Akiu"'; *ut-pa-la lta-bur gas-pa*, 'where one is split [by the cold] like an *utpala*,' *i.e.* the damned are split into 8, 20, or 60 pieces, according to the number of petals of the lotus after which the hell is called (Georgi, *Alph. Tibet.* p. 266; cf. Beal, *Catena*, p. 63, and Waddell, p. 95).

every hundred years were to take from it one sesamum seed, that load would sooner dwindle away than one Abbuda hell; and even as are twenty Abbuda hells, so is one Nirabbuda hell.' The *Abhidharmakośa* (iii. 84) has the same method of counting for the *arbuda*, etc. *Arbuda*, etc., are what are called 'high numerals' (*Mahāvyutpatti*, § 246 [101–102], § 250 [9–14]; see AGES OF THE WORLD [Buddhist], vol. i. p. 188[b]).

(*a*) There are some hells about which we know nothing but the names, *e.g.* the *Saṁsavaka* (*Vimānavatthu*, p. 50), and the traditions of the Great Vehicle are rich in multiple inventions. We may mention the hells that the Tibetans call 'ephemeral' (*ñi-tshe-ba*), which are the 'frontier hells' of Beal (*Catena*, p. 65), Skr. *prādeśika* or *pratyekanarakas* (?) (see *Mahāvastu*, i. 458, and Burnouf, *Introduction*, p. 320). They are reserved for small sins or for special categories of sinners (see art. BODHISATTVA, vol. ii. p. 744[b]). They are found on the borders of the hells, in the ocean, in the world of men, and in the deserts of *Jambudvīpa*. There are 84,000 of them.

(ii.) ANIMALS.—The animals form the class immediately above the damned. They are divided into many categories (e.g. *Majjhima*, no. 129), and their special abode is the 'exterior ocean'; but, as everybody knows, they are met with in the world of men, and (in spite of what certain heretics say) not in the world of the gods (*Kathāvatthu*, xx. 4).

(iii.) PRETAS, 'THE DEAD' or 'GHOSTS.'—The popular beliefs concerning the dead have not yet been systematized, as may be seen from the *Petavatthu* and the literature of every epoch (see artt. DEATH, etc. [Buddhist], STATE OF THE DEAD [Buddhist], etc.). Speaking generally, we may say that the *pretas* dwell almost everywhere throughout the world of men, but especially in the kingdom of *Yama*, which is divided into 36 provinces, situated 500 leagues below *Jambudvīpa*. There they live 500 years, a day being equal to a human month.[1]

(iv.) ASURAS, 'NON-GODS.'[2]—Their abode is especially in the caverns of Mount Meru, below the level of the sea, where there are four towns of 11,000 leagues, at depths of 20,000, 40,000, 60,000, and 80,000 leagues, namely, 'Shining,' 'Star-tassel,' 'Deep,' and 'Golden town,' with Rāhu (the spirit of the eclipse), Kaṇṭhamālādhara, Puṣpamālādhara, and Vemachitra as kings.[3] But they often leave their abysses to conquer Meru, and fight with the 'Thirty-three gods' and their vanguard (dragons and *yakṣas*); hence the mistake made by some authors in saying that they dwell on the fourth stage of Meru.

There is an infinite number of *yakṣas* (*yakkha*, 'a being to be worshipped,' 'a powerful spirit' [Kern, *Manual*, p. 59]), terrestrial (*bhauma*, living on the surface of the earth and under the earth), atmospheric, etc.[4] Three categories occupy a special place in our sources (*Abhidharmakośa*, iii. 56) as inhabitants of Mount Meru.

On Meru there are four terraces (*pariṣaṇḍa*, *ban-rim*) of 16,000, 8000, 4000, and 2000 leagues, separated from each other by 10,000 leagues. The fourth is reserved for the Four Kings, who are classed as gods (*devas*) (see below, § 6); the other three are inhabited by (1) the *yakṣas karoṭapāṇis*, 'bowl in hand,' (2) the *yakṣas mālādharas*, 'bearing garlands,' and (3) the *yakṣas sadāmadas* (*sadāmattas* [*Dīgha*, ii. 260]), 'always drunk.'[5]

6. Heavens of the concupiscence-world (*kāmadhātu*).—(*a*) On the fourth terrace of Meru is the retinue of the Four Great Kings (*cāturmahārājakāyikas*, *catummahārājikas*), 80,000 in all (?),[6] and (higher up, if we are to believe *Dīgha*, i. 216) the Four Great Kings, rulers of the cardinal points. These are the first beings who regularly receive the name of 'gods,' and are classed as such. The length of their life is 500 years, a day being equal to 50 human years, and their height is ¼ *krośa* (= ⅛ *yojana*, 'league'). Perhaps the numerous servants and courtiers of the Great Kings, the *gandharvas*, 'celestial musicians,' etc., although they are not *devas*, ought to be regarded as belonging to this category.

Half-way up Meru are the chariots of the sun (51 leagues), of the moon (a league further down), and of the stars. These deities do not form a special class.[7]

(*b*) On the summit of Meru are the gods 'who have the Thirty-three at their head' (*trāyastriṁśas*; *tāvatiṁsas*), to the number of 100,000 (?), and, above them (according to *Dīgha*), is their king Śakra, *devānam inda*, 'the Indra of the gods.' Their town, 'Lovely view,' is 2500 miles square, and contains the Palace of Victory (*vaijayanta* [*Majjhima*, i. 253]), etc. They live for 1000 years, one day being equal to 100 human years (*Dīgha*, ii. 327),[8] and their height is ½ *krośa*.

Then there are palaces which might be called aerial (*vimāna*):[9]

(*c*) 160,000 leagues above *Jambudvīpa*, *i.e.* 80,000 above the Thirty-three, and 80,000 leagues broad, the palace of the *yāmas* gods,[10] whose king Suyāma, according to *Dīgha*, dwells higher up. Length of life, 2000 years, one day = 200 human years; height, ¾ *krośa*.

(*d*) The abode of the *tuṣitas*, 'satisfied' or 'blissful'; the residence of a future Buddha before his last existence; king, Samtuṣita; length of life, 4000 years; height, 1 *krośa*.

(*e*) The abode of the *nirmāṇaratis*, 'who have their pleasure in creation,' 'happy creators'; king, Sunirmita, 'well-built.' According to the *A.K.V.*, the meaning of this name is 'enjoying self-created pleasures,' in contrast with the inferior gods, who enjoy objects which are presented to them on account of their deserts (cf. *Itivuttaka*, p. 94). Length of life, 8000 years; height, 1¼ *krośa*.

(*f*) 1,280,000 leagues above *Jambudvīpa*, 640,000 leagues broad, the abode of the 60,000 *paranirmitavaśavartins* (*paranirmita*, and sometimes wrongly [?] *pari*[o]), having Vaśavartin, 'the sovereign,' as king (*Dīgha*, i. 219). The name of these gods means 'rulers over the things created by

[1] A study of the *pretas* 'with magical power,' and of the king of the *pretas* (*pettirāja*), as well as that of the 'guardians of the hells' (who may bear the name of god [*Kathāvatthu*, xx. 3]), etc., belongs to the doctrine of existing beings rather than to cosmology.

[2] On the *asuras*, see above, p. 130; and art. DAITYA.

[3] According to *Kalpadruma*, p. 5; Beal (*Catena*, p. 51) is of a different opinion. See Burnouf, *Introduction*, p. 601 (incorrect); Koppen, i. 246; Nāgārjuna's 'Epistle,' in *JPTS*, 1886, p. 27; *Mahāvyutpatti*, § 171; *Divyāvadāna*, pp. 126, 148, 222; *Mahāvastu*, i. 30, ii. 344, iii. 138, 254. The *Mahāvastu* speaks of five armies of *asuras*, but mentions only three kings—Vemachitrin, Rāhu, and Muchilinda. The *Kathāvatthu* (viii. 1) associates the companions of Vepachitti with the gods, and the *kālakañjakas* with the *pretas*. On the war of the *asuras* with the *suras*, see *Aṅguttara*, iv. 433; *JPTS*, 1903, p. 143, etc.

[4] We may mention the twenty-eight generals of the *yakṣas* referred to in *Lalitavistara*, p. 202.

[5] See *Mahāvyutpatti*, § 163, 36–38; Burnouf, *Introduction*, p. 599 (quoting Georgi, p. 480); *Mahāvastu*, i. 30; *Divyāvadāna*, p. 218 (which mentions *nāgas*, 'dragons,' resting on the water [*udakaniśrita*] at the foot of Meru); Morris, *JPTS*, 1891, pp. 21–25. These *genii*, *dii minores*, are sometimes called *devas*, especially the *karoṭapāṇis* (*Divyāvadāna* and *Mahāvyutpatti*); so also the *bhaumās devās* in *Lalitavistara*, etc. *Deva-putra*, 'god-son,' 'divine,' is sometimes an epithet of greater gods.

[6] According to *Lalitavistara*, p. 46, 19.

[7] See *A.K.V.* iii. 60; Beal, *Catena*, p. 71; Spence Hardy, *Manual*, p. 26.

[8] Here, as elsewhere, years consisting of 12 months of 30 days are meant. In *Divyāvadāna*, p. 225, the day of Śakra and of the Thirty-three is equal to only one human year; hence a total of 360,000 human years.

[9] The Tibetan translation means 'non-measurable (*vi-māna*) mansions.' These palaces may be spiritual, *i.e.* they are composed of subtle matter: 'splendid, paguda-shaped palaces, movable from place to place by an effort of will' (Childers, *Dict.* p. 574); see *Vimānavatthu*, and Böhtlingk-Roth, *s.v.* 'Vimāna.'

[10] The meaning of *yāmas* is not clear. The Tibetan is *khab-bral-ba*, 'free from battle,' because they have not to wage war with the *asuras*, as the Thirty-three have to do. The *yāmas*, as we have seen (§ 3), are created before the *chakravāla*. The kings are named in *Lalitavistara*, p. 44.

others,' 'disposers of others' creations' (C. A. F. Rhys Davids' tr.), *i.e.* they themselves create, or they cause others to create, the objects of enjoyment which they desire. Length of life, 160,000 years, one day = 16,000 human years; height, 1½ *krośa*.

Some sources regard Māra, the Satan of early Buddhism, as the Supreme god of the world of concupiscence, and assign a special place to him, Mārabhavana, with 68,000 good assistants. Length of life, 32,000 years (see *Lalitavistara*, index, and Beal, *Catena*, p. 83, who adds, from the Chinese *Dīrghāgama*, the weight of the clothing of each class; it varies from 1 oz. to 1⅛ oz.).

The gods of 'concupiscence' (*kāmabhogin*) enjoy sensuous pleasures: but there is a progressive refinement in their food (see C. A. F. Rhys Davids, *Buddh. Psych.* p. 197). In the higher spheres the sexual act is accomplished by binding (*dvaṅga*, among the *yāmas*), by joining hands (*pāṇyāpti*, among the *tuṣitas*), by smiling (*hasita*, among the *nirmāṇaratis*), or by a simple look (*ālpita*, among the *paranirmitavaśavartins*) (see *A.K.V.* iii. 62, and Georgi, p. 483). On the birth of the gods, who do not come out of the womb, although they are not 'apparitional beings' (see § 7), see Beal, *Catena*, pp. 74, 78, and cf. Waddell, *Lamaism*, p. 86.

The Four Kings and the Thirty-three are well-known in the Brāhmanical sources, and are much older than Buddhism. There are several Brāhmanical refereoces to the *yāmas* (*suyāmas*), *tuṣitas*, *nirmāṇaratas* (*Mahābhārata*, xiii. 18, 74; see Burnouf, *Introd.* p. 604 *f.*), but they are probably borrowed from Buddhism (*tuṣitā brahmakāyās*).

The sextuple division of the gods of concupiscence appears in the earliest Buddhist books, e.g. *Majjhima*, ii. 194, iii. 100, *Digha*, i. 216; and the length of the lives is fixed just as in the scholastic era (*Vibhaṅga*, p. 422). But lists of gods, like *Digha*, ii. 256 (six series of ten divine groups, *kāyas*), seem to be older than this sextuple division (see reference to *yāmas*, etc., on p. 261).

7. Heavens of the material world (*rūpadhātu*) or Brahmā-world.—Probably the most ancient documents on divine beings superior to the *devas* properly so-called, to the gods of desire, are *Digha*, i. 17, 34, 195.[1] The following is a summary. According to the 'names, expressions, turns of speech, designations in common use in the world' (the indifference of Buddhists to what is not the way of salvation is clearly shown in these precautions of the ancient editor, who seems to have been conscious that the Buddha regards such things as accessory and un-sure), there are three classes of gods (or kinds of existence, *attabhāva*), which must not be called by each other's names, viz. (1) 'divine, having form (or material, *rūpī*), belonging to the sensuous (or sexual) plan (*kāmāvachara*), feeding on solid food,' in a word, 'solid' (*olārika*), 'formed of the four great elements'; (2) 'divine, having form, made of mind, with all major and minor links complete, not deficient in any organs,' in a word, 'made of mind' (*manomaya*);[2] (3) immaterial (formless), made up of consciousness (or thought, *saññā*) only.

To the first class belong the six categories of gods 'who enjoy pleasures' (*kāmabhuj*), the Four Kings, . . . the *paranirmitavaśavartins*.

We must now consider the second class, *rūpāvachara*, or gods of the realm of matter, of whom Brahmā is the ancient type and the representative *par excellence* to such a degree that the 'world of matter' is called the 'world of Brahmā.' The gods here are born without parents, by apparitional birth (*aupapātika*); they are not immaterial, but their matter is subtle (*sūkṣma*, *pranīta*), for they feed on joy (*prītibhakṣa*), and are luminous—the same as the first men (see art. AGES OF THE WORLD [Buddhist], vol. i. p. 190[a]). We may compare the *ribhus* of *Mahābhārata*, iii. 15461: 'They have divine bodies, and not material forms' (*vigrahamūrti*).[3] The idea of the progressive refinement of the body of the gods is old (*Śatapathabrāhmaṇa*, x. i. 5. 4; *Taittirīya Upaniṣad*, ii. 1–5 [Rhys Davids, *Dialogues*, i. 48]); and with the Brāhmans the worlds of Prajāpati (cf. *Majjhima*, i. 2) and Brahmā were placed above the heavens of the *karma*-gods (gods owing to their merit) and the birth-gods (*Taitt. Up.* ii. 8; Windisch, *Buddha's Geburt*, Leipzig, 1908, p. 15). Being by his nature invisible to the inferior gods, Brahmā creates a 'solid' body for himself when it pleases him to show himself to the Thirty-three (*Digha*, ii. 210). In this respect there is some resemblance between the *Kenopaniṣad* and *Digha*, i. 220. The connexion is still more marked with *Majjhima*, i. 330, where Brahmā (the god Brahmā then called *Baka*, 'Heron') tries in vain to disappear from the eyes of Buddha; he was more successful with Varuṇa, the Vedic god.

[1] See Rhys Davids, *Dialogues*, i. 46, 259, 260 (line 2 to be read: 'The second has form.' . . .); cf. *Sumaṅgalavilāsini*, *ad loc.*

[2] On *manomaya*, see art. BODHISATTVA, vol. ii. p. 742[b], note §; also *A.K.V.* 265.

[3] See Fausböll, *Indian Mythology*, p. 144.

The text which we have quoted, 'divine . . . with all major and minor limbs complete' (cf. *Majjhima*, ii. 17, l. 26), is clear enough: the *rūpa*-gods possess all the organs of the body. This opinion, however, came to be regarded as almost 'heretical' by Pāli orthodoxy as well as by Northern orthodoxy (see *Vibhaṅga*, p. 418: *Kathāvatthu*, viii. 7, with the commentary, and *A.K.V.* (Burn. 44]). Smell (*gandha*) and taste (*rasa*) are solid food (*kavaḍiṅkārāhāra*), and consequently cannot be perceived by the gods of *rūpadhātu*; therefore noses and tongues are useless to them. If these gods possess these organs, it is replied that it is merely for reasone of beauty. The sexual organ is of no use to them, and it would detract from their beauty if it were not hidden as it was in the body of Śākyamuni (see *Suttanipāta*, p. 99 = *SBE* x. 100, and elsewhere). This discussion, which we might consider rather frivolous, is characteristic of a part of scholastic Buddhism; there are some points in it which we shall never see clearly, and about which the Buddhists themselves are confused.

The Buddhists, making the most of the theory of the four *dhyānas* (*jhānas*, 'trances'), have established very coherent systems on the hierarchy of the so-called 'material' celestial spheres. The complete table is as follows:

(i.) FIRST-TRANCE HEAVENS.—(1) *Brahmapārṣadyas* (or °*kāyikas*),[1] retinue of Brahmā; length of life, 20 small ages of the world (20 *antarakalpas* = ½ great *kalpa*); height, ½ league. The heaven is situated 2,580,000 leagues above *Jambudvīpa*,[2] and is 1,290,000 leagues broad. These numbers have to be doubled for the following heavens. (2) *Brahmapurohitas*, 'Brahmā-chaplains'; length of life, ½ great *kalpa*; height, 1 league. (3) *Mahābrahmāṇas*, 'Great Brahmās'; length of life, ¾ *kalpa*; height, 1½ league.[3]

The common opinion is that there are as many stages as there are classes of gods. But some say that 'Brahmā has no distinct abode; only in the middle of the *purohita*-heaveo there is a high storeyed tower, and this is the abode of Brahmā.' Every trance-heaven has a king, ministers, and people (Beal, *Catena*, p. 95; cf. *Aṅguttara*, ii. 126, where Brahmakāyika [life, 1 *kalpa*] is the general name of the gods of the first trance). Contrast with this *Digha*, i. 216: the retinne of the great Brahmā does not know 'where, why, whence Brahmā is.' This text is not familiar with *purohitas*. On the other hand, according to *A.K.V.*, the Kashmirians do not distinguish the *purohitas* from the great Brahmās. It will be noted that this plural, 'great Brahmās,' is strange, because there cannot be, and in former Buddhist mythology there was not, more than one Brahmā. But the early texts, when mentioning several 'prænomens' of different Brahmās, probably believed to belong to different cosmoi or to different ages of the world, have opened the way for this new idea. On different classes of Brahmās, see below, § 9.

(ii.) SECOND-TRANCE HEAVENS.—(1) *Parittābhas* ('Limited splendour'); length of life, 2 *kalpas*; height, 2 leagues. These figures are doubled for the next five classes. (2) *Apramāṇābhas*, 'Im-

[1] Mentioned in *Saṁyutta*, i. 145, 155. The *Lalitavistara* (p. 150) draws a distinction between °*kāyikas* and °*pārṣadyas* (see also p. 44).

[2] According to *Kalpadruma*. Feer (*AMG* v. 535) says 256, *i.e.* double the height of the heaven of the *paranirmitavaśavartins*.

[3] We give the heights and lengths of life according to the *A.K.V.* 'The first gods of the *rūpa*-world are ½ *yojana* in height; another ½ *yojana* must be added for the following classes, and one must double from the *parittābhas*.' As regards the length of life, the Pāli sources have for these three classes ½, 1, and 1 *kalpa* (*Vibhaṅga*, p. 424; Warren, p. 290). The text quoted in the commentary to *Kathāvatthu*, xi. 5, however, assigns a *kalpa* to the *brahmakāyikas*; but, according to Buddhaghoṣa, it refers to a *kappekadesa*, *i.e.* a portion of a *kalpa*. The *Abhidharmakośa* has ½, 1, 1½ *kalpa* (see Feer, *AMG* v. 535); but its commentary, the *Vyākhyā*, maintains that *kalpa* must be taken to mean ¼ *kalpa*, therefore ½, ¾, 1. It refers to a large *kalpa*; but, according to the *Kalpadruma*, the length of life in the *rūpa*-world extends from a small *kalpa* (1/20 of a large *kalpa*) to 16 small *kalpas*.

measurable splendour.' (3) *Ābhāsvaras* (*Ābhassara*), 'Radiant.'[1]

(iii.) THIRD-TRANCE HEAVENS.—(1) *Parittaśubhas*, 'Limited beauty.' (2) *Apramāṇaśubhas*, 'Immeasurable beauty.' (3) *Subhakṛtsnas* (*Subhakiṇha*, wrongly *Subhakiṇṇa*), 'Complete beauty';[2] length of life, 64 *kalpas*, *i.e.* until the return of the destruction of the cosmos by wind (see AGES OF THE WORLD [Buddhist], vol. i. p. 188); height, 64 leagues.

(iv.) FOURTH-TRANCE HEAVENS.—(1) *Anabhrakas* ('Cloudless'); 125 *kalpas* and leagues (not 128, which would be double that of the *Śubhakṛtsnas*); these numbers are doubled for the following classes. (2) *Puṇyaprasavas*, 'Merit-born' (Tib. *bsod-nams-skyes*), or perhaps 'Merit-begetting' (?). (3) *Bṛhatphalas* (*Vehapphalas*), 'Abundant fruit.'[3] (4)–(8) bear the generic name of *Śuddhāvāsa*, 'Pure abode,' whence *Śuddhāvāsikas*, *Śuddhāvāsakāyikas*, 'inhabitants of the Pure abodes.'[4] (4) *Avṛhas* (*Avihas*), 'Effortless' (?).[5] (5) *Atapas* (*atappa*=*atāpya*), 'No heat,' 'Cool gods.' (6) *Sudṛśas* (*Sudassa*), 'Beautiful.' (7) *Sudarśana* (*Sudassin*), 'Well-seeing.' (8) *Akaniṣṭhas*, 'Sublime' (='not youngest,' 'not smallest'), also called (or subordinated to) *Aghaniṣṭhas*, 'at the end (*niṣṭha*) of the compact' (*agha*), *i.e.* 'at the top or the end of the material world';[6] length of life, 16,000 *kalpas*; height, 16,000 leagues.

The total number of 'places' or 'stages' in the *rūpa*-world, therefore, is seventeen, according to the *Abhidharmakośa* (iii. 2); the Kashmirians suppress one of them (see above, p. 135b). The Pāli tradition of *Abhidharma* counts only eleven; it has neither the *Anabhrakas* nor the *Puṇyaprasavas*, but it adds the *Asaṃjñāsattvas* (*°devas*, 'unconscious beings,' 'gods') as follows: FOURTH TRANCE.—(1) *Asaññasattas*, (2) *Vehapphalas*, (3) Pure abodes, five in number. [In later documents, *e.g.* in *Abhidhammatthasaṅgaha*, v. 2–6, 10, tr. Warren, *Buddhism*, p. 289, the *Asaññasattas* come after the *Vehapphalas*; and the same arrangement occurs in Northern texts, viz. *Lalitavistara*, p. 150, *Dharmasaṅgraha*, § 128; Beal, p. 85 (according to *Dīrghāgama* ?), which add the *Asaṃjñāsattvas* to the list of the *Kośa*.][7]

Lastly, certain sources place the heaven of Mahāmaheśvara, the Great Lord, Śiva, above the *Akaniṣṭhas*—a non-Buddhist idea borrowed from Hinduism (*Mahāvyutpatti*, § 161; Triglotte, 53; Rémusat, *Fo-koue-ki*, p. 146).[1]

We shall now venture to make some more or less hypothetical remarks on the origin and development of this theological cosmology. It is probable that Brahmā was at first regarded as the greatest god (see *Digha*, i. 222, ii. 210), and his name has remained attached to the *rūpa*-world (see, *e.g.*, Index *s.v.* 'Visuddhimagga,' Warren-Lanman, *Buddhism in Translations*, Cambridge, Mass., 1909, *Subhakiṇhabrahmaloka*, etc., and even *Rupārūpabrahmaloka*, material and immaterial Brahmā-world). Scholars have established a hierarchy of beings according to *vijñānasthiti* (position [?] of intellect) (*Digha*, ii. 69, cf. *Aṅguttara*, iv. 40): (1) *Brahmakāyika*, (2) *Ābhassara*, (3) *Subhakiṇha*, and, according to the trance (*Aṅguttara*, ii. 126), . . . (4) *Vehapphala*, for which the catalogues of 'abodes of beings' (*sattvāvāsa*) have (*Aṅguttara*, iv. 401), . . . *Asaññasatta*. On the other hand, *Majjhima*, i. 2, enumerates Prajāpati, Brahmā, Ābhassara, Subhakiṇha, Vehapphala, and Abhibhū. To get a scheme very near the classical (scholastic) scheme, the classes of Ābha and Subha had to be formed in imitation of the classes of Brahmā (*pārṣadya*, *purohita*); and this is what we find in *Majjhima*, iii. 102: Parittābha, Appamānābha, Ābhassara, Parittasubha, etc. The Vehapphalas of *Majjhima*, i. 2, are kept, and in place of the Abhibhūs are put four categories: Aviha . . . Akaniṭṭha. But *Digha*, ii. 62, adds the fifth category, Sudassī (Sudarśana). It is possible, therefore, to follow to a certain point the scholastic work which has amalgamated separate traditions and speculations; from an epithet like *ābhāsvara* a class of gods was made, and in the end three classes and three heavens were deduced from it.

8. Immaterial sphere (*arūpadhātu*, *ārūpya*).—There are two views on the *ārūpya*. According to the first, which keeps to the letter of the canonical texts,[2] the *ārūpya* is not part of the receptacle-world; it contains only 'spiritual' beings, free from matter, disembodied intellects (*vijñāna*), consisting in thought (*saññāmaya*). When the transmigrating *vijñānas* are re-born (if we may say so) into this category, they create the intellectual apparatus (*nāman*) for themselves, but do not accumulate matter (*rūpa*), or organs of knowledge (*ṣaḍāyatana*).

Instead of 'places,' the *ārūpya* presents four 'aspects' (*ākāra*), according to the state of the pure intelligences which constitute it. There are (1) the realm of the Infinity of space (*ākāśānantyāyatana*), (2) the realm of the infinity of intellect (*vijñāna*°), (3) the realm of nothingness (*akiṃchanyāyatana*), and (4) the realm of neither consciousness (or notion) nor not-consciousness (*naivasaṃjñānāsaṃjñāyatana*),[3] according to the kind of meditation in which the mind finds itself absorbed for 20,000, 40,000, 60,000, and 80,000 'great *kalpas*.'[4]

The first three realms are *vijñānasthitis*[5] (*Digha*, ii. 69; *Aṅguttara*, iv. 40), 'meditations on which intellect (*vijñāna*) dwells (*sthiti*)'—an intellect which has in this world been absorbed in one of the meditations, 'space is infinite,' 'intellect is infinite,'[6] 'there is nothing,' and finds itself, for countless centuries, in the same meditation—and *vijñānasthitis* only, for intellect is disincarnated and without any relations to matter (*rūpa*). Like the *Asaṇjñāsattvas*, 'Unconscious,' the fourth 'realm' is not a *vijñānasthiti*, but a *sattvāvāsa*, 'dwelling-place of beings,' or an *āyatana*, 'place,' for it does not include attachment to (or dwelling of intellect upon) any kind of existence, being established on an absolute indifference (*upekṣā*).

[1] *Ābhassara* appears in several early texts, not as the name of the third category of the second trance, but (1) as the general name of the gods of the first rank (*Saṃyutta*, i. 114) above Brahmā (cf. the gods 'of beyond' [*taduttari*] in *Aṅguttara*, iii. 287); see, e.g., *Digha*, i. 17; *Aṅguttara*, iv. 89, v. 60. During the period of chaos the future Buddha dwells among the Ābhassaras (see art. AGES OF THE WORLD [Buddhist], vol. i. p. 190, on the Buddhist Genesis); and (2) as the general name of the gods of the second trance in *Aṅguttara*, ii. 127 (life, 2 *kalpas*).

[2] General name of the gods of the third trance in *Aṅguttara*, ii. 127 (life, 4 *kalpas*). In ii. 231 this expression means 'completely happy'; but *śubha* is taken to mean 'beauty' in *A.K.V.* 265a; Warren translates it 'lustrous.'

[3] General name of the gods of the fourth trance in *Aṅguttara*, ii. 128 (life, 500 *kalpas*).

[4] *Saṃyutta*, i. 26; *Majjhima*, i. 82. A future Buddha is never re-born in these heavens, which are reserved for the *Anāgāmins*, saints who obtain *nirvāṇa* without being re-born in the world of men (*A.K.V.* 207b: *JPTS*, 1905, p. 102).

[5] Tibetan *mi-che-ba*, 'not great' (from *abṛhat*); Chinese, according to Beal, 'without heat,' and, according to Eitel, 'no thought.' These gods are named in *Saṃyutta*, i. 35, 60; *Digha*, ii. 50.

[6] *Lalitavistara*, 44, 13 (*niṣṭhagatāś cha kaniṣṭhāś cha*); *Mahāvyutpatti*, § 161; Beal, p. 85, n. 10; Wogihara, *Asaṅga's Bodhisattvabhūmi*, Leipzig, 1908, p. 18, who quotes *A.K.V. Akaniṣṭha ajyeṣṭha*, 'neither the youngest nor the oldest,' is an epithet of the Maruts (*Rigveda*, v. 59. 6, v. 60. 5). The *Akaniṣṭhas* are the most distinguished gods, *paṇḍitatara* (*Digha*, ii. 286). References to these gods are comparatively rare in the ancient texts. The *Saṃyutta* uses the phrase *uddhaṃsoto . . . akaniṭṭhagāmin*, 'mounting . . . going to the *akaniṭṭha*.'

[7] It should be noticed that the *Vibhaṅga* (p. 425) attributes the same length of life (500 *kalpas*) to the *Asaññasattas* and to the *Vehapphalas*; and Beal (p. 95), following the *Vibhāṣā* (Sarvāstivādin), explains that the heaven of the Unconscious (like the world of Brahmā) is inhabited by heretics. By all other reports, it is similar to that of the *Bṛhatphalas*. We may, therefore, believe that the Asaṃjñin heaven does not form a separate region, *bhūmi* or *pradeśa*, and understand why the *Abhidharmakośa* is not concerned with it in its nomenclature of the heavens of the *rūpa*-world. On the Unconscious, see esp. *Digha*, i. 28; Rhys Davids, *Dialogues*, i. 41 note, ii. 60; *Kathāvatthu*, iii. 11.

We shall now venture to make some more or less hypothetical remarks on the origin and development of this theological cosmology. It is probable that Brahmā was at first regarded as the greatest god (see *Digha*, i. 222, ii. 210), and his name has remained attached to the *rūpa*-world (see, *e.g.*, Index *s.v.* 'Visuddhimagga,' Warren-Lanman, *Buddhism in Translations*, Cambridge, Mass., 1909, *Subhakiṇhabrahmaloka*, etc., and even *Rupārūpabrahmaloka*, material and immaterial Brahmā-world). Scholars have established a hierarchy of beings according to *vijñānasthiti* (position [?] of intellect) (*Digha*, ii. 69, cf. *Aṅguttara*, iv. 40): (1) *Brahmakāyika*, (2) *Ābhassara*, (3) *Subhakiṇha*, and, according to the trance (*Aṅguttara*, ii. 126), . . . (4) *Vehapphala*, for which the catalogues of 'abodes of beings' (*sattvāvāsa*) have (*Aṅguttara*, iv. 401), . . . *Asaññasatta*. On the other hand, *Majjhima*, i. 2, enumerates Prajāpati, Brahmā, Ābhassara, Subhakiṇha, Vehapphala, and Abhibhū. To get a scheme very near the classical (scholastic) scheme, the classes of Ābha and Subha had to be formed in imitation of the classes of Brahmā (*pārṣadya*, *purohita*); and this is what we find in *Majjhima*, iii. 102: Parittābha, Appamānābha, Ābhassara, Parittasubha, etc. The Vehapphalas of *Majjhima*, i. 2, are kept, and in place of the Abhibhūs are put four categories: Aviha . . . Akaniṭṭha. But *Digha*, ii. 62, adds the fifth category, Sudassī (Sudarśana). It is possible, therefore, to follow to a certain point the scholastic work which has amalgamated separate traditions and speculations; from an epithet like *ābhāsvara* a class of gods was made, and in the end three classes and three heavens were deduced from it.

[1] See also *Lalitavistara*, p. 4, l. 12, 6. 12, 42. 12, 112. 3, etc.

[2] This is the orthodox theory (*Vibhaṅga*, pp. 153, 419; *Kathāvatthu*, viii. 8; *Abhidharmakośa*, iii. 3, with comm. 224 a, 254 a, Chaudrakirti's *Pañchaskandhaprakaraṇa*).

[3] This is the 'summit of existence' (*bhāgrāgra*). It will be seen (Waddell, *Lamaism*, p. 85, and art. ADIBUDDHA, vol. i. p. 94b, inaccurate) that the *Akaniṣṭhabhavana* has been placed above the immaterial heavens to serve as a dwelling-place for Ādibuddha.

[4] The numbers are already given in *Aṅguttara*, i. 257, but there they refer to *kalpas* without the epithet 'great.'

[5] See Childers, *Dict.* p. 579; *Dialogues*, ii. 66.

[6] It is very difficult to form an exact idea of these meditations or concentrations (*samāpatti*), especially of the second. Is it the same as the contemplation of 'the invisible, infinite thought' (*viññāṇa*) of *Majjhima*, i. 329? This would be a doctrine similar to the *Vedānta* and the *Yogdchāra*. See *Compendium* (*PTS*, 1910), p. 64. It is well known that these 'concentrations' are given by Buddhist tradition as previous to Śākyamuni (e.g. *Majjhima*, i. 164; Warren, p. 335).

But we must not regard the double negation 'neither consciousness . . .' as an absolute negation of consciousness; thought (*chitta*) and its derivatives (*chaitta*) remain, although in a very attenuated state.[1] In fact, if thought happened to cease in these immaterial existences, the result would be *nirvāṇa*; and we know (*Aṅguttara*, i. 267) that 'non-converted' persons (*pṛthagjana*) may reach them without being worthy of *nirvāṇa*, without being free from the danger of falling back again into hell or among the *pretas*.

Several schools maintain the existence of 'matter' in the 'Immaterial World.' This refers to a 'fine or attenuated form of matter,' according to the *Mahāsāṁghikas*, but such that it includes the five kinds of perceptible knowledge (*vijñānakāyas*).[2] The syllable *ā* of *ārūpya*, 'formlessness' (which is the *vṛddhi*, initial emphasis, of the abstract word derived from *rūpa*, 'formless'), is explained as a diminutive (*iṣadarthe*). An argument in favour of this opinion is that the intellect (*vijñāna*) needs a material support (*āśraya*), and this support must be the special 'matter' called *hṛdayavastu*, 'heart-thing' (according to the *A.K.V.* the opinion of the Tāmraparṇīyas, i.e. the Buddhists of Taprobane, the Sinhalese).[3] Another argument is that, according to the formula of 'dependent origination' name (intellectual data) and matter (*rūpa*) proceed from *vijñāna*.[4]

9. **Cosmic systems, chiliocosms.**—It is possible that the most ancient Buddhist cosmology did not imagine anything but the 'small universe,' the *chakravāla* properly speaking; but, in documents which appear to be very archaic (agreeing, in fact, with what we believe we know of the teaching of the Buddha), the notion of the infinity of the world is stated—from which arises that of the existence of other universes (*lokadhātu*) or *chakravālas* similar to ours;[5] and in the *Aṅguttara* (i. 227) we find great combinations of 'thousands of universes,' which will remain the basis of the 'great cosmology,' if we may thus express it, namely: (1) A system of a thousand universes, 'small chiliocosm,' *sahassī chūḷanikā lokadhātu*,[6] or *sahassadhā loka* (*ib.* v. 59); (2) a system of a million universes, a thousand 'small chiliocosms'; this is the 'middle chiliocosm,' *dvisahassī majjhimikā lokadhātu* ('two-thousandth middle universe'); and (3) a system of a thousand million universes, 'great chiliocosm,' or 'three-thousandth great-thousandth universe,' *tisahassī mahāsahassī lokadhātu*.[7]

[1] See *Kathāvatthu*, iii. 12; Beal, *Catena*, p. 91; C. A. F. Rhys Davids, *Buddh. Psych.* p. 74 f.; *Saṁgītisutta* (*Dīgha*, xxxiii.), in Burnouf, *Lotus*, p. 809; *Aṅguttara*, v. 7, 318.

[2] See Beal, *Catena*, pp. 92, 104: Wassilieff, *Buddhismus*, 1860, p. 237 (261).

[3] See *A.K.V.* (Burn. 28[b]), cited in Burnouf, *Lotus*, p. 513 (cf. Walleser, *Phil. Grundlage des älteren Buddhismus*, Heidelberg, 1904, p. 106). On the *hadayavatthu*, 'basis' or 'site,' of the *sensorium commune* (*manas*), see C. A. F. Rhys Davids, *op. cit.* p. 129, note; cf. p. 173 and index: *JPTS*, 1884, p. 28; *Visuddhimagga*, *JPTS*, 1891, p. 124, and Burnouf, *Introduction*, p. 569; the rôle of the heart in the ancient Hindu philosophy is well known (Böhtlingk-Roth, *s.v.* 'Dhātu,' p. 934[b]).

[4] *Kathāvatthu*, viii. 8; cf. Warren, *Buddhism*, p. 178, l. 15, and see also *Saṁyutta*, iii. 53.

[5] The *Brāhmaṇas* admit the infinity of the world upwards and sideways (see *Pañchaviṁśabrāhmaṇa*, xviii. 6, 2, in Hopkins, 'Gods and Saints of the Great Brāhmaṇa,' *Trans. Connecticut Acad.* xv. 25, July 1909). The theory that the world is infinite across, and finite in upward and downward directions, is condemned in *Dīgha*, i. 23 (Rhys Davids, *Dialogues*, i. 36; see AGNOSTICISM [Buddhist], vol. i. p. 224[b], note). A tradition which was long in being attested (*Aṭṭhasālinī*, § 374, quoted in Burnouf, *Lotus*, p. 844, wanting in the 'Chapter of the Fours' of the *Aṅguttara*, as Rhys Davids remarks, *loc. cit.*) states that four things are infinite: space, the number of universes, the number of living beings, and the wisdom of a Buddha.

[6] *Lokadhātu*, masc. in *Mahāvastu*, i. 40, 7, and *Śikṣāsamuchchaya*, p. 246; fem. in Pāli, *Mahāvastu*, ii. 300, 16, *Karuṇāpuṇḍarīka*, p. 4, etc. The word *sukhāvatī*, 'the happy' (see BLESS, ABODE OF THE [Bud.], vol. ii. p. 638[b]), must be understood as *sukhāvatī lokadhātu*, 'the happy world,' and not as *sukhāvatī bhūmi*, 'the happy earth or storey.'

[7] The Skr. forms in *Mahāvyutpatti*, § 153, *Bodhicharyāvatārapañjikā*, ad ii. 14; *sāhasraś chūḍiko lokadhātuḥ; dvisāhasro madhyamo . . .; trisāhasramahāsāhasro. . . .* There are variants in *Mahāvastu* and elsewhere (*trisāhasrā . . .*). See Lefmann, *Lalitavistara übersetzt*, Berlin, 1874, p. 208. *Chūḍika*, *chūlikā* (Pāli-Prākrit *chūla*, *chūḷa*, 'small,' cf. Skr. *kṣulla*) is traced to *chūḍā*, 'top,' 'crest' (tuft left on the head after tonsure), but see *Saddharmapuṇḍarika*, p. 327 (*kṣudrakalokadhātu*).

The traditional meaning of the words *dvisahassī*, *tisahassī*, seems to be quite clear. The *Aṅguttara* says that the *dvisahassī* = 1000 *sahassī*, and the *tisahassī* = 1000 *dvisahassī*. *Dvi* and *ti* are exponents, not multipliers. We find 1000, 1000[2], 1000[3]. Schmidt's interpretation, 'das grosse Tausend der 3000 Welten,' is wrong; and Köppen (*Buddhismus*, ii. 337) is also inexact, if we can trust the *Aṅguttara* and the *Abhidharmakośa*. But it must be remembered that the universes appear grouped in triads in order to form the hell of 'intramundane darkness'—which justifies the number 3000. But in the multiplication of 1000 by 1000 there are other differences which strike scholars: 'The holy words of Buddha cannot be in disagreement; how is it then that there are so many differences in the accounts found in the *sūtras* and treatises (*Abhidharmaśāstras*)? For instance, in regard to the number of mountains called Sumeru (there is a Meru in each small universe, *chakravāla* (see above, p. 131)), if we rely on the *Āgamas* (= Pāli *nikāya*, 'canonic collection') and the *Kośa*, each great chiliocosm has one thousand million, whereas the *Suvarṇaprabhāsa* and the *Avataṁsaka* (Great Vehicle) say there are only ten millions. Then with regard to the various measurements and the contradictory statements relating to the number of the *rūpa*-heavens,[1] how are these differences to be accounted for?'[2]

In order to establish a sort of coherence among these multiplications of universes and on account of theories on the more or less complete destructions of the world, the following arrangement has been imagined:—

One thousand *chakravālas* make a small chiliocosm, with 4000 continents, 1000 Merus, and 1000 heavens of Brahmā-gods (gods of the first trance). This small chiliocosm is surrounded by a mountain which separates it from the neighbouring small chiliocosms; and there is by way of a roof, so to speak, a heaven of gods of the second trance. The middle chiliocosm includes 1000 heavens of this second trance, with as many small chiliocosms beneath them; the walls reach up to the third trance; it is covered by a heaven of the third trance. The great chiliocosm comprises 1000 heavens of this trance, and is crowned with a heaven of the fourth.

The documents which show this superimposing do not seem to be very old (Köppen, i. 236; Rémusat, *Mélanges posthumes*, p. 94; but Beal, p. 103, cites the *Vibhāṣāśāstra*). The *Lalitavistara* (p. 150) certainly does not know it, for it informs us that the great chiliocosm contains a thousand million (100 *koṭis*) heavens of each kind.

We must point out a certain number of cosmic multiplications which are independent of and probably previous to the chiliocosmic conception; e.g. *Mahāvagga*, i. 6, 31 (*Jātaka*, i. 63), *ayaṁ dasasahassī lokadhātu* (where the reference is to 10,000 worlds and not to 1000[10] worlds); *Dīgha*, ii. 139, where the gods of ten universes (*dasāsu lokadhātusu*) gather together to be present at the death of the Buddha. There are different kinds of Brahmā-gods; in *Dīgha*, ii. 261, Mahābrahmā, 'the great Brahmā,' reigns over 1000 Brahmā-worlds; *Majjhima*, iii. 101, distinguishes between a *Sahasso brahmā*, 'thousandth Brahmā,' governing a *sahassī lokadhātu* (cf. *Aṅguttara*, i. 277), a *Dvisahasso . . .* and a *Dasasahasso* (10,000th-Brahmā), governing a *dasasahassī lokadhātu* (cf. *Saṁyutta*, i. 146). See *Visuddhimagga*, xiii. (Warren, p. 321; S. Hardy, *Manual*, p. 2); Burnouf, *Lotus*, p. 363) on the three 'fields' or 'domains' (*kṣetra*) of a Buddha: 'Birth-domain (*janma*[o]) comprises 10,000 worlds; all tremble at different moments in the life of a Buddha (cf. *Mahāvagga*, i. 6, 31). Authority-domain (*āj̃ñā*) comprises a hundred thousand times ten millions of worlds (= 100 great chiliocosms); over all extends the protecting power of the "formulæ of protection" (the so-called *parittas*) given by the Buddha. Knowledge-domain (*jñāna*[o]) is without limit.' The *Mahāvastu* mentions a *buddhakṣetra* equal to 61 great chiliocosms, and an *upakṣetra* equal to 244 great chiliocosms (i. 121, cf. pp. xxxii and 471, and iii. 341). In the later literature 'great chiliocosm' and *buddhakṣetra* are, as a rule, synonymous (cf. *Aṅguttara*, i. 228).

The chiliocosm did not satisfy the Buddhist imagination. The *Mahāvastu* (i. 122) and the *Mahāyānasūtras* consider that the number of chiliocosms, or 'fields of Buddha,' is infinite in every direction (e.g. *Lotus*, xi.; *SBE* xxi. 232), and there are quoted, by the dozen, names of these 'great universes' (e.g. *Karuṇāpuṇḍarīka*); and in the *Avataṁsaka* we get a systematic arrangement of these chiliocosms.

On whirlwinds rests the Fragrant Ocean, which carries an infinite number of world-germs (*lokabīja* [?]); from it there issue lotuses infinite in number—very far removed, indeed, from each other. From each of these lotuses is born a universe (great chiliocosm), above which (separated by whirlwinds) there are three, then five, and so on up to the twentieth tier, where there are 39 great chiliocosms. We are not told whether this development of a 'world-germ' is in the form of a *tranche* or of a fan, or whether it is to be understood as an inverted

[1] The text says *arūpā*-heavens. This must be a mistake (see above, p. 136).

[2] *Shou-lun*, tr. in Beal, *Catena*, p. 103.

pyramid (1, 3^2, 5^2, . . . 39^2). But, on the other hand, we learn that the universe in which we are, the *Sahalokadhātu*,[1] forms part of the thirteenth stage, and constitutes the 'field' of the Buddha Vairochana (see art. ADIBUDDHA, vol. i. p. 99ª note ‖), and that, on the same level at the same stage, in the extreme west, is the blessed universe of the Buddha Amitābha, the *Sukhāvatī*, where a *kalpa* of our universe is equal to a day and a night (see art. BLEST, ABODE OF THE [Buddhist], vol. ii. p. 638b).[2]

LITERATURE.—See preliminary note 3 on p. 130 f., and p. 131ª, note 4, and works mentioned throughout the article. See also the tr. of the *Abhidhammasaṅgaha* by Shive Zan Aung and C. A. F. Rhys Davids under the title *Compendium of Philosophy* (*PTS*, London, 1910), the tr. of *Dīgha*, ii., by T. W. and C. A. F. Rhys Davids, *Dialogues of the Buddha*, ii. (Oxford, 1910). Reference must also be made to Mañjughoṣaha-savajra's *Siddhanta*, i. fol. 223–248.

L. DE LA VALLÉE POUSSIN.

COSMOGONY AND COSMOLOGY (Celtic).—We do not know the ancient Celtic ideas with respect to the origin of the world. According to Strabo (IV. iv. 4), the Druids, as well as others, said that the soul and the world were immortal, and that one day fire and water would prevail. On the other hand, the Celts of the Adriatic said to Alexander: 'We fear only one thing, and that is that the sky may fall on us' (Strabo, VII. iii. 8). This belief in the fall of the sky is seen frequently in the oaths of Irish epic poetry. In a note on the hymn of Ultan (verse 9) mention is made of the two pillars of the sky.

These confused and contradictory ideas do not enable us to re-construct Celtic cosmology. It would be dangerous, besides, to look for this cosmology in the Christian legends of the Irish Middle Ages, or in the so-called secrets of the bards of the Island of Britain, or in the oral traditions of Armorican Brittany; for the elements contained in these different sources are either foreign or modern in origin. See also art. CELTS, vol. iii. p. 298.

LITERATURE.—Roget de Belloguet, *Ethnogénie gauloise*, Paris, 1861–75, iii. 137; C. Jullian, *Histoire de la Gaule*, Paris, 1907, i. 360, ii. 126, 175; H. Gaidoz in *Zeitschrift für celtische Philologie*, 1897–1901, i. 27 f. G. DOTTIN.

COSMOGONY AND COSMOLOGY (Chinese).—Chinese theories of cosmogony and cosmology may be said to be of comparatively modern date. They profess, however, to be based on a system which claims an almost immemorial antiquity, *i.e.* the 8 trigrams, which are usually attributed to Fu-hsi (2852 B.C.), though somewhat contradictory accounts are given as to their ultimate origin. These figures were intended to represent the stalks of the milfoil (*Ptarmica sibirica*), which were employed by diviners in close association with the lines which were produced on the shell of the tortoise, as described in art. COMMUNION WITH THE DEAD (Chinese), vol. iii. p. 731b. The stalks were divided into longer and shorter lengths, and the order in which they were drawn and disposed, in varying combinations of long and short or 'strong' and 'weak' lines, was interpreted in accordance with the arbitrary methods which prevailed from time to time, but of which the details have not been handed down. It may, however, safely be assumed that the function of the trigrams was limited to questions of tribal or domestic interest, and that nothing of a theological or cosmological character was attached to them.

The trigrams were arranged in 8 groups thus:

A new arrangement was invented by Si-peh (1231–1135 B.C.), during his two years' imprisonment at the hands of the ruler of the Yin dynasty, and it is probable that to him is also due the combination of the original 8 trigrams to form the 64 hexagrams which are the basis of the *Yi-king*, or Canon of Permutations, commonly known as the Book of Changes.

Si-peh, afterwards canonized as Wên-wang (= King Wên), appended to each of the hexagrams an explanatory outline, giving the general sense supposed to be conveyed by the figure, but his son Tan, better known as Chow-kung (Duke of Chow), added an analysis, showing how each line of the hexagram was to be interpreted so as to contribute to the general conclusion which his father had established. The deductions of King Wên, with the analyses of the Duke of Chow, form the text of the *Yi-king*. Throughout the 64 chapters of the original work there is nothing whatever of a cosmological character; the compilers were entirely occupied with political and personal matters, endeavouring to learn from the omens furnished by the stalks and their representative symbols the probable results of certain courses of conduct which were in contemplation. The harmless trifling, as it seemed to his jailers, with which the prisoner, Si-peh, employed his leisure, was in reality a means by which he was able to develop his revolutionary schemes without let or hindrance; none but himself knew the significance attaching to the harmless straws with which he amused himself; and when, in course of time, his liberty was restored, he was enabled to consummate his schemes with complete success.

A new element is, however, introduced in the 10 Appendixes to the *Yi-king* which bear the imprimatur of Confucius, though it seems probable that only the first and second are properly attributed to him. To Confucius it seemed inevitable that the thought which had been expended upon the hexagrams, by sages so eminent as Si-peh and his son, could not fail to be of permanent value, and that, though the political conditions which had first inspired their studies no longer existed, the lessons which they contributed might be applied with equal value to the troublous circumstances of his own times. Hence Confucius, in later life, devoted a great deal of attention to the study of the *Yi-king*, frankly acknowledging the difficulty he experienced in the interpretation of its cryptic phraseology, and in adapting its lessons to his own enlarged conception of the scope of the work. Later commentators, building upon the theory that the three lines of the early trigrams represent the three powers—Heaven, Earth, and Man—attempt to transfer the lessons of the figures from the smaller stage of human affairs to the larger theatre of universal Nature. In the Appendixes, therefore, we discover, in an ever-ascending scale, the application of the hexagrams to the constitution and course of Nature, the later chapters furnishing some of the material out of which Chu-hsi (Chucius, A.D. 1130–1200) developed his scheme of cosmogony and cosmology, which now represents modern Chinese philosophic thought on the subject.

A word of explanation may here be necessary in order to show the mechanism of the developed

[1] This expression seems to denote a great chiliocosm, but it is certain that its natural meaning should be the small universe, the *chakravāla* in which we live. *Saha* is an adjective; we find a fem. form *sahā* (*Mahāvyutpatti*, § 154, 21; *Divyāvadāna*, p. 293, 19; *Mahāvastu*, ii. 379, 21; *Laṅkāvatāra*, in Burnouf, *Introduction*, p. 596; *Karuṇāpuṇḍarīka*, p. 119; Wilson, ii. 32; and probably *Rājatarañgiṇī*, i. 172, where A. Stein reads *mahi*), and more rarely the masc. form *saha* (Triglotte, § 46, and *sahalokanātha*, in *Mahāvastu*, ii. 385). This expression, which has been translated 'enduring,' 'suffering,' or 'supporting' (from root *sah*), is not clear. The Tibetan *mi mjed* or *mjed* (see Jäschke, *Tib. Dict.*, London, 1881, p. 174) does not shed any light on the question, and the designation of Brahmā as *Sahāmpati* (*Sahapati*) remains obscure (Burnouf, *Introduction*, p. 594; Beal, *Catena*, p. 16; Eitel, *Handbook*, p. 134).

[2] The present sources are Rémusat, *Mélanges posthumes*, p. 96; Beal, *Catena*, p. 121. The two authors differ on many points; *e.g.* Beal regards *Sahā* as the name of the whole thirteenth stage. Between the *Sahā* (centre of this stage) and the *Sukhāvatī* (regarded not as a chiliocosm but as a privileged *chakravāla*, with no hell, and no cosmic mountains), there are 10,000,000,000 universes. The original source is the *Avataṁsaka*—a word which denotes a part of the Chinese canon of the Great Vehicle (Nanjio, *Catal.*, 1883, p. 32 ff., on which see Tāranātha, p. 63, and Wassilieff, *Buddhismus*, esp. p. 157 [171] f.).

system of the *Yi-king*. Each trigram bears a distinctive name, as well as a local habitation or direction, together with a natural affinity, quality, etc. Thus the 6th group, as arranged by Si-peh, originally the first group according to the earlier system, consisting of 3 unbroken or 'strong' lines, is denominated *k'ien*, which means 'untiring,' 'strength,' etc., and represents Heaven, a sovereign, a father, etc. Its locality or direction is north-west; its affinity, ether; its quality, humidity, etc.

The hexagrams are formed by the combination of 2 trigrams, and also have distinctive names. Each line bears a certain relation to the other lines; thus the first or bottom line in the lower trigram is related to the first line of the upper trigram, *i.e.* to the 4th line of the hexagram. The position of the various lines is a most important consideration—sometimes a 'strong' line is found in a 'weak' place, and *vice versa*.

An illustration from Legge's *Yi-king* (*SBE*, xvi. 71) may serve to indicate the method of interpretation. The 7th hexagram, known as *sze*, is written thus: ䷆, consisting of the 2 trigrams *k'ân* ☵, representing water, and *kw'un* ☷, representing earth, suggesting, by the combination, waters collected on the earth, or, in the language of the diviner, multitudes of people mustering for purposes of defence or attack. The 'strong' or undivided line occupies the most important place in the *inner* or lower trigram, *i.e.* the middle, second only to the middle place in the *outer*, or upper, trigram, which is the paramount position in the whole figure. The 'strong' line, therefore, occupying a secondary position, must stand for the leader of the host; were he to occupy the highest position, *i.e.* the 5th line from the bottom—the middle line of the upper trigram—he would represent the sovereign. These, of course, are perfectly arbitrary preconceptions.

The Duke of Chow thus interprets the figure: 'The first line (reckoning from below), divided, shows the host going forth according to the rules (for such a movement). If these (rules) be not good, there will be evil.' Legge adds: 'The line is divided, a weak line in a strong place, not correct; this justifies the caution which follows.'

'The second line, undivided, shows (the leader) in the midst of the hosts. There will be good fortune and no error. The king has thrice conveyed to him his charge.'

'The third line, divided, shows how the hosts may possibly have many commanders; (in such a case) there will be evil.' Legge explains: 'The third place is odd, and should be occupied by a strong line, instead of which we have a weak line in it. But it is at the top of the lower trigram, and its subject should be in office or activity. There is suggested the idea that its subject has vaulted over the second line, and wishes to share in the command and honour of him who has been appointed to be commander-in-chief. The lesson of the previous line is made of none effect. We have a divided authority in the expedition. The result can only be evil.'

'The fourth line, divided, shows the hosts in retreat: there is no error.' Legge comments thus: 'The line is also weak, and victory cannot be expected; but in the fourth place a weak line is in its correct position, and its subject will do what is right in his circumstances. He will retreat, and a retreat is for him the part of wisdom.'

'The fifth line, divided, shows birds in the fields, which it is advantageous to seize (and destroy). There will be no error. If the oldest son lead the host, and younger men be (also) in command, however firm and correct he may be, there will be evil.' Legge interprets the Duke's findings thus: 'We have an intimation [in this passage] . . . that only defensive war, or war waged by the rightful authority to put down rebellion and lawlessness, is right. "The birds in the fields" are emblematic of plunderers and invaders, whom it will be well to destroy. The fifth line symbolizes the chief authority, but here he is weak or humble, and has given all power and authority to execute judgment into the hands of the commander-in-chief, who is the oldest son; and in the subject of line 5 we have an example of the younger men who would cause evil if allowed to share his power.'

'The topmost line, divided, shows the great ruler delivering his charges (to the men who have distinguished themselves), appointing some to be rulers of States, and others to be chiefs of clans. But small men should not be employed (in such positions).' Legge thus comments: 'The action of the hexagram has been gone through. The expedition has been conducted to a successful end. The enemy has been subdued. His territories are at the disposal of the conqueror. The commander-in-chief has done his part well. His sovereign, "the great ruler," comes upon the scene, and rewards the officers who have been conspicuous by their bravery and skill, conferring on them rank and lands. But he is warned to have respect in doing so to their moral character. Small men, of ordinary or less than ordinary character, may be rewarded with riches and certain honours; but land and the welfare of its population should not be given into the hands of any who are not equal to the responsibility of such a trust.'

To turn now to the main deduction of King Wên, of which the above is the detailed explanation. We find the lessons of the hexagram thus expressed: '*Sze* indicates how (in the age which it supposes), with firmness and correctness and (a leader of) age and experience, there will be no error.'

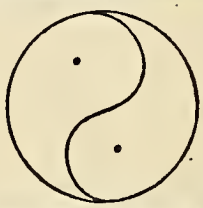
It will be observed, from this example, how the character of the lines (whether divided or undivided), their place in the hexagram (whether odd or even, *e.g.* 1, 3, 5; or 2, 4, 6), and their mutual relation to each other (2 corresponding to 5, etc.) are all of great importance in the exposition of the lessons they are supposed to convey. The mutual relation of the 2 trigrams in each hexagram is also a matter of importance.

This specimen will serve to show how little there is of any cosmological element in the original Book of Changes, and how far the modern commentators have wandered from the intention of the compiler and his earliest expositor; in fact, it was only by an arbitrary forcing of the primitive modes of divination, and the introduction of entirely new ideas in the Appendixes, that Chucius succeeded in building up the system which is attributed to him, and which has only the slightest affinity with the diagrams of King Wên. A rough parallel might be established between the diagrams and our modern playing cards, in which the calendar may be said to be represented, though with no cosmological intention, the 4 suits representing the 4 seasons; the 13 cards in each suit = the 13 sidereal months; the 52 cards = the 52 weeks of the year; the 364 pips (including the value of the 'coat' cards) = the days of the year, etc.; and, as the cards are now employed by pretended 'fortune-tellers' as a key to the secrets of human existence, so the hexagrams of King Wên came to be applied, in course of time, to issues much larger than were ever contemplated by their inventor.

The chief exponent of the modern system was Chucius, whose name is pre-eminent amongst the philosophers of the Sung school of the 11th and 12th centuries in China. Confucius and Mencius were practical philosophers, but Chucius was not content to accept the fact of Heaven and Earth, which had been sufficient for the great teachers who preceded him; he endeavoured to establish a systematic theory of the origin of all things, finding in the *Yi-king*, as he supposed, a groundwork for his researches. He was further aided in his speculations by Taoistic and Buddhistic suggestions, as well as by other philosophic concepts which may well have reached China by that time, and which to an ardent and omnivorous student would prove attractive. It is not unlikely that he was familiar with Persian and early Christian ideas propagated by the Nestorian teachers in the centuries preceding him.

It is very important to bear in mind that the earliest conception of the Chinese regarding the universe was a theological one, while the later system of Chucius is philosophical; and it is owing to this fact that Chucius found himself involved in frequent difficulties in the endeavour to harmonize the two. The ancient or theological concept takes its starting-point from Shang-ti, or Heaven; the Taoistic or philosophic theory goes no further back than the 'Great Extreme'; but Chucius, though professedly no theologian, appears unable to elimin-

ate from his system some traces of the ancient conviction that behind all phenomena there is a power, variously described as Heaven, the 'Controller,' the 'Great Framer' (or 'Potter'), etc., while he shrank from any suggestion of anthropomorphism, and disclaimed the view that that power actively interfered in the affairs of men.



As a matter of fact, the theories of Chucius are not intended to account for ultimate beginnings; his conception of the present world is that it is but one of a long series of similar existences which have flourished in turn, and have been corrupted, each disappearing eventually from view and giving place to a new world. He makes no attempt to explain how the primal element came into being, but finds his starting-point in the theory of the existence of a Natural Law which he denominates *Li* (pronounced *Lee*), and a vital essence which he calls *K'i* (pronounced *Chee*). He does not inquire wherein this Law resides, or where this vital 'breath' is derived from. The theologian may contend for the recognition of a Divine creator or framer, but Chucius, though he does not traverse the argument, declines to discuss the subject. In inquiring, therefore, into the evolution of this present world, he finds its material basis in *K'i* (vapour, breath, air, etc.), and its active principle in *Li*—both eternal in their nature, as existing before the clock of time began to strike, yet admitting of a priority of order in the case of *Li*. The alternate action and inaction of *Li*, in the sphere of *K'i*, produced the positive and negative forms, *Yang* and *Yin*, variously represented as Light and Darkness, Heaven and Earth, Male and Female, etc., whose vicissitudes constitute the *Tao*, or Course of Nature, as reflected in the 4 seasons, the alternations of day and night, etc. The *Yang* and *Yin* contain the 'Five elements' in embryo, viz. metal, wood, water, fire, and earth, of which water and fire are regarded as the simplest forms. Each element possesses a *Yang* and a *Yin* quality, and all are pervaded by *Li*. As a result of the interaction of these two 'forms'—the *Yang* and the *Yin*, which are in constant motion—a certain amount of 'sediment' is precipitated to the centre of the whirling mass and becomes Earth, whilst the more subtle excreta are flung upwards to the outer ring of the circle, and become Heaven. Earth remains motionless in the centre, whilst the Heavens revolve continually, as the movements of the heavenly bodies serve to show.

The myriad creatures were produced by the spontaneous coagulation of the finer essences of the five elements in the *Yang-Yin*, forming a hermaphroditic being or pair, which in course of time separated and gave birth to the male and female species which now constitute the human race.

It will be seen at a glance how far removed these theories are from the system of divination attributed to King Wên, and it seems inevitable that they represent an interpretation of that system entirely alien to the purpose which inspired its first exponents. From Chucius' own words, we are led to conclude that the study of the *Yi* had made little progress during the centuries which had elapsed from the days of Confucius until his own time. It seems probable that the later Appendixes, popularly ascribed to the great 'Master' himself, 'belong to a period long posterior, and they seem to reflect opinions which began to be current only in Chucius' days. Philosophers such as *Shao-yung* (A.D. 1011–1077), of whom Chucius says, 'From the time of Confucius no one understood this (*i.e.* the relation between the Great Extreme, the 8 diagrams, etc.) until Shao explained it,' and Chow Tun-i (A.D. 1017–1073), to whom is attributed the circular diagram of the Great Extreme, apparently made use of the *Yi* as a vehicle of Taoistic ideas, and applied to the 'strong' and 'weak' lines of King Wên the system of *Yang* and *Yin*, which nowhere appears in the text of the *Yi*, but which is suggested by the words of Lao-tze in the *Tao-Tê-King*):

'Tao produced unity; unity produced duality; duality produced trinity; and trinity produced the innumerable objects; the innumerable objects, carrying the feminine or shadow principle on the one side, and the masculine or sunlight principle on the other, created a just harmony by their respective clashes of primitive impulse or ether' (Parker's tr.).

It may be assumed, therefore, that the Chinese cosmogony is of comparatively recent origin, and that the ancients were content to accept the fact of the universe without abstruse theorizing as to its origin and method. The Sung philosophers adopted the trilinear figures of the *Yi*, but devised a new diagram of what they called the 'Great Extreme,' viz. a circle intended to represent the ultimate principle *Li*, which, in their system, indicates the limit of philosophical discussion. This circle was subdivided thus:

to illustrate the interaction and constant gyrations of the *Yang* and *Yin*, i.e. the primal essence, or *K'i* in its 2 forms, the motive power in which is *Li*. Another circle represents the *K'i* as divided into its constituent elements, *i.e.* the five active principles—water, fire, wood, metal, and earth. Sometimes the four seasons are represented.

From these we may learn that, according to Chucius, the world came into existence as a result of the operation of *Li*, or 'Natural Law,' setting in motion the *K'i*, or 'vital essence,' which, by the interaction of its two forms, *Yang* and *Yin*, containing the 5 elements, threw off, in its perpetual revolutions, the excreta which coagulated respectively into Heaven, on the outward edge, and Earth, in the centre; and that the vicissitudes of *Yang* and *Yin* account for the regular succession of day and night, the alternate waxing and waning of the same being the cause of the four seasons; and that, when the great cycle, calculated as occupying a *kalpa*, or 129,600 years, is accomplished through the exhaustion of the *Yang* element in man, as exhibited by moral declension and universal corruption, the whole system is resolved into its constituent elements, and a new heaven and earth are called into being.

Man's place in Nature.—As to the place which man occupies in this system, since man is compounded of the five elements constituting the *K'i*, or vital essence, in which the *Li* operates, he is described as a microcosm—a world in miniature—from which it follows that every man has within him a 'spark of the Divine.' In some men the *Yang* predominates; in others the *Yin*. Of the former are the Sages, the great men of past and present times; the latter are represented by the 'mean' men, the dull, the criminal, etc. As in the case of Nature, so man has his seasons of spring, summer, etc., and his days and nights, and, like the world, comes to an end by the exhaustion of the *K'i*, or vital breath. His great business, therefore, is to frame and fashion his life so as to live in conformity with the *Tao*, or observed order of the universe. 'No contrariety' must be his motto. By so doing he may attain in time the proud distinction of being an associate of Heaven and

Earth. As to his future, neither Lao-tze, Confucius, nor Chucius has anything to say; probably, from the philosophical point of view, death to them, though they would not discuss it, meant a return to the original chaos, like the universe at the end of its cycle of existence; or, to express it in the polite but equivocal phrase of ancient and modern days, a 'return to Heaven.'

The philosophic idea was, however, too lofty and illusive for common acceptance, and, during the Sung dynasty, the tradition of a 'first man' was evolved, ascribing the ancestry of the human race to a certain P'an-ku, of whom it is stated in the *Lu-she* (Mayers' tr.):

'When the great first principle had given birth to the two primary forms, and these had produced the four secondary figures, the latter underwent transformations and evolutions, whence the natural objects depending from their respective influences came abundantly into being. The first who came forth to rule the world was named *P'an-ku*, and he was also called the "Undeveloped and Unenlightened" (i.e. the Embryo).'

This idea is now almost universally accepted by the mass of the unlearned in China, and by not a few of the scholarly class, being, as it were, a sort of concretion of the indefinite theories of the Chucian philosophers as to the origin of man.

The place occupied by spiritual beings.—Though Confucius and Chucius (16 centuries later) were unwilling to enter into the question of spiritual existences, and though the latter expressly declared the difficulties involved in such a theory, the fact that the earliest records refer so frequently to the existence of spirits made it necessary that a place should be found for them in the Chinese philosophy, and, accordingly, the *Kuei-shen*, or spirits, were adopted as representing, so to speak, in personal form, the activities at work in the changing phenomena of Nature; but the ancient doctrine that the spirits are the ministers of God, carrying out His behests, on the analogy of the officers of State fulfilling the decrees of the sovereign, survives, in a somewhat debased form, in the popular opinion which invests the earth and air with a numberless host of good and evil spirits or demons.

The place of God.—In the earliest days of which we possess any record, Shang-ti, or God, appears to have occupied a chief place in the mind of China's rulers, but at the beginning of the Chow dynasty (12th cent. B.C.) we find the terms 'Heaven' and 'Earth' coming into prominence, representing the operations of God in Nature and Providence, and, as a consequence, Shang-ti is removed to a greater distance than that intimate relation in which he seems to have stood *vis-à-vis* his votaries in the earlier days. Later developments contributed towards the increasing of this distance, and the attitude of Confucius towards metaphysical and transcendental questions tended to widen the chasm. Chucius appears to have relegated God to a position of infinite remoteness and unknowableness, though he did not deny the possibility of there being an ultimate ruling power, of whose existence individual students must satisfy themselves; and he refers to the 'Great Framer,' the 'Root of the Great Extreme,' the 'Heavenly decree which set in motion the primal elements,' etc. His conviction seems to be that God, or the 'Infinite,' invested the *K'i*, or vital essence, with His own *Li*, or Law, and then allowed the creation to develop itself spontaneously, He Himself taking no further active share in the affairs of Nature or of human life. Such a contention, indeed, was directly contrary to the earlier beliefs, and led Chucius, unwillingly, into conflict with the received opinions. He, however, steadily refused to discuss the matter, and insisted that every man should be 'fully persuaded in his own mind' and make his own investigations. Here again the agnosticism of Chucius was unable to overcome the immemorial persuasion of his fellow-countrymen, that the 'Supreme Ruler' interferes actively in the affairs of the nation, and sends forth His agents, including spirits and sages, to fulfil His behests. Hence it happens that Shang-ti is still worshipped officially by the Emperors of China, and Heaven is invoked by the mass of the people, whilst the spirits are solicited to exert their influence on behalf of their petitioners. The theological concept has thus survived the philosophical, and, by a strange inconsistency, the materialism of Confucius and Chucius, as represented by the modern Chinese literate, is exhibited in a country which, above all others, is remarkable for its active and almost frenzied addiction to the propitiation of spirits and demons.

W. GILBERT WALSHE.

COSMOGONY AND COSMOLOGY (Christian).—1. Early.

—The early Christians were not seriously perplexed by questions of cosmogony. They had come into a heritage, whereby they had grown up into the current Palestinian-Jewish ideas of the origin and constitution of the world. Moreover, they looked out upon the world and the whole realm of Nature from the purely religious standpoint. 'In the beginning God' (Gn 1^1) was the primary article of their faith. It was Jahweh, the God of Israel, who had 'measured the waters in the hollow of his hand, and meted out heaven with the span, and comprehended the dust of the earth in a measure, and weighed the mountains in scales, and the hills in a balance. . . . It is he that sitteth upon the circle of the earth . . . that stretcheth out the heavens as a curtain, and spreadeth them out as a tent to dwell in. . . . I am Jahweh, and there is none else. . . . I form the light, and create darkness: I make peace, and create evil. I, Jahweh, do all these things' (Is $40^{12\text{-}22}$ $45^{5\text{-}7}$). Psalms 8 and 104 express the same idea of the sole, beneficent creatorship of God, and in Psalms 33 and 148 creation by the *spoken word* is confidently expressed. The Book of Job is likewise pervaded by this belief, and the same is true of Pr $8^{22\text{-}31}$. These seem to have been the primary sources from which the early Christians drew their conception of the material cosmos and God's relation to it. This simple religious view found free expression in their prayers: 'O Lord, thou that didst make the heaven and the earth and the sea, and all that in them is' (Ac 4^{24}). And Jesus had expressed His faith in the same direct and simple way. To Him God was 'Lord of heaven and earth' (Mt 11^{25}), who 'maketh his sun to rise on the evil and the good, and sendeth rain on the just and the unjust' (Mt 5^{45}). His heavenly Father also feeds the birds of the heavens, and clothes the grass of the fields (Mt $6^{26\text{ff.}}$). The disciples, like their Master, were absorbed in the thought of the loving care of God, and His gracious provision for all His creatures. 'In him,' says St. Paul, 'we live, and move, and have our being' (Ac 17^{28}).

But the profound and enduring impression which Jesus made upon His followers soon constrained them to associate Him with the Father in the work of creation. It was He who had brought redemption from sin, and given them a glad new sense of sonship with God. But Lordship in the spiritual world must and did ultimately involve equal Lordship in the material world and in the whole realm of the Divine activity. This idea was early expressed by St. Paul, who says: 'To us there is one God, the Father, of whom are all things, and we unto him; and one Lord, Jesus

Christ, through whom are all things, and we through him' (1 Co 8^6); 'for in him [the Son] were all things created . . . things visible and things invisible . . . and he is before all things, and in him all things consist' (Col $1^{16f.}$; cf. He $1^{2c.}$). 'By faith we understand,' says the author of the Ep. to the Hebrews, 'that the worlds have been framed by the word (ῥήματι) of God' (He 11^3). 'In the beginning was the Logos,' says St. John, 'and the Logos was with God, and the Logos was God . . . all things were made by him' (Jn 1^{1-3}; cf. Rev 4^{11}). The specific use of the word Logos by the Fourth Evangelist completed and confirmed a development which had been in progress for several decades, by which Jesus as the Son was definitely classed with God the Father, and associated with Him in the creation and government of both the visible and the invisible world. It also tended to reconcile and adjust the Christian faith to the late Jewish development of the concept 'wisdom' (Pr 8, Sir 24, Wis 8, and the like) and the current Hellenistic idea of the Logos (Book of Wisdom, Philo Judæus, and the like). Christian cosmology henceforth was definitely related to the Person of Christ.

But the tragic fate which overtook Jesus, and His own utterances concerning the machinations of the 'prince of this world,' together with His teachings regarding His 'return,' and the 'day of judgment,' and the 'last things,' made a deep and solemn impression upon His disciples. Everything seemed to constrain them to believe in the presence of an opposing Satanic power in the universe (Ac 5, 8, 13; Rev 2^{13} and oft.). St. Paul speaks of the 'lawless one' . . . whose 'coming is according to the working of Satan' (2 Th $2^{8f.}$); he declares that the 'whole creation groaneth and travaileth in pain together until now' (Ro 8^{22}), and that 'our wrestling is not against flesh and blood, but against the principalities, against the powers, against the world-rulers of this darkness, against the spiritual hosts of wickedness in the heavenly places' (Eph 6^{12}). The Book of Revelation attempts to describe this great world-drama, this duel between good and evil, and the final triumph of the 'Lamb that hath been slain.' In this more or less incoherent and dualistic view of things, we have the outcropping of Babylonian and Persian ideas, which for several generations had been occupying a large place in Jewish thought (see *Test. Twelve Patriarchs, Bk. of Jubilees, Bk. of Enoch, Assump. of Moses*; cf. Mt $4^{1f.}$ $12^{24f.}$ 13^{39}, Jn 8^{44} 12^{31}, Ac 13^{10}, 2 Co 11^3, Eph 2^2 6^{16}, Ja 4^7, 1 P 5^8, He 2^{14}, 1 Jn 3^8, and oft.). Christian cosmology, accordingly, becomes profoundly affected by the resurgence of Bab.-Pers.-Jewish ideas, and takes on a dualistic cast.

The lapse into 'sins of the flesh' on the part of professing Christians, as well as the appalling moral corruption of environing paganism, gradually led to the conviction that sin has its primal seat in 'the flesh.' Here, again, we have the outcropping of ideas already rife in current Judaism and paganism. St. Paul's teaching was more or less infected by the half-assumption of the physical basis of sin, and he exhibits a distinct tendency toward asceticism (Gal $5^{16f.}$, 1 Co $3^{1c.}$ $7^{1f.}$, Ro $7^{14f.}$). The whole trend of thought within the Christian Church gradually became reactionary and ascetic. Some began to withdraw from marital and social relations and to 'flee from the world.' Asceticism entered as a constituent element into Christian ethics, and soon coloured the whole view of things, giving its character to contemporary cosmology. If evil is inherent in matter, or, rather, if matter is inherently evil, the question of the creation and government of the world by an all-wise and beneficent God becomes seriously complicated. The Christians were, as a rule, inclined to emphasize the Genesis story of the 'Creation' and 'Fall,' and thereby to shield God from complicity in the introduction of evil into the universe. But there were other and diverse accounts of the origin of the cosmos and the entrance of evil into it.

The Gnostics were not only the 'first Christian theologians,' but the first cosmogonists and cosmologists. Indeed, their primary concern was to discover and develop a theory of the cosmos which should shield the Supreme Being from all complicity in, or responsibility for, its creation, which seemed to them to involve also the production of evil. They, accordingly, assumed that the material cosmos arose through the more or less blind and perverse activity of the Demiurge, who was far removed from the Supreme God and the heavenly Pleroma. Although man was created by the Demiurge, he yet received, through 'Sophia,' sparks from the Divine nature, and is struggling to get free from his material bondage. Ascetic discipline is, accordingly, one of the means by which the Gnostic is to overcome 'sin in the flesh,' and secure salvation. Another means is the rational revelation which the Logos made to the world when He became manifest in the Christ. The 'prince of this world' must be overthrown by the Supreme God, who has sent His Son to rescue men from their bondage to evil (= ὕλη). In all these Gnostic views we have but the exaggeration or perversion of ideas that were then present in current Christian thought, and which had come as a heritage from Judaism and environing paganism. In other words, Gnosticism (*q.v.*) was but an aberrant form of the Christian faith, and its crude and fantastic cosmologies were, after all, only abortive efforts to solve the riddle of the universe in a supposedly Christian fashion. The cosmic views of the Gnostics persisted in modified forms in Neo-Platonism (*q.v.*) and in Manichæism (*q.v.*).

The Apologists, contemporaries of the Gnostics, fell back, as a rule, upon the simple 'Creation' and 'Fall' stories of Genesis, and thereby escaped the worst excesses. They also made ample use of the Platonic-Stoic-Philonian Logos idea, and emphasized the mediatorship of the Logos in the work of creation. They were likewise surcharged with a belief in demons and opposing Satanic powers, but they looked forward to the destruction of the material cosmos and the overthrow of all hostile forces. Justin Martyr and Athenagoras speak of God as having fashioned the world out of formless material (ὕλη), but Theophilus declares that God created all things *ex nihilo* (ἐξ οὐκ ὄντων). Each based his assumption upon Gn $1^{1f.}$ $2^{4f.}$ (Justin, *Apol.* i. 10, 20, 59, 67; Athenag. *Apol. for Christ.* 15; Theophilus, *Autol.* i. 6, 7, 10, ii. 4, 6, 10; cf. Tatian, *Addr. to Greeks*, 5 and 12; Aristides, *Apol.* 1 and 4). The Apologists, as a rule, thought of evil as inherent in matter, and accordingly were inclined towards asceticism; but they preserved, to a degree, the simpler religious view of Apostolic times, which they derived mainly from the OT.

Irenæus and Tertullian, Clem. Alex., Origen, and Hippolytus reject the Gnostic theory of the creation of the world by the Demiurge, and emphasize the function of the Logos-Son in the whole realm of the Divine activity. The NT writings are now quoted as authoritative Scripture, but the OT is also heavily drawn upon to explain God's relation to the cosmos. But, as was to be expected, these men were 'children of their own times,' although seeking to pass on a heritage. Some of the earlier crudities were retained, especially the belief in evil as somehow inherent in material things. With some slight aberrations, the Church Fathers of the 3rd cent. were true to the unformulated cosmology of the OT and NT, coloured by the speculations of the Apologists

(Iren. *c. Hær.* I. iii. 6, x. 1 f., xxii. 1, II. x. and xi., v. xviii.; Tert. *adv. Herm.* 29–34 and 45, *adv. Prax.* 19, *adv. Marc.* i. 15 and 16; Clem. Alex. *Str.* vi. 16; Origen, *de Prin.*, Præf., I. ii., II. i. iii. ix., III. v., *c. Cels.* vi. 49–61, *Com. in Joh.* i. 17 and 22; Hippol. *Phil.* i. 1 f., *c. Noet.* 9–14; cf. Arnob. *adv. Gent.* ii. 58; Lactant. *Div. Inst.* ii. 10, vii. 5; *Symb. Apostol.*).

The Nicene Fathers make no distinct advance upon the cosmology of their predecessors. Athanasius refutes the heathen views of the origin and constitution of the universe (*c. Gent.* 6, 7, 29, 35–40), and emphasizes the co-operation of the Son in the work of creation (*c. Arianos*, i. 22, 29, ii. 21). Eusebius, in his *Præp. Evang.*, describes the cosmologies of the Phœnicians, Egyptians, and Greeks (i. 6–11), and later expands the Creation-story of the Hebrews, quoting, in confirmation of his own views, from Philo, Origen, Dionysius Alex., Maximus, Plato, and others (vii. 10–22, viii. 13 f., xi. 29–38, xiv. 23). Plato he assumes to have derived his knowledge of the creation and constitution of the universe from Moses. Eusebius then sets forth the teaching of the Stoics and Neo-Platonists by extended quotations, testing always by the Genesis story. The standard exposition of Gn 1 and 2 meets us in Basil's *Hexaemeron*. But the treatment here is homiletical and fervently religious. In this we are reminded of the early Christian view of things (NT; Clem. Rom. 20 and 33; Herm. *Past.* Vis. i. 3, 4, iii. 4, 1; *Didache*, 3 and 10).

Augustine has only incidental allusions to cosmology, but is chiefly interested in defending the Creator from complicity in the origin of evil. This he does by assuming that sin has its principal seat in the will. Rebellion against God on the part of both angels and men was the beginning of sin and the cause of 'all our woes, with loss of Eden' (*Conf.* vii. 5–7, 9, 15–20, xii. 7, 8, 12, 15–29, *de Civ. Dei*, xi. 4, 6–23, xii. 10–15). The eschatological element, which was so prominent in Apostolic times, has practically disappeared in Augustine. It began to wane at the opening of the 2nd cent., and diminished as the Church became established in the Empire and set about to conquer the world. In other respects the cosmological elements remain in about the same proportions.

The picture which the early Christians made for themselves of the cosmos and its related parts is not easily portrayed. The earth is, of course, central in their universe, and is surrounded and sustained from beneath by the chaotic watery abyss. Above is the firmament, which supports the heavens as a fixed vault, furnishing a path for the sun and all the planets. Beyond and above the firmament are the fixed stars, and all the hosts of heaven. The waters above the firmament are separated by it from the waters beneath, and serve as a fountain to refresh the earth with timely showers. Sheol, or Hades, was placed beneath the earth, and served as the prison-house, or waiting-place, for departed spirits. The cosmos as a whole was conceived as having been created for the sake of man and the heavenly intelligences, and as ruled over in wisdom and righteousness. It reveals the glory of God, and interprets His majesty and eternal Divinity.

E. K. MITCHELL.

2. Mediæval and modern.—In the period from the fall of the Roman Empire to the 10th cent. there was little thought upon these subjects. The leaders of the Church were content to follow the teachings of the Fathers, and Augustine's interpretation of the formation of the world was accepted without question. The first one to depart from the accepted belief, or to try to explain it in a philosophical way, was John Scotus Erigena. In his study of the writings of Dionysius he became acquainted with Neo-Platonic ideas, and he tried to apply these to the Biblical account of Creation. He departed from the views of the Fathers by bringing in the theory that all things emanate from God. His views are expressed in his book entitled *Concerning the Division of Nature*, including under 'Nature' the sum-total of existence. Nature in this sense is divided into four species: that which creates and is not created; that which is created and creates; that which is created and does not create; that which neither creates nor is created. The first of these—that which creates and is not created—is God as the essence, source, and substance of all things, the one Being who truly exists. Erigena's view is pantheistic, in that he teaches that God created the world out of His own essence. He held to an all-including unity because God is all. It was easy for him to reconcile his apparent pantheism with the teaching of the Church, by saying that the Divine essence was the nothing out of which the world was created.

Through the Middle Ages the Schoolmen gave little attention to the subject of Creation. They were content to accept the views which had been handed down to them, and those who failed to do this were sure to come into conflict with the Church authorities. It was agreed that the universe came into being and was sustained and governed by the Divine will. Whether the six days of Creation were days of twenty-four hours each was open to some discussion; but two points must be agreed to by the orthodox, viz. that the universe was created out of nothing, and that it was not from eternity, but had a beginning in time. The most profound thinker on this subject in the mediæval period was Anselm of Canterbury, who modified the traditional views by the introduction of Platonic ideas. He explains (*Monolog.* ix.) the meaning of the expression *ex nihilo* by saying that there is no way by which anything can be made by another unless it previously exists in the mind of the one making it. Before creation things existed eternally, from God and in God, as ideas. They did not exist as individuals, but in the sense that God foresaw and predestined that they would be made. They were in the Divine mind as an example, similitude, or rule of what was to be made. Before the making of the universe it was in the thought of the Supreme Being, but no material existed out of which it was to be made. Yet it was not nothing in its relation to the reason of the One making. By reasoning in this way Anselm is able to reconcile his philosophical views with the accepted interpretation of the account given in Genesis. There is one passage (*Cur Deus Homo*, i. 18) in which he implies that perhaps the six days of Creation were different from the days with which we are acquainted. Thomas Aquinas discusses the subject at considerable length, but adds little to the current views. He accepts the Biblical cosmology, admitting that there is room for a difference of opinion about the six days. Like Albertus Magnus, he teaches that Creation was a miracle which cannot be comprehended by the natural reason. He believed that it was not possible to demonstrate that matter was not eternal, deprecating the efforts of other men to make the temporal character of the material universe a matter that could be proven.

He taught that it was an article of faith to believe that the world was created in time.

Contemporary with the Schoolmen were the various heretical sects, differing in some respects from the orthodox in their views of the creation and government of the world. The most divergent from the commonly accepted views were the dualistic sects, which at the same time claimed to be Christian. They went by various names, such as Cathari, Albigenses, and so on. They seem to have gained their heretical views from contact with the religions of the East, where dualism was very common at the time. In general they held that there were two principles, or spirits, or creators, which had to do with the making of the universe visible and invisible. These two were the good and the evil, and both were from eternity, though some held that the evil spirit was originally good and had fallen from his first estate. The evil spirit was the author of the OT, and the maker of all visible Nature. He had created man as a physical being, and was the cause of all natural phenomena and all disorders in Nature. The good spirit was the author of the NT. He was also the creator of the human soul, which had been captured and imprisoned by the evil spirit.

In the later Middle Ages there arose various schools of Mystics. Some of these were heretical and frankly pantheistic. Others, like Master Eckhart, considered themselves orthodox Christians, but were unable to escape the suspicion of pantheism. Eckhart was in agreement with Aquinas in his belief that there existed from eternity a world of ideas distinct from the world of creatures. He explained what seemed to his contemporaries to be pantheism, by saying that creatures are made in time and out of nothing, and that they existed from eternity in God in the same sense that a work of art exists in the mind of the artist before it takes material form. The existence of the creation from all time was in the Divine reason. God exists in created visible objects as their essence. The external world is but the reflexion of the innermost essence of God.

The modern Roman Catholic Church holds to the teaching of Aquinas, but allows a difference of opinion on unimportant points. What a Roman Catholic must believe to-day in regard to cosmology and cosmogony is defined by the Vatican Decrees. The Council declared against the statement that matter alone exists, and in opposition to the view that the substance and essence of God and of all things are one and the same; also in opposition to the view that finite things, both corporeal and spiritual, or at least spiritual, have emanated from the Divine substance, or that the Divine essence by the manifestation and evolution of itself became all things, or that God is universal or indefinite Being, which, by determining itself, constitutes the universality of things. The positive statement by the Council was that God from the very beginning of time produced out of nothing the world and all things both spiritual and corporeal.

The Protestant position, as given in the earlier creeds, is merely a paraphrase of the cosmology found in Genesis. The Westminster Confession states: 'It pleased God in the beginning to make or create out of nothing the world and all things therein in the space of six days' (iv. 1). The Belgic Confession is more explicit: 'We believe that the Father by the Word created of nothing the heavens, the earth, and all creatures, as it seemed good unto Him, giving unto every creature its being, shape, forms, and several offices to serve its creator.' 'We believe that He doth also uphold and govern them by His infinite power for the service of mankind to the end that man may serve His God' (Art. xii.).

There is, of course, no authoritative statement for Protestantism relating to Christian cosmology and cosmogony. With the freedom of investigation which characterizes modern Protestantism, there are many divergent views. Some still hold to the statements of the older creeds, and believe that the conclusions of science have nothing to do with religion. The extreme holders of this position maintain that the world was made in six days of twenty-four hours each, but this view has a decreasing number of adherents. Others believe that the account of Creation given in Genesis is strictly scientific, and that the statements there found correspond in a minute degree to the facts of geology. Others consider that the account in Genesis agrees with the facts only in a general way. Others regard the account as a myth or legend corresponding to the Creation stories in Assyrian and Babylonian literature. The only points upon which modern Protestants agree are that God is the source of the universe; that it came into being as a result of the free exercise of His will; and that it is continually under His care and control.

COSMOGONY AND COSMOLOGY (Egyptian).—

We shall here divide this subject into three stages: (1) earth-myths, (2) sun-myths, (3) theology.

1. Earth-myths.—The attention of primitive man was naturally first directed to explaining tangible Nature—the earth, the sea, and the mists which lay on the land. The most elementary distinction between racial views is the sex of the earth and of the abyss or sea, which from its blueness was naturally thought to be of the same nature as the blue sky—the heavenly ocean. In Egypt the sky (Nut) was feminine, the land (To) was masculine. Exceptionally in the 13th cent. B.C., when Semitic influence was strongest, the sexes were reversed, as in Hebrew *shāmayīm* ('heavens') is masculine, and *'ădāmāh* ('earth') is feminine. Similarly in Babylonia, Ea (the deep) and Anu (the sky) are masculine, while Damkina (the land) is feminine. The same attribution is adopted by Greek, Latin, and German, and in the New Zealand mythology. Egypt was, therefore, exceptional in the sex of land and sky.

These elements of land and water were thought to have been evolved in the primal chaos of the universal ocean (Nu or Nun), when 'not yet was the heaven, not yet the earth, men were not, not yet born were the gods, not yet was death' (Pyramid of Pepy I., l. 663).

This idea passed to Hesiod, along with the same sexes as in Egypt:

> 'From chaos were generated Erebos (masc.) and black Night (fem.),
> And from Night again were generated Ether and Day,
> Whom she brought forth, having conceived from the embrace of Erebos.' (*Theogony*, 123 ff.)

He probably derived it through the Sidonians, who, Damascius asserts, 'before all things place Chronos, and Pothos, and Omichlês. And by a connexion between Pothos and Omichlês, as the two principles, are generated Aer and Aura.' This view then seems to have prevailed in the eastern Mediterranean.

The lifting of the watery mists, which are seen rising each morning from the Nile, the parting of them from the earth and the raising of them to the sky, was a wor' variously attributed

to Ra (the sun) or Shu (the atmosphere). The heaven (Nut) was forced apart from the earth (Keb or Seb); and usually Shu is represented upholding Nut over his head.

Similarly in New Zealand, the earth and heaven clave together in the darkness, and had produced gods and men. The gods try to part them, but cannot until the god and father of forests, birds, and insects strives; 'his head is now firmly planted on his mother the earth, his feet he raises up and rests against his father the skies, he strains his back and limbs with mighty effort. Now are rent apart Rangi and Papa, and with cries and groans of woe they shriek aloud. . . . It was the fierce thrusting of Tane which tore the heaven from the earth, so that they were rent apart, and darkness was made manifest, and so was the light' (G. Grey, *Polynes. Mythol.*, Lond. 1855 [reprint, p. 3]).

In Egypt it was similarly assumed that Seb and Nut had produced Ra or Shu before they were separated.

2. Sun-myths.—The genesis of the sun (Ra) is variously attributed to Seb and to Nut. According to one view, Ra was 'the egg of the great cackler,' Seb being, by a play on words, equated with the goose. In another view, Ra was born as a calf of the celestial cow, or child of the sky-goddess; and this may be the motive for regarding the sky as feminine. Another, and a more general, view, when the theologic frame of creation came forward, was to posit the formation of Ra direct from the chaos Nun, and so make him an ancestor of Seb and Nut. Probably this view was that of the Heliopolitan Ra-worshippers, as distinct from the older Seb- and Nut-worshippers in the Nile valley. Ra came into being 'while as yet there was no heaven, . . . and there was nothing that was with him in that place where he was . . . resting in the waters of Nun, and he found no place where he could stand' (Erman, *Religion*, p. 26). Ra then united with his own shadow, and from his seed created Shu and Tefnut, in the midst of the chaos. Shu certainly represents space or air, symbolized by an ostrich feather; Tefnut represents moisture. From Shu and Tefnut were born Seb and Nut; and from them, in turn, the Osiride family, and mankind.

The heaven was regarded as an ocean parallel with that on earth. It was on the heavenly ocean that the sun, the moon, and the stars sailed in ships each day and night. To explain the sun's re-appearing in the morning, they supposed a nocturnal ocean beneath the world, on which the sun sailed as by day. The dead were, on this view, considered as joining the boat of Ra, and sailing, under his protection, through the hours of the night as well as of the day.

3. Theology.—The gods associated with creation are many. *Khnumu*, 'the Shaper,' who shapes living things on his potter's wheel, 'created all that is, he formed all that exists, he is the father of fathers, the mother of mothers . . . he fashioned men, he made the gods, he was father from the beginning . . . he is the creator of the heaven, the earth, the under world, the water, the mountains . . . he formed a male and a female of all birds, fishes, wild beasts, cattle, and of all worms' (Wiedemann, *HDB*, vol. v. p. 179[b]). He is figured always with the ram's head, to signify his creative power, and was worshipped at the source of the Nile—the cataract. *Ptah*, 'the Great Artificer,' the Demiurge, shapes the sun- and moon-eggs on his potter's wheel; he is the god of law and order who created all things by *Maat*, truth or exactness. *Osiris* 'formed with his hand the earth, its water, its air, its plants, all its cattle, all its birds, all its winged fowl, all its reptiles, all its quadrupeds.' This is the development of the primitive idea of Osiris as a god of vegetation. *Amon-Ra* also, on the growth of his worship when Thebes was the capital, became 'the father of the gods, the fashioner of men,' and all other things (see Wiedemann, *loc. cit.*). *Thoth*, according to Hermopolite legend, when in the chaos of Nun, created Seb and Nut by his word; and they were parted asunder at Hermopolis. This creation by the word was the highly spiritualized idea of later times, and is seen in the *Korĕ Kosmou* (500 B.C.), where Thoth-Hermes is first of the gods.

Other sky-gods are *Anher*, 'He who goes above,' god of Thenî or Girgeh; and *Horus* as the sky, supported by four pillars who are the four sons of Horus. The mixtures of ideas in later times are so complex, and so combined with the theology, that we cannot touch on them here. Our object has been to show the primitive ideas, and the various nuclei of thought which were combined.

W. M. FLINDERS PETRIE.

COSMOGONY AND COSMOLOGY (Greek).

—Since the word 'cosmogony' describes the origin of the universe by the figure of birth, it suggests to us in the first instance accounts of a mainly poetic and mythological kind. Yet science also has its fairy tales, and one who sought for information about Greek cosmogonies might not unreasonably look for some account of that, for example, which is contained in the *Timæus*. If this be introduced, so should those of one or two other philosophical systems. We propose, therefore, to deal first with what may be called the *poetic* cosmogonies, and afterwards with the *philosophical*. We shall devote rather more space to the former, as being probably less familiar to most readers. In the case of the latter, we shall take three typical examples, describe them briefly, and try to show the place of each in the history of Greek thought as to the relation between God and the world.

I. *POETICAL COSMOGONIES.*—1. Homer.—We find in Homer not a complete cosmogony, but ideas of a cosmogonical kind, or, rather, of a geogonical, as all he is concerned about is the world in which we live. In *Il.* xiv. 246, Oceanus is the father (γένεσις) of all the gods, and in xiv. 201 he is the father, and Tethys the mother. The latter name is usually derived (F. Lukas, *Kosmogonien*, p. 154 n.) from θῆσθαι, 'to suck' (τήθη = 'nurse'). Tethys will then symbolize the suckling mother, Earth. But behind these Nature-powers stands a third still more august, the goddess Night. In *Il.* xiv. 244, Zeus is referred to as younger, indeed, but more potent, than Oceanus; Night, on the other hand, even Zeus fears to offend (*ib.* 259 ff.). Lukas, therefore, follows Damascius (6th cent. A.D.), our chief authority on the first principles of the Greek cosmogonies, in supposing that, for Homer, Night was the supreme geogonical conception (Damasc. περὶ πρώτων ἀρχῶν, c. 124, ed. Kopp, 1826, p. 382).

2. Oldest Orphic cosmogony.—To this head Lukas refers those fundamental conceptions which in various fragmentary notices are directly ascribed to Orpheus. Not the least evidence of their antiquity is their practical identity with what we have found in Homer. Eudemus the Peripatetic declared, according to Damascius (*l.c.*), that Orpheus made his beginning with Night. John Lydus (6th cent. A.D.) stated that Orpheus' three first principles were: Night, Earth, Heaven (Lobeck, *Aglaoph.* 1829, i. 494). Plato, again, quotes a couplet as from Orphens, describing Oceanus and Tethys as the first wedded pair (*Crat.* 402 B), while he informs us in the *Timæus* (41 A) that Oceanus and Tethys were the offspring of Earth and Heaven. As the former statement is expressly referred to Orpheus, we may be sure that he had the same

real or fancied authority for the latter. In this Orphic cosmogony, it will be seen, Oceanus and Tethys are a degree less venerable than in Homer; Earth and Heaven are the older pair. Yet the difference is insignificant, and here, as in Homer, Night is the supreme conception. According to Gruppe (*Griech. Culte*, etc., 1887, i. 613 f.), the cosmogony of *Il.* xiv. was borrowed from the Orphic. But the question of their relation is an extremely difficult one, which cannot be discussed here.

3. Hesiod.—In the introduction to his *Theogony*, Hesiod actually names Earth, Heaven, and Night—the reputed Orphic trinity—as the sources of the gods (verses 106–107); and one feels that, whatever its origin, he is using a familiar and probably already ancient formula. But, at the outset of the poem proper, he proceeds to give us what in fact, though not in name, is a cosmogony of his own (verses 116–136). Its outline is as follows: In the beginning was Chaos, after whom, on the one hand, came Gaia and Eros, and, on the other, Erebus and Night. Erebus and Night were the parents of Æther (or Light) and Day. Gaia of herself produced, first Uranus (Heaven), that he might be a cover to her round about, and that she might be a secure dwelling-place for the gods; and after him the mountains and seas. Lastly, mating with Uranus, she became mother of all the gods, except the few who sprang from Erebus and Night.

At the top, then, of Hesiod's cosmogony stands Chaos. Its meaning has been variously interpreted by ancient no less than by modern commentators. It has been taken for Water, Air, Fire, and Space (cf. for ref. Lukas, *op. cit.* p. 157 f.). Etymology has been appealed to in each case. But no derivation seems more probable than that from χα or χαν (the root of χαίνω, 'to gape,' χάσκω, χάσμα, Lat. *hisco, hiatus*, etc.). Thus we get the meaning of Space, and this further accords with the manner in which Hesiod seems to have arrived at his first principle, viz. by *abstraction*. In pondering the origin of the universe, he thinks away one by one its various contents, until he reaches Space as the final presupposition of all things. As Time comes first in the Phœnician cosmogony given by Eudemus, and, as we shall see, in some Greek cosmogonies, so does Space in this of Hesiod. Zeller (*Pre-Socr. Phil.* i. 88 f.) agrees with Lukas that Space was Hesiod's first principle, and that he reached it by abstraction, but thinks that Hesiod pictured it 'as an immeasurable, waste, and formless mass,' while Lukas understands by it the mere unlimited void.

On the next cosmogonical stage we have two pairs, of which the first is Gaia and Eros. Gaia is Earth, not however as an element, but as a vaguely conceived mass. There is, at first sight, something detached about the appearance of Eros. He enters the stage with the others, but seems to perform no rôle. But the reason is that he is a potency rather than a person. He is the soul of all the unions here recorded. He is the Eros, not of art, but of early local cult like that at Thespiæ (Paus. ix. 27. 1), who was life and love in one, and was taken over by the Orphics (cf. Gomperz, *Gr. Thinkers*, i. 89, and, for the connexion of Eros with the Orphics, J. Harrison, *Proleg. to Gr. Relig.* ch. xii.). We are not told *how* Gaia and Eros came into being. They may symbolize matter and spirit, but they are not derived from Chaos as a higher principle. The ruling principle of the cosmogony is not that of cause and effect, but that of sequence in time. We only hear that Gaia and Eros came afterwards (ἔπειτα). And the same is doubtless true of the second pair, Erebus and Night. They are said to have come ἐκ Χάεος, but the ἐκ may be merely local (Space being referred to), or temporal, or both. Accordingly Gaia, Eros, Erebus, and Night occupy together the second cosmogonical stage.

A step further removed from Chaos are Æther and Day, who are children of Erebus and Night. So the unrelieved darkness gives place to the succession of night and day. Earth also at this stage gives birth to Heaven, that he may shield her with his vault, to the mountains also and the seas; and then, when all is ready for their reception, Earth and Heaven become the parents of the gods.

In Hesiod's cosmogony there is no real attempt to explain the *causes* of things. But it has, according to Lukas, two elements of speculative worth—the conception of *purpose* in creation (the provision of a safe home for the gods), and the far-reaching *abstraction* by which the poet goes back to Space, and then step by step reconstructs the world.

Passing by Acusilaus, a prose chronicler of the 6th cent., and, like Hesiod, a native of Bœotia, whose cosmogony, contained in Damascius, resembles Hesiod's, and has also a marked Orphic colouring (Lukas, *op. cit.* pp. 162–163), we come next to—

4. Pherecydes.—He was a native of Syros, but lived at Athens at the court of Pisistratus (6th cent. B.C.). At Athens 'he founded an Orphic community, though how far he was the disciple and prophet of the Orphic doctrines we are hardly able to say' (Gomperz, *op. cit.* i. 86). His own work has been lost, but numerous notices, which have come down to us from ancient times, and which relate to various parts of his cosmogony, enable us to form, though with reserve on some disputed points, a tolerably full as well as reliable estimate of his system. According to both Damascius (c. 124, ed. Kopp, p. 384) and Diog. Laert. (i. 119), Pherecydes derived the universe from three first principles—Zas (=Zeus), Chronos, and Chthonia (or Chthon). At the summit of the cosmogony, then, stands Zeus. He is probably best regarded as a purely spiritual principle (so, *e.g.*, Arist. *Met.* xiv. 4, 1091a, and many moderns, but cf. *e.g.* Zeller, *op. cit.* i. 91), so far as mind was consciously distinguished from matter at that early date. The spiritual interpretation is confirmed by the statement of Proclus (5th cent. A.D.)—which at the same time presents a new and interesting phase of the cosmogony—that the Zeus of Pherecydes changed himself into Eros when he meant to create the world (*Tim.* 155). Zeus as such, therefore, stands outside the world; he is the principle of supreme might. Chronos, the second member of the trinity, naturally denotes the Time, in which everything happens, and occupies an analogous position to Space in Hesiod's cosmogony. Lastly, Chthonia must be taken to mean either primary matter (Lukas, *op. cit.* p. 170) or the Earth-spirit (Gomperz, *op. cit.* i. 88).

Some of the ancients asserted that *water* was Pherecydes' first principle; but this conflicts not only with Diog. Laert. but with the more detailed account of the cosmogony given in Damascius. A full discussion of this obscure and difficult question will be found in Lukas, *op. cit.* pp. 163–170, or Zeller, *op. cit.* i. 93–94 n.

As regards the relation of the three principles to one another, Damascius implies that Zeus was in some sense first; but his exposition is purely Neo-Platonic. It is safer, therefore, to trust the more objective Diogenes, according to whom the three first principles of Pherecydes were alike eternal (ἦσαν ἀεί).

The cosmogony begins when Chronos produces from his seed Fire, Air, and Water, who then in turn beget the five families of the gods. Thus gods and elements alike are the offspring of Time. And now Zeus-Eros plans to create the world. But at this stage, according to Max. Tyrius (*Dissert.* xxix. p. 304, ed. Davis; cf. also Celsus *ap.* Origen *c. Cels.* vi. 42, *et al.*), a fearful conflict intervenes between Cronos (not to be confused with Chronos) and the

dragon Ophioneus for the lordship of Nature. Only when Cronos wins and the dragon is cast into the sea can Zeus set about his creative task. The episode is not quite of a piece with the cosmogony, since Zeus is from eternity,—there is no Cronos before him. But there is no reason to doubt that Pherecydes employed the myth. Perhaps, as Philo of Byblus states (*ap.* Eus. *Præp. Ev.* i. 10, 33), he borrowed it from the Phœnicians. In any case the meaning is clear: before the ordered world, the κόσμος, can be established, a victory must be won over the forces of disorder.

The final stage is related by Clem. Alex. (*Strom.* vi. 621 A): 'Pherecydes the Syrian says: Zas makes a mantle, large and fair, and broiders on it earth and ocean and ocean's dwellings.' Again he speaks (*ib.* 642 A) of 'the winged oak and the embroidered mantle that rests upon it.' The 'winged oak' is no doubt 'the earth floating freely in space'—a conception lately introduced by Anaximander (Gomperz, *op. cit.* i. 89). The rest of the imagery explains itself.

Points of likeness between the cosmogonies of Pherecydes and Hesiod will readily occur to the reader. Here we only note points in which Pherecydes marks an advance. In the first place, Zeus, according to the interpretation here followed, and even on the lower, is a more spiritual conception than Chaos (Space). In the second, there is a certain suggestion of science in the cosmogony. The four elements are named before the formation of the world. So far, indeed, as our accounts go, Pherecydes does not work the suggestion out. On the other hand, he clearly treated Eros (Love) as a cosmical principle, and one cannot but suspect that, if his whole work had reached us, we should have found that Zeus-Eros used the elements as materials for his creative task.

Damascius (c. 124, ed. Kopp, p. 385) gives a fragment of a cosmogony by the Cretan Epimenides (c. 600 B.C.). In this cosmogony we meet for the first time among the Greeks the doctrine of the World-Egg. But it is little more than mentioned, and so we shall pass at once to give some account of the later Orphic cosmogonies, in which it plays a prominent part.

5. **Later Orphic cosmogonies.**—In a former section we dealt with certain thoughts about the origin of the world which were ascribed to Orpheus, but here we are dealing with entire systems. They are highly mystical and pantheistic, and, though fanciful and grotesque, are most naturally referred to a period of religious and philosophical syncretism. Hence some critics like Zeller (*op. cit.* i. 100 ff.) refuse to regard any of them as earlier than the 1st or 2nd cent. B.C. Others, however, assign a much earlier date to the one which Damascius tells us was contained in the current 'Rhapsodies,' and which he describes as the usual Orphic theology. Thus O. Gruppe (in Roscher, *s.v.* 'Orpheus') argues strongly, but cautiously, in favour of the view that it was formed in the 6th cent. B.C. on the basis of a still earlier Orphic myth. To this system we now turn our attention.

(1) *Rhapsodist cosmogony.*—This includes what the Orphics taught both about the Divine nature and about its relation to the world. The fullest account of the former is contained in Damascius (c. 123, ed. Kopp, p. 380). He must, indeed, be used with caution, owing to his Neo-Platonic bias. Lukas points this out, but thinks he may be trusted for the number, sequence, and names of his first principles. In this he seems to go too far, but, if we combine all that is essential in Damascius with what we learn from other sources, especially Orphic fragments (for which cf. Gruppe, *l.c.* p. 1139), we reach the following result, which will be found in essential agreement with what, for example, is contained in Zeller (*op. cit.* i. 104) or in Gruppe (in Roscher, *s.v.* 'Phanes'). At the summit of the system stands Chronos (Time). Next come Æther (bright, fiery substance, cf. 'Stoic cosmogony' below) and Chaos (Space). Lukas observes that, though Time is named before Space, it is not viewed as producing it, but merely as the active principle, while Space receives that which arises in Time (but cf. Zeller, *l.c.*). After Æther and Chaos comes the Egg, which is viewed sometimes as the offspring of Chronos and Æther (fr. 53), sometimes as that of Æther and Chaos (Proclus, *Tim.* i. 138). In either case it springs from Æther, and is thus, as Lukas calls it, an Egg of Light. Damascius elsewhere describes it as ἀργύφεον, 'silver-white.' And it deserves the name, not only because it was formed from the light of heaven, but because from it, as we shall see, Phanes, the light of the world, proceeded. Finally, there issues from the Egg the first Orphic god. Damascius, who favours trinities, calls him Phanes-Ericapæus-Metis, which is generally interpreted 'Light, Life-giver, Counsel.' But, above all, he is Phanes, 'Light,' who becomes at will the light of reason, the light of life, and—for he is also Eros—the light of love. As first-born of the gods he is Protogonos. There is something sublime in these conceptions. But Phanes was also 'polymorphic, a beast-mystery god,' a creature monstrous and grotesque, as in the fragment quoted by Proclus (*Tim.* ii. 130):

> 'Heads had he many,
> Head of a ram, a bull, a snake, and a bright-eyed lion'
> (J. Harrison, *op. cit.* p. 651).

Such was the Orphic doctrine of the Divine nature. It had one feature which, according to Lukas, gave speculative value to the Rhapsodist cosmogony. This is the effort to explain the origin of life. While many cosmogonies *begin* with a Divine being, the Orphic sees in his God the last stage in the evolution of life out of the lifeless.

We have next to consider Phanes' relation to the world. He had in him all the forces, or σπέρματα, out of which it sprang. Hence, though he was sometimes called its creator, he was generally thought of as having given it birth. The idea took the form of a theogony, in which the successive dynasties of gods represent the successive stages in the evolution of the world. In this process, part of the god became the world's life; with the other he withdrew as sun into the heavens, where only Night could look on him, while his splendour amazed the other gods. But when Zeus attained to sovereignty he devoured Phanes. Thus the old order was dissolved, but thus also Zeus became the sum of all things. He *became* Phanes (see next section), and from him a new race of gods, a new world, sprang. In his son, Dionysos, the god of the mysteries, Phanes was born again. Like Phanes, Zeus became the world—Ζεὺς κεφαλή, Ζεὺς μέσσα, Διὸς δ' ἐκ πάντα τέτυκται (fr. 123),—but, like Phanes also, he dwelt apart, for his mind was the ether (Gruppe, in Roscher, *s.v.* 'Orpheus' and 'Phanes'; Pauly-Wissowa, *s.v.* 'Orpheus'; Zeller, *op. cit.* p. 104 f.; J. Adam, *Relig. Teachers of Greece*, p. 95 f.; Lobeck, *Aglaoph.* 518 ff.; fr. 120 ff.).

The story of the swallowing of Phanes has usually been explained as a device to recover for Zeus his ancient dignity as source of life—for had he not long ago devoured Metis and borne Athene? This could be done by showing that he swallowed Phanes who was *also* Metis. But Gruppe sees in the story a different motive. It was to depict the periodical renewal of the universe, which he regards as the ground thought of the Rhapsodist cosmogony. This was a feature of Stoic cosmo-

gony (see below) to which the Orphic doctrine has other points of resemblance—especially its pantheistic materialism, and its view of Æther as the principle of Divine life. On the whole, it is difficult not to believe that there was a close connexion between the two cosmogonies, on whichever side the borrowing lies.

(2) *The cosmogony of Hieronymus and Hellanicus.*—From the Rhapsodist theogony, Damascius passes to one which he describes as ἡ κατὰ τὸν Ἱερώνυμον φερομένη καὶ Ἑλλάνικον. It is uncertain, and cannot be here discussed, whether it was known to Hellanicus of Lesbos in the 5th cent. B.C., or was published under his name by Hieronymus in one of the later pre-Christian centuries. It was generally Orphic in character, but differed, as Damascius indicates, from the current Orphic theology. We cannot, indeed, be sure as to its precise form. This is due chiefly to the fact that we find in Athenagoras (2nd cent. A.D.) what is evidently a different version of the same original doctrine. The differences will be afterwards mentioned. Meantime we shall notice briefly the main points in Damascius' version.

At the head of this cosmogony we find, not Chronos, as in the last, but—Water and Slime. Out of these springs Chronos. This does not mean that Time is not viewed as an active first principle, but only that it is more concrete. Here Time is viewed as force—force which presupposes matter to work on. The Orphic imagination runs riot in depicting this force. Chronos is a winged dragon with the heads of a bull and a lion, and betwixt them the face of a god. He is Chronos-Herakles-Ananke-Adrasteia. Herakles betokens his might, Ananke his necessity, Adrasteia his inevitability. Next, Chronos produces Æther, Chaos, and Erebus. We met Æther and Chaos in the Rhapsodist cosmogony, but here they follow after primary matter, and so Æther is more grossly conceived as *humid* (ὑγρός). In the same way Erebus is *misty* (ὁμιχλώδες). Lastly, in the midst of the vaporous space, with its mingled light and gloom, Chronos produced an Egg (ᾠὸν ἐγέννησεν). This naturally implies that it partook of the substance with which space was filled. It was, therefore, formed out of grosser elements than the Egg of the Rhapsodist cosmogony. Thus also we are told that it had within it the seed of male and female, and likewise of all manner of things without life. For this very reason it better deserves to be called a World-Egg. But it is not an Egg of Light. And, lastly, we have the same contrast in the Divine Being, the Maker and Ruler of the world, who issues from the Egg. In his monstrous and grotesque form he resembles the first-born God of the other cosmogony. But he has lost his title of Phanes, the god of light, and appears as Protogonos-Zeus-Pan.

As compared with the current Orphic doctrine, that just examined is marked by a certain coarse realism. Both in form and spirit it is less distinctively Greek. In some points, indeed, it closely resembles the Phœnician cosmogony, and Zeller maintains that its author borrowed directly from that source (*op. cit.* i. 102-3 n.; but, on the other side, cf. Gruppe, in Roscher, *s.v.* 'Orphens,' p. 1141).

In describing the Orphic doctrine, Athenagoras, who was a Christian, no doubt selected the cosmogony of Hellanicus and Hieronymus because he saw most in it to condemn. But what specially concerns us is the form in which he presented it. The series begins with Water and Slime, and out of these Chronos-Herakles is evolved. But here the resemblance to Damascius ceases. No mention is made of Æther, Chaos, and Erebus. Chronos-Herakles produces a gigantic egg, which breaks into halves, of which the upper forms the heaven, and the lower the earth. In this naïve conception there is clearly no element of speculative value. The egg has no special significance beyond its shape. On the other hand, in the cosmogonies described by Damascius, the World-Egg is an expression of the profound thought that the universe is an organism, gradually formed from an original germ, in obedience to the same law which governs every living thing.

(3) Before leaving the Orphic cosmogonies proper, we may briefly notice three others of minor importance. (*a*) The first and the best known is that of *Apollonius Rhodius* (3rd cent. B.C.), who in the *Argonautica* (i. 494 ff.) puts into the mouth of Orpheus some verses describing the origin of the world. Here the separation of the four elements is ascribed to the action of Discord—an idea evidently borrowed from Empedocles. The legend of Ophioneus and Chronos, which was used by Pherecydes (see above), is introduced in a somewhat different and, judging by internal evidence, less authentic form (cf. Gomperz, *op. cit.* i. 91). (*b*) *Alexander of Aphrodisias* (3rd cent. A.D.) gives us the following series: Chaos, Oceanus, Night, Uranus, Zeus. This, it will be seen, resembles the older rather than the later form of Orphic cosmogonies. (*c*) Lastly, the author of the *Clementine Recognitions* (x. xvii.) gives a brief summary of Orphic doctrine. Some of the first principles, notably the Egg and Phanetas, remind us of the Rhapsodist cosmogony, but the account as a whole is less coherent, and strikes one as probably less accurate, than that of Damascius.

6. Aristophanes.—In one famous passage (*Av.* 693 ff.) Aristophanes depicts the origin of the universe. In the beginning were Chaos, Night, Erebus, and Tartarus. Into the bosom of Erebus, Night laid a wind-born egg (ὑπηνέμιον ᾠόν) from which, as the seasons rolled, Eros sprang, gleaming with golden wings. Eros blended all things together, and from their union Heaven, Ocean, Earth, and the race of the gods were born. J. Harrison (*op. cit.* p. 626) calls the passage about the birth of Love 'pure Orphism.' And, indeed, Gruppe (in Roscher, *s.v.* 'Orpheus,' p. 1121) maintains that the gold-winged Eros springing from the egg was part of the oldest Orphic doctrine. But some details in the passage remind us of other cosmogonies, especially that of Hesiod (cf. Lukas, *op. cit.* p. 196).

The 'theologians,' as Aristotle calls those whose doctrines we have been considering, represent a perfectly distinct phase of Greek thought. 'Their mind was less scientific than that of the "physiologists." They made a far keener demand for a vivid representation of the origin and development of the world' (Gomperz, *op. cit.* i. 85). Nor were they satisfied with the current mythology. Its tales were perhaps too immoral. Certainly its cosmogony was too vague. And so they sought to fill up its gaps partly from local legend, partly from the traditions of foreign peoples.

Gomperz has striven to show (*op. cit.* i. 92-97) that various features in the Greek cosmogonies—the World-Egg, the two-fold nature of the Orphic godhead, in which the male and female attributes were united, and the important position occupied by Chronos as the Time-principle—were ultimately derived from Babylon, although the two former had probably their direct source in Egypt, but a discussion of this question would carry us beyond our present limits.

II. *PHILOSOPHICAL COSMOGONIES.*—The cosmogonies we have examined, though not without elements of speculative value, are essentially hypothetical in character; those to which we now turn represent the effort to explain the world on philosophical principles, and in each case from a distinct philosophical point of view. For this very reason, however, they cannot be properly understood or appreciated apart from the general movement of Greek thought. This, therefore, we must also try very briefly to indicate.

1. Early Ionian philosophers.—The earliest Greek philosophers were natives of Ionia in Asia Minor. Beginning with Thales, who flourished at Miletus about 600 B.C., they each sought to explain

the universe from a single, and that a material first principle. They discussed more or less fully the nature of the changes which the primary matter underwent, but the ultimate cause of the movement, by which the world in all its parts was formed out of material elements, was a subject on which Thales and his immediate successors had little or nothing to say. The reason was that they regarded the cause as inherent in the nature of matter itself (Gomperz, *op. cit.* i. 56). This was also true of Heraclitus of Ephesus (*c.* 500 B.C.): to him also matter was 'organically alive' (*ib.* p. 66). But a great step in the history of Greek speculation is marked by his doctrine of the *Logos*, by which he gave expression to the thought that the world-forming process must be guided by Intelligence. He taught, indeed, that all reality is material, and that the primary element is Fire; but, as he assigned to the latter the attribute of reason, he called it also the Logos. In other words, the Logos viewed on its corporeal side was Fire, and Fire viewed on its spiritual side was the Logos (J. Adam, *op. cit.* p. 224). Here, then, a first principle was postulated, which was at once material and rational, and it was on this basis that the Stoic cosmogony (see below) was afterwards reared. But before that time the great thinkers of Greece had sought to show that the world was framed by God as at once a rational and non-material Being, and Heraclitus at least paved the way for that conception when he endowed his First Cause with the attribute of reason.

2. The first Greek philosopher who traced the world to a non-material agency was Empedocles (*c.* 450 B.C.). He did this in his doctrine of the four elements, whose movements were determined by the twofold agency of Love and Discord (J. Adam, *op. cit.* p. 245). But a far more important step in the direction of idealism was taken by Anaxagoras, who, though born rather earlier than Empedocles, probably had the work of the latter before him when he wrote (*ib.* p. 254). According to Aristotle, it was Anaxagoras who first pointed to the real cause of the movement by which the world was formed. This cause he named Nous, or Reason, to which also he seems to have attributed a mainly, if not exclusively, transcendent existence (*ib.* p. 371).

3. Plato.—Though Anaxagoras did not make much use of his great conception, it led to far-reaching results. Especially it brought into clear view the opposition between matter and spirit. The opposition may not be absolute, but it was naturally the distinction between the two which first occupied the attention of philosophers. It was the chief problem of Plato's Dialectic. But it is with its cosmological aspect that we are here concerned. If the First Cause was purely immaterial, how could He act on matter at all so as to create the world? In this question and the answer to it lies the chief significance of the cosmogony which Plato has set before us in the *Timæus*:

> Even apart from much that does not strictly belong to it, the cosmogony of the *Timæus* is intricate, but here it will be enough to consider its main ideas. For a fuller exposition and discussion the reader may be referred to Jowett's *Plato*, vol. iii., or to Adam, *op. cit.* p. 360 ff.

God formed the world out of a material so intractable that it could not be completely moulded to His will. But He introduced into the primary substance 'as many proportions *as it was possible* for it to receive' (*Tim.* 69 B). The stubborn power, which thus resists the Creator, Plato calls 'Necessity.' It is the root of evil in the world, and, as it will not wholly yield to God, 'the Creator in Plato is still subject to a remnant of Necessity which he cannot wholly overcome' (Jowett, *Plato*, iii. 391).

In forming the world, God gave it a Body and also a Soul. (1) *The body.* On certain portions of primary matter, which was formless and chaotic, God imprinted various mathematical 'forms' and 'numbers' (*Tim.* 53 B). Thus arose the four elements of which the body of the universe was composed. The idea of a Divine mathematician, in which Pythagorean influence is plainly visible, runs through the whole account of creation. According to Plutarch, Plato said that God is always playing the mathematician (*θεὸς ἀεὶ γεωμετρεῖ*). (2) *The soul.* Plato describes the elements of which the World-Soul was composed, but his account is highly metaphysical, and need not detain us here. It is enough to examine its attributes. Of these the first is Motion. It is manifested in the movements of the planets (*Tim.* 36 D), but it has other aspects, not directly referred to in the *Timæus*, which are important in estimating the nature of the World-Soul. According to the *Laws* (x. 896 A), the essential quality of soul is self-movement. Further, the Soul is the cause of movement in other things, and by movement (*κίνησις*) Plato understood every kind of change (*ib.*, *Phædrus*, 245 C). The World-Soul, therefore, is the cause, not only of locomotion, but also of 'separation and combination, growth, decay, and dissolution' (J. Adam, *op. cit.* p. 368). The second attribute is Intelligence. It is here to be taken in the widest sense, for we are given to understand that the World-Soul apprehends not only ideas, but sensible realities, and such as lie between the two (*ib.* p. 369 f.). On the other hand, 'the World-Soul, as described in the *Timæus*, has nothing analogous to the principles of anger and desire . . . which, according to Plato, constitute so large and turbulent a portion of the human soul' (*ib.* p. 370). Plato speaks of the World-Soul as *created*. In what sense he used the term he nowhere precisely explains, but there can be little doubt that he thought of an emanational process. Such is the view of the writer just quoted, who thus sums up the cosmogonical process: 'At the beginning of Time, God created the Universe. A spirit or soul went forth from him, and inhabited the body which he redeemed from chaos by imprinting mathematical forms on primordial matter' (*ib.* p. 373).

The universe, thus formed of body and soul, is described as *εἰκὼν τοῦ πατρός, μονογενής*, 'image of its Creator, only-begotten.' Thus it is related to Him as son to father. Further, it is itself a god, a *θεὸς αἰσθητός*, or 'perceivable god' (*Tim.* 92 C). On the other hand, the Creator is a Being mysteriously remote, 'hard to discover' (*ib.* 28 C), who, when He had made the world, 'abode in his own nature' (*ib.* 42 E).

We may now see how the Platonic cosmogony was an attempt to explain the world on dualistic principles. Since God as pure thought could have no contact with matter, Plato was obliged to assume for the work of creation some formative principle separate from God Himself. Hence the separate existence of the mathematical forms imprinted on matter, and especially of the World-Soul incorporated within it. It is from this point of view that Caird describes the World-Soul as 'a kind of bridge to connect two terms which it is impossible really to unite' (*Evolution of Theology in the Gr. Phil.* ii. 266).

4. Although Aristotle (*q.v.*) effectually criticized the theory of 'Ideas,' which Plato held to exist apart from matter, yet his own doctrine was fundamentally dualistic, as appears from his view of the Divine life as an energy of self-contemplation. But after his time Greek thought swung round to the opposite pole. Abandoning the dualism by which mind and matter, subject and object, were opposed to each other as mutually exclusive realities, it sought to explain the world by means of

a single principle. This men sought where they felt surest of finding it, in their own subjective experience. Thus they hoped for a certainty which they could never have about an object with whose appearances only they were acquainted. It may be added that the subjective trend in philosophy was part of a general movement affecting the last epoch of Greek national life, from Alexander the Great onwards (Schwegler, *Hist. of Phil.* pp. 120–122). Now, the subjective life itself has two sides, the one universal and spiritual, the other individual and material. It was on the latter view of man's nature that the Epicureans based both their ethical and their physical theories. The Stoics, on the other hand, appealed in their Ethics to man's rational nature, while in their Physics they derived the world from a material principle (for the reason of this apparent inconsistency, see Schwegler, *op. cit.* p. 125). It will be seen that in their use of a single principle the Stoics and Epicureans returned to the point from which philosophy had diverged after the time of Heraclitus, but, as R. D. Hicks remarks (art. 'Stoics,' in *EBr*[11]), 'until dualism had been thought out, as in the Peripatetic school, it was impossible that monism (or at any rate materialistic monism) should be definitely and consciously maintained.' Both the Epicureans and the Stoics had what may be called a materialistic cosmogony, but that of the Stoics is in several ways the more important, and to it therefore we now turn.

5. Stoic cosmogony.—The Stoic first principle was akin to the Fire of Heraclitus, but of a subtler nature—a fiery breath (*πνεῦμα*) or ether (*αἰθήρ*). But in a more important respect it differed from Heraclitus' first principle. For the Stoic primary substance was matter regarded in its distinctively active aspect as force. Viewed in relation to the actual world, it is thus described by R. D. Hicks (*loc. cit.*):

'Before there was heaven or earth, there was primitive substance or Pneuma, the everlasting presupposition of particular things. This is the totality of all existence; out of it the whole visible universe proceeds, hereafter to be again resolved into it. Not the less is it the creative force, or deity, which develops and shapes this universal order or cosmos.'

So far the Stoic theory reminds us of much that we have already met with in other systems. But the *mode* of the creative activity, as conceived by the Stoics, was altogether new. The Stoic primary substance, be it remembered, is matter and force in one (cf. Zeller, *Stoics*, etc., p. 148: 'the forming force . . . is in itself something material,' etc.). Its force is that of *tension*, the expansive and dispersive pressure due to heat, and the extremity of the tension is seen in the fact that all distinction of particular things, due to relative density, is lost within it. It cannot long withstand the intensity of this inward pressure. It sways to and fro, and this movement cools a little the glowing ether. Condensation begins, and with it the first distinction within the primal substance—the separation of force from matter. Matter is now the relatively passive; but, as first formed, it differs but little from the pure activity of the substance from which it sprang. It is the element of fire. But again, as condensation proceeds, fire produces air, and this in turn the grosser elements of water and earth. Throughout the process, however, the more active substance never quite surrenders its own nature. Thus only a portion of air becomes water or earth, and something of the pure *Pneuma* itself remains in the ether which stretches above and around the world. As already seen, the distinction of active and passive in the case of the four elements is only relative; and this appears still further in the blending of the elements with one another, and the formation of all particular things. In the universe thus formed the finer substances are those in which the tension of the primary substance is greatest, and the solid are those in which it is most relaxed, and in which matter appears most inert and passive. And, finally, all the shapes and other attributes of things are referred to the ethereal force. Here the need of a guiding Intelligence is most felt. And in fact the force moving in the world was to the Stoic the Soul of the World. Although material, it was, like the Fire of Heraclitus, also intelligent, even as the *λόγοι σπερματικοί* before the dawn of creation slumbered within it.

The Stoic cosmogony was the chief attempt made by the Greeks not merely to derive but to *explain* the origin of the world from a purely material first principle. It was ingenious, and its account of the manner in which force works in the material world contained elements of permanent value. But it went too far in treating force as a genetic first principle. For material energy is always relative to matter as passive and inert. Nor does it, indeed, appear that the Stoics conceived of force as anything else than the formative aspect of matter (cf. Zeller, *l.c.*). Nevertheless, by regarding it as a primary substance out of which the world was evolved, they *ipso facto* ascribed to it an independent reality. Hence the Stoic first principle was an abstraction which could explain nothing.

6. Neo-Platonic cosmogony.—Before leaving the Greek cosmogonies, we must notice briefly a second and very different attempt to explain the origin of the world from a monistic standpoint. We refer to the system of the Neo-Platonists, who belonged to the last period of Greek thought, when Stoicism and Epicureanism had run their course. The Neo-Platonists taught that the ultimate source of being was neither matter nor spirit, but a real unity transcending both. In this they might seem to quit the subjective standpoint of the later philosophical systems. Yet in reality theirs was the most subjective of all. They found the key to the Divine nature solely in the subjective side of human experience, in the unity given to outward impressions by the thinking subject. They taught also that the material is less real and perfect than the ideal world, that intellectual cognition is the pathway to truth and goodness, and that actual contact with these realities is attained only by means of an 'ecstasy,' in which the distinction between subject and object disappears.

The Neo-Platonists claimed that their doctrine was the direct outcome of Plato's teaching, but in this they did less than justice to the objective element in the latter. No doubt there were features in Plato, especially the terms in which he described the transcendence of God, which gave some support to this claim. But Neo-Platonism owed far more to Oriental influence, the causes of which we cannot stop to inquire (cf. Ueberweg, *Hist. of Philos.* i. 222 f.). It is, in fact, a blend of Greek and Oriental elements. It may be added that 'the religious philosophy of the Alexandrian Jews and the Gnosis of early Christianity are products of the same elements, but under an Oriental form' (*ib.* p. 223).

Plotinus (A.D. 204–269) is the most representative teacher of this school. Of his doctrine, contained in the six *Enneads*, which were published by his pupil Porphyry, a very brief summary must suffice:—The first principle, from which Plotinus derives the universe, is called by him the One, or the Good. This supreme essence is absolutely transcendent, and incognizable. It cannot be described as either Being or Intelligence, for either epithet would imply a limitation of its absolute unity. It is *ἐπέκεινα τῆς οὐσίας* and also *ἐπέκεινα*

νοήσεως. It is not however, irrational, but only supra-rational (*ὑπερβεβηκὸς τὴν νοῦ φύσιν*). Its title of 'the Good' immediately reminds us of the Supreme Being in Plato. But, in spite of the abstract manner in which 'the Good' or 'the Idea of the Good' is described in the *Republic*, it is clear that Plato ascribed to it both being and intelligence. (For the meaning of 'the Good' in Plato, and for a comparison with Plotinus, see J. Adam, *op. cit.* p. 446 f., and Ueberweg, *op. cit.* i. 122, 246 f.)

As the source of all things, the One produces first of all the highest kind of actual being, which is Mind (*νοῦς*), i.e. the Divine Mind (Ueberweg, *op. cit.* i. 248). In this Mind the Ideas (*νοητά*) are immanent. They are not, however, mere thoughts, but parts of the Mind's essence, and for this reason, on which Plotinus lays great stress, they are absolutely true objects of thought. Thus the Nous is at once the Subject and the Object of knowledge; in the first aspect Plotinus regards it as at rest, in the second as active. But *how* did the Nous originate from the One? Plotinus regards this as a problem so difficult that it must be approached with prayer (*Enn.* v. 1, 6). He finds an analogy in the idea of radiation (*περλλαμψις*). The Nous arises from the One like brightness from the sun (*ib.*). The great difficulty, of course, was to explain how actual Being could arise from a source to which the attribute of Being was denied. But he finds a solution 'in the transcending power of the One, which latter, as the superior, can send forth from the superabundance of its perfection the inferior, without having contained the latter, as such, in itself' (Ueberweg, *op. cit.* i. 247; *Enn.* v. 2, 1).

As the One produces Mind, so does Mind produce Soul (*ψυχὴν γεννᾷ νοῦς*, *Enn.* v. 1, 7). And, as Ideas appear along with Mind, so does Body along with Soul. As Plotinus expresses it, Soul, as it issues from Nous, extends itself into the corporeal, as the point extended becomes a line (*ib.* iv. 1). Plotinus says that the Soul has a divisible element, yet he also says that it is immaterial. He tries to reconcile the two statements as follows: 'The soul is *per se* indivisible, being divided only as related to the bodies into which it enters, since these could not receive it if it remained undivided' (*ib.* iv. 21; Ueberweg, *op. cit.* i. 249). The Soul in its entirety is present throughout the body, yet in all its faculties—reason, memory, perception, and even life-force—is absolutely separable from it. There is a plurality of souls. The highest of all is the Soul of the World, but other souls have also a separate existence of their own (*Enn.* iv. 3, 7, iv. 9).

Lastly, what is the Neo-Platonist view about the nature and origin of *matter*? In Plato, matter and mind remain as two ultimate facts. Plotinus, on the other hand, declares that the soul, in virtue of its mobility, *begets* matter (*ib.* iii. 7, 10, iv. 3, 9; Ueberweg, *loc. cit.* i. 249). Now, so far as the material is known to us, *i.e.* so far as it possesses form, it partakes of an ideal nature. But Plotinus recognizes that beneath that form there is a *substratum* (*ὑποκείμενον*), a something which is different from the form and which might take other forms. This *substratum* he calls the *βάθος*, or 'depth,' of each thing, and he says that it has no real existence; it is *μὴ ὄν*. He explains its nature partly by reference to the Ideas which are the objects of Nous. In its most general sense the term *ὕλη* ('matter') is also applied to these. And just because they are *objects* of thought, they also possess this quality of *βάθος*, or 'depth.' But they are nevertheless wholly real, like the Mind which knows them. And Plotinus says that the *substratum* of sensible things is only a shadow (*εἴδωλον*) of the *substratum*, as their form is but a shadow of the form pertaining to the Ideas.

The theory whose essential features we have thus tried to give represents the last important attempt made by Greek thought to explain the origin of the world. It fails mainly through the abstractness of its first principle—a Unity of which not even Being can be predicated.

In its mysticism the Neo-Platonic theory of the world reminds us not a little of the Orphic cosmogonies. It resembles them, indeed, both in form and in spirit, as might be inferred from the fact that the notices of the latter given by Damascius are interwoven with Neo-Platonic conceptions.

LITERATURE.—The following, though only a selection from an immense number of books dealing with various parts of the subject, will, together with their references, supply all needed help to those who wish to study it further: F. Lukas, *Die Grundbeg. in den Kosmog. der alten Volker*, Leipz., 1893, to whom the writer has been specially indebted in the first part of the subject; O. Gruppe, *Griechische Culte und Mythen*, i., Leipzig, 1887, and artt. 'Orpheus' and 'Phanes,' in Roscher; E. Abel, *Orphica*, Leipz. 1885; T. Gomperz, *Gr. Thinkers*, Eng. tr., vol. i., London, 1901; E. Zeller, *Stoics*, etc., new and rev. ed., do. 1892, *Pre-Socr. Phil.*, vol. i. do. 1881, *Outlines of Hist. of Gr. Phil.*[2], do. 1892, *Plato and the Older Acad.*, do. 1876; J. E. Harrison, *Prolog. to Study of Gr. Relig.*[2], Camb., 1908; J. Adam, *The Relig. Teachers of Greece*, Edinb., 1908; B. Jowett, *Dialogues of Plato*[3], vol. iii., Oxford, 1892; R. D. Hicks, art. 'Stoics,' in *EBr*[11], also *Stoic and Epicur.*, London, 1910; T. Whittaker, *The Neo-Platonists*, Camb. 1901; C. Bigg, *Neoplatonism*, Lond. 1895; E. Caird, *The Evol. of Theol. in the Gr. Philosophers*, Glasgow, 1904; J. Horowitz, *Philons u. Platons Lehre v. d. Weltschopfung*, Marburg, 1900; R. Ueberweg, *Hist. of Philos.*, vol. i., London, 1872; J. E. Erdmann, *Hist. of Philos.*, do. 1898; A. Harnack, *Hist. of Dogma*, Eng. tr., do. 1894–1899.

L. F. BURNS.

COSMOGONY AND COSMOLOGY (Hebrew).—

There are generally recognized in the Hebrew Scriptures two formal cosmogonies, the earlier of which is contained in Gn 2, beginning with v.[4], or rather v.[5].

1. **Cosmogony of J.**—This story, as we have it, belongs to the pre-exilic, historical, Prophetic narrative of the Judæan kingdom (J), which was in course of composition from about the time of Solomon until the middle of the 8th cent. B.C. The cosmogony, as much as we have of it in Gn 2, assumes the world as already existing, and deals only with its preparation for the use of man. With it is connected the story of the Garden of Eden, the Temptation, and the Fall and its consequences. The object is not so much to answer the question, How did the world come into existence? as the questions, Where did man come from? Why does man differ from the beasts? especially, Why does man have a sex consciousness and a sex shame, which the beasts do not have? and, Why must man, who is the crown of creation, toil and labour to get his bread, and to reproduce his kind, by the sweat of his brow and the agony of his body? So far as the nature of man is concerned, this cosmogony, while naively primitive, is full of a childlike wisdom and sweet spirituality, which has commended it to all succeeding ages, and which was doubtless the cause of this part of the J narrative being preserved at a time when the Pentateuch was cast into the present form and prefaced by the great cosmogony of the Priestly Code (Gn 1–2[4]).

In the cosmogony of Gn 2, the earth is assumed as already in existence, a barren place on which there were no shrubs and no herbs, because Jahweh Elohim had not yet caused rain to fall on it, and because—a charming bucolic touch, characteristic of the anthropomorphism of the whole narrative—there were no men to till the ground. But a fountain[1] went up out of the

[1] אֵד, practically a ἅπ. λεγ. (the only other occurrence is Job 36[27]), rendered in EV 'mist.' LXX has πηγή, which, practically, Gunkel follows. This accords with the following narrative, the reference being apparently to the great source out of which came all the rivers of the world. In this narrative the waters

earth and watered all the face of the ground (v.6). Then, out of the dust of the ground, moistened by this water, Jahweh Elohim, like a potter, made man, and, having made him, breathed into his nostrils the breath of life, whereupon man became a living creature. And, because he was made out of the ground (*'ădāmā*), therefore he was called 'man' (*'ādām*). Then Jahweh Elohim planted a garden in Eden, far away to the east, and caused all sorts of beautiful trees and goodly fruits to grow there, and the tree of life and the tree of the knowledge of good and evil. Through the garden, coming from the fountain which connected with the waters beneath the earth, flowed a great stream, watering the garden and dividing, as it left it, into the four great rivers of the world—Pishon, Gihon, Tigris, and Euphrates.

Jahweh Elohim put man in His garden to till it and guard it, and permitted him to eat of all the trees in the garden, except only of the tree of the knowledge of good and evil. Then, seeing that the man was alone, He planned to give him a helpmeet, and formed all the beasts and birds and brought them to man, who named them. But among them was found no mate for man. Then Jahweh Elohim caused man to fall into a profound sleep, and, taking one of his ribs, clothed it with flesh and made out of it woman; and her the man at once recognised as his mate, bone of his bone and flesh of his flesh. Woman (*'ishshā*) was she called, because derived from man (*'ish*); therefore a man leaves his father and his mother and cleaves to his wife, and they become (literally, by physical union) one flesh. And the two of them, the man and his wife, were naked, and were not ashamed.[1]

The story here told is in many of its particulars identical with the cosmogonies and cosmologies which we meet elsewhere. The thought is world thought, the out-thinking of primitive man almost anywhere. When he asks himself the question, Of what is man created? the natural answer is: Dead, he returns to dust; therefore, out of dust he came; and so, as the potter makes vessels out of clay (dust mixed with water), God made man. So breath, which is wind (a part of God's breath), is the element of life; for, if the wind or breath goes out of a man, he is dead. So, again, the relation of name to thing, which plays so important a part in this cosmogony, is not characteristic of any one people, but is a very wide-spread conception of primitive men. Name and thing are one. To know the name is to know the essence of the thing; and to know is to have power over—the utterance by Adam of the names of the beasts put those beasts in subjection to him who had given them their names. The serious plays upon words —*'ădāmā* and *'ādām*, *'ish* and *'ishshā*—are based upon the same theory of the identity of name and thing. Of course, this assumes that the primitive language was Hebrew, in accordance with the universal belief of primitive peoples that their own language was spoken by God Himself. The story of the origin of mankind, told in the person of a being bearing the name 'Man,' is common also to various national cosmological myths. The same is true of the relation of man and woman here described, and, to a considerable extent, of the garden of God in which man was placed.

But, while much in the story may be classed as universal primitive thought, there are also certain ear-marks which unmistakably indicate a Bab. connexion for at least some of the fundamental thoughts of our tale.

The park or garden which God plants, and in which He sets the man whom He creates, is far off, in some remote land away to the east. This is the case also with the Egyptian paradise; but, when we note the name Eden, apparently the Bab. *edinu*, 'plain,' for the garden, and the names of the rivers which have their source in it, we are obliged to recognize the influence of Bab. thought. The garden, it is true, is not in Babylonia, yet it lies in the region out of which the rivers of Babylonia take their origin. It is a plain on the top of the mysterious mountain of the north, where, in Bab. thought, the gods had their abode.[1] Probably also the fourfold number of the rivers connects itself with those representations which we find in early Bab. art of a four-divided stream, all the rivers of the earth pouring out from one great fountain connecting with the great deep, the waters beneath the earth. In the relation of man to the beasts, before woman was created, there is also at least a suggestion of resemblance to the story of the wild primitive man, Eabani, in the Bab. Gilgamesh legend. Eabani was made out of clay by the goddess Ishtar, in whom is the womb of life. At the outset he consorted with the beasts of the field. 'He ate grass with the gazelles, he drank water with the cattle of the field, he amused himself with the animals of the water.' Out of this condition he was raised to true manhood by entering into relation with a woman, a priestess of Ishtar, who came to entice him. It was by finding a mate in her that he developed out of a being like the beasts into civilizable man. So, apparently, in the thought of the Heb. story, Adam was at first like Eabani, but no true mate was found for him among the beasts of the field. His manhood required a helpmeet of his own kind, bone of his bone, flesh of his flesh. Perhaps another Bab. element is the eating of the tree of life, which appears in the sequel of this story, the Fall of Man (Gn 3). This bears a certain resemblance to the Adapa myth, of which a copy was found among the Tell el-Amarna tablets. The cherubim also which God placed eastward of the Garden of Eden, appear to be of Bab. origin. The peculiar emphasis laid upon Assyria in the geography of the Garden of Eden, and apparently on a very early Assyria, when Ashur, and not Calah or Nineveh, was the capital of Assyria, when, in fact, the city of Ashur was Assyria (for the Tigris is here made to flow to the east of Assyria), leads one to ask whether the Bab. elements in this story were not largely, or in some part, mediated through Upper Mesopotamia, with which the ancestry of Israel was connected by a very strong tradition. Cf., further, Cosmogony and Cosmology (Bab.).

But while the cosmogony of this story has evident connexions with Bab. thought, such connexions are ancient and remote. The characteristic colouring is evidently Palestinian. It is the native of a *bᵉ'ĕlāh* land, a land of the *ba'al*, like Palestine (where fertility comes directly from the rain sent down from heaven), not the native of a land like Babylonia (where fertility depends on the overflowing of the rivers), who gives us in Gn 2 the picture of the barrenness of the world before Jahweh Elohim sent rain and man tilled the ground. It is worthy of note that similarly, in the J version of the Flood story, the Flood was caused by the rain which Jahweh sent from heaven, not by the breaking out also of the waters of the abyss beneath.[2]

Another incidental evidence of the antiquity of the J cosmogony, in addition to the allusion to Assyria, is the relation of man to woman. It is not the woman who leaves father and mother to cleave to the man, but the man who leaves father and mother to cleave to his wife—an apparent survival of the old matriarchy, of which we also have an example in the Samson story, where the woman remains with her tribe or clan or family, and is visited by the man (Jg 15[1]).

In general, we may say of the cosmogony contained in Gn 2 that it is based upon a primitive folklore developed in Palestine, going back to a very great antiquity, into which have been absorbed, at some time or another, by an indirect process, some elements of Bab. myth and legend, possibly coming through the Mesopotamian region, with which, according to tradition, the Israelitic ancestors were closely connected. In the form in which it has come down to us, it has been thoroughly Hebraized, above all in the monotheism of its conceptions. The Creation is due to Jahweh only. There is no other God mentioned. He is Elohim (God), albeit He is conceived of in a most anthropomorphic fashion. Growing upon Canaanite soil, rooting in the remote past, utilizing in its composition Bab.

beneath the earth are assumed; it is only with the rain, which comes from above, from Jahweh Elohim, that we are concerned. Cf. Skinner, *ad loc.*

[1] This story is a man's story, *homo sexualis*. In general it is an interesting example of the methods of early thought. Man measures the universe by himself. He explains the relations of all about him by what he knows of himself. Woman depends upon man, and woman was made for man. She is a subordinate but very intimate part of himself. The rib is chosen for the material of her construction because ribs are relatively numerous, and therefore superfluous, in man's composition, while at the same time a rib belongs so much to the inward part of man, so to speak, as to establish by its use in the construction of woman the most intimate relation with himself.

[1] In the most original Heb. traditions the abode of God (Jahn) was in the south, in Sinai, or Horeb (cf. *e.g.* Jg 5[5], Ex 19[11]); but, by a borrowing apparently from Can. traditions (ultimately derived, probably, from Babylonia), it is also placed in the mountain of the north (cf. Ps 48, Ezk 1), as is the account of the Deluge (Gn 7 ff.).

[2] Cf., for the latter, the P version of the Flood story (Gn 7[11]).

material indirectly derived, it shows, in the last stages of its development, the high, spiritual thought of the Prophetic narrators of the 9th and 8th cent. B.C., who paved the way for the great writing prophets of the succeeding centuries.

The story was evidently popular among the Hebrews, not on the side of what may be properly called its cosmogony, but for its account of the Garden of God in Eden and the Fall of man, which we find particularly used in later literature in the Book of Ezekiel (cf., for instance, ch. 28, and the other chapters dealing with the fall of Tyre). It is this element also which has profoundly influenced Christian thought. The cosmogony proper is negligible in its influence on later thought, and is manifestly in itself very incomplete.

2. **Cosmogonic myths in Hebrew literature.**—A more complete and more systematic cosmogony is contained in Gn 1. The composition of this chapter dates probably from the early post-exilic period, but it is founded on old myths, which appear in much older passages, and which display a striking similarity to the cosmogonic myths of Babylonia. Some of these passages it is worth while to consider before we analyze the more systematic and elaborate cosmogony of Gn 1.

Ps 89[7-14] is an old passage, of Galilæan origin (as is shown clearly by the use, in v.[12], of Tabor and Hermon as landmarks of north and south), now forming part of a later Psalm. This is one of those Psalms whose words imply a polytheistic conception: 'Who among the clouds is like unto Jahweh, is equal to Jahweh among the sons of the gods?' Jahweh is described as ruling the waves of the sea, stilling the tumult of its billows. He has smitten and contemptuously treated Rahab. With His strong arm He has scattered His foes. This is referred to as a part of the Creation work by which He founded the heavens and the earth, the world and its fullness, Creation being depicted as connected with a battle of Jahweh against some monster, here called Rahab, and its allies, who are foes of God or of the gods.

Ps 74[12-17] is similarly an ancient passage, apparently of north Israelitic origin,[1] in a Psalm which, in its later form, is Maccabæan. Here God is described as having, in olden time, done wonderful works in the midst of the earth. He divided the sea by His strength, He smote the heads of dragons or sea-monsters on the waters, He crushed the heads of Leviathan and gave him for food to the jackals—a more specific note of that contemptuous treatment to which there is reference in Ps 89. That this is part of a Creation-myth is shown by the following description, where, as the result of this battle with the sea-dragons and Leviathan, God digs out the fountains and the valleys in which their waters run, dries up the primitive rivers, forms night and day, moon and sun, establishes the boundaries of the earth, etc.

The Book of Job, while itself of relatively late origin, is notably full of old traits. In it we find a number of references to mythical monsters, with whom God contended in connexion with the creation of the world. Of these the most noteworthy perhaps is Job 26[12f.]:

> 'With his strength he troubled the sea,
> And with his skill he pierced Rahab.
> His wind spread out heaven,
> His hand slew flying serpent.'

We have here two monsters—Rahab (connected with the sea) and flying serpent (connected with the heavens). The battle with the sea, indicated in the first line, is connected with the piercing of Rahab; and bound up with this is the spreading out of heaven by His wind, and the slaughter, apparently in heaven, of another monster.

Chapters 40 and 41 deal much more fully with two monsters, here, however, differently named—Behemoth, whose home is on the dry land, and the much more dreadful Leviathan, which inhabits the deep. These monsters were evidently well known in Heb. tradition of a later date. Thus, in 2 Es 6[49-52] we have a description of two living creatures which God preserved on the fifth day of creation—Behemoth and Leviathan—to the former of whom He gave as his habitation a part of the dry land whereon are a thousand hills, while to the latter He gave that seventh part of the earth occupied by the sea. In Enoch 60[7-9] we find the same two monsters, with the further note that Behemoth, who occupies the barren waste, is a male, while Leviathan, the monster of the abyss, over the source of the waters, is a female. Enoch 54[8] corresponds somewhat more closely with the account of the two animals in Job, in that it describes the water which is above the heavens as male, and the water which is under the earth as female. In Job 7[12] and 9[13] we have incidental references to a sea-monster of the deep called in one place 'dragon,' תַּנִּין,[1] and in the other Rahab,[2] which, with its allies, has been overcome by God and imprisoned by Him. In ch. 38 there is no mention of the monsters, but of a struggle of God with the deep itself (v.[7f.]): 'When the morning stars sang together, and all the sons of God shouted for joy: when God shut up the sea with doors, fastening it in with bars and gates.' According to the cosmogonic ideas of this book, 'God spread out the sky, strong as a molten mirror' (37[18]); this rests upon pillars (26[11]), and above it are the waters held up by the clouds (v.[8]): the earth rests upon a chaos of waters or a great sea (v.[7]); in the bowels of the earth is Sheol or Abaddon (v.[6]). Waters are closely connected with darkness, and both those above and those below the earth form the habitation of monsters.

Abundant other references, early and late, show this to be certainly a very wide-spread view of the origin of the world among the Hebrews and later Jews. There are, however, slight variants of this general view, and the monsters of the deep are called by different names. The deep itself and the chaos to which the original deep belonged are designated sometimes merely by words expressing the sea, at other times by more technical titles; and the same is true of the monsters of chaos or the deep.

The ancient myth is applied also to historical events, very much as we may find parts of the *Nibelungenlied* mixed up with actual historical events of mediæval history, or in Babylonian literature events of the history of Erech combined with the Epic of Gilgamesh.[3] In Is 51[9] the delivery from Egypt is described in terms of the old cosmogonic myth: 'The arm of Jahweh cut Rahab in pieces, pierced the dragon.' In Is 30[7] Egypt is called Rahab because 'she helpeth in vain.' In Ps 87[4] and elsewhere we find the same use. The myth is also applied eschatologically. As God once created the earth after destroying the monsters of chaos, so He shall again, out of a world reduced to chaos because of the wickedness of man, re-create a new earth and a new heaven

[1] Cf., among other things, the almost exclusive reference in the Asaph Psalter to Jacob, Joseph, and Benjamin, and the use of Elohim instead of Jahweh—differentiating this collection, or rather these collections, from the first book of Psalms, precisely as E is differentiated from J in the Pentateuch.

[1] See also Ezk 29[3-5a], Ps-Sol 2[28b-34]. In Ezekiel the dragon-myth is used in describing the fate of Egypt, and in the Psalms of Solomon, of Pompey; but in both cases the ancient myth is clearly in mind.

[2] In Ps 40[5][4] the plural of this, *rᵉhābîm*, appears to mean 'false gods'; and *tōhû* is used in the same sense in 1 S 12[21] and Is 41[29].

[3] Folk-lore frequently exhibits this phenomenon. So, for instance, in the Wendish Spreewald one finds old fairy tales, identical with those collected by Grimm, told about Frederick the Great, Ziethen, and others of the same period.

by the same means (cf. the late Isaianic Apocalypse, Is 24–27). Here, however, we have (27[1]) three monsters: Leviathan the swift serpent or flying serpent (which appears to be alluded to in Job 3[8], inhabiting the waters above the firmament and causing the eclipse); Leviathan the crooked serpent, which is the sea encircling the earth; and the dragon in the depths of the sea, which is the serpent of Am 9[3].

In a somewhat similar picture of the reduction of the earth to chaos through the wrath of God, in Jer 4[23-26], birds, men, and beasts are destroyed; mountains and hills lose their solidity and shake to and fro; the light of the heavens is turned into darkness; and the earth becomes waste and void —*tōhú* and *bōhú*—the technical words for 'chaos' used in Gn 1[2].

Out of these various references we may reconstruct the general cosmogonic conception of the Hebrews: first, a condition of chaos and darkness, a waste of waters, inhabited by monstrous and noxious forms; then a battle of Jahweh, with the approval and rejoicing of the gods (divine or semi-divine beings, stars, etc.), against the deep and the monsters of chaos, in which in some way He uses the wind. By means of this He spreads out a firmament above, resting upon pillars, provided with windows,[1] through which the waters above may be let down upon the earth. Beneath, upon the great void, He spreads the earth, a dwelling-place for living things, under which is the sea or abyss (*t'hôm*).[2] In this abyss, as also in the heights above, still dwell great monsters, whom the Lord has preserved there, whom no other than He can control, and who are dangerous and noxious to men and to the works of men.

This was not only the cosmogonic thought of the Hebrews; it also constituted an element of their religion, and was represented in their ritual and religious paraphernalia. So, in the temple of Solomon was a great laver, the so-called 'sea,' representing the *t'hôm*;[3] and on the candlesticks of Herod's temple, as represented on Titus' Arch at Rome, are apparently pictured the monsters of that *t'hôm* which Jahweh had overcome.[4]

This cosmogony clearly is closely related to that of Babylonia, where we have the same contest of Marduk (acting for the other gods, whom he thereby largely supplants) with a great female monster, *Tiamāt*,[5] which is by root the same as the Heb. *t'hôm*. This monster he splits in two, after inflating her with a great wind. He reduces her various allies to submission, and, after treating her corpse with contumely, he divides it into two parts, out of one of which he makes the heaven, and out of the other the earth, the waters being thus separated into two great seas, the one above the firmament of heaven and the other beneath the earth.

3. Systematized cosmogony of the Priestly Code.—The Bab. cosmogony, as we know it in the cuneiform texts, is contained in seven tablets. Similarly the systematized cosmogony of the Heb. Priestly Code (Gn 1–2[4]), which formulates and develops in a scientific and exact manner the popular belief, is divided into seven days.

This cosmogony commences with the description of a condition where the earth was *tōhú* and *bōhú* (i.e. chaos)—two words evidently handed down from antiquity. This chaotic condition is further described as 'darkness upon the face of *t'hôm*.' *T'hôm*, as already stated, is radically identical with the Bab. *Tiamāt* (here used without the article), and is evidently, like *tōhú* and *bōhú*, a technical term of the cosmogonic myth. Following this description of the condition of darkness, chaos, and enormity, the narrative proceeds: 'The wind of God was rushing upon the face of the waters.'[1] Here perhaps we have a remnant of the myth which represents Marduk using the wind as his weapon against Tiamāt.

Having thus condensed the mythical material, which bulks so largely in the Bab. story, and which evidently played an equally important part in the common Jewish cosmogony, and having altogether eliminated its polytheism, the Priestly narrator then proceeds on a higher plane to describe Creation as a result of seven utterances of God. The order of these creative utterances may be supposed to coincide in general with that of the Bab. seven tablets, although this cannot be stated certainly, owing to the fragmentary condition of those tablets.

First came light; second, the firmament in the midst of the waters, to divide the waters beneath from the waters above; third, the separation of dry land and the springing of verdure, trees, and the like upon the earth; fourth, the creation of sun, moon, and stars, which are set in the heavens, both to give light and to rule the day and the night—the latter, perhaps, containing a trace of the polytheistic conception of the old astral worship, which it is intended to correct by stating that these rulers of day and night are creations of God; fifth, the creatures of the sea and the birds of the air, both of them created out of water, among which it is noteworthy that the writer recognizes the continued existence of the great sea-monsters, dragons, serpents, etc., of the popular belief (v.[21]), included in Job, Enoch, and Esdras, under the titles Behemoth and Leviathan. The sixth day covers the creation of the creatures of the earth and of man. In the note of the creation of man (v.[26]) we have a remnant of the more primitive anthropomorphic conception of God, of which the writer could not readily divest himself, in the statement that man was made in the image of God; and perhaps also an echo of the earlier polytheism in the words put in the mouth of Elohim: 'Let us make man in *our* image.' Not that the writer means to speak of more than one God of Israel, but he cannot yet altogether divest himself of the thought of a plurality of gods in human shape. The resting of God on the seventh day, and the establishment in connexion with that of an eternal Sabbath, are peculiarly Hebrew; for, although a rudimentary Sabbath existed among the Babylonians, it played no important part in Bab. religion or mythology. The seventh tablet of the Babylonian Creation-series, with which in Hebrew corresponds the establishment of the Sabbath as a part of Creation itself, contains a hymn of praise to Marduk as the creator.

The question arises, To what extent was this cosmogony based on Bab. ideas? We have already seen that, in general, it is a statement, in precise, scientific, monotheistic, and unmythological form, of cosmogonic views prevailing among the people of Israel from an early period. Certain resemblances have also been pointed out between those cosmogonic myths and the cosmogonic myths of the Babylonians. It would seem that at some early period Bab. cosmogony became known to the people of Palestine. The general view at present is that, in some form, locally modified, the Bab. cosmogony became the common property of Palestine and surrounding regions during the centuries of predominating Bab. influence in the West (*c.* 2000 B.C.), and that the Hebrews adopted that cosmogony, in whole or in part, gradually modifying it to fit into their religion,[2] eliminating the polytheistic and grosser traits, and spiritualizing and rationalizing the residue. The cosmogonic myth, accordingly, pursued the same course

[1] Cf. Gn 7[11], 2 K 7[2, 19], Ps 78[23].
[2] Gn 7[11] 49[25], Dt 33[13], Ps 42[7] 78[15], Pr 3[20].
[3] 1 K 7[23], interpreted by comparison with Bab. use.
[4] Cf. the similar use in Bah. temples.
[5] In the Bab. myth we have also *apsu*, 'sea,' as a technical term or name. At least once in Hebrew (Is 40[17]) the corresponding root כדם has the same sense.

[1] Commonly rendered 'the spirit of God was brooding,' etc. This rendering of the Heb. מְרַחֶפֶת is suggested by a supposed connexion with an Aram. root. In Hebrew it occurs elsewhere only in Dt 32[11], in a description of the vulture teaching its young to fly, where it has been translated 'hovering.' This is manifestly incorrect (but see Skinner on Gn 1[2]). The parent birds do not hover over the young when turning them out of the nest to fly for themselves, but make rushes at them, and away from them. The LXX has preserved the correct tr. of the word מְרַחֶפֶת of Gn 1[2], viz. ἐπεφέρετο, 'was rushing upon.' This agrees with other references in Heb. literature to the use by God of wind in creation (see above), and also agrees with the Bab. myth.

[2] Unfortunately we lack, up to the present time, a sufficient knowledge of Phœnician cosmogony and the cosmogony of other neighbouring peoples to prove or disprove this theory. True, certain fragments of Phœn. cosmogony have come down to us, claimed to be the relics of the writings of a certain Sanchuniathon; but, in the first place, it is very doubtful whether such a man ever existed, and, in the second place, what has been handed down has reached us in such a form that it is almost impossible to determine its origins and connexions. We do find, however, in Phœn. cosmogony, a creature, *Tauthe*, which is the same as *Tiamāt* and the Heb. *t'hôm*, and a *Baau*, which appears to be the Hebrew *bōhú*; to that extent Phœn. remains may be said to support this hypothesis.

as almost everything else in Hebrew ritual and religion. The cosmogony in Gn 1 represents the final stage of its development, when the effort was made to rid it altogether of its grosser and polytheistic elements, to spiritualize it, and to fit it into the new scheme of the purified and reformed religion of Israel, which the priestly schools of the Captivity sought to establish. The final author may possibly have been affected directly by Bab. models to the extent that he adopted from the seven tablets his arrangement by seven days; but even this seems improbable, for the seven-day system was already in existence in Israel, and constituted an integral part of its religion. The Bab. seven tablets of Creation were ancient. Their 'sevenness' is an element which would naturally have impressed any people, but especially one regarding the number seven as holy; and, while there is no other evidence in the Biblical passages, indicating acquaintance with the cosmogonic myth, of knowledge of this 'sevenness,' it nevertheless seems more probable that it formed part of the popular scheme of cosmogony,[1] even though the events of the days of Creation may not coincide altogether with the order of events in the Bab. tablets, than that it was borrowed by the Priestly Code from the Babylonians. The author of the Priestly Code cosmogony was concerned rather with those things which differentiate the Heb. from the Bab. versions of the cosmogony. And, indeed, the difference between the two is far more striking than the resemblance. It is wonderful how out of the fantastical, puerile, and gross fancies of the Bab. original there has been developed so sane, so lofty, and so spiritual a system of cosmogony as that contained in Gn 1-2⁴.

4. **Cosmogony of J compared with popular cosmogony and cosmogony of P.**—How does it happen that two cosmogonies so radically different in conception continued to exist side by side? As already pointed out, ch. 2 deals, not with the creation of the world, but with the problems of man. It finds him on the barren hills of Judæa. It does not concern itself with their creation, but with the manner in which they are made habitable, and the problems of the men who inhabited them, who had been driven out, for their sins, from the beautiful Garden of God in the fertile far east, to live on, and to till, this land of thorne and thistles. Had the narrator been asked how the dry land, the heavens, etc., came into existence, he would doubtless, incompatible as the two things seem to us, have told of a contest of Jahweh with chaos and the monsters of the deep, and the formation of an earth resting on the great deep, with the solid firmament of heaven above, and the waters still above that—substantially the scheme described in Gn 1, though not in the same systematized and highly developed form. Theoretically he believed in a deep beneath the earth, as is shown in the fountain from which a stream came out and watered the Garden of God, being the source of all the rivers of the world. But practically this deep was negligible in Judæa, where one must look to Jahweh for water from heaven; and so even in the Flood-story of J the water comes down only from above.

5. **The highest and final Hebrew thought concerning Creation.**—The cosmogony of Gn 1-2⁴, lofty as it is in its monotheistic conception of the power of God, did not reach the highest limits of Hebrew thought. Hampered by the old myths, it stood perilously near dualism in reckoning chaos, darkness, and the deep as existing, independently of God, from eternity. There were men of the same period, but of a different school of thought, with prophetic vision, and a higher, less hampered spirituality, who had perceived and were teaching a still higher thought, namely, that God was the Creator of darkness as well as of light, of chaos as well as of order, of evil as well as of good. Deutero-Isaiah was familiar, as we have seen, with the popular cosmogonic myths, and apparently also with the more formal cosmogony ultimately formulated in Gn 1-2⁴; but its fundamental conception of the opposition of chaos, darkness, and the deep to God he utterly rejects. 'I am Jahweh, and there is none else, forming light and creating darkness, making prosperity and creating evil' (Is 45[6f.]). This is the highest expression of the creative thought in the Old Testament. In Pr 8[23-31] Creation is an expression of the wisdom of God, which is almost hypostatized. In some of the late Psalms we have very beautiful and spiritual conceptions of Creation, especially in Ps 104,[1] but in principle these are only poetic liberties with the cosmogony of Gn 1. More and more this cosmogony became an essential part of the religion of the Jews, on which Judaism and Christianity, almost up to the present time, have founded literally their conception of the creation of the world. Along with this also some of the old mythological conceptions continued to linger on.[2] Indeed, there is nothing in Gn 1 to forbid them, and, as we have seen, the writer of v.[21] evidently himself believed in the existence of the mythical monsters of the deep. What part these played in later Judaism one may see from the Book of Esdras and from Enoch, which have already been quoted, and finally even from the Apocalypse in the New Testament, many of the images and concepts in which, particularly in chs. 12, 13, 17, 21, reflect the ancient mythology of the battle of the representative of the gods with the dragons and monsters of chaos and the deep.

LITERATURE.—The OT commentaries, especially those of Delitzsch (Eng. tr., Edinburgh, 1888–89), Dillmann, (Eng. tr., Edinburgh, 1897), Holzinger (Freiburg, 1893), Gunkel[2] (Göttingen, 1902), Driver[7] (London, 1909), Ayles (New York, 1904), and Skinner (Edinburgh, 1910), on *Genesis*; A. B. Davidson (London, 1862), Dillmann[4] (Leipzig, 1891), Budde (Göttingen, 1896), and Duhm (Freiburg, 1897), on *Job*; Cheyne[3] (London, 1886), Dillmann-Kittel (Leipzig, 1898), Marti (Tübingen, 1900), and Duhm[2] (Göttingen, 1902), on *Isaiah*; Bertholet (Freiburg, 1897) and Kraetzschmar (Göttingen, 1900), on *Ezekiel*. JOHN P. PETERS.

COSMOGONY AND COSMOLOGY (Indian).—Cosmological speculations were, in India as elsewhere, the first manifestation of philosophical thought; they are already met with in the Rig-veda, in single verses as well as in entire hymns. The basis of these speculations, in the Vedic period, was not a generally adopted theory or mythological conception as to the origin of the world; widely differing ideas about this problem seem to have been current, which the more philosophically minded poets developed and combined. There is a kind of progress from crude and unconnected notions to more refined ideas and broader views; but this development did not lead to a well-established cosmogony such as we find in the first chapter of Genesis. A similar variety of opinion prevailed also in the period of the Brāhmaṇas and Upaniṣads, though there is an apparent tendency towards closer agreement. Uniformity, however, was never

[1] Cf., for instance, the form of the Fourth Commandment in Ex 20, which, however far removed from the form of the original 'Word,' is at least much earlier than the Priestly Code.

[1] Cf. also Ps 33[6f.].

[2] Ps 148[7].

achieved, even in the Purāṇas; for all statements, however contradictory, contained in the revealed literature were regarded as truth, and might be reproduced by later writers. Cosmography, on the other hand, had another fate. Different writers of the same period are much more nearly at one regarding the plan and structure of the Universe, at least in its main outlines, than regarding its origin and development; but it goes without saying that both sets of ideas—cosmogonic as well as cosmographic—are equally fanciful, and lack the basis of well-ascertained facts.

1. Vedic period.—The world, according to Vedic notions, consists of three parts—earth, air, and sky, or heaven. But, when the idea of 'Universe' is to be expressed, the phrase most commonly used is 'heaven and earth.' Both Heaven and Earth are regarded as gods and as the parents of gods (*devaputra*), even although they are said to have been generated by gods. Sometimes one god,—Indra, or Agni, or Rudra, or Soma,—sometimes all the gods together, are said to have generated or created heaven and earth, the whole world; and the act of creating is metaphorically expressed as building, sacrificing, or weaving. That heaven and earth should be parents of the gods, and at the same time have been generated by them, is a downright self-contradiction; but it seems to have only enhanced the mystery of this conception without lessening its value, since it recurs even in advanced speculation. It is avoided in the declaration that mother Aditi is everything, and brings forth everything by and from herself, though in another place it is said that Aditi brought forth Dakṣa, and Dakṣa generated Aditi. Here Aditi is apparently a mythological expreseion for the female principle in creation, and Dakṣa for the male principle or creative force. The latter is more directly called Puruṣa, man or male spirit, and is conceived as the primeval male who is transformed, or who transforms himself, into the world. To him is dedicated the famous *Puruṣasūkta*, Rigveda, x. 90, which recurs, with variations, in the *Atharvaveda* (xix. 6), the *Vājasaneyi Saṁhitā* (xxxi.), and the *Taittirīya Araṇyaka* (iii. 12), and greatly influenced later theosophical speculation. As a specimen of Vedic cosmogony we subjoin Muir's translation of it (from *Orig. Skr. Texts*, v. 368 ff.), though it, or rather the original, contains many obscure points:

'Puruṣa has a thousand heads, a thousand eyes, and a thousand feet. On every side enveloping the earth, he transcended [it] by a space of ten fingers (1). Puruṣa himself is this whole [universe], whatever has been, and whatever shall be. He is also the lord of immortality, since through food he expands (2). Such is his greatness; and Puruṣa is superior to this. And existing things are a quarter (or foot) of him, and that which is immortal in the sky is three-quarters of him (3). With three-quarters Puruṣa mounted upwards. A quarter of him again was produced here below. He then became diffused everywhere among things animate and inanimate (4). From him Virāj was born, and from Virāj, Puruṣa. As soon as he was born, he extended beyond the earth, both behind and before (5). When the gods offered up Puruṣa as a sacrifice, the spring was its clarified butter, summer its fuel, and autumn the [accompanying] oblation (6). This victim, Puruṣa born in the beginning, they immolated on the sacrificial grass; with him as their offering, the gods, Sādhyas, and Ṛiṣis sacrificed (7). From that universal oblation were produced curds and clarified butter. He (Puruṣa) formed those aerial creatures, and the animals, both wild and tame (8). From that universal sacrifice sprang the hymns called Ṛich and Sāman, the metres, and the Yajus (9). From it were produced horses, and all animals with two rows of teeth, cows, goats, and sheep (10). When they divided Puruṣa, into how many parts did they distribute him? What was his mouth? What were his arms? What were called his thighs and feet? (11). The Brāhmaṇa was his mouth; the Rājanya became his arms; the Vaiśya his thighs; the Śūdra sprang from his feet (12). The moon was produced from his soul; the sun from his eye; Indra and Agni from his mouth; and Vāyu from his breath (13). From his navel came the atmosphere; from his head arose the sky; from his feet came the earth; from his ear the four quarters; so they formed the worlds (14). When the gods, in performing their sacrifice, bound Puruṣa as a victim, there were seven pieces of wood laid for him round the fire, and thrice seven pieces of fuel employed (15). With sacrifice the gods worshipped the sacrifice. These were the first institutions. These great beings attained to the heaven where the gods, the ancient Sādhyas, reside (16).'

The unity of the Godhead as the cause of the world, which is recognized in the above hymn, is directly expressed in others where he is called the One, the Unborn, and placed above all gods. In two hymns (Rigveda, x. 81, 82) he is invoked under the name Viśvakarman, 'All-creator,' who in later mythology became the architect of the gods; in another remarkable hymn (x. 121) the poet inquires who is the first-born god that created the world and upholds it, and in the last verse he invokes him as Prajāpati, 'Lord of the creatures.' Prajāpati later became the current designation of the creator, and synonymous with Brahmā. In connexion with Viśvakarman and Prajāpati occurs what seems to be an ancient mythological conception: the highest god is said to have originated in the primeval waters as the Golden Germ (*Hiraṇyagarbha*) which contained all the gods and the world, or became the creator. This idea was afterwards developed to that of the world-egg, and of Hiraṇyagarbha = Brahmā.

An entirely different treatment of the cosmological problem is contained in the philosophical hymn, Rigveda, x. 129 (cf. *Taittirīya Brāhmaṇa*, ii. 8, 9, 3–6), which, for depth of speculation, is one of the most admirable poems of the Rigveda. Notwithstanding the labour of many ingenious interpreters, the meaning of some passages still remains doubtful; yet a general idea of its contents may be got from the subjoined metrical translation of Muir (*op. cit.* v. 356, note 530):

'Then there was neither Aught nor Nought, no air nor sky, beyond.
What covered all? Where rested all? In watery gulf profound?
Nor death was then, nor deathlessness, nor change of night and day.
That One breathed calmly, self-sustained; nought else beyond it lay.
Gloom hid in gloom existed first—one sea, eluding view.
That One, a void in chaos wrapt, by inward fervour grew.
Within it first arose desire, the primal germ of mind,
Which Nothing with Existence links, as sages searching find.
The kindling ray that shot across the dark and drear abyss,—
Was it beneath? or high aloft? What bard can answer this?
There fecundating powers were found, and mighty forces strove,—
A self-supporting mass beneath, and energy above.
Who knows, who ever told, from whence this vast creation rose?
No gods had then been born,—who then can e'er the truth disclose?
Whence sprang this world, and whether framed by hand divine or no,—
Its lord in heaven alone can tell, if even he can show.'

In the *Atharvaveda* we meet with some cosmological hymns, chiefly of the Prajāpati type, in which the highest god and creator is conceived under other forms, and invoked under various names, such as Rohita (the red one), Anaḍvān (the ox), Vaśā (the cow), Kāla (time), Kāma (desire), etc.

LITERATURE.—J. Muir, *Orig. Sanskrit Texts*, London, 1858–72, iv. ch. 1, v. sect. xxi.; L. Scherman, *Philos. Hymnen aus der Rig- und Atharva-veda-Saṁhitā*, Strassburg, 1887; P. Deussen, *Allgem. Gesch. der Philosophie*, i.[2] 1 (Leipzig, 1906); K. F. Geldner, 'Zur Kosmogonie des Rigveda' (*Universitätsschrift zur feierlichen Einführung des Rektors*, Marburg, 1908).

2. Period of the Brāhmaṇas and the Upaniṣads.—The Brāhmaṇas contain many legends about Prajāpati's creating of the world. They usually open with some statement like the following: 'In the beginning was Prajāpati, nothing but Prajāpati; he desired, "May I become many"; he performed austerities, and thereby created these worlds' (either the living beings, or heaven, air, and earth). Besides Prajāpati, other names of the creator are met with: Svayaṁbhū Nārāyana, Svayaṁbhū Brahman, and even Non-Being. The authors of the Brāhmaṇas, being wholly engrossed with liturgy and ceremonial, introduce these legends in order to explain some detail of ritual

or the like; and therefore, after a few general remarks on the creation of the world, they plunge again into ritualistic discussions (see the specimens given by Deussen, *op. cit.* p. 183 ff.). But the little information they give is sufficient to show what were in their time the popular opinions about the origin of the world. Besides the statement that Prajāpati was at the beginning of things, there are others, according to which the waters seem to have been believed to be coeval with him or to have preceded him. Thus it is said (*Taittirīya Saṁhitā*, v. 6, 4, 2, and similarly vii. 1, 5, 1) that in the beginning there was nothing but the waters, and Prajāpati, as wind, went over them or floated on a lotus leaf. Connected with this order of ideas is the now more fully developed conception of the world-egg in *Śatapatha Brāhmaṇa*, xi. 1, 6, 1 ff., which runs thus in Muir's translation (iv. 25):

'In the beginning this universe was water, nothing but water. The waters desired, "How can we be reproduced?" So saying, they toiled, they performed austerity. While they were performing austerity, a golden egg came into existence. Being produced, it then became a year. Wherefore this golden egg floated about for the period of a year. From it in a year a male (*puruṣa*) came into existence, who was Prajāpati. . . . He divided this golden egg. . . . In a year he desired to speak. He uttered "*bhūr*," which became this earth; "*bhuvaḥ*," which became this firmament; and "*svar*," which became that sky. . . . He was born with a life of a thousand years. He perceived the further end of his life as one may perceive the opposite bank of a river. Desiring offspring, he went on worshipping and toiling. He conceived progeny in himself; with his mouth he created the goda,' etc.

We append, for the sake of comparison, another ancient account of the world-egg from the *Chāndogya Upaniṣad*, iii. 19 (*SBE* i. 54 f.): 'In the beginning this was non-existent. It became existent, it grew. It turned into an egg. The egg lay for the time of a year. The egg broke open. The two halves were one of silver, the other of gold. The silver one became this earth, the golden one the sky, the thick membrane (of the white) the mountains, the thin membrane (of the yolk) the mist with the clouds, the small veins the rivers, the fluid the sea. And what was born from it was Āditya, the sun,' etc.

While the authors of the Brāhmaṇas treated cosmogonic myths from their liturgical point of view, the authors of the Upaniṣads used them in order to illustrate their great philosophical tenet of the transcendent oneness of Brahman and its presence in all created things. Accordingly, they frequently substitute for Prajāpati philosophical abstractions, *e.g.* Brahman, Ātman, Not-Being, or Being, and derive from this first principle the worlds, or the Vedas, or those cosmical and psychical agencies which chiefly engross their speculations. They develop and combine these notions in ever-varying ways; but it is to be understood, or it is expressly stated, that the first principle, after having created things, entered them, so that it is present in them, and, in a way, is identical with, and yet different from, them. It is impossible to reduce the variety of opinion on the origin of the world, contained in the Upaniṣads, to one general idea underlying them; we shall, therefore, illustrate them by some selected specimens.

In *Bṛhad Āraṇyaka*, i. 4, the creation is ascribed to Ātman in the shape of a man (*puruṣa*); as there was nothing but himself, he felt no delight, and therefore 'made this his Self to fall in two, and thence arose husband and wife.' He embraced her, and men were born. In the same way he created all beings that exist in pairs. Then he created other things, developed them by name and form, and 'entered thither, to the very tips of the finger-nails, as a razor might be fitted in a razor-case, or as fire in a fire-place' (*SBE* xv. 87). The account of the world-egg in the *Chāndogya Upaniṣad* has already been quoted above. Of a less mythological and more speculative character is a passage in *Taittirīya Upaniṣad*, ii. 1, according to which from this Self (Brahman) sprang space, from space wind, from wind fire, from fire water, from water earth, from earth food, from food seed, men, and all creatures. An older account in *Chāndogya Upaniṣad*, vi. 2, 2 f., mentions only three elements; it runs thus (*SBE* i. 93 ff.):

(Uddālaka speaks to Śvetaketu): 'In the beginning, my dear, there was that only which is (τὸ ὄν), one only, without a second. Others say, in the beginning there was that only which is not (τὸ μὴ ὄν), one only, without a second; and from that which is not, that which is was born.' 'But how could it be thus, my dear?' the father continued. 'How could that which is, be born of that which is not? No, my dear, only that which is, was in the beginning, one only, without a second. It thought, "May I be many, may I grow forth." It sent forth fire. That fire thought, "May I be many, may I grow forth." It sent forth water. And therefore whenever anybody anywhere is hot and perspires, water is produced on him from fire alone. Water thought, "May I be many, may I grow forth." It sent forth earth (food). Therefore whenever it rains anywhere, most food is then produced. From water alone is eatable food produced. . . . That Being (*i.e.* that which had produced fire, water, and earth) thought, "Let me now enter those three beings (fire, water, earth) with this living Self (*jīva ātmā*), and let me then reveal (develop) names and forms." Then that Being, having said, "Let me make each of these three tripartite" (so that fire, water, and earth should each have itself for its principal ingredient, besides an admixture of the other two), entered into those three beings with this living self only, and revealed names and forms,' etc.

Here we have the first forerunner of Sāṅkhya ideas, which are more fully developed in the *Śvetāśvatara* and some later Upaniṣads which form the connecting link between this period and that of the Epics and Purāṇas. The genesis of the evolutionary theory of Sāṅkhya can be traced to these Upaniṣads (see Deussen, *op. cit.* i. 2, p. 216); but we pass this subject over here, as it will be treated in § 3.

The notions as to the *structure of the Universe* entertained by the Vedic poets continued to prevail in the period of the Brāhmaṇas and Upaniṣads, where frequently the Universe is spoken of as tripartite: earth, air, and sky, symbolized in the three 'great utterances' (*vyāhṛtis*), '*bhūr*,' '*bhuvaḥ*,' '*svar*.' In *Aitareya Āraṇyaka*, ii. 4, 1, however, it is said that in the beginning the Self sent forth the worlds of Ambhas, Marīchi, Mara, and Ap. 'That Ambhas (water) is above the heaven, and it is heaven, the support. The Marīchis (the lights) are the sky. The Mara (mortal) is the earth, and the waters under the earth are the Ap world.' Nine or ten worlds are enumerated in *Bṛhad Āraṇyaka Upaniṣad*, iii. 6, viz. the worlds of wind, air, Gandharvas, sun, moon, stars, gods, Indra, Prajāpati, and Brahman;[1] each of these worlds is woven into the next higher one, 'like warp and woof.' More importance is attached to a sevenfold division of the world. This was introduced by the augmentation of the *vyāhṛtis* from three, the usual number, to seven, which number first occurs in *Taittirīya Āraṇyaka*, x. 27 f. There we find the following *vyāhṛtis*: '*bhūr*,' '*bhuvaḥ*,' '*svar*,' '*mahar*,' '*janas*,' '*tapas*,' and '*satyam*.' Now, as the three first, the original *vyāhṛtis* ('*bhūr*,' '*bhuvaḥ*,' '*svar*'), symbolically denoted the three worlds (earth, air, sky), so the four added *vyāhṛtis* ('*mahar*,' '*janas*,' '*tapas*,' '*satyam*') became names of still higher worlds. Thus, in some later Upaniṣads seven worlds are mentioned, and in the *Aruṇeya Upaniṣad* these seven worlds ('*bhūr*' . . . '*satyam*') are distinguished from seven nether worlds: Atala, Pātāla, Vitala, Sutala, Rasātala, Mahātala, and Talātala. This last conception of a twice sevenfold world was, in the next period, developed in detail.

3. **Period of the Epics and the Purāṇas.**—While in the preceding period cosmogonic myths are of an episodical character, the same subject is now treated more at length, and for its own sake. Its importance is fully recognized in the Purāṇas; for cosmogony and secondary creation—*i.e.* the successive destructions and renovations of the world—belong to the five characteristic topics (*pañchalakṣaṇa*) of the Purāṇas.

[1] In the cosmography of the *Vaiṣṇava*, which will be dealt with in § 3, the names of the highest celestial spheres are Māhendra, Prājāpatya, and Brahmā.

The variety of views as to the origin of the world which obtained in the preceding periods still continues; but there is a decided tendency towards introducing some order. The mythological elements of cosmogony are mostly adopted from Vedic literature, and further developed; some are of more modern origin; both elements are variously combined. These mythological elements are as follows: (1) the highest godhead, Brahman or Ātman, identified with Nārāyaṇa, Viṣṇu, Śambhu, etc., according to the sectarian tendency of the author; (2) the primeval waters or darkness; (3) the Puruṣa or Hiraṇyagarbha, who sprang up therein; (4) the world-egg, which brought forth Brahmā (or Prajāpati, Pitāmaha); (5) the lotus, from which sprang Brahmā; the lotus itself came forth either from the waters or from the navel of Viṣṇu; (6) the intermediate creators, or mental sons of Brahmā, numbering seven or eight, Marīchi, etc.; (7) the successive creations and destructions of the world. Though the last-mentioned conception can be traced to a greater antiquity,[1] it was only then developed into a gigantic chronology of the world which reckoned by *kalpas*, *manvantaras*, and *yugas* (see art. AGES OF THE WORLD [Indian]). This system was employed in order to reconcile conflicting views on the origin of the world by assigning some cosmogonic processes to primary, some to secondary, creation, and by distinguishing the several secondary creations. But all these attempts at systematic order resulted in greater confusion, for primary and secondary creations were inextricably mixed up with one another. The framers of cosmogonic systems in the *Mahābhārata* and the Purāṇas freely laid under contribution the Sāṅkhya philosophy; they took over from it the evolutionary theory as taught by Kapila, or they tried to improve on it. As it formed the theoretical foundation of cosmogony, a brief sketch of it must be given here.

According to Sāṅkhya philosophy, there are two principles, entirely independent of each other: (1) the souls, *Puruṣas*; and (2) *Prakṛti*, original nature, or *Pradhāna* (principle, viz. matter), which is made up of the three *guṇas* (secondary elements)—darkness (*tamas*), activity (*rajas*), and goodness (*sattva*)—in the state of equipoise. When this equilibrium is disturbed through the presence (or co-inexistence) of the *Puruṣa*, then from *Prakṛti* is developed *Mahān* or *Buddhi*, the thinking substance, which chiefly consists of *sattva*. From *Buddhi* is developed *Ahaṁkāra*, a substance the function of which is to produce the conceit of individuality. *Ahaṁkāra* produces the mind (*manas*), the five organs of sense (*buddhīndriya*), the five organs of action (*karmendriya*), and the five subtle elements (*tanmātrā*). The last, combining with one another, form the five gross elements (*mahābhūta*): space (or air), fire, wind, water, and earth. These are the twenty-five principles (*tattvas*) of Sāṅkhya. They and the order of their production have been adopted, and adapted to the order of ideas taught in the Upaniṣads, by the authors of those parts of the *Mahābhārata* which deal with the evolution of the world. In trying to reconcile Vedic cosmogony with the principles of Sāṅkhya philosophy, those didactic poets invented various changes of the latter or of their arrangement, though none of these attempts was generally adopted. We shall mention only two points in which the epic writers departed from the Sāṅkhya system and, at the same time, disagreed among themselves. (1) The established belief in a first cause, Brahman or Ātman, was radically opposed to the Sāṅkhya doctrine of two mutually independent principles, *Puruṣa* and *Prakṛti*; yet both views had to be harmonized somehow. No wonder that opinion differed widely on this head. For instance, Puruṣa is identified with *Pradhāna*, or Hiraṇyagarbha with *Buddhi*, or Brahmā with *Ahaṁkāra*, etc. (2) The Sāṅkhya doctrine, which derived the elements from *Ahaṁkāra* through the interposition of the transcendent *tanmātrās*, seems to have been thought unduly abstruse by those poets who preached to a mixed audience. They therefore usually omit the *tanmātrās*, and make the *mahābhūtas* the direct product of *Ahaṁkāra*, just as in the Upaniṣads the elements are said to have sprung directly from Brahman. It is needless for our purpose to multiply instances; for details the reader is referred to E. Washburn Hopkins' work, *The Great Epic of India*, New York, 1901, in which epic philosophy is exhaustively treated (p. 85 ff.). It must, however, be stated that some scholars, *e.g.* Dahlmann,[1] and Deussen,[2] are of the opinion that epic Sāṅkhya represents a preliminary state of speculation, from which systematic Sāṅkhya was developed.

The cosmological passages of the Great Epic belong to an age of transition, and none of them seems ever to have been generally accepted as an authoritative exposition of the subject. It is, however, different with another document which may roughly be assigned to the same period—the cosmogonic account in the *Laws of Manu*, i. 5 ff.; for it (or parts of it) is quoted in a great number of mediæval works, and it may therefore serve to illustrate the state of the views on cosmogony which prevailed before the time when the Purāṇas took their present form. We quote here Bühler's translation in *SBE* xxv. 2 ff.

'This (universe) existed in the shape of Darkness, unperceived, destitute of distinctive marks, unattainable by reasoning, unknowable, wholly immersed, as it were, in deep sleep (5). Then the divine Self-existent (Svayaṁbhū, himself) indiscernible, (but) making (all) this, the great elements and the rest, discernible, appeared with irresistible (creative) power, dispelling the darkness (6). He who can be perceived by the internal organ (alone), who is subtle, indiscernible, and eternal, who contains all created beings and is inconceivable, shone forth of his own (will) (7). He, desiring to produce beings of many kinds from his own body, first with a thought created the waters, and placed his seed in them (8). That (seed) became a golden egg, in brilliancy equal to the sun; in that (egg) he himself was born as Brahman, the progenitor of the whole world (9). The waters are called *nārāḥ*, (for) the waters are, indeed, the offspring of Nara; as they were his first residence (*ayana*), he thence is named Nārāyaṇa (10). From that (first) cause, which is indiscernible, eternal, and both real and unreal, was produced that male (Puruṣa), who is famed in this world (under the appellation of) Brahman (11). The divine one resided in that egg during a whole year, then he himself by his thought (alone) divided it into two halves (12); and out of those two halves he formed heaven and earth, between them the middle sphere, the eight points of the horizon, and the eternal abode of the waters (13). From himself (*ātmanaḥ*) he also drew forth the mind, which is both real and unreal, likewise from the mind egoism, which possesses the function of self-consciousness (and is) lordly (14); moreover, the great one, the soul, and all (products) affected by the three qualities, and, in their order, the five organs which perceive the objects of sensation (15). But, joining minute particles even of those six, which possess measureless power, with particles of himself, he created all beings (16). Because those six (kinds of) minute particles, which form the (creator's) frame, enter (*ā-śri*) these (creatures), therefore the wise call his frame *śarīra* (the body) (17). That the great elements enter, together with their functions and the mind, through its minute parts the framer of all beings, the imperishable one (18). But from minute body (-framing) particles of these seven very powerful Puruṣas springs this (world), the perishable from the imperishable (19). Among them, each (succeeding) element acquires the quality of the preceding one, and whatever place (in the sequence) each of them occupies, even so many qualities it is declared to possess (20). But in the beginning he assigned their several names, actions, and conditions to all (created beings), even according to the words of the Veda (21). He, the Lord, also created the class of the gods, who are endowed with life, and whose nature is action; and the subtle class of the Sādhyas, and the eternal sacrifice (22). But from fire, wind, and the sun he drew forth the threefold eternal Veda, called Ṛich, Yajus, and Sāman, for the due performance of the sacrifice (23). Time and the divisions of time,

[1] It is found as early as the *Śvetāśvatara and Maitrāyaṇa Upaniṣads*.

[2] *Op. cit.* i. 3, p. 18.

the lunar mansions and the planets, the rivers, the oceans, the mountains, plains, and uneven ground (24), austerity, speech, pleasure, desire, and anger, this whole creation he likewise produced, as he desired to call these beings into existence (25). Moreovar, in order to distinguish actions, he separated merit from demerit, and he caused the creatures to be affected by the pairs (of opposites), such as pain and pleasure (26). But with the minute perishable particles of the five (elements) which have been mentioned, this whole (world) is framed in due order (27). . . . But for the saka of the prosperity of the worlds, he caused the Brāhmaṇa, the Kṣatriya, the Vaiśya, and the Śūdra to proceed from his mouth, his arms, his thighs, and his feet (31). Dividing his own body, the Lord became half male and half female; with that female he produced Virāj (32).' From Virāj sprang Manu Svāyaṁbhu, who, 'desiring to produce created beings, performed very difficult austerities, and (thereby) called into existence ten great sages, lords of created beings—Marichi, Atri, Aṅgiras, Pulastya, Pulaha, Kratu, Prachetas, Vasiṣṭha, Bhṛgu, and Nārada (34, 35).' These secondary Prajāpatis created the other Manus, gods, demons, men, animals, plants, etc. Next comes the account of the destructions and secondary creations of the world, the days and nights of Brahmā, the system of *yugas* and *manvantaras*, etc. (For details, see Ages of the World [Indian].)

A very full discussion of the cosmogony in Manu and its relation to the accounts in other sources will be found in W. Jaho, *Über die kosmogon. Grundanschauungen im Mānava-dharma-śāstram*, Leipzig, 1904.

Cosmogony in the Purāṇas, in the form in which they have come down to us, is, on the whole, a later development of that which we have just described. Here, too, the evolutionary theory of Sāṅkhya has been so modified as to agree with the Vedāntic doctrine about the oneness of Brahman, by assuming that *Puruṣa* and *Prakṛti* are but two forms of the Supreme Deity, who is identified with one of the popular gods according to the sectarian character of the work. An abstract from the account of the creation in the *Viṣṇu Purāṇa*[1] may serve to illustrate Paurāṇic cosmogony, if we keep in mind that the accounts in other Purāṇas are, on the whole, similar in tenor, though they may vary in details. According to the *Viṣṇu Purāṇa*, the self-existent Brahman is Vāsudeva; he is originally and essentially but one, atill he exists in three successively proceeding forms: Puruṣa, Pradhāna (both unevolved and evolved), and Kāla (time), the latter acting as the bond connecting the former two. When the Supreme Deity entera Puruṣa and Pradhāna (the equilibrium of the three *guṇas*), then Pradhāna produces Mahān or Buddhi, which in its turn produces Ahaṁkāra; and so the five subtle elements, the gross elements, and the eleven organs are produced, much in the same way as is tanght in Sāṅkhya philosophy. But the Purāṇas teach, in addition to the evolutionary theory, that each generating principle or element envelops the one generated by it. The gross elements combine into a compact mass, the world-egg (*brāhmāṇḍa*), which rests on the waters, and is surrounded by seven envelopes—water, wind, fire, air, Ahaṁkāra, Buddhi, and Pradhāna. In the world-egg the highest deity, invested with the *guṇa* activity, appeared in the form of Brahmā, and created all things. The same deity in the *guṇa* goodness preserves, as Viṣṇu, the Universe till the end of a *kalpa*, when the same god, in the awful form of Rudra, destroys it. The third chapter of the *Viṣṇu Purāṇa* deals with time, the days and nights of Brahmā, the duration of his life, etc. (see Ages of the World [Indian]). The next chapter describes how, in the beginning of a *kalpa*, Nārāyaṇa, in the shape of a boar, raised the earth from beneath the waters and created the four lower spheres—earth, sky, heaven, and Maharloka. In the fifth chapter occur some more speculations of Sāṅkhya character, and a description of nine creations:

'The first creation was that of Mahat, or Intellect, which is called the creation of Brahmā. The second was that of the rudimental principles (*tanmātrās*), theoce termed elemental creation (*Bhūtasarga*). The third was the modified form of egotism, termed the organic creation or creation of the senses (*Aindriyika*). These three were the Prākṛta creations, the developments of indiscrete nature, preceded by the indiscrete principle. The fourth or fundamental creation (of perceptible things) was that of inanimate bodies. The fifth, the Tairyagyonya creation, was that of animals. The sixth was the Ūrdhvasrotas creation, or that of the divinities. The creation of the Arvāk-srotas beings was the seventh, and was that of man. There is an eighth creation, termed Anugraha, which possesses both the qualities of goodness and darkness. Of these creations five are secondary, and three are primary. But there is a ninth, the Kaumāra creation, which is both primary and secondary. These are the nine creations of the great progenitor of all, and, both as primary and secondary, are the radical causes of the world, proceeding from the sovereign creator.'[1]

The seventh chapter relates how Brahmā after the creation of the world created 'other mind-born sons like himself'; about the number and names, however, of these Prajāpatis, or mental sons of Brahmā, the different Purāṇas do not agree.[2] Then Brahmā created Manu Svāyaṁbhuva, for the protection of created beings. Manu's daughter Prasūti was married to one of the Prajāpatis, Dakṣa, who thereby became the ancestor of a great number of divine beings, mostly of an allegorical character, as personified virtues and vices.

The preceding abstracts from the *Viṣṇu Purāṇa* give some idea of the heterogeneous character of the cosmogonic theory which henceforth was generally adopted. Mythological and theosophic notions inherited from the Vedic period have been combined with notions of later origin—genealogic legends, the evolutionary system of Sāṅkhya, and the scheme of the Ages of the World—in order to give a rational theory of the origin and development of the world in harmony with the teachings of the Vedas. But the materials proved too refractory, or rather the authors were not bold enough in re-modelling the old traditions; hence their work leaves the impression of disparate parts, ill-combined or only formally united.

The authors of the Purāṇas succeeded better in delineating a plan of the Universe; for the cosmographic notions which are contained in the Vedas, and which have been sketched above under § 1, lent themselves readily to such an undertaking. The Great Epic added little to the old stock of cosmographic ideas, except a detailed description of the earth and some particulars about the hells. There was, indeed, the ancient belief in worlds of Indra, Varuṇa, Vāyu, Agni, Āditya, Yama, etc., but the notions as to the situation of these worlds (except those of Indra and Yama) seem always to have been rather vague, so that the authors of the Purāṇas were not over much prejudiced by tradition in their endeavours to devise a systematic cosmography. The system is practically the same in all Purāṇas; the following description of it is based on the *Viṣṇu Purāṇa*, while for the discrepancies in details the reader may be referred to Wilson's notes in his translation of the *Viṣṇu Purāṇa*.

The whole system of the worlds contained in the world-egg may be divided into three parts in agreement with the current expressions *tribhuvana*, *trailokya*, etc., 'the three worlds.' The middle part, which is, however, many times nearer the base than the top, is formed by the earth, an enormous disk of five hundred millions of *yojanas* in extent; it is encircled by the Lokāloka mountain, and contains the continents and oceans. A description of the earth need not detain us here, as it will be given in the art. Geography (Mythical). Above the earth are the heavens, and below it the nether worlds, or *Pātāla*. But actually the Universe is divided into two parts; for it consists of seven upper regions, the lowest of which is the earth, and of the seven nether regions. Hence frequently fourteen worlds are spoken of. To these two divisions have been added the hells, somewhere in the lowest part of the Universe. The number of

[1] Wilson, *op. cit.* i. 74 ff.

[2] *Ib.* p. 100, note; cf. the passage from Manu quoted above, verse 34 f.

hells seems originally not to have been fixed (*Viṣṇu Purāṇa*, ii. 6), though Manu (iv. 87) gives their number as twenty-one.[1]

Omitting the hells, there are seven nether worlds (Atala, Vitala, Nitala, Gabhastimat, Mahātala, Sutala, and Pātāla),[2] and the seven upper worlds (Bhūr [the earth], Dyaus, Svar, Mahar, Janas, Tapas, and Satya). Pātāla—for this is also the collective name of the seven nether worlds—extends downwards 70,000 *yojanas* below the surface of the earth, each of its seven regions having a depth of 10,000 *yojanas*. Pātāla is the abode of Nāgas, Daityas, and Dānavas, and it equals the heavens in beauty and magnificence. Below Pātāla is the dragon Śeṣa, who 'bears the entire world like a diadem upon his head, and who is the foundation on which the seven Pātālas rest.' As said above, the hells, or *narakas*, are beneath Pātāla; but their exact situation cannot be made out, because some place them below, some above, the waters which encircle the Universe. The cause of this uncertainty with regard to the hells seems to have been that originally they were not distinguished from the nether worlds. For, as will be seen below (§ 4), the Jains have seven hells instead of seven Pātālas, and find room for the Asuras in caves below the earth and above the first hell, instead of seven Pātālas. The upper regions begin with the terrestrial sphere, *Bhūrloka*; the next is *Bhuvarloka*, or *Dyaus*, which reaches thence to the sun; while from the sun to the pole star extends the *Svarloka*, or the heaven of the gods. These three worlds are destroyed at the end of each *kalpa*. The next higher world, *Maharloka*, is not destroyed, but at the end of the *kalpa* its tenants repair to the next region, the *Janaloka*, the inhabitants of which are Sanandana and other sons of Brahmā. The sixth region is *Tapaloka*, peopled by the Vairāja gods; and above it is the highest region, *Satyaloka* or *Brahmaloka*, the inhabitants of which never know death. It must, however, be stated that the different Purāṇas do not agree regarding the inhabitants of the higher heavens. The distance of these regions from one another increases from below upwards: Maharloka is ten million *yojanas* above the pole star, Janaloka twenty, Tapaloka eighty, and Satyaloka a hundred and twenty, millions of *yojanas* above the next lower region.

A somewhat different description of the Universe is given by Vyāsa in the *Yogabhāṣya*, iii. 26. This account, which may be ascribed to the 7th cent. A.D., is much more detailed than that of the Purāṇas, with which, however, it agrees on the whole. But it has also some curious affinities with the Buddhist description of the world, in proper names as well as in the part played by contemplation. The entire Universe is contained in the world-egg, which is but an infinitesimally small particle of the Pradhāna. It consists of seven regions (*bhūmi*), one above the other. The lowest is *Bhūrloka*, which extends from the lowest hell to the top of mount Meru. The second region, *Antarikṣaloka*, reaches to the pole star. The third is termed *Svar-* or *Māhendraloka*; the fourth *Mahar-* or *Prājāpatyaloka*. The fifth, sixth, and seventh regions, called *Jana-*, *Tapa-*, and *Satyalokas*, form together the tripartite Brāhmaloka. Bhūrloka is subdivided into hells, Pātālas, and earth. At the bottom of Bhūrloka are the seven hells, one above the other. Their names are: Avīchi, Ghana, Salila, Anala, Anila, Ākāśa, and Tamaḥpratiṣṭha; with the exception of Avīchi, a popular name of hell, these hells seem to be identical with the envelopes of the world-egg in the Paurāṇic account. Probably for this reason these six hells each bear another name, as stated by Vyāsa, viz. Mahākāla, Ambarīṣa, Raurava, Mahāraurava, Kālasūtra, and Andhatāmisra. Above the hells are the seven Pātālas: Mahātala, Rasātala, Atala, Sutala, Vitala, Talātala, and Pātāla. Above these seven *bhūmis* is the eighth, the earth, *Vasumatī*, with the seven continents, etc., which may be passed over here.

As to the inhabitants of the seven regions of the Universe, the following notions are found. (1) In the Pātālas, in the oceans and on the mountains of the earth live the following classes of gods (*devanikāyas*): Asuras, Gandharvas, Kinnaras, Kimpuruṣas, Yakṣas, Rākṣasas, Bhūtas, Pretas, Apasmārakas, Apsaras, Brahmarākṣasas, Kūṣmāṇḍas, and Vināyakas; in the continents live gods and men, and on Meru are the parks and palaces of the gods. (2) Antarikṣaloka is the sphere of the celestial bodies. (3) In Māhendra are six classes of gods: Tridaśas, Agniṣvātas, Yāmyas, Tuṣitas, Aparinirmitavaśavartins, and Parinirmitavaśavartins. (4) In Prājāpatya there are five classes of gods: Kumudas, Ribhus, Pratardanas, Añjanābhas, and Prachitābhas. (5) In Janaloka there are four classes: Brahmapurohitas, Brahmakāyikas, Brahmamahākāyikas, and Amaras. (6) In Tapaloka there are three classes: Ābhāsvaras, Mahābhāsvaras, and Satyamahābhāsvaras. (7) In Satyaloka there are four classes: Achyutas, Śuddhanivāsas, Satyābhas, and Saṁjñāsaṁjñins. The gods in the regions from Prājāpatya upwards live on contemplation (*dhyānāhāra*); their powers and the duration of their life increase by bounds from below upwards; the gods in Tapaloka are not reborn in a lower sphere, and the four classes of gods in Satyaloka realize the happiness of the four degrees of contemplation respectively—*savitarka*, *savichāra*, *ānandamātra*, and *asmitāmātra-dhyāna*. Cf. art. COSMOGONY AND COSMOLOGY (Buddhist).

The detailed knowledge of the structure of the Universe was generally believed to have been reached by contemplation; this is expressly stated by Patañjali in *Yogasūtra*, iii. 26, and by the Jain writer Umāsvāti in *Tattvārthādhigama Sūtra*, ix. 37. Notwithstanding, or rather because of, its visionary character, Paurāṇic cosmography became, as it were, an article of faith.[1] The general belief in it was not shaken even by the introduction of scientific astronomy, though the astronomers tried to remodel the traditional cosmography on the basis of their science. The result of this compromise may be seen in the following abstract from the *Sūrya Siddhānta*, xii. 29 ff.:[2]

'This Brahma-egg is hollow; within it is the universe, consisting of earth, sky, etc.; it has the form of a sphere, like a receptacle made of a pair of caldrons (29). A circle within the Brahma-egg is styled the orbit of the ether (*vyoman*); within that is the revolution of the asterisms (*bha*); and likewise, in order, one below the other (30) revolve Saturn, Jupiter, Mars, the sun, Venus, Mercury, and the moon; below, in succession, the Perfected (*siddha*), the Possessors of Knowledge (*vidyādhara*), and the clouds (31). . . . Seven cavities within it, the abodes of serpents (*nāga*) and demons (*asura*), endowed with the savour of heavenly plants, delightful, are the inter-terranean (*pātāla*) earths (35). A collection of manifold jewels, a mountain of gold, is Meru, passing through the middle of the earth-globe, and protruding on either side (36).'

Literature to §§ 2 and 3 has been indicated in the above.

4. Jain cosmography.—According to the Jains, the world is eternal, without beginning or end. They have therefore no cosmogony, but they have a cosmography of their own which differs widely from that of the Brāhmans, especially with regard to the upper spheres or heavens. The Universe takes up only that part of space which, from this

[1] For particulars, see Wilson, *op. cit.* ii. 215, and Hall's note to that passage.

[2] For variations in other Purāṇas, see Wilson, *op. cit.* i. 208.

[1] It is worthy of remark that in these cosmographic systems worlds are assigned to the more ancient gods, viz. Indra, the Prajāpatis, and Brahman, but not to Viṣṇu and Śiva; indeed Viṣṇu's heaven, Vaikuṇṭha, is wanting in those lists of heavens. Apparently the authors of cosmography had not come under the influence of popular Vaiṣṇavism or Śaivism.

[2] Burgess's tr. in *JAOS* vi. 245.

circumstance, is called Lokākāśa; the remaining part, Alokākāśa, is an absolute void and perfectly impenetrable to anything, either matter or souls. The Lokākāśa is coterminous with the two substances Dharma and Adharma, the substrata of motion and rest, which are, therefore, the indispensable conditions of the presence of all existing things. 'The world is figured by the Jainas as a spindle resting on half of another; or, as they describe it, three cups, of which the lowest is inverted; and the uppermost meets at its circumference the middle one. They also represent the world by comparison to a woman with her arms akimbo.'[1] Older, however, is the comparison with a man (*puruṣa*). The disk of the earth is in the lower part of the middle, and forms the waist of the *puruṣa*; below the earth are the hells, and above it the upper regions. The entire world rests on a big layer of 'thick water,' this on one of 'thick wind,' and this again on one of 'thin wind.' The last two layers measure innumerable thousands of *yojanas*. The seven lower regions (*bhūmis*), one below the other, are Ratnaprabhā, Śarkarāprabhā, Vālukāprabhā, Paṅkaprabhā, Dhūmaprabhā, Tamaḥprabhā, and Mahātamaḥprabhā. Another set of names for them is given by Umāsvāti: Dharmā, Vaṃśā, Śailā, Añjanā, Ariṣṭā, Mādhavyā, and Mādhavī (cf. the double set of names for the hells in the *Yogabhāṣya*, above, § 3). These regions contain the hells; the lowest one has but five, while the highest one, Ratnaprabhā, has three millions of hells. Their inhabitants are the damned, *nārakas*, whose stay in hell is not without end, but for fixed periods of time, varying from 10,000 years to 33 oceans of years, when they are re-born in other conditions of life. These regions are separated from each other by layers of 10,000 *yojanas* containing no hells; but in the layer separating Ratnaprabhā from the earth are the dwellings of the Bhavanāvāsin gods; these dwellings are apparently the Jain counterpart of the Brāhmanic Pātālas. Above the seven regions of the hells is the disk of the earth, with its numerous continents in concentric circles separated by rings of oceans (see art. GEOGRAPHY [Mythical]). In the middle of the earth towers Mount Meru, 100,000 *yojanas* high, round which revolve suns, moons, and stars, the Jyotiṣka-gods. Immediately above the top of Mount Meru begins the threefold series of heavenly regions styled Vimānas, and inhabited by the Vaimānika gods. These regions are as follows: (1) *the twelve kalpas*, Saudharma, Aiśāna, Sanatkumāra, Māhendra, Brahmaloka,[2] Lāntaka, Mahāśukra, Sahasrāra, Ānata, Prānata, Āraṇa, and Achyuta (the Digambaras add Brahmottara before Lāntaka; Kāpiṣṭha and Śukra after it, and Śatāra after Mahāśukra); (2) *the nine Graiveyakas* (these heavens form the neck [*grīva*] of the man figuring the world; hence their name); (3) *the five Anuttaras*, Vijaya, Vaijayanta, Jayanta, Aparājita, and Sarvārthasiddha. The gods in the Anuttara Vimānas will be re-born no more than twice. It is to be understood that all these twenty-six heavens are one above the other. Above Sarvārthasiddha, at the top of the Universe, is situated Īṣatprāgbhāra, the place where the souls resort on their liberation (*nirvāṇa*). The following description of it is given in the *Uttarādhyayana Sūtra*, xxxvi. 57 ff. (*SBE* xlv. 211 f.):

'Perfected souls are debarred from the non-world (Alōka); they reside on the top of the world; they leave their bodies here (below), and go there, on reaching perfection (57). Twelve *yojanas* above the (Vimāna) Sarvārtha is the place called Iṣatprāgbhāra, which has the form of an umbrella (58). It is forty-five hundred thousand *yojanas* long, and as many broad, and it is somewhat more than three times as many in circumference (59). Its thickness is eight *yojanas*; it is greatest in the middle, and decreases toward the margin, till it is thinner than the wing of a fly (60). This place, by nature pure, consisting of white gold, resembles in form an open umbrella, as has been said by the best of Jinas (61). (Above it) is a pure blessed place (called Sītā), which is white like a conch-shell, the *aṅka*-stone, and *kunda*-flowers; a *yojana* thence is the end of the world (62). The perfected souls penetrate the sixth part of the uppermost *krośa* of the (above-mentioned) *yojana* (63). There at the top of the world reside the blessed perfected souls, rid of all transmigration, and arrived at the excellent state of perfection (64).'

In concluding our exposition of Jain cosmography it may be remarked that the knowledge of it seems always to have been popular among the Jains, for the plan of the Universe as described above is always before the mind of Jain authors, and they presuppose an acquaintance with it on the part of their readers.

LITERATURE.—The above account of Jain cosmography is based chiefly on Umāsvāti's *Tattvārthādhigama Sūtra* (tr. by the present writer in *ZDMG* lx. [Leipzig, 1906]).

H. JACOBI.

COSMOGONY AND COSMOLOGY (Iranian).—The chief Iranian texts on the creation of the world are *Vendidād* i. and *Būndahišn*. Of these the more elaborate is the latter, and according to it both Ormazd and Ahriman have existed from all eternity—a view which is as old as the Gāthās (cf. *Yasna* xxx. 3, which distinctly terms the two spirits 'twins'—*yēmā*—and xlv. 2). The pair are parted by the ether (*vāyu*), and Ormazd dwells in 'endless light,' while his opponent lurks in an abyss of infinite darkness. Ormazd, moreover, was aware, through his omniscience, of the existence of Ahriman, but the evil spirit was ignorant of the higher being until aroused to conflict with him by beholding light. Thereupon, as Ormazd created excellent lands, Ahriman sought to mar his work by bringing into being plagues, moral and physical. Herein the essential dualism of Zoroastrianism finds one of its most important illustrations.

Zoroastrian cosmogony covers a period of 12,000 years, which are divided into four ages of 3,000 years each. The first of these epochs is the age of the spiritual creation, in which the creations remained 'in a spiritual state, so that they were unthinking and unmoving, with intangible bodies' (*Būndahišn* i. 8; *Selections of Zāt-sparam* i. 22). These spiritual creations bear a remarkable analogy to the Platonic 'Ideas,' and Darmesteter has sought (*Le Zend-Avesta* iii., Paris, 1893, pp. li–liii), although without success, to trace an actual connexion between the two. Meanwhile, Ahriman created demons for the overthrow of the creatures of Ormazd, and refused the peace which the celestial being offered him. Thereupon, they agreed to combat for nine thousand years, Ormazd foreknowing that for three thousand years all things would go according to his own will, while in the second three thousand years the two spirits should struggle in bitter conflict, and in the third Ahriman should be utterly put to rout. The second epoch of three thousand years was that of the material creation, the order being, after the Amesha Spentas (*q.v.*), heaven (including the heavenly bodies), water, earth, plants, animals, and man. The third period of three thousand years begins with the eruption of Ahriman into the good creation of Ormazd. The evil spirit spreads disease, devastations, and noxious creatures, throughout the world, harming and defiling water, earth, plants, and fire, in addition to slaying the primeval ox and the primeval man. Finally, however, the demoniac hosts are driven back to hell. The remainder of this period is concerned with the legendary history of the Iranian kings, so that

[1] Colebrooke, *Miscellaneous Essays*, London, 1837, ii. 198.

[2] About the Brahmaloka the following details are given: in it live the Lokāntika gods (who will reach *nirvāṇa* after one re-birth); and round it, in the cardinal and intermediate points of the compass, N.E., E. etc., are situated the Vimānas of the following eight classes of gods: Sārasvatas, Ādityas, Vahnis, Aruṇas, Gardatoyas, Tuṣitas, Avyābādhas, and Ariṣṭas.

neither it nor the final eschatologic period comes under consideration in an outline of the Persian cosmogony.

Throughout the Avesta the creation of all things is ascribed to Ahura Mazda (Ormazd), as in *Yasna* xvi. 1, although a certain amount of creative activity is also attributed to the Amshaspands (*Yasna* lxv. 12; *Visparad* xi. 12; *Yašt* xix. 18). In *Yasna* xxxvii. 1 occurs the striking passage: 'Here, then, we worship Ahura Mazda, who created both kine and holiness, and created water, created both good trees and light, both the earth and all good things' (cf. xliv. 3–5). That this belief was Iranian is shown by the recurrence of similar phraseology in the Old Persian inscriptions, as in NR. a, 1–8: 'A great god is Auramazda, who created this earth, who created yon heaven, who created man, who created peace for man, who made Darius king, the one king of many, the one ruler of many,' although similar phrases are not unknown in Assyrian inscriptions (Gray, *AJSL* xvii. 152).

The creation itself, according to the Parsi *Āfrīn Gahanbār* (tr. by Darmesteter, *op. cit.* pp. 180–187, and edited by him in *Études iran.*, Paris, 1883, ii. 318–333) and the *Būndahišn* xxv. 1 (cf. also the section of the *Great Būndahišn*, tr. by Blochet, *RHR* xxxii. 223), occupied a year. The tradition of a cosmic epoch of 12,000 years, although not mentioned in the extant Avesta, must be of considerable antiquity, for the historian Theopompus, an author of the 4th cent. B.C., says, in a fragment preserved by Plutarch (*de Iside et Osiride*, xlvii.): 'According to the Magi, one of the gods conquers and the other is conquered for three thousand years each; and for another three thousand years they fight and war, and one destroys the works of the other; but finally Hades loses, and mankind shall be blessed, neither needing nourishment nor casting shadows.'[1] The Iranian cosmogony seems to have been geocentric, and, according to *Dātistān-ī-Dēnīk* xxxvii. 24, 'the sky is in three thirds, of which the one at the top is joined to the endless light, in which is the constantly-beneficial space; the one at the bottom reached to the gloomy abyss, in which is the fiend full of evil; and one is between those two thirds which are below and above' (cf. *Yašt* xiii. 2). This has led some scholars, notably Spiegel, to seek to find the idea of the cosmic egg in Iran, but of this, as Casartelli has well pointed out, there seems to be little evidence. The question whether the Iranian cosmogony presupposes a creation *ex nihilo* has been much discussed, although it would seem from the phrase in the *Būndahišn* (xxx. 5), 'when they were formed, it was not forming the future out of the past,' that at least in the later development of the religion this doctrine was not unknown. The earlier texts, however, shed little light on this problem, nor do the verbs used of the creative activity of Ormazd (*dā*, 'establish,' *θwares*, 'cut'; *taš*, 'form,' cf. Gr. *τέκτων*) and Ahriman (*karat*, 'cut') give much aid, although *θwares*, *taš*, and *karat* seem to imply the elaboration of already existing material, while it may be urged that *dā* connotes, at least in some passages, actual creation *ex nihilo*. Equally dubious is the problem of the origin of the Iranian cosmogony. An elaborate comparison has been drawn by Spiegel (*Erânische Alterthumskunde*, i. 449–457) between the Iranian and the Semitic, particularly Hebrew, accounts of the creation of the world; but this is, to say the least, unproven. It is true that, both in Genesis and in the *Būndahišn*, creation occupies six periods, but in the former the epoch is a week of six days, and in the latter a year of six *gāhānbārs*, and the correspondence in the main between the order of the two accounts is a natural sequence of development, and not necessarily due to the borrowing of either from the other. It should also be noted that the Iranian account makes no allowance for the seventh day of the Biblical record, thus further increasing the improbability of borrowing from either side. On the other hand, the division of the earth into seven *karšvars*, or 'zones,' which is mentioned repeatedly in the Avesta (as in *Yasna* lxi. 5; *Yašt* xix. 82), and is as old as the Gāthās (*Yasna* xxxii. 3), is doubtless late Babylonian in origin, especially as the Semitic cosmogony likewise divided the earth into seven zones (*tubuqâti*). This origin of the Iranian *karšvars* seems more probable than the view which equates them with the *dvīpas* ('islands') of Hindu cosmogony, which usually number seven, although they are occasionally regarded as four or thirteen. They are not mentioned, however, before the *Mahābhārata* and the *Purāṇas*, and are thus probably too late to have influenced the Avesta (cf. Muir, *Original Sanskrit Texts*, i.[2] London, 1872, pp. 489–504; and, for the proof of Bab. influence, P. Jensen, *Kosmol. der Babylonier*, Strassburg, 1890, pp. 175–184).

The cosmogony of the Iranians, as outlined in the Avesta and the Pahlavi texts, underwent some slight changes in the course of time as a result of philosophic thought. The reduction of the dualism of the Gāthās—itself, no doubt, a reduction of an earlier polytheism—to a monotheism gave rise to the elaboration of the concept of 'Boundless Time' (*zrvan akarana*), which is hailed as a godling even in the so-called Younger Avesta (*Yasna* lxxii. 10; *Nyāiš* i. 8; *Vendīdād* xix. 13). The Zarvanite sect, which was an important factor in Parsiism as early as the 4th cent. A.D., derived both Ormazd and Ahriman from 'Boundless Time,' making the evil spirit born first in consequence of the doubt of 'Boundless Time,' while Ormazd did not come into being until later, and was long inferior in power to Ahriman. In somewhat similar fashion, the Kaiyomarthians, another Zoroastrian sect, held that Ahriman, the principle of evil, was sprung from Yazdān ('God,' *i.e.* Ormazd) because of his sinful thought, 'if I had an adversary, how would he be fashioned?' (Cf. the account of these sects by al-Shahrastani, tr. Haarbrücker, i., Halle, 1850, pp. 276–280; and see Spiegel, *Erân. Alterthumskunde*, ii. 175–189; Darmesteter, *Ormazd et Ahriman*, Paris, 1877, pp. 314–338.) This extrême unitarian tendency, however, by which evil itself was traced back ultimately to Ormazd, was always rejected by orthodox Zoroastrianism.

LOUIS H. GRAY.

COSMOGONY AND COSMOLOGY (Japanese).

—The most ancient and most authentic account of Japanese cosmogony is found in the *Kojiki* ('Records of Ancient Matters,' A.D. 712). The following is the description of the genesis of the universe contained in this valuable text:

'The names of the Deities that became (*i.e.* that were born) in the Plain of High Heaven, when Heaven and Earth began, were Ame-no-mi-naka-nushi-no-kami (the Deity Master-of-the August-Centre-of-Heaven), next Taka-mi-musu-bi-no-kami (the High-August-Producing-Wondrous-Deity), next Kami-musu-bi-no-kami (the Divine-Producing-Wondrous-Deity). These three Deities were all Deities born alone (*i.e.* spontaneously, without being procreated), and hid their persons (*i.e.* disappeared, by death or otherwise). The names of the Deities that were born next from a thing that sprouted up like unto a reed-shoot when

[1] For the Gr. text, see vol. i. p. 208[a], where a different interpretation from the one here given (which agrees independently with that of Lagrange, *RB*, 1904, p. 35) may be found.

the country (*i.e.* the earth), young and like unto floating oil, drifted about medusa-like, were Umashi-ashi-kabi-hiko-ji-no-kami (the Pleasant-Reed-Shoot-Prince-Elder-Deity), next Ame-no-toko-tachi-no-kami (the Deity Standing-Eternally-in-Heaven). These two Deities were likewise born alone, and hid their persons. The five Deities in the above list are separate Heavenly Deities (*i.e.* were separate from those who came into existence afterwards).

'The names of the Deities that were born next were Kuni-no-toko-tachi-no-kami (the Deity Standing-Eternally-on-Earth), next Toyo-kumo-nu-no-kami (the Luxuriant-Integrating-Master-Deity). These two Deities were likewise Deities born alone, and hid their persons. The names of the Deities that were born next were U-hiji-ni-no-kami (the Deity Mud-Earth-Lord), next his younger sister (*i.e.* wife) Su-hiji-ni-no-kami (the Deity Mud-Earth-Lady); next Tsunu-guhi-no-kami (the Germ-Integrating-Deity), next his younger sister Iku-guhi-no-kami (the Life-Integrating-Deity); next Oho-to-no-ji-no-kami (the Deity Elder-of-the-Great-Place), next his younger sister Oho-to-no-be-no-kami (the Deity Elder-Lady-of-the-Great-Place); next Omo-daru-no-kami (the Deity Perfect-Exterior), next his younger sister Aya-kashiko-ne-no-kami (the Deity Oh-Awful-, or Venerable-, Lady); next Izana-gi-no-kami (the Deity the Male-Who-Invites), next his younger sister Izana-mi-no-kami (the Deity the Female-Who-Invites). From the Deity Standing-Eternally-in-Heaven down to the Deity the Female-Who-Invites in the foregoing list are what are termed the Seven Divine Generations. The two solitary Deities above-mentioned are each called one generation: of the succeeding ten Deities each pair of Deities is called a generation' (*Kojiki*, at the beginning of vol. i.; tr. B. H. Chamberlain, ed. 1906, p. 15 f.).

From these very first lines of the sacred account we have before us a genesis that is not lacking in grandeur. The world appears as a nebulous, moving chaos; Divine beings develop in it by spontaneous generation, some being born in the heart of space, others coming from a reed-shoot that has arisen from the mud; while others spring up, at first solitary, then in pairs, following a progress and bearing names that recall in a striking manner our theory of evolution. This rational explanation of the ancient national myth did not escape the Japanese commentators who elucidated these texts in the 18th and 19th centuries.

'The god U-hiji-ni and the goddess Su-hiji-ni,' says Hirata, 'are so called because they contained the germs from which the earth itself was to spring. The god Oho-to-no-ji and the goddess Oho-to-no-be are so called from the primitive appearance of this earth. The god Tsunu-guhi and the goddess Iku-guhi are so called from the common appearance of the earth and the deities when they sprang into existence. The god Omo-daru and the goddess Aya-kashiko-ne are so called from the perfect character of the august persons of these deities. Thus the names of all these gods were given them according to the gradual progress of the creation.'

And, indeed, it cannot be denied that the above-quoted myth conceals under the transparent symbolism of its Divine figures an intellectual effort to find a logical explanation of the genesis of the universe.

To this slender outline of the *Kojiki* we may now add the complementary picture supplied by the *Nihongi* ('Chronicles of Japan,' A.D. 720). This account is less simple, and is permeated by Chinese ideas, which must be eliminated; but, on the other hand, it is also richer in various developments borrowed from other indigenous sources.

'Of old, Heaven and Earth were not yet separated, and the In and Yô not yet divided. They formed a chaotic mass like an egg, which was of obscurely defined limits, and contained germs. The purer and clearer part was thinly diffused and formed Heaven, while the heavier and grosser element settled down and became Earth. The finer element easily became a united body, but the consolidation of the heavy and gross element was accomplished with difficulty. Heaven was therefore formed first, and Earth was established subsequently. Thereafter Divine Beings were produced between them. Hence it is said that, when the world began to be created, the soil of which lands were composed floated about in a manner which might be compared to the floating of a fish sporting on the surface of the water. At this time a certain thing was produced between Heaven and Earth. It was in form like a reed-shoot. Now this became transformed into a god, and was called Kuni-toko-tachi-no-mikoto (the August Standing-Eternally-on-Earth). Next there was Kuni-no-sa-tsuchi-no-mikoto (the August True-Soil-of-the-Country), and next Toyo-kumu-nu-no-mikoto (the August Luxuriant-Integrating-Master), in all three Deities. These were pure males spontaneously developed by the operation of the principle of Heaven.'

At this point the account breaks off, and the narrater gives us curious variants from the ancient manuscripts (now lost) that he had before him. Sometimes we have the original existence, in the midst of the Void (*sora*), of a 'thing whose form cannot be described,' and from which the first god is produced. Sometimes, again, we have the birth, 'at the time when the country was young and the earth was young, floating like floating oil,' within the country, of a 'thing in appearance like unto a reed-shoot when it shews itself above the ground.' Sometimes, again, all we are told is that, 'when the Heavens and the Earth were in a state of chaos, there was at the very outset a Divine man'; or, 'when the Heavens and the Earth began, there were Deities produced together.' Another version, which is more original, says: 'Before the Heavens and the Earth, there existed something which might be compared to a cloud floating on the sea, and having no means of support. In the midst of this was engendered a thing resembling a reed-shoot springing out of the mud; and this thing was immediately metamorphosed into human form.' A last variant shews us once more 'a thing produced in the midst of the Void, which resembled a reed-shoot and changed into a god'; then a 'thing produced in the midst of the Void, like floating oil, from which a god was developed.' After this we see unfolding again the series of the Seven Divine Generations (see the *Nihongi*, Shukai ed. i. 1–4; W. G. Aston's tr., Yokohama, 1896, i. 1 ff.).

All these texts are valuable from their very incoherence, which, like the incoherence of the Hindu myths on the same subject, proves their authenticity and affords all the more interest from the point of view of comparative mythology. In the first place, indeed, this abundance of versions enables us to trace in Japan the cosmogonic myths of many other races: *e.g.* the idea that gods and men were sprung from certain plants—an idea that we meet with from the time of the ancient Greeks, who believed that they had sprung from the earth like cabbages, were born from certain trees, or had risen out of a marsh, right down to the Amazulu, who make their Unkulunkulu come from a bed of reeds or even from a reed-shoot (which corresponds exactly with the Japanese idea). In the second place, by examining these most ancient texts in relation to each other, we can distinguish, as far as is possible, the true native Japanese conception from the Chinese notions added thereto. The idea of the separation of the Heavens and the Earth, with which the *Nihongi* begins, and which also exists in China (myth of P'an-ku), is found again in India, Greece (Kronos myth), and New Zealand (Rangi and Papa), and consequently it would be rash to affirm a simple Chinese imitation here. But the whole passage on the *In* and the *Yô* (the *Yin* and the *Yang*, the passive or female principle, and the active or male principle, which are the mainspring of Nature in Chinese philosophy) is clearly only a little dissertation of foreign metaphysics, preparing the way for the native tradition of Izanagi and Izanami, the creators of Japan. As regards the cosmic egg which appears next, although it is found among a great number of peoples, both ancient (Indians, Egyptians, Phœnicians, Greeks) and modern (Fijians, Finns, etc.), and may therefore have been one of the spontaneous hypotheses which struggled for mastery in the mind of the primitive Japanese, it seems more probable that it also was a product of the same Chinese inspiration, especially when we consider the fact that this idea of the egg is posterior to the indication of the male and female principles, and that it does not harmonize very well with the image of the fish employed immediately after. It is only at this point ('Hence it is said . . .') that the real national account, agreeing with that of the *Kojiki*, begins. Thus we see the

leading line of the purely Japanese myth disentangling itself, viz. the essential notion of a floating earth, from which springs a reed-shoot, which in turn engenders the human form. And in this way we have, along with the origin of the world, the origin of man himself: the cosmogony terminates in a mysterious theogony, in which the Divine and human elements are confused in an insensible transition.

At this stage the last couple born in the Plain of the High Heavens are commissioned by the other gods to 'make, consolidate, and give birth to this drifting land':

'Hereupon all the Heavenly Deities commanded the two Deities, His Augustness the Male-Who-Invites and Her Augustness the Female-Who-Invites, ordering them to "make, consolidate, and give birth to this drifting land." Granting to them an heavenly jewelled spear, they thus deigned to charge them. So the two Deities, standing upon the Floating Bridge of Heaven (most probably, the Rainbow), pushed down the jewelled spear and stirred with it, whereupon, when they had stirred the brine till it went curdle curdle, and drew the spear up, the brine that dripped down from the end of the spear was piled up and became an island. This is the Island of Onogoro (*i.e.* Self-Condensed)' (*Kojiki*, 19).

Izanagi and Izanami descend from Heaven to this island and celebrate their union. They give birth first to a weakly child, which they abandon in a reed-boat, and then to the islet of Awa (Foam), which also they refuse to acknowledge. But, on being told by the celestial gods that, if 'these children were not good,' it is 'because the woman spoke first' in the marriage-ceremony, they resume their work of creation under more favourable conditions, and give birth first to the island of Awaji (Foam-way), and then to the other islands of the archipelago. After this, they put into the world in the same manner a whole tribe of Nature-gods. Here, again, we observe the idea of evolution so familiar to Japanese thought.

The god of Fire, Kagu-tsuchi, Izanami's last-born, accidentally scorches his mother so badly that she dies in a terrible fever. Izanagi in despair drags himself round about the body groaning, and from his tears is born another god. He buries his wife on Mount Hiba, on the borders of the land of Izumo. Then, in the fury of his grief, he tears the matricide to pieces, the blood and scattered members also changing into new deities. He finally descends to Hades to recover his wife, and finds himself face to face with a mass of putrid matter. Horror-struck, he returns to the light of day, and proceeds to elaborate ablutions in a river of Kyūshū, in order to get rid of the uncleanness contracted in his sojourn with darkness and death. Twelve deities are at this time born from his staff, various parts of his clothing, and his bracelets, as he throws them on the ground; then fourteen others spring from the various processes of his ablutions, among these being three illustrious deities who are the last to appear, when he washes his left eye, his right eye, and his nose, viz. Ama-terasu-oho-mi-kami (the Heaven-Shining-Great-August-Deity), Tsuki-yomi-no kami (the Moon-Night-Deity), and Take-haya-susa-no-wo-no-mikoto (His Brave-Swift-Impetuous-Male-Augustness). To these three deities—the goddess of the Sun, the god of the Moon, and the god of the Ocean, soon transformed into the god of the Storm—Izanagi proceeds to give the investiture of the government of the universe:

'At this time His Augustness the Male-Who-Invites greatly rejoiced, saying: "I, begetting child after child, have at my final begetting gotten three illustrious children." At once jinglingly taking off and shaking the string of jewels forming his august necklace, he bestowed it on the Heaven-Shining-Great-August-Deity, saying: "Do Thine Augustness rule the Plain of High Heaven." With this charge he bestowed it on her. . . . Next he said to the Moon-Night-Deity: "Do Thine Augustness rule the Dominion of the Night." Thus he charged him. Next he said to His Brave-Swift-Impetuous Male-Augustness: "Do Thine Augustness rule the Sea-Plain"' (*Kojiki*, 50).

So, then, is the universe organized in its essential elements. It still remains, however, to complete the construction of the earth. This is the task, after the death of Izanagi, of a descendant of Susa-no-wo in the sixth generation—the god Oho-kuni-nushi (Master-of-the-Great-Land, *i.e.* of Izumo), who is the hero of a new cycle of legends. He is assisted in his work first by a dwarf god, a sort of magician, from foreign parts, and then by a mysterious spirit, which reveals itself as one of the hero's own doubles. One might be tempted to think that here it is no longer a question of the task of the material construction of the world, but rather some political organization of the country by a powerful chief. But this is not so, as is shown by the following curious account taken by the author from an old document at the very heart of this legendary eyele, the *Izumo Fudoki* ('Topographical Description of Izumo,' A.D. 733):

'The august god declared: "The country of Izumo . . . is indeed a youthful country of narrow stuff. The original country is still very little. Therefore, I am going to sew a new piece of land to it." He spoke; and, as he looked towards the cape of Shiragi (a Korean kingdom) to see whether there was not an excess of land there, he said to himself: "There is an excess of land"; and with a mattock he hollowed out a cleft like that between a young maiden's breasts; he separated the part with blows, like those dealt on the gills of a large fish (to kill it); and cut it away . . .; and, fastening round it a thick three-strand rope, he drew it along, balanced, as if by tsuzura (*Pueraria Thunbergiana*) blackened by frost, and as smoothly as a boat on a river, saying: "Come, Land! Come, Land!" The piece of land thus sewed on is to be found between the extreme boundary of Kozu and the promontory of Kizuki, which has been formed eight times. The post arranged in this way is Mount Sahime, on the boundary between the country of Ihami and that of Izumo. Moreover, the rope with which he dragged the land along is the long beach of Sono. When he looked towards the country of Saki, at the gates of the North (*i.e.* in the North), to see whether there was not an excess of land there, he said: "There is an excess of land" [as above, down to "Come, Land!"]. The land thus brought and sewed on is the country of Sada, which extends from the very borders of Taku to here. When he looked towards the country of Sunami, at the gates of the North, to see whether there was not an excess of land there, he said: "There is an excess of land" [once more the same words, ending with "Come, Land!"]. The land thus brought and sewed on is the country of Kurami, extending from the borders of Taguhi to here. When he looked towards Cape Tsutsu, of Koshi, to see whether there was not an excess of land there, he said: "There is an excess of land" [always the same phrase]. The country thus brought and sewed on is Cape Miho. The rope with which it was brought is the island of Yomi (one of the place-names that are connected with the entrance to Hades, situated in Izumo). The post arranged in this way is Mount Oho-kami, in Hahaki. "Now we have finished bringing land," he said. And, as he drove his august staff into the ground, in the wood of O-u, he cried: "O-we!" whence the name O-u' (*Izumo Fudoki*, ed. Ohira, 1808, pp. 4–6).

This 'bringing of land' (*kuni-biki*), the naive account of which ends with an equally childish explanation of the name of the place, is a striking illustration of the material character of the task devolving upon Oho-kuni-nushi—the finishing of the work begun by the creator-couple, then continued by Izanagi on his being widowed, and finally interrupted by Izanagi's death. Only the method is different. A short passage in the *Nihongi* (ii. 366) shows the extent to which this putting together of the country seemed a natural work: one night, in A.D. 684, a noise was heard coming from the east like the rolling of drums; in the morning it was seen that an island had suddenly risen out of the waves: the conclusion was that the ominous noise was the din the gods made when building this island in the darkness. Without leaving Japan, we can trace the same idea of building in an Ainu myth. It is intended to explain why the west coast of Yezo ends in treacherous rocks, while the east slopes down gently to the sea. The explanation is that the island was built by a Divine couple, and the woman, who had charge of the west shore, neglected her task by speaking all the time.

In short, apart from spontaneous generation, which is freely admitted for the primordial gods, the creation of the world can be explained prin

cipally either by a more or less precise normal generation or by a Divine construction. The idea of generation is the one that dominates the Japanese myths, and is seen in its most material form in the story of Izanagi and Izanami. Nothing could be more natural than this conception, for it is logical to think that things, just as organic beings, could not form themselves without connexion of male and female. Among some peoples, the primitive couple are placed at the very beginning of the evolution: *e.g.* in Nicaragua, a man and woman, Famagoztad and Zipaltonal, created the heavens, the earth, moon, stars, and human beings—the whole world; in Polynesia, Tangaloa and O-te-papa are the parents of the islands and their inhabitants. We have the same idea among the Japanese, except that, being more metaphysical, and wishing to find the cause of the first couple, they imagined vague terrestrial deities who had to precede the first couple, and then went still further back to far-off deities, some of whom are still attached to the earth, while others appeared spontaneously in Heaven. As to the idea of construction, it appears chiefly, as we have just seen, when the task of perfecting the work of creation comes into question. These are two conceptions which are likewise found among the ancient Greeks, and which were combined in the Pythagorean cosmogony.

We now pass from the formation of the world to the laws controlling it. We find among the ancient Japanese various attempts at explanations, which sometimes even form a rudimentary cosmology. What they wanted to explain first of all was the cause of the great physical phenomena, beginning with the phenomena of light, which are the most striking of all to the primitive man, as they are to the child. For instance, Why do the sun and moon not shine at the same time?—Because the goddess of the Sun, enraged by a crime committed by the god of the Moon, determined never to see him again:

'Now when Ama-terasu-no-oho-kami was already in Heaven, she said: "I hear that in the Central country of reed-plains there is the Deity Uke-mochi-no-kami (the goddess of Food). Do thou, Tsuki-yomi-no-mikoto, go and wait upon her." Tsuki-yomi-no-mikoto, on receiving this command, descended and went to the place where Uke-mochi-no-kami was. Thereupon Uke-mochi-no-kami turned her head towards the land, and forthwith from her mouth there came boiled rice: she faced the sea, and again there came from her mouth things broad of fin and things narrow of fin (*i.e.* fishes both great and small). She faced the mountains, and again there came from her mouth things rough of hair and things soft of hair (*i.e.* all kinds of game). These things were all prepared and set out on one hundred tables for his entertainment. Then Tsuki-yomi-no-mikoto became flushed with anger, and said: "Filthy! Nasty! That thou shouldst dare to feed me with things disgorged from thy mouth." So he drew his sword and slew her, and then returned and made his report, relating all the circumstances. Upon this Ama-terasu-no-oho-kami was exceedingly angry, and said: "Thou art a wicked Deity. I must not see thee face to face." So they were separated by one day and one night, and dwelt apart' (*Nihongi*, i. 32).

Similarly, How does it happen that the brightness of the Sun is one day totally obscured?—The same Sun-goddess, persecuted by her terrible brother, Susa-no-wo, and indignant at his wickedness, hides herself in a celestial cave; and, when the other gods make her come out by magic processes, the world is lit up again (*Kojiki*, 52–65). In the same way, again, Why, at a more recent time, did the heavens remain dark for whole days on end?—Because two priests were buried in the same tomb; on the separation of their coffins, the division of night from day re-appeared (*Nihongi*, i. 238).

In the first legend, we have to do with a fundamental law of the universe; in the second, with an unusual phenomenon of such a kind as to strike the imagination for a time; in the third, with a far less important occurrence in which we see hardly anything more than a portent. The first mystery is explained by an important act in the drama played by the gods; the second, by an analogous incident, in which, however, human intervention is already making itself more evident; the last, as the result of a simple mistake in ritual. But in all three cases one and the same psychological process appears—a process explaining the normal order and the exceptional disorders of light by the human passions of the Sun. And the story of the other gods would give us similar motives for all the physical phenomena which exercised primitive intelligence—from the stability of the solid sky, which the winds hold up like pillars (Ritual, no. iv.), to the instability of the soil, which the subterranean god shakes with earthquakes (*Nihongi*, ii. 124). Nor must we omit to note how the resentment of a sea-princess against a terrestrial god is offered as the explanation of the fact that 'there is no communication between the earth and the sea' (*Nihongi*, i. 107).

After these attempts to explain the greater aspects of Nature, the ancient Japanese turned their attention to lesser objects—stones, plants, animals. The thing which most impressed them about stone was the spark they could get from it, and this mysterious property the myths are quick to explain, solving at the same time the same question with regard to the fire-principle concealed in tree and plant. When a flint is rubbed, or two pieces of wood are rubbed together for a time, fire appears; it must therefore be concealed in these substances. In order to exist thus in a latent manner, it must have entered these substances. But how? It is here that the hypotheses differ more or less according to the various mythologies.

In New Zealand, Maui obtained from an old Divine grandmother, Mahu-Ika, one of her nails, which produced fire by friction; only he extinguished this fire at once, started off to renew his request, and continued until Mahu-Ika had to part with all her nails one by one; finally, she became enraged and pursued him with her flames, and was prevented from consuming him only by an opportune fall of rain; fortunately some sparks got lodged in certain trees, and from them they can be brought forth again. This is clearly the logical evolution of the production of fire, first by knocking a stone, then by rubbing certain hard woods. Alongside of this Maori Prometheus we may place the Prometheus of the Thlinkets, who fills the same civilizing rôle on the north-west coast of the Pacific: the hero Yehl, in the shape of a raven, stole the heavenly fire, carrying off a burning brand in his mouth; the fire fell upon stones and pieces of wood, and it is from these that it can be extracted again to-day. The same idea is found among the Eskimos, according to whom the rocks contain fire-spirits which are often seen in the form of will-o'-the-wisps; among the American Indians—*e.g.* the Sioux and Chippeways—who believe that flints are thrown down by thunderbolts; among the black races of Africa, who established the same connexion between heavenly fire and stones on earth; and among the ancient Hindus, who supposed that there were Agnis, apparently descended from Heaven, in stones, plants, and trees, just as they knew them to be present in the whole of Nature, in man, in the cloud, and even in the sea.

It is interesting to find this wide-spread myth in Japan. When the god of Fire was slain by his father, his blood leapt up in one place to the sky, and there, in the region of the Milky Way (*Nihongi*, i. 23, 29), it seems to have lit up certain stars which, like Sirius, appear pale to-day, but which, at the time when the Japanese myths were elaborated, certainly shone with a ruddy glow (cf. Hor. *Sat.* II. v. 39; Seneca, *Quæst. Nat.* bk. i.); in another place, this blood flowed over the ground, and infused the fire-principle into plants and trees, stones and rocks. One variant of the *Nihongi* (i. 29) is particularly clear on this point:

'At this time the blood from the wounds spurted out and stained the rocks, trees, and herbage. This is the reason that herbs, trees, and pebbles naturally contain the element of fire.'

These myths, touching sometimes upon cosmogony, sometimes upon cosmology, but always coming from the same desire to explain the most varied phenomena, had, of course, to attempt to account for all the strange things in the animal world. For example, why has the *bêche-de-mer* (trepang) a peculiar mouth? Because long ago its mouth was slit as a Divine punishment:

'Ame-no-uzume-no-mikoto (Her Augustness the Heavenly-Alarming-Female) drove together all the things broad of fin and the things narrow of fin, and asked them, saying: "Will ye respectfully serve the august son of the Heavenly Deities?" upon which all the fishes declared that they would respectfully serve him. Only the *bêche-de-mer* said nothing. Then Her Augustness the Heavenly-Alarming-Female spoke to the *bêche-de-mer*, saying: "Ah! This mouth is a mouth that gives no reply!" and slit the mouth with her small string-sword. So at the present day the *bêche-de-mer* has a slit mouth' (*Kojiki*, 139).

In the same way the Breton legend explains how the plaice, for making a grimace at the Holy Virgin, ever after had a crooked mouth; and an Oceanic legend tells how the sole refused to sing, and was trampled upon by the angered fishes, and was flat ever after. In Japan itself a popular tale, which is not in the sacred books, but which is nevertheless undoubtedly very ancient, tells us that the reason why the medusa has no bones to sustain her shapeless substance is that, for being stupid in the performance of a task entrusted to her by the god of the Seas, she was so mauled by blows that she was reduced to pulp. In all these stories, as in that of the Biblical serpent condemned to creep for ever (Gn 3^{14}), the punishment continues in the descendants of the afflicted animal—a very natural conclusion, since the established form of the animal precisely constitutes the *raison d'être* of the myth.

We find myths of this kind to an even greater extent in relation to man himself, his physical nature, and, above all, his death, which shocks his instinct of preservation. Like all primitive peoples, the ancient Japanese see in death an abnormal phenomenon. Natural death does not exist: death must be the work of some supernatural agent. The fatal fever of Izanami must be a manifestation of the god of fire, and the last illness of the hero Yamato-dake, who was seized with a sudden chill in an icy shower, must be the effect of the vengeance of the god of the mountain when he lost his way. Speaking in a more general way, just as the majority of civilized races claim a spiritual immortality which they deny to animals, so primitive man liked to believe that physical immortality would have distinguished him from all other beings, if death had not been introduced into the world by some mistake or as a mysterious punishment. This conception is found equally among Hebrews and Greeks, Kafirs and Hottentots, Fijians, New Zealanders, etc. The punishment hypothesis is that of the Shinto myth:

'Ama-tsu-hi-daka-hiko-ho-no-ni-nigi-no-mikoto (His Augustness Heaven's-Sun-Height-Prince-Rice-ear-Ruddy-Plenty) met a beautiful person at the august Cape of Kasasa, and asked her whose daughter she was. She replied, saying: "I am a daughter of Oho-yama-tsu-mi-no-kami (the Deity Great-Mountain-Possessor), and my name is the Divine-Princess-of-Ata, another name by which I am called being Ko-no-hana-saku-ya-hime (the Princess Blossoming-Brilliantly-Like-the-Flowers-of-the-Trees)." Again he asked: "Hast thou any brethren?" She replied, saying: "There is my elder sister, Iha-naga-hime (the Princess Long-, i.e. Enduring-, as-the-Rocks)." Then he charged her, saying: "I wish to make thee my wife. How will this be?" She replied, saying: "I am not able to say. My father, the Deity Great-Mountain-Possessor, will say." So he sent a request to her father the Deity Great-Mountain-Possessor, who, greatly delighted, respectfully sent her off, joining to her her elder sister Princess Long-as-the-Rocks, and causing merchandise to be carried on tables holding an hundred. So then, owing to the elder sister being very hideous, His Augustness Prince Rice-ear-Ruddy-Plenty was alarmed at the sight of her, and sent her back, only keeping the younger sister Princess Blossoming-Brilliantly-Like-the-Flowers-of-the-Trees, whom he wedded for one night. Then the Deity Great-Mountain-Possessor was covered with shame at Princess Long-as-the-Rocks being sent back, and sent a message, saying: "My reason for respectfully presenting both my daughters together was that, by sending Princess Long-as-the-Rocks, the august offspring of the Heavenly Deity, though the snow fall and the wind blow, might live eternally immovable like unto the enduring rocks, and again that, by sending Princess Blossoming-Brilliantly-Like-the-Flowers-of-the-Trees, they might live flourishingly like unto the flowering of the blossoms of the trees: to ensure this, I offered them. But owing to thy thus sending back Princess Long-as-the-Rocks, and keeping only Princess Blossoming-Brilliantly-Like-the-Flowers-of-the-Trees, the august offspring of the Heavenly Deity shall be but as frail as the flowers of the trees." So it is for this reason that, down to the present day, the august lives of Their Augustnesses the Heavenly Sovereigns are not long' (*Kojiki*, 140–142).

This curse seems at first sight to apply only to the Imperial line, but there is no doubt whatever that, in primitive thought, it was meant to explain why all men are mortal. This is proved by the following variant of the *Nihongi* (i. 84):

'Iha-naga-hime, in her shame and resentment, spat and wept. She said: "The race of visible mankind shall change swiftly like the flowers of the trees, and shall decay and pass away." This is the reason why the life of man is so short.'

There is a rather striking resemblance to be seen between this myth and a legend of the North American Indians: the Pebble and the Bush were with child at the same time, but the children of the Bush were born first; that is why man is subject to death. Iha-naga-hime also recalls in a wonderful manner O-te-papa, the rock-wife of Tangaloa, in Polynesian myth.

Besides death, life also has its place, especially among a light-hearted people like the ancient Japanese, whom even Buddhism itself could not subdue. They sought to probe to the origin of death, but they understood none the less that this was not the only problem of their destiny. They admired life with its fertility; and another important myth proceeds to tell how, in spite of the calls of the region of darkness, humanity develops and triumphs in the immortality of its perpetual rejuvenation. Izanagi, the father of men and islands, fled from the subterranean kingdom, pursued by the Furies, the Thunderbolts, and all the horrible army of Hades.

'Last of all his younger sister Her Augustness the Princess-Who-Invites came out herself in pursuit. So he drew a thousand-draught rock, and blocked up the Even Pass of Hades (Yomo-tsu-hira-saka, forming the frontier-line between Hades and the World of the Living), and placed the rock in the middle; and they stood opposite to one another and exchanged leave-takings; and Her Augustness the Female-Who-Invites said: "My lovely elder brother, Thine Augustness! If thou do like this, I will in one day strangle to death a thousand of the folks of thy land." Then His Augustness the Male-Who-Invites replied: "My lovely younger sister, Thine Augustness! If thou do this, I will in one day set up a thousand and five hundred parturition-houses (the separate hut for a woman about to be delivered). In this manner each day a thousand people would surely die, and each day a thousand and five hundred people would surely be born."'

Izanami is thus conquered; Izanagi prevails; and in commemoration of his victory the Japanese thereafter called themselves Ame-no-masu-hito-ra, 'the heavenly surplus-population.'

All these stories—the common aim of which was to answer the innumerable questions of primitive curiosity regarding the affairs of Nature and of man, of physical phenomena and living beings, the origin of the world and its present appearance, in short, regarding everything that afterwards constituted the complicated object of the sciences—provide us with a mythology in which cosmogony holds the place of honour, and cosmology is only beginning to appear. The ancient Japanese felt themselves enveloped in mysteries which they would have been glad to solve; but, as the limited extent of their knowledge set strict bounds to their attempts, they soon tired of looking for these causes; they accordingly stopped short with infantile explanations which seemed satisfying to them, but which could scarcely approach a deep investigation of the laws that underlie the sensible world. It was only under Chinese influence that this type of investigation developed, and that the ancient mythology became complicated with abstract principles, as we have seen in the typical example of the story of the creation in the *Nihongi*. This desire to harmonize national tradition with the philosophical ideas of China, or even of Europe, was bound to end in the most ludicrous theories in the hands of the modern Shintoist theologians. Thus, *e.g.*, they attempted to explain the origin of the stars, sometimes by investigating whether they

might have sprung from the excess of material stirred up and scattered into space by Izanagi's spear, sometimes by supposing that the shell of the primitive egg got broken, and that the fragments were caught up by the rotatory motion of the sun and thus drawn into the astronomical whirl (Hirata, *Koshiden*, 1812, ii. 36, 38). But these apologist fantasies are clearly foreign to the simple cosmogony and embryonic cosmology of the ancient Japanese.

MICHEL REVON.

COSMOGONY AND COSMOLOGY (Jewish).—Speaking generally, it may be said that speculation as to the origin of the world was not encouraged during the early Rabbinic period. Between Biblical times and the era of the Jewish philosophers, cosmology in the modern sense can scarcely be said to have flourished, and ultimately it is so closely connected with philosophy itself that separate treatment is scarcely possible. The well-known verses of Ben Sira (Sir $3^{21f.}$),

> 'Search not the things that are too wonderful for thee;
> And seek not that which is hid from thee.
> . . thou hast no business with the secret things'
> (tr. C. Taylor),

are quoted in Talmud and Midrash, and are applied to this form of investigation (see *JQR* iii. [1890–1] 690; Bab. *Ḥagiga*, 13*a*, etc.; Midr. *Bereshith Rabba*, ch. viii.; cf. also parallel passages quoted in *JQR* iii. 698). It may also be said that, in most cases where cosmological elements are found in Rabbinic sources, the scientific character is subordinated to the religious. Leaving the Biblical records, the following are the main groups of writings, during this intermediate period, which deal with the question of creation: (1) references in Talmud and Midrash (cited above); (2) special references to the 'Logos' as distinct from other means of creation; (3) Ḳabbalistic writings and references, such as the *Sepher Yĕṣīra* and the *Zohar*, etc.

With regard to the first class, the verses of Ben Sira which have been cited are typical of the disapproval displayed by the Rabbis towards cosmological study. With them should be carefully compared the Gemara in the first Mishna of the second *pereq* of *Ḥagiga* (11*b*). This passage is the *locus classicus*, though scarcely less noteworthy are the beginnings of *Genesis Rabba* and *Tanḥuma*. It is evident that the dislike of the Rabbis to the study of cosmology was due to two causes—the fact that the material and method appeared to be Greek in origin, and the fact that such study sometimes led to atheism and apostasy. In support of this the famous story of Elisha b. Abuya (Aḥer) (cf. *Ḥagiga*, 15*b* foot, etc.) may be recalled. The study of Greek mythology and philosophy leads to Hellenization, and must be discouraged.[1] It would seem, however, that the ardour for these studies grew, in spite of checks from the Rabbis; and the latter seem to have abandoned a policy of resistance and adopted a new attitude—that the creation of the world must be shown to have depended entirely on the Divine power. Hence the early chapters of *Bereshith Rabba* are devoted to proving that God, and God alone, is the Creator. There are clear traces of replies, on the part of the Rabbis who are there quoted, to opponents, who seem to have been Gnostics and dualists, by whom the Biblical scheme of creation is rejected; in some cases it would seem as though we were face to face with Pantheistic ideas, but that would be difficult to establish. The *creatio ex nihilo* is frequently affirmed, but this question, as well as that of the 'eternity of matter,' belongs to Jewish philosophy rather than to cosmology; they cannot be considered without reference to later writers, *e.g.* Maimonides and Judah Hallēvi.

Each of the three great Semitic religions has had to face the problem of harmonizing a doctrine of pre-existence, in some shape or form, with a concurrent belief in the *creatio ex nihilo*. In the case of Christianity it is the Arian controversy. Among the Muslims, the question of the Qur'ān—whether it was created or eternal—was one of the points on which the Mu'tazilits heresy turned. But in Judaism, at least in the early period, the question of the pre-existence of the Torah was never a burning one. It was the application to the Torah of Pr 8^{22} that gave rise to this belief. Perhaps Gnostic ideas were originally responsible, but at all events it is certain that Jewish theology, whether private or official, was not seriously disturbed. Had this been the case, the doctrine must have been pushed to its logical conclusion, and it would have been alleged that the Torah had some share in the actual work of creation (contrast *B. Rabba*, ed. Theodor, p. 6). But, while the *Bereshith Rabba* compares the Torah to the parchment plans of an architect, the functions of the Divine Creator are not only never usurped, but, on the contrary, the supremacy of the Godhead in the work of creation is emphatically stated. From this it may be inferred that the belief was never reduced to definite form. The same may be said of the passages in the Midrash. Their purpose is homily, not science; their concern is to praise the works of the Deity rather than to investigate the ways of Nature or to explain the riddle of the universe. This is clear from the methods employed. A verse of Scripture is regularly interpreted by natural phenomena, and the functions of heaven and earth are derived philologically from the Bible. Had the objective of the Rabbis been practical, a different plan would have been adopted. As it is, arguments *post factum* are quite legitimate and in keeping with the purpose.

To imagine that the Rabbis would have been content with such methods of argument, or would have considered them adequate, is impossible for two reasons. (1) This would overlook the true character of Haggāda (*i.e.* allegoric homily); and (2) it would imply ignorance of the scientific capabilities of the Rabbis. It is only necessary to turn to astronomy, in order to see what they could achieve. Hence it is desirable, for cosmological purposes, to pass over *Bereshith Rabba* and most Talmudical passages. It is also fair to exclude the famous controversy of Hillel and Shammai as to the relative precedence of Heaven and Earth[1] in this category (*Ḥag.* 12*a*), because their objective also was religion, not science. On the whole, the dogma of the *creatio ex nihilo* was accepted, though not without reservations and even opposition. In 2 Mac 7^{28} the author speaks actually of a creation ἐξ οὐκ ὄντων, but Wis 11^{19} prefers the theory of re-arrangement of existing matter rather than creation.[2] Philo allegorizes: God gave the form, not the matter; though, of course, ultimately He is the Creator. According to the

[1] *Cf. Ḥagiga*, 11*b*, בְּמַעֲשֵׂה בְרֵאשִׁית בִּשְׁנַיִם . . . אֵין דּוֹרְשִׁין, 'Men are not to expound . . . the work of Creation with two (*sc.* disciples),' tr. Streane.

[1] This was one of the questions asked by Alexander of Macedon (see *Tamid*, 32*a*, and *B. Rabba*, ed. Theodor, p. 13).

[2] ἡ παντοδύναμός σου χεὶρ κτίσασα τὸν κόσμον ἐξ ἀμόρφου ὕλης.

beginning of *de Opific. Mundi*, the world was created for the תּוֹרָה; and with the תּוֹרָה all natural phenomena must be in harmony. This is perhaps an extension of the Midrashic thought that the world was created בִּזְכוּת הַתּוֹרָה (*B. Rabba*, ed. Theodor, p. 9, line 9). Philo's Logos does not perform quite the same functions as the Mishnic or Targumic Logos or Memra—if such a term may be used. In *Aboth* (v. 1) we read that the world was created by ten מַאֲמָרוֹת, or sayings; that is to say, וַיֹּאמֶר, 'And God said,' occurs ten times with reference to the Creation. Now this theory has developed from what may briefly and conveniently be described as the Targumic attitude—the objection to anthropomorphism. The Maămār, or Memra, to some extent intervenes and becomes the mouthpiece or instrument of creation. This gives rise to theories of Mediators, whether in form of Demiurge or of Meṭaṭron, which are, however, often expressly repudiated: e.g. *Bereshith Rabba* (ed. Theodor, p. 5, l. 10, and p. 27, l. 3), where the date of the creation of angels is discussed. The question is in itself unimportant. Stress is laid on the fact that they could not have been created on the first day, lest any share in the work of the creation should be ascribed to them. Meṭaṭron (*μετὰ θρόνον* or *metator*?) is mentioned by name frequently (cf. *Sanhedrin*, 38*b*, which is a warning against ascribing Divine powers to Meṭaṭron). It may be doubted whether it was ever believed that the Maămārôth actually exercised functions; it is more probable that the idea was invented to account for the text, and repudiated when felt to be dangerous. At all events it cannot be included in true cosmology.

In considering the Ḳabbala, which, of course, belongs really to a later period, the same air of unreality is experienced. In the *Sepher Yĕṣira* and similar works, permutations and arrangements of numbers and letters are the basis of argument, and this is typical of the whole mystical outlook of the Ḳabbala. A close relation is postulated between the real and the unseen, between the written word and the abstract idea of which it is the symbol; hence it was believed to be possible to extract the spiritual from the physical form, *i.e.* from the word in which it was confined. The deductions are, of course, ingenious, but they are reached by literary or quasi-philological arguments. It is obvious that either scientific investigation or carefully selected tradition must form the foundation of cosmology, and it cannot definitely be stated to what practical extent the authors of Ḳabbalistic reasoning desired their results to be taken. The truth is that between the period of the Bible and that of the mediæval Jewish philosophers there is no real cosmology. The Scriptures supplied the needs of all seekers, until Judaism was brought face to face with Aristotelianism and Neo-Platonism. Hitherto cosmology was not taken seriously in the scientific sense, it was mere homily; but henceforward it became an integral portion of the system of each thinker. It is impossible to discuss the theories of יֵשׁ מֵאַיִן, *creatio ex nihilo*, in mediæval times, apart from the rest of the philosophy which was established upon it.

LITERATURE.—There is a critical edition of the Midrash *Bereshith Rabba* by J. Theodor (Berlin, 1903). For those unacquainted with Hebrew the Talmudic references may be studied in M. L. Rodkinson's tr. (*Hagiga*=vol. vi.), New York, 1899, or preferably in L. Goldschmidt's Germ. tr. (Berlin, 1897 ff.). The treatise *Hagiga* was translated (with notes, etc.) by A. W. Streane, Cambridge, 1891. Some idea of the Midrash may be obtained from S. Rapaport's *Tales and Maxims from the Midrash* (London, 1907); see also *JE*, artt. 'Cosmology,' 'Creation.'

HERBERT LOEWE.

COSMOGONY AND COSMOLOGY (Mexican and South American).—1. Mexico.—On the origin and constitution of the universe the ancient Mexicans developed a number of complex and, in part, discordant myths. In the earliest times, according to Sahagun's version, the gods assembled in Teotihuacan for the purpose of debating who was to govern the world and who was to be the sun, for at that time there was no daylight. A deity named Tecuciztecatl offered to illuminate the world. His compeers asked who would act as his mate, but none of them could summon sufficient courage, each offering excuses. At last they delegated the task to Nanauatzin, who was afflicted with the pox (*buboso*), and he cheerfully acquiesced. The luminaries-elect then began a four days' penance. A fire was built, and both made their offerings. After the four days had elapsed, Tecuciztecatl and Nanauatzin received their ceremonial vestments. The gods ranged themselves in two rows, one on either side of the fire, and first called upon Tecuciztecatl to leap into the flames. The deity approached the blaze, but recoiled from its excessive heat. Four times he made the attempt, and four times he abandoned it. Then the gods ordered Nanauatzin to try. He mustered up all his courage, closed his eyes, and leapt into the flames. Immediately a crackling sound was heard. Then Tecuciztecatl followed suit. When the two deities had been completely consumed by the fire, the other gods seated themselves, expecting to see them rise. After a long period of waiting, the sky assumed a reddish aspect, and there appeared the light of dawn. The gods fell on their knees and turned hither and thither, not knowing from what quarter the sun would come, for the light of dawn was shining everywhere. At last it rose from the east, swaying to and fro, and dazzling the onlookers with its brilliancy. Presently the moon rose from the same cardinal direction. They appeared in the same order in which the two gods had entered the fire. At first sun and moon were equally brilliant. The other gods debated whether this was proper, and decided in the negative. Then one of them began to run, and struck Tecuciztecatl's face with a hare. Straightway it turned darker, lost its splendour, and assumed the present appearance of the moon. Though the sun and the moon had thus been created, they were still stationary. The gods asked one another: 'How could we live under these conditions? The sun does not move. Are we to spend all our life among unworthy mortals? Let us all die, so that our death may animate these luminaries.' The wind then offered to kill the gods, and did so. Still the sun did not begin to move. At last the wind blew so violently that he forced the sun to commence its journey, but the moon remained stationary for a while. Finally, it also began to move. Thus, sun and moon became separated and assumed the habit of rising at different hours of the day. Had Tecuciztecatl leapt into the fire before Nanauatzin, he would have been the sun.[1]

A somewhat similar version has been recorded by Mendieta. Citlalatonac and Citlalicue appear as the primeval deities. The latter bore a flint, which her enraged sons hurled to the earth. From the shattered stone there developed 1600 gods, who asked their mother for permission to create mankind. Citlalicue referred them to Mictlantecutli, who was to furnish them with the bones and ashes of the deceased. The messenger of the gods received the required objects from the lord of the under world, but, lest Mictlantecutli might recall his gift, he fled in haste, stumbled, and broke the bones. He quickly gathered the fragments and presented them to the gods, who enclosed them in

[1] Sahagun, *Hist. gén. des choses de la Nouvelle-Espagne* (Paris, 1880), 478–482.

a bag and bespattered them with their own blood. On the fourth day there issued forth a boy, and on the eighth a girl. These became the ancestors of mankind. The sun was not yet in existence. The gods assembled in Teotihuacan and announced that whosoever would jump into the fire should be transformed into the sun. One man ventured to leap in, and the spectators anxiously watched for the rising of the sun. In the meantime they laid a wager that the animals present would not be able to guess the place whence the sun would rise, and, as the animals actually failed to do so, they were all sacrificed. At last the sun appeared, but did not move. Angered by his immovability, Citli ('Hare') let fly three arrows at him, wounding him twice. The enraged solar deity hurled one arrow back at the enemy, piercing his forehead. The gods then recognized their relative inferiority, and consented to be sacrificed. Xolotl tore out their hearts, and himself committed suicide. Appeased by this sacrifice, the sun began his daily course.[1]

A rather different tale is narrated in the Zumarraga Codex. There dwelt originally in the thirteenth heaven a Divine couple, Tonacatecutli and Tonacacihuatl, who begat four sons, viz. Camaxtli, Yayauquitezcatlipuca, Quetzalcoatl, and Huitzilopochtli. After 600 years of inactivity these four created the world. Quetzalcoatl and Huitzilopochtli created fire and a half-sun, the first pair of human beings, the days, the denizens of infernal regions, the heavens beyond the thirteenth, and finally water and the monster Cipactli. In the further creation the entire quartet participated. They formed the sea-deities Tlalocatecutli and Chalchihtlicue, and then created out of Cipactli the earth and her deity Tlaltecutli. The first human pair, Oxomoco and Cipactonal, begat a son who married a woman shaped out of Xochiquetzal's hair. As the half-sun gave forth but little light, it was decided to perfect it, and accordingly Tezcatlipoca transformed himself into a real sun. Then the giants were created. After Tezcatlipoca had shone for 676 years (13 cycles), Quetzalcoatl hurled him into the water, himself assuming solar functions, while his enemy transformed himself into a tiger which devoured the giant race. In commemoration of this event, there developed the constellation of Charles's Wain, which represents Tezcatlipoca descending into the ocean. After Quetzalcoatl had served for an equal space of time, his rival hurled him headlong with a blow of his paws, causing a tempest that destroyed the majority of human beings. Then Tlalocatecutli reigned as the sun for 364 years (7 cycles), but Quetzalcoatl drove him away by means of a torrent of fire and installed Chalchihtlicue in his place. She served in this position for 312 years (6 cycles), then a deluge occurred, mankind were changed into fish, and the heavens fell down. The divine quartet next opened a passage under ground, and created four men. By the joint efforts of all of these the sky was raised to its present altitude. As a token of his gratitude, Tonacatecutli transferred to his sons the sovereignty of the stars, they settled in the heavens, and by their migrations they are smoothing the path known as the Milky Way. Two years later Tezcatlipoca first produced fire by friction, and, several years later still, a new race of man was created. After the lapse of five years, the gods decreed the formation of a new sun. War was waged in order to secure a sufficient number of human sacrifices for the sun, then the gods fasted, drew blood from their own bodies, and heaped up firewood. Into the blaze Quetzalcoatl cast his own son, who thus became the sun. Tlalocatecutli, however, threw *his* son into the ashes, thus making him rise as the moon, which continually follows the sun without ever overtaking it. Both luminaries wander through the air without ever reaching the heavens. The Codex Vaticanus mentions the bi-sexual deity Ometecutli as the creator of the universe. He creates the first human pair, Oxomoco and Cipactonal. These beget Tonacatecutli, to whom the later stages of creation are due.[1]

The modern Tarahumare believe that the present world was preceded by many others, all of which were destroyed. In these earlier periods all the watercourses flowed eastward, but now there are also some rivers that empty into the Pacific. Originally, the world was but a waste of sand, which the bears put into shape. The rocks were at first soft and small, but they grew to be large and hard. The people grew up from the soil, and the earth was quite level. At that time men lived to be only one year old, dying like the flowers. According to another tradition, they came from heaven with corn and potatoes in their ears, and were led by Tata Dios—a solar character designated by a Christian name—into the mountains, the middle of the world. In the beginning, the Morning Star was the only heavenly body to illuminate the earth, and the 600 Indians then in existence were greatly irritated by the surrounding darkness, for they were unable to do their work and were continually stumbling about. The sun and the moon were then children, dressed in palm-leaf garments and dwelling in a house thatched with palm leaves. The Indians at last dipped small crosses into *tesvino* (native beer) and with them touched the sun and the moon on the chest, on the head, and on the back. Then they began to shine.[2]

2. **Maya.**—The creation-myth of the ancient Quiché is the fullest cosmogony of the Maya stock now accessible to us. In the beginning there were heaven and water, but everything was stagnant and dark. Gucumatz, Tepeu, and Hurakan held a council and created the world, forming mountains, plains, and rivers. First there appeared the vegetable, and later the animal, kingdom. But the animals were unable to call by name or greet their creators, and were accordingly condemned to be killed and eaten. Next the gods created men out of clay; but, as this material lacked vitality, it dissolved in the water. Then the deities invoked the aid of Xpiyacoc and Xmucane, and created a man out of the wood of one tree and a woman from the sap of another. Both were able to move about and propagate their kind, but they lacked intelligence and lived like the brute creation. Accordingly the gods sent showers of pitch which caused a flood, and wild animals which destroyed the race. From the few survivors are descended the small monkeys dwelling in the forests. At last there were created four perfect men out of yellow and white maize: Balam Quitze, Balam Agab, Mahucutah, and Iquibalam. These were intelligent, and were able to perceive things far and near by the light of the morning star, and to penetrate the most recondite matters. Rejoicing in their powers, they thanked their creators. The latter, however, became envious of their creatures and blew a cloud over their eyes, so that they were able to see only what was near. While the men were asleep, the gods created four women for them. The race multiplied, but, as they lacked patron deities, they moved to Tulan Zuiva, where they acquired the necessary divinities.

Tohil, one of these tutelary gods, gave fire to the people, but it was extinguished by rain and hail, and Tohil then created it anew by stamping his feet. Owing to the suffering undergone by the people in Tulan, they abandoned the place under Tohil's guidance, and, after long-continued migrations, reached Mt. Hacavitz. There sun, moon, and stars were called into being, though they did not then shine as brightly as they do now. The origin of these heavenly bodies, however, is differently accounted for in the myth of Hunahpu and Xbalanque, the miraculously born twin heroes of Quiché folklore. In order to avenge their father's death, the brothers descend to the infernal realm of Xibalba, and slay their parent's murderers. They cause their father and his brother to rise as the sun and moon respectively, while 400 youths who had been killed by the Xibalba monarch's son are transferred to the sky as stars.[1]

The Maya proper of the present day believe that the world is in the fourth period of its existence. In the first era there lived the Saiyamwinkoob ('Adjusters'), the mythical dwarfish aborigines of Yucatan, who are credited with the construction of the ruins before the appearance of the sun. As soon as the sun appeared, these people turned to stone. Figures found in the temples of Chichen Itza and other archæological sites are supposed to represent the Saiyamwinkoob. After a deluge, another race, the 'Offenders,' came into being, but again a flood destroyed the greater part of the world, and the Masehualli, or modern Maya, rose to power. Another deluge occurred and ushered in the present period, during which a mixture of all the previous inhabitants of Yucatan took place. The present natives of Yucatan distinguish seven heavens, each of which has a hole in the centre, one directly above the other. A giant tree (*Bombax ceiba*) sends its branches through these seven openings, and by means of it the spirits of the dead clamber up to their final place of repose. One version substitutes a ladder of vines for the tree. The *Gran Dios* of the white man is believed to reside in the uppermost heaven, while the lower heavens are peopled by the older deities of the natives, now degraded to the rank of subordinate spirits. Below the earth there is an under world. The spirits of the dead first descend to this region for a short space of time, but soon begin their ascent to the upper worlds. Men who have died in war and women who have died in childbirth are absolved from the obligation to visit the under world, and commence their ascent without delay.[2]

3. Chibcha.—The Chibcha philosophers postulated as the original substance *chiminigagua*—light enclosed in some undefined envelope. When the light freed itself from this covering, it created black birds which flew through the world, emitting radiant air from their beaks. Later it created all living things save men. Mankind traced their descent from a woman named Bachue (or Fuzachogue) and a boy, both of whom issued from a lagoon in the vicinity of Tunja. On reaching puberty, the boy married his companion, and their numerous progeny soon peopled the entire country. According to another myth, mankind was created by the *caciques* of Sogamozo and Ramiriqui—men out of yellow earth, and women out of hollow plant-stems. As darkness reigned over the earth, the *cacique* of Sogamozo bade his nephew, Ramiriqui, ascend to the sky and illuminate the world. Nevertheless, the night remained dark. Accordingly the *cacique* transformed himself into the moon. An interesting cosmological concept was connected with the myth of Chibchachum. This deity, angered by the inhabitants of Bogota, had afflicted them with an inundation of the Sopo and Tibito rivers. The Indians prayed to Bochica, who put a stop to the devastation of the country and punished Chibchachum by ordering him to support the earth, which hitherto had rested on wooden props. Earthquakes originated whenever the tired Atlas shifted his burden from one shoulder to the other.[1]

4. Peru.—A number of essentially different Peruvian cosmogonies are recorded in the earlier writings. According to one legend, Con, a boneless son of the sun and the moon, created the world and man, levelled mountains, and raised valleys by his supernatural powers. He is said to have come from the north. J. von Tschudi regards him as the deity of the Chimu, the natives of the north-western coast district. Con became displeased with the dwellers of the coast, and converted the region into a desert, though he mitigated this punishment by allowing some rivers to flow through the land so that the people might slake their thirst, and also provided his creatures with wild herbs and fruits. After him came Pachacamac, another son of the sun and the moon, and Con disappeared. Pachacamac transformed into birds, apes, pumas, and other animals the human race called into being by his brother. He then created the Indians of historical times, giving them for their occupation the cultivation of fields and the growing of fruit. Turruel's fuller account relates that in the beginning of the world Pachacamac created a man and a woman, without, however, supplying them with food. The man starved, but the woman prayed to the sun for relief, and the deity descended, comforted her, and impregnated her with his rays, so that she gave birth to a son four days later. Pachacamac, however, was angered at the thought that she had supplicated his father rather than himself, destroyed the infant, cut him in pieces, and sowed the dismembered parts of the child's body. From the teeth grew corn, from the bones yuccas, and from the flesh all the other fruits and vegetables. Thus, the Indians were indebted to Pachacamac for their food. The slain child's mother, however, clamoured for revenge. The sun again took pity on her, and created another son, Vichama, out of the murdered infant's umbilical cord. When grown to maturity, Vichama set out to journey all over the world. In the meantime Pachacamac killed his mother and caused birds of prey to devour her body, except the hair and bones, which he left near the shore. Then he created men and women, and appointed chiefs to rule over them. When Vichama learned of his mother's death, he restored her to life from her concealed hair and bones; then he set out to avenge her destruction. Pachacamac threw himself into the sea where afterwards stood the temple and city named after him. Vichama devastated the fields, and implored the sun to turn the people of Vegueta into stone, because, he alleged, they had participated in his mother's murder. Thus, all Pachacamac's creatures were transformed into stones. Repenting of their deed, the sun and Vichama transferred the former chiefs and nobles to the coast, setting them up there as *huacas* to be worshipped in the future. Then Vichama implored his father to create a new race. The sun gave him eggs of gold, silver, and copper, from which there developed the chiefs, their wives, and the common herd, respectively. Still another legend derives mankind from two male and two female stars sent down to earth by Pachacamac.[2]

On the shores of Lake Titicaca there developed variants of another myth. Before the reign of the Incas, the natives believed, there was no sun, and their ancestors prayed to the gods for light. Suddenly the sun rose radiant from the island of Titicaca. At the same time there appeared from the south a white man of slim figure, who levelled the mountains and caused springs to gush forth from the rocks. Hence he was regarded as the author of all things, the creator of the sun, mankind, and the brute creation. He travelled northward, and never retraced his steps. In the course of his journey he admonished the Indians to live in peace. The name by which he was commonly known was Ticiviracocha. Some time after his departure there appeared another man who cured the sick and wrought miracles. The inhabitants of Pueblo Cacha, however, rose against him, and were about to stone him to death; but he merely raised his hands, and flames darted from the sky, threatening to consume his assailants. Taking pity on the terrified Indians, he extinguished the fire, leaving only the burnt rocks as evidence of his power. He then wandered to the coast, spread his cloak over the waves, and vanished from sight. The name of this second wonder-worker was Viracocha. For a more substantial creation-tale we are indebted to Betanzos. Long ago, according to his narrative, there rose from a lake Con Tici Viracocha, who created heaven and earth and mankind, but did not supply them with light. Offended by man's ingratitude, he transformed the race into stones. He again rose out of the lake with several companions, created the sun in Tiahuanaco, and later the moon and the stars. Next, he re-peopled the earth in the following way: for every province he fashioned a number of stone images; then he sent all but two of his companions towards the east, where they called into being such people as their master had indicated in his stone effigies; finally, he dispatched, with similar powers, the two men that had remained with him, one to Condesuyo, and the other to Andesuyo, while he himself wandered to Cuzco, creating human beings as he passed along. In Pueblo Cacha he was attacked by the newly created Indians, but reduced them to submission, as in the version already quoted. In Cuzco he also created a tribe, and gave to the place its name. When he arrived at the seashore, he was joined by his associates, and they all walked across the sea as though it were solid earth. The full name given to this creator is Con Tici Viracocha Pachayachachic, while his assistants figure as 'viracochas' generically. In Molina's version, the two *viracochas* that remained with their master after the others had set out on their mission are called Ymaymana Viracocha, and Tocapo Viracocha. The former was credited with having named trees and plants, and with having instructed the Indians as to their nutritive and medicinal virtues. Tocapo, on the other hand, named the rivers, and taught the people about the fruits and flowers. According to the same variant of the myth, the sun, while rising from the Island of Titicaca in human shape, addressed the ancestors of the Incas, promising them that their descendants would rule the land and subject many tribes.[1]

5. Primitive tribes.—The *Arawak* of Guiana say that, before the existence of mankind, a being broke off twigs and pieces of bark from a silk-cotton tree and threw them broadcast around him. Some turned into birds; others fell into the water and became fish; still others fell on land and became beasts, reptiles, men, and women. The *Warrau* myth begins with a period when the ancestors of the Indians lived in the sky. There Okonorote', a great hunter, once pursued a bird for many days. At length he was able to shoot it, but his quarry fell into a deep pit and was lost to sight. Okonorote', however, saw daylight in the pit, and soon discovered a land down below, inhabited by many quadrupeds. He hung a long piece of bush-rope down towards the earth, and climbed down. After a successful chase, he returned home with some venison. The Warrau relished the food so much that they decided to emigrate to the earth. After many of them had climbed down, a woman of large proportions got stuck in the opening, and, though her fellow-tribesmen attempted to extricate her, it was found impossible. Accordingly, those Warrau who were already on the earth were obliged to remain in their new place of residence, while those who were still in the sky-land could not but stay in the upper regions. The same story, with trifling modifications, is told by the Carib Indians.[1]

The *Bakairi*, a Carib tribe living on the affluents of the upper Xingu river, regard the sun as a large ball made of the feathers of the red macaw and the toucan, and the moon as a corresponding ball of the tail feathers of the Cassicus. The sun is covered at night with a large pot, which is removed at daybreak. During the rainy season it is carried by a snail, during the dry season by the fast-flying humming-bird. The waning of the moon is due to the successive appearance of a lizard, an ordinary armadillo, and a giant armadillo, the last of which completely covers the feather-ball. Corresponding explanations are offered for solar and lunar eclipses. Orion is a frame for drying manioc, the larger stars form doorpost knobs, and Sirius constitutes a large cross-beam supporting the frame on the side. The Pleiades are simply a pile of flour-grains. The firmament shows merely a duplication of terrestrial affairs: the Indians find there manioc, cultivated soil, forests, etc. The Milky Way is a huge tomtom, near which the two culture-heroes, Keri and Kame, performed their deeds. Other heavenly phenomena are regarded as a jaguar, ant-eater, vulture, etc.

The place of a genuine cosmogony is taken by a number of myths, accounting not so much for the ultimate origin as for the more or less miraculous arrangement and regulation of observed phenomena through the power of the twin culture-heroes, Keri and Kame. Practically everything now existing in the universe is believed to have existed from the very beginning: there were even some Bakairi tribesmen and members of other tribes. Conditions, however, represented a sort of topsy-turvydom as compared with the present cosmos. In the beginning the earth was the sky. Earth and sky were in close proximity, so that it was possible to walk to and fro. Keri bade the sky shift its position, for his people were dying; but the sky refused to do so. Then Keri decided to depart. Accordingly, he and all his tribe went to the earth, and the sky rose to its present height. The sun was in the possession of the Urubú vulture; when the bird was away, darkness reigned supreme. Owing to this darkness, the tapir fell into a pit belonging to the Urubú. Keri saw him and entered one of his front feet; while Keme, who had entered a little yellow singing-bird, was to inform his brother of everything that was going on. When the vulture swooped down on his prey, Keri seized him and, on pain of death, ordered him to surrender the sun. The Urubú dispatched his brother to bring the sun, but his messenger only came back with the dawn. Sent back again, the vulture's brother offered Keri the moon, but the hero persisted in his demand until the sun was presented to him. Then he released the Urubú. The sun was shining continually, and Keri did not know what to do with it, though finally he covered it with a large pot, which was simply removed to make daylight. Thus, the latter-day distinction of day and night was first introduced. The moon was given to Kame. Another quasi-cosmogonic tale accounts for the origin of the Paranatinga and Ronuro-Kulisehu rivers. Keri and Kame were sent for water. They found three pots with water, but broke two of them, so that the water flowed down, forming the water-courses in question.

The remaining origin-tales of the Bakairi, though for the greater part belonging to the same cycle, are not cosmogonic at all, but merely narrate the heroes' exploits in acquiring fire, manioc, tobacco, the hammock, and other necessaries of life for the benefit of mankind.[2]

[1] Brühl, *op. cit.* 464–472.

[1] E. F. Im Thurn, *Among the Indians of Guiana* (London, 1883), 376 f.

[2] K. von den Steinen, *Unter den Naturvölkern Zentral-Brasiliens* (Berlin, 1894), 357–386.

The *Paressi*, though members of the Nu-Arawak family, possess a number of cosmic notions akin to those of the Bakairi. They also believe the sun to be composed of red macaw feathers, which are hidden in a gourd at night and uncovered by their owner at daybreak. The moon consists of yellow 'mutung' feathers. The full moon begins to wane when a thin spider appears on its edge, and it is successively covered by four armadillos, the last being the giant armadillo, *Dasypus gigas*. The galaxy is dotted with countless yellow fruits, and of the stars many are recognized as an ostrich, jaguar, or some other animal. In the beginning there was a woman named Maisö. Neither earth nor water was in existence, and there was no light. She took a piece of wood and introduced it into her body, from which there then issued forth the Rio Cuyaba. Its muddy stream was soon followed by the limpid waters of the Rio Paressi. Maisö then placed land in the stream, and thus made the earth. Maisö also gave birth to many quasi-human beings of stone, first of all being Darukavaitere, who married Uarahiulu. This couple procreated the sun, the moon, and all the other celestial beings, and assigned to each its place in the firmament. Next, Darukavaitere begat parrots and snakes, until Maisö made his wife conceive Uazale, the ancestor of the Paressi and the first really human being.[1]

Of the *Weltanschauung* of the *Bororo* we have, unfortunately, but a meagre sketch. Like the Bakairi and Paressi, they regard the sun and moon as bunches of macaw feathers. Mankind are believed to dwell on a large island in a river. The sun and moon, or their owners, are on one side and pass through the river; when they meet, the moon passes by and becomes the new moon. The Pleiades are the blossoms of a tree, Orion is looked upon as a tortoise, and single stars are generally regarded as sand-fleas, Venus, for example, being characterized as 'the large sand-flea.' The rainbow is supposed to be a large shamanistic water-snake. A meteor that appeared during the second German Xingu expedition was regarded as the soul of a shaman bent on afflicting some Bororo with dysentery.[2]

The cosmogonic notions of the *Jibaro* of Ecuador are insufficiently known. According to one tale, the world was fashioned by a great spirit who amused himself with manufacturing clay objects. He constructed a large blue vessel, and placed it where the sky is nowadaya seen.

A more detailed account is given of the deluge. A member of the Murato sub-tribe was fishing in a lagoon. A little crocodile swallowed his hook, and was killed by the Indian. The mother of the crocodiles was so incensed at this deed that she struck the water with her tail, and flooded all the country bordering on the lagoon. All the Indians perished, save a single individual who climbed a *pivai* palm, where he stayed many days in utter darkness. From time to time he dropped a *pivai* fruit, but he invariably heard it strike water. One day, however, the fruit appeared to strike the earth. The Murato climbed down, built a lodge, began to till the soil, and planted a piece of flesh from his own body. From this there grew up a woman, whom he married. A deluge-myth derived from the *Cañari*, but also attributed by Suarez to the Jibaro, records the escape of two brothers, who fled from the flood to the top of a mountain, which continued rising with the elevation of the waters. After the flood the two Indians went in quest of food, and on their return were astonished to find some dishes already prepared in the hut they had constructed. One of the brothers hid himself in order to fathom the mystery, and discovered two parrot-women, who set themselves to preparing the meal. Suddenly rushing from his hiding-place, he seized one of the bird-women and married her. The couple had three sons and three daughters, who became the ancestors of the Jibaro.[3]

The *Caraya* of the Araguayá River believe that their ancestor, Kaboi, and his people once lived in the under world, where the sun shone when the earth was dark, and *vice versa*. Hearing the call of a bird, Kaboi decided to follow it. He got to an opening leading to the earth, but, while his companions succeeded in passing through it, he himself proved too large and was able to get only his head above ground. The other Indians gathered many kinds of fruit, also honey and bees, as well as dead and dry wood, and brought their finds to the chief. Kaboi told them that, while the country seemed to be beautiful and fertile, its inhabitants, as indicated by the dry wood, could not live to the old age that fell to the lot of their own people, for in the under world the Indians attained a very great age, and died only when they were too old to move any part of their body. In spite of this warning, the people preferred to stay above ground. Accordingly, while their fellow-beings in the lower regions are still in the prime of life, the descendants of Kaboi's companions are destined to die. At an apparently later period, two powerful beings, Tenira and Sokroa, hurled all the Indians into a blazing fire and then destroyed each other in a trial of strength. Only two dwarf parrots and two belated youths, returning from the hunt after the destruction of their fellow-tribesmen, escaped. When the young men set out on the next day to hunt, they heard the pounding of mortars, and on their return discovered that their meals had been prepared by unknown hands. This was repeated on the next day. On the third day they discovered that the food had been cooked by the two parrot-women, married them, and thus became the ancestors of the modern Caraya.

Another tale recounts the destruction of the Indians by a flood. The Caraya were out hunting and drove their game into a pit. After taking out the captured animals, they dug up the magician named Anatiuá, and brought him to their village. Frightened by his strange antics and unintelligible gibberish, they fled from him, but Anatiuá pursued them. He had with him numerous calabashes filled with water. By breaking these, he made the river rise until he had caused a deluge. The Indians fled to the top of two mountain-peaks, but Anatiuá summoned to his aid several species of fish. Finally, one fish possessing a beak-like mouth ascended the peaks from the rear, pushed the people down, and thus drowned them. Only a few of them escaped. These descended to the valley when the waters had fallen again.[1]

The *Caingang* of the State of Paraná (Brazil) tell of a great flood which submerged the entire world inhabited by their ancestors, with the exception of a single mountain-peak. The Caingang, the Kadjurukre, and the Kame all swam towards this summit, carrying firesticks in their mouths, but only the Caingang and a small number of Kuruton Indians reached the goal, where they stayed without food for many days, some lying on the ground, while others, for lack of space, were obliged to cling to the branches of the trees. They were beginning to give up hope when they heard the singing of *saracura* (water-fowl), which were carrying hampers full of earth. By dropping this into the water, they caused the flood to recede. The Indians shouted to them to make haste, which they did, asking the ducks to aid them. In a short time they got to the summit of the mountain and formed a platform, on which the Caingang departed, those that had clung to the branches of the trees being transformed into Monito, and the Kuruton into Caraya, Indians. Because the *saracura* had begun their work in the east, all the watercourses of the land flow towards the west into the Paraná. After the flood the Caingang established themselves in the vicinity of the mountains. The Kadjurukre and Kame, whose souls had gone to dwell inside the sierra, began to cut roads, and finally succeeded in getting out in two opposite directions. The Kadjurukre entered a level country watered by a brook and without rocks, so that their feet remained small. The road of the Kame, however, led to a rocky region,

where their feet were bruised and swelled up to their present size. As there was no spring there, they had to beg water of the Kadjurukre. On leaving the sierra, the Caingang ordered the Kuruton to look for the baskets and calabashes which they had abandoned below before the deluge. The Kuruton departed, but were too lazy to re-ascend the mountain, so they remained where they were and never joined the Caingang. During the night following their departure from the sierra, they built a fire, and a Kadjurukre made tigers out of the ashes and coals, bidding them devour the people and the game. As he had not enough coal left for painting the creatures he meant to fashion next, he made the tapirs, painting them with ashes and bidding them eat game. But, as they were hard of hearing, they asked him to tell them again what to do. Being already engaged in creating another species, the Kadjurukre answered gruffly, 'Eat leaves and the branches of trees!' Since then they have eaten only foliage and the branches or fruits of trees. The Kadjurukre was making another animal, which still lacked a tongue, teeth, and several claws, when the day began to break. As he was unable to complete the animal in the daylight, he quickly put a thin rod in its mouth and said, 'As you have no teeth, feed on ants!' Hence the imperfections of the ant-eater. The next night the Kadjurukre resumed his labours and created other animals and insects, among them the bees. In the meantime the Kame had created other animals to combat his rival's, such as the pumas, venomous snakes, and wasps. All the Indians marched on together. The young men of the Kadjurukre's band married the girls in the Kame's, and *vice versa*; and, as there were still left a great many young men, these married the Caingang women. For this reason the Kadjurukre, Caingang, and Kame consider themselves allies and relatives of one another.[1]

The *Tupi* derive their origin from Monan, the creator. Offended by his creatures, this deity caused a universal conflagration, which destroyed all human beings save Irinmage. Upon the solicitation of Irinmage, Monan extinguished the fire, and afterwards gave him a wife. From the descendants of this pair there issued Monan Maire, who acted as culture-hero, transforming men into animals and establishing the cultivation of plants. However, the Indians feared him for his magic, and forced him to commit suicide. One of his descendants, Maire Poxi, dwelt in insignificance among mankind, but finally ascended to heaven radiant with beauty. His son vainly attempted to follow, being transformed into stone. Another scion of the same line, Maire Ata, begat the twins Tamenduare and Arikute. The brothers went in search of their father, who resided in the east, and were subjected to a number of tests. They proved their miraculous powers by shooting an arrow into the sky and sending an arrow into its notch, continuing this process until the chain of arrows was complete. They further passed through clashing rocks ('symplegades') and descended to the under world. In the course of their wanderings Arikute attacked his brother, who caused a deluge, from which both were obliged to flee, seeking the shelter of trees. After the flood they re-peopled the earth, becoming the ancestors of two tribal divisions.[2]

The *Araucanians* worship as their supreme deity the representative of thunder, lightning, and fire, the latter being regarded as the origin of all life. This deity, Pillan, is believed to reside on the highest summits of the Andes, and definite localities are still named after him. At a later period there appeared Mapu, the creator of the earth, and Pillan became his enemy, gradually assuming the character of an evil being. His messengers and subordinate genii introduced disease among the Indians and their cattle, but could be driven away by means of burning branches. One of these supernatural beings, named Cherruve, took the form of comets and large meteors, and generally resided near the crater of volcanoes. Smaller meteorites were inhabited by another form of being with human head and serpentine body. The moon, Anchimalguen, was the wife of the sun, and was formerly regarded as a beneficent deity. More recently, she is described as an *ignis fatuus*, who frightens the traveller by throwing herself under his horse's body. When the rider attempts to lasso her, she flees and seeks refuge in the hut of a witch.[1]

RÉSUMÉ.—While the material available for comparison is far from complete, some interesting historical problems present themselves to the student of Central and South American myths. So far as homologies occur among neighbouring tribes, or tribes linguistically affiliated, the theory of dispersion from a common source of origin offers the readiest explanation of the similarities in question. Thus, there can be no doubt that the Warrau and Carib myths recorded by Im Thurn have a common prototype, and the conception of sun and moon as balls of feathers can hardly be supposed to have originated independently among the Bakairi, Paressi, and Bororo. The surreptitious preparation of food by bird-women constitutes so characteristic a motive that, though the Jibaro are far removed from the Caraya, we cannot assume that the incident developed twice, and we must depend on future research to indicate more clearly the path of transmission. It is far more difficult to apply this theory to the South American deluge-myths. While in the northern half of the New World the deluge-myth generally assumes a stereotyped form from the Atlantic to the Pacific, embodying highly characteristic elements, the South American narratives of floods do not seem to be united by any striking element of likeness. In the absence of such homologies the possibility of independent development cannot be denied, and we might suppose with Andree[3] that, so far as the myths are autochthonous, the flood motive has been suggested several times by local inundations. In view of the cultural affinity of North and South America, the question broached by Ehrenreich, whether this relationship is exemplified in the mythology of these continents, is of great significance. As Ehrenreich points out, the arrow-chain by which heroes ascend to an upper world in British Columbian mythology recurs among the Eastern Tupi, who are separated from their northern kinsmen by fifty degrees of latitude; and the blocking of a passage-way to another world by a person of generous proportions is equally prominent in the Warrau, Caraya, and Mandan cosmogonies.[2] But, striking as are these resemblances, they are as yet suggestive rather than convincing, and it must devolve on future investigators to settle the problem of a pristine community of cosmogonic tales in the Western Hemisphere.

Psychologically, it is perhaps worth while to emphasize the essentially unphilosophical character of the South American cosmogonies. A certain degree of systematization is apparent in the Mexican, Mayan, and Peruvian myths; but the bulk of even these cosmogonic narratives is akin in spirit

and substance to the folk-tales current among their less civilized congeners in both Americas. The Quiché myth is probably fuller of abstract conceptions than any other Central and South American creation-story, yet these metaphysical portions of the *Popol Vuh* are relatively insignificant compared with the elaborate tale of the twin heroes, which has numerous parallels on both continents. Contrary to the traditional theory that folk-tales are degenerate myths, it might, therefore, be plausibly contended that myths are merely *Märchen* with a speculative gloss, or secondarily invested with a religious significance. This view, however, which has been urged by the present writer,[1] still awaits intensive discussion.

LITERATURE.—This is sufficiently indicated in the article.

ROBERT H. LOWIE.

COSMOGONY AND COSMOLOGY (Muhammadan).—The account in the Qur'ān of the creation of the universe is founded upon an imperfect version of the story in Genesis. In xli. 8 ff. it is written (Rodwell's tr.):

'Do ye indeed disbelieve in Him who in two days created the earth? . . . and He hath placed on the earth the firm mountains which tower above it, and He hath blessed it, and distributed its nourishments throughout it, for the cravings of all alike, in four days; then He applied Himself to the heaven, which was but smoke: and to it and to the earth He said: "Come ye, in obedience or against your will"; and they both said: "We come obedient." And He completed them as seven heavens in two days, and in each heaven made known its office; and He furnished the lower heaven with lights and guardian angels.' Other references are xv. 15 ff., xvi. 3 ff., xxxv. 12, etc.

The commentators Zamaḫsharī and Baiḍāwī, whose remarks are abstracted in the notes to Sale's *Koran* (Lond. 1734, p. 389), explain that the 'smoke' or 'darkness' of the heaven proceeded from the waters under the throne of God (which was created before the heavens and the earth), and rose above the water; and, the water being dried up, the earth was formed out of it; and the heavens out of the smoke which had mounted aloft. It is added that the heavens were created on Thursday; the sun, moon, and stars on Friday, in the evening of which Adam was made. The guardian angels were appointed to ward off prying devils (Baiḍāwī, *ib.* 211). The Traditions add little to this vague material:

'God was; but nothing was before Him, and His imperial throne was upon water. After that God created the regions and the earth; and wrote everything on the tablet of His own memory.' 'The angels were created from a bright gem; and the *jinn* from fire without smoke, and Adam from clay.' 'When God created Adam in paradise . . . the devil came and took a look at him, and, when he saw him with a body, he knew that God had created a creation which could not guard itself from hunger' (*Mishkāt al-Maṣābiḥ*, tr. Matthews, Calcutta, 1810, xxiv. i. 1).

Orthodox Muslim imagination has elaborated a fantastic idea of the Creation out of these scanty materials, aided by suggestions from foreign sources (such as the seven spheres and seven climates), but without allowing notions of science or philosophy to trench upon revelation. Thus the Qur'ān (ii. 20, lxxviii. 6) states that the earth was 'spread out as a bed,' or 'as a carpet'; so it manifestly must be a flat surface. The Muhammadans interpret the sayings of their Prophet literally, and believe that there are seven heavens, one above the other, and seven earths, one beneath the other; and they lay down the distances between them, and the diameter of each, and the substance of which each is constructed, with much precision. (These valueless speculations and opinions may be read in some detail in Lane, *1001 Nights*, London, 1859, Introd., note 2.) One account pretends that, the seven superimposed earths being unstable, God created a series of supports beneath them: first He ordered an immense angel to go beneath and hold the earth (or rather the seven earths) on his shoulders; and beneath his feet, to support him, God created a rock of ruby, with 7000 perforations, from each of which poured a sea. But the rock stood upon nothing, so God created a huge bull called Kuyūta, with 4000 eyes, and an equal number of other features, to bear it up on his back and horns. And under the bull God made Behemoth (Bahamūt), the giant fish, to lie; beneath which was placed water, and under the water darkness, 'and the knowledge of mankind fails as to what is under the darkness' (al-Damīrī, Ibn-al-Wardī, etc., *ap.* Lane, *op. cit.*); but the general belief is that there lies Hell with its seven stages, just as Paradise is supposed to be in the seventh heaven or above it. Muslim philosophers naturally did not always subscribe to such opinions, but, as their philosophy was wholly borrowed, their ideas of cosmogony possess no original value.

LITERATURE.—This is given in the article.

STANLEY LANE-POOLE.

COSMOGONY (Polynesian). — Throughout Polynesia the creation of the world is assigned to Tangaloa, the god of heaven, who is thus named in Tonga and Samoa, while in Tahiti, Raiatea, the Hervey Islands, and elsewhere he is called Taaroa, in New Zealand Tangaroa, and in Hawaii Kanaloa. He dwells in the highest heaven, and is often believed to have the form of a bird, this being his aspect as the celestial wind-god. The sun is his left eye, and he is likewise often the god of the sea, the mirror and the earthly representative of the blue sky. His wife is an enormous rock named O-te-papa, by whom he became the parent of the gods, the planets, the sea, and the winds. The gods, in their turn, were the parents of mankind, although, according to other accounts, Tangaloa himself formed man of red earth. Besides O-te-papa, Tangaloa had other wives, by one of whom, Hina, at once his daughter and his wife (as in many other cosmogonic myths), some legends made him the parent of heaven, earth, sea, and numerous gods. After man he created beasts, fowls, and fishes. Still other creation-myths ascribe the creation of the sky, clouds, stars, winds, beasts, fishes, sea, and the like to Raitubu, 'the maker of heaven,' a sort of demiurge and the son of Tangaloa. The earth is also explained, especially in the western Society Islands, as the exterior of Tangaloa's body, while in Raiatea he was believed to live in a sort of mussel, throwing away the shells from time to time, and thus enlarging the world. The myth of the cosmic egg was not unknown in Polynesia. A legend current in Hawaii, the Society Islands, and Tahiti, made Tangaloa, in his aspect as a bird, a prisoner for long ages in a gigantic egg. He finally broke this place of confinement, however, and the two halves of the shell formed the heaven and the earth, while the smaller fragments became the islands. Another tradition makes the islands bits broken from the cosmic rock O-te-papa, as she was dragged by her husband through the sea, or else pieces broken off from the mainland by angry gods. The myth of the cosmic egg recurs in New Zealand, where mankind were believed to be produced from an egg laid on the waters by a gigantic bird.

Tangaloa's exertions at the creation of the world were so great that, according to some cosmogonic legends of Polynesia, the salt sweat which streamed from him formed the ocean. From this ocean Tangaloa attempted to fish the earth; but, just as land was appearing above the surface of the water, his line broke, and the potential continent was dashed into a mass of small islands. A similar legend of Tangaloa fishing up the earth was found in Samoa, though the inchoate condition of Polynesian cosmogony is again exemplified by the existence in this island of divergent myths on this subject. Two islands, Savaii and Upolu, were

[1] Lowie, 'The Test-Theme in North American Mythology,' *JAFL* xxi. (1908) 97–148, xxii. (1909) 431 ff.

hurled from heaven by Tangaloa. He then sent his daughter, Turi or Tuli, to people this first land, and she, assuming the form of a snipe, settled down upon the islands, bearing with her a creeper which grew in the earth that formed beneath her feet. From the decaying leaves and tendrils of the creeper came worms, which Tuli pecked in two with her beak, thus forming human beings.

Both heaven and earth were regarded as impersonal in Samoa, Tahiti, and Rarotonga, and as being so close together that men could not stand upright, but were forced to crawl on the ground. The two were separated, according to the Samoan and Rarotongan versions of the myth, by a man who pressed them apart. In Tahiti, on the other hand, Ru, the sea-god, raised the sky to its present elevation. In Raiatea, a monstrous cuttle-fish held the earth and the heaven together, but he was killed by the sun-god Maui, whereupon the sky rose up to heaven. On the shoulders or the back of this god the earth rests; and, when he moves, the earth quakes. He is also confused with Tangaloa as the deity who fished the earth from the sea, while in other legends he takes the place of Tangaloa's daughter, Tuli, assumes the shape of a bird, and forms man by dividing a worm in two. In Tonga the earthquake is caused by the subterranean god Mafuike, who carries Samoa in his left arm. This same phenomenon is elsewhere ascribed to other gods, such as Maui himself in Tahiti.

Throughout this cycle of Polynesian cosmogonic myth one fact, not without parallel in other religions, is clear. O-te-papa, the primal barren earth or rock, represents the female principle, which is fructified and made to give birth to all things living, by the fertilizing rain which falls from the superincumbent male Tangaloa, the sky. In New Zealand the myth of the separation of earth and sky undergoes a curious modification.

Originally Rangi, the sky, who takes the place of the general Polynesian Tangaloa, who becomes a mere sea-god in this island, was closely united in nuptial embrace with Papa, the earth. From this union sprang countless children, but they were forced to dwell in utter darkness. In discomfort at this gloomy existence, the offspring of the pair sought to separate their parents. Tu-matauenga, the most cruel of all, urged that Rangi and Papa be killed; but Tane-mahuta, the god of trees, urged that the pair be parted. All assented, excepting Tawhiri-matea, the god of winds. The gods in turn now endeavoured to break the embrace of their parents—Ronga-ma-tane, the god of cultivated plants, Haumia-tikitiki, the god of wild plants, Tangaloa, the god of fishes and reptiles, and Tu-matauenga, the god of heroes. Finally, Tane-mahuta pressed his back against his mother and his feet against his father, thus parting Rangi from Papa. Tawhiri-matea, however, was angry with his brothers and followed his father, so that the wind and his children, the storm winds, still make war on the forests and the sea, and only man, the offspring of the terrible Tu-matauenga, is able to resist them. Strife also arose among the gods who had remained on earth, especially between the god of the sea and the god of the forest, since the latter gave Tu-matauenga wood for fishing-implements, wherefore the sea is angry with men and seeks to devour them. On the other hand, Ma-tauenga and his offspring, mankind, were able to conquer all the gods, with the exception of the wind which blows from heaven.

This version, although more detailed than any other Polynesian creation-myth, is obviously of much later origin than the legends current elsewhere in this part of Oceania.

LITERATURE.—Waitz-Gerland, *Anthropol. der Naturvölker* (Leipzig, 1872), vi. 232–239, 245–254; A. Bastian, *Die heilige Sage der Polynesier* (Leipzig, 1881). LOUIS H. GRAY.

COSMOGONY AND COSMOLOGY (Roman).

—The only Roman cosmogonies which go beyond mere single statements about the origin of the world are found in the works of later writers. They belong, therefore, to a period when Roman culture was permeated with foreign, and especially Greek, elements. On the other hand, we meet with various cosmogonical ideas which may be referred without hesitation to the earliest Roman times. We shall, therefore, give some account of these, and afterwards inquire how far they enter into, and give a genuinely Roman character to, the cosmogonies of a later age.

1. **Early cosmogonical ideas.**—Nearly all the cosmogonical ideas of the Romans were connected with the god Janus, who is admittedly one of the very oldest Roman divinities (cf. *e.g.* Herodian, i. 16: *θεὸς ἀρχαιότατος τῆς Ἰταλίας ἐπιχώριος*). As F. Lukas (see Literature) puts it, he is related to Juppiter as the First is to the Highest. Accordingly, in the public worship of the Romans the first sacrifice was paid to Janus (Mart. *Epig.* x. 28. 2). As first in time he was naturally also regarded as the cause of all that followed after. So Festus, explaining why the first sacrifice was paid to Janus, adds: 'Jano primum fuisse supplicatum, quasi parenti, a quo rerum omnium factum putabant principium.' M. Val. Messala, the augur (50 B.C.), describes his cosmogonical character more fully: 'qui cuncta fingit eademque regit, aquae terraeque vim ac naturam gravem atque pronam in profundum dilabentem, ignis atque animae levem, in immensum in sublime fugientem, copulavit circumdato coelo,' etc. (Macr. *Sat.* i. 9). Martial (*Epig.* x. 28. 1) describes him as 'sator mundi.' As the author of organic life, he is described in a fragment of the Saliaric Hymn (Varro, *Ling. Lat.* 7, 26) as 'duonus cerus'—where 'duonus'=*bonus*, 'good,' and 'cerus' (or 'kerus,' connected with *creo*, Skr. *kar*, 'to make') means a creative spirit, and, as it is an older word for Genius, the creative deity of the family in particular (Lukas, p. 200). As the author of life, he was also invoked as Consivius (*a conserendo*, Macr. *Sat.* i. 9, 16).

It is clear, then, that Janus was a cosmogonic personage. But it is difficult to say what cosmic principle, if any, was originally represented by him. Here everything depends on the meaning of the name, about which opinions have varied greatly both in ancient and in modern times (cf. Roscher, *s.v.* 'Janus'). Of the ancient explanations, that which regarded Janus as a personification of the Sun (Nigid. Fig. in Macr. *Sat.* i. 9, 11, etc.) has been most generally adopted by recent writers, amongst whom we include those who think of the sun's light rather than the sun itself (cf. Roscher, *l.c.*; Lukas, p. 202, etc.). According to another and very similar ancient view, Janus represented the Heaven (Macr. *Sat.* i. 9, 11), and, further, we are informed by Varro that in this character he occupied a place of the highest honour among the Etruscans—*αὐτὸν παρὰ Θούσκοις οὐρανὸν λέγεσθαι καὶ ἔφορον πάσης πράξεως* (*ap.* J. Lydus, *De mens.* iv. 2). Now, there is a remarkable fragment of an Etruscan cosmogony in the oracle of Vegoia or Vegone (see *Gromat. Vet.* 350; cf. Müller-Deecke, *Die Etrusk.* ii. 30 ff., 165, 299, 312; Preller, *Röm. Mythol.* i. 172, 256), which begins: 'Scias mare ex aethere remotum. Cum autem Juppiter terram Etruriae sibi vindicavit,' etc. Here we have a Latin translation, probably of the 2nd or 3rd cent. B.C., of an ancient Etruscan oracle, which, according to Preller, represents ancient Italian popular belief. The oracle, which relates to the protection of landed property in Etruria, is thus prefaced by a priestly doctrine about the origin of the world: the Sea arose by separation out of primal Æther—and the same must also have been asserted in the original oracle about the Earth (Preller, i. 256 n.). But Æther is practically the same as Heaven (see art. ÆTHER in vol. i.; Roscher, *s.v.* 'Aither'), with which we are told that Janus was identified in Etruria, and it includes the notion of Light (see 'Greek' art. above; and Lukas, p. 208—'Aether=Licht des Himmels'), which others regarded as the essential attribute of Janus. Hence it is reasonable to suppose that the early Italians not only regarded Janus as creator of the world, but pictured his creative activity after the manner described

in the Etruscan oracle (Lukas, *loc. cit.*; Preller, p. 172).

2. Literary cosmogonies.—We are now in a position to inquire how far the cosmogonies of the later poets can be regarded as an independent product of Roman thought. We may fairly ascribe this character to any cosmogony which is based on the ideas already described. Franz Lukas has tried to show that this is the case with regard to the theory sketched by Ovid in the *Metam.* i. 5 ff., and *Fasti*, i. 103 ff. Ovid's is also, so far as we know, the only complete cosmogony whose dependence on primitive Roman ideas can be at all confidently asserted. To it, therefore, we shall now turn.

In the *Metamorphoses* we read that the world was preceded by Chaos. This was not, however, the empty void of the Hesiodic cosmogony, but the primary substance with which space was filled. It was a formless and confused mass—'rudis indigestaque moles'—the parts of which all struggled with one another, by reason of opposite qualities of moist and dry, hot and cold, etc. The process by which the world arose out of Chaos is attributed to what Ovid calls 'Deus et melior natura.' The 'melior natura' is evidently the material force by means of which order is brought out of chaos. Did it reside in matter from the first? The passage is not clear on this point (cf. Lukas, p. 208). But at least it implies that at some point of time the Deity either infused a higher nature into the primal substance, or gave effect to a higher power latent within it. Forthwith the diverse elements separated from each other, and united with their like, and the wholes thus formed took up a relative position in accordance with their several natures. Fire, the lightest element, flashed forth from the topmost arch of heaven; beneath it was the Air, and lower still the Earth, while Water, encircling the latter ('circumfluus humor'), still further compressed its solid mass. Next, the Deity moulded the Earth, which must here be taken as including the liquid element, into a sphere, and formed it in all its parts—seas, fountains, lakes, marshes, and rivers, plains, valleys, hills, and zones. He likewise completed the severance of the Æther from the Air, the region of cloud and storm. Then the constellations, erstwhile hidden in Chaos, glowed in the firmament. Life in all its grades appeared. The stars, as Divine Beings, dwelt in heaven; fish, bird, and beast tenanted their respective homes, and lastly Man was born.

The cosmogony of the *Fasti* is similar, but with some notable differences. There is nothing here about the 'Deus' or the 'melior natura.' The former is absent because the poet is concerned with the evolution of the four elements rather than with the formation of the world; and the latter, because here, whatever may be the case in the *Metam.*, the evolution of the primary matter is regarded as due to its own indwelling force. Another difference lies in the fact that the primary matter, which is again called Chaos, is here expressly identified with the god Janus. This brings us directly to the question whether the Ovidian cosmogony is to be regarded as essentially Roman. Now, the mere fact that Ovid equates Chaos with Janus counts for little, as the connexion of the names depends on a fantastic etymology (cf. Roscher, *s.v.* 'Janus,' pp. 35, 43). What is important is that the cosmogonical ideas contained in the *Fasti* are expressly associated with the old Roman god. The ground-thought of the passage is the separation of the elements from primal matter in obedience to the law of its own nature. The same thought is present in the *Metam.*, though there the evolutionary process is ascribed in part to a 'melior natura' working along with a separate Divine agency. We have seen, further, that the separation of the elements from the primal Æther (and that apparently without reference to an external agency) was an ancient Etruscan doctrine, and that in all probability Æther and Janus were equivalent terms. Still the connexion of the Etruscan doctrine with Janus rested on conjectural etymological grounds. But the fact that Ovid expressly associates the same ideas with Janus is strong evidence both that the former inference was correct, and that we have here a genuine Roman cosmogony. At the same time it is probable that in the working out of the fundamental idea Ovid was more or less indebted to Greek thought (cf Lukas, p. 209).

The idea of a force inherent in primary matter, which forms the basis of Ovid's cosmogony, appears also in the representations which other poets give of Nature in general. As examples of these, Lukas refers to Virg. *Georg.* ii. 336 ff., and *Æn.* vi. 724 ff. In the former passage the poet ascribes the origin of the world to the same force which at each new spring-time clothes it with fresh life:

> 'Non alios prima crescentis origine mundi
> Illuxisse dies; aliumve habuisse tenorem
> Crediderim. Ver illud erat; ver magnus agebat
> Orbis, et hibernis parcebant flatibus Eori,
> Quum primae lucem pecudes hausere, virûmque
> Ferrea progenies duris caput extulit arvis,
> Immissaeque ferae silvis et sidera coelo.'

In the second passage he speaks of the Soul which animates the body of the world, which streams through every member, and from which every living creature sprang. In both these passages the poet, no doubt, borrowed freely from other writers, and especially from Lucretius (see Conington's *Virg.*). But he gives expression to the thought which we have seen reason to believe was familiar to the Romans from the earliest time—that, namely, of the evolutionary capacity of matter.

LITERATURE.—Roscher (see COSMOGONY AND COSMOLOGY [Gr.], 'Literature'), where readers will find a full account and criticism of views relating to Janus; F. Lukas, *Kosm.* (see *ib.*); *Gromat. Vet.*, ex rec. C. Lachmann, 2 vols., Berlin, 1848–67; K. O. Müller, *Die Etrusker*, new ed. by W. Deecke, 2 vols., Stuttgart, 1877; L. Preller, *Röm. Mythol.*, 2 vols., 3rd ed. by H. Jordan, Berlin, 1881–3.

L. F. BURNS.

COSMOGONY AND COSMOLOGY (Teutonic).

—The word 'Teutonic,' as we take it, is in its way descriptive of all peoples of Germanic origin, such as the Scandinavian, German, Dutch, and Anglo-Saxon. The word 'Teuton' first appears in the 4th cent. B.C., and is then applied to the Germanic tribe living around the mouth of the river Elbe. Modern ethnologists join in the common division of the Teutonic race, as yet existing, into three branches: (1) the Scandinavian, (2) the Low German, and (3) the High German. The Scandinavian branch includes the Icelanders, the Norwegians, the Swedes, and the Danes; the Low German branch includes the Frisians, the Dutch, the Low or Northern Germans, the Flemings, and the Anglo-Saxons; the High Germans are the Germans of Middle and Upper Germany, of Switzerland, and of Austria. For convenience' sake it is just as well, however, to speak only of the Scandinavian and the German branches, since this is both common and satisfactory.[1]

As Teutons, these two great branches had a common origin and a common faith in the supernatural. Thus their myths are also essentially identical, though the Scandinavian is much richer than the German. This is especially the case with reference to their cosmogony, for which we have to depend almost entirely upon Scandinavian sources. But whether the common stock of Teutonic belief

[1] Some divide the entire Teutonic race into the Eastern, Western, and Northern branches. Of these the Eastern, which once consisted of Ostrogoths, Visigoths, and Moesogoths, is now extinct; and the other two divisions are identical with the German and the Scandinavian branches.

is faithfully preserved in the Northern myths is a matter of much dispute. In reference to this problem, two different schools have developed—the conservative, and the critical—to which must be added a number of more or less independent investigators of a mediating type, leaning towards the one side or the other, though, of course, having much in common with both (cf. Literature at end of art.).

It is, however, safe to say that most modern scholars hold that Christianity in its earlier forms has, in a marked degree, influenced the old Norse poets, their songs, and their sagas, and consequently has made it very difficult to ascertain which elements in this mythology are genuinely Teutonic. The important poem *Vǫluspá* especially is viewed with much suspicion, as may be well noted, for instance, in E. H. Meyer's edition of it (*Vǫluspá, eine Untersuchung*, Berlin, 1889), in which he arrives at the conclusion that this great cosmogonic source is a mere Christian poem in a heathen disguise, composed in the 12th cent. by Saemund the Learned. Several later authors do not agree with this view, but rather consider it erroneous, though they allow that the great song has suffered from foreign influences, probably mostly Christian. Furthermore, it is generally held that the author of this poem, as well as of all the songs of the poetic Edda, is unknown, though the various lays were all collected in the 13th century.

From the German sources little can be learnt concerning the cosmogony of the old Teutons. Indeed, they tell us next to nothing of any of the beginnings, and they have no prophecies with reference to the future, while there is much of both kinds in the Scandinavian myths. Traces, indeed, have been found in Germany of a mythological belief similar to the Scandinavian, and even identical with it. Thus in Waitz's 'Merseburg MS' (probably from the 10th cent.) there are indications of a Balder as an originally Teutonic character; Odin is mentioned and Frija his wife, as is also a class of beings named Idisi, who perform the same services as the Valkyries of the Northern myths. These names occur in certain magic formulæ of undoubted heathen character, which are contained in the manuscript just mentioned. A similar source is the so-called 'Wessobrunn Prayer' from the 8th cent., in which, according to Müllenhoff and others, there are traces also of an original Teutonic cosmogony with the concept of a large void and yawning abyss, etc. But this may have been derived from Christian influences, as Wackernagel contends. Another source is found in Tacitus' works, in which he incidentally or otherwise touches upon the belief of the Teutons (cf. esp. *An.* xiii. 57; *Germ.* ii.). From these notices it seems that the old Teutons considered fire and water, and also salt, as original elements. Similar notions are to be found in Snorri Sturlason's *Gylfaginning*, chs. 5 and 6 (cf. below, p. 178, on the cow Audhumla licking salty stones in Ginnungagap). Finally, there exists at Mainz a letter of Daniel of Winchester (*Ep.* 15, Mon. Moguntina Coll.) to Boniface, the missionary to the Germans, written *c.* 720, which to some extent describes the cultus and beliefs of the ancient heathen. In it there are some references to the origin of the world and of the gods themselves.

These are really the only remains which we possess from the German branch of the Teutons as to the beginning of the world, except that in the idiom of the language itself and in certain remaining forms of magic there are some recollections of ideas once entertained by the original Teutons. But from all these remnants brought together there cannot be constructed anything like a Teutonic cosmogony. For such we have, as already indicated, to turn to the North.

The two main cosmogonic sources of the Scandinavian branch of the Teutons are Snorri Sturlason's *Gylfaginning* and the *Vǫluspá*. The former is, however, of less value as being very much a construction from the period of its composition, so that we shall have to draw mainly from the latter. According to it, the origin of the world, with its resultants, was as follows:

'There was, in times of old, where Ymir dwelt,
nor land nor sea, nor gelid waves;
earth existed not, nor heaven above;
there was a chaotic chasm,
and verdure nowhere.

Before Bör's sons raised up heaven's vault,
they who the noble Midhgardh shaped,
the sun shone from the south
on the structure's rocks;
.
there was the earth begrown
with green herbage.

The sun from the south, the moon's companion,
her right hand cast round the heavenly horses;
the sun knew not where it had a dwelling;
the moon knew not what power it possessed;
the stars knew not where they had station.

The Aesir met on Idha's plain;
they altar-steads and temples high constructed;
their strength they proved, all things tried,
furnaces established,
precious things forged,
formed tongs, and fabricated tools.

At tables played at home; joyous they were;
to them was not the want of gold,
until there came Thurs-maidens three
all powerful,
from Jötunheim.

Then went all the powers to their judgment-seats,
the all-holy gods, and thereon held council
who should the dwarfs' race create,
from the sea-giant's blood
and livid bones.

Then was Mótsognir created,
greatest of all the dwarfs,
and Durin second;
there in man's likeness
they created many dwarfs from earth,
as Durin said.'

Then follows a list of some fifty-five dwarfs, which the high gods created to be remembered as long as mortal men exist on earth. And, as in Genesis and most other cosmogonies, so in the Edda there is a story of a double creation, for now we are told that

'There came three mighty and benevolent Aesir
to the world from their assembly.
They found on earth nearly powerless
Ask and Embla,
void of destiny.

Spirit they possessed not, sense they had not,
nor blood, nor motive powers, nor goodly colour.
Spirit gave Odin, sense gave Hoenir,
blood gave Lódhur,
and goodly colour.'

According to this description of the Creation, we find that before either heaven or earth was made there existed a chaotic state with a deep yawning chasm, later called Ginnungagap ('yawning gap'). This may be considered as the *terminus a quo* for the Teutonic idea of creation. In the *Vǫluspá* the story of the making of the world is given as here quoted, but it would hardly be fair to make this the only source of the cosmogony of the Teutons, as long as there is another, which proceeds to a much more detailed description. This is found in the prose Edda of Snorri Sturlason, and under the heading *Gylfaginning*, as before mentioned, but it is rather too extensive to quote. In the remaining literature of the Eddas there are also a few other references to the creation of the world and the

origin of things, and these, together with the two main sources just mentioned, offer the following composite view of the Teutonic cosmogony.

Ginnungagap was limited to the north by the cold and frosty region called Niflheim, and to the south by Múspellsheim, with its fire and burning heat. In Ginnungagap itself the cold from Niflheim, carried along by the twelve poisonous rivers, the Elivágar from the fountain Hvergelmir in the lowest deeps of the abyss, met the heat from Múspellsheim, resulting in the first development of life, which took form in a being similar to a man and called Ymir, who was of immense size and became the progenitor of the giants.

Along with Ymir there arose from the same union of cold and heat a monstrous cow called Audhumla—an original conception, it seems, and as such the fructifying power. With her milk she sustained Ymir, while she herself fed from the salty stones in Ginnungagap, which she licked. From her contact with the salty stones there grew forth another being called Buri, who united with Ymir's daughter Bestla, a sister of Mimir, the water-demon. By Bestla, Buri had a son Bör, who became the father of Odin, Vili, and Vé. Of these Odin was the greatest, and as such he is sometimes called the father of the gods. Odin and his brethren finally killed Ymir, drowning in his own blood his entire progeny, the giants, with the exception of Bergelmir, who escaped, and, in his turn, now became the father of a new race of giants. With Ymir's body the gods filled the awful and dark abyss, Ginnungagap, and there made the world. From Ymir's flesh they formed the earth; from his blood the rivers, lakes, and seas; from his teeth and smaller bones they made the rocks and pebbles; while from the larger bones they formed the mountains. With his eyebrows they surrounded this new-made earth, and called it Midhgardh, outside of which there was the ocean—the whole being now overtopped by heaven, which was made out of Ymir's skull and illuminated with sparks from Múspellsheim itself. From the giant's brains the gods made the flying clouds and the mists.

The next creative act of the Aesir, or high gods, was the making of man. Originally he was made into a pair from the mystic trees Ask and Embla, which the sons of Bör found on the seacoast, when one day they were walking there. To these new-made beings Odin himself gave life, Hoenir understanding, and Lódhur the blood and the lower senses, placing all this in a most beautiful form. Of man in his original state we noted the following from the *Völuspá*: 'Spirit they possessed not, sense they had not, nor blood, nor motive powers, nor goodly colour; spirit gave Odin, sense gave Hoenir, blood gave Lódhur, and goodly colour.' It should be remarked that Hoenir and Lódhur are identical with Vé and Vili.

As we have seen, the dwarfs made another class of beings with which men always had to contend, and who probably represent a later stage in the forming of the Teutonic myths, caused, perhaps, by the resistance of an earlier race to the coming invaders. These dwarfs constituted a hostile power of great number, and are mentioned at many places in the Eddas and in the earlier Icelandic literature.

From the account of the creation of man we have seen that trees have had a prominent place in the Teutonic mind from the very beginning. Most important of these trees was the great ash Yggdrasil, which was the life-tree, the tree of cosmic unity and of all existence, spreading its branches out over the whole world, and reaching with its top even to the abode of the gods, while sending its roots under the world in order to support it. Of these roots, one goes to Niflheim, where it is constantly gnawed by the subterranean serpent Nídhögg in order to destroy the tree and the world; the second root stretches to the region of the giants, where it enters the spring of Mimir, the great ruler of the nether world and the keeper of the tree itself. From this spring even Odin has to draw his wisdom. The third root reaches to the home of the gods themselves, from under which the sacred spring of Urd has its place, and whence the Norns, the sole arbiters of all human destinies, constantly scoop water to pour over the great ash, so as not to allow it to wither. But, notwithstanding all this care, there will come a time when the great tree will lose some of its leaves and branches, and then it will begin to groan. This will be the signal of Ragnarök, or the end of the present condition of the world. Now the final struggle between the gods and the giants, between good and evil, shall be fought, when evil will be for ever vanquished. After this the Yggdrasil will flourish as never before, and there shall be a new age, with a new earth, in which the hosts of the righteous shall dwell for ever in perfect bliss.

This is as nearly as possible an objective statement of the views of the early Teutons as regards the beginning of the world. But no one can tell whether these beliefs were not preceded by others of a more rude and simple character. This view seems probable to the present writer. But, as the examination of this hypothesis would lead us into the altogether uncertain, we shall have to rest satisfied with the matter we have in hand, and congratulate ourselves that we have so much. Perhaps its philosophy may be summed up as follows. The early Teutons believed in a pre-existing substance in a completely chaotic state, out of which, through the incompatible forces of cold and heat, there arose the primitive forms of life, endowed from the beginning with reproductive power. In this early state only the most monstrous beings were produced—beings like Ymir and his race, the giants. In the generating forces of the cow Audhumla, as well as in the two trees Ask and Embla, we meet new factors of organization, forming gods and men, which have a very near relationship. These are not generated outside of Nature, but within it, and are thus dependent upon it. Hence it follows that even the gods themselves are temporal *a parte ante*, and not eternal. Undoubtedly this was the early idea of the Teutonic race as regards the superior powers in which it believed. Furthermore, the gods are not real creators, but organizers forming the desirable objects out of pre-existing elements, which may have been considered as eternal. The gods may be said to have been generated from Nature, while man is the work of these gods through Nature, and they all in common have to conquer their baser instincts in order to remain free from trouble and curse. It is along these lines that the world itself, considered as a whole, will proceed until, after a final struggle, the new world, with its new conditions of happiness and bliss, shall be ushered in.

Such is the story of the cosmogony of the Teutons contained in some of the most sublime poetry of ancient literature. Few will doubt that it has, at least in a measure, been influenced by early mediæval Christianity, as Meyer and Bugge, together with many others, have proved; but none will deny that in these Icelandic lays we possess the essential strata of genuine Teutonic belief.

LITERATURE.—The *Poetic* or *Sæmundar Edda*, crit. ed. by S. Bugge, Christiania, 1867, Eng. tr. by Benjamin Thorpe, London, 1866, literal tr. in Vigfusson's *Corpus Poeticum Boreale*, Oxford, 1883; the *Snorra Edda*, ed. Copenhagen, 1848–87, partial Eng. tr. by I. A. Blackwell, in *Northern Antiquities*, London, 1847, and by R. B. Anderson, Chicago, 1880; K. Blind, 'The Teutonic Tree of Existence,' *Fraser's Magazine*, 1887; P. D. Chantepie

de la Saussaye, *Rel. of the Teutons*, tr. Boston and London, 1902; S. Bugge, *Studier over de nordiske Gude- og Heltesagns Oprindelse*, i.-ii., Christiania, 1881–1889, Germ. tr. by O. Brenner, Munich, 1889 (Eng. tr. of vol. ii. under the title *The Home of the Eddic Poems*, London, 1899); J. Darmesteter, 'Les Cosmogonies aryennes,' in *Essais orientaux*, Paris, 1883; C. F. Keary, *Outlines of Primitive Belief*, London, 1882; A. V. Rydberg, *Fädernas gudasaga*[2], Stockholm, 1898, also *Germanisk Mythologi*, i.-ii., Stockholm, 1886–1889 (Eng. tr. of vol. ii. by R. B. Anderson for the Norroena Library, London, 1906 ff.); W. Golther, *German. Mythologie*, Leipzig, 1895, pp. 501–543; J. Grimm, *Deutsche Mythologie*[4], Berlin, 1876; E. H. Meyer, *Völuspá*, Berlin, 1889 (this work has a good list of references to sources, literature, and commentaries), also *Die eddische Kosmogonie*, Freib. 1891; K. Müllenhoff, *Deutsche Altertumskunde*, vol. v. (by H. Gering, 'Die Edda,' Berlin, 1892); E. Mogk, *Germ. Mythologie*, Leipzig, 1906; H. Paul, *Grundriss d. germ. Phil.* iii.[2], Strassburg, 1896–1900; H. Petersen, *Om nordboernes gudedyrkelse*, Copenhagen, 1876; K. Simrock, *Handbuch d. deutschen Mythologie*[6], Bonn, 1887, §§ 6–53; F. Kauffmann, *Deutsche Mythologie*[2], Leipzig, 1898; Paul Herrmann, *Nordische Mythologie*, Leipzig, 1903; H. Schück, 'Svensk gudatro under hednatiden,' *Finsk Tidskrift*, 1898; *cf.* also T. Möbius, *Catalogus Librorum*, Leipzig, 1856, also his *Verzeichniss*, Leipzig, 1880.

Darmesteter, Rydberg, and Grimm belong to the 'conservative' school, while Mogk and Meyer are very critical with reference to the contents in much of the Icelandic literature, particularly in *Völuspá* and the *Snorra Edda*; Golther occupies a sort of intermediate ground; Müllenhoff is generally considered a very safe guide and a good authority.

COUNCILS (Buddhist).—

Before giving a short survey of the traditions relative to the Buddhist Councils, it seems advisable to state what these Councils were. While it is impossible to accept the Buddhist opinion, which views them as ecumenical assemblies after the Nicene type, it is at the same time necessary to explain how Buddhist monastic life, without the help of such solemn assemblies, nevertheless resulted in a sort of 'catholicism,' and secured the redaction and the compilation of Canons of scriptures very like one another. The problem of the origin and character of the early sects cannot be evaded, for sectarianism is as old as catholicism in the Buddhist world; and Councils are said to have been held by the 'orthodox' to impugn sectarianism, and by the 'heterodox' to define their own peculiar tenets. As the history of the Canons and of the Sects will be dealt with elsewhere, we shall say here only what is necessary to avoid misleading ideas about the Councils, and to justify our half-conservative, half-critical position.

I. *COUNCILS, CANONS, AND SECTS.*—The professed dogma of the Buddhists of the post-canonic ages is that Councils were solemn synods of Saints, where *quasi*-omniscient and sinless old men (*arhats, sthaviras*) gathered in order to rehearse, to 'chant together' (*saṅgīti*), the Word of Buddha (First Council), or to re-state it against the heretical views of innovators (Second and Third Councils), or to approve the addition of new treatises to the sacred lore, or to give authoritativeness to some theory of exegesis (Third Council and Kaniṣka's Council).

It is hardly necessary to point out that, as regards the First Council, the ecclesiastical dogma is untenable. No European would admit the 'authenticity' of the whole Pāli scriptures; and —without troubling to refer to a number of specious arguments—in presence of such facts as are adduced by Rhys Davids (*Buddhist India*, London, 1903, p. 176) or R. O. Franke ('Buddhist Councils' in *JPTS*, 1908, p. 8), the relative lateness of a great or the greater part of the *Nikāyas* themselves is evident (see below, on the later Councils). But it is safe to believe with Kern, whose critical methods are by no means uncautious, that there have been 'synods' ('Qu'il y ait eu des synodes, personne ne le nie' [*Geschiedenis*, ii. 265]). Upaniṣads as well as Suttantas furnish many evidences of the habit of discussing doctrinal matters.[1] We shall venture to add (1) that Councils were sometimes legal sessions, of the type approved of in the Pāli *Vinaya*, held by the parochial or diocesan (or even polydiocesan) clergy, *i.e.* a *saṅgha*, in order to inquire into accusations brought against a monk or group of monks (First Council, ordeal of Ānanda [if it be historical], Second Council, on the ten extra-allowances of the monks of Vaiśālī); (2) that heretical views, no less than extra-legal practices, may have been a matter of scandal, of inquiry, of doctrinal appreciation by the *soi-disant* supporters of tradition (Council on the Five Points of Mahādeva?)—there was on some occasions at least more or less formal 'consensus' of the contending parties; (3) that, possibly—we dare not say probably, for no human being knows anything about it, and 'probably' would be misleading where no appreciation of probability is possible—immediately after the death of the Master, some of his disciples, headed by Upāli or Ānanda or Kāśyapa, tried to ascertain at least a list of his authentic sermons and teachings; they agreed, let us say, on the technical 'phrases' which are the oldest form of the *Prātimokṣa* (*cf. Mahāvyutpatti*, § 256 ff.), on the wording of the Benares sermon, etc.; (4) that kings of old concerned themselves with ecclesiastical affairs, as did kings of later times[1]—synods and doctrinal disputations, usual in the Middle Ages, as we are told in many sources,[2] may sometimes have acquired special importance, owing to royal intervention (Aśoka, Kaniṣka?); (5) that some monasteries (and in early times there were huge monasteries) were like permanent councils. Their 'living libraries' became Canons; for the canonic shape which the Word of Buddha (*buddhapravachana*) received at last, when Word became Scripture, had been for a very long time foreshadowed by the oral and mnemonic distribution of the Word into several Baskets (*Piṭakas*) and Collections (*Nikāyas*).[3]

Real synods, regional or local, would have furnished Buddhists with the idea of primitive and catholic Councils, if the immemorial custom of conversing on the Law had not early evolved this very idea, and if the sectarian spirit had not given to it a special importance: '*Our* Scriptures are the Word of Buddha, for they have been authenticated by sinless and divine-eyed witnesses.'

But, while acknowledging the possibility (even the probability) of synods, we are at no loss to point out more certain and farther reaching causes of the facts to be explained, viz. the formation of the body of the Scriptures, the general (if not strict) 'consensus' of the sects of the Hinayāna as concerns Buddha's teaching, and, conversely, the splitting of the Order into sects.

If one excepts the division of the clergy named *āranyakas*, 'forest men,' or *pratyekabuddhas*, 'those who leave the world to live as the saints of old' (*ṛṣiprarrajyā* [see Poussin, *Bouddhisme*, 1909, p. 355, and art. TANTRAS]), Buddhist monks have never been hermits, 'rhinoceros-like' solitaries. A novitiate so-called, and often prolonged apprenticeship, study, and service at the feet of the preceptor, fortnightly confession, cœnobitic life, and prolonged living together during the rainy season

[1] See, for instance, *Digha*, i. 173; Rhys Davids, *Dialogues of the Buddha*, i., Oxford, 1899, p. 244, n. 2.

[1] We may cite Aśoka's Bhābrā Edict and Pillar inscription at Sārnāth (V. A. Smith, *Early History of India*[2], Oxford, 1908, p. 150); also (possibly) his Edict on the Quinquennial Assembly (Fourth Rock Edict [V. A. Smith, *Aśoka*, Oxford, 1901, p. 116; Kern, *Manual*, 101]); on the assemblies convoked by Harsa, see V. A. Smith, *Early History*, p. 322; Kern, *loc. cit.*, and *Geschiedenis*, ii. 220.

[2] For instance, Tāranātha (*Geschichte des Buddhismus in Indien*, tr. Schiefner, 1869), Hiuen Tsiang (*Buddhist Records of the Western World*, tr. Beal, 1884).

[3] On the oral transmission of the *Vinayas*, see Fa-hien, xxxvi.

were designed to prevent the admission of heterogeneous elements or to lead to their expulsion.[1] True Buddhist life was secured in every monastery, and the itinerant habits[2] which led the Brethren from their aboriginal country to the farthest monasteries of the 'Universal Church' established strong ties between the fraternities. Thus, the sons of Śākya constitute only one family 'held together (not) merely through their common reverence for their master, and through a common spiritual aim,'[3] but by frequent intercourse and a common fear of deviating from Buddha's practice. Rival orders, whether Jain or Brahman, were a danger to orthodoxy, although they were also a cause of it.

There are no bishops in the Buddhist Order, nor even abbots in monasteries (*vihāras*); there was no monk entitled by the Buddha himself, or by the Church, or by 'Elders in number' (*saṁbahula*), to be the 'protection' (*paṭisaraṇa*) of his brothers.[4] Nevertheless, the present writer is now inclined to believe that Buddhism contains more of a hierarchy than Oldenberg (*Buddha*[5], p. 395 = *Bouddha*[2], p. 333) and he himself (*Bouddhisme*, Paris, 1909, p. 335) have hitherto been willing to admit.

The 'ecclesiastical age,' the number of years elapsed since the admission into the Order, and the 'sanctity' (arhat-ship), the number of years elapsed since the acquisition of the passionlessness of an arhat, are the principle of a hierarchy—not a constraining, but a very effectual one. The rule of addressing an 'elder in religious life' by a special title, *bhante*, 'venerable,' instead of using the primitive and levelling *āvuso*, 'friend,' is attributed to the dying Buddha; it was enforced at an early epoch, though not at the very beginning.[5] Arhats were jealous of their privileges; they regarded it as a very grave crime unduly to claim arhat-ship; they considered themselves as the spiritual aristocracy of the Church, the universal *saṅgha* (cf. the legend of the judgment of Ānanda).[1] 'There are not only Elders (*thera*), but 'Older Elders' (*theratara* = *πρεσβύτερος*, *therachirapabbajita*), and 'the oldest Elder on earth' (*pathavyā saṅghathera*);[2] and these old monks are styled 'Fathers of the Church,' 'Leaders of the Church' (*saṅghapitāro*, *saṅghaparināyaka*).[3]

This was evolved the idea of Patriarchs, *vinayapāmokkhas*, 'chiefs of discipline,' or *ācāryas*, 'Masters,' who are supposed by the Singhalese and the Northern Buddhists to have successively controlled the universal Church. Oldenberg rightly observes that this idea of Patriarchs is foreign to the canonical literature; but we are told in *Dīgha*, ii. 124, that such and such a *saṅgha* possesses *theras* and *pāmokkhas*.[4]

The feeling of the unity of the Order, and the actual striving to promote or to restore this unity, assert themselves in the sermons of Buddha on 'schism' (*saṅghabheda*),[5] the most hateful crime, in punishment of which an eternity (*kappa*, 'age of the world') of suffering is hardly sufficient![6] In some cases Buddha goes so far as to forbid the re-ordination of monks who have turned away to schism (or who have followed schismatics).[7]

But we ought to be aware that these sermons contain a lesson to the 'rigorists,' or conservative party, as well as to fosterers of division.

The following is reported to Buddha: 'A certain monk, Lord, had committed an offence which he considered as an offence, while the other monks considered that offence as no offence. Afterwards he began to consider that offence as no offence, and the other monks began to consider that offence as an offence. . . . Then those monks . . . pronounced expulsion against that monk for his refusal to see that offence. . . . Then that monk got his companions and friends among the monks on his side, and sent a messenger to his companions and friends among the monks of the whole country. . . . And the partisans of the expelled monk . . . persevered on the side of that expelled monk and followed him . . .' Buddha piteously exclaims: 'The *saṅgha* is divided! The *saṅgha* is divided!' but he has words of rebuke for the 'expellers': 'Do not think, O monks, that you are to pronounce expulsion against a monk for this or that, saying: "It occurs to us to do so."'[8]

One has to distinguish between what is really important and what is not worth disputing. *Pātimokkha*, the essential rule of the Order, and *Dhamma*, the essential doctrine leading to salvation

[1] As too often happens in such obscure fields, our documents are *double-edged*, and one can use them to demonstrate conflicting theories—original 'orthodoxy' as well as original 'anarchy.' For instance, we are told of monks 'who had no preceptors and received no exhortation or instruction,' wearing improper garments, eating improper food . . . (*Mahāvagga*, i. 25, in *SBE* xiii. ['Vinaya Texts,' pt. i.] 161); of 'a certain monk, who had formerly belonged to a non-Buddhist school, silencing his preceptor by reasoning, and going back to that same non-Buddhist school' (*ib.* i. 81. 8). Even old monks return to the world or go over to a (schismatic) faction (*ib.* i. 86. 1). There are monks who forbid novices the use of all food that is taken with the mouth (*ib.* i. 57. 3). Relations with non-Buddhist devotees are forbidden (*Pāc.* 41). The *jaṭilas*, or ascetics with matted hair, are said to have thrown their hair and their sacrificial utensils into the river when Buddha converted them; nevertheless, the phrase *natthi hutam*, 'oblations to fire are of no use,' is with the Buddhists a heretical tenet (*micchādṛṣṭi*), just as it was probably with the *jaṭilas*. It is not held as absurd and impossible that a monk, when at the half month the *Pātimokkha* ('Book of Confession') is being recited, should say: 'Now for the first time do I notice that this rule, they say, is handed down in the Suttas . . .' (*Pāc.* 73). Nay, we find the case discussed of not a single monk, among all the Brethren dwelling in some particular place, knowing the *Pātimokkha* (*Mahāvagga*, ii. 17. 5 [*SBE* xiii. p. xxxiv]), but this would prove far too much. It sometimes happens that the sinful monks are strong, and the pious monks feeble; these last are dejected, forced to silence in the *saṅgha*, and go away to another country (*Aṅguttara*, i. 68).

All these testimonies, and many others, *e.g.* the dishonest method of securing concord and orthodoxy by manipulation of the votes (Oldenberg, *Buddha*[5], p. 398 = *Bouddha*[2] [tr. Foucher], p. 336; *Cullavagga*, iv. 14, 26, in *SBE* xx. ['Vinaya Texts,' pt. iii.] 56), establish at the same time: (1) that there are germs of division, and no small danger of the Order's losing its originality; (2) that, conversely, there is a catholic and traditional spirit, asserting itself in the rules of excommunication, etc. That this spirit gained the upper hand is sufficiently proved by the history of the Church, the constitution of Canons, etc. But the same history (growth of Mahāsaṅgha, Lokottaravāda, Mahāyāna, Tantrayāna) confirms the view that there has always been a Buddhism *du dehors*, a heretical, popular Buddhism, which later gained the predominance.

[2] See Minayeff, *Recherches sur le bouddhisme*, ch. v., esp. p. 116 ff.; cf. S. Lévi, 'Saintes écritures du Bouddhisme,' *Conférences faites au Musée Guimet*, *AMG* Bibl. de vulgarisation, xxxi. (1909) 125.

[3] *SBE* xiii. p. xii; see Poussin, *Museon*, 1905, p. 811.

[4] *Majjhima*, iii. 8; reference in Oldenberg, *Buddha*[5], p. 397 = *Bouddha*[2], p. 335.

[5] On this point, see R. O. Franke, *JPTS*, 1908, p. 181. His inquiry shows how much light can be derived from a careful comparison of texts. It establishes the fact that 'in the older canonical texts there appears a certain customary mode of address, different from that prescribed for the future by the Buddha.' Here, again, one may urge that the doctrine of the 'elderness' is not primitive.

[1] In Mahāyāna, *saṅgha* = *bodhisattvagaṇa*, 'the cohort of the celestial Bodhisattvas' (Śāntideva's *Bodhicharyāvatāra*, Com. ii. st. 1). In the later Hinayāna, *saṅgha* = *chattāro puriṣayugā*, the four owners of, and the four candidates for, the fruits of *sotāpanna* . . . *arhat* (*Kathāvatthu*, Com. p. 32, *Madhyamakavṛtti*, p. 478). This idea that saints (or *quasi*-saints) only are real members of the *saṅgha* is visible in *Saṁyutta*, i. 233: *chattāro cha paṭipannā chattāro cha phale ṭhitā esa saṅgho ujubhūto*, and also in the history of Councils (*Cullavagga*, xi., xii.); see discussion in *Kathāvatthu*, xvii. 6.

[2] *Cullavagga*, xii.

[3] *Dīgha*, ii. 77 (= *SBE* xi. 6): 'So long as the brethren honour and esteem and revere and support the elders of experience and long standing, the fathers and leaders of the order, and hold it a point of duty to hearken to their words,' etc. (We have objections to the translation 'of the order,' and prefer 'of the fraternities, of the parishes.') Here, again, the text shows that disrespect towards Elders was not impossible. Cf. the Vaiśālī legend.

[4] See *Buddha*[5], 393 (= *Bouddha*[2], 336), reference to *Dipavaṁśa*, v., *Parivāra*, 2; Kern, ii. 291; *Samantapāsādikā*, 292 (*Vinayapiṭakam*, vol. iii. [1881]). See also, on the 'Northern' Patriarchs, Kern, *Geschiedenis*, i. 215.

[5] There are a number of synonyms, or *quasi*-synonyms, which are translated as follows: 'altercations, contentions, discord, quarrels, divisions' among the *saṅgha* (*bheda*), disunion among the *saṅgha* (*vaji*), separations among the *saṅgha* (*vavatthāna*), schism among the *saṅgha* (*nānākaraṇa*; *SBE* xvii. 288). There is 'disunion,' when the number of disputing monks does not exceed eight; 'schism,' when they are nine or more (*Cullavagga*). It must be observed that the Vinaya has in view disputes in a parish; but it states that 'expelled' monks search for partisans 'in the whole country' (*janapada*), and that 'expellers' give notice abroad of the expulsion. The *Abhidharmakośa* distinguishes between common *saṅghabheda* and *chakrabheda* (?), which is the real *saṅghabheda*; it adds that *bheda* supposes in the 'schismatic' (*bhettar*) the folly of believing oneself a 'Master' (*śāstar*), like Buddha.

[6] *Itivuttaka*, § 18 = *Aṅguttara*, v. 76 = *Kathāvatthu*, xiii. 1 = *Parivāra*, xvii. 73 = *Cullavagga*, vii. 5. 4. [We are indebted for these references to Prof. R. O. Franke.]

[7] See *Cullavagga*, vii. 5. 4; but cf. the whole paragraph.

[8] *Mahāvagga*, x. 1; the translators of 'Vinaya Texts' (*SBE* xvii. 287) have: 'expulsion against a *bhikkhu* whatever be the facts of the case . . .' (*yannūn' ūssa tasmiṁ vā*).

—these are important; and happily 'there are not,' Ananda says to Buddha, 'two monks who differ concerning the Eightfold Path, the Four Efforts,' etc.[1] There are also *Adhipātimokkha*, *Ajjhājīva*, and *Abhidhamma*, subtleties or refinements or niceties concerning monastic life and doctrine, but these are mere trifles.

When two monks differ (or believe that they differ) on *Abhidhamma*, one has to content oneself with the mere statement of facts: 'You differ concerning the meaning and the letter [of a Sūtra]; well, do acknowledge that you differ, and do not dispute thereof.'[2]

Again, 'orthodoxy' has two aspects: not to rest content with 'unreliable' evidences (see below), and not to impugn systematically received opinions: 'Whatsoever monk . . . shall speak thus: "I cannot submit myself to that precept, brother, until I shall have inquired touching it of another monk, an experienced master of the Discipline," that is a Pāchittiya, a fault requiring repentance' (*Pāch.* 71).

The principle of the *āchiṇṇa* at once occurs to us, according to which 'it is allowable to do a thing on the ground that "my preceptor, my teacher, has practised this or that"': this principle, acknowledged in Brāhman circles, was maintained by some Buddhists, the heretics of Vaiśālī (*Chullavagga*, xii. 2, 8); and it was to some extent agreed to by the orthodox, for we are told that, when the First Council was just concluded, there came a celebrated monk, Purāṇa, with his 500 disciples, who refused to adhere to the resolutions of the Council: 'The doctrine and the disciplinary rule have been well sung by the Elders; nevertheless, even in such manner as it has been heard by me, and received by me from the very mouth of the Blessed One, in that manner will I bear it in my memory.' Neither the Elders nor the pious writer have a word of rebuke for this individualism (*Chullavagga*, xi. 11).

There are, we say, evidences of a very tolerating tendency; in order to assure concord, the most reasonable are to yield, for discord is the greatest evil. The care to live 'well, without dispute,' and the care not to lose any word of Buddha, whencesoever it might come, were both commended.

It may even happen that laymen are the only supporters of some important texts: 'If he sends a messenger to the monks, saying, "Might their reverences come and learn this suttanta; otherwise this suttanta will fall into oblivion," . . . then you ought to go even during the rainy season' (*Mahāvagga*, iii. 5, 9 [*SBE* xiii. p. xxxiv]).

But the care to be 'orthodox,' and not to alter Buddha's practice (*Buddha-āchiṇṇa*) has not proved less effective. Not only irregular practices, but sinful theories (*pāpikā diṭṭhi*), must be abandoned.[3] The legend of the Vaiśālī Council relates the endeavours of the 'good ones' to enforce the old rules.[4] The *Mahāparinibbānasutta*, without mentioning Councils, points out that one ought not to rest content, in the matter of the orthodoxy of a theory or of a practice, merely with the testimony of a hearer of Buddha, of an Elder, of a (parish) *saṅgha*, or of many Elders, but that one must look at what we venture to style the original source: 'Without praise and without scorn every word and syllable[5] [of a hearer, of an Elder, etc.] should be carefully understood, and then one must go for them to the Sūtra, look for them in the Discipline. If they are not to be found in the Sūtra, if they are not to be seen in the Discipline, then you may come to the conclusion, "Verily, this is not the word of the Exalted One"' (*Dīgha*, ii. 124).[6]

[1] *Majjhima*, ii. 245; cf. iii. 128. But we are told by Buddhaghosa that these very lists were altered by heretics (see *Aṅguttara*, i. 1883 [not 1885], p. 98).

[2] *Majjhima*, ii. 238 (nos. 103 and 104).

[3] See *SBE* xiii. 226, note: 'Temporary expulsion . . . is pronounced against monks who refuse . . . to renounce a false doctrine.'

[4] See below, p. 183.

[5] Although Buddha said: 'Syllables are without any importance; you ought not to dispute on mere trifles' (*Majjhima*, ii. 240).

[6] See *SBE* xi. 67; *Dialogues*, ii. 133 (Rhys Davids' tr., from which we venture to differ somewhat in wording); cf. the Sanskrit rendering of these criteria of authenticity in Poussin, *Bouddhisme*, p. 144.

There is no reason to deny *a priori* that such a notion of the *Dhamma-Vinaya*, as being more authoritative than individual assertions or local traditions, is very old and even primitive. Without turning the early monachism into a catholicism, one may trace strong catholic tendencies in the 'universal fraternity' (*chāturdiśa saṅgha*). The order of the dying Buddha that, after his death, 'the "Law" is the recourse, the lamp, the island,' has been obeyed. From religious and intellectual needs has issued a system of rehearsing practical, legendary, and doctrinal lore—an ever-increasing and more or less organic growth of the primitive wisdom. The schools which style themselves *sthaviras* (*Thera*, *Theravādins*) wrongly believe that they maintain the doctrine ascertained in the Councils of the Elders; but the older and more 'historical' conception is very similar, viz. that there was a tradition, called the tradition of the Elders, because the Elders were in early times the authoritative witnesses of the Buddha's word.

To sum up: it is not to be believed that 'Canons' were *compiled* before a relatively late epoch, and additions were possible for a long time after the sacred lore had been converted into sacred books: the Pāli *Parivāra* and *Abhidhammas* may be quoted as evident additions. But already at the time of the compilation of the *Mahāparinibbānasutta*, the notion of an authentic tradition, whose claims are not to be overborne by isolated *theras* or by parish-clergy, had made its way. And, without admitting a solemn *consensus* of the universal Church, gathered in Nicene-like assemblies, one can understand how the cœnobitic and itinerant organization of the clergy produced this 'common patrimony' of all the sects—to use Cecil Bendall's phrase—which underlies the sectarian development of the Canons known to us.[1]

Whilst, in order to explain the 'splitting into sects' and the diversity of the Canons, a Buddhist would admit the *mūlasaṅgīti-bhraṁśa*, 'decay of the original chanting together of the Law,' 'rupture of the primitive consensus,' we shall rather look at the manifold and numerous variants in the wording, and not a few discrepancies in the *mise en œuvre* of the 'common patrimony,' as the natural result of a (doctrinally and locally) diversified work on the oral tradition. The Pāli Canon itself, with its 'polygeneous' *loci communes*, its repetitions, its parallel stories with interchangeable heroes, and its contradictions, furnishes us with the best idea of what this tradition was. Nay, it would not be impossible to extract from this Canon two or three Canons all complete, all like one another, and all conflicting.

If the above observations are correct, it is not impossible to work out a provisional theory concerning the origin and the character of sects.[2] The legend of Purāṇa and numerous evidences of every kind prove that a central authority was wanting, that the original precise dogmatism postulated by some modern historians is purely conjectural, that Buddhist monachism contained germs of 'localization' or division.[3] But all this is not inconsistent with a sort of 'catholicism' or 'orthodoxy' at least. Sects (*bhedas*) may arise and develop, without being the results or the causes of formal schisms or divisions of the Church (*saṅghabheda*), and without implying repudiation or the prohibition of 'eating together' or 'communicating together' with monks (*asaṁbhogaṁ saṅghena*, [*Mahāvagga*, x. etc.])—a prohibition which is made known by the repudiating parish to the parishes in general. There may

[1] The consensus of the different sects as concerns the sacred character of many passages, in dogma or history, is not a proof that these passages were unanimously acknowledged before the splitting into sects. Mutual borrowing from sect to sect was by no means impossible; opposition between sects was, on the whole, restricted to a few rules of practice or a few doctrinal tenets; local traditions, or fresh acquisitions, by a particular sect, by some monastery or group of monasteries, were, we must admit, generally welcomed by the others. And it may be urged that a sect—possibly the Pāli-speaking one—which would surpass its fellow-sects in compiling an organized body of Scriptures (or, to be more precise, in designing a drawer-desk in which to put the Buddha's words) would exercise *ipso facto* a profound and decisive influence on the Buddhist Order at large. It does not follow that the traditions of this sect were the oldest, or genuine and free from borrowing, or that they have not been, since their earliest compilation, manipulated, developed, or adulterated in many ways.

[2] See art. SECTS (Buddhist). We are not here concerned with the 'Great Vehicle' (*Mahāyāna*).

[3] 'Forest men' are allowed to observe ascetic practices that are more or less in contradiction to the principles of the 'middle way' between asceticism and laxity—a principle solemnly stated in the Benares Sermon.

be 'cantonments' without discord, 'diversities' without excommunication. It is, for instance, a fact that Buddhists used their own dialect[1]—Buddha himself is said to have allowed his disciples to do so; and diversity of language is more than sufficient to cause distinction and what we may call 'liturgical' opposition. Details concerning monastic life, robes, and food are also decisive in this regard: discrepancies could not but arise. The Pāli *Vinaya* states that extra allowances ought to be tolerated in some provinces (*Avanti*); four monks make a *saṅgha* in 'Bordering countries,' nine are necessary in 'middle countries' (*madhyameṣu*), etc.

As we know from later documents, such discrepancies did not lead to scandal or rupture. Of course, a monk ought to follow the rules to which he has subscribed as a novice; but he is not obliged to protest when he is the guest of monks who use food forbidden to him; conversely, his guests have no right to force their own rules upon him.[2] But, as it is said, 'the very water has taken fire' (*SBE* xx. 119), the very evidence to which we refer shows that intolerance, too, was by no means impossible in such cases.

Diocesan varieties, which we may consider as the usual origin of sectarian rivalries, did not prevent union and communion, and, therefore, did not prevent collaboration on the Canonical Literature. Anything that claimed to be 'Buddha's word' obtained, as a rule, adhesion. Sūtras attested by extraneous tradition (*parasamayatas*) were taken into consideration, for later doctrinal contradictions between schools depend upon exegesis rather than upon sources, and are more concerned with the meaning of the Sūtras than with their authenticity. Schools work on a common literary stock, made up from mutual borrowings, and they arrive at divergent conclusions, even when they do not start from divergent dogmatical tenets. As a rule, doctrinal contradictions do not disrupt the *saṅgha*. If the clergy of a diocese, through the action of a synod or otherwise, draw up a synthesis of the Law, the objection is ready at hand: 'You alter the Law' (*sāsanaṁ navakatam*).[3] 'No, we have not modified the cardinal principles, theological or moral,' is the answer. And this answer, be it right or wrong, is probably accepted. It may happen that a theory, for instance, the *pudgalavāda* ('doctrine of a permanent *ego*'), would lead some sectaries so far as to deny the authenticity of certain *sūtras*; or, conversely, it may be a question amongst the orthodox whether such sectaries have any right to style themselves Buddhists, and yet they are recognized as 'scions' of the tradition of the Elders.[4]

Thus, if we consider the mutual relations of sects and their legal position as branches of the universal *Saṅgha*—leaving out of account doctrinal divergences which are not, as such, of paramount importance—sects are not to be contrasted as hostile bodies, with closed traditions. The dream of Bimbisāra may be quoted as giving a true symbol of the Buddhist church:

King Bimbisāra once saw in a dream that a piece of cloth was torn, and a gold stick broken, both into eighteen fragments.[5] Being frightened, he asked the Buddha the reason. In reply, Buddha said: 'More than a hundred years after my attainment of *nirvāṇa*, there will arise a king, named Aśoka. . . At that time, my teaching, *handed down* by several Bhikṣus, will be split into eighteen schools, all agreeing, however, in the end, that is to say, all attaining the goal of final liberation. The dream foretells this, O king, you need not be afraid.'[6]

II. *TRADITIONS CONCERNING THE COUNCILS.*—1. First Council or Rājagṛha Council.—The Pāli canonical narrative of the First Council (*Cullavagga*, xi. [*SBE* xx. 370]) may be summarized in the words of Kern:[7] 'After the demise of the Master, a certain Subhaddha said to his fellows: "Do not grieve! We are happily rid of the Great Ascetic. We used to be annoyed by being told, 'This beseems you, this beseems you not.' But now we shall be able to do what we like, and what we do not like we shall not have to do." In order to obviate the dangerous effects of such unseemly utterances, Kāśyapa the Great made the proposal that the Brethren should assemble to rehearse the Lord's precepts. The proposal was adopted, and Kāśyapa was now entreated to select 500 Arhats. This being done, it was decided that Rājagṛha should be the place of assembly. During a seven months' session the *Vinaya* ("Discipline") was fixed, with the assistance of Upāli; the *Dhamma* ("Law," doctrine), with the assistance of Ānanda.' There are added some details regarding certain errors or misdeeds of Ānanda, who had to make amends for them. Lastly, a celebrated monk, Purāṇa, arrives when the 'chanting together' of the Law is completed, and, although he admits that the Law has been well 'sung' by the Elders or Arhats, he prefers to 'bear' the Law as he has himself received it from the Master.

According to Oldenberg, 'what we have here before us is not history, but pure invention';[1] and every one will agree with him, as far as the 'chanting together' of the whole *Vinaya* and *Dharma* (=Sūtras) is concerned, although, in the words of Kern, 'it is by no means incredible that the disciples, after the death of the founder of their sect, came together to come to an agreement concerning the principal points of the creed and of the discipline.'[2] As concerns the minor details, whose unhistorical character is by no means evident (misdeeds of Ānanda, excommunication of Chhanna, etc.), Minayeff thinks that they are to some extent historical, and the present writer does not see how this opinion can be 'proved' to be either right or wrong.[3] He ventures to believe that it is *right*. The author of *Chullavagga*, xi., in order to embellish his history of the First Council (a legend or a *quasi*-legend, an 'ætiologic' or 'apologetic' construction which may cover some kernel of truth), has used traditional data, which are neither more nor less reliable than the whole of the ancient Buddhist Tradition contained in Vinayas or Sūtras. Moreover, it is not necessary to decide whether these data are true or false; in any case, they present us with useful evidence as to the early Church.

The narratives of several sects—Dharmaguptas, Mahīśāsakas, Sarvāstivādins, Mahāsāṅghikas—are parallel with the *Chullavagga*. Although there are manifold discrepancies, it is far from certain that they furnish us with independent traditions.[4] The *Chullavagga* looks older, for it does not contain any allusion to the rehearsing of the Abhidharma.

Much importance has been attributed by Oldenberg and Franke to the fact that the *Mahāparinibbānasutta*[5] altogether ignores the Council, although it tells of the indecent attitude of Subhaddha (which, according to the *Chullavagga*, was the occasion of the Council); while, on the other hand, the *Chullavagga* depends (or seems to depend) on the *Mahāparinibbāna*;[6] therefore, when the last text was compiled, the very idea of a primitive Council had not yet appeared. The present writer does not think that such weighty conclusions can be drawn from a mere literary comparison of the documents. The very argument would not have emerged if the Pāli *Mahāparinibbāna*, like some northern editions of the 'Last days of Buddha,' had been followed by the narrative of the Council; and it is not absurd to suppose that its redactor, for mere literary reasons, abstained from giving an account of the Council.[7]

[1] *Chullavagga*, v. 33. 1: *sakā nirutti*, 'one's own language'—understood by the commentary as meaning 'Buddha's own language.' See Oldenberg, Introd. to *Vinaya Piṭakam* (1879), p. xlix; Minayeff, *Pāli Grammar* (Guyard's French tr., Paris, 1874), pp. xxxix, xlix, and *Pātimokkha* (1869), p. xliv.

[2] I-tsing, *Religieux éminents*, tr. Ed. Chavannes (Paris, 1894), p. 48.

[3] *Kathāvatthu*, xxi. 1; cf. *Majjhima*, ii. 245.

[4] For more details, see art. SECTS (Buddhist).

[5] This figure, 18, which does not agree with our lists of sects, possibly depends upon the 18 *bhedakaravatthus*, 'causes of division in the Church'—a fanciful list (*Chullavagga*, vii. 5. 2).

[6] I-tsing, *A Record of the Buddhist Religion* (tr. Takakusu, Oxford, 1896), pp. 13–14; cf. and ct. Tāranātha, tr. von Schiefner, St. Petersburg, 1869, p. 274; and Watters, *On Yuan Chwang* (1904), i. 162 ff.: 'The tenets of the Schools keep these isolated, and controversy runs high; heresies on special doctrines lead many ways to the same end. . . .'

[7] *Manual* (1896), p. 101 f. (with some omissions).

[1] Introd. to *Vinaya Piṭakam*, p. xxvii.

[2] Kern, *Manual*, p. 103. According to *Dīgha*, iii. 210, the divisions among the Jains at the death of the Jina caused Sāriputta to 'rehearse' the Law, to compile a mere numerical enumeration of the dogmatic topics. There is much truth in this information.

[3] As is well said by Oldenberg, quoted in *IA*, 1908, p. 7.

[4] See R. O. Franke, 'Buddhist Councils,' in *JPTS*, 1908, p. 75.

[5] 'The Book of the Great Decease,' the Pāli narrative of the last days and the funeral of Buddha, tr. Rhys Davids, *SBE* xi., and *Dialogues*, ii.

[6] See *Dialogues*, ii. 70.

[7] See *IA*, 1908, p. 8, note; also Nanjio, *Catalogue of the Chinese Transl. of the Bud. Tripitaka* (Oxford, 1853), no. 552, and *SBE* xi. p. xxxviii. [We are indebted for this reference and this argument to M. Louis Finot.] A typical instance of the complexity of these literary and historical problems is furnished by the various narratives of the episode of Purāṇa. This episode is more developed in some *Vinayas* than it is in the Pāli *Vinaya Chullavagga*. According to the *Vinaya* of the *Mahīśāsakas*, Purāṇa demanded the insertion of seven permissions (keeping food indoors, cooking indoors, etc.); according to the *Dharmaguptas*, of eight. Now the Pāli *Vinaya* (*Mahāvagga*, vi. 17–19, 20. 4, 32) states that the problem of the 'eight

2. Council of Vaiśālī (Vesālī).—According to a tradition fully developed in *Chullavagga*, xii. (*SBE* xx. 386), and common at least to several sects, there was held, in the year 100 or 110 after the Nirvāna,[1] a Council to examine and condemn ten extra-legal practices of the monks of Vaiśālī. The inhabitants of Vaiśālī and surrounding country (Vraja, the modern Braj) are known as *Vṛjis* (Pāli *Vajjis*), and the heretic monks as *Vṛjiputrakas* (Pāli, *Vajjiputtakas*). The heretical practices were described, or technically pointed out, in short phrases—'two fingers,' 'another village,' 'dwelling-place,' etc.—some of which were no longer intelligible when *Chullavagga*, xii., and the other *Vinayas* allnded to were compiled, as is shown by the discrepancies in the interpretation of the 'phrases.'

We may safely acknowledge the historical character of a Vaiśalian controversy on ten points of monastic discipline, but it is as yet impossible to draw from our documents any conclusion regarding the importance or the date of the event, the development of the monastic institution at that time, or the date of the Pāli *Vinaya* as a whole. The present writer considers it a misleading opinion that the whole Pāli *Vinaya* was anterior to the Vaiśālī Council because it does not contain any allusion to the ten 'phrases.' Further, as is generally admitted, the figures 100 and 110 are round numbers.

Oldenberg's remarks on Vaiśālī (Introd. to *Vinaya Piṭakam*, and 'Buddh. Studien,' *ZDMG* xlii. 613) cannot be said to have settled the question in favour of the priority of the *Vinaya*. For a discussion of the arguments *pro* and *con* one may refer to *IA*, 1908, p. 81 ff.

R. O. Franke defends an altogether different estimate of the 'Vaiśalian' legend. His argument against Rājagrha and Vaiśālī, is, in short, as follows: The author of *Chullavagga*, xi. (First Council), has turned into history the saying of Buddha that 'after my death, O monks, the Law ought to be your refuge.' Therefore, thought this ecclesiastical romancer, the Elders compiled the Law jnst after the Nirvāna; and, as there was no tradition whatever concerning this supposed Council, he employed all the 'evangelical' data which could be of use for an 'apostolic' history. Again, Buddha was said to have delivered many discourses (compiled in the Suttas or in the Vinaya) concerning heretics 'who proclaim and hold as right (*dhamma*) what is wrong (*adhamma*), as Discipline (*vinaya*) what is un-Discipline (*avinaya*)'; nay more, he predicted that the Vajjis would be destroyed owing to their disrespect for Arhats, their discords, etc. [Various misdeeds of the Vesālian Vajjiputtakas are also well known: during the lifetime of Buddha, they adhered to the 'five points' (ascetic exaggerations of Devadatta), *Chullavagga*, vii. 4. 1; or, on the contrary, they indulged in the most strange indulgences—eating, bathing, and sleeping as they pleased, and permitting themselves sexual intercourse (*Vinaya Piṭakam*, iii. 23; *Pār.* i. 7).] From these data, the ecclesiastical romancer has constructed a history of a schism (finally settled at Vaiśālī), parallel with his history of the compilation of the Law (First Council), and showing the same literary skill: '. . . The chronicle of the "Second Council" . . . is not only a merely literary construction; it does not even possess any relevant subject-matter. Whether such monkish steam as those ten puerilities was ever let off has little or no importance for the history of Buddhist literature.'[1]

3. The two Aśokas and their Councils.—(1) The Pāli *Vinaya* (*Chullavagga*, xii.) states that the Vesālī Council was held in A.B. 100, but it does not name the reigning sovereign, and it contains no allusion to any later Council. Other sources (*Mahīśāsakas*, *Dharmaguptas*, and *Sarvāstivādins* [A.B. 110]) seem to be equally silent on these points.

(2) Pāli later sources (Sinhalese sources) know the name of the sovereign, Kālāśoka, and they add that the Vesālian schismatics (Vajjiputtakas) in their turn held a Council, the 'Great Assembly,' whence issued the sect Mahāsāṅghika, 'of the Great Assembly'—while the Mahāsāṅghikas are said by other sources to maintain that this 'Great Assembly' was held immediately after the Rājagrha Council.

(3) Vasumitra, the author of a treatise on the sects, hitherto undated (see Minayeff, *Recherches*, p. 195), who seems to ignore Vaiśālī, tells us of a Council held in A.B. 100, at Pāṭaliputra, under Aśoka, concerning 'five points';[2] the Council resulted in the division between the Church and the Mahāsāṅghika sect.

(4) Bhavya, the author of another treatise on the sects, relates the tradition of the Sammitiyas that a Council was held in A.B. 137, at Pāṭaliputra, under the kings Nanda and Mahāpadma[3] [concerning 'five points'?].

(5) According to the same authority, the Sthaviras say that a Council was held in A.B. 160, at Pāṭaliputra, under Aśoka, concerning some controverted question, and that it resulted in the Mahāsāṅghika schism.

(6) According to Tāranātha (p. 44), during the lifetime of Aśoka, Vatsa, a Brahman from Kaśmīr, a monk or even an elder (*sthavira*) preached to the common people the doctrine of the existence of a soul, and caused no little discussion among the clergy. The 'noble Black' (*ārya Kāla* or *Kṛṣṇa*), who had succeeded Dhītika in the 'protection of the Law,' assembled the whole body of clergy in the Puṣkariṇī-monastery, in Maru (Marwar), and after a session of three months the followers of Vatsa and Vatsa himself were converted.

This Council appears in an altogether different light, namely, as 'the collection of the Scriptures' through the elder Vatsiputra, in Tanjur, *Mdo*, 132, where it is dated A.B. 400, and in Bhavya, with the figure 200 or 400.[4] The sect of the Vātsi-

(or seven) points' was discussed during the lifetime of the Buddha, who, after having authorized the 'keeping of food indoors,' etc., withdrew this concession (see *IA*, 1908, p. 5). It is not easy to draw any conclusion from such coincidences. (1) One may say that the *Mahīśāsakas* and the *Dharmaguptas* have embellished the history of the Council through attributing to Purāna some opinions alluded to and condemned in the *Vinaya*; and this opinion is right enough, for Purāna seems not to have been a man to patronize extra allowances; and, from a merely literary point of view, the *Mahāvagga* (our Pāli recension, or some other edition of the subject-matter of the *Mahāvagga*) is the probable source of the *Mahīśāsaka* information. But (2) it is very probable, or rather certain, that the redactors of the *Vinaya* (*Pātimokkha*, *Mahāvagga*, etc.) have 'antedated' many prescriptions and many events, Buddha himself being said to have condemned practices or tenets which, in fact, appeared only after his death, and became occasions of disputes or schisms.

[1] The date 100 *anno nirvāṇi*, according to the *Chullavagga*, the *Mahīśāsakas* (Wassilieff, in Tāranātha, p. 291), the *Dharmaguptas* (Beal, *Four Lectures on Bud. Lit. in China* [London, 1882], p. 83, and Berlin Congress of Orientalists, Ostas. section, p. 33), and Fā-hien (xxv., at the end); the date 110, according to the Sarvāstivādins (Rockhill, *Life*, p. 171; *IA*, 1908, p. 104), Hiuen Tsiang (Watters, *On Yuan Chwang*, ii. 73 f., cf. p. 75, nnte). Tāranātha (p. 42) says that the figure 'in the Vinaya of other schools' is 210 and 220.

[1] To the present writer it appears that one might safely maintain the reverse. It is *a priori* probable that the discourses of Buddha on schisms, the predictioo of the misfortnne of the Vajjis, and the fanciful attribution to them of extra-legal practices, either ascetic or sinful, far from being the literary cause of the legend of a schism, are the consequence, the reflexion of some tradition relative to some historical events in which the Vajjis (or Vaiśalians) were concerned. And the dispute on the 'ten points' was probably such an event. We are greatly mistaken if a part of the *Vinaya*, nay, of the *Pātimokkha* itself, is not made up of new (we do not say modern) acquisitions of the earliest Buddhist discipline, acquisitions mainly due to the development of the Order and to the necessity of stating rules for new cases—acquisitions which were, of conrse, antedated and solemnly attributed to Buddha himself. For instance, when Buddha is said to have first authorized and finally withdrawn some allowance, have we not some right to suppose that the Church itself had modified its rules? We know little of this early history. Buddhist Vinaya and Sūtra may be compared with an apocryphal Gospel where the decisions of Nicæa and the Canons of Cluny may be found side by side with Apostolic traditions. We have only a few episodes which bear an appearance of truth, in so far at least that they are not piously antedated; but amongst them is the Council of Vaiśālī. The 'ten points' have not been 'concocted' from the data of the *Vinaya* by pseudo-historians, even if the narrative depends on the *Vinaya*, as R. O. Franke has proved it to do; on the contrary, it is not impossible that the *Vinaya* has been largely amplified owing to many Vaiśālī-like disputes.

[2] Five doctrines on Arhat-ship and the Path, the originator of which is named Mahādeva, and sometimes Bhadra (see below, p. 184[b], and *JRAS*, 1910, p. 413).

[3] The word 'king' (Tibet. *rgyal-po*) is in the singular (see Rockhill, *Life*, p. 186, note), but Nanda and Mahāpadma are two persons (cf. Tāranātha, p. 61; Wassilieff, p. 47 [51]). Nanda seems to have been the second or third successor of Aśoka (see V. A. Smith, *JRAS*, 1901, p. 851).

[4] See Bhavya *ap.* Rockhill's *Life*, p. 187. In the words of the latter, '. . . a Council held in the year A.B. 137 (see (4) above) . . . the monks continued to quarrel for sixty-three years afterwards, that is to say, till A.B. 200; and 102 years later (*i.e.* A.B. 302) the Sthavira and Vātsīputrīya schools verified the canon ["rightly collected the doctrine"].' The present writer holds against Rockhill, (1) that *gnas-brtan gnas maḥi bus* must be translated *Sthavira Vātsīputrīyeṇa* (or *°putreṇa*), that is to say, 'the Elder named Vatsīputra collected the doctrine'; (2) that the figure 102 is wrong; Bhavya's *brgya phrag gñis* may be or must be 200 (see Jäschke, *Tibet. Grammar*, Eng. tr., London, 1883, p. 31 n.), and Mañjughṣahāsavajra, quoting Bhavya, has *ñis brgya*, that is to say, 200. We have 137+63=A.B. 200. If we add 200, we have 400, the date of the Vātsīputrīya Council according to Tanjur, t. 132, fol. 32 (Tāranātha, p. 298). We prefer to take the figure 200 of Bhavya as the total 137+63, for the phrases *de-nas lo brgya phrag gnis ḥdas pai rjes la*, *de rjes lo ñis brgya ḥdaspar* may be translated: 'then (*tatas*) two hundred years being elapsed, then, after two hundred years' (cf. Tāranātha, p. 298, line 6 f.). [The dispute of 63 years, says Tāranātha (p. 61), lasted 100 years from its commencement till its final settlement.]

putrīyas, 'adherents of Vatsīputra,' scions of the *sthaviras*, is well known for its theory of a soul (*pudgala*).[1]

(7) Sinhalese sources: a Council in A.B. 236, at Pāṭaliputra, under Aśoka (Dharmāśoka), which proclaimed the orthodoxy of the *Vibhajyavāda* ('doctrine of the distinction'), to which belongs the Pāli or Sinhalese Church, and authenticated the last of the Pāli Abhidharma treatises, the *Kathāvatthu*.

The obvious conclusions are as follows. (*a*) Nothing precise was known concerning the origin of the Mahāsāṅghikas. They claimed to be ancient and orthodox. Others styled them heretics and schismatics. The Sinhalese identified them with the Vesālian Vajjiputtakas, but there is no evidence in favour of this identification; some sects believed that they originated out of the dispute on the 'five points,' and it seems certain that they admitted the 'five points.' (*b*) There was a tradition of a Vesālian Council on 'ten points,' date uncertain, no mention of king; and (*c*) a tradition of a Council on 'some controverted question,' more precisely on 'five points'; date uncertain, and probably no mention of king. (*d*) The monks of Ceylon supposed that their *Kathāvatthu*, a catalogue of heresies, had been first preached mysteriously by Buddha; they were well aware that the book was 'modern,' nay, that it had been revealed by Tissa Moggaliputta, some centuries after the Nirvāṇa; and they had reasons to admit that their Scriptures, inclusive of the *Kathāvatthu*, had been rehearsed in a Council, which could not be the Vaiśālī Council, since the *Chullavagga* ignores Tissa and the *Kathāvatthu*.

It was reasonable to place all the important events in the history of the Church under Aśoka, a sovereign who had evidently been a second 'mover of the Wheel of the Law'; and this was done. [Note the exceptional mention of Nanda and Mahāpadma, above, p. 183.] Again, Pāṭaliputra was the evident seat of such meetings. Our Northern documents are scanty and conflicting, but they give the impression that there was no certain tradition of the date of Aśoka: 100, 110, 137, or 160 are figures out of which no chronology can be extracted ('no oil out of sand,' *na sikatābhyas tailam*).

Sinhalese tradition places the Vaiśālī Council in 100 under Kālāśoka, and the Pāṭaliputra Council in 236 under Dharmāśoka. Besides the 'Northern' figures for Aśoka (100 [110], 137, 160), there was a fourth figure, A.B. 236 (17 or 19 years after his coronation in A.B. 217, 219). We are not concerned with the question whether these were fanciful or traditional computations. In fact, the authors of the ecclesiastical history 'concocted' in Ceylon admitted this figure, without troubling themselves very much to adjust it to some other chronological details of their own; and, as they maintained the canonic date of Vaiśālī, and were at a loss to name the sovereign reigning in A.B. 100, they imagined a 'black Aśoka,' *Kālāśoka*—a mere *idolum libri*.[2]

The Sinhalese narrative of the Third Council is open to serious objections as concerns the rehearsal of the Pāli Canon and of the *Kathāvatthu* as it stands now, and as regards the solemn declaration by the whole clergy that Buddha was a *Vibhajjavādin*, i.e. that he adhered to the tenets of the school of this name. But some details are historical, and the story itself rests on historical ground. Aśoka's inscriptions are explicit enough as to the king's intervention in clerical questions: we know that he decreed expulsion ('putting in white [*i.e.* layman's] garments') against [monks or] nuns. The Sinhalese tradition may be relied upon when it affirms that such rules were enforced against bad monks, 'pseudo-Buddhists';[3] but that 'heretics' were ill-treated by the king seems rather incredible. On the other hand, it is unfortunate that the inscriptions contain no allusion to a 'Council,' and some historians feel obliged to place the Council in the short time between the Pillar-inscriptions and the death of the king (see ii. 126). But the question is whether the Council was what it is said to have been, a 'Nicene' Assembly, and not rather a series of synods or dogmatic disputations.

Until the *Kathāvatthu* has been thoroughly studied and compared with 'Northern' documents, it will be impossible to describe the ancient doctrinal discussions; but we already possess a few hints which may prove useful.

(*a*) The name of Tissa Moggaliputta, the hero of the Third Council and the 'defender' of the Vibhajjavādin faith, is quoted in the books of a rival sect, the Sarvāstivādins. The *Vijñānakāya*, a treatise of this sect, 'is a tedious argumentative treatise combating the views of a Moginlin who denied the reality of the Past and the Future . . .' (Watters, *On Yuan Chwang*, i. 374). This 'thesis of the omni-existence' (*sarvāstivāda*), which gave their name to the Sarvāstivādins, is discussed in the *Kathāvatthu* (i. 6–10). It is at least possible that a Moggaliputta maintained the system or method of distinction (*vibhajja*[o]) which already appears in the sermons of Buddha on *sabbam atthi*? 'Does anything exist?' (*Saṁyutta*), and is employed in some places of the *Kathāvatthu*.

(*b*) It is an interesting fact that the 'five points'—the five theories attributed to a schismatic, Mahādeva by name, concerning the Arhat-ship and the Meditation—which, according to the 'northern' sources, were discussed under Aśoka and formed the origin of the Mahāsaṅghika schism,—are also discussed in the *Kathāvatthu* (ii. 1–6).[1]

(*c*) Further, the first heresy condemned in the *Kathāvatthu*—'Is there in the truest and highest sense a soul (*pudgala*)?'—is known from the Northern sources as the capital tenet of the Vātsīputrīyas (see above, p. 184); and we believe that the problem of the 'soul' aroused division in the earliest times. The second heresy—'Can an Arhat fall from Arhat-ship?'—is also very ancient, etc.

To sum up: it seems almost certain that a number of heresies discussed in the *Kathāvatthu* may have occasioned discussions, synods, and divisions in the days of Aśoka, and even before his time; that there was a *Kathāvatthuppakarana*, a 'book on controversies,' which could be easily completed, and, in fact, has been enlarged through many and manifold additions. There is no reason to doubt that, in a primitive form, it was in some way connected with Tissa Moggaliputta.

4. **Council of Kaniṣka.**—The documents concerning this Council are late, 'more or less at variance, and, moreover, very vague.'[2]

It seems that this Assembly is, for the Sarvāstivādin School, what Moggaliputta's Council is for the Vibhajjavādin School of Ceylon—an apologetic *quasi*-invention. Like the Vibhajjavādins, the Sarvāstivādins possess treatises on Abhidharma,[3] and maintain that these are authoritative (word of the Buddha); their authenticity or authority was, they say, recognized at the Council held under Kaniṣka, and, moreover, a Commentary on the *Abhidharma*-treatises (*Vibhāṣā*) was compiled or written on this occasion. It must be observed that the *Abhidharmakośa*, while stating the conflicting theories of the Vaibhāṣikas (scions of the Sarvāstivādins, relying on the *Vibhāṣā*) and of the Sautrāntika (who consider the *Abhidharma*-treatises as 'human' works), does not mention, we think, Kaniṣka's Council; further, that all the Kāśmīras (monks of Kaśmīr, the stronghold of the Sarvāstivādins and Vaibhāṣikas) are not Vaibhāṣikas.

The narratives of this Council are to some extent dogmatic legends,[4] and seem only to bear witness to the literary activity of the Sarvāstivādins. As is well said by Takakusu, until the treatises of this school shall have been made accessible to scholars, it will be vain to argue about the Council or its proceedings (see artt. VAIBHĀṢIKAS, SARVĀSTIVĀDINS).

[1] *Vātsīputrīya*—the reading is certain—is translated *gnas-maḥi bu*; *Vatsa* is a conjecture of Schiefner for *gnas-pa*; *Vatsī-putra*, a conjecture of the present writer's for *gnas-maḥi bu*. Kern says that the Vātsīputrīyas are 'evidently the same as the Vajjiputtakas of the [Sinhalese] Chronicles' (*Manual*, p. 111); that is to say, in their 'genealogy' of the sects the Sinhalese give to the Vātsīputrīyas the old name Vajjiputtakas. But there is only *quasi*-homophony between these two names.

[2] See V. A. Smith, *JRAS*, 1901, p. 855. We are much indebted to this authority.

[3] See Samantapāsādikā, *Vinaya*, iii. 312 [read line 19 *apapabājesi*, 'forced to quit the order']; cf. *Śikṣāsamuchchaya*, p. 66 (which forbids such spiritual usurpation of the 'civil power'), and *Lotus of the Good Law*, *SBE* xxi. ch. xii. 17.

[1] See *JRAS*, 1910, p. 413.

[2] Kern, *Manual*, p. 121 (see also *Geschiedenis*, ii. 359). Kern gives a summary of the narratives of Fa-hien, Hiuen Tsiang, Tāranātha (*Tibet. Lebensbeschreibung Sakya Munis*, tr. von Schiefner, St. Petersburg, 1849). V. A. Smith (*Early History*, p. 249 ff.) adds new evidences, especially Takakusu's observations. The date of Kaniṣka, in the present writer's opinion, has not yet been ascertained; but there is nothing to prove that the Sarvāstivādins' books are either earlier or later than Kaniṣka (*q.v.*).

[3] It seems certain that the two Abhidharmic collections have nothing in common.

[4] The present writer cannot agree with Kern's opinion (*Manual*, p. 122) that, as a result of the Council, 'somehow an agreement, a *modus vivendi*, was hit upon on the base of the principal truths unassailed by any of the 18 sects.' Such an interpretation of the legends is opposed by the fact that the Sarvāstivādin character of the Council seems to be proved.

5. We must be content simply to note a tradition as to later Councils: A.B. 400—Vātsīputra's Council; A.B. 700—Mahāsammatīyas' Council; A.B. 800—a Council under Bhūtika and Buddhamitra (Wassilieff, *ap.* Tāranātha, p. 298).

LITERATURE.—Almost all the books on the history of Buddhism: C. F. Köppen, *Die Religion des Buddha*, Berlin, 1859, ii. 10; W. Wassilieff, *Der Buddhismus*, St. Petersburg, 1860, p. 37 [Fr. tr., Paris, 1865]; H. Kern, *Geschiedenis van het Buddhisme*, Haarlem, 1881–84, ii. 232 [French tr. by G. Huet, *Bibl. d'Etudes du Musée Guimet*, x. and xi., 1901–3], *Manual of Indian Buddhism* (*GIAP* iii. [1896] 8), p. 101 ff.; H. Oldenberg, *Buddha, sein Leben* . . . p. 399 (5th ed., Stuttgart, 1906; 2nd Fr. ed., Paris, 1903, p. 337), Introd. to *Vinaya Piṭakam*, p. xxv, London, 1879, 'Buddhistische Studien' (*ZDMG* lii. [1898] 612); J. P. Minayeff, *Buddizmъ*, St. Petersburg, 1887, [Fr. tr. 'Recherches sur le bouddhisme,' *Bibl. d'Et. du Musée Guimet*, iv., 1894]; Vincent A. Smith, *Early Hist. of India*[2], Oxford, 1908. Some monographs may be noted: V. A. Smith, 'The Identity of Piyadasi with Aśoka Maurya and some connected Problems' (*JRAS*, Oct. 1901, pp. 827–858); L. de la Vallée Poussin, 'Les Conciles bouddhiques' (*Muséon*, 1905 [tr., *IA*, 1908]), and 'The Five Points of Mahādeva and the Kathāvatthu' (*JRAS*, 1910, p. 413); R. O. Franke, 'The Buddhist Councils at Rājagṛha and Vesālī' (*JPTS*, 1908). Original sources are chiefly: Pāli *Vinaya* (tr. *SBE* xiii. xvii. xx.); Tibetan treatises on sects, in Wassilieff, *Buddhismus*; Rockhill, *Life of the Buddha*, London, 1884; Chinese Pilgrims (Fahien [tr. Legge, Oxford, 1886]; Hiuen Tsiang [Watters, *On Yuan Chwang*, London, 1904–5]).

L. DE LA VALLÉE POUSSIN.

COUNCILS (Christian: Early, to A.D. 870).—**1. The various kinds of Councils.**—The Councils of the early Church may be classified as follows: (1) Diocesan, being the assembly of a single diocese; (2) Provincial, being of all the dioceses comprised in an ecclesiastical province; (3) Councils of united provinces, being assemblies of several neighbouring provinces, sometimes called Plenary Councils (*concilia plenaria*); (4) Patriarchal, being of the provinces united in one patriarchate, sometimes called Plenary or Universal Councils (*concilia plenaria* or *concilia universalia*); (5) National, being of the provinces existing in a country, sometimes called Plenary or Universal Councils, frequently identical with Primatial and Patriarchal Councils; (6) General Councils of the East or of the West, being of all the provinces in the East or the West; (7) General Councils representing in their constitutions the whole Church; (8) Ecumenical Councils, being Councils whose decisions were accepted by the whole Church.[1] To these may be added (9) the Councils held at Constantinople in the 4th and following centuries, known as the Home Councils (*σύνοδοι ἐνδημοῦσαι*); and (10) the Mixed Councils (*concilia mixta*) of the 9th and following centuries, held in regard to matters of Church and State.

2. The constitution of Councils.—(1) A diocesan Council consisted normally of the presbyters of the diocese, meeting under the presidency of the bishop. The rule of the bishop was not regarded as being rightly exercised altogether independently of the presbyters, although he had the power and the responsibility of decisions.

In the letters of St. Ignatius of Antioch the authority of the bishop is constantly viewed as being exercised in connexion with the presbyters (see, *e.g.*, *ad Eph.* 20; *ad Magn.* 6, 7; *ad Trall.* 3). St. Cyprian (*Ep.* xiv. 4), writing to his presbyters and deacons, says: 'From the beginning of my episcopate I determined to do nothing separately of my own judgment, without your advice and without the assent of the laity.' The advice of clergy and laity was sought by the bishop in regard to those whom he ordained. St. Cyprian (*Ep.* xxxviii. 1) writes to his presbyters and deacons and laity: 'In the ordination of clergy it is our custom to consult you beforehand, and to consider in common counsel the character and deserts of individuals'; and a canon of the 6th cent. Gallican document, known as the canons of the 'Fourth Council of Carthage' (canon 22; see Hardouin, *Concilia*, i. 980), which passed into the general Western canon law (*Decret.* I. xxiv. 6), enacted 'that a bishop is not to ordain clergy without the advice of his clergy, so that he may look for the assent and witness of the people.'

From this dependence of the bishop on the advice of those in his diocese the diocesan Councils had their origin. The normal constitution of such Councils was that they consisted of the bishop and presbyters of the diocese, though in important matters other bishops were sometimes associated with the Council.

For instance, a Carthaginian Council, probably earlier than A.D. 249, is described by St. Cyprian (*Ep.* i. 1) as composed of 'I and my fellow-bishops who were present, and our fellow-presbyters who sat with us.' At a Roman Council held a little later there were present, besides Cornelius the Bishop of Rome and the Roman presbyters, five bishops who happened to be at Rome at the time (Cornelius in Cypr. *Ep.* xlix. 2). About A.D. 320, Alexander, Bishop of Alexandria, summoned a Council of the presbyters, together with certain bishops who were then at Alexandria, to consider the case of Arius (see Epiph. *adv. Hær.* lxix. 3). A 6th cent. Gallican canon in the so-called 'Fourth Council of Carthage' (canon 23; see Hardouin, i. 980), which passed into the general Western canon law (*Decret.* II. xv. 7 [6]), enacted 'that a bishop is not to hear the case of any one without the presence of his clergy; and the judgment of the bishop shall be void if it is not confirmed by the presence of the clergy.'

By means of his diocesan Council the bishop had the advice of his presbyters and their assent to his decisions in the exercise of discipline and the selection of candidates for ordination, and, moreover, knew the mind of his diocese when he came to meet other bishops in the larger Councils.

(2) As the diocesan Councils arose from the relation of the bishop to the presbyters of his diocese, so the provincial and larger Councils had their origin from his relation to the other bishops of the province. The local Council concerning Arius, held at Alexandria by Bishop Alexander, mentioned above, led to that bishop convening a Council of many bishops (Socrates, *HE* i. 6). The still larger Council of Nicæa (A.D. 325) was also due to the controversy about Arius; and this Council formulated a specific provision for the holding of provincial Councils in order that the excommunications of individual bishops might be revised by the bishops of the province, and the danger of injustice consequently lessened.

'In regard to the excommunicated, whether of the clergy or of the laity, the sentence passed by the bishops of each province shall have the force of law in accordance with the canon which enacts that those who have been excommunicated by some bishops shall not be admitted by others. Inquiry must, however, be made to see that the bishop has not passed the sentences of excommunication from smallness of mind, or from love of strife, or from some such perversity. In order, then, that such an inquiry may be held, it has seemed good to decide that during each year, in each province, Councils be held twice in the year, that all the bishops of the province may meet together, and that such inquiries be made, and that thus those who have evidently offended against their bishop may be seen by all to have been reasonably excommunicated, until the assembly of the bishops may think well to pronounce a milder sentence in their case. The Councils are to be held, the one before Lent, in order that all smallness of mind may be put away, and that the gift may be offered to God in pureness, the other in the autumn' (canon 5; see Hardouin, i. 323–326).

This canon of Nicæa is of great importance as illustrating (*a*) the purpose of revising the acts of individual bishops by the holding of provincial Councils; and (*b*) the connexion between the exercise of the bishop's authority and his power of excommunication. Similarly, it was enacted by the Council of Antioch in 341 that,

'if any one be excommunicated by his own bishop, he may not be admitted by other bishops unless he has been restored by his own bishop, or unless a Council has been held and he has appeared before it and made his defence, and convinced the Council and obtained a new decision. This decree applies to laity and presbyters and deacons and all ecclesiastics' (canon 6; see Hardouin, i. 595).

Apart from exceptions at Rome at the end of the 5th cent., and in Spain in the 7th cent., to be mentioned later, the constituent members of provincial and larger Councils were bishops only, though presbyters and deacons and lay people were sometimes present. The earliest instances of Councils of a character to be reckoned with provincial or larger Councils are those held during

[1] The nomenclature is not uniform; but it prevents confusion to use 'General' for Councils representative of the whole Church in their constitution, and 'Ecumenical' for those whose decisions are accepted by the whole Church.

the 2nd cent. in Asia Minor concerning Montanism, and in many places concerning the date of Easter. Such scanty evidence as exists about these Councils indicates that the members of them were bishops only (see Euseb. *HE* v. 16, 23, 24; *Libellus Synodicus*, in Hardouin, v. 1493–1496; Salmon, in Smith-Wace, *DCB* iii. 938; Hefele-Leclercq, *Conciles*, i. 128–130, 151–153). At the African Councils held in the middle of the 3rd cent., presbyters and deacons and lay people were present (see Cypr. *Epp.* xvi. 4, xvii. 1, 3, xix. 2, xxx. 5, xxxi. 6, xxxiv. 4, lv. 5, lix. 15, lxiv. 1), and expressed their opinions, sometimes in opposition to that of their bishop (*ib.* xvii. 3, lix. 15); but the actual decisions were the work of the assembled bishops, who alone were the constituent members of the Councils. For instance, a Council summoned to discuss the question of the validity of baptism administered by schismatics was held at Carthage on 1st Sept. 256. Besides the eighty-seven bishops from proconsular Africa, Numidia, and Mauretania, who were the members of the Council, there were present presbyters and deacons, and a large number of lay people. That only the bishops were the constituent members of the Council is shown by the judicial pronouncements being their work alone (see 'Sententiæ Episcoporum,' in *S. Cypriani Opera*; cf. Cypr. *Epp.* i. 1, xix. 2, xliv., xlv. 2, 4, lix. 13, lxiv. 1, lxx. 1, lxxi. 1, lxxii. 1, lxxiii. 1). The Councils held at Antioch in 264 or 265, and 269, to consider the charges against Paul of Samosata, are described by Eusebius as consisting of bishops. Presbyters and deacons were present at Antioch in connexion with the Councils, and at one of them a presbyter took a prominent part in the discussions; but there is no reason to suppose that these Councils differed from those at Carthage, so as to include others besides bishops as constituent members possessing votes, though the letter written to announce the decision of the last Council of the series was in the name of 'bishops, presbyters, and deacons, and the Churches of God' (see Euseb. vii. 27–30). Similarly, the Arabian Councils about 244 consisted of bishops, though Origen, who was a presbyter, took part in a conference held in connexion with one of the Councils, and appears to have spoken in the actual proceedings of another Council, but on the invitation of the bishops, not as a member of the Council (see Euseb. vi. 33, 37). The constituent members of the Councils held in the 4th cent. were bishops, and any presbyters or deacons or ecclesiastics in minor orders who might be the representatives of absent bishops and empowered to vote on behalf of those whom they represented. Thus, at Elvira in 305, twenty-six or thirty-six presbyters were present, had seats, and signed the decrees in a group after the bishops; deacons were present standing; and lay people were present. But the decrees were described as the decisions of the bishops (see 'Acts of Elvira,' in Hardouin, i. 249, 250). In like manner, at Arles in 314 some presbyters and deacons and ecclesiastics in minor orders were present in attendance on bishops or as representatives of absent bishops; but the natural inference from all the evidence is that the only constituent members of the Council, that is, those with a right to be present and vote, were bishops and representatives of absent bishops (see 'Acts of Arles,' in Hardouin, i. 266–268; cf. Euseb. x. 5). So again, at Nicæa in 325, many presbyters, deacons, and acolytes were present as attendants of bishops; Athanasius, then an archdeacon in attendance on the Bishop of Alexandria, was prominent in discussions connected with the Council; laymen took part in conferences before its formal opening; and the Emperor Constantine, though still unbaptized, was present at some of the proceedings, as the head of the State. But the accounts of all the authorities show that bishops and representatives of absent bishops were the only constituent members of the Council (see Euseb. *Vit. Const.* iii. 6–14; Socrates, i. 8–14; Sozomen, i. 15–25; cf. Bright, *The Age of the Fathers*, 1903, i. 78).

Till nearly the end of the 5th cent. the evidence suggests the same conclusions as those which have been mentioned in regard to the Councils of the 2nd and 3rd and early 4th cents., namely, that at provincial and larger Councils bishops alone were entitled to be present and vote, or, if unable to attend the Council, to nominate representatives with power to vote in their absence; that they frequently brought with them to Councils presbyters or deacons in attendance on them and for purposes of consultation, but without votes; and that they often were careful to ascertain the mind of the lay people about the matters which it was the work of the Council to discuss and decide upon. In the series of Roman Councils held in the latter part of the 5th cent. and during the early years of the 6th cent., the constitution of some Councils was the same as already described; in other Councils of the series the presbyters and deacons, who were the precursors of the cardinals, appear to have held a position like that of the bishops. For instance, presbyters apparently shared in the authority of the bishops at the Council held in 495 (see the 'Acts,' in Hardouin, ii. 941–948); and both presbyters and deacons at that held in 499 (*ib.* ii. 959–963). A different instance of others than bishops being members of provincial or larger Councils is in the Spanish Councils of the 7th cent., which included abbots, as, for example, the Eighth Council of Toledo in 653 (*ib.* iii. 967).[1]

3. **The relation of the laity to Councils.**—It is important to distinguish two separate matters: the position of the Christian laity as such, that is, as members of the Christian society, the Church; and the position of the representatives of the State. (1) As already mentioned, Christian lay people—in earlier times probably a multitude who were allowed to come in, and probably including women as well as men,[2] and in later times selected representatives—were present at Councils. Neither in diocesan nor in larger Councils do they appear to have been members with votes. They were present in order that they might (*a*) express their opinions on matters under discussion; see, *e.g.*, Cypr. *Epp.* xvii. 3, lix. 15; (*b*) bring abuses to the knowledge of Councils; see, *e.g.*, canon 4 of Fourth Council of Toledo (633), in Hardouin, iii. 580; (*c*) know the decisions which the members of the Councils made; see, *e.g.*, the letter of Viventiolus, the Archbishop of Lyons, summoning the Council of Epaon (517), in Hardouin, ii. 1046. (2) As the friendship of the State towards the Church increased, and the relations between them became closer, the Emperors, or their representatives, and great men of the State were present at Councils. At Nicæa (325), Constantine, though unbaptized, and therefore in no sense a representative of the Christian laity, was present (see above); and the Emperors were represented, and were in some cases present, at four of the other six Ecumenical Councils (see below), namely at Ephesus (431), Chalcedon (451), Constantinople (680), and Nicæa (787); see 'Acts of Ephesus,' p. i. cap. xx.; 'Acts of Chalcedon,' Acts i., vi.; 'Acts of Constantinople,'

[1] The position of the presbyters in the Roman Councils and that of the abbots in the Spanish Councils mentioned above probably had much to do with the events through which the English provincial Councils in the 13th cent. included abbots and priors and representatives of cathedral and collegiate chapters and of beneficed parochial clergy. This, again, was one cause of the privileges of the Lower Houses of the Canterbury and York Convocations.

[2] Cf. Ac 1[14-26] for a parallel in Apostolic times.

Act i.; 'Acts of Nicæa,' Acts i., viii., in Hardouin, i. 1345–1348, ii. 53, 463–465, iii. 1056, iv. 33–40, 481–485. Instances of illustrious laymen, present at Councils of the Church as representatives of the State, are not infrequent in later times, particularly in Spanish and Anglo-Saxon Councils; see, *e.g.*, the Acts of the Roman Council of 495 (Hardouin, ii. 943); the Second Council of Orange in 529 (*ib.* 1102); eleven out of the series of sixteen Councils held at Toledo from 589 to 701, the laymen at which were in some cases chosen by the Council itself, and in other cases appointed by the king (*ib.* iii.); and the Councils at Cloveshoo in 747 and 822 (*ib.* iii. 1952, 1953, iv. 1245). Side by side with these Councils, to which lay representatives of the State were admitted, there were Councils restricted to bishops, as, *e.g.*, the Sixth and Seventh Councils of Toledo (638 and 646) and the Councils of Hertford (673) and Hatfield (680) (see Hardouin, iii. 608–610, 623–625; Bede, *HE* iv. 5, 17, 18; cf. Bright, *Chapters of Early Eng. Ch. Hist.*[3], 1897, pp. 276, 357, 358; Hunt, *The English Church from its Foundation to the Norman Conquest*, 1899, pp. 137, 151). Lay people were members of the mixed Councils held on matters of joint interest to Church and State; and these sometimes included women, as, *e.g.*, the abbess Hilda at Whitby (664), and the abbess Ælfleda at the Council on the Nidd in Northumberland (705) (see Hardouin, iii. 993, 1826; Haddan-Stubbs, *Councils and Ecclesiastical Documents*, 1869–1878, iii. 101, 266).

4. The convocation of Councils.—Diocesan and provincial Councils were convoked by the bishop of the diocese and the metropolitan of the province respectively. In regard to larger Councils it is necessary to consider the relation of (1) the Emperor, and (2) the Pope; and any initiative of the Pope in regard to local Councils may be discussed together with his relation to the larger Councils.

(1) Each of the seven Ecumenical Councils was summoned by an Emperor—Nicæa (325) by Constantine the Great (Euseb. *Vit. Const.* iii. 5, 6);[1] Constantinople (381) by Theodosius I. (Socrates, v. 8; Sozomen, vii. 7; Theodoret, *HE* v. 7); Ephesus (431) by Theodosius II. and Valentinian III. (see 'Acts of Ephesus,' p. i. cap. xix., xx., in Hardouin, i. 1343–1348); Chalcedon (451) by Marcian and Valentinian III. (see 'Acts of Chalcedon,' p. i. cap. xxx.–xxxvi., *ib.* ii. 45–52); Constantinople (553) by Justinian (see 'Acts of Constantinople,' Coll. i., *ib.* iii. 56); Constantinople (680–1) by Constantine II. (see 'Acts of Constantinople,' Act i., *ib.* iii. 1056); and Nicæa (787) by the Emperor Constantine VI. and the Empress Irene (see 'Acts of Nicæa,' 'Divalis sacra,' and Act i., *ib.* iv. 21–24, 36).

(2) Pope Victor I. appears to have given the initiative for the holding of local Councils to discuss the Paschal question in the 2nd century. Polycrates, Bishop of Ephesus, mentions that the Asiatic Council was summoned by him at the desire of Victor (see his letter in Euseb. *HE* v. 24). This makes it probable that the Councils held in other places at the same time on the same question were convoked because of a wish expressed by Victor. The relation of the Popes to the convoking of the seven Ecumenical Councils must be considered in some detail. (*a*) It came to be believed that Pope Sylvester I. had shared in, or agreed to, the summoning of the Council of Nicæa (325) by Constantine. In the address of the Sixth Ecumenical Council (Constantinople, 680) to Constantine IV. it is said that Constantine the Great and Sylvester, Bishop of Rome, summoned the Council of Nicæa (Hardouin, iii. 1417), and in the *Liber Pontificalis* (xxxiv.) it is said that this Council was held with his assent. If it is the case, as Rufinus (*HE* i. 1) says, that Constantine acted in accordance with the views of the bishops, there is strong probability that the Bishop of Rome would be one of those consulted. (*b*) The Second Ecumenical Council, held at Constantinople in 381, was summoned from the East only, and no Western bishop took part in it. There is no evidence[1] and no probability that the Pope had anything to do with the convocation of it. (*c*) Pope Celestine I. took no part in the summoning of the Third Ecumenical Council, held at Ephesus in 431. (*d*) The circumstances connected with the summoning of the Fourth Ecumenical Council, held at Chalcedon in 451, are complicated. They justify the words of Pope Leo I. himself, that the Council was held 'by the command of the Christian princes and by the consent of the Apostolic See' (St. Leo, *Ep.* cxiv. 1), and the courtly phrase of the Emperor Marcian, that the Council was to take place at the suggestion of the Pope (*Opera S. Leonis, Ep.* lxxiii.), if some latitude of interpretation is allowed to this phrase. They are inconsistent with the statement of the bishops of Mœsia in their letter to the Emperor Leo that the Council had been assembled 'by the order of Leo, the Roman pontiff, who is truly the head of the bishops, and of the venerable bishop Anatolius' ('Acts of Chalcedon,' cod. encyc. 12, 'Ep. Episc. Mœs. sec. ad Leonem Imper.,' in Hardouin, ii. 710). The facts are as follows. After the 'Robber-Synod' of Ephesus in 449, Pope Leo I. asked the Emperor Theodosius II. to summon a Council of bishops from all parts of the world to meet in Italy (*Ep.* xliv.).[2] He twice repeated the same request (*Epp.* liv., lxix.), though on the second occasion he said that the Council would be unnecessary if without it the bishops would subscribe an orthodox statement of the faith (*Ep.* lxix.). He also asked Valentinian III., the Western Emperor, and his mother and his wife, Galla Placidia and Licinia Eudoxia, to support this request to Theodosius (*Epp.* lv.–lviii.). Soon after St. Leo's third letter to Theodosius, that Emperor died. His successors, Pulcheria and Marcian, wrote to St. Leo that they were willing to convoke a Council, evidently intending that it should be held in the East (St. Leo, *Ep.* lxxxiv.), but circumstances had changed since St. Leo had expressed his wish for a Council, and he wrote two letters to Marcian and another to Pulcheria, dropping the wish for a Council, and in the second letter to Marcian urging that it would not now be advisable to hold one (*Epp.* lxxxii., lxxxiii., lxxxiv.). After the writing of the first of these letters, and before the second and third, the Emperor Marcian convoked the Fourth Ecumenical Council. When the Council had been summoned, St. Leo wrote two letters to Marcian. In the first of them, dated 24th June 451, he said that he had hoped for the postponement of the Council, but that, since the Emperor had determined on its being held, he would not offer any hindrance, and appointed representatives to be present at it (*Ep.* lxxxix. 1). In the second letter, dated 26th June 451, he wrote that, though he had requested the postponement of the Council, he would not oppose the Emperor's arrangements

[1] In connexion with his summoning of the Council as well as with his presence at it, there is need of remembering that Constantine was still unbaptized. He was baptized shortly before his death by Eusebius, Bishop of Nicomedia (see Euseb. *Vit. Const.* iv. 61, 62; Socrates, i. 39; Sozomen, ii. 34; Theodoret, *HE* i. 32; St. Ambrose, *de Obit. Theod.* 40; St. Jerome, *Chron.* sub anno 354. This evidence is too early and strong for it to be credible that Constantine was baptized at an earlier date by Sylvester, Bishop of Rome (see *Liber Pontificalis*, xxxiv.).

[1] The reference to the letters of Pope Damasus to Theodosius in the synodical letter preserved by Theodoret (*HE* v. 9) concerns the Council of 382, not that of 381; see v. 8.

[2] In making this request, St. Leo may possibly have been influenced by the appeals made to him by Flavian of Constantinople and Eusebius of Dorylæum: see G. Amelli, *S. Leone Magno e l'Oriente*, Rome, 1882, pp. 41–49; *Spicilegium Cassinense*, Monte Cassino, 1893, i. 132–137.

(*Ep.* xc. 1). (*e*) The attitude of Pope Vigilius towards the Fifth Ecumenical Council, held at Constantinople in 553, was in some respects the opposite of that of St. Leo towards the Council of Chalcedon. In his condemnation of Theodorus of Cæsarea, Pope Vigilius mentions that such a Council had been contemplated at a meeting at which were present, besides the Emperor and the civil officials, many bishops, including the Bishop of Constantinople and the Bishop of Milan (*Fragm. damn. Theod.*, in Hardouin, iii. 8). Vigilius himself more than once expressed a wish that the Council should be held ('Ep. ad univ. Eccl.' and 'Constitutum,' in Hardouin, iii. 3, 12, 13); but when it had been convoked by the Emperor and the time for holding it had arrived, he desired that it should be postponed, and held aloof from the proceedings of it ('Acts of Constantinople,' Coll. i., ii., in Hardouin, iii. 63–66). (*f*) Pope Agatho I. took no part in the summoning of the Sixth Ecumenical Council, held at Constantinople in 680–681. (*g*) It was stated by Pope Adrian I. that the Seventh Ecumenical Council, held at Nicæa in 787, was by his appointment ('Acts of Nicæa,' 'Hadriani Scriptum,' *ib.* iv. 818); but the Council was convoked by the Empress and the Emperor on the suggestion of Tarasius, the Bishop of Constantinople ('Acts of Nicæa,' 'Apol. ad pop. a Tarasio,' *ib.* iv. 24, 25), and the only fact to justify the Pope's statement appears to be the practical assent which he gave after receiving the letter from the Empress and the Emperor announcing their intention of convoking the Council ('Acts of Nicæa,' 'Divalis sacra ad Hadrianum,' *ib.* iv. 21–24).

5. The presidents of Councils.—The president of a diocesan Council was the bishop of the diocese, of a provincial Council the metropolitan of the province, and of a larger Council the chief bishop present, or a bishop locally eminent, or some bishop of special note. The presidents of the seven Ecumenical Councils were as follows. (*a*) At Nicæa (325), Hosius, the Bishop of Cordova, presided (see the list of signatures in Hardouin, i. 311, 312; cf. Socrates, i. 13). Possibly the reason why he held this position, notwithstanding the presence of Vito and Vincentius, the legates of Pope Sylvester I. (see Euseb. *Vit. Const.* iii. 7; Socrates, i. 13; Sozomen, i. 17; Theodoret, i. 7; signatures in Hardouin, i. 311, 312), and the fact that he was a Western bishop presiding in a Council held in the East, was that he was appointed by the Emperor Constantine, whose chief ecclesiastical adviser he was. Both St. Athanasius and Theodoret, however, speak as though his prominence at Councils was due to his personal eminence.

St. Athanasius writes: 'It is unnecessary that I should speak of the great Hosius, happy in his old age, a true confessor. . . . This aged man is not unknown, but of the greatest distinction. What Council has there been of which he was not the leader, and in which by his right words he did not convince all?' (*Apolog. de fuga*, 5). Theodoret, after quoting this passage, continues: 'Hosius was Bishop of Cordova, and was prominent at the Council of Nicæa, and took the first place among those who assembled at Sardica' (*HE* ii. 15).

It is unlikely that credit ought to be given to a statement of Gelasius of Cyzicus, a writer in the second half of the 5th cent., universally regarded as usually untrustworthy, that Hosius presided as the representative of the Pope (see his *Act. Conc. Nic.* ii. 5). (*b*) At Constantinople (381) the presidents were successively Meletius, Bishop of Antioch; Gregory of Nazianzus, Bishop of Constantinople; and Nectarius, Bishop of Constantinople. Neither the Pope nor any Papal representative was present. (*c*) At Ephesus (431), St. Cyril of Alexandria was president. The Acts of the Council say that he 'took the place of Celestine, the most holy and most sacred archbishop of the Romans' (see 'Acts of Ephesus,' in Hardouin, i. 1353, 1465, 1468, 1485, 1509, 1512, 1527, etc.). Pope Celestine I. sent as legates the bishops Arcadius and Projectus and the presbyter Philippus. (*d*) At Chalcedon (451) the Imperial commissioners (see 'Acts of Chalcedon,' in Hardouin, ii. 53, 65, 68, 69, 89, 93, 113, 272, 273, 308), and in the sixth session the Emperor Marcian (see 'Acts of Chalcedon,' Act vi., *ib.* ii. 485–489), acted as presidents; the chief place among the members of the Council was held by the legates of Pope Leo I.—Paschasinus, Lucentius, and Boniface (St. Leo, *Epp.* lxxxix., ciii.; cf. 'Ep. Syn. Chalc.,' in *Opera S. Leonis*, *Ep.* xcviii. 1; 'Acts of Chalcedon,' Acts i., iii., in Hardouin, ii. 53, 310, 365).[1] (*e*) At Constantinople (553), Eutychius, Bishop of Constantinople, was president (see 'Acts of Constantinople,' Coll. viii., in Hardouin, iii. 201); the Pope was neither present nor represented. (*f*) At Constantinople (680–681) the Emperor Constantine IV. presided ('Acts of Constantinople,' Act i., *ib.* iii. 1056); the legates of Pope Agatho I., the presbyters Theodore and George, and the deacon John held the first place among the members of the Council ('Acts of Constantinople,' *e.g.* Acts i., xviii., *ib.* iii. 1056, 1401). (*g*) At Nicæa (787) the legates of Pope Adrian I.—the archpresbyter Peter and the abbot Peter—presided ('Acts of Nicæa,' Acts i., vii., *ib.* iv. 28, 456).

6. The ratification of Councils.—(1) The decrees of the seven Ecumenical Councils received civil sanction from the Emperors: (*a*) in the case of Nicæa (325) by a letter from the Emperor Constantine (see Euseb. *Vit. Const.* iii. 17–20; Socrates, i. 9; Sozomen, i. 21; Gelasius of Cyzicus, *Act. Conc. Nic.* ii. 36); (*b*) in the case of Constantinople (381) by an edict of the Emperor Theodosius I. (see Socrates, v. 8; Sozomen, vii. 9); (*c*) in the case of Ephesus (431) in substance by letters and decrees of the Emperors Theodosius II. and Valentinian III. (see 'Acts of Ephesus,' in Hardouin, i. 1616, 1669, 1716); (*d*) in the case of Chalcedon (451) by the decrees and letters of the Emperors Valentinian III. and Marcian, and a letter of the Empress Pulcheria (see 'Acts of Chalcedon,' p. iii. cap. iii.–xiii., *ib.* ii. 660–688); (*e*) in the case of Constantinople (553) by an approbation of the Emperor Justinian, if we may trust the statement of Zonaras (*Ann.* xiv. 8), which in this matter has the support of strong general probability;[2] (*f*) in the case of Constantinople (680–681) by the signature and edict of the Emperor Constantine IV. (see 'Acts of Constantinople,' Act xviii., 'Edict. Const.,' in Hardouin, iii. 1436, 1445–1457, 1633–1639); (*g*) in the case of Nicæa (787) by the signing of the decrees of the Council by the Empress Irene and the Emperor Constantine VI. (see 'Acts of Nicæa,' Act viii., *ib.* iv. 485).[3]

(2) With the exception of the Second Council and the canons of the Fourth, the decrees of the seven Ecumenical Councils were (*a*) subscribed by the Papal legates, or (*b*) both so subscribed and subsequently approved by the Pope, or (*c*) eventually approved by the Pope. The decisions of Nicæa (325) were subscribed by the Papal legates (see 'Acts of Nicæa,' in Hardouin, i. 311–312); those of Ephesus (431) were subscribed by the Papal legates and referred to with approval in letters by Pope Sixtus III. (see 'Acts of Ephesus,' *ib.* i. 1527; 'Epp. Xysti III. ad Cyrillum,' in

[1] Julian, Bishop of Cos, and a presbyter Basil are also said to have been appointed as papal legates, but do not appear to have held the same position at the Council as the three mentioned above (see St. Leo, *Epp.* lxxxvi., xc., xcii., xciii.).

[2] The evidence afforded about this Council by Zonaras is not valuable; but there is no reason for doubting his statement referred to above.

[3] There is no record in this case of a formal edict after the Council; but the whole course of events after the Council shows that the decrees were regarded by the State authorities as being in force.

Coustant, *Epp. Rom. Pontif.* col. 1231–1240); those of Chalcedon (451) were subscribed by the Papal legates and accepted by Pope Leo I. (see 'Acts of Chalcedon,' in Hardouin, ii. 465–468; St. Leo, *Ep.* cxiv.); those of Constantinople (680–681) were subscribed by the Papal legates and accepted by Pope Leo II. (see 'Acts of Constantinople,' in Hardouin, iii. 1424, 1425, 1469–1478, 1729–1736); and those of Nicæa (787) were subscribed by the Papal legates and accepted by Pope Adrian I. (see 'Acts of Nicæa,' *ib.* iv. 456, 819). In the case of the Fifth Council, held at Constantinople in 553, Pope Vigilius at first dissented from the action of the Council (Vigilius, *Constitutum* of 553, *ib.* iii. 10–48), and the Council struck his name from the diptychs ('Acts of Constantinople,' Coll. vii., *ib.* iii. 186, 187); but he afterwards changed his mind and declared his approval of the decisions (Vigilius, *Ep. Decret.*; *Constitutum* of 554, in Hardouin, iii. 213–244).

7. **The relation of the Emperor to Councils.**—After the time of Constantine the Great, the close relations between Church and State led not only to the summoning of Councils and the ratification of their decrees by the Emperors, but also to an influence—sometimes greater, sometimes less—in many other ways. But, whatever the aggressiveness of certain Emperors and the sycophancy of prominent members of the Church at some times, the State recognized, and the Church maintained, that the work of ecclesiastical decisions and legislation belonged to the Church, not to the State. A few instances from Church and State may suffice to illustrate this fact. Both the Second and the Third Ecumenical Councils, in asking the Emperor Theodosius I. and the Emperors Theodosius and Valentinian III. respectively to ratify their decisions, spoke of the decisions themselves as wholly their own work, independently of the State (see 'Acts of Constantinople,' 381, and 'Acts of Ephesus,' Act v., in Hardouin, i. 808, 1501–1510). The Emperor Constantine the Great, in giving circulation to the decrees of the First Ecumenical Council, said: 'Whatever is determined in the holy assemblies of the bishops is to be regarded as showing the will of God' (Euseb. *Vit. Const.* iii. 20). The Emperors Theodosius II. and Valentinian III. wrote to the Third Ecumenical Council that they had sent Candidian to be their representative, 'to have no share in the discussions which may take place about doctrine; for it is unlawful that one who is not on the list of the holy bishops should mingle in the affairs of the Church' ('Acts of Ephesus,' p. i. cap. xx., in Hardouin, i. 1345). The Emperor Marcian addressed the Fourth Ecumenical Council: 'Our will to be present at the Council is that we may ratify those things which are done, not that we may exercise any power' ('Acts of Chalcedon,' Act vi., *ib.* ii. 465). The historian Theodoret records a dialogue between the Emperor Constantius II. and Pope Liberius, in which Liberius insisted, and incurred banishment for insisting, that St. Athanasius must not be condemned without a fair trial by ecclesiastical authorities and a sentence passed upon him after such a trial in accordance with the rules of the Church (see Theodoret, *HE* ii. 16). The same principle of the independence of the Church is emphatically declared in the letter written by Hosius, Bishop of Cordova, to the Emperor Constantius II., in which he said:

'Push not yourself into the affairs of the Church, neither give commands to us about them; but rather do you learn them from us. God has committed to your hands a kingdom. He has entrusted us with the affairs of the Church. And as he who should steal your rule would be resisting God who appointed it, so do you be afraid on your part to take upon yourself the affairs of the Church and become guilty of a great offence. It is written, "Render unto Cæsar the things that are Cæsar's, and unto God the things that are God's." Therefore it is not lawful for us to bear rule upon the earth, and you, Sire, have not authority to burn incense. . . . This is my determination; I unite not with the Arians, but I anathematize their heresy. I subscribe not against Athanasius, whom we and the Church of the Romans and the whole council acquitted' (St. Athan. *Hist. Arian.* 44).

Such instances show that, while the Church acquiesced in the use of the most extravagant language to describe the Emperor, as when the Imperial commissioners and others called him 'the divine head,' 'the divine and immortal head,' 'our most divine lord,' or when a letter from him was styled a 'divine letter' (see, *e.g.*, 'Acts of Ephesus,' p. i. cap. 19, 20; 'Epp. Cath.' cap. 17, and 'Acts of Chalcedon,' p. i.; 'Epp.' 20, 36, Acts iv., xi., xiv. p. iii. cap. 5. 7, in Hardouin, i. 1344, 1345, 1616, ii. 36, 52, 413, 545, 572, 664, 668), it was not allowed that the Emperor had any right to dictate what the Councils should do.

8. **The relation of the Pope to Councils.**—The subject of the relation of the Popes to the convoking and confirming of Councils has been dealt with above. It is necessary to examine also the view of the Papal authority taken by the Councils. As of the Emperor, so of the Pope, language of a strong kind was used at and by the Councils. It must suffice to quote some of the most remarkable instances. At Ephesus (431) the Papal legate Philip described St. Peter as 'the prince and head of the Apostles, the pillar of the faith, and the foundation of the Catholic Church'; declared that he 'up to this time and always lives in his successors and gives judgment'; and in this context referred to Pope Celestine as the 'successor and representative' of St. Peter ('Acts of Ephesus,' in Hardouin, i. 1477, 1478); and the Fathers of the Council, in giving sentence against Nestorius, used the words, 'necessarily impelled by (ἀπό) the canons and by (ἐκ) the letter of our most holy Father and fellow-minister, Celestine, Bishop of the Roman Church' ('Acts of Ephesus,' Act i., *ib.* i. 1421, 1422). At Chalcedon (451) the Papal legate Paschasinus called the Pope the 'head of all the Churches' ('Acts of Chalcedon,' Act i., *ib.* ii. 67, 68); and the Fathers of the Council in their letter to the Emperor Marcian spoke of the Pope as the 'invulnerable champion' whom 'God provided,' and in their letter to Pope Leo described him as the 'head' of which they were the 'members,' and as him to whom 'was entrusted by the Saviour the guarding of the vine,' the Church ('Acts of Chalcedon,' p. iii. cap. 1, 2, *ib.* ii. 643, 644, 655, 656). At Constantinople (680–681) the Fathers of the Council wrote to Pope Agatho: 'We commit to thee, as the chief ruler of the universal Church standing on the firm rock of the faith, what is to be done,' to give effect to the decisions of the Council; and described the Pope's letter to the Emperor as 'uttered about divine truth by the chief head of the Apostles' ('Acts of Constantinople,' Act xviii., *ib.* iii. 1437–1440). Yet, notwithstanding all such statements, the Councils did not regard the Papal utterances as settling anything; they examined and tested the judgment of the Popes; they assented to these as conforming to orthodox standards; they did not shrink from declaring a Pope to be a heretic. At Ephesus (431) the condemnation of Nestorius was not passed until after the most elaborate consideration of his case, though the letter of Pope Celestine condemning him was before them ('Acts of Ephesus,' Act i., *ib.* i. 1353–1434). At Chalcedon (451) there was a like examination of the *Tome* of Pope Leo, and it was eventually approved as being 'consonant with the confession of great Peter' ('Acts of Chalcedon,' Act v., *ib.* ii. 455, 456). The Fifth Ecumenical Council, held at Constantinople in 553, insisted on condemning Theo-

dore of Mopsuestia and Theodoret, in spite of the resistance of Pope Vigilius ('Acts of Constantinople,' Coll. viii., *ib.* iii. 187–208). The Sixth Ecumenical Council, held at Constantinople in 680–681, anathematized Pope Honorius I. as a heretic; and with reference to the letters of Sergius and Honorius declared:

'We find that these documents are altogether alien from the doctrines of the Apostles and the decisions of the holy Councils and all the accepted holy Fathers, and that they follow the false teachings of the heretics. We entirely reject them, and we execrate them as destructive to the soul. Moreover, we have determined that the names of the very men whose doctrines we execrate as impious are to be cast out from the holy Church of God, namely Sergius. . . . And besides these, we have decided that Honorius, who was Pope of the elder Rome, is to be cast out of the holy Church of God and anathematized together with them. . . . To Theodore of Pharan, the heretic, anathema. To Sergius, the heretic, anathema. To Cyrus, the heretic, anathema. To Honorius, the heretic, anathema. To Pyrrhus, the heretic, anathema' ('Acts of Constantinople,' Acts xiii., xvi., in Hardouin, iii. 1332, 1333, 1385).

A comparison of the different parts of the evidence shows that, while the Pope was regarded as the chief bishop of Christendom, and while his authority and influence were great, the Councils held that it was for them and not for him to decide in matters of doctrine and discipline; and that, while the ordinary and normal desirable process was that Pope and Council should be in agreement, and that what the Council decided the Pope should accept and give effect to, a necessity might arise of a Council taking its own line in opposition to a Pope, and even of condemning him as heretical.

As regards the disciplinary power of the Pope, regulations of the Councils of Nicæa (325) and Sardica (343) are of special importance. Canon 6 of Nicæa assumes the possession by the Pope of a certain patriarchal authority in Italy, parallel with that of other patriarchs elsewhere, referred to as an illustration in a way which may imply a primacy on the part of Rome:

'The old customs in Egypt and Libya and Pentapolis are to be preserved so that the Bishop of Alexandria shall have authority over all these, since this is customary also in the case of the Bishop of Rome. In like manner, in Antioch and in the other provinces the rights are to be preserved to the Churches.'

Canons 3, 4, and 5 of Sardica provide for appeals to Rome in certain cases. They enact that, if a bishop has been deposed by the bishops of his province, there may be an appeal to the Bishop of Rome, who is to decide whether the appeal is to be allowed or not; if it is allowed, the Pope is to nominate bishops from the neighbourhood of the province in question to act as the court for the second hearing of the case; if the appellant can persuade the Pope to do so, the Pope may send presbyters of his own to act as his legates (*εἶναι ἐν τῇ ἐξουσίᾳ αὐτοῦ τοῦ ἐπισκόπου . . . ἔχοντάς τε τὴν αὐθεντίαν τούτου παρ' οὗ ἀπεστάλησαν*) in the court thus formed.

9. **The authority of Councils.**—The degree of authority which a Council possessed varied greatly with its character. A local Council in itself could make no claim to acceptance wider than in the locality to which it belonged, and its decisions were always open to revision by a larger and more representative body. Thus, a diocesan Council had authority for its diocese, and a provincial Council for its province, but in each case this authority was subject to appeal from the diocese to the province, from the province to a union of provinces, and from any smaller Council to a Council of the whole Church; and as the Council was more fully representative, so its authority was greater. But a Council, however fully representative in constitution, was not finally authoritative simply because of that constitution. The ratification of its decrees by the Emperor gave civil sanction, and the assent to them by the Pope supplied a further ecclesiastical step (cf. the famous saying of St. Augustine, 'Iam enim de hac causa duo concilia missa sunt ad sedem apostolicam: inde etiam rescripta venerunt. Causa finita est: utinam aliquando finiatur error' [*Serm.* cxxxi. 10]). But the Council did not become Ecumenical, in the sense in which that word has been here used, and so completely binding on the whole body of the Church, without the general acceptance by the Church of its doctrinal decisions, since a Council, however representative in constitution, might fail to represent the real mind of the Church, just as a civil body of the most completely representative character, so far as constitution is concerned, might fail to represent the real wishes of the nation which elected it. This acceptance by the whole body of the Church was given to each of the seven Councils which have here been called 'Ecumenical.' In the case of these Councils the acceptance was not always easily or immediately received. For instance, the First Ecumenical Council, that of Nicæa (325), proved to be the occasion of controversy rather than the settlement of it, and did not receive universal acceptance for more than fifty years, until after the Second Ecumenical Council, that of Constantinople (381); and the decisions of the Seventh Ecumenical Council, that of Nicæa (787), were for a long time without acceptance in the West, were actually rejected by the Council of Frankfort (794) under a misunderstanding of their meaning,[1] and only gradually came to that recognition in the West which, added to the Eastern acceptance, constituted universal approbation. An instance of the way in which a Council not representative of the whole Church by its constitution may become Ecumenical through universal acceptance of its doctrinal teaching is in the Second Ecumenical Council, that of Constantinople (381), which was summoned from the East only, and which no Western bishop attended. The authority of the Ecumenical Councils is thus that of the whole Church. The idea of authority, whether as resident in the Church or as expressed by Councils, was based on the belief that the Church, under the guidance of the Holy Spirit, was giving effect to the teaching of Holy Scripture and the deposit of faith committed by our Lord to His apostles. St. Athanasius described the work of the orthodox bishops at Nicæa (325) as having been 'to collect the sense (*διάνοια*) of the Scriptures' (*de Decr. Nic. Syn.* 20). The work done at Constantinople (381) was described by the bishops who met at Constantinople in the following year, who were almost the same as those of the Council of 381, in the words:

'We, whether we have endured persecutions or tribulations or the threats of monarchs or the cruelties of rulers or some other trial at the hands of the heretics, have borne these for the sake of the faith of the gospel which was ratified at Nicæa in Bithynia, by the three hundred and eighteen holy Fathers under the guidance of God. For this which we have been at pains to preserve ought to be sufficient for you and for us and for all who do not wrest the word of the true faith. It is the most ancient faith. It is in accordance with our baptism. It teaches us to believe in the name of the Father and of the Son and of the Holy Ghost, and consequently in one Godhead and Power and Essence of the Father and of the Son and of the Holy Ghost, the dignity being equal and the majesty coeternal; in three wholly perfect Subsistences or three perfect Persons. . . . We also preserve unperverted the doctrine of

[1] The Council of Nicæa (787) affirmed the lawfulness of 'reverence of honour' (*τιμητικὴ προσκύνησις*) addressed to the images of our Lord and the saints, but condemned any offering of 'real worship of adoration' (*ἀληθινὴ λατρεία*) to them ('Acts of Nicæa,' Act vii., in Hardouin, iv. 456). What the Council of Frankfort (794) rejected was the offering of adoration: 'Allata est in medium quaestio de nova Graecorum synodo quam de adorandis imaginibus Constantinopoli [obviously a blunder for Nicæa] fecerunt, in qua scriptum habebatur ut qui imaginibus sanctorum ita ut deificae Trinitati servitium aut adorationem non impenderent anathema iudicarentur. Qui supra sanctissimi patres nostri omnimodis adorationem et servitium renuentes contempserunt atque consentientes condemnaverunt' (canon 2 in Hardouin, iv. 904). This ascribes to the Nicene Council (787) exactly what that Council had rejected—the offering to images of the adoration due to the Holy Trinity.

the Incarnation of the Lord, receiving the tradition that the dispensation of the flesh is not without soul or without reason or imperfect, and being fully convinced that the Word of God was perfect before the ages and became perfect man in the last days for our salvation' (see Theodoret, *HE* v. 9).

At Ephesus (431) the bishops gave as their reason for the approval of the letters of St. Cyril that they 'were in no respect discordant with the Scriptures inspired by God or with the faith which has been handed down, which was set forth in the great Council by the holy Fathers who assembled at Nicæa,' and, as their reason for the condemnation of Nestorius, that his teaching was 'wholly alien from the faith of the Apostles and the gospel' ('Acts of Ephesus,' Act v., in Hardouin, i. 1505). At Chalcedon (451) the letter of St. Cyril of Alexandria to John of Antioch was read, containing the following passage:

'Concerning the Virgin Mother of God how we both think and say, and concerning the manner of the Incarnation of the Only-Begotten Son of God, we will speak briefly, necessarily, not by way of addition, but as a full completion, as we have received from the beginning from the divine Scriptures and from the tradition of the holy Fathers.'

The *Tome* of St. Leo, which also was read to the Council, appealed chiefly to the evidence of Holy Scripture, but likewise to the creed confessed by the whole body of Christians. After the *Tome* had been read, the bishops exclaimed:

'This is the faith of the Fathers. This is the faith of the Apostles. Thus do we all believe. Thus do the orthodox believe. Anathema to him who does not so believe. Peter has spoken thus through Leo. Thus did the Apostles teach. Piously and truly has Leo taught. Thus taught Cyril. Eternal be the memory of Cyril. Leo and Cyril taught alike. Thus taught Leo and Cyril. Anathema to him who does not so believe. This is the true faith. Thus are we, the orthodox, minded. This is the faith of the Fathers' ('Acts of Chalcedon,' Act i., ii., in Hardouin, ii. 121, 305).

At Constantinople (553) the bishops declared:

'Being gathered together, before all things we have briefly confessed that we hold that faith which our Lord Jesus Christ, true God, delivered to His holy Apostles, and through them to the holy Churches, and which the holy Fathers and doctors who succeeded them delivered to the peoples committed to their care'; and described themselves, in their condemnation of heresy, as lighting 'the light of knowledge from the divine Scriptures and the teaching of the Apostles' ('Acts of Constantinople,' 553, Coll. viii., in Hardouin, iii. 189, 194).

The bishops at Constantinople (680–681) stated:

'We have examined the synodical letter of Sophronius of holy memory, once patriarch of the holy city of Christ our God, Jerusalem; and, as we have found it to be in harmony with the true faith and in accordance with the teachings of the Apostles and the holy approved Fathers, we have judged it to be orthodox and have received it as profitable to the Holy Catholic and Apostolic Church'; described themselves as 'following the five holy Ecumenical Councils and the holy and approved Fathers,' and as defining the faith 'according as the prophets from the beginning have taught, and Jesus Christ Himself has instructed us, and the symbol of the holy Fathers has delivered to us'; and in their letter to Pope Agatho I. said of their work: 'On us shone the grace of the all-holy Spirit, bestowing His power through your continual prayer, so that we might root out every tare and every tree that bringeth not forth good fruit, and commanding that they should be consumed with fire. And, agreeing in heart and tongue and hand, we have put forth, by the assistance of the life-giving Spirit, a definition most free from error and most certain, not removing the ancient landmarks, as it is said, which God forbid, but abiding by the testimonies of the holy and approved Fathers' ('Acts of Constantinople,' 680–681, Acts xiii., xviii., in Hardouin, iii. 1333, 1400, 1440).

At Nicæa (787) the bishops defined their work:

'Thus the teaching of our holy Fathers is strengthened, that is, the tradition of the Catholic Church, which has received the Gospel from one end to the other. Thus we follow Paul, who spoke in Christ, and all the company of the divine Apostles and the holy Fathers, holding fast the traditions which we have received'; and wrote to the Empress Irene and to the Emperor Constantine VI.: 'Following the traditions of the Apostles and the Fathers, we are bold to speak, being of one mind in the concord given by the all-holy Spirit; and being all brought together in one, having the tradition of the Catholic Church in harmony with us, we are in accord with the agreeing voices set forth by the six Ecumenical Councils' ('Acts of Nicæa,' Act vii., in Hardouin, iv. 456, 473).

For their great doctrinal decisions the Ecumenical Councils thus possess the authority of the universal Church, and base their work on that tradition of the faith which goes back to and rests on the authority of our Lord Himself. A more difficult question arises as to the degree of their authority in certain other matters. Some disciplinary enactments obviously dealt with local and temporary circumstances, and therefore have only local and temporary force, as, *e.g.*, regulations about letters of commendation made at Chalcedon (451) in canon 11; but in other matters of discipline it is less easy to decide how far a principle is involved which may tend towards some degree of permanent authority.

An instance may show the complexity of the problem thus raised. The First Ecumenical Council, acting in accordance with the condemnation of 'usury' in canon 20 of the Council of Elvira (305), the excommunication of 'ministers who lend money for interest' in canon 12 of the Council of Arles (314), and the regulation in the forty-fourth *Apostolical Canon*, that 'a bishop, priest, or deacon, who seeks interest from those who owe him money must either cease from the practice or be deposed,' enacted that: 'Since many who are in the list of the clergy, moved by covetousness and the spirit of gain, have forgotten the divine word which says, "He hath not given his money upon interest," and lend and require one per cent per month, the holy and great Council declares that, if any one after this decree be found to be receiving interest . . . he shall be deposed from the clerical office and his name shall be struck off the list' (canon 17); and this canon passed into the ordinary law of both East and West, and became part of the *Corpus iuris canonici* (*Decretum*, I. xlvii. 2, II. xiv. 4 (8)). This canon differs markedly, on the one hand, from doctrinal decisions concerning central truth; and, on the other hand, from regulations of merely local and temporary import.

10. The work of the Seven Ecumenical Councils.—It has already been indicated that the Ecumenical Councils dealt with matters of very varying character and importance, some doctrinal, others disciplinary.

(1) Their great work was in regard to *the theology of the Incarnation.*—(*a*) By the acceptance of the Nicene Creed, and in particular of the phrase in it 'of the same essence as the Father' (ὁμοούσιος τῷ Πατρί), the FIRST COUNCIL OF NICÆA (325) affirmed the real Deity of Christ (see CONFESSIONS, in vol. iii. p. 836, and CREEDS [Ecumenical]). (*b*) The FIRST COUNCIL OF CONSTANTINOPLE (381) ratified the work of the Council of Nicæa (325) in regard to the Deity of Christ; and in particular, by its condemnation of Apollinarism—the heresy which maintained that our Lord did not possess a higher human soul or spirit—protected the completeness of Christ's manhood; see canon 1:

'The confession of faith of the three hundred and eighteen Fathers who were assembled at Nicæa in Bithynia shall not be abolished, but shall remain; and every heresy shall be anathematized, especially that of the Eunomians or Anomaeans, the Arians or Eudoxians, the semi-Arians or Pneumatomachians, the Sabellians, Marcellians, Photinians, and Apollinarians.'

It has been thought by some that this Council affirmed the longer form of the Nicene Creed, sometimes called the Constantinopolitan Creed (see CONFESSIONS, and CREEDS, *ut supra*). (*c*) The FIRST COUNCIL OF EPHESUS (431), by its approval of the letters of St. Cyril of Alexandria and its condemnation of Nestorius, affirmed the one Person of Christ, so that it is accurate to call the Blessed Virgin Mary 'the Mother of God' (θεοτόκος), and to say that 'God was born and died.' (*d*) The COUNCIL OF CHALCEDON (451) ratified the work of the three earlier Councils by its affirmation of the Deity, complete manhood, and one Person of Christ, and by its acceptance of the original Nicene Creed and the Constantinopolitan Creed (see CONFESSIONS, and CREEDS); and declared also the distinctness and permanent reality of Christ's two natures of Deity and manhood by accepting the *Tome* of St. Leo and by acknowledging

'two natures, without confusion, without change, without rending, without separation, while the distinction of the natures is in no way destroyed because of the union, but rather the peculiarity of each nature is preserved and concurs into one Person and one Hypostasis' (Act v., in Hardouin, ii. 453–456).

(*e*) The SECOND COUNCIL OF CONSTANTINOPLE (553), by its condemnation of the 'Three Chapters'—that is (1) the person and writings of Theodore

of Mopsuestia, (2) the writings of Theodoret in defence of Nestorius and against St. Cyril of Alexandria and the Council of Ephesus (431), and (3) the letter of Ibas to Maris—rejected anew the Nestorian heresy and affirmed the doctrine of the one Person of Christ. The words of the sentence of the Council are:

'We receive the four holy Councils, that is, of Nicæa, of Constantinople, the First of Ephesus, and of Chalcedon; and we have affirmed and do affirm those truths which they defined in defence of the one and the same faith. We declare those who do not receive these Councils to be apart from the Catholic Church. We condemn and anathematize, together with all other heretics who have been condemned and anathematized by the aforesaid four holy Councils and by the Holy Catholic and Apostolic Church, Theodore who was Bishop of Mopsuestia and his wicked writings, and the wicked writings of Theodoret against the right faith and against the twelve chapters of the holy Cyril and against the First Council of Ephesus, and his writings in defence of Theodore and Nestorius. Moreover, we anathematize also the wicked letter which Ibas is said to have written to Maris the Persian, which denies that God the Word was incarnate of the holy Mother of God and ever Virgin Mary, and so was made man' ('Acts of Constantinople,' 553, Coll. viii., in Hardouin, iii. 193, 194; cf. Evagrius, *HE* iv. 38).

(*f*) The THIRD COUNCIL OF CONSTANTINOPLE (680–681) condemned the Monothelite heresy, according to which there is only one will in Christ, and affirmed the reality of His human will as well as of His Divine will. After declaring their adherence to the Councils of Nicæa (325), Constantinople (381), Ephesus (431), Chalcedon (451), and Constantinople (553), and after reciting the original Nicene Creed and the enlarged Nicene or Constantinopolitan Creed (see CONFESSIONS, and CREEDS, *ut supra*), the bishops said:

'This holy and orthodox creed of the Divine grace was in itself enough for the complete knowledge and confirmation of the orthodox faith; but since the author of evil has never ceased to find a serpent to help him, and thereby to diffuse his deadly poison among the human race, and so to find fit instruments to accomplish his will—we mean Theodoret, who was Bishop of Pharan; Sergius, Pyrrhus, Paul, Peter, who were bishops of this royal city; also Honorius, who was Pope of old Rome; and Cyrus, who held the bishopric of Alexandria; also Macarius, who was recently in charge of Antioch, and his disciple, Stephen—he did not fail to bring through them scandalous errors on the whole Church by disseminating in new fashion among the orthodox people the heresy of the one will and one operation in the two natures of the one Christ our true God, one Person of the Holy Trinity, . . . the heresy which serves to take away the fullness of the Incarnation of the one Lord Jesus Christ our God by means of a crafty notion, and which impiously brings in the idea of His rationally quickened flesh as being without will and operation. . . . In like manner, following the teaching of the holy Fathers, we proclaim two natural wills (*θελήσεις ἤτοι θελήματα*) in Him, and two natural operations, without division, without change, without severance, without confusion, and two natural wills not opposed to one another—God forbid—as the wicked heretics said, but his human will following, and not resisting or opposing, but rather subject to His divine and almighty will' ('Acts of Constantinople,' 680–681, Act xviii., in Hardouin, iii. 1395–1400).

(*g*) The SECOND COUNCIL OF NICÆA (787) dealt with the contentions of the Iconoclasts that Christ might not be represented in a material form because of the infinity of the Godhead, or, as the more moderate members of the party taught, that the representations of Him might not be venerated. In view of these contentions, the Council affirmed the teaching of the six earlier Ecumenical Councils, and proceeded to declare that the material representations of our Lord were the visible signs of the reality of the Incarnation, and that the veneration of these and of the images of the saints—which was to be distinguished from the adoration due to God alone—lifted the thoughts of the worshippers to the realities which these visible things represented:

'We, holding fast in everything the decrees and acts of our divinely guided Fathers, proclaim them with one mouth and one heart, adding nothing to, taking nothing away from, the things which they delivered to us, but in these we are strong, in these we are established; we so confess, we so teach, as the six holy Ecumenical Councils have defined and determined. And we believe in one God, the Father Almighty, Maker of all things visible and invisible; and in one Lord Jesus Christ, His only-begotten Son and Word, through whom all things were made; and in the Holy Ghost, the Lord and Life-Giver, consubstantial and co-eternal with the Father and His co-eternal Son—the Trinity uncreated, undivided, incomprehensible, uncircumscribed, which wholly and alone is to be adored and venerated and worshipped, one Godhead, one Lordship, one Dominion, one Kingdom and Power, which without division is apportioned to the Persons, and without confusion is joined to the Essence. And we confess that One of the same holy and co-essential Trinity, our Lord Jesus Christ, the true God, in the last days for our salvation became flesh and was made Man, and by the saving dispensation of His passion and resurrection and ascension into heaven did save our race and set us free from idolatry. . . . The Lord of glory Himself, God who became Man, saved us and set us free from idolatry. To Him, therefore, he glory; to Him be grace; to Him be thanksgiving; to Him be praise; to Him be majesty. His is redemption and salvation. He alone is able to save to the uttermost. This is the work of no other man, who came from the dust. He Himself, through the dispensation of His incarnation, has fulfilled for us, on whom the ends of the world are come, the words foretold by the prophets. . . . And we greet the words of the Lord, and of the apostles, and of the prophets, by which we have been taught to honour and magnify, first her who is actually and really the Mother of God, who is above all the heavenly powers, and then the holy powers of the angels, the blessed and illustrious apostles, the glorious prophets, the victorious martyrs who fought for Christ, the holy and God-fearing doctors, and all the saints; and to seek for their intercessions, which are able to make us at home with God, the King of all, if we keep His commandments, and strive to live virtuously. We greet, moreover, the figure of the honourable and life-giving cross, and the holy relics of the saints; and we receive and greet and embrace the holy and venerable images, according to the primitive tradition of the Holy Catholic Church of God, that is, our Holy Fathers, who both received them and determined that they should be in all the holy churches of God, and in every place of His dominion. These honourable images, as has been said before, we honour and greet and honourably venerate, namely, the image of the Incarnation of our great God and Saviour Jesus Christ; and of our unstained Lady, the all-holy Mother of God, of whom He was pleased to become flesh, that He might save us and set us free from all wicked idolatry; and of the holy and bodiless angels, who appeared in the form of men to the righteous; and the figures and images of the divine and far-famed apostles, the God-speaking prophets, the triumphant martyrs, and the saints; so that, through their representations, we may be led to the recollection and memory of them who are represented, and may attain to some share in their holiness. . . . In proportion as the saints are beheld by their images, those who behold them are uplifted in memory and affection of those who are represented, so as to assign to these greeting and honourable veneration, not the real adoration which, according to our faith, is due to the nature of God only; but that to these, as to the figure of the honourable and life-giving cross, and to the holy Gospels, and to the other sacred objects, there should be brought incense and lights to do them honour, as has been the pious custom of men of old' ('Acts of Nicæa,' 787, Acts iv., vii., in Hardouin, iv. 264, 265, 456).

(2) Of the work done by the Ecumenical Councils in addition to the protection and development of the doctrine of the Incarnation, only a few representative instances can be given. The decision in regard to the schism caused by Meletius, Bishop of Lycopolis, intruding into other dioceses and ordaining in them; the decision about the dispute as to the right day for keeping Easter; the regulation that all were to pray standing on Sundays, at Nicæa (325); the assigning of the first place after the Bishop of Rome to the Bishop of Constantinople, at Constantinople (381); the prohibition of simony and the regulations about deaconesses, at Chalcedon (451)—show the wide scope of the disciplinary enactments of these councils.

II. **Other important Councils.**—Illustrations of Councils other than the Seven Ecumenical Councils may be placed in three groups.

(1) *The Councils held at Constantinople in 869 and 879.*—That in 869 was regarded in the West, and is still regarded by the Church of Rome, as the Eighth Ecumenical Council. Its chief work was the condemnation of Photius, one of the claimants to the See of Constantinople, who in 866 had issued an encyclical letter in which he attacked the Westerns for (*a*) keeping Saturday as a fast; (*b*) eating milk and cheese during part of Lent; (*c*) not allowing married men to be priests; (*d*) restricting confirmation to bishops; (*e*) teaching the double procession of the Holy Ghost (*Ep.* i. 13, in Migne, *PG* cii. 721–742); and who in 867 had presided at a Council at Constantinople which had anathematized the Pope ('Acts of Constan-

tinople,' 869, in Hardouin, v. 749–1196). The Council held in 879 is regarded in the East as the Eighth Ecumenical Council. It reversed the proceedings of the Council of 869 and acknowledged Photius. Legates of the Pope were present at it, and assented to its work; but it was eventually repudiated by the Pope. The absence of Eastern acceptance of the Council of 869 and of Western acceptance of the Council of 879 makes both these Councils to be without that universal acceptance which is a condition of ecumenicity.

(2) Between the Council of Nicæa (325) and the Council of Constantinople (381) *a series of Councils concerning the Arian controversy* were held. The most important of them were those at Antioch in 341, with supplementary assemblies later in the same year and in 344, which drew up five Creeds which in themselves were orthodox, but which played into the hands of the semi-Arians by the use of ambiguous expressions about the Deity of Christ; at Sardica in 343, which defended St. Athanasius; and the simultaneous Council at Philippopolis, which condemned him and accepted the fourth of the Antiochene Creeds; at Sirmium in 351, 357, and 358, which were favourable to the semi-Arians, and the third of which drew up a Creed of the same character as the Antiochene Creeds; at Ariminum in 359, which accepted a semi-Arian Creed; at Seleucia in 359, which accepted the same Creed as that adopted at Ariminum; and at Alexandria in 362, which, on the temporary return of St. Athanasius to his See, dealt with the various practical difficulties which had arisen through the dominance of the Arians during the reign of Constantius II.

(3) *Particular Councils of special importance.*—(*a*) The Councils of Laodicea, held between 341 and 381, of Carthage in 397 and 419, and the Quinisext, or Trullan, Council of Constantinople (692) made regulations in regard to the books which might be read in church.—(*b*) A series of Councils held in the 5th cent. in Africa and Palestine and Italy were concerned with the Pelagian heresy. With these must be placed the highly important Second Council of Orange (529), which condemned Semi-Pelagianism, and definitely asserted the need of Divine grace both to lead man to choose good and to enable him to give effect to his choice; but took pains to avoid exaggerations in the opposite direction, by adding to the canons the following statement:

'When grace has been received through baptism, all the baptized, by the help and co-operation of Christ, are able and ought to fulfil those things which pertain to the salvation of the soul, if they are willing to labour faithfully. That any are predestined to evil by the power of God, we not only do not believe, but also, if there are any who wish to believe so great an evil, we say anathema to them with all abhorrence. This also we healthfully confess and believe, that in every good work it is not we who begin and afterwards are aided by the mercy of God, but God Himself in the first instance inspires into us, without any good deserts of our own preceding, belief in Him and love for Him, so that we both faithfully seek for the sacrament of Baptism, and after Baptism are able with His help to fulfil those things which are pleasing to him' ('Acts of Orange,' 529, in Hardouin, ii. 1101, 1102).

These decisions at Orange were accepted as expressing the general mind of the Church (see PELAGIANISM, SEMI-PELAGIANISM).—(*c*) A Council was held at Constantinople in 543, to which the *Fifteen Anathematisms on Origen*, which are sometimes ascribed to the Fifth Ecumenical Council, probably belong. They include the anathema, 'If any one maintains the legendary pre-existence of souls and the monstrous idea of restitution which follows from it, let him be anathema' (see Hardouin, iii. 284).—(*d*) The Third Council of Toledo (589) was the occasion of the Spanish Church and nation repudiating their traditional Arianism, and accepting the Catholic faith as expressed by the orthodox Councils. It is of importance, in regard to the history of the Creeds and to controversies between the East and the West, that the clause in the enlarged form of the Nicene Creed was recited at this Council as 'ex Patre *et Filio* procedentem' (see Hardouin, iii. 472).—(*e*) The Quinisext, or Trullan, Council of Constantinople (692) reaffirmed the doctrinal declarations of the six Ecumenical Councils which had by that time been held, and added to them a series of disciplinary canons which became a recognized part of the Eastern canon law.—(*f*) The Council of Frankfort (794), expressing the general mind of the Church, condemned the heresy of Adoptianism, declaring that it 'ought to be utterly rooted out of the Church' (canon 1; see Hardouin, iv. 904, and cf. art. ADOPTIANISM). Under a misapprehension, it rejected the decisions of the Second Council of Nicæa about images (see above, p. 190[b] n.).

DARWELL STONE.

COUNCILS (Christian: Mediæval, 870–1400). —The Councils of this protracted period were not important from a doctrinal standpoint, as compared with the Ecumenical Councils from 325 to 869, or as compared with the later Councils of Trent and the Vatican. The dogma of Transubstantiation is the only dogma which was defined (at the Fourth Lateran, 1215) that had not been defined by one of the first eight Ecumenical Councils. These Synods are, however, of unusual value for the light they throw upon the clerical manners of the period, and the advocacy they gave to some of the greater social and ecclesiastical movements of the Middle Ages. They legislated upon the relation of the Church to the Empire, upon the prerogatives and election of the Popes, upon Church reforms, especially against simony and priestly concubinage, upon heresy and its punishment, upon the details of the conduct of worship, priestly dress and manners, upon the crusades, upon the evils of feud (through the truce of God), and upon the tournaments. As regards locality, Rome was all through the period the chief centre of Church assemblies. Down to 1200, few Synods, of which any account is preserved, were held outside Germany, France, Italy, and England. The important Synod of Szoboles (1092) in Hungarian territory was one of the exceptions. After 1150 the Spanish Synods came into prominence on account of the regulations touching heresy and its extirpation. A notable feature is that not only the Synods in Rome, but many outside of it, were presided over by Popes in person or through their legates. Such were the Synods in France, Germany, and Italy, attended by Leo IX., Urban II., Innocent II., Alexander III., Lucius III. The presence of the supreme head of Christendom gave to the acts of such

Synods a semi-Ecumenical importance. The period witnessed seven Ecumenical Councils, the first in the West, and all called and presided over by Popes. The decrees of some of them are of less importance than the legislation of some of the local Synods, such as the Reform Synods held in Rome in 1049, 1059, etc., the Synod of Clermont (1095), which set the first crusade in motion, the Synod of Verona (1184), which took up heresy, and the Synod of Tours (1229), which, in addition to other important regulations aimed against heretics, forbade laymen to possess copies of the Scriptures. We shall treat the subject under five heads.

I. 870-900.—The Synods of this dark age, so far as they are known to us, were only of temporary and local importance. The subjects discussed were crimes against the clergy and their punishment, the payment of tithes, the rights of patrons over church livings, marriage and divorce. No new measures of Church reform or ecclesiastical polity were taken up. No new statements of doctrine were made. No Synod of importance was held at Rome. The Synod of Tribur, near Mainz (895), was one of the best of them (see Hefele, iv. 552 ff.). It was attended by the three great German archbishops, Hermann of Cologne, Haito of Mainz, and Rothod of Trèves, by 19 bishops, and many abbots. Twelve of its 58 canons concern marriage, which is declared valid only when the parties are equals. A man having a concubine was expressly permitted, in addition, to take a wife. A man committing adultery with another man's wife was forbidden to marry her, even if the husband died. The old Roman law evidently still had its influence, but the movement of the Church was in the right direction, and at the Roman Synod (1059) under Nicolas II. a layman was forbidden, under pain of excommunication, to have a wife and a concubine at the same time.

II. 900-1050.—The 10th cent. witnessed even fewer Synods than the 9th (Hefele, iv. 571), and this, according to the canonist Hergenröther, was a sign of the decay of Catholic discipline (*Kathol. Kirchenrecht*, 342). The Ottos and Henry III. had a taste for calling Synods, regarding themselves as the successors of Constantine, Theodosius, Marcian, and other Roman Emperors. After the year 1000 there is a very noticeable increase in the number of Synods. Here, again, no theological dogma is stated which had not already been defined. The prerogative of the Papal Chair, which was to form such a conspicuous subject of Conciliar discussion after 1050, was not touched upon, except incidentally at the Synod of St. Bâle, near Rheims (991), where Gerbert, afterwards Sylvester II., took a prominent part, and Archbishop Arnulf was deposed. Sylvester, on becoming Pope, restored him (Hefele, iv. 637 ff., 654; Loofs, *Dogmengesch.*[4], Halle, 1906, p. 249). A Synod of Rome under Sylvester (998), in the spirit of Nicolas I., imposed a penance of eight years upon Robert, king of France, for his marriage with his blood-relation, Bertha; and the Archbishop of Tours and other prelates, who had assented to the incestuous relationship, were suspended. Of the Synods which took up the cases of individual Popes, the Synod of Rome (963) deposed John XII. and elected Leo VIII.; the Roman Synod of 964 reinstated John XII.; and another Roman Synod (964) restored Leo VIII. Otto the Great called the last of these Synods. The most famous of them, the Synod of Sutri, has a permanent interest, as bearing upon the relation between a Council and the Papacy. It was controlled by Henry III., and disposed of three Popes and elected a fourth. Benedict IX. resigned, Sylvester III. was imprisoned, and Gregory VI. deposed himself, his resignation being accepted by the assembled Fathers. Descending from the throne, he implored forgiveness for having usurped the supreme seat of Christendom by simoniacal purchase. Clement II. was then seated.

The Synodical legislation of 1000–1050 shows a great revival of interest in ecclesiastical discipline and order, and is characterized by three notable features—a strong movement towards the moral reform of the clergy, the check put upon feuds and bloodshed, and the repression of heresy. The Synods of Pavia (1018), presided over by Benedict VIII., of Goslar (1019), Seligenstadt (1022), and Bourges (1031), busied themselves with questions of reform, especially with the incontinence of the clergy. The deposition of all clerics who had wives or concubines was decreed, from subdeacon to bishop. The Synod of Seligenstadt recognized the crying evil of excessive masses, when it limited a priest to three a day. The legislation against the deep-rooted evil of uninterrupted feud and blood-revenge begins with the Synod of Poitiers (1000). The Synod of Limoges (1031) threatened the interdict as punishment for such feud. The legislation which started in France was perfected there. The agreement of peace (*pax Dei*), dating from 1034, which required a cessation of warfare all the days of the week, was found impracticable, and (about 1040) Synods in Southern France established the *treuga Dei*, the peace or truce of God, whereby cessation from bloodshed was ordered from Wednesday evening to Monday at sunrise, thus including the sacred days of the Ascension, Passion, Burial, and Resurrection. Later Synods, as the Synod of Narbonne (1054) and the great Synod of Clermont (1095), under the presidency of Urban II., extended the limits of the truce to the Lenten period and other holy seasons of the Church year. This humane legislation was confirmed by the first three Ecumenical Councils of the West (1123, 1139, 1179); and, in putting a check upon the barbarism of mediæval society, it stood probably for a more remarkable measure than the principle of arbitration in international disputes which is now gaining recognition. The Synodal action on heresy opens with the Synod of Orleans (1022). There had been no call for repressive measures for hundreds of years, as heresy was practically unknown in Western Europe. It appeared again in Southern France and Northern Italy; and at Orleans, in the presence of Robert, king of France, and his consort, 13 persons were burned for erroneous teachings and practices. This legislation was taken up by the Synod of Arras, Southern France (1025), which condemned heretics who had emigrated from Italy and rejected baptism and the Lord's Supper, despised marriage, and 'annulled' the Church. Again, at the Synod of Rheims (1049), heretics were condemned. This legislation was renewed at a later time and elaborated by many Synods, culminating in the measure of the Inquisition laid down by Innocent III. at the Fourth Lateran, the rules of the Synod of Tours, and the decrees of Innocent's successors.

III. 1050-1122.—In this, the Hildebrandian period, Synods are numerous. They are a sign of a new age in Church history, and an indication of the administration of vigorous personalities. Their decisions had much influence on the permanent policy and practice of the Latin Church. Hildebrand (Gregory VII.), the most imposing figure of the period, lent the great weight of his presence at these Synods and his confirmation to their enactments. Other powerful Popes who did the same were Leo IX., Nicolas II., and Urban II. The chief subjects legislated upon were the Papal prerogative as involved in the

ceremony of investiture, clerical concubinage, ecclesiastical simony, the mode of electing the Pope, and the crusades. The so-called Reform Synods, assembling in Rome, which took up the first three questions, form an epoch in the history of the Western Church, and bear the same relation to the earlier periods of the Middle Ages that the reformatory Councils of Pisa, Constance, and Basel bear to their last period. The Lord's Supper was the only question of a doctrinal nature to be discussed, being taken up in connexion with the dynamic theory advocated by Berengar of Tours (d. 1088). The doctrine of the transmutation of the elements was assumed, the word 'transubstantiation' not being used. Through the influence of Lanfranc, Berengar's views were condemned in Rome (1050). He failed to appear at the Synod of Vercelli (1050), over which Leo IX. presided. His case was subsequently taken up at several Synods, notably at the Roman Synods (1059 and 1079). At both of these Synods he retracted his view, but afterwards recalled his denials, declaring that they had been made through fear. The 113 bishops present at the Synod of 1059 he called 'wild beasts.' The protection of Gregory VII. saved him. The famous law regulating Papal election and confining it to the cardinals was passed at the Roman Synod of 1059, under the presidency of Nicolas II. The law was elaborated by Alexander III. at the Ecumenical Council of 1179, and again at the second Ecumenical Council at Lyons (1274).

The Reform Synods began at the opening of the period in 1049. At the Roman Synod of 1047, Clement II. had already declared against simony, and punished some bishops who practised it. The Roman Synod of 1049, under Leo IX., declared war in earnest against the two evils of simony and clerical marriage, renewed the old laws on the subject, and forbade to clerics, from the sub-deacon up to the higher orders, the exercise of religious functions so long as they were married or kept concubines. This legislation was repeated the same year by Synods at Rheims and Mainz, both presided over by Leo. Vigorous laws were also passed by the Roman Synods of 1059 and 1061, under Nicolas II., and by the Synod of Melfi, near Monte Cassino (1059), presided over by the same Pontiff. The energy with which the canon of celibacy was pushed is shown by Nicolas' despatch of legates to propagate the Papal views, and the action of the Synods of Vienne and Tours (1060) along the same line. Gregory VII. won for himself a foremost place among Papal reformers by the boldness with which he advocated moral reforms, and the suffering he was ready to undergo in their interest. Simony, clerical concubinage, and lay investiture were the three evils against which he waged vigorous war. At the Lenten Synod in Rome (1074), the first of his pontificate, he ordered all holding ecclesiastical offices by purchase to relinquish them, and all guilty of the *crimen fornicationis*, that is, having a wife or a concubine, to desist from saying mass. To the resistance offered by localities and bishops to the latter decree was added the unfavourable action of the local Synods of Paris and Erfurt (1074). But such Synodal action was as a passing cloud. Other Synods came to Gregory's aid, and those held at Rome year by year renewed the war; and the legislation condemning the marriage of the clergy was repeated again and again, even in far-off England, as at the Synods of Winchester under Lanfranc (1076), at London under Anselm (1102, 1108), and at Westminster (1138), etc. These Synods extended the war to the sons of priests, who were excluded from succeeding to the benefices held by their fathers. The Roman Synod of 1083, the last under Gregory, placed in one and the same category the sons of priests, the sons of adulterers, and all other bastards, and pronounced them ineligible for ordination. The difficulty met with in putting a stop to the marriage of clerics is shown by the action of the Hungarian Synod of Szoboles (1092), which, for the sake of peace, granted priests already married the indulgence to keep their wives (see Hefele, v. 204 ff.).

A positive prohibition of lay investiture was laid down by Gregory in the Lenten Synod at Rome (1075). Henceforward the custom was illegal whereby the Emperor and princes had inducted bishops and abbots into their office by the gift of ring and staff. This right Gregory now reserved for the spiritual authorities, to whom it properly belonged. The principle was asserted at one Council after another, and thus the moral weight of Conciliar action was added to the heroic boldness of Gregory in his personal struggle with Henry IV., until the matter was finally settled by the Concordat of Worms (1122).

Synods undertook an easy task when they began to urge Western Christendom to endeavour to rescue Jerusalem and the other sacred sites from the grasp of the infidel. The spirit of chivalry, as well as the impulse of piety, was touched when the appeal was made to assert by arms the right of the Church to the localities where the Redeemer was born, had died, and lay in the grave for three days. The subject was first brought to the attention of a Council at the Synod of Piacenza (1095), when an embassy appeared from the Emperor Alexius calling for aid against the encroachments of the Turk upon the Eastern Empire. At the Council of Clermont (1095), presided over by Urban II., the first crusade was determined upon. Urban's address, picturing the distress of Jerusalem, fired the heart of the large assembly with such enthusiasm, that the cry arose, 'God wills it, God wills it,' and multitudes took the cross. More effective sermon was never preached, and at once throughout Central Europe was heard the noise of preparation for the main army which was to start under Godfrey, and the preliminary swarms under Peter the Hermit, Walter the Penniless, etc. See CRUSADES.

IV. **1122-1400** (the Ecumenical Councils).—This period of 280 years is marked by seven Ecumenical Councils, a great increase in the number of local Synods, and their spread over all Western Europe. They were called forth by the crusades, the spread of heresy, the conflicts of the Popes with the Emperors, the evils in the Church which called for reformation, and other considerations. The inclination of the Popes to strengthen their hands and carry out their plans through the action of Synods continued to be a marked feature of the Papal policy, as it had been in the Hildebrandian age. The greatest of the Popes—Alexander III., Innocent III., Gregory IX., and Innocent IV.—summoned Synods and laid their projects before them. The Ecumenical Councils were called by Popes, and the secular prince had nothing to do with their being summoned. Thus the theory of the ancient Church was set aside (see Döllinger-Friedrich, *Das Papstthum*, 88 ff.). The Papal ratification gave authority to their decrees, and the first canon of the First Lateran runs: 'Auctoritate sedis apost. prohibemus,' etc. It is true that the approbation of the assembled prelates is sometimes mentioned, and it was assumed that it was given. The formula ran: 'Sacro approbante concilio,' or 'Sacro praesente concilio.' So the Fourth Lateran. The seven General Councils were as follows:—

(1) *The First Lateran* (1123), so called from having met in the Lateran Church in Rome, was

—following the counting of the Latins—the 9th Ecumenical Council, or the next in the list after the Council of Constantinople (869). It was called by Calixtus II., and had for its principal object the ratification of the Concordat of Worms, known also as the *Pactum Calixtinum*. By that pact the Church reserved to itself the exclusive right of investing bishops with the ring and the crozier, and of inducting them into the spiritual functions of their sees, while the temporal prince retained the right of inducting them into the temporalities and of being present at the elections. Our reports of the First Lateran vary in giving the number of attending bishops and abbots as 300–997. It was the first Ecumenical Council to enjoin clerical celibacy. Following the example of Urban II. at Clermont, it granted indulgence of sins to all participating in the crusades, and, in addition, it took their relatives and their goods under the special protection of the Church.

(2) *The Second Lateran*, or 10th Ecumenical (1139), was opened with an address by Innocent II., witnessed the close of the disastrous Papal schism which had distracted the Church for nine years, and pronounced against the heresy of Arnold of Brescia (see Otto of Freising, *de gestis Frederici*, ii. 20). It also condemned simony, priestly concubinage, and the ministration of the sons of priests, and introduced a new element in forbidding, for a term of years, tournaments. Like the First Lateran and the Third Lateran, it enjoined the truce of God.

(3) *The Third Lateran*, or 11th Ecumenical (1179), was summoned and presided over by Alexander III. 287 or, according to other reports, 300 or 396 bishops were present, besides many abbots and other clergy. It celebrated the establishment of peace between the Papacy and Frederick Barbarossa. It made some additions to the rules for electing a Pope. Falling back on the 12th canon of the Second Lateran, it legislated against heretics, especially the Cathari and Patarini, and ordered separate burial-places and churches for lepers.

(4) *The Fourth Lateran*, or 12th Ecumenical (1215), was, with the Council of Constance, the most important ecclesiastical assembly of the Middle Ages, and one of the most eventful in all Church history. Its two chief acts were the declaration of Transubstantiation as a dogma of the Church, and the establishment of the Inquisition. The Council was called by Innocent III., and attended by 412 bishops, 800 abbots, the representatives of many absent prelates, also the representatives of the Emperor Frederick II., the Latin Emperor of Constantinople, the kings of England, France, Aragon, Hungary, and Jerusalem, and other crowned heads. The Latin patriarchs of the East were also there. The sessions were opened with a sermon by the Pope on Lk 22^{15} 'With desire I have desired to eat this passover with you.' In his letter of convocation, Innocent had announced as the objects of the Council: measures for the re-conquest of Jerusalem and the betterment of the Church. The business was issued by the Pope, and free discussion in his Imperial presence was not to be thought of. The doctrine of the Eucharist was discussed for the first time at a General Council, and the assembly made the formal declaration that Christ's body and blood are truly contained in the Sacrament of the Altar under the forms of bread and wine, the bread being *transubstantiated* into the body and the wine into the blood (Mansi, xxii. 982; Mirbt, *Quellen*, 133). The formal adoption of the Inquisition by the Council introduced its harsh and un-Christian measures into the body of the discipline of the Latin Church. The Synods of Verona (1184), Avignon (1209), and Montpellier (1215) had already taken definite action, but these were local assemblies, although the first was under the presidency of a Pope. The Inquisition, thus established by the highest authority of the Church, —for both Pope and Ecumenical Council ratified it, —was intended to crush freedom of thought wherever the Catholic Church went, and deliberately commended those measures of the civil power which resulted in tens of thousands being brought to the stake for errors of opinion. The third canon calls heresy *heretica foeditas*, and not only summoned all bishops to search out and punish heretics with ecclesiastical penalties, but required rulers, upon pain of excommunication, to clear their realms of heresy by the use of the sword. More especially was the decree launched against the Albigenses; and the Catholics who girded themselves with the sword for the reduction of that people to the faith were promised the same indulgence that was offered to those who took part in the crusades against the Saracen (Mansi, xxii. 986 ff.; Mirbt, *Quellen*, 133 ff.). The Council also approved Innocent's proposed crusade, which was fixed to start in June 1217. The Pope promised as his own contribution a vessel for the crusaders from Rome and its vicinity, and £30,000 in money. The indulgence for sins was extended to those who contributed to the expenses of the enterprise, as well as to those who went to the East. The speedy death of Innocent deprived it of his powerful support, and, in spite of the efforts of his two successors, Honorius III. and Gregory IX., it was never realized, unless the bizarre expedition of Frederick II. in 1229 be regarded in that light. To these decisions of greater moment were added a series of acts of a moral and ecclesiastical nature, which would of themselves render the Fourth Lateran one of the notable Councils in the history of the Church. The further establishment of monastic orders was forbidden—a canon repeated with an important modification at the second General Council of Lyons (1274). The Jews and Saracens were ordered to wear a different dress from the Christians, lest unawares there might be carnal intercourse between them, and the Jews were forbidden to appear out of doors during Passion week, and excluded from public office. Tournaments were forbidden for three years, on the ground that they would interfere with the crusade. This rule was repeated at the Ecumenical Council of Lyons (1245).

(5) *The First Council of Lyons*, or the 13th Ecumenical (1245), was called by Innocent IV., who had fled from Rome to escape Frederick II. It took the place of the Council called by Gregory IX., whose assemblage had been prevented by the violent action of Frederick and his son Enzio. Innocent, in his opening address, called attention to five wounds of the Church, namely, the low estate of the clergy, the distressed condition of Jerusalem, the Greek schism, the menace of the Tatars in Eastern Europe, and the persecution of the Church by Frederick II. The last was the greatest and most painful wound of all, and itself justified the assembly. With the assent of the Council, Innocent formally deposed Frederick from his throne. No ecclesiastical Synod before or since has taken such ominous action against an exalted monarch. Frederick was unequal to the contest, and died, defeated (1250).

(6) *The Second Council of Lyons*, or the 14th Ecumenical (1274), was summoned by Gregory X., and attended by 500 bishops, 70 abbots, and 1000 other ecclesiastics. Gregory opened the proceedings with an address on Lk 22^{15}, the text which Innocent III. had used in 1215. The main topic was the re-union of Christendom. The Greek

Church was represented by Imperial delegates—Germanus, patriarch of Constantinople, the archbishop of Nicæa, and other bishops. The Emperor through his representatives announced his acceptance of the double procession of the Holy Spirit, and the primacy of the Apostolic see. The Apostles' Creed was sung in Latin, and then in Greek. A termination of the Schism seemed to be at hand, but the articles of agreement, when they became known in the East, were rejected, and the Council proved a failure at its historic point.

(7) *The Council of Vienne*, or the 15th Ecumenical (October 16, 1311 - May 6, 1312), was called by Clement V., the first of the Avignon Popes, at the demand of Philip the Fair of France. The reports of the Council are unsatisfactory, but among the chief objects of business were the abolition of the order of the Knights Templar, the establishment of peace between the two contending wings in the Franciscan order, and the condemnation of Boniface VIII. as a heretic. The condemnation of Boniface, which Philip had strenuously demanded, was, after much discussion, set aside, in view, it is supposed, of Clement's concession to the French sovereign that the Templars should be destroyed.

V. **1122 - 1400** (important local Synods).—Speaking in a general way, the local Synods of this period derive their chief importance from their regulations concerning the detection and punishment of heresy. They throw much light upon the religious conditions and clerical manners of the period. After the Council of Vienne, and until the close of the 14th century, Synods no longer had the importance they had had before. This was due to the distracted condition of Western Christendom, resulting from the exile of the Papacy to Avignon, to the growing tendency to freedom of thought and expression, as manifested by Dante and by the publicists in the age of Boniface VIII., and the increasing tendency, since Boniface VIII., to autocratic Papal government through bulls. Among the more important of the local Synods were the following:—(1) *Toulouse* (1119), which passed important legislation against heretics. (2) *Tours* (1163), attended by 17 cardinals, 124 bishops, and 414 abbots. Alexander III. presided in person. Thomas à Becket, whose difficulties had begun, was present. The Synod's regulations against heresy are of historical importance. (3) *The Council of Clarendon* (1164), a mixed council of laymen and bishops, passed the famous Clarendon Constitutions, which struck at the root of ecclesiastical arrogance as represented by such prelates as Thomas à Becket, and led to his flight from England. (4) *Verona* (1164), presided over by Lucius III., passed a lengthy and notable decree concerning the trial and punishment of heretics. It makes the first Conciliar mention of the *pauperes de Lugduno*, or Waldenses. Walter Map, the English *littérateur*, was present, and has left us an interesting account of the examination and appearance of the humble Waldensian representatives. Impenitent heretics were turned over to the worldly authority, and magistrates and princes were ordered to aid bishops in spying out heretics and bringing them to trial, on pain of excommunication. (5) *The Synod of Trèves* (1227) has a place of importance on account of its canons which bear upon the administration of the sacraments (see Hefele, v. 944–55). (6) *Toulouse* (1229), presided over by the Papal legate, celebrated the close of the bloody crusades against the Albigenses, prescribed the final punishment of the house of Toulouse, and passed notable canons for the punishment of heretics, its 14th canon forbidding laymen to have in their possession the Old and New Testaments in the original or in translation. The laity—men and women—were ordered to attend the Communion three times a year, and to visit the confessional the same number of times, upon pain of being suspected of heresy. Toulouse was in the centre of the territory most infected with heresy. There the Papal inquisitors were most active in the 13th century, and many Synods in that region and in Spain—at Beziers, Tarragona, Narbonne, Albi, etc.—repeat the rules for the detection and punishment of the unfortunate victims of the Inquisition. When, in a later century, persecutions for witchcraft were carried on, it was a Papal bull—the bull of Innocent VIII.—and a book—the *Malleus maleficarum*—which encouraged that awful movement, rather than the acts of Synods.

LITERATURE.—The Collections of the Acts of Councils, by Labbe-Cossart, 17 vols., Paris, 1674; Hardouin, 12 vols., Paris, 1715, and additional vol. 1722; esp. Mansi, 31 vols., Venice, 1759–98, continuation, Paris, 1900 ff.; valuable excerpts are given by Mirbt, *Quellen zur Geschichte des Papsttums*[2], Tübingen, 1901. For the history of the Councils and succinct statement of their acts: C. J. von Hefele, *Conciliengesch. nach den Quellen bearbeitet*[2], 9 vols., Freiburg im Br., 1873–1890 [vols. v.–vii. rev. by A. Knöpfler; vols. viii. and ix. prepared by J. A. G. Hergenröther]. D. S. SCHAFF.

COUNCILS (Christian: Modern, 1400–1910).—It will be convenient to deal with the Councils of this period under four separate heads. Supremely important as were the dogmatic pronouncements both of Trent and of the Vatican, they were themselves the utterances of two dissimilar assemblies, deliberating under the stress of quite different combinations of circumstances, and animated by a notably different spirit. On the other hand, the ecclesiastico-political influences at work in the early part of the 15th cent., owing to the Great Schism, were absolutely unique in the history of Christianity, while, from the outset of this period, the high relief and importance given to General Councils (owing to the gravity of the crisis and the desperate nature of the evils, which only an Ecumenical assembly could remedy) tended to throw altogether into the background the decrees of diocesan and provincial Synods, and to rob them of all dogmatic character and influence. We have, then, for our four divisions:—(1) The Councils of Pisa, of Constance, and of Basel-Ferrara-Florence, all of which were held under the shadow of the religious anarchy created by the Great Schism of the West, and in all of which the position and power of a *concilium generale* in itself was a question of primary importance. (2) Trent, the great Reformation Council, in respect of which the Fifth Lateran may be regarded as an ineffective preliminary, overshadowed by the really important work which the Papal legates and the Fathers of Trent, in spite of disheartening political obstacles, carried steadfastly to a conclusion. (3) The Council of the Vatican, giving expression to that recognition of the Papal *magisterium* and that acquiescence in the policy of centralization which three centuries of peace, organization, and discipline had bred in the hearts of the more pious, if not always the more learned, representatives of the Roman obedience. (4) We also require to give some brief consideration to the local Synods which, in these last four centuries, have done little more than popularize the great principles of dogma and

discipline laid down at Trent. To the influence of these Synods as a whole is also largely due the extension of those anti-Gallican tendencies which eventually took formal and articulate shape in the definitions of the Vatican.

1. Councils of Pisa, Constance, Basel-Ferrara-Florence.—(1) *Council of Pisa.*—The one outstanding fact in the religious situation at the beginning of the 15th cent. was the division of Christendom owing to the Schism. All attempts to bring about an accommodation between the rival Popes, Gregory XII. and Benedict XIII., had hitherto proved abortive. The situation was intolerable, and patience was becoming exhausted. Finally, in July 1408, cardinals belonging to both Papal courts met at Livorno and proposed as a solution the *via concilii generalis utriusque obedientiæ*, appointing 25 March 1409 for the meeting of such an assembly. The appeal evoked considerable response. At its maximum the attendance numbered from 22 to 24 cardinals, 80 bishops, 87 abbots, etc., while 102 bishops unable to attend in person sent procurators. In its eighth session (18 May) the Council proclaimed itself ecumenical and canonically convoked. On 5 June it deposed both the reigning Popes as notoriously guilty of schism and heresy, and empowered the cardinals then at Pisa to elect a new Pope in their place. The choice fell upon Peter Philargi, Archbishop of Milan (Alexander V.). But, as neither Benedict XIII. nor Gregory XII. was willing to submit, the only immediate result was that there were now three claimants to the Papacy instead of two. As for the second avowed purpose of convening the assembly at Pisa (the *causa reformationis*), it was agreed that a more careful preparation of measures of reform was necessary than could then be attempted. Any such projects must, therefore, be left for the consideration of another Council to meet in three years' time. Accordingly, on 7 Aug. 1409, the new Pope dissolved the assembly.

It has been the custom to speak of the Council of Pisa with scant respect as a foolish expedient, foredoomed to failure, which only added to the divisions of Christendom. Moreover, on the ground that it was not summoned by a legitimate Pope, or by the whole Church, or generally acknowledged, it has not usually been allowed, except by avowed Gallicans, to rank among the Ecumenical Councils (*cf. e.g.* Hefele-Leclercq, *Conciles*, 1907 ff., i. 89); but a much more favourable view of its aims and its results has recently found acceptance (see esp. Bliemetzrieder, *Das Generalkonzil*, 306–339). In any case, the assembly at Pisa certainly did much to pave the way for the solution ultimately reached.

(2) *Council of Constance.*—Alexander V., the Pope elected at Pisa, died within a year of his election, when he was succeeded by John XXIII. (Baldassare Cossa), who, though not the monster of depravity his enemies have depicted, was certainly unworthy of his high position, and was himself the cause of scandal rather than a promoter of reform. Nothing in John's behaviour seemed to promise an end of the Schism, and so, after an abortive Council at Rome (1412), which mainly occupied itself with Wyclif's writings, Sigismund, king of the Romans, put pressure on John and forced him to summon a Council to meet at Constance on 1 Nov. 1414. Under Sigismund's patronage, a vast and rather motley assembly gathered there, with the triple object (1) of defining the true doctrine of the Church with regard to the teaching of Wyclif and Hus (*causa fidei*); (2) of putting an end to the Schism (*causa unionis*); and (3) of reforming the Church alike in its head and in its members (*causa reformationis*). In respect of the first object a long series of propositions was extracted from the writings of Wyclif and his Bohemian followers, and these were unanimously condemned. On the question of Communion in one kind the Council drafted a detailed decree, in which the custom of the Church was approved, that the Sacrament of the Eucharist 'should be received by those who consecrated it under both kinds, and by the laity only under one,' seeing that 'it must be most firmly held that the Body and Blood of Christ are contained entire both under the species of bread and under the species of wine.'

In the 15th session of the Council (6 July 1415), Hus, who, in spite of his safe-conduct from King Sigismund, had been kept in close confinement for several months previously, was, after his refusal to retract his errors, solemnly degraded from the priesthood and burnt at the stake. No special pleading can palliate this breach of faith, whether the main responsibility falls upon Sigismund personally or upon the ecclesiastics of the Council (see Wylie, *The Council of Constance to the Death of John Hus*).

Meanwhile, as regards the healing of the Schism, the path of the Council had not been so easy. In spite of John's favoured position as the convoker of the assembly under the protection of Sigismund, men were not slow to declare that a settlement could be reached only by the resignation of all three Popes. To destroy the numerical preponderance of the Italian bishops a plan was adopted of voting by nations (Italian, German, French, English, and, at a later date, also Spanish) to the exclusion, in the general sessions, of the system previously adhered to, which based the decision upon the simple majority of voices. The outcry against Pope John made itself more insistently heard, and on 20 March 1415 he fled from the city. Despite the desertion of its official president, the Council, at the instigation primarily of Zabarella, d'Ailly, and Gerson, passed the famous 'Decrees of Constance,' declaring itself to be ecumenical and lawfully convened; asserting the claim of a General Council, in so far as it holds its jurisdiction immediately from God, to the obedience of all men, even though of Papal dignity; and finally proclaiming that contumacious resistance to its authority was a crime legally deserving of punishment, and involving, it might be, the guilt of schism or heresy. The formal deposition of John, on the grounds of simony, immorality, and the fostering of schism, followed shortly afterwards. Gregory XII. resigned, and Benedict XIII., after he had been forsaken by the King of Arragon, was also deposed (26 July 1417). Finally, Odo Colonna (Martin V.) was elected Pope (11 Nov. 1417) by 23 cardinals and 30 deputies—six from each of the five nations—thus at last ending the Schism.

A few spasmodic attempts at reform were also made before the Council dispersed. Serious differences of opinion among the 'nations'—the Italian bishops, for example, favouring the Papal claim to Provisors—led to the decision that, while certain general decrees should be passed upon matters as to which all were agreed, the Pope should be left free on the contested points to arrange Concordats with the different nations separately. The periodical convening of General Councils was also determined upon, the first to be held at Pavia in 1423; and on 22 April 1418, Martin V. dissolved the assembly.

The ecumenicity of the Council of Constance is a subject of much debate. No one, practically speaking, denies that character to the Council after the election of Martin V. Again, the doctrinal decrees condemning Wyclif and Hus are certainly covered by the declaration of Martin V. in the last session, that he desired to maintain and to ratify the decrees, 'in matters of faith,' which had been determined by the assembled Fathers *conciliariter*. But the decrees maintaining the superiority of a General Council over the Pope were not, so it is held, arrived at *conciliariter* but rather *tumultuariter*. In any case, Martin's language obviously suggests that he did not approve the decrees of Constance *en bloc*, while, if he excepted anything from his sanction, it must have been the hold, and up to that time almost unheard of, pretension to exalt conciliar authority at the expense of the Papacy, which in 1682 became the founda-

tion of the famous Gallican Articles (see, *e.g.*, Hefele-Leclercq, *Conciles*, i. 69–72). By no Roman theologian of the present day is the ecumenicity of the Council of Constance admitted without reservation.

(3) *Council of Basel-Ferrara-Florence.*—In accordance with the provisions of Constance, Martin V. was bound to convoke a Council at Pavia in 1423; this was done, but the small attendance, the transference to Siena on account of plague, and other causes, furnished a reasonable pretext for dissolving the assembly altogether in May 1424. Deference, however, was still paid to the agreement arrived at in Constance regarding the periodical recurrence of Councils, and Basel was selected for the next meeting in 1431. Martin V. died before the day appointed, and Eugenius IV., who succeeded him, looking with apprehension at the spirit which had already manifested itself in the handful of delegates present at Basel—a spirit which still persisted in treating the Pope as only the *caput ministeriale ecclesiæ*—decided to dissolve the Council even before the end of 1431. A period of great distraction followed. Eugenius, who had to some extent been misinformed regarding the condition of affairs at Basel, and who was also, no doubt, honestly influenced by the desire to facilitate the re-union of the Greeks by summoning a Council in some, to them more accessible, town in Italy, was eventually constrained, by the determination of the prelates at Basel and the political support accorded them, to set aside his bull of dissolution and to suffer the Council to proceed. Meanwhile the assembly had explicitly renewed the decrees of Constance asserting the supremacy of a General Council over the Pope, and denying to the Pope the right of dissolution without the consent of the Council itself. Notwithstanding this, Eugenius found himself compelled to pronounce (*decernimus et declaramus*) the continuity of the Council of Basel as a legitimately constituted assembly from the beginning, to declare *pure et simpliciter* that it was in the enjoyment of his favour, and to annul (*cassamus, revocamus*, etc.) whatever he himself had attempted 'to its prejudice or against its authority.'

During the period which followed, beginning with the 16th session (5 Feb. 1434), the assembly passed many useful decrees of reformation, but, by its almost entire abolition of annates and reservations, it bore very hardly upon the financial resources of the Holy See.

With regard to some dogmatic points in the proposed re-union with the Greeks there was further friction between Pope and Council, and the unstable peace was at length entirely wrecked over the question of the locality to which the Orientals should be invited for the discussion of their differences. On this point Eugenius stood firm, and when, on 18 Sept. 1437, he convened a Re-union Council to meet at Ferrara, Christendom at large gave him its support in the long run. The remnant of the Basel assembly, after defining, on 17 Sept. 1439, the doctrine of the Immaculate Conception of the Blessed Virgin (Mansi, xxix. 184), proceeded, under the leadership of Card. Lewis Aleman, first to suspend and then to depose Eugenius; and on 5 Nov. 1439 they elected a new anti-Pope, Felix V. But the common sense of Europe revolted against this renewal of the Schism. The handful of prelates at Basel were gradually deserted by their supporters. In 1448 they were banished from the city, migrated to Lausanne, and eventually, in 1449, made their submission to Nicholas V.

Meanwhile, at Ferrara, whence in Jan. 1439 the assembly, for sanitary reasons, was transferred to Florence, a conspicuously representative deputation of the Greeks, headed by Joseph II., Patriarch of Constantinople, and the Emperor John Palæologus, had gathered for the Re-union Council, influenced mainly, no doubt, by the hope of inducing a united Christendom to make common cause in resisting the Turks. The path of conciliation was a very thorny one, but eventually the *Filioque* difficulty was broached, and in the end the Western doctrine was accepted by all the Greek representatives save Marcus Eugenicus of Ephesus. Agreement was also arrived at concerning the use of unleavened bread, the 'epiclesis' question in the liturgy, the doctrine of purgatory, and, with more difficulty, the Roman primacy. Most, but not quite all, of the matters discussed were enshrined in a Papal bull *Lætentur cæli* (6 July 1439), which informed the world that the decree of union had received the signature of the Greek representatives.

Though the main object of the Re-union Council had thus, for the time being, been attained, it continued to sit on, probably as a counterpoise to the schismatical assembly at Basel. Several other Eastern Churches—the Armenians (autumn of 1439), the Jacobites (1442), and, after the sessions of the Council had been transferred to the Lateran, the Syrian church of Mesopotamia (1444), and certain Maronites and Nestorian Chaldæans (1445)—sent in their submission. The conspectus of doctrine, however, in the respective decrees of union, notably the *decretum pro Armenis* and the *decretum pro Jacobitis* (Denzinger-Bannwart, *Enchiridion Symbolorum*[10], Freiburg, 1908, nos. 695–715), though very important as an indication of theological opinion, is not usually regarded as an infallible pronouncement, being considered as aiming rather at disciplinary instruction than at definition of dogma.

The question of the ecumenicity of the decrees of Basel-Ferrara-Florence has been much discussed, and the theologians of the extreme Gallican school in the 17th and 18th centuries habitually maintained that the anti-Papal edicts of Basel, like those of Constance, were to be regarded as the duly authorized expression of the voice of the Church assembled in General Council. At present the more received view asserts that, while the sessions at Ferrara-Florence may be regarded as ecumenical, those at Basel can claim ecumenicity only for the decrees passed before 1437 and concerned with the suppression of heresy, the peace of Christendom, and the reform of the Church. The Papal approval necessary for their validity cannot be considered to have extended to any other matter (see Hefele-Leclercq, *Conciles*, i. 80–86, and Baudrillart in *Dict. Théol. Cath.* ii. [1905] 125–128).

2. The Council of Reform (Council of Trent).—The extravagant pretensions of the Councils of Constance and Basel had had disastrous results. The hope of reform in the Church was almost crushed, for the very mention of the word 'Council' awakened resentment and mistrust. Still the energetic protests of such men as Savonarola and Geiler of Kaisersberg kept the idea alive, and, when the friction between Julius II. and Louis XII. induced the latter to threaten the Pope with a General Council and to organize the schismatical assembly at Pisa (1511), the need of reform was put forward as a rallying cry. Julius responded by anathematizing the *conciliabulum* and its authors, but at the same time he convoked a Council himself, the Fifth Lateran (1512), generally reckoned the 18th General Council. It was not numerously attended, and, though it was prolonged by Leo X. until 1517, the work of reform in the Church, with which it professed to identify itself, was taken in hand very half-heartedly. Some useful decrees were passed concerning Papal provisions to benefices, etc., but the chief work accomplished was the condemnation of the Pragmatic Sanction of Charles VII., for which was substituted a Concordat with Francis I. (18 Aug. 1516). This received the formal approval of the Council, 19 Dec. 1516; and in the bull *Pastor æternus*, issued with the approval of the assembled Fathers in the

same connexion, the Pope was declared to possess authority over General Councils, which he had also the right to convoke, transfer, and dissolve (Mansi, xxxii. 967). Indirectly the 'Gravamina' drafted by Wimpfeling in 1510, which in many respects were based on the Pragmatic Sanction of Bourges, received their answer in the same bull.

There was little, then, in the proceedings of the Fifth Lateran to still the clamour for the suppression of abuses, which made itself heard more and more insistently after the revolt of Luther in 1517. Soon the appeal came, in a form not to be ignored, from the great ruler and statesman who found himself called upon at the same time to maintain the peace of the German Empire and to uphold the ancient faith. The preliminaries of the Council which Charles V. aspired to control form a long and extraordinarily intricate history, the details of which have only recently been given to the world in such collections of original documents as the *Nuntiaturberichte aus Deutschland* and the *Concil. Trident. . . . nova collectio*, iv., edited for the Görres Gesellschaft by Ehses, or, again, the fifth volume of Pastor's *Gesch. der Päpste*. The Council was first to have met at Mantua on 23 May 1537 (Ehses, p. 3), but the unwillingness of the Protestants to take part in an assembly on Italian soil, together with the numberless political complications, as well as the disagreements between Pope and Emperor, caused many delays. In 1542, Paul III. summoned the Council to meet at Trent on 1 Nov. of that year, but the difficulties were such that a beginning was not made until 13 Dec. 1545. Three Roman cardinals presided as legates over its early sessions—del Monte (afterwards Julius III.), Cervini (afterwards Marcellus II.), and Reginald Pole. The city of Trent had been selected, as situated upon Imperial territory, though south of the Alps, and easily accessible both from Germany and Italy. In the 8th session (11 March 1547), on account of the appearance of the plague, the transference of the Council to Bologna was decided upon, in spite of the opposition of the Emperor. Still, as Charles's bishops remained at Trent and the numbers at Bologna were very small, no decrees were passed during the two sessions held there. To put an end to the impossible situation, Paul III. prorogued the Council on 17 Sept. 1549.

Julius III. again convoked the Fathers in 1551, and business was transacted in the 13th to 16th sessions (11 Oct. 1551–28 Apr. 1552); but, on the fresh outbreak of hostilities against the Emperor, when the troops of the Elector of Saxony seemed to threaten the safety of the Council, another prorogation took place.

Finally, Pius IV. (29 Nov. 1560) summoned the bishops to Trent for the third time. They should have met at Easter, but the work of the Council did not begin until Jan. 1562. The Pope's interest in the proceedings, which were pushed on with great energy, was manifested alike in the sending of five Cardinal legates to represent him, and in the voluminous correspondence maintained by the Pontiff's nephew and secretary, Card. Charles Borromeo, afterwards canonized (see Susta, *Die röm. Curie und d. Concil v. Tr. unter Pius IV.*). The 17th–22nd sessions were held between 15 Jan. and 17 Sept. 1552, after which followed a long period of stormy discussions which nearly brought about the abandonment of the Council; but, thanks to the tact of the Papal legates, two other public sessions were held in July and November. The 25th and concluding session took place under the presidency of Card. Morone, 3–4 Dec. 1563.

It should be noted, as regards the method of procedure, that by the word 'session,' which is always used in quoting the decrees of Trent (thus, for example, the famous ordinance for the founding of seminaries in every diocese is cited 'Conc. Trid. sess. xxiv. *de Reform.* cap. 14'), we must understand the public and solemn sittings in which the Fathers met to record, by an as nearly as possible unanimous vote, the acceptance of decrees already prepared and agreed to. No discussion took place at these sittings; the subjects pronounced upon had already been fully debated in preliminary 'general congregations.' Further, in anticipation of these general congregations, schedules of 'articles' were usually drafted by the legates, and then certain theologians (*theologi minores*), who themselves had no vote, were invited to express their opinion thereon before the assembled Fathers, to assist them in forming a judgment. At the same time it had been arranged, almost from the beginning of the Council, that doctrine and discipline should be discussed simultaneously. The Pope had wished the dogmatic questions at issue between the Catholics and the Protestants to be authoritatively defined before the Fathers turned their attention to reform within the Church. Charles V., on the other hand, had wished these delicate points of doctrine to be deferred, and he demanded precedence for the correction of abuses. The Council compromised by issuing, at each session productive of legislation, a body of ordinances *de Reformatione* together with a varying number of dogmatic decisions and canons. All questions were decided not by nations, but by a simple majority of voices. Practically speaking, only prelates of episcopal dignity and the generals of religious orders had votes, though Paul III., in the first period of the Council, allowed the procurators of certain German bishops to vote, on the plea that the state of that country rendered it difficult for bishops to quit their dioceses. The Italian sees had at all times a great numerical preponderance. France, owing to its rivalry with the Emperor, sent hardly any representatives except its ambassadors. No Protestants appeared in the first period of the Council, but in the second period, under Julius III., a body of Protestant divines—of course under a safe-conduct—attended the deliberations which preceded the 15th session, in view of the possibility of arriving at some compromise regarding the concession of the cup to the laity. They were not allowed a vote, being in that respect on the same footing as those Catholic divines who were not bishops. A safe-conduct was also offered to Protestants of all countries in the 18th session (4 March 1562), but none availed themselves of the invitation. For various causes several of the sessions were barren of all legislation. For a summary of the decrees and canons of the Council, see art. CONFESSIONS, vol. iii. pp. 839–841.

The publishing of a revised index of prohibited books, as well as of a Missal, a Breviary, and a doctrinal Catechism (the famous *Catechismus ad Parochos*), which last had already been set in hand, was left to the charge of the Holy See; and, with a recognition of the need of Papal confirmation for its decrees, the great Council concluded its work.

A convenient summary of the more noteworthy additions made by the Council of Trent to the body of doctrine previously defined is afforded by the *Professio Fidei Tridentina*, commonly known as the Creed of Pope Pius IV. Its Confessional importance is indicated by the fact that at the present day a convert joining the Church of Rome is required to make such a profession of faith in the same or equivalent terms. Formerly the Creed of Pope Pius itself was always used, but latterly the option has been given of employing a shorter form. *Per contra*, when in the year 1714

a *Form for admitting converts from the Church of Rome* was drawn up and approved by both Houses of the Convocation of Canterbury, the proselyte, if in holy orders, was to be asked: 'Dost thou in particular renounce the twelve last articles added in the confession commonly called "the Creed of Pope Pius IV.," after having read them and duly considered them?'—to which the proselyte was required to answer: 'I do upon mature deliberation reject them all, as founded upon no warrant of Scripture, but rather repugnant to the word of God' (see *The Month*, Jan. 1907, pp. 1–18). This Anglican form for the reception of a convert has of recent years been considerably modified.

Prof. Fid. Trid. is quoted in full in art. CONFESSIONS, vol. iii. p. 841 f.

3. The Vatican Council.—The first hint of Pope Pius IX.'s intention to convoke an Ecumenical Council seems to date from 6 Dec. 1864, and a little later all the Cardinals resident in Rome were invited to send in their written opinion upon the proposal. The majority favoured it, but a few feared political complications. Only two of the twenty-one, when speaking of the purposes to be served by such an assembly, made any reference to a definition of Papal infallibility (Granderath, *Gesch.* i. 44). The matter being further brought to the notice of a select number of bishops in all parts of Europe, together with certain Catholic Orientals, an almost unanimous reply was received in favour of the scheme. The motive principally insisted on was the dangerous and subversive nature of much modern religious teaching, which rendered it desirable to emphasize the powers inherent in the Holy See as against the Gallican and Erastian tendencies of the times. In 1868, accordingly, a bull was issued convoking the Council for 8 Dec. 1869. A special Congregation of Cardinals had already been appointed to prepare the topics to be discussed and pronounced upon, and, in subordination to this, five separate subcommittees, or 'commissions,' were created to deal with (i.) Doctrine, (ii.) Discipline, (iii.) the Regulars (*i.e.* Monks and Nuns), (iv.) the Oriental Churches and Foreign Missions, and (v.) Politico-ecclesiastical questions. Considerable uneasiness was aroused in circles of Gallican sympathy by the strong Ultramontane bias of many of the preliminary arrangements. The selection of consultors invited to sit on the commissions—a selection which excluded such scholars as Döllinger and von Schulte—evoked protest from many moderate men, *e.g.* from Cardinal von Schwartzenberg, Archbishop of Prague.

The endorsement by the *Civiltà Cattolica*, 6 Feb. 1868, of a wish, attributed to many influential French Catholics, that the definition of Papal infallibility might be carried by acclamation, was taken to indicate the mind, not only of the Jesuits, but of Pius IX. himself. The occasion was used by Döllinger to publish five articles anonymously in the *AZ* of Augsburg, in which the main purpose of the forthcoming Council was assumed to be the definition of the Pope's infallibility, and the doctrine was attacked on historical grounds. The articles were reprinted under the pseudonym of 'Janus,' and were widely read outside Germany. Other publications, deprecating a pronouncement in favour of infallibility, were issued by Mgr. Maret, titular Archbishop of Sura, and Mgr. Dupanloup, Bishop of Orleans.

The Papal constitution *Multiplices inter* of 27 Nov. 1869, determining the procedure of the Council and affirming the Pope's exclusive right to decide what matters should be submitted for discussion, also gave considerable dissatisfaction; and, when the known opponents of the proposed definition were systematically excluded from the 'deputations' and from other sub-committees appointed in the Council, it became clear that the infallibilists, secure in their overwhelming majority, intended to carry things with a high hand. They were, moreover, better organized, more nearly unanimous, and more energetic than their opponents, who, from the fact that the objection was, in the case of the greater number, one of expediency, not of principle, lacked cohesion, and were far from presenting a united front. Even those who most pressed the historical difficulty knew that it was largely founded on a series of highly debatable incidents about which we have no clear information. That the opponents of the definition were sincere when almost all described themselves as 'inopportunists' rather than anti-infallibilists may be inferred from their subsequent submission, and may be illustrated from the famous letter of Newman to the Bishop of Birmingham, which, made public through an indiscretion, showed upon the face of it that it was written to his bishop in absolute candour. Herein, at the very time that he describes the projected definition as the work of 'an aggressive insolent faction,' he remarks: 'When we are all at rest and have no doubts, and —at least practically, not to say doctrinally—hold the Holy Father to be infallible, suddenly there is thunder in the clear sky,' etc.; while, again, the conclusion of the letter makes it manifest that the writer had no intention of doing otherwise than loyally to accept the definition, if it were pronounced (see *Collectio Lacensis*, vii. 1513). On the other hand, Manning (not then a Cardinal) seems to have been the chief and most energetic of the organizers of the movement within the Council to press forward the definition as a matter of the utmost urgency(see Granderath, *Gesch.* ii. 69, 73), and he himself made no secret of the policy of the committee organized by him, to exclude from the *deputatio de fide* every name known to be adverse to the definition. This, however, was the work of a section, who were carrying through a plan of campaign on constitutional lines. It was not the work of the Pope or the Curia (cf. Friedrich, *Gesch.* iii. 175).

The first two public 'sessions' of the Vatican Council transacted only formal business (8 Dec. 1869, and 6 Jan. 1870); but previously to the third session, which took place on Low-Sunday (24 Apr.) 1870, a considerable amount of work was done, and the *Constitutio dogmatica de Fide Catholica* was then passed unanimously. It consists of a prologue and four chapters—(i.) of God the Creator of all things, (ii.) of Revelation, (iii.) of Faith, and (iv.) of Faith and Reason—followed by 18 canons which sum up the principal points defined, and subject the contrary propositions to anathema. The errors so condemned included some of the fundamental conceptions of Pantheism, Naturalism, and Rationalism; for example, canon 4 of (i.) runs thus:

'If any one shall say that finite things, both corporeal and spiritual, or at least spiritual, have emanated from the Divine substance, or that the Divine essence, by the manifestation or evolution of itself, becomes all things; or, lastly, that God is universal or indefinite being, which, by determining itself, constitutes the universality of things, distinct according to genus, species, and individuals: let him be anathema.'

Again, in ch. ii. the Council, developing somewhat the doctrine defined at Trent (sess. iv.), declares that:

'The books of the Old and New Testament [as enumerated by the Council of Trent] are to be received as sacred and canonical, in their integrity, with all their parts . . . not because, having been carefully composed by mere human industry, they were afterwards approved by her [the Church's] authority, or merely because they contain revelation, with no admixture of error; but because, having been written by the inspiration of the Holy Ghost, they have God for their author, and have been delivered as such to the Church herself.'

It is to be noted also that, contrary to the usage

of earlier General Councils, the Vatican decrees are formally issued, not in the name of the Ecumenical Synod, but 'in the name of the Supreme Pontiff, with the bishops of the whole world assembled round us and judging with us.' An amendment, proposing to add the word *definientibus* to the *sedentibus Nobiscum et judicantibus universi orbis episcopis* of the decree, was rejected after a somewhat heated discussion.

Twenty of the general congregations (10th to 29th) which preceded the third session were given up to questions of disciplinary reform, the most interesting of which was perhaps the proposal to draw up one form of elementary catechism, the use of which should be obligatory throughout the whole Church. But this, like other disciplinary schemes, came to nothing, owing to the premature termination of the Council. Much time was, however, wasted in debate, and the Papal ordinance of 20 Feb. 1870, for abbreviating the discussions and introducing a form of closure, despite the violent protests it elicited from the minority, was really a necessary measure.

By this time, however, the energetic agitation of Manning, Sénestrey, and other leading infallibilists, resulting, for example, in a petition for the definition, signed by 480 of the Fathers, had pushed matters so far that the subject could not be shelved. Originally the question of Papal infallibility had not formed part of the proposed decree 'on the Church of Christ' (see *Coll. Lacensis*, vii. 567–578), but it was later on added to the *schema*, and became the subject of the liveliest controversy. The Cardinal Presidents in the general congregations opposed rather than favoured the efforts to declare this discussion urgent, but they yielded eventually to the agitation headed by Manning and Sénestrey (Granderath, *Gesch.* iii. 270). Fourteen sittings were devoted to the infallibility question in general, and sixty-four speeches were delivered before the closure was applied. Thirteen other sittings and fifty-seven speeches were devoted to amendments. Finally, when the vote was taken (13 July 1870), of 601 Fathers present 450 voted *placet*, 88 *non placet*, and 62 *placet juxta modum*. Throughout the debate not more than three or four speakers had openly expressed disbelief in the doctrine itself; the minority, as a rule, contested only the opportuneness of defining it.

Before the public session, 18 July 1870, many of the minority left Rome. Of the 535 Fathers present only two voted *non placet*. The whole decree *de Ecclesia Christi*, like its predecessor, consists of four chapters. Ch. i. concerns the Apostolic primacy of St. Peter, ch. ii. the perpetuity of the primacy in the Roman pontiffs, ch. iii. the powers and nature of the primacy, and ch. iv. the infallible teaching of the Holy See. The kernel of the doctrine thus set forth is expressed in the terms quoted above, in art. CONFESSIONS, vol. iii. p. 842.

Owing to the heat of summer and the outbreak of the Franco-Prussian War, fewer than 200 Fathers stayed on in Rome. Some further discussions on matters of discipline took place, but the occupation of Rome by the Piedmontese troops occurred soon afterwards, and on 20 Oct. 1870, Pope Pius IX. formally prorogued the assembly.

Severe criticisms have been directed by many Old Catholic and other writers (cf. *e.g.* Littledale, art. 'Vatican Council,' in *EBr*[9]) against the procedure followed in the Vatican Council, more especially with regard to the infallibility definition. It has been urged that the minority were coerced into a simulated acceptance of the decrees, that the assembly was not representative, that the majority was largely formed of Italian, missionary, or titular bishops, who came without mandate from any appreciable body of the faithful,[1] that free discussion was not permitted, etc. There is no doubt foundation for some of these objections, but the facts remain that, owing to the facility of locomotion, the assembly was not less, but immensely more, representative of the Catholic episcopate than any of its predecessors; that the vast majority were whole-hearted in favour of the definition; that in no Council of the Church has it ever been the custom to attach weight to the suffrages of the bishops in proportion to the population of the dioceses they represented; that the greater part of the opposition, whether sincerely or not, had from the beginning styled itself 'inopportunist,' not anti-infallibilist, and so forth. No special pleading can disguise the fact that the subsequent action of the faithful at large has as completely justified the Fathers of the Vatican as the subsequent action of the faithful justified the Fathers of Nicæa or Chalcedon. If the inopportunist bishops made their submission, as they all did without exception, we may assume that either they followed the dictates of their conscience in so doing, or else they were convinced that their flocks would not support them in any act of schism. Whether we hold that the ultimate appeal lies to the collective voice of the bishops or to the sense of the great body of the faithful, the definition in either case, from the point of view of the Roman Church, is fully justified. The sensitiveness to the rights of minorities displayed by the critics of the Council is, after all, a thing of modern growth. Any alleged high-handedness or irregularity of procedure at the Vatican could probably be paralleled many times over in the history of earlier Councils. No view of the Divine constitution of the Church has ever regarded the assistance of the Holy Spirit as promised only to the learned few in any episcopal assembly, while the plea that the minority had not been able to make their objections heard, after all the discussions on the spot, and after the sensation caused, long months before, by the writings of Döllinger, Dupanloup, and others, cannot be treated seriously.

[1] It has been pointed out, for example, that Mgr. Darboy (inopportunist), Archbishop of Paris, represented 2,000,000 people, while 65 bishops came from the States of the Church with a population of less than 1,000,000. But statistics of this kind are plainly most fallacious. The 2,000,000 of the diocese of Paris include the hordes of the Commune who twelve months later became masters of the city, imprisoned the Archbishop, and condemned him to death. It would be as reasonable to argue that Manning represented the six millions of London and the adjacent counties comprised in his diocese.

4. **Councils other than Ecumenical.**—Upon the plenary Councils, provincial Councils, and diocesan Synods of this period, little need be said. Although elaborate disciplinary regulations aiming at the correction of abuses among both clergy and people were passed in such Councils as those of Mainz (1451), Sens, or, more correctly, Paris (1528), Cologne (1536 and 1549), and Augsburg (1548), still the political disturbances of the times, and the moral anarchy which almost necessarily follows in the wake of a fundamental change in religion, stood in the way of any lasting improvement. It was to the Council of Trent that men's eyes were turned (not altogether in vain) to inaugurate a new era, and the annual diocesan Synods and triennial provincial Councils, which in many places (*e.g.* at Milan under St. Charles Borromeo) were convoked in strict obedience to the Tridentine decrees (sess. xxiv. *de Reform.* cap. 2), undoubtedly helped greatly to turn the Council's measures of reform to practical account. But under Pope Sixtus V. the important Papal constitution *Immensa* (22 June 1589) profoundly modified the conditions which affected the legislation of these provincial Synods. It was now required that the decrees of provincial (though not diocesan) Synods must be submitted to a Roman Congregation, and could be promulgated only after correction, and subject to the modifications, or even the additions, of the congregation in question. This measure, which was made the ground of animated protest at the Vatican Council (see Granderath, ii. 179 ff.), has greatly furthered the centralizing tendencies at work in the Church of Rome during the last three centuries, but it has also much diminished the importance of provincial synods, now practically deprived of their independence. The same cause was probably not without its effect in bringing about the almost entire neglect of such Councils during the 17th and 18th centuries. In comparatively modern times—possibly as a result of the religious reaction which followed upon the French Revolution—a renewed energy began to make itself felt in convoking these assemblies. In France, for example, in the year 1849 Provincial Councils were

held at Paris, Rheims, Tours, and Avignon; and in 1850 at Albi, Lyons, Rouen, Bordeaux, Sens, Aix, Toulouse, and Bourges. In Central Europe there were provincial Councils at Vienna (1858), Gran (1858), Cologne (1860), Prague (1860), Kalocsa (1863), etc. In the United States six bishops assisted at the first Provincial Council of Baltimore (1829), but at the first Plenary Council, which met at Baltimore in 1852, the presence of six archbishops and twenty-six bishops marked the developments of Roman Catholicism in the New World. In England four Provincial Councils have been held since the restoration of the hierarchy, viz. in 1852, 1853, 1859, and 1873.

Historically speaking, apart from the Vatican Council, interest during the last three hundred years has centred chiefly in conventions of a rather unorthodox character. Such, for example, was the Gallican Assembly of the clergy summoned by Louis XIV. (1681–1682), which drew up the famous four Gallican Articles: (1) denying any jurisdiction of the Pope over the royal authority in temporal matters; (2) declaring the Pope to be inferior to a General Council; (3) limiting the exercise of the Papal prerogative by the Conciliary decrees and by the customs of the Gallican Church; and (4) affirming that the Pope's definitions, even in matters of faith, become irreformable only when confirmed by the consent of the whole Church, Louis XIV. imposed the teaching of these Articles upon the clergy throughout his dominions; but, in the face of uncompromising Papal opposition, he eventually withdrew them in 1693.

Very similar was the spirit which, growing out of the 'Febronianism,' or 'Josephism,' current in Germany in the 18th cent., manifested itself at the so-called Synod of Pistoia (1786). The Synod was convened by Scipio Ricci, Bishop of Pistoia-Prato, at the instigation of Ludolph, Grand Duke of Tuscany; and it passed a long array of decrees on points of canon law, ceremonial, the rights of the secular authority in religious matters, etc. —all very Gallican and Jansenistic in spirit. Pius VI., in the bull *Auctorem fidei* (1794), condemned 85 propositions of the Synod of Pistoia; and Ricci, in 1799, and again in 1803, made humble submission to the censure thus passed.

LITERATURE.—i. *GENERAL.*—Most of the great collections of the Councils, *e.g.* those of Mansi, Hardouin, Labbe and Cossart, etc., have already been mentioned. It may be noticed, as the contrary has been implied in a printed advertisement emanating from the publisher himself, that at the date of writing (Oct. 1910), the volume of indexes long ago promised as vol. xxxvi. in the facsimile reprint of Mansi has not yet appeared. On the Canon Law of Councils, see Wernz, *Jus Decretalium*, Rome, 1906, ii. 22, 720 ff.; P. Hinschius, *System des kathol. Kirchenrechts*, Berlin, 1869, iii. 333 ff. Upon the relations between Pope and Council, see J. Turmel, *Hist. de la théol. positive du Concile de Trente au Concile du Vatican*, Paris, 1904, pp. 300–405.

ii. *FIFTEENTH CENTURY COUNCILS.*—Hefele-Hergenröther, *Conciliengesch.*, Freiburg im B. 1887–1890, vii. viii. ix.; Haller, and others, *Concil. Basiliense, Studien und Quellen*, vols. i.–v., Basel, 1896–1904; H. Finke, *Acta Concil. Constanc.*, Münster, 1896 (only one volume published); H. v. d. Hardt, *Magnum œcum. Constant. Concilium*, 6 vols., Frankfort and Leipzig, 1697–1700; *Monumenta Concil. General. Sæc. XV.*, published by the Vienna Academy, 3 vols., Vienna, 1857–1896; J. Haller, *Papsttum und Kirchenreform*, vol. i., Berlin, 1903; F. P. Bliemetzrieder, *Das Generalkonzil im grossen abendländ. Schisma*, Paderborn, 1904; L. Pastor, *Gesch. der Päpste*, vols. i. and ii.[4], Freiburg, 1904; M. Creighton, *History of the Papacy from the Great Schism*, i.–ii.[2], London, 1897; H. Finke, *Forsch. u. Quellen z. Gesch. d. Konst. Konzils*, Paderborn, 1889; L. Salembier, *Le grand schisme d'Occident*[2], Paris, 1900 (Eng. tr. 1908); N. Valois, *La France et le gr. schisme d'Occid.*, 4 vols., Paris, 1896–1902; V. Vanoutelli, *Il Concilio di Firenze*, Florence, 1899; J. H. Wylie, *Council of Constance to the Death of John Hus*, London, 1900.

iii. *COUNCIL OF TRENT.*—F. Baguenault de Puchesse, *Hist. du Conc. de Trente*, Paris, 1870 [still the best general view in small compass]; A. Theiner, *Acta Genuina Conc. Trid.*, 2 vols., Zagrabiæ, 1874; *Conc. Trid. Diariorum, Actorum, Epistularum, Tractatuum nova collectio*, vol. i., ed. S. Merkle, Freiburg, 1901; vol. iv., ed. S. Ehses, Freiburg, 1904 (two other volumes of this great work, which appears under the auspices of the Görres Gesellschaft, are announced to be in the press; ten or twelve volumes are contemplated); J. Le Plat, *Monumentorum ad Hist. Conc. Trid. spectantium Collectio*, 7 vols., Louvain, 1781–1787; I. v. Döllinger, *Ungedruckte Berichte u. Tagebücher z. Gesch. d. Con. v. Tr.*, 2 vols., Nördlingen, 1876; A. v. Druffel-Brandi, *Monumenta Tridentina*, 4 vols., Munich, 1885–1897; J. Susta, *Die röm. Curie und das Con. v. Tr. unter Pius IV.*, 2 vols., Vienna, 1904–1909; T. v. Sickel, *Zur Gesch. des Concils v. Tr.*, Vienna, 1872; L. Maynier, *Étude histor. sur le Conc. de Trente*, Paris, 1874; O. Braunsberger, *Beati P. Canisii Epistulæ et Acta*, vol. iii., Freiburg, 1901; L. Pastor, *Gesch. der Päpste*, vol. v., Freiburg, 1909. The two standard histories are, of course, Sforza-Pallavicino, *Istoria del Conc. di Trento*, Rome, 1652 (3 vols., written, with access to the archives, from the official and Ultramontane standpoint); and 'Pietro Soave Polano' (Fra Paolo Sarpi), *Hist. del Conc. Trid.*[2], Venice, 1629 (conspicuously anti-Papal in tone, and often distorting facts in the interest of the writer's prejudices). J. A. Froude's *Lectures on the Council of Trent*, London, 1896, treats only of the first period of the Council, and is written without any reference to the abundant new material published within the last fifty years. *The Canons and Decrees of the Council of Trent* have been translated into English by J. Waterworth, London, 1848.

iv. *THE VATICAN COUNCIL.*—The *Acta and Decreta* of the Vatican Council, with a very large number of documents bearing upon the preliminaries of the Council and the discussions to which it gave rise, have been printed in vol. vii. of the *Collectio Lacensis*, Freiburg, 1890. The chief Histories are those of E. Cecconi, *Storia del Conc. Ecum. Vaticano*, 3 vols., Rome, 1872–1879; J. Friedrich, *Gesch. d. Vat. Koncils*, 3 vols., Bonn, 1877–1887 (this is written from the Old Catholic standpoint); T. Granderath, *Gesch. d. Vat. Konzils*, 3 vols., Freiburg, 1903–1906 (in the preparation of this work the author was afforded every facility by the Roman authorities, and it may be regarded as in some sense the official history; a French tr. is in course of publication); H. E. Manning, *The True Story of the Vatican Council*, London, 1877; cf. also E. Ollivier, *L'Église et l'état au Concile du Vatican*, 2 vols., Paris, 1879; 'Quirinus' (I. v. Döllinger), *Römische Briefe*, Munich, 1870 (a collection of critical and denunciatory letters which appeared in the *Allgemeine Zeitung*: there is an Eng. tr., London, 1870).

v. *OTHER COUNCILS.*—The principal collection is *Acta et Decreta Sacrorum Conciliorum recentiorum*, 7 vols., Freiburg, 1869–1890, but the proceedings of many of the provincial and other Synods, *e.g.* those of Baltimore, Westminster, and Maynooth, are published separately. A very famous local collection is also the *Acta Ecclesiæ Mediolanensis*, 2 vols., Milan, 1599.

HERBERT THURSTON.

COUNSELS AND PRECEPTS.—

According to the doctrine of the Catholic Church, 'precepts' are commands laid upon every Christian, obedience to which cannot be avoided without risking the loss of eternal salvation ('quae sunt necessaria ad consequendum finem aeternae beatitudinis,' Thomas Aquinas, *Summa*, II. i. qu. cviii. art. 4). 'Counsels' or 'counsels of perfection' are suggestions of very virtuous ways of living, by the following out of which a man may arrive more quickly and better at eternal life ('per quae melius et expeditius potest homo consequi finem praedictum,' *ib.*), but which he may yet refuse without incurring blame or imperilling the salvation of his soul ('consilium autem in optione ponitur ejus cui datur,' *ib.*). The 'precepts' are the new law of the gospel. 'Counsels' are something added to that law.

This formal doctrine is simply a statement of the judgment formed by the Church on Christian living—a reasonable account of certain plain phenomena which came within the view of all observers. It was obvious from the very earliest times that some men renounced more of the world's goods, honours, and pleasures than others did; accomplishing, as it seemed, a more complete dedication of their mental and bodily powers to the Lord. These were naturally thought of as living a fuller and higher kind of spiritual life. The judgment was in accord with that of St. Paul (1 Co $7^{25ff.}$), where the virgin state is reckoned superior to the married, although he that marries has not sinned.

The distinction between a higher and lower Christian life meets us in Hermas (ἐὰν δέ τι ἀγαθὸν ποιήσῃς ἐκτὸς τῆς ἐντολῆς τοῦ θεοῦ, σεαυτῷ περιποιήσῃ δόξαν περισσοτέραν καὶ ἔσῃ ἐνδοξότερος παρὰ τῷ θεῷ οὗ ἔμελλες εἶναι [*Sim.* v. 3. 3, cf. *Mand.* iv. 4. 2]); in Tertullian in greater detail (*ad Uxor.* i. 3, ii. 1, *adv. Marc.* i. 29, *de Monog.* i., *de Pudic.* 16); in Cyprian, who repeats almost the words of his 'master' ('nec hoc jubet Dominus sed hortatur; nec jugum necessitatis imponit, quando maneat voluntatis arbitrium liberum . . . carnis desideria castrantes majoris

gratiae praemium in coelestibus obtinetis' [*de Habit. Virg.* 23]); in Origen, where a new idea is introduced and a new passage of Scripture referred to ('Donec quis hoc facit tantum quod debet, id est ea quae praecepta sunt, inutilis servus est; si autem addas aliquid praeceptis, tunc jam non inutilis servus eris' [*ad Rom.* iii. 3]); in the pseudo-Clementine *Epistles to Virgins*, where there is a repetition of Hermas' teaching (*Ep. ad Virg.* i. 4); and in Methodius, who teaches, as Tertullian does, the lawfulness of marriage, but the superior sanctity of the virgin state (*Conviv.* iii. 13, 14).

The rise of Monasticism gave a new importance to the distinction between a higher and lower Christian life. Hitherto the contrast between the most obviously ascetic and the most naturally human kinds of life had been plain but less striking, less clamorous for reasoned expression, than it was when the whole Church became aware of the supreme self-denial of St. Anthony and his followers. The drift of crowds of nominal Christians into the Church, which followed the conversion of Constantine, tending, as it did, towards a relaxation of the earlier strictness and a lowering of the general standard of Christian living, still further emphasized the distinction, and made the formulating of a theory of Christian life which would cover all the observed facts an absolute necessity. It is noticeable that the early monks themselves neither elaborated nor seemed conscious of the theory that their lives were the following out of counsels of a higher way and transcended the obedience to the commands obligatory on all Christians. It was St. Ambrose who explained their position for them, and formulated more clearly than any of his predecessors the doctrine of 'counsels' and 'precepts':

'Officium autem omne aut medium aut perfectum est, quod aeque Scripturarum auctoritate probare possumus. Habemus etenim in Evangelio dixisse Dominum: Si vis in vitam aeternam venire, serva mandata. Dixit ille: quae?' etc., following Mt $19^{17\text{-}19}$, adding 'Haec sunt media officia, quibus aliquid deest. Denique dicit illi adolescens: Omnia haec custodivi,' etc., following vv.$^{20.\ 21}$, adding, 'Hoc est igitur perfectum officium' (*de Offic. Min.* i. xi.). Here for the first time in this connexion the passage which afterwards became a standard proof of the doctrine is quoted from St. Matthew (see also, for St. Ambrose's statement of the doctrine, *de Vid.* xii.). The use of the expressions 'medium' and 'perfectum officium' suggests that St. Ambrose felt the influence of Stoic philosophy. St. Augustine, in his *Enchiridion* (121) and elsewhere, and St. Jerome (*adv. Jovin.* i. 12), teach as St. Ambrose does.

So far the doctrine of the distinction between 'counsels' and 'precepts' appears to have been quite a natural and probably an inevitable explanation of observed fact. The way of Christ was a way of renunciation. It is thus that He Himself sets it forth when He demands absolute poverty (Mt $19^{17\text{ff.}}$) and recognizes virginity persisted in for the Kingdom of Heaven's sake (v.^{12}). It was obvious that some Christians accomplished a more complete renunciation than others. Yet the general conscience of the Church refused to count blameworthy those who renounced less. It followed that the life of more perfect renunciation was a higher kind of life voluntarily entered upon by those who were ambitious of perfection. It is probable that the doctrine thus enunciated by St. Ambrose and St. Augustine was wholesome for the Church. There was continually set before men a very lofty kind of life, and this was recognized as worthy of peculiar praise on earth and as inheriting a great reward in heaven.

The doctrine of 'counsels' and 'precepts' was worked out by the Schoolmen, and made to serve a purpose which was not conducive to spiritual life in the Church. As the power of the Church to remit the temporal and purgatorial punishments of sin came to be more and more insisted on, the need was felt of a theory which should justify the power claimed and ultimately make less hopelessly unintelligible the distribution of indulgences. The existence of a treasury of merits ('thesaurus meritorum' [Ps.-Clem. vi.; *Unigenitus Dei Filius*, 1343]) was supposed; and it was placed at the disposal of the head of the Church for distribution. This treasury was filled with the infinite merits of Christ and the superfluous merits of those who, by following the counsels of perfection, had done more than was required (*opera supererogationis*) for their own salvation. ('In operibus poenitentiae supererogaverunt ad mensuram debitorum suorum, et multi etiam tribulationes injustas sustinuerunt patienter, per quas multitudo poenarum poterat expiari si eis deberetur,' Thomas Aq. *Summa*, suppl. qu. xxv. art. 1). In the end the conscience of the Church was shocked, and the Reformation precipitated, by the shameless sale of these indulgences. Luther and his fellow-Reformers, in attacking the traffic, traced it back first to the theory of a 'treasury of merits' and then to the doctrine of 'counsels' and 'precepts' (Luther, *Werke*, Erlangen edition, 1826–57, lx. 256, v. 216, iv. 451; *Articuli Smalcaldici*, iii. 3, 39). It is plain, however, that, although the existence of the 'treasury of merits' was logically deducible from the doctrine of 'counsels' and 'precepts,' the deduction need never have been made. The Schoolmen might have stopped short of it; probably would never have thought of making it but for the necessity of completing and strengthening the doctrine of the remission of penalties. Also the Reformers might have recognized as justifiable and inevitable the original distinction between counsels of perfection and obligatory precepts. Their position probably would have been stronger if they had.

In another way also the doctrine of 'counsels' and 'precepts,' as elaborated by the Schoolmen, militated against spirituality, viz. by lowering the general tone of the Christian life. The harder sayings of our Lord, especially those in the Sermon on the Mount, came to be reckoned as 'counsels,' and so removed from the life ideals of ordinary men. Thus among the 'counsels,' ordinarily reckoned as twelve, are to be found: loving our enemies, giving alms not only from our superfluity, not swearing without necessity, and so on (see H. Lämmer, *Die vortrident. kath. Theol.*, Berl. 1858, p. 171 ff.). It is inevitable that at periods of low spiritual vitality there will be a tendency to transfer into the catalogue of counsels of perfection duties which make very high demands on devotion, in communities where the Catholic doctrine is fully accepted. This constitutes a serious danger and a real objection to the doctrine.

The Protestant theologians denied that there was any choice given to man between a higher and a lower kind of Christian life. The fundamental command to love the Lord with all the heart was binding upon all, and, as there was no possibility of doing more than this, so every failure to attain to the fullness of such love was sin (Luther, xiv. 35). Cases like that of the young man in the Gospel who was bidden to sell all and follow Christ (Mt $19^{17\text{ff.}}$) were met by the assumption that the command in such cases was to an individual, absolutely binding on that individual under pain of the sin of definite and deliberate disobedience; but, having nothing to do, either as a suggestion of higher perfection or as an example of eminent virtue, with those to whom such a personal command was not given. This was Wyclif's position ('omne consilium Christi obligat quemcunque ipso consultum'). It ignored the distinction (made, however, only in Mt., not in the parallel passages) between 'if thou wilt enter into life' and 'if thou wilt be perfect.' This theory that a 'counsel' was simply a precept given to an individual—according to Wyclif only to an 'heroic' individual—was modified by the later Reformers; and 'counsels' came to be considered as means suggested to certain individuals whereby they might fulfil the com-

mandments of which the 'counsels' seemed to be refinements. Sometimes for these particular individuals the 'counsel' was the *only* means by which the original commandment could be fulfilled at all. Luther, opposing Eck, says that 'counsels' are not 'supra' but 'infra praecepta'; because they are only means of conveniently fulfilling commandments. Thus virginity is not a counsel to be adopted at will or refused. It is a means, perhaps for some the only means, of fulfilling the law of chastity. To such individuals it is evident that to refrain from marriage is a precept, absolutely obligatory. To the others it is not a counsel of perfection, since, being able in the married state to observe the law of chastity, there is nothing to be gained by renouncing marriage (Luther, *de Votis Monasticis*, viii. 583, 30 ff.).

The result of the Protestant theory is a reversal of the previous judgment of the Christian conscience about those who follow the evangelic 'counsels.' A life of virginity or of voluntary poverty ought no longer to be considered a very eminent kind of devotion. It is a confession of weakness, an absolutely less perfect way of following Christ than that of the ordinary citizen of the world. In comparison with the old Catholic judgment that the way of greater renunciation is the way of nobler devotion, the Protestant view appears strained, and is not in accordance with the voice of the general conscience. It is not possible to alter the judgment of the common man's conscience so as to bring it into line with the deductions which theological thinkers make from the positions forced upon them by their polemics. In spite of their theory, Protestants still continue to regard as peculiarly admirable the lives of those who have sacrificed wealth, honour, or bodily desire for the sake of Christ (for full discussion of this fact see Append. III. of J. O. Hannay's *Spirit and Origin of Christian Monasticism*, 1903). It is, however, to be observed that the Protestant theologian's denial of special honour to lives of complete renunciation has had a certain effect. Protestantism is less rich than Catholicism in examples of heroic Christianity. The general tendency of Protestantism has been to raise to a high level the common Christian life and to develop certain virtues of a kind suitable to the lives of citizens. It has not made for, and, except in comparatively rare instances, has not achieved, the production of unique saints, like, for example, St. Francis of Assisi, whose devotion lays hold upon the popular imagination. This failure must be attributed to the denial of the doctrine of 'counsels' and 'precepts,' and the consequent unwillingness of Protestant teachers to hold up for admiration lives which must always be rare, and are never imitable except by those who realize the peculiar glory of very great kinds of renunciation.

Further, it has happened that certain evangelic sayings, regarded by the Schoolmen as counsels of perfection, have, in times of high religious vitality, laid hold of the consciences of earnest Protestants and compelled obedience. Thus, during the 17th cent. in England, our Lord's teaching about the non-resistance of evil fascinated the early Quakers. In a Catholic community their kind of life would have been recognized as a following of a counsel of perfection, and they might very well have become an Order within the Church. The refusal of Protestants to recognize the distinction between 'counsels' and 'precepts' had a double effect. It forced the Quakers, who in this matter thought as Protestants, to defend their literal obedience to the commands of Christ as the only way of following Christ. It obliged those Christians whose consciences did not forbid them to use force in self-protection or in the interests of society, to condemn the position of the Quakers as fantastic, exaggerated, and definitely wrong. The same sort of thing happened in Germany and Flanders at the time of the Anabaptist protest against the possession of private property; and less strikingly in other similar cases (see J. O. Hannay, *op. cit.* ch. i.). The greater and more fully organized Protestant Churches have thus been deprived of the services of many very enthusiastic men and women who might have been most valuable in deepening the spirituality of the general life; and the teachers of these Churches have been obliged to read glosses into certain passages of Scripture, notably certain passages of the Sermon on the Mount, in such a way as to obscure their plain meaning and weaken their original force.

It appears, therefore, that in formulating the doctrine of 'counsels' and 'precepts' the Catholic Church did no more than endorse and give scientific expression to the natural and obvious judgment of conscience which recognized in the life of great renunciation a peculiarly high kind of life; that by formulating the doctrine the Church ran the risk of deductions being made from it which would in the end outrage, and actually have outraged, the consciences of sincere believers; and the further risk of the list of 'counsels' being enlarged and that of 'precepts' diminished, until the common man's standard of life was seriously lowered. It appears also that Protestant theologians, in refusing to endorse the natural judgments of conscience, have not succeeded, in fact, in preventing such judgments being made by their followers, but have deprived Protestants of an incentive to a lofty kind of life; and have risked, and actually suffered, the loss to organized Protestant Churches of souls who have felt the need of heroic self-sacrifice for the sake of Christ.

LITERATURE.—Works cited in text, and J. Schwane, *De operibus supererogatoriis et consiliis Evangelicis*, Münst. 1868; K. Thieme, art. 'Consilia Evangelica,' in *PRE*[3], vol. iv.; R. Rothe, *Theol. JAMES O. HANNAY.

COURAGE.—Courage has figured as one of the prominent virtues in every ethical system. Yet it has from early times given trouble to scientific moralists, because it seems at first sight compatible with an utterly worthless or vicious character. This is, however, only the case where it is identified with fearlessness (*q.v.*). Absence of fear in physical danger may be the result of temperament and so contain no moral element at all, while a certain dread of moral evil is not exclusive of courage as usually understood. Thus the Greek philosophers discerned that, to gain an accurate notion of courage, it was necessary to define things worthy or unworthy of fear.

In some of Plato's Dialogues, notably the *Laches* and the *Protagoras*, we are made to see the difficulty of finding a place for courage in any system which recognizes the paramount position of wisdom or knowledge in moral life, since not only do brute beasts show spirit and endurance in combat, but the conduct of men in vigorous military efforts loses the merit of courage if prudence suggests that the forces are adequate to the occasion. In the *Republic*, however (bk. iv. 429 f.), Plato distinctly lays down the principle that the Guardians of the City (in whom the virtue of courage principally resides) must acquire that quality by a sound training in the nature of things to be feared and of things not to be feared.

Aristotle, in bk. iii. of the *Nic. Ethics*, submits the whole subject to a searching analysis. According to his principle of the Mean, courage lies between rashness on the one hand and cowardice on the other. As fear, the foreboding of evil, is not

altogether to be disparaged, Aristotle, like Plato, has to distinguish legitimate from illegitimate fears, and finds that courage exists where danger is despised from a noble motive—from preference of that which is most honourable. He subsequently distinguishes real courage from five spurious forms: (1) that which is induced by respect for authority, or for opinion; (2) that which comes from knowledge that the danger apprehended is not real; (3) courage arising solely from emotion—anger or vengeance—which man shares with some animals; (4) the courage of a hopeful temperament; (5) the courage of ignorance which cannot recognize danger. It may, perhaps, be said that this distinction between genuine and spurious courage corresponds for the most part to the modern distinction between moral courage and that which is purely physical.

Although Aristotle in his general treatment of courage seems somewhat nearer to the modern ideas than Plato, in one respect Plato would seem to us more satisfactory; he includes in courage the power and will to resist evil generally, or to bear calamity without flinching; whereas Aristotle would restrict the term to its primary military significance, regarding other meanings as derivative or metaphorical. Certainly it seems illogical to refuse the epithet of 'courageous' to a man who is not alarmed but stands to his duty in a shipwreck or an earthquake, while allowing it to one who behaves in like manner during the attack on a city.

Courage thus held its place with the three other virtues—wisdom, justice, temperance—in the system of Greece and Rome. These 'cardinal' virtues were combined with the three Christian graces of faith, hope, and charity, to form the seven virtues inculcated in the Christian morality of the Middle Ages. Yet in the new atmosphere, courage—or fortitude, as it is commonly called in this connexion—underwent some transmutation. St. Ambrose—who derived his ethical system from the Greeks *via* Cicero, and passed it on to St. Augustine, and through him to the Western world—would make fortitude include boldness in withstanding temptations to sin. To a certain extent, he agrees here with Plato. But he also dwells much on heroic endurance of physical suffering as shown by the Christian martyrs. It would seem probable that the martyr-cult must have tended in the direction of emphasizing the passive side of courage or fortitude, by which it is assimilated to patience or resignation.

The Christian idea of fortitude is expressed in many admirable works of mediæval art. Many readers will recall Ruskin's remarks on the Fortitude of Botticelli (*Mornings in Florence*, iii.):

'Botticelli's Fortitude is no match, it may be, for any that are coming. Worn, somewhat; and not a little weary, instead of standing ready for all comers, she is sitting, apparently in reverie, her fingers playing restlessly and idly—nay, I think, even nervously, about the hilt of her sword . . . and yet, how swiftly and gladly will they close on it, when the far-off trumpet blows, which she will hear through all her reverie.'

It may be noticed that by mediæval Christian moralists fortitude is regarded as the corrective of *accidie* (*q.v.*), the sin of gloom and inaction. It seems thus to contain necessarily an element of cheerfulness, a resolution to live in an atmosphere of hope.

Perhaps there are few virtues that have varied more than courage in their manifestations among different peoples and at different times. There is always an æsthetic, as well as a purely moral element in the conception of courage, and human notions vary even more about the beautiful than about the good. Thus, during the age of chivalry in the West, the maturer civilization of the East looked on the aggressive, unreasoning courage of the Crusaders as crude and barbarous, while the knightly spirit of the Franks despised Eastern subtlety as mean and cowardly. Non-military times call for the exercise of patience more than for that of intrepidity,—though both are essential to the well-being of any people,—and there is occasionally cause for fear lest a comparative contempt for merely physical courage, or 'spirit,' may bring about general slackness of effort. On the whole, however, the actively combative powers are likely to retain their importance in popular esteem.

There is one kind of courage which seems especially to belong to a highly civilized society—intellectual courage. By this is to be understood the power and determination to follow loyally and reasonably one's own beliefs and principles, irrespective not only of the disapproval of neighbours, but also of painful disturbance in one's own mind. The abandonment of an intellectual position, which has been reached by honest effort, for fear of the further efforts which may be required to reconstitute one's theories in the light of new knowledge, is a cowardly proceeding, and ought to receive more reprobation than it commonly incurs.

Of cowardice (*ignavia*) as the opposite of courage, little need be said. It is commonly due to constitutional timidity not checked by habits of self-control, or to a selfish propensity to exaggerate the importance of personal dangers and risks; or, again, to a want of appreciation of ideals worthy of risk on the part of those who desire to attain them.

COUVADE.—See BIRTH.

COVENANT.—**1. Introduction.**—A covenant is a bond or agreement entered into between two persons or groups of persons, or between a man or a group of men and a god or gods. The covenant thus entered upon may be for a specified time, or for all time; it may cover certain clearly-defined purposes, or it may be indefinite. The covenant state is usually produced, or—at a later time—symbolized, by artificial means: eating or drinking together; drinking, or being inoculated with, one another's blood; or by exchange of names or of articles belonging to the covenanting parties. The relation produced by the covenant, as well as the real intention of these ritual acts, is still in debate. According to some writers, the covenant produces kinship and introduces the stranger into the clan which now adopts him.

'He who has drunk a clansman's blood is no longer a stranger but a brother, and included in the mystic circle of those who have a share in the life-blood that is common to all the clan' (W. R. Smith, p. 315; cf. Hartland, *LP* ii. 237).

This is regarded as the primitive purpose of the covenant, and, moreover,

'if the individual kinsman made a blood-covenant with a stranger, the whole of each tribe was bound thereby,' while 'the original form of alliance . . . was always and necessarily between clans, not between individuals' (Jevons, *Introd. to Hist. of Religion*, 99, 142).

The actual evidence hardly supports these views, nor does the covenant producing kinship appear among the lowest races. Generally the covenant is an engagement between individuals, between representatives, or between tribes; but there is hardly ever produced kinship or blood-relationship. Hence another theory maintains that the covenant relationship is that of the identity of individuals, who are mutually inoculated by cer-

tain ritual actions of which the blood-covenant is a well-known, though probably a late, instance. There is produced identity of aims and interests, as well as mutual agreement and sympathy.

'Each has a part of the other in his keeping, and this part not only assimilates each to the other by transmission of properties, but is a pledge, deposit, and hostage. Thus identity of interests is secured, and the possibility of mutual treachery or wrong is prevented, not only by the fact that injury done to B by A is equivalent to injury done by A to himself, but also by the fact that, if B is wronged, he may work vengeance by injuring . . . the part of A which he possesses' (Crawley, *Mystic Rose*, 237).

Without laying too much stress on the latter part of this theory, it is certain that the covenant-relationship as one of identity fits the facts better than as one of kinship. Yet it may be observed that, if the covenant produces identity of aims and interests, since the aims and interests of the individual are largely those of his kin, the covenant state will so far produce a kinship relation. But, as a third theory, it is maintained that the ritual act (eating together, transfusion of blood, etc.), while it involves the parties to the covenant in certain duties to each other, 'serves as a conductor of conditional imprecations,' of potential punishments for the transgression of these duties (Westermarck, *Moral Ideas*, i. 590, ii. 208; art. CURSING AND BLESSING, p. 369[b], below).

Frequently the parties to a covenant take an oath to keep it, or execrate vengeance on each other if it is broken. And, as many examples show, the food, drink, blood, etc., is itself the oath or curse, or is the vehicle of either. Thus, in Madagascar, the oath-takers pray that the liquid may poison him who is faithless to the bond (Dumont d'Urville, *Voy. pittoresque autour du monde*, Paris, 1834–1835, i. 81). Or, as in Morocco, a compact of friendship is sealed by eating together at the tomb of a saint, and, according to the phrase used, 'the food will repay' him who breaks the compact (Westermarck, i. 587; cf. below, p. 369[b]).

Examples show now the working of the principle contained in one of these theories, now that involved in the others, but the kinship theory is seldom observed in the complete form which the theory itself presupposes. It is not impossible that the primitive covenant contained both the idea of mutual identity and that of a conditional curse, for the two are not mutually exclusive, as various examples suggest. But it should not be forgotten that the covenant frequently implies no more than faithfulness to the object of the covenant, without any thought of its producing identity of persons, of aims, or of interests, much less of kinship.

2. Covenants between men.—Of all the various outward signs of the covenant, that to which most attention has been drawn is that each party to it *drinks or is inoculated with the other's blood, or that they smear each other or some sacred object with it.* Where the parties to the covenant form two groups, selected individuals undergo the ceremony, which usually forms an indissoluble bond (see BLOOD; BROTHERHOOD [artificial], and works cited there). Probably the idea that kinship means blood-relationship—a relationship which can be produced by the blood-covenant—is not primitive. More primitive is the idea that contact, eating and drinking together, exchange of names, garments, weapons, and the like, will produce a close bond, whether involving identity or relationship, between two unrelated persons. Here the underlying ideas are that the whole adheres in the part, that whatever has been in contact with a person, whatever is his, is for all practical purposes himself; that for another to obtain possession of it brings the owner under his control; hence to offer it to another is in effect to offer oneself. Thus mutual eating, especially where the food is exchanged, or the mutual exchange of common possessions, makes men entirely dependent upon each other, makes their aims and interests the same, or produces identity or, according to the first theory, kinship. Here, primitively, the act of eating or exchange is itself the covenant, but the food or articles exchanged are also seen to be vehicles of conditional oaths or curses verbally pronounced. At the same time, witnesses human or Divine may be called to the compact which has been made. The purposes for which a covenant is entered upon are, *e.g.*, friendship and comradeship between individuals; the adoption of a stranger into a kin-group; mutual aid and protection—assistance in war, in revenge, or in some hostile purpose; peace between tribes after war; commercial purposes; union between the members of a society or association, usually at the time of initiation into it, etc. It is obvious that, since a covenant brings the parties to it into such close affinity, their responsibilities towards each other are great and must be accurately fulfilled, while also there are produced many mutual privileges.

Where *a common meal* is the chief feature of a covenant, there is the idea that what is partaken of in common establishes a bond of union or of identity, and this is still more marked where there is an exchange of food. It is possible that the covenant-meal may have been the earliest form of the covenant, and it should be observed that, quite apart from the theoretic view of the effects of mutual eating common among primitive peoples, there is a natural basis to it. For, wherever men eat and drink together, they tend to be friendly towards each other. But, where the theoretic view prevails, the eating together of unrelated persons produces automatically the covenant-state. The stranger who eats with the Arab is no longer a stranger; the two parties have entered upon a bond of friendship, with mutual obligations which are absolutely sacred. The same is true elsewhere, as among the Omaha Indians, with whom, if an enemy

'appear in the lodge, and receive a mouthful of food or water, or put the pipe in his mouth . . . he is bound for the time being by the ties of hospitality' (Dorsey, *3 RBEW*, 1884, p 271).

In general the stranger is regarded as a source of potential evil. Hence to give him food identifies him with his host, and probably at the same time makes him liable, should he do wrong, to a conditional curse swallowed with the food. We find also covenants of mutual friendship expressed by eating together, especially where there has hitherto been hostility between the parties. Thus in Morocco persons who wish to be reconciled join hands before a holy man or at a saint's tomb, usually after partaking of a common meal. This is the usual method of sealing a compact of friendship. If any party to the compact is guilty of a breach of faith, it is commonly said that 'God and the food will repay him,' the food being the vehicle of a conditional curse (Westermarck, ii. 623–624; cf. Gn 26^{28-31} 31^{44-46}; see also the article CURSING AND BLESSING, p. 373[b]). Between villages, clans, or tribes, which have been at war, on the cessation of hostilities the covenant of peace is almost invariably marked by a common meal or a species of sacrament. A typical instance is found among the Battas, who, on making peace and forming unions, divide the heart of a slain animal into as many pieces as there are chiefs present. Each chief roasts his piece, holds it up, and says:

'If I should ever violate my oath, I am willing to be slaughtered like the bleeding animal which lies before me, and to be devoured like the piece of heart I am about to eat' (Featherman, *Soc. Hist. of the Races of Mankind*, London, 1881–1891, ii. 333).

Among the Ceramese the covenant of peace between two villages is entered upon by the people of one village making a feast to which those of the other are invited. The chiefs drop some of their blood into a dish of food, and weapons are also dipped into it. The food is then eaten alternately. A similar feast is also held at the other village, and the covenant is complete. Here there is a combination (found elsewhere also) of the blood-covenant with the covenant-meal (Riedel, *De sluik- en kroesharige rassen*, The Hague, 1886, p. 128; cf., for a similar instance among the Nilotic Negroes, Johnston, *Uganda Protectorate*, London, 1902, ii. 795).

Drinking together is another common form of covenant ceremony, the draught being frequently accompanied by an oath, while, as many examples show, the liquid partaken of is regarded as the oath itself, which will harm the breaker of it. But there is also such a simple form of friendship covenant as that of the aborigines of Formosa, who put their arms round each other's necks and drink simultaneously a cup of wine (*L'Anthropologie*, v. [Paris, 1894] 552). Survivals of such a ceremony as this are well known. Nor is it improbable that drinking each other's blood at the making of a covenant was an extension of such a practice, while it is a common custom to mingle some blood with the liquid which is drunk.

As the basis of a covenant of friendship, the *exchange of names* is very frequent among savage tribes, the name being regarded as part of the personality, while the sacred nature of the act is seen in the fact that the name is usually not revealed, lest any one should do its owner harm by making use of it. In such a case the alliance is indissoluble, and forms one of the most sacred of bonds. Other exchanges of personal belongings—garments or weapons—form the basis of covenants of friendship, and will make lasting friends of men who have been enemies. A temporary exchange of wives is occasionally found as a means of sealing a compact, especially among Australian tribes, with whom also, on the occasion of making peace between tribes or certain other alliances, a general exchange of wives takes place for the time being. By this means the identity or union of the two parties is assured (cf. ADULTERY, vol. i. p. 125 (*b*); *JAI* xxiv. 169, 173).

Saliva is occasionally the vehicle of the covenant state. Thus, among the Orango in the Bissagos Archipelago the ceremony for sealing a friendship is to spit in each other's hands. The Masai spat at a man with whom they swore eternal friendship (Hinde, *Last of the Masai*, London, 1901, p. 47); and among the Somalis a stranger becomes a member of his host's family by the host spitting in his right hand and rubbing it on the stranger's forehead (Paulitschke, *Ethnogr. Nordost-Afrikas*, Berlin, 1896–1896, p. 248).

Opposite theories of the meaning of this rite are found. Mutual spitting is regarded as an interchange of life, since by many peoples saliva is held to contain the element of life (Crumble, *Trans. Inter. Fr. Cong.*, 1897, p. 249ff.). Westermarck, on the other hand, is of the opinion that saliva is the vehicle of a curse, since the Masai spit copiously when cursing (*op. cit.* ii. 208). Spitting among the Masai is also reported to be a sign of the greatest goodwill and a compliment (Johnston, *op. cit.* ii. 822).

Covenants of peace between tribes which have been at war are frequently sealed by a common meal (see above). In some cases the material of the covenant-meal is the flesh of *a human victim*. Thus, the people of Vate kill one or more of their number and send the flesh for consumption to the hostile tribe with whom they desire peace (Erskine, *Journal of a Cruise among the Islands of the W. Pacific*, London, 1853, p. 384). In other alliances the cannibal meal is found. Chiefs among the Bambala (a Bantu tribe), in making a covenant against future bloodshed, partake with their followers of the flesh of a slave fattened for the occasion. Any chief who kills a slave after such a covenant must pay a fine to every village which took part in the bond (*JAI* xxxv. 404, 409). This is equivalent to that form of the blood-covenant in which the blood of a slaughtered victim is drunk by all the parties to the compact (cf. Herod. iii. 11; and the case of Catiline and his fellow-conspirators, who drank the blood of a slave in wine).

A pleasanter practice, and one ultimately based on the fact that sensuous satisfaction tends to goodwill, is that of *smoking the calumet* among American Indian tribes which had been at war. It was also done at the ratification of treaties and as a symbol of hospitality, and was regarded as so sacred that to break the covenant thus made would have been followed automatically by fatal consequences.

Other ceremonies are used elsewhere, with the purpose of making a covenant of peace binding. In Tshiti a wreath was made of green boughs, to which each party contributed. Two young dogs were exchanged, and a band of cloth was made together. The wreath and the cloth were then offered to the gods, and imprecations were uttered on those who should break the covenant (Ellis, *Polynes. Researches*, London, 1829, i. 318; see other instances in Farrer, *Military Manners and Customs*, London, 1885, p. 162 ff.).

Where the bodies of the parties to a covenant are cut to obtain blood, the marks of the wounds serve as tokens of the covenant. Similarly the garments or weapons exchanged will be constant reminders of it. At other times a cairn is set up as a witness of the covenant state (cf. Gn 31[48]; Frazer, in *Anthrop. Essays presented to E. B. Tylor*, Oxford, 1907, p. 131 ff.).

In later times, and in more advanced civilizations, the covenant becomes simply a bond or oath for mutual support, or for amity between men more or less animated by a common purpose. Here there is little or no idea of kinship or identity, though some of the older ritual acts may survive, and the parties to such bonds recognize a brotherly feeling existing between themselves as a result of their bond and of their common purpose. In fact, the covenant at all times is intended to produce solidarity among those who are parties to it, though in these later covenants brotherhood is not actually and automatically produced. And, though the breaker of the covenant risks great dangers, these are not supposed to result automatically from the oath which he has taken, as in many instances from savage life.

3. **Covenants between men and gods, etc.**—The ceremonies and symbolism of covenants are even more important than the words of contract used, and, in fact, they constitute the covenant. Hence, in great measure, all religious ceremonial and worship is the expression of a covenant relationship between men and gods. For the worship paid, men expect the god to perform duties towards them, and this worship also tends to confirm that relationship. But there are certain ceremonies, especially those of a sacramental or sacrificial nature, in which the covenant relationship appears more emphatically. In all sacrifices in which the victim is, or represents, the god, and in which a sacramental meal is made of his flesh, the meal is the expression of a close union or a covenant between the god and the group of worshippers. This is seen in the fact that all the worshippers partake, while there are instances, as in Hawaii, where a refusal to eat would be followed by death (Bastian, *Der Mensch*, Leipzig, 1860, iii. 152). But, even where the slain animal is not the god,

the sacrifice or the meal which follows it marks a desire for union with the god, and is an expression of a covenant alliance with him. In this case, as in covenants between men, there is a common meal of which the two parties to the covenant partake—the god and the group of worshippers. In the OT, God is often represented as making a covenant with individuals and their descendants, or with Israel (Gn 9^9 15^{18}, Nu 25^{12}, Ex 6^4 $24^{4ff.}$, Dt 5^2, Jer 34^{13}), and the probability is that sacrifice was the basis of all covenant rites between God and the individual or the people of Israel (cf. Ps 50^5, Jer 34^{18}). This is particularly noticeable in the case of the covenant with Abraham (Gn $15^{9ff.}$) and with Israel at Sinai (Ex $24^{3ff.}$). In the first case there is no mention of a sacrificial meal, and in the second the blood of the sacrifice is sprinkled on the altar and the people, thus uniting the covenanting parties, since the altar is the token of God's presence. This rite of sprinkling image or altar and worshippers, or the analogous custom of the worshipper shedding his blood or sprinkling it on the *sacra* (cf. 1 K 18^{28}), is widely spread, and constitutes a simple method of union with the god—in other words, of effecting or strengthening the covenant relation with him, or of reminding him of it. In other cases the covenant ritual consists in placing and leaving the worshipper's hair, clothing, etc., on the altar, but frequently in the OT the sacrificial meal may be regarded as the basis of the covenant—the god or his worshippers eating together and renewing their union with each other. Hence, according to one theory, the meal itself unites god and men in an act of communion (W. R. Smith, p. 271); or, according to another view, the food is here again the vehicle of conditional curses mutually transferred to god and worshipper (Westermarck, *op. cit.* ii. 623 ff.). Both purposes may, however, be served by the sacrificial meal. It is certainly the case that, in the view of the OT writers, breaking of the covenant by the individual or the nation was followed by punishment (Dt $17^{2ff.}$, Jos $7^{11ff.}$ 23^{16}, Jg 2^{20}, 2 K 18^{9-12}), while blessing followed its being observed (Ps 132^{12}). In any case, what holds true of these OT sacrifices is true of similar sacrifices elsewhere. Indeed, in some aspects the mere offering of sacrifice to a god, thus propitiating him, is the token of an alliance with him; hence the worshipper asks and expects help from the god to whom he, for his part, is faithful. The same is true of the vows made to a god by a worshipper, in which he promises certain things, usually a sacrifice, for some specified help given him by the god.

In the OT other things are found as signs of a Divine and human covenant, *e.g.* the rainbow in the case of Noah and his posterity (Gn 9^{16}), though here a covenant sacrifice appears also ($8^{20ff.}$); circumcision is the token of the covenant with Israel (Gn $17^{10ff.}$), though it is to some extent a sacrificial rite; and in Ex 31^{16} the Sabbath is to be kept for a perpetual covenant. For marks or cuttings on the body as signs of a covenant, see BADGES.

Totemism, as 'an intimate relation which is supposed to exist between a group of kindred people on the one side and a species of natural or artificial objects on the other side, which objects are called the totems of the human group' (Frazer, *Totemism and Exogamy*, London, 1910, iv. 1), is essentially a covenant relationship, since both parties have entered explicitly or implicitly into an alliance for mutual help and protection. This covenant state is generally furthered by various ritual acts, by which men assimilate themselves to their totem, these being analogous to the covenant rites between human beings. The group of men is, in effect, identified with the animal species which is their totem: the relation is one of identity. Similarly, in the rites used at puberty for obtaining an individual animal guardian or *manitou*, and in the relative positions in which the individual and his *manitou* stand to each other, there is the suggestion that this relation is essentially a covenant one. Blood-letting is the most significant of these rites. Thus, the Mosquito Indians are said to have sealed their compact with the *manitou* by drawing blood from different parts of their body (*NR* i. 740). Among the Indians of Honduras each youth formed a contract with his *nagual*, by offering some of his blood to it,

'whereupon such friendship was contracted between them that, when one of them died, the other did not survive' (Herrera, *General Hist. of . . . America*, 1740, iv. 135).

The American Indian youth generally killed the animal which was to be his *manitou*, and used its skin as a 'medicine-bag.' There was thus some kind of blood-covenant between the youth and his guardian, and, as in Omaha Indian belief there was a bond between them so close that the man acquired the properties of the animal, so generally it was held that the youth would not survive the death of his *nagual*; and there was a common idea of the identity of the two, or perhaps of an interchange of life between them.

The meal eaten by survivors at a death, and repeated on anniversary occasions, and of which the ghost is supposed to partake, has the intention of uniting the ghostly and human eaters, and of preserving the goodwill of the ghost by showing that he is not forgotten. It is thus a species of covenant with the dead. This is still more closely marked in cases where the mourners eat the dead man himself—perhaps the origin of the funeral feast. Other methods of this implicit covenant with the dead may be looked for in such rites as that of the mourners cutting themselves, letting the blood drop on the grave, making offerings of their hair, or anointing themselves with the fat or decomposed matter of the corpse. These are analogous to the similar rites in connexion with the cult of gods (see Hartland, *op. cit.* ii. 277 ff.; Jevons, *op. cit.* 41 ff.).

Various customs in human covenants—in which, *e.g.*, the parties hold an animal which is sacrificed, its blood being sometimes sprinkled on a sacred object, or are sprinkled with sacrificial blood or that of an animal not apparently sacrificial—are probably connected with that type of covenant sacrifice in which the parties are a god and a group of men. Here, perhaps, the sacred nature of the sacrifice makes it an important basis of the human covenant, while sacrifices are frequently the vehicles of a curse; or, again, the god to whom the sacrifice or the blood is offered is regarded as a third party to the covenant (for examples, see BROTHERHOOD [artificial], vol. ii. pp. 859b, 870a; Wellhausen, *Reste arab. Heid.*², Berlin, 1897, p. 128; Lewin, *Wild Races of S.E. India*, London, 1870, p. 228). In many human covenants a god is expressly called upon as witness to the contract, as in the similar appeal in the case of an oath. The god is then expected to visit with his wrath the breaker of the covenant (cf. Herod. iii. 8; Tylor, *Prim. Cult.*⁴, London, 1903, ii. 342; Wilson, *Western Africa*, 1856, pp. 210, 392).

LITERATURE.—A. E. Crawley, *The Mystic Rose*, London, 1902; E. S. Hartland, *LP*, London, 1895, vol. ii.; F. B. Jevons, *Introd. to History of Religion*, London, 1896; J. Kohler, 'Studien über die künstliche Verwandtschaft,' *ZVRW*, v. 415 ff.; A. H. Post, *Studien zur Entwicklungsgesch. des Familienrechts*, Oldenburg and Leipzig, 1889; W. R. Smith, *Rel. Sem.*², London, 1894; H. C. Trumbull, *The Blood Covenant*, London, 1887, *The Threshold Covenant*, Edinburgh, 1896; E. Westermarck, *Origin and Development of the Moral Ideas*, London, 1906-1908. J. A. MACCULLOCH.

COVENANT (American).—The substitution of an artificial for a natural basis of subsistence had the effect in America, as elsewhere, of establishing

the gods as the principal members of the agricultural community. On their co-operation the maintenance of such a community depended. To some extent the obligation was mutual; for, while men reaped much benefit from the encouragement, advice, and practical assistance of the gods, they were beholden to men for the sustenance tendered through sacrifice. A definite and tacit, if unwritten, covenant thus came into being between gods and men, any human breach of which was visited with Divine punishment. The arrangement was purely one of self-interest on both sides. Man felt the necessity of placating the only beings from whom he could obtain foreknowledge of seasonal and other changes, and, deeply sensible of the value of supernatural assistance, he rewarded it as handsomely as he could—by gifts of such food, drink, and clothing as in his sight appeared most desirable.

Commencing this practice by an 'understanding' with the earlier tribal deities, he later extended it to the 'great gods' of the heavens and earth, whom from time to time he admitted into his pantheon. He felt that the wealth accruing from this co-operation with Divine beings should be fairly divided. This applied to the fruits of the earth produced under supernatural guidance, and to such live stock as had been raised under the same auspices. A step further, and we perceive that the logical outcome of such a policy was to set apart such fields and flocks as would satisfy the god, for his own special use—these to be worked and tended by (in all probability) the most skilful labourers. Thus, according to Gumilla (*Orinoco Illustrado*, Madrid, 1745, vol. ii. p. 278), a tribe of the Guayanos, in consternation at an eclipse of the moon, at once commenced work upon a plantation for the moon-spirit, considering the eclipse to be a sign of his displeasure at their failure to supply him with a separate field of maize. The gods of Peru had their own herds of llamas and pacos, the flesh of which was largely consumed on their altars, while the wool, woven into cloth, was burned to provide them with 'astral' clothing, or used in the provision of raiment for their images and attendants.

When mere animal sacrifice fails, either, as in Mexico, owing to the lack of large animals, or, perhaps, because of a more sanguinary popular temperament, the blood of human victims is supplied to the gods as nutriment. Thus the Mexican god Huitzilopochtli lived wholly upon human sacrifice, countless thousands of victims, for the most part members of hostile tribes, being slain annually upon his altar. The hunter, too, as well as the cultivator and herdsman, paid his debt to the gods, who assisted him to track his game in dreams. Thus the Nicaraguan tendered to his deer- and rabbit-gods clotted blood wrapped in a cloth, and the Otomi offered blood to the great Cloud-serpent, Mixcoatl. Dwellings, too, were supplied to the Divine beings.

The natural conclusion of the savage in these circumstances is that a breach of his covenant with the gods brings upon him calamities of every description. There is much temptation on the part of the cultivator to withhold a portion of the firstfruits or other sacrifice; and, should this temptation overcome him, he becomes an easy prey to the malevolence of the slighted deity. The Peruvians believed that in such a case the offended god sent an evil spirit to haunt the wrongdoer, and that it lay in wait for him in his habitual resorts. His crops failed, his health gave way under some terrible disease, his stock perished. Such were thought to be the consequences of *hucha*, or sin, in Peru; and, in the event of a national calamity, every member of the community was rigorously examined, until, the guilty one being discovered, restitution was forced from him. Throughout the two Americas the idea of the covenant with the gods was quite as current as elsewhere; and its inevitable workings have been observed in the economy of nearly every tribe.

LEWIS SPENCE.

COVENANTERS.—The subscribers of the National Covenant and the Solemn League and Covenant rejected the theory of the Divine right of kings, and vigorously opposed the absolutism which crushed the liberties of the people. In the days of James VI., before the Covenants, the conflict was begun. George Buchanan in 1579 published his *De Jure Regni apud Scotos*, in which he taught that kings are chosen and continued in office by the people, and, in particular, that the Scots had always claimed and exercised the right to call wicked rulers to account. Two Scotsmen had already dealt with the old question of the right of kings. As early as 1521, John Major asserted in his *History* that the people first made kings, and could dethrone them; while Hector Boece in his *History*, published in 1527, assumed that the royal authority is derived from the people. In 1584, Buchanan's book was condemned by Act of Parliament, and in the same year were passed the 'Black Acts,' which declared, contrary to the teaching of Knox, that the king was head of the Church as of the State, that assemblies should not meet without his sanction, that there should be bishops who should be appointed by him, and that ministers should not discuss public affairs under pain of treason. When these statutes were framed, James's adviser was James Stuart, Earl of Arran, who had succeeded Esmé Stuart, Lord of Aubigny. Leaving the court of Henry III. of France, in which the doctrine of royal absolutism was cherished, D'Aubigny had proceeded to Scotland, on the mission of the Guises for the restoration of Mary Stuart and the Catholic religion, and there had taught the young king to be an autocrat. The Scots, however, feared a popish plot; and honestly or dishonestly he approved the drawing up of the Negative Confession, assailing Romanism, which in 1581 was signed by James and his courtiers. While D'Aubigny was directing the king, Andrew Melvill was leading the Church and inveighing against 'the bloodie guillie of absolute authority.' By his influence the Assembly of 1580 condemned Episcopacy; and in 1581 presbyteries were established with the king's consent, and the Assembly approved the Second Book of Discipline. The Raid of Ruthven, which was devised for the liberation of James from the hands of D'Aubigny, was successful; but it could not make the king forget the Frenchman's lessons in absolutism; and, when Arran was the chief counsellor, the Black Acts, with their assertion of the royal supremacy, were passed. Though Arran's rule terminated in 1585, James was able, two years later, to persuade the Parliament to declare that all ecclesiastical property belonged to the crown.

For a time, however, James did nothing for the bishops, and before and after his marriage seemed to favour Presbyterianism. In 1590 the Assembly ordained 'the subscription of the band of mainteaning religion and confession *de novo*,' and, in 1592, Presbyterianism received from Parliament its 'Magna Charta,' whereby the ecclesiastical courts were legalized, and the liberty of the Church was ratified by the abrogation of the Black Acts, so far as they interfered with its authority in matters

of religion. The royal favour to Presbyterianism was of short duration, and in 1596 Andrew Melvill told James that he was 'but God's sillie vassall,' and said:

'Sir, as diverse tymes before, so now again I must tell you, there are two kings and two kingdomes in Scotland; there is Christ Jesus and His kingdome the Kirk, whose subject King James the Sixth is, and of whose kingdome not a king, nor a head, nor a Lord, but a member.'

The words did not convince, and James, casting aside tradition, called by his own authority Assemblies, which yielded to his pressure. At last in 1610 an Assembly restored Episcopacy, and in 1612 the Estates ratified the new order of ecclesiastical government. In justification of his authority, James published, in 1598, *The True Law of Free Monarchies*, and set forth the Divine origin of the royal power.

'Monarchy,' he wrote, 'as resembling the Divinity, approacheth nearest to perfection, as all the learned and wise men from the beginning have agreed upon.' He declared that 'kings are called Gods by the prophetical King David, because they sit upon God his throne upon earth, and have the count of their ministration to give unto him.' Scripture texts were used to show that the people should pay obedience to the king 'as to God's lieutenant on earth, obeying his commandments in all things, except directly against God, as the commands of God's minister, acknowledging him a judge set by God over them, having power to judge them, but to be judged only by God, to whom only he must give account of his judgment.'

In the *Basilikon Doron*, published shortly after *The True Law of Free Monarchies*, James instructed his son to know and love God, who had made him 'a little God to sit on his throne, and rule over other men.'

True to his exalted notion of his office, James used his authority to change the government of the Church, and then turned to the customs and forms of worship. In the Assembly of 1616, called by him, and the first which met after 1610, a new Confession of Faith, Catechism, Liturgy, and Book of Canons were projected; and in an Assembly at Perth in 1618 royal coercion secured the passing of the famous Five Articles, which were startling innovations in the Scottish ritual. When the government of the Church had been changed and the ritual modified, the king was satisfied with the exercise and recognition of his supremacy; but, while by his actions and writings he showed his attachment to the theory of the Divine right of kings, he ruled in the Church through Assemblies, and, though these were coerced, he preserved the recognized forms of legislation.

Charles I. succeeded to his father's belief in his Divine right, and continued, but without tact or discretion, the assertion of royal absolutism. In May 1635 he signed the warrant for a Book of Canons, which in the following year was imposed upon the Scottish Church, without the sanction of either an Assembly or a Parliament. Reference was made in the Book itself to a Liturgy, afterwards known as Laud's Liturgy, which was ratified in 1636, and in 1637, on the sole authority of the king, was sent to Scotland. The Canons, as they made no outward change in the Church, did not stir the people, though they saw in them a violent exercise of royal power; but the Liturgy, also devised by the king as an autocrat, roused a popular clamour, and set the nation against him. The Liturgy met with instant opposition, and the riot which occurred in the church of St. Giles, Edinburgh, when it was first read, inaugurated a revolution which spread through the greater part of Scotland. The Scots, ever fond of legal bonds of association, prepared a document which is known as the 'National Covenant,' and multitudes signed it.

The document was prepared by Johnston of Warriston, one of the ablest of the lawyers, and the Rev. Alexander Henderson, minister of Leuchars, who was the ecclesiastical leader of the Presbyterians; and with them most probably was associated Hope, the king's advocate. It included the Negative Confession of 1581, which James VI. had signed; a list of the Acts of Parliament confirming the Confession; and the Covenant proper, by which the subscribers bound themselves to defend their religion and their king as guardian of it. The signing of the Covenant was begun on 28th Feb. 1638, in the Greyfriars churchyard, which contained the burial-place of George Buchanan, whose *De Jure* helped to drive James towards absolutism. If the first Covenanters, drawn from all classes and representing the greater part of the country, were rebels against the king's tyranny, their document infringed no law of the land. Yet it was the bond of a nation against the sovereign, and, with troubles in England, Charles was forced to yield. He appointed the Marquis of Hamilton as his commissioner, who tried to divide the Covenanters by means of a new Covenant, the King's Covenant, which included but did not enforce the Confession of 1581; and, when the project failed, Hamilton in his master's name promised a free Assembly, a Parliament, and the abolition of the Courts of High Commission which, with bishops among the judges, tried ecclesiastical cases. The Presbyterians did not admit that the royal assent was necessary for an Assembly, and accordingly they called one, which met on 21st November in Glasgow. The Marquis of Hamilton appeared as the king's representative, and the members chose Henderson as moderator and Johnston of Warriston as clerk.

Henderson and his associates had summoned the bishops, but these refused to recognize the authority of the Assembly; and, when their cases were considered, the commissioner declared the proceedings illegal, and dissolved the Assembly. The Presbyterians, however, were undaunted, and the business was continued, without and in spite of the king's representative. The bishops were deposed, and some of them excommunicated; the Book of Canons, the Liturgy, and the Five Articles of Perth were condemned, and the Courts of Commission abolished. Thus did the Covenanters in the Glasgow Assembly answer the king with his absolutism. The Earl of Argyle accepted the Covenant in Glasgow, and it had been signed by the Earl of Montrose in Edinburgh.

War was inevitable, and Charles devised schemes for which he had no money. He attempted, however, to irritate the English by representing that the Scots were preparing an invasion; and the Scots, in defence of their honesty, published 'An Information for all good Christians within the Kingdome of England.' Another document appeared, the 'Large Declaration,' which Dr. Balcanquhal wrote and Charles authorized. It was the king's version of his troubles with the Scots, and was not a contribution to truth. Something more than a distribution of pamphlets was required to settle the quarrel between the people and their king, and Charles mustered an army of 21,000 men at Berwick. The Scottish forces, numbering 20,000 men, were entrusted to Alexander Leslie, who had followed the profession of arms on the Continent. Marching southwards, he fixed his quarters at Dunse Law, twelve miles from Berwick. The First Bishops' War was a demonstration and not a battle, and on 18th June 1639 commissioners arranged the Pacification of Berwick, which secured their demands for the Covenanters.

By the Treaty an Assembly and a Parliament were to meet; and on 12th August the Assembly sanctioned the Acts of the Glasgow Assembly, that they might have undisputed legal validity. The members requested the Privy Council to require every one in the nation to sign the Covenant, and,

so doing, violated the rules of toleration. The Earl of Traquair, the king's commissioner, ratified the proceedings of the Assembly, though Charles indicated to Archbishop Spottiswoode that what had been done could be undone. Parliament approved the action of the Assembly in overthrowing Episcopacy; and, in spite of his action as commissioner to the Assembly, Traquair refused assent in the king's name, and against precedent dissolved the Parliament. War was once more inevitable, since the nation's demands, in spite of the Treaty of Berwick, had been refused. Charles summoned an English Parliament, known as the Short Parliament, and dismissed it when supplies for a war with Scotland were refused. He succeeded, however, in collecting a force at York on 22nd August 1640; and on the 20th of the same month Leslie entered England with an army of 20,000, and marched to Newcastle. The Second Bishops' War was no more romantic than the First; and commissioners were appointed to meet at Ripon, and to arrange terms of peace on the basis of the abolition of Episcopacy and the recognition of the Covenant. The troubles in England forced Charles again to yield to the Scots, though not till 10th August 1641 was an arrangement made with the Long Parliament, which had taken the business out of the hands of the king.

Hoping to create a party in his favour, Charles in 1641 visited Scotland, and remedied further abuses, especially in the Privy Council and Court of Session, which by his own act were filled with his partisans. He expected to strengthen the opponents of the Covenant, already represented by the Incendiaries and the Plotters or Banders. The Earl of Traquair and Sir Robert Spottiswoode, the archbishop's son, were the chief men among the Incendiaries, who had been the advisers of Charles from the time of the Covenant; while the Plotters were led by Montrose, who had passed to the side of the king, perhaps through jealousy of Argyle's prominence among the Covenanters. The affair known as 'The Incident,' whether it was a fact or merely a story, told against the king, and, when he departed from Scotland in October, he had neither weakened his enemies nor strengthened his own party.

In August 1642, Charles raised his standard at Nottingham, and the Civil War in England was begun. The king and the Parliament each sought the aid of the Scots, who, though themselves divided, were in great numbers favourable to the Parliamentary cause. The Parliament informed them that an Assembly at Westminster had been appointed to consider 'a reformation in church discipline and ceremonies'; and on 2nd Aug. 1643 the General Assembly, associated with the Convention of the Scottish Estates, put forward the Solemn League and Covenant, drafted by Alexander Henderson, as the condition of an alliance. The subscribers to the Covenant were to bind themselves to preserve the Reformed religion in Scotland, to secure in England and Ireland a reform in doctrine, worship, discipline, and government, according to the Word of God and the example of the best Reformed Churches; to seek the extirpation of Popery, prelacy, superstition, heresy, and schism; and to defend the privileges of the Parliament, and also the person and authority of the king. The English Parliament accepted the Covenant on 25th September, and in Jan. 1644, Leslie, who had been created Earl of Leven, led an army into England, which helped to secure the victory of Marston Moor. In his difficulties, Charles granted a commission to Montrose, and, after an arrangement with the Marquis of Antrim, sent him a wild horde of Irish and Scoto-Celts. Victory after victory in Scotland was gained by Montrose, though at the expense of horrible cruelties perpetrated by the savages of his army; and he did not know defeat till September 1645, when he met David Leslie, Leven's nephew, at Philiphaugh. The triumph of the Covenanters was secured, and was cruelly celebrated in the execution of Sir Robert Spottiswoode and other Malignants, as the Royalists were called.

In England, the Parliamentary party, after their victory at Naseby, had no further need of the Scots; and they, on the other hand, being opposed by the Independents, despaired of the success of the Solemn League and Covenant. Charles understood the situation, and in May 1646 threw himself into the hands of the Scots. Yet he would not accept their Covenants, and they would not support him. Had he agreed to their terms, they would have defended him; but they handed him over to the English Parliament, on condition that his life should be spared, and the money due to them be paid.

One last effort to save their king was to be made by some of the Scottish nobles. The Earls of Loudon, Lanark, and Lauderdale visited him at Carisbrooke Castle, and made a compact, known as 'The Engagement,' according to which they were to find an army for him, and he was to establish Presbyterianism in England for three years. In the Scottish Parliament, the nobles, barons, and commissioners from the large towns showed by a decided majority that they trusted the king, though the clergy, on the other hand, would not believe that he was sincere. Hamilton, however, raised an army of 10,000 men, who when they reached England were met by Cromwell and defeated.

Charles was executed on 30th Jan. 1649, and Covenanters and Royalists alike were horrified. Charles was the victim of his cherished principle of the Divine right of kings, which, bequeathed to him by his father, destroyed the peace of Scotland, turning a loyal people into rebels whom history has justified. James was a despot who knew the value of discretion; but Charles, with an erroneous doctrine of his personality and an archaic theory of his power, was destitute of tact, and the Scots strenuously opposed him in the defence of their liberties. Yet, though he was a tyrant in their eyes, they would have remembered that he was their king and would not have taken his life.

Six days after the execution at Whitehall, Charles II. was proclaimed king by the Scottish Estates, though he was to be acknowledged only on condition that he accepted the Covenants. The zeal of the Covenanters was not diminishing, and just before the death of the king they secured the Act of Classes, which excluded from civil and military posts all who were hostile to the Covenants. Montrose cared nothing for the Estates, and still dreamed that the country might be subdued. He failed, however, to gather the Royalist army of his visions, and yet would not cease from romantic expeditions and attacks. At last he was taken, and was beheaded on 21st May 1650 at the Market Cross of Edinburgh. Charles II. landed in Scotland in June, and, according to an agreement already made, accepted the Covenants. His presence was a menace to England, and on 22nd July, Cromwell crossed the Border. David Leslie was in command of the Scottish army, which in the rush of events was now gathered for the defence of the king, though many of the Covenanters, led by Johnston of Warriston and James Guthrie, minister of Stirling, did not put their trust in Charles. In their fanaticism they succeeded in banishing all Malignants from the army, and so interfered with Leslie that Cromwell secured a decisive victory at Dunbar. Immediately after the battle they prepared a Remonstrance against the government of Argyle

and his friends, and presented it to the Committee of Estates, with the declaration that they rejected Charles till he proved 'the reality of his profession.' Argyle was forced to choose an alliance with the Remonstrants or with the Malignants, and he gave his support to the friends of Charles. The Committee of the Estates accordingly passed a Resolution in condemnation of the Remonstrance, and the Estates abolished the Act of Classes. On 1st Jan. 1651, Charles was crowned at Scone, and Malignants and Resolutioners alike were satisfied. Cromwell, however, was still in the country, and once more David Leslie was placed in command of an army. In hope of a rising in favour of Charles, the Scots marched into England, but Cromwell followed and utterly defeated them at Worcester. Scotland was subjected to English rule; and, though toleration was enforced, Resolutioners and Remonstrants continued their quarrel, till in 1653 the General Assembly was closed and its meetings forbidden. Enthusiasm for the Covenants was no longer national but sectarian. The National Covenant had been the protest of a realm against the absolutism of the king, and the Solemn League and Covenant had been framed for the reformation of religion by those who believed that the true Church should be Presbyterian. In the events which followed the National Covenant, Charles had been compelled to submit to the Scots, and after his death the Covenanters, true to the Solemn League and Covenant, became the guardians of Presbyterianism. Fanaticism divided them, but the factions were none the less devoted to the Church which James and Charles I. had assailed, and to its worship and government which had been saved from the hands of the destroyers.

Scotland hailed the Restoration with joy, as the English rule was ended and the king was to reign who had been crowned at Scone. The Remonstrants or Protesters alone, in their anxiety for the Church, did not share in the joy, and soon it was seen that they were not foolish in their alarm. Charles nominated a Privy Council, without waiting for a Parliament to advise in the selection; and, while the members of the Council were with him in London, he entrusted the government to the Committee of the Estates, which had not acted after 1651. Remembering injuries and destitute of gratitude, he committed Argyle to the Tower, and then sent him to Scotland for trial, and at the same time issued an order for the seizure of Johnston of Warriston, who, however, escaped to France. The Committee of Estates, recognizing the attitude of the king to the Covenanters, broke up a meeting of Protesters, and seized among others James Guthrie, the minister of Stirling. In their eagerness to please they issued a proclamation against 'all unlawful and unwarrantable meetings and conventicles'; and, in decreeing that there should be no meetings 'without his Majesty's special authority,' showed how the men in the king's service no longer opposed the absolutism and supremacy which had been fatal to his father. It seemed at first that Charles, though ruthless towards the Remonstrants, would uphold the Church for the sake of the Resolutioners; and James Sharp, minister of Crail and professor in St. Andrews, whom the Resolutioners had sent to London, returned on the last day of August with a communication to the Presbytery of Edinburgh. 'We do resolve,' Charles wrote, 'to protect and preserve the government of the Church of Scotland as it is settled by law'; but, while he referred to the government as it existed, he soon afterwards put a strange interpretation on his words. On 1st Jan. 1661, a Parliament with carefully selected members met, and in its sessions passed a multitude of Acts. In an oath of allegiance, Charles was declared 'supreme Governor of this kingdom over all persons and in all causes'; and a Rescissory Act, which revoked the legislation of every Parliament after 1633, destroyed what the nation had built up in the struggle against royal absolutism. The Church 'settled by law,' to which Charles referred in his letter to the Edinburgh Presbytery, was no longer Presbyterian, and in a communication to the Privy Council he wrote: 'We have, after mature deliberation, declared to those of your Council here our firm resolution to interpose our royal authority for restoring of that Church to its right government by bishops, as it was by law before the late troubles, during the reigns of our royal father and grandfather of blessed memory, and as it now stands settled by law.' The Church was Episcopal, but only one of the bishops was alive; and four men, of whom were James Sharp and Robert Leighton, set out for London to receive episcopal consecration.

The second session of the 'Drunken Parliament,' as it was called, began on 8th May 1662, and, after an Act for 'the restitution and re-establishment of the ancient government of the Church by archbishops and bishops,' the prelates were admitted to the dignity of an Estate. Thereafter the Covenants were declared to be treasonable, and holders of offices of trust were required to abjure them. Another Act was tragic in its consequences. Patronage had been abolished in 1649, and the election of ministers had been entrusted to the kirk-sessions. The Parliament now decreed that every minister who had been ordained after 1649 should receive a presentation from the patron, and institution from the bishop. In the west and south nearly three hundred men refused to comply; and churches were closed till 'curates' were found for them. In the third session of the Parliament the Earl of Rothes took the place of the Earl of Middleton as the king's representative, though the Earl of Lauderdale was the real director of the business. Ecclesiastical affairs were in hopeless disorder. The churches from which the ministers had been excluded were almost empty, and the people flocked to private houses in which these men preached. The Parliament sought a remedy in an Act which required the 'outed' ministers to abstain from preaching, and the people to attend the churches. Fines were to be imposed on those who would not obey, and the Privy Council were to receive reports from the curates regarding offenders. Before the close of the Parliament, Johnston of Warriston, who had been apprehended in France, was sent to execution. Argyle and James Guthrie, and also a man named Govan, had been condemned; and Warriston followed them to the scaffold and to martyrdom for the Covenants. The victims of the king's wrath were few, and Argyle and Guthrie, conspicuous champions of the people's rights, might have satisfied his vengeance; but Warriston was pursued till his death was accomplished. Samuel Rutherfurd, the Principal of St. Mary's College, St. Andrews, was summoned to appear at Edinburgh, and died before he could answer. In his *Lex Rex* he had set forth the democratic principles which George Buchanan taught in the *De Jure*; and, when he could not be brought to sentence, his book was publicly burned by order of the Government.

Without consent of the Church, Charles II. changed its constitution, and the men who would not obey his orders were driven from their livings. James VI. had forced or corrupted Assemblies and Parliaments to be his agents, while Charles I. had imposed the Canons and Liturgy with neither Assembly nor Parliament. It is true that Charles II. acted through a Parliament and through his Privy Council, but the Parliament was not freely

elected, and the Church itself was not consulted. The 300 evicted ministers could urge the Presbyterian claim of free assembly. Their theory of the Divine origin of the Presbyterian polity might be denied, but they could point to Knox and Melvill as the upholders of the Church's freedom, and to the struggles and successes of the first Covenanters. Many of the ministers quietly accepted the Episcopacy ordained by the 'Drunken Parliament,' but the men who were ejected, and not the men who conformed, were obedient to the Presbyterian tradition, and as heirs of the Covenanters were entitled to their name. Opponents of the royal absolutism and advocates of ecclesiastical freedom, the second race of the Covenanters were destined to bear testimony through suffering to their devotion to the lost liberties of their Church.

Fines were imposed by the Privy Council on those who neglected the ministrations of the curates, and soldiers were quartered on offenders till these were paid. At Archbishop Sharp's suggestion the Court of High Commission was re-instituted to deal with breakers of the law, and the troubles increased when Covenanters, to whom an Act of Indemnity had not extended, were ordered by the Court to pay their fines. In the disaffected districts the people were galled by the tyranny of the Council in imposing fines, quartering soldiers, and breaking up conventicles (*q.v.*) for worship. Passive obedience was not a favourite custom of the Scots, and a rising of the oppressed was to be expected. Sir James Turner, the most zealous of the soldiers of the Government, was in Dumfries, and on 15th Nov. 1666 was attacked and taken prisoner by a company of men from Galloway, who had been stirred by a shameful tale of cruelty. From Dumfries they marched, 3000 in number but untrained, across the country to Lanark, where they renewed their adherence to the Covenant. Intending to pass to Edinburgh, they turned on their way to the city, as Sir Thomas Dalziel, a fanatic Royalist who had served in Muscovy, was on their track, and they reached Rullion Green, on the southern slopes of the Pentlands. Dalziel with his disciplined force routed them. Some were killed, many fled, and at least fifty were taken. Two of the leaders, John Neilson of Corsack and Hugh M'Kail, who was a preacher, were tortured with the boot in presence of the Council, that they might reveal a supposed league with the Dutch, and were afterwards sent to the scaffold. Ten men, and then five, were hanged in Edinburgh, and the work of execution was continued in Glasgow and Ayr. Many of those who had been engaged in the rising were fined and their lands and goods confiscated. To Dalziel was given the task of quieting the disturbed places, and with his ruthless severities he terrorized the people. In 1667, however, a respite was offered when Lauderdale, who had overthrown Rothes and Sharp in the Council, intimated an indemnity, under conditions, for the Pentland rising. While many accepted the terms, the sternest of the Presbyterians refused obedience to a Government which required conformity to an Episcopal Church and ignored the Covenant.

After the indemnity no further step towards conciliation was taken till 1669, when an Indulgence was offered. It was ordained that vacant parishes might be given to ministers who were willing to accept collation from the bishops; and those who would not take collation might have the manse and glebe, without the stipend, if they agreed, among other conditions, to administer the sacraments to their parishioners alone. Forty-two ministers, professing their adherence to Presbyterianism, were admitted; but the most zealous of the Covenanters inveighed against them, and extreme Episcopalians objected to the Indulgence as an Act of Erastianism. Lauderdale, though responsible for the Indulgence with any clemency involved in it, was an avowed supporter of the royal absolutism; and under him the Parliament of 1669 declared in the Assertory Act 'that his Majesty hath the supreme authority and supremacy over all persons, and in all causes ecclesiastical within this kingdom; and that, by virtue thereof, the ordering and disposal of the external government and policy of the Church doth properly belong to his Majesty and his successors, as an inherent right of the crown.'

Burnet, the Archbishop of Glasgow, was deposed for his opposition to the king's authority in the issue of the Indulgence, and Leighton, who succeeded him, proposed an 'accommodation' for peace between Presbyterians and Episcopalians. The scheme was futile, as compromise pleased no one, and Leighton, resigning the archbishopric, departed to England. The Indulgence did not remove the opposition of the Covenanters, and they flocked to the conventicles, carrying arms for safety in attack. The Government, on the other hand, showed no leniency. In 1670 an Act was passed which required any one on oath to give information regarding conventicles and the men who attended them; and another Act made death and confiscation of goods the penalty for preaching at conventicles. Not content with these severities, the Parliament decreed that punishment, even to exile, should be inflicted on those who had their children baptized by the non-conforming ministers, and also on those who for three successive Sundays absented themselves from the parish church. The conventicles, in spite of the Government, did not cease, and the Bass Rock was turned into a prison. In 1672 the Parliament declared the ordination of ministers by the Covenanters a crime, and decreed that parents should be punished who left their children unbaptized by the curates for more than thirty days. For some reason a second Indulgence was published. It was offered to eighty of the clergy, and some of them accepted it, but the Covenanters were not quieted. The Government in their straits decreed that magistrates for the burghs and landowners in respect of their estates were to be made responsible for conventicles, and householders were to answer for their families and servants. Another step was taken in 1675, when letters of intercommuning were issued against 100 persons, including men and women of social position, who were not to be harboured or fed or clothed by any one. Though landowners in 1674 had been made responsible for their tenants and servants, they were required in 1677 to take a bond for all persons on their lands. Many of these men in the disturbed counties, though friendly to the Government, would not sign such a bond; and in February 1678 a host of 6000 Highlanders with 3000 Lowlanders was sent to Ayrshire and let loose for plunder. The Duke of Hamilton and also the Earls of Atholl and Perth appeared with expostulations before the king, and, though Charles approved Lauderdale's actions, the Highlanders were withdrawn. The disorder increased, however, in spite of indulgences and coercive Acts; and the year 1679 witnessed among other tragedies the murder of Archbishop Sharp. From the day of his acceptance of the archbishopric there were few who even respected him, and the Covenanters hated him as their fiercest oppressor. Travelling to St. Andrews he was murdered at Magus Muir, three miles from the city, by a band of men who had been outlawed for attending conventicles. These men were not taken, though a proclamation was issued for their arrest; and another tragic event was to increase the troubles. On 27th May

—the anniversary of the Restoration—a company of eighty men gathered in Rutherglen, and, after extinguishing the bonfires, affixed to the market-cross a paper denouncing the Acts of Parliament against Presbyterianism. The same company, increased in numbers, held a conventicle on the Sunday which followed; and Graham of Claverhouse with a troop of soldiers was sent to disperse it and to seize the men who had appeared at Rutherglen. At Drumclog, two miles from Loudon Hill, where the conventicle had assembled, an engagement took place, and Claverhouse was defeated. The victors determined to form a camp, and many flocked to it. The Government, on the other hand, made ready an army, and the king sent the Duke of Monmouth to command it. The battle of Bothwell Bridge was fought on 22nd June with disastrous results to the Covenanters. They had enthusiasm; but, divided over the Indulgences, they quarrelled when they should have been drilling themselves for action, and there was no capable and trusted leader. While the number of the dead was not great, more than 1000 prisoners were taken and conveyed to Edinburgh. For months many of the wretched men were confined in the Greyfriars churchyard. Two of the ministers were hanged, and five men, who had not been involved in the death of the Archbishop, were sent for execution to Magus Muir, that the murder might be avenged. Many were allowed to leave their prison, after taking a bond not again to bear arms; and others, to the number of 250, were packed into a ship sailing to Barbados, that they might be sold into slavery. The ship, however, was wrecked on one of the Orkney Islands, and 200 of the unfortunate men, who were kept under the hatches, were drowned.

Thanks to Monmouth, an Act of Indemnity was passed for those who had been at Bothwell Bridge, and a third Indulgence for ministers was published. Conditions, however, were attached, and there were few who did not reject them. Clemency was accordingly thrown aside, and diligent search was made for those who had been at Bothwell. The thumbkins and lighted matches to the fingers were used by the savage soldiers of the Government to force unwilling informers to reveal their secrets. Oppression again had its natural consequences, and wild men were made wilder. The Presbyterians who still remained staunch to the Covenants separated from communion with those who had accepted the Indulgences, and deliberately threw off allegiance to the king. Two ministers, Richard Cameron and Donald Cargill, were the leaders, and they and their followers called themselves 'Society People,' and were known as Cameronians, Wanderers, Hillmen, or Whigs. On 22nd June 1680, Cameron and Cargill with some of their men, twenty-one in all, entered Sanquhar and affixed to the market-cross a declaration that they disowned Charles Stuart as king for 'his perjury and breach of covenant to God and His Kirk.' These men did at Sanquhar, in the time of Charles Stuart, what England and Scotland afterwards did when James Stuart was king. Cameron and Cargill were marked by the Government, and at Aird's Moss, on 20th July, Cameron was killed, when he and Hackston of Rathillet, with some of the Hillmen, were attacked by a company of dragoons. Hackston was executed at Edinburgh with a display of abominable cruelty, and Cargill, who was not at Aird's Moss, became the leader of the Covenanters. He appeared in October at Torwood, and in a great assemblage excommunicated the king, the Duke of York, the Duke of Lauderdale, and others; and, though the sentence was futile and the action altogether fanatical, the devotion to a cause consecrated in the tradition of the country made Cargill a hero in the eyes of the persecuted Whigs. He, too, was to die for the Covenant, and in 1681 was executed in Edinburgh.

In 1681 the Duke of York appeared in Scotland, and, in place of Lauderdale, acted as Royal Commissioner. After the Act for securing the Protestant religion, the Parliament, at his direction and to suit his purposes as a Catholic, passed an Act which declared that the kings of the realm derived their power from God, succeeding to it by lineal descent, and that the succession could not be changed. This declaration, in favour of the Divine right of the king, was followed by the Test Act, which required every holder of office to swear that he owned the Protestant religion as set forth in the Confession of 1567, acknowledged the supremacy of the king in all causes, would not consult about any State matter without royal licence or command, and would never endeavour to alter anything in the Government of the country. Never before had the Scottish Parliament displayed such abject subservience. Eighty of the ministers refused to take the test, and left their parishes; and in January 1682, fifty of the Covenanters published at Lanark a fresh declaration, and burned the Succession and Test Acts. The 'Society People' were counted rebels, as they were, and were treated with savage cruelty; Dalziel and Claverhouse, merciless leaders of the rudest soldiers, earned infamous reputations; and, when the troubles were at an end, men continued to talk of the 'Bloody Clavers,' while they spoke, too, of the 'Bloody Mackenzie,' the Lord Advocate, who was pitiless in his prosecutions. Their victims were fined or sent to slavery, and some were shot and some were hanged. In November 1684 the 'Society People' published their 'Apologetical Declaration,' drawn up by James Renwick, a young minister, which contained a warning to their persecutors that they counted them, and would punish them, as the enemies of God and His covenanted work; and they did not shrink from killing their foes. An oath of abjuration of the Apologetical Declaration was at once prepared by the Government, and he who did not take it might be shot without pretence of trial. John Brown of Priesthill, in whose house were found bullets and treasonable papers, refused to take the oath. 'Whereupon,' wrote Claverhouse, 'I caused shoot him dead, which he suffered very unconcernedly.' A few days later, though Claverhouse was not the perpetrator of the deed, an old woman and a girl were drowned at Wigton, as they would not abjure the Apologetical Declaration.

James II. ascended the throne in 1685, and the Estates expressed their gratitude for the blessings which they owed 'to the sacred race of their most glorious kings, and to the solid, absolute authority wherewith they were invested by the first and fundamental laws of the monarchy.' Acts were passed against the Covenanters, and in one it was declared that any person who preached at or attended a conventicle was to be punished with death and confiscation of goods. The accession of James marked no change of policy in the treatment of the Covenanters, and the first year was known as 'the black year, the killing time.' Argyle, in the plot with Monmouth for the removal of James from the throne, landed in Scotland in 1685; but he received no help from the Covenanters, whose cause, at an earlier time, he had forsaken The plot ended in failure, and Argyle was taken and carried to Edinburgh, where he was beheaded. Before he arrived in the city, the Government resolved to make sure that their prisoners, who might be in sympathy with him, were securely warded. About 200 of the Covenanters were accordingly removed to Dunnottar Castle. Men

and women were thrown together into a vault, with but one window for air, and the space hardly gave them room to sit down. Days passed before any of them were removed, and then forty men were sent to another vault, where a break in the wall gave the only current of air. After two months those who were alive were taken to Leith; and, while a few promised allegiance, the majority were sent as slaves to the Plantations.

James was a Roman Catholic, and, whatever his schemes were for the return to Rome of the nations over which he was king, he determined to repeal the penal laws against the Roman Catholics. The Scottish Parliament, which again and again had admitted the royal absolutism, would not consent to more than a serious consideration of his communication regarding the repeal, and was dissolved. Thereafter the Privy Council received an intimation from him that his prerogative enabled him to dispense with all laws, and he charged the Council to rescind the penal laws. Even the most subservient Government could not ignore the fact that Scotland dreaded a return of Popery. James accordingly extended to the Presbyterians the toleration he desired for the Catholics, and they were allowed to meet in private houses or chapels, if no disloyal doctrines were preached. The 'Society People,' however, were excluded from the new Indulgences, as they had thrown off allegiance to the king, and they continued in their opposition and frequented their conventicles. Their leader was James Renwick, and in February 1688, having refused to acknowledge the Government, he was put to death, the last martyr for the Covenants. The year which witnessed the execution of the Covenanter in Edinburgh witnessed also the arrival in London of William of Orange and the flight of James.

In the period between the imposition of the Liturgy and the death of Charles I., and, again, in the period between the Restoration and the Revolution, the Covenanters were the guardians of freedom. After the Restoration the nobles and barons, as if there had been no Covenants, admitted with extraordinary servility the despotism of the kings; and even the Covenanters themselves were not united, since those who profited by the Indulgences submitted to the king, who was an ecclesiastical autocrat. The 'Society People' alone were faithful to the Covenants.

Recognizing Presbyterianism as Divinely instituted, and declaring, therefore, the rights of their Church to be those of the Redeemer, they fought for Christ and the Covenant; and at last threw off allegiance to the king as the enemy of their Lord. In Scotland throughout the 17th cent. the royal absolutism was displayed almost entirely in affairs of the Church, and there was no clear issue, without appeals to religion, between despotism and liberty. Yet in the sphere of the Church, where tyranny pressed, and where a contest alone was possible, the Covenanters asserted the rights of the people.

COVENANT THEOLOGY.—1. Preliminary definition.—By this term is designated a type of theological thought which expresses the relations between God and man in the formula of a covenant or legal agreement, formally entered into by two contracting parties. It was specially common among the English Puritans, from whom it passed to their descendants in America. On the Continent it is first found among the German Reformed theologians in the second half of the 16th century. Its best known Continental representative is Cocceius (John Koch, 1603–69), who is often wrongly said to be its author.[1] Through him and his successors (Burmann, Witsius, and others) it received its most elaborate literary expression, and ever since has constituted one of the recognized types of Calvinistic or Reformed theology. It is the purpose of this article to explain the nature of this type, and to give some account of its origin and history.

2. Nature of the covenant theology.—(1) *The covenant idea and the covenant theology distinguished.*—At the outset it is necessary to distinguish between the covenant idea and the covenant theology. The covenant idea is common Christian property. It is an inheritance of Christianity from the OT, which frequently describes the relation between Jahweh and His people in terms of a covenant, entered into either with individual Israelites (*e.g.*, Noah, Abraham, Phinehas; David), or with the nation as a whole. The covenant theology describes a special type of Christian thought which gives this idea a central importance not elsewhere assigned to it, and uses it as the organizing principle of the entire theological system. According to this scheme, God at the Creation entered into an agreement with Adam as the federal head of the race, promising to him and to his descendants eternal life on condition of his obedience to the Divine command that he should not eat of the fruit of the tree of the knowledge of good and evil, and threatening him with eternal death for himself and his descendants in case of his disobedience. Adam having failed to stand the test, God entered into a second agreement with Christ as the second Adam, on behalf of the elect, promising them forgiveness and eternal life in consideration of Christ's perfect obedience and satisfaction imputed to them by faith, as well as all the gifts and graces which are necessary to the realization of this supreme blessing in experience. The covenant theology in its developed form is a scheme of doctrine in which the entire system of divinity is expressed in the terms of these two covenants, and man's assurance of salvation based upon the fact that he is included within the latter. In order to understand its origin and significance, it is necessary to consider the problem which it was designed to solve.

(2) *The covenant as a ground of assurance.*—This problem was, in a word, the reconciliation of the sovereignty of God with man's assurance of salvation. The federal theologians, as they are called, were Calvinists. Their major premiss was the absolute sovereignty of God. Man, in their view, had no independent right as against his Maker. Unquestioning submission to the Divine command was his duty. Perfect obedience, were such possible, carried with it no merit, and could guarantee no reward. If, then, man was to be admitted to the Divine fellowship or assured of the Divine favour, it could be only by some voluntary condescension on God's part, establishing by arbitrary enactment

[1] So by Strong (*Systematic Theology*[7], Philad. 1907, p. 612 f.).

relations which had no necessary foundation in nature. The importance of the covenant for these theologians consisted in its assurance that such condescension had, as a matter of fact, taken place. By the covenant God not only bound Himself to a certain definite line of conduct, so far as man was concerned, and in so far restricted the freedom of His own choice,[1] but He made known in detail to His creature the nature and conditions of His gracious purpose, and so removed the uncertainty to which he would otherwise have been exposed.

'God,' says Thomas Shephard, in his preface to Bulkeley's *Gospel Covenant*,[2] 'might have done good to man before his fall, as also since his fall, without binding himselfe in the bond of Covenant . . . but the Lord's heart is so full of love (especially to his owne) that it cannot be contained so long within the bounds of secrecie, . . . but it must beforehand overflow and breake out into the many streames of a blessed Covenant.'

Arminian theologians also made use of the covenant idea.[3] But for them it had less importance, because their view of the relation between man and his Maker was founded on natural right. Thus, Arminius, while recognizing that God dealt with our first parents by way of covenant, distinguished between the law of nature, which God wrote on the heart of man, and the symbolical law, or law of precept, which deals with matters in themselves indifferent apart from the Divine command. While it is man's duty to obey in either case, the latter obedience is 'far inferior,' and 'is not so much obedience itself as the external profession of willingly yielding obedience' (*Works*, Eng. tr. ii. 370). To the Calvinistic theologians, on the other hand, the highest virtue consisted in snbmission to the will of God simply because it was God's will, and the covenants gained their great importance because they defined the specific form which, from age to age, that will assumed for man.

This precision of statement explains the prominence of the covenant idea in Puritanism. Puritanism, as is well known, is a type of thought which makes much of uniformity. The Puritan believed that God had not only revealed a way of salvation, but had established certain institutions and laid down certain laws, by means of which this salvation was to be mediated to those whom God bad chosen to enjoy its blessings. He was a churchman as well as an individualist, and valued the covenant not only as the ground of personal assurance to the individnal Christian, but as the charter which established the existence and defined the laws of the Christian society.

From this fact two further consequences follow which are necessary to the complete definition of the covenant theology: (*a*) the covenant furnished the framework for the treatment of Christian ethics; and (*b*) it gave the key to the Christian interpretation of history.

(3) *The covenant as the standard of Christian duty.*—The use of the covenant as a standard of duty, important as it later became, is derivative, not primary. The earlier theologians knew of but one covenant between God and man, namely, the covenant of grace. In this the Father, in consideration of Christ's promise of obedience even unto death, agreed to accept His satisfaction as an equivalent for the punishment due by guilty man, and to accept the persons of the elect as righteous for His sake. God's dealings with Adam in Paradise were not brought under the covenant idea except in so far as the promise to Eve that her seed should bruise the serpent's head (Gn 3^{15}) was regarded as an anticipation of the later covenant of grace. In the course of time, however, the idea was extended to include all God's dealings with man, before as well as after the Fall. Two covenants were distinguished — the covenant of works made in Paradise with Adam as the federal head of the race, and the covenant of grace made with Christ, the second Adam, or with the elect in Him as their representative. In the former, God reveals the substance of the moral law as the condition which He prescribes for the attainment of salvation. In the latter, He acquaints men with the machinery which He devised for the repair of Adam's fault. But the substitution of the second for the first covenant does not render the moral law obsolete; it only alters man's relation to that law. After as well as before the Fall perfect holiness is essential to salvation, and not the least of the blessings of the covenant of grace is its clear repetition of the substance of the law originally promulgated in Paradise. The covenant of grace differs from the covenant of works in the fact that it adds to the law the promise, *i.e.* the disclosure of the means through which Adam's original fault is to be repaired and the blessings of salvation won by Christ to be mediated to the elect. Accordingly, the covenant of grace includes, with the substance of the moral law, institutions of worship (*i.e.* sacraments and ceremonies) which, varying from age to age, typify Christ, and seal to believers the grace which He has merited for them.[1]

The literature of the covenant, therefore, is full of discussion as to the nature of the Church and of the sacraments. Since the sacraments are signs and seals of the covenant of grace, it is essential that they should be rightly administered, and that those only should be admitted to partake of them who are really entitled to the privilege. Here we find differences of opinion among those who were agreed as to the general significance of the covenant and were at one in their opposition to Arminianism. Some held that the regenerate only had any right to the privilege of the sacraments;[2] others were willing to take a Christian profession (*i.e.* a dogmatical, as distinct from a justifying, faith) as *prima facie* evidence of right of admission to the sacraments.[3] The controversy as to the half-way covenant, which agitated New England in the latter part of the 17th and in the 18th cent., is an echo of these earlier disputes.

There was also difference of opinion as to the extent to which the conditional language properly applicable to the covenant of works could be rightly employed of the covenant of grace. In the case of the covenant of works we have to do with a real condition. The whole significance of the agreement into which Adam entered with his Maker turned upon his possession of the freedom of contingency. But, in the case of Adam's descendants, such freedom is lacking. The contracting party in the second covenant is Christ, the second Adam; and one of the most important considerations in the compact into which He entered with the Father was that the Holy Spirit should

[1] Cf. John Preston (*The New Covenant, or the Saint's Portion*, London, 1629): 'These words contain a further and a greater favour expressed to Abraham than the former words do . . . that is, I will not only tell thee what I am able to doe, I will not only express to thee in generall that I will deale well with thee, etc. . . . but I am willing to enter into covenant with thee, that is, I will bind myself, I will ingage myself, I will enter into bond, as it were, I will not be at liberty any more, but I am willing to make a covenant, a compact and agreement with thee,' etc. (p. 70).

[2] *The Gospel Covenant, or the Covenant of Grace opened*, etc. . . . *preached in Concord in New England*, by Peter Bulkeley, London, 1646.

[3] Cf. Arminius, *Works*, Eng. tr. by Nichols, London, 1825 ff., ii. 369 ff., 389 ff.; Limborch, *Compleat System*, Eng. tr. by Jones, London, 1702, bk. iii. ch. i. § 7, p. 211 ff.

[1] The later Covenant theologians, interested in showing the uniformity of God's method with man, carry back the idea of the sacrament to Paradise, and associate it with the law as well as with the Gospel (cf. Thomas Blake, *The Covenant Sealed, or a Treatise of the Sacraments of both Covenants* . . . London, 1655, p. 9 ff.).

[2] *e.g.* Richard Baxter, *Plain Scripture Proof of Infants' Church-Membership and Baptism*[4] (London, 1656), p 327, quoted by Blake, *op. cit.* p. 114.

[3] Thomas Blake, *op. cit.* p. 114

be granted to the elect to make possible a faith of which they are incapable by nature. It would seem, then, an abuse of language to speak of any condition to be fulfilled on the part of the elect as distinct from Christ, and this was the position taken by some of the more rigorous Puritans. Christ, they held, was the sole party to the covenant of grace.[1] Others,[2] however, distinguished two covenants: the covenant of redemption entered into between the Father and the Son, and the covenant of grace made with the elect through Him. The covenant of grace, no less than that of works, they regarded as conditional, the difference being that in the former case the sole condition was faith in Christ, which faith was itself made possible through the gift of the Spirit.

But, whatever difference of opinion there may have been as to the conditionality of the covenant of grace, all agreed that no one could be saved whose life did not conform to the standard which it revealed. Of all heresies Antinomianism (*q.v.*) was most abhorrent to the Puritan, and many controversial tracts reveal the eagerness of the advocates of the covenant theology to clear their skirts from any imputation of sympathy with so abominable and dangerous an opinion. The assurance in which the Puritans rejoiced was indeed an assurance of salvation, but it was a salvation which included ultimate conformity to the Divine law.[3]

(4) *The covenant as a key to the Christian interpretation of history.*—Thus far we have considered the covenant theology primarily on its practical side, but it had an important theoretical significance as well, since it furnished the formula for the Christian interpretation of history. The Biblical writers speak of a number of different covenants entered into by God with different individuals at different times, and it was natural that the problem of the relation of these covenants one to another should engage the attention of Christian theologians. Protestants were agreed that God followed a uniform method in His treatment of men, and hence could not admit any essential difference in principle between the covenants; but they could not shut their eyes to the contrast between the covenant with Moses at Sinai and the new covenant foretold by Jeremiah and the prophets, which the Apostle Paul identifies with the Christian gospel; nor could they overlook the contrast drawn by Paul himself between the promise to Abraham and the law given by Moses. Thus, the relation between these different covenants constituted a problem, the solution of which furnished the nearest approach to a philosophy of history which the theology of the time possessed.

In general, it may be said that it was the disposition of the earlier Protestant theologians to minimize the difference between the Christian gospel and its preparation in the religion of Israel. All the Reformers recognize the contrast between the OT and the NT, and devote a section of their theology to a discussion of their differences. But they are agreed that these differences are superficial, and that, in substance, the two Testaments are the same. What the old dispensation shadows forth in types, the new fulfils in reality, but both alike, the OT and the NT, the law of Moses and the gospel of Christ, are to be regarded as different forms of the one covenant of grace (cf. the Westminster formula, 'one covenant under different administrations,' *Westm. Con.* vii. 5, 6).

[1] So John Saltmarsh, *Free Grace, or the Flowings of Christ's Blood freely to Sinners*[2], London, 1646, p. 125; Tobias Crisp (1600–1642), *Christ Alone Exalted*, 1643–6.

[2] *e.g.* Daniel Williams, *Gospel Truth Stated and Vindicated*, etc., London, 1692, a reply to Crisp.

[3] This consciousness of strict moral responsibility found expression in the National Covenants, to which reference will presently be made, as well as in the large epace given to the exposition of the moral law in the Catechisms of Puritanism.

With the recognition of the twofold covenant a further distinction is introduced. We have now the contrast between the covenant of works entered into between God and Adam, the substance of whose requirement is repeated in the law given on Sinai, and the covenant of grace under its twofold administration, the OT and the NT. Another distinction meets us in William Ames (Amesius),[1] and was further developed by Cocceius and his successors in the early part of the 17th century. These theologians, while making use of the general formula already described, distinguished within the administration of the old dispensation various historic stages marked by characteristics of their own.[2] Thus, there are the periods (1) from Adam to Noah, (2) from Noah to Abraham, (3) from Abraham to Moses, (4) from Moses to David, (5) from David to Christ, each of which has its own institutions and sacraments. In like manner, the NT has its own divisions, *e.g.* (1) from the Advent to the Resurrection, (2) from the Resurrection to the Second Coming, and (3) the Final Consummation in the world to come. Such a treatment made it possible for those theologians to do more justice to the facts of Biblical history than was possible under the more rigorous scheme of their predecessors. Robertson Smith, speaking of the federal theology of Cocceius, says with justice that, 'with all its defects,' it 'is the most important attempt, in the older Protestant theology, to do justice to the historical development of revelation' (*Prophets of Israel*, Edin. 1882, p. 375).

Thus the covenant theology has a threefold significance. In the first place, it is a theory of salvation; in the second place, it is a programme for conduct; in the third place, it is a philosophy of history. The section that follows will attempt to show how the different interests cross and re-cross in the course of the history.

3. **History of the covenant theology.**—(1) *The antecedents.*—The Biblical basis for the covenant theology is found partly in the account given in the OT of various covenants made by Jahweh with Israel[3] or with representative Israelites,[4] partly in the Pauline identification of the Christian gospel with the new or spiritual covenant prophesied by Jeremiah and other prophets.

The Heb. word בְּרִית, tr. 'covenant' in our versions, denotes either a treaty or alliance entered into between equals (*e.g.* between Abraham and the Amorites, Gn 14[13], AV and RV 'confederate'; Hiram and Solomon, 1 K 5[12], AV and RV 'league'), or a constitution or ordinance establishing the relation between a monarch and his subjects (*e.g.* David and the Israelites, 2 S 5[3]; Zedekiah and his people, Jer 34[8-18]). This difference of meaning is not without its bearing on the later history.

If we analyze the transactions described in the OT by the term 'covenant' (בְּרִית), we find that they fall into two classes —those in which Jahweh reveals to His servants a purpose which He has conceived independently of man, and whose execution is dependent upon no one but Himself, and those in which the conduct of the people with whom the covenant is made is a determining factor. Of the former class are the covenants with Noah and Abraham; to the latter belong the covenant at Sinai and the later covenants with Jehoiada (2 K 11[17]), Hezekiah (2 Ch 29[10]), and Josiah (2 K 23[3]). The promise to Noah that day and night shall no more fail (Gn 8[22]), or to

[1] (1576–1633) *Medulla S.S. Theologiæ*, Eng. tr. *The Marrow of Sacred Divinity*, 1642, chs. xxxviii., xxxix.

[2] Gass (*Gesch. der prot. Dogmatik*, Berlin, 1857, ii. 265), following Schweizer (*Reform. Glaubenslehre*, i. 103 ff.) and Schneckenburger (*Vergleichende Darstellung*, etc., ii. 146), regards this disposition to apply the covenant form to the different stages in the history of religion as characteristic of the Reformed theology from the first, and finds its beginnings in Bullinger and Leo Jud.

[3] *e.g.* at Sinai (Ex 19[5] 24[7f.] [E] 34[10. 27. 28] [J] 31[16], Lv 2[13] [P] 24[8] 26[9ff.], Dt 4[13]); in the plain of Moab (Dt 29[1. 21]).

[4] *e.g.* Noah (Gn 9[9-17] [P], Is 54[10], Jer 33[20. 25]); Abraham, Isaac, and Jacob (Gn 15[18] [J] 17[2-21], Ex 2[24] 6[4f.], Lv 26[42] [P], 2 K 13[23], 1 Ch 16[15ff.], Ps 105[8. 10], Neh 9[8], Jer 34[18]); Phinehas, (Nu 25[12f.] [P]); Joshua and Israel (Jos 24[25] [E]); David (Ps 89[3. 28. 34. 39] 132[12], Jer 33[21], cf. 2 S 7, 1 Ch 17); Jehoiada and the people (2 K 11[17], 2 Ch 23[16]); Hezekiah (2 Ch 29[10]); Josiah (2 K 23[3]); and Ezra (Ezr 10[3]).

Abraham that in his seed all nations shall be blessed (Gn 12^3 etc.), is obviously not in the same class with the promises which accompanied the giving of the Law to Israel, which were, in the nature of the case, conditional upon the future conduct of the Israelites. Yet both alike are described by the same word.

Besides these covenants there is also frequent reference in the prophets to a new covenant which Jahweh is to establish with redeemed Israel in the future (Jer 31^{31-33}, cf. Is 42^6 49^8 55^3 59^{21} 61^8, Jer 32^{40} 50^5, Ezk $16^{60.\ 62}$ 20^{37} 34^{25} 37^{26}, Hos 2^{18-20}). Unlike the old covenant, this is to be inward and spiritual, a law written on the hearts of the people (Jer 31^{33}), and will be of everlasting validity.

This new covenant the NT identifies with the Christian gospel, which is contrasted with the Mosaic law as the former or old covenant (Gal 4^{24}, He $9^{15.\ 18}$, cf. 8S, 2 Co 3^6). Like the latter, it was sealed with sacrifice—even the blood of Christ, who by His voluntary obedience and submission unto death has rendered the older sacrificial system superfluous and become the mediator of a new and better covenant (He 7^{22} 8^{6-9} 12^{24}), since it is an everlasting one (13^{20}). This new covenant is symbolized in the cup which Jesus gave to His disciples at the Last Supper (Mt 26^{28}, Mk 14^{24}, Lk 22^{20}, 1 Co 11^{25}). It has its anticipation in the covenant of promise made by Jahweh with Abraham (Gal 3^{17}, cf. Eph 2^{12}, Ac 3^{25}), which, being prior to the Law, could not be superseded by it.

We find thus in the NT the same double usage which we found in the OT, the word διαθήκη being used now to denote a free promise of God, as to Abraham and his seed, and later to Christian believers in the gospel, now of a series of precepts and orders given through Moses and his successors, and conditional in their effects upon the obedience of the people.

In He 9^{16} the idea of the covenant is interchanged with that of the testament, or will—a substitution which explains the uniform rendering of διαθήκη in the Vulgate by the Lat. *testamentum*, and its frequent translation in AV by the word 'testament' (*e.g.* Mt 26^{28}, Mk 14^{24}, Lk 22^{20}, 1 Co 11^{25}, 2 Co $3^{3.\ 14}$, He 7^{22} $9^{15ff.}$).

In view of the emphasis laid by the Biblical writers upon the covenant idea, and their use of the conception to describe the different steps in the Divine training of mankind, it is surprising that it should so early and so completely have fallen into the background. Irenæus is the only early Christian writer who makes much use of it. He distinguishes several different covenants (διαθήκη, *testamentum*) into which God has entered with man, and regards the study of their nature and relations as a legitimate subject for Christian investigation.[1] His interest in the subject is, doubtless, due to the fact that, like St. Paul, he was chiefly concerned with the question of the nature of the difference between Judaism and Christianity—a difference which naturally expressed itself in the contrast between the old covenant and the new. When this question fell into the background, as it soon did, the covenant phraseology went out of use. Augustine makes no use of the idea in his *City of God*, and it plays no important part in the theology of Roman Catholicism. It was only when the rise of a new religious type, historically derived from Catholicism, but independent of it, brought the question of the distinctive nature of Christianity again into the foreground, that the subjects which engaged Irenæus' thought became again of general interest. This condition emerged at the Reformation, and one of its consequences was the revival of the covenant idea.

But, though Catholicism contributed little directly to the preparation for this type of theology, its indirect contribution was great. The conception of God as lawgiver and judge, the expression of Christ's work in terms of satisfaction and equivalence, the conception of the Christian Church as the inheritor of the rights and privileges of the Jewish Church, and the loss of St. Paul's sense of the novelty of Christianity as a historic religion, all helped to prepare the way for the use by Protestant theologians of OT legalistic phraseology to describe a type of religious experience whose characteristic feature was the denial of the possibility of salvation by works.

(2) *The beginnings of the covenant theology.*—In tracing the history of the covenant theology in Protestantism, we have to recall the distinction already made between the covenant idea and the covenant theology. The idea of the covenant or testament is used by all the Reformers to express God's gracious revelation to His people, both before and after Christ. Two such revelations were distinguished, the OT and the NT, agreeing in substance, but differing in administration, and the nature at once of the agreement and of the difference forms the subject of a special *locus* in the early Protestant dogmatics (*e.g.* on the Law and the Gospel; on the difference between the OT and the NT).[1] But the conception was not given the structural importance in the system which it later acquired, and which warrants us in speaking of a covenant theology as distinct from the covenant idea.

We may take Calvin as typical of all the Reformers. He distinguishes the Gospel not merely from the Law, but from earlier gracious revelations of God within the OT, yet he hastens to add that we must not imagine that the Gospel has

'succeeded the whole Law in such a sense as to introduce a different method of salvation. It rather confirms the Law, and proves that everything which it promised is fulfilled. What was shadow, it has made substance. When Christ says that the Law and the Prophets were until John, he does not consign the fathers to the curse, which, as the slaves of the Law, they could not escape. He intimates that they were only imbued with the rudiments, and remained far beneath the height of the Gospel doctrine. . . . Hence we infer that, when the whole Law is spoken of, the Gospel differs from it only in respect of clearness of manifestation' (*Institutes*, II. ix. 4).[2]

[1] While in one passage (III. xi. 8) Irenæus distinguishes four distinct covenants (namely, those with Noah [so the Greek text; the Latin reads 'Adam,' and substitutes Noah for Abraham, omitting the latter], Abraham, Moses, and Christ), in general he recognizes only two, namely, the old covenant, or law, given through Moses, and the new, or gospel, given through Christ (III. xii. 11; IV. ix. 1, xxxii. 2). According to this division, God's dealing with man in the pre-Mosaic period is not to be conceived under the covenant relation, the reason being that law is not needed by those who are just (IV. xvi. 2). The Law, by which Irenæus means the Jewish ceremonial law, was added later because of sin, and was destined in time to be replaced by the Christian gospel, or new law of liberty (*lex vivificatrix*, IV. xxxiv. 4), as the means through which alone full righteousness and salvation are made possible.

We have thus in Irenæus three distinct stages in the process of the Divine training of man—the pre-Mosaic period, typified by Abraham, in which man works out his own salvation through obedience to the natural law written on the heart; the period from Moses to Christ, in which his salvation is conditioned upon fidelity to the Jewish ceremonial law; and the period of the gospel, in which the ceremonial law is abrogated, and salvation depends upon man's free fulfilment of the moral law, which Christ has reaffirmed and reinforced with new sanctions. While, in general, the covenant idea is applied to the two later of these periods only, in principle the three belong together, and, in one passage, the covenant idea is extended backwards to include the pre-Mosaic period. In this, as we shall see, Irenæus is typical of the development of the later covenant theology.

On the theology of Irenæus, cf. Werner, 'Der Paulinismus des Irenäus,' in *TU*, Leipzig, 1889, pp. 179–202. On the significance of Irenæus in early Christian theology, cf. W. A. Brown, *Essence of Christianity*, Edinburgh, 1903, p. 64 ff.

[1] Thus Calvin finds the agreement (1) in the common hope of immortality; (2) in the fact that both were established by the mercy of God; (3) in that 'they both had and knew Christ, the Mediator, by whom they were united to God and made capable of receiving his promises.' The difference consisted (1) in that in the old covenant the heavenly inheritance was exhibited under the form of temporal blessings, which was not the case in the new; (2) in that the OT typified Christ under ceremonies which exhibited 'only the image of truth, the shadow, not the substance,' whereas the NT gives us 'both the full truth and the entire body'; (3) in that the OT is literal, and the NT spiritual; (4) in that the OT is one of bondage, the NT one of liberty; and, finally, (5) in that the OT is for one people only, while the NT is for all. Cf. Brown, *Essence of Christianity*, p. 103 f.

[2] It is instructive to compare Calvin's view with that of Irenæus. He follows Irenæus in conceiving of two covenants or testaments, the Old and the New. He agrees with him further in that he does not apply the term 'covenant' to God's primitive revelation to Adam in Paradise. He differs from Irenæus in that he brings both covenants under the conception of grace rather than of law. Irenæus, like the early theologians in general, conceived salvation primarily in terms of the fulfilment of law. To Calvin, as to all the Reformers, salvation is a means of repairing the damage wrought by man's transgression of law. Like Irenæus, Calvin regards both covenants as expressions of a single principle. But, whereas Irenæus carries forward the idea of merit from the Law and applies it to the Gospel, Calvin carries back the idea of free grace into the Law, and interprets the latter by the

In thus emphasizing the essential unity of God's dealings with His people, Calvin is representative of all the Reformers. Luther[1] and Melanchthon[2] recognize no difference in principle between God's dealings with His people under the old dispensation and under the new. The first specific treatise on the covenant which the present writer has been able to discover is that of the Swiss reformer, Henry Bullinger, which bears date 1534, and has for its title *De Testamento sive fœdere Dei unico et æterno*. Bullinger, like his predecessors, recognizes only one covenant, namely, the covenant of grace.[3]

The beginnings of the covenant theology in a technical sense are to be found on German soil, and precede the more famous school of Cocceius by more than half a century. Its representatives were Reformed theologians who, under the influence of a warm and vital piety, had developed a theology which differed in several respects from the stricter predestinarianism of Switzerland and France. This theology had three main characteristics. In the first place, it used the conception of the Divine covenant, with its synonyms, the Church or the Kingdom, as a comprehensive theological idea to express the purpose at once of creation and of redemption, and to give unity to the rest of the system. In the second place, it associated this conception with the idea of the believer's mystic union with Christ; and, in the third place, it deduced from the combination of these two conceptions, rather than from the doctrine of predestination, its doctrine of the perseverance of the saints.[4] The two best known representatives of this theology were Caspar Olevianus and Zacharias Ursinus, the authors of the Heidelberg Catechism.[5]

Olevianus' most important dogmatic monograph, published anonymously in 1585, is entitled *De substantia fœderis gratuiti inter Deum et electos, itemque de mediis*, etc. This work, as the title indicates, discusses the nature of the free covenant between God and the elect, and the means through which its substance is communicated to us. The substance of the covenant consists in God's promise and oath that He will never be angry with His elect, but will receive them as sons of God and heirs of eternal life in Jesus Christ. This promise consists in the offering through the gospel of the Son of God, with the double benefit which He brings, namely, the remission of sins and renewal after the Divine image through the life-giving Spirit. These gifts are made known to us outwardly, by the word and by visible signs, as a testimony of agreement between God and ourselves, and are confirmed with inner efficacy by the free gift of faith through the infinite mercy of God to the elect. The work is introduced by a discussion of the following questions: (1) Who is God, the author of the covenant? (2) Who is man, with whom God establishes His covenant? (3) What is the nature of the covenant itself?

Even more striking in its historic significance is an earlier treatise of Olevianus, the *Expositio Symboli*,[1] in which the Apostles' Creed is interpreted under the form of an exposition of the covenant of grace, the articles of the Creed being regarded as a brief statement of the terms of the covenant. It is to be noted that the first book of the *De substantia fœderis* also takes the form of an exposition of the Apostles' Creed, the second book being given to the proofs of the covenant. Under this head Olevianus discusses the function of the Church, and more specifically the word and the sacraments. Here we see the covenant idea given structural significance and made a comprehensive conception under which the whole content of Christian faith and practice may be brought.[2]

Olevianus recognized in principle but a single covenant, namely, the covenant of grace. It was reserved for his successors (*e.g.* Raphael Eglin, and Matthias Martinius) to extend the covenant idea to the relation of man before the Fall and to distinguish two covenants—that of works and that of grace.[3] With this distinction the scheme of the covenant theology in its later form is complete.

(3) *The covenant theology in Puritanism.*—Parallel with the movement already described, we find another developing on the other side of the channel. In English Puritanism, as we have already seen, the covenant idea found congenial soil, and the later treatises of Cocceius and his school owe quite as much to the impulse gained from English writers[4] as to the German theologians already referred to.

former. We may say, indeed, that the characteristic feature of the Reformed theology is the attempt to use legal phraseology to express a gospel which is essentially anti-legal; and the reason why the covenant idea finds such favour with its representatives is the fact that the covenant expresses an obligation voluntarily assumed on either side, and hence not properly to be brought under the sphere of necessity.

[1] Cf. the references in Köstlin, *Luthers Theologie in ihrer geschichtlichen Entwicklung und ihrem inneren Zusammenhange*[2], Stuttgart, 1883, 2 vols., esp. ii. 376 ff., Eng. tr. ii. 359 ff.

[2] Cf. his *Loci Communes*, ed. Kolde, 2nd ed., Leipzig, 1890, esp. p. 211 ff.

[3] The design of Bullinger's treatise is to show that the gospel is older than Judaism, Muhammadanism, and Catholicism; indeed, that it goes back to 'Noah, Enoch, Seth, Abel, Adam, who without circumcision pleased God through faith.' He holds that there is no Christian virtue commended in the NT which was not equally exemplified in the words and deeds of Abraham. Cf. the citations given by Rockwell, *Die Doppelehe des Landgrafen Philipp von Hessen*, Marburg, 1904, p. 223, note 2.

[4] So Heppe, *Dogmatik des deutschen Protestantismus im 16ten Jahrhundert*, Gotha, 1857, i. 143 ff. Heppe is the best authority on the German Reformed theology, and this work gives much information concerning works otherwise inaccessible to English readers. Cf. esp. pp. 139 ff., 188 ff.

[5] Besides Olevianus and Ursinus, Heppe mentions, as representatives of the covenant theology, Andrew Hyperius, Professor of Theology at Marburg from 1541 to 1564 (*Methodi theologiæ sive præcipuorum Christianæ religionis locorum communium*, Basel, 1566); Peter Boquinus, Professor of Theology at Heidelberg, died 1582 (*Exegesis divinæ atque humanæ κοινωνίας*, Heidelberg, 1561); Joachim Curæus (*Exegesis perspicua et ferme integra controversiæ de sacra cœna*, 1574, ed. Scheffer, Marburg, 1853); Sohnius ('Methodus theologiæ,' *Opp.* ed. 3, i. 234 ff.); Raphael Eglin, Professor of Theology in Marburg (*Diezodus theologica de magno illo insitionis nostræ in Christum mysterio Rom. 6; De fœdere gratiæ ex loco Rom.* 8[31], Marburg, 1613), and esp. the theologians of Bremen, Matthias Martinius (*Christianæ doctrinæ summa capita*, 1603), and Ludwig Crocius (*De perseverantia sanctorum libri septem dogmatici et apologetici*, Bremen, 1616).

[1] *Expositio Symboli Apostolici, sive articulorum fidei, in qua summa gratuiti fœderis æterni inter Deum et fideles breviter et perspicue tractatur*, Frankfort, 1576.

[2] While agreeing in substance with Olevianus, Ursinus does not give the covenant so important a place in the structure of his system. His views are set forth most fully in his Sum of the Christian Religion of 1598 (*Corpus doctrinæ christianæ ecclesiarum a papatu reformatarum, continens explicationes catecheticæ D. Zachariæ Ursini . . . studio Davidis Parei . . .*). This work was the outgrowth of Ursinus' lectures on the Heidelberg Catechism, first published in Geneva in 1584; afterwards in a fuller edition by David Pareus in 1591. Pareus' work was a revision and amplification based upon his own notes, and included much matter for which Ursinus was not responsible. This matter the later edition of 1598 omits, and it may be regarded as the most authoritative statement of Ursinus' views. It was often reprinted, and was translated into English under the title, *The Summe of Christian Religion*, by Dr. Henry Parry, London, 1645.

The discussion of the covenant is introduced by Ursinus between Questions 18 and 19, which deal with the mediatorship of Christ, and the gospel, and includes the following sub-heads: (1) What a covenant is; (2) Whether it can be made without a mediator; (3) Whether there be but one and the same covenant, or more; (4) In what the old and the new covenant agree, and in what they differ.

[3] Cf. Heppe, *op. cit.* p. 197. It is an interesting question when the idea of the covenant of God with Adam first makes its appearance. We find no trace of it in our canonical Scriptures. Schmidt (art. 'Covenant' in *EBi*) finds the first appearance of the idea in Sir 17[12], but the reference is not altogether clear, and other commentators refer the passage to Sinai.

[4] Among Cocceius' teachers, besides Martinius and Crocius, was the English Puritan, William Ames.

The covenant idea makes its earliest appearance in English history in practical rather than theoretical form, in the National Covenants entered into by the Scottish people and their rulers. These were solemn engagements, in which the nation as a whole pledged itself to be true to the revealed will of God as set forth in the Scriptures, and interpreted with the stern literalism of the Puritan conscience. Such a national covenant is the so-called *Second Scottish Confession*, a practical appendix to the early Confession of Knox (1560), to which the people publicly subscribed in the year 1581. It was frequently renewed in the course of the later history, and played a momentous part in the struggles of the Stuarts with their rebellious fellow-countrymen. It is not strange that an idea familiarized to the Scottish people in so dramatic a way should have received early literary expression. See art. COVENANTERS.

One of the earliest Scottish monographs on the covenant bears date 1596, and is by Robert Rollock (1555–1598), a distinguished Principal of the University of Edinburgh (*Quæstiones et Responsiones aliquot de fœdere Dei deque sacramento quod fœderis Dei sigillum est*). Here already there is emphasized the close connexion between the covenant and the sacrament which is characteristic of the later history.[1]

English monographs were frequent during the first half of the 17th century. An anonymous treatise, bearing date 1616, is dedicated to the mayor and magistrates of the town of Feversham in Kent.[2] Like Olevianus, its author uses the covenant idea as a framework for the exposition of the Creed. His practical interest is apparent in his emphasis upon the importance of renewing one's covenant made in baptism through 'a continual repeating' of it, which takes place in catechizing the children of the faithful (p. 63). Other treatises by John Preston (*The New Covenant, or the Saints' Portion*, London, 1629), and George Downame (*The Covenant of Grace, or an Exposition upon Lk* $1^{73, 74, 75}$, Dublin, 1631), are likewise practical in nature.

The theological significance of the idea is apparent in the place given to it in systematic treatises. William Ames (1576–1633) in his *Medulla S.S. Theologiæ* (Eng. tr. *Marrow of Sacred Divinity*, 1642)[3] distinguishes two covenants—the law or covenant of works given to Adam in Paradise, having as its symbols the two trees of the Garden (I. x. 33), and the covenant of grace made with the redeemed through Christ. Ames traces the various steps in the administration of the covenant of grace, distinguishing not only the periods before and after Christ (the OT and NT), but also, under the first, the periods from Adam to Abraham, from Abraham to Moses, from Moses to Christ; and, under the second, the period from Christ to the end of the world and the eternal reign of the saints in heaven (I. xxxviii. xxxix.). In this he anticipates the later teaching of his pupil Cocceius.

Even more detailed is the description of the covenant given by Ussher in his *Body of Divinity*.[4] Here the nature of the compact made by God with Adam is described in great detail, and man in the person of our first parent is declared to have promised 'by that power which he had received to keep the whole law, binding himself over to punishment in case he did not obey' (p. 126). On the other hand, the covenant of grace was made by 'God alone,' who, immediately after man's fall in Paradise, declared to Adam His gracious purpose to save the elect through Christ (p. 158).[1]

Through Ussher the covenant idea received its first confessional expression in Puritanism. It appears in the 21st article of the *Irish Articles*, of which he was the author, and from them passed to the *Westminster Confession of Faith*, in which it forms the subject of a special chapter (vii.).[2]

The covenant was frequently discussed in the latter half of the 17th century. It appears not only in the works of the great Puritan theologians, Richard Baxter[3] (1615–1691), and John Owen[4] (1616–1683), but in many monographs by men less known to fame, *e.g.* John Saltmarsh,[5] Thomas Blake,[6] William Allen,[7] Edward Leigh,[8] and Daniel Williams.[9] It filled an important rôle in the controversies that divided the different parties in the Church, and a correct understanding of its nature and scope was regarded as one of the prime requisites of a sound orthodoxy.

Thus, as we have already seen, the stricter and the looser predestinarians were divided as to the conditionality of the covenant of grace. The stricter predestinarians denied that it was conditional at all. Like Ussher, they held that God alone was its author, or, at most, God and Christ. Representatives of this view were Saltmarsh and Crisp. Others, like Owen and Baxter himself, held to a true conditionality. They distinguished between the covenant of redemption, made between the Father and the Son, and the covenant of grace, made by the Father with the elect in Christ;[10] and, while they held that the redeemed were enabled to fulfil their part only through the grace which Christ had merited for them, yet they believed in preaching as though all depended upon

[1] Mitchell (*Westminster Assembly*, London, 1883, p. 377) cites Howie as another early Scottish representative of the covenant theology, but the present writer has not been able to verify the reference.

[2] *The covenant between God and man playnely declared in laying down the chiefest points of Christian religion*, London, 1616.

[3] Cf. also William Perkins, *A Golden Chain, or the description of theologie* (*Workes*, London, 1635, i. 70 f.); *An exposition of the symbole or Creede of the Apostles* (*ib.* p. 164 ff.); John Downame, *The Summe of Sacred Divinitie*, London, n.d., bk. i. ch. xvi., bk. ii. ch. i.

[1] Cf. also *The Marrow of Modern Divinity*, in two parts, 1645, 1649, by E. F., edited with Introduction, Notes, and an Appendix, Biographical and Bibliographical, by C. G. M'Crie, 1902. The sub-title of this 'epoch-marking, if not epoch-making,' work, as M'Crie calls it, reads: 'Touching both the Covenant of Works, and the Covenant of Grace: with their use and end, both in the time of the Old Testament and in the time of the New' (*Confessions of the Church of Scotland*, Edinburgh, 1907, p. 69).

[2] Even more prominent is the use made of the covenant idea in the *Sum of Saving Knowledge*, a brief compendium of doctrine which appeared in Scotland in 1650, and is bound up with the Confession and Catechisms in many of the later Scottish editions. Here the language of bargain and sale appears in its baldest form (*e.g.* Head II.: 'By virtue of the foresaid bargain, made before the world began, He, *i.e.* Christ, is, in all ages, since the fall of Adam, still upon the work of applying actually the purchased benefits unto the elect: and that He doth by way of entertaining a covenant of free grace and reconciliation with them through faith in Himself, by which covenant He makes over to every believer, a right and interest in Himself, and in all His blessings.'

[3] Cf. his *Plain Scripture Proof of Infants' Church-Membership and Baptism*[4], London, 1656 (pp. 100 ff., 112 ff., 223 ff., 326 ff.), as well as his Preface to Allen's *Discourse on the Nature, Ends, and Difference of the Two Covenants*, London, 1673.

[4] Cf. his *Doctrine of Justification by Faith*, chs. viii. xii.; *Treatise on the Doctrine of Perseverance* (*Works*, ed. Goold, xi. 205), Edin. 1851–55, *Salus Electorum Sanguis Jesu, or the Death of Death in the Death of Christ* (Goold's ed., x. 168 ff.).

the action of the human will. The tract of Williams, already referred to, gives an interesting picture of the questions in controversy, and the extent to which the stricter party were willing to carry their logic.

That these controversies were not confined to Old England, but speedily found their way across the water, finds interesting confirmation in a treatise of Peter Bulkeley, which appeared in London in 1646, and is entitled *The Gospel Covenant, or the Covenant of Grace opened.* It gives the substance of sermons preached by its author in his parish in Concord, in New England. He speaks of great divisions which had arisen about the covenant, and some busybodies who called the preachers 'legall preachers,' and said that they were 'wholly ignorant of the covenant of grace, and . . . shut up under a covenant of workes.' The reference is evidently to the rising Antinomianism which is associated with the name of Anne Hutchinson, 'that wretched Jezabell,' as Bulkeley calls her (p. 293). Bulkeley, who himself seems to have been a man of moderate views, gives a list of the questions in dispute, *e.g.* (1) whether the covenant of grace was made between God and man, or only between God the Father and Christ; (2) what is the meaning of the reference to Abraham's seed in Gal 3^{16}; (3) what the covenant of Sinai was, whether of works or of grace; (4) whether justification may be evidenced by sanctification; (5) whether the commandment commanding faith be a commandment of the law; (6) whether faith be a condition antecedent to justification or only consequent; and (7) whether the conditional promises be promises of free grace or no (Preface, p. 3).

The theoretical difference had its practical effect in the doctrine of the Church. The question here turned on how far it was possible to preserve the purity of the Church in the administration of the sacraments and ecclesiastical discipline. All but the Baptists agreed that the covenant of grace, like the Abrahamic covenant of the OT, included the children of believers, and therefore defended the practice of infant baptism. But this position raised perplexing questions as to the administration of the other sacraments. Since baptism could rightfully be administered to some who were not regenerate, why should the Lord's Supper be confined any more strictly? Why not recognize that the covenant conferred upon the children of believers certain ecclesiastical rights which extended beyond the circle of the elect, and be willing to accept a dogmatical, as distinct from a justifying, faith as the sufficient ground for admission to the Supper? This was the position taken by Blake in his interesting treatise entitled *The Covenant Sealed*—a position which brought him into a controversy with Baxter, in which it must be confessed that he puts that sturdy defender of the larger liberty to sore straits to defend his more exclusive position on this point.[1]

These practical controversies also had their echoes in America. The question as to those who could rightly be admitted to the Lord's Supper was one which agitated the New England churches for many years, and in the so-called half-way covenant the laxer practice advocated by Blake was long prevalent.[2]

A typical example of the Puritan treatment of the covenant is William Strong's posthumous *Discourse of the Two Covenants* (London, 1678), a voluminous treatise of 447 large quarto pages, the substance of which was originally delivered in the form of sermons. Comparing it with similar treatises by Continental writers, we notice its practical interest, which appears (1) in the constant application of the points made to the different classes of people living in Strong's own day; (2) in the emphasis laid upon the obligations created by the covenant as distinct from its benefits; and (3) in its full discussion of the covenant relation of the children of believers. On the last point he leans to the views of Blake rather than to the stricter views of Baxter. He claims federal holiness for the children of the righteous as distinct from the personal holiness of regeneration; but he does not specifically apply the principle involved to the question of the Lord's Supper.

(4) *Cocceius and his school.*—The most eminent representative of the covenant theology is undoubtedly John Koch, or, as he is better known by his Latin name, Cocceius. He was born in Bremen in 1603, studied Hebrew under Matthias Martinius, and theology under Ames and Crocius. He was Professor of Theology successively at Bremen, 1630–1636; at Franeker, 1636–1650, where he succeeded Ames; and at Leyden, 1650–1669, where he died. He became the leading opponent and reformer of the scholasticism of his day, and by his more historical treatment of theology prepared the way for the later discipline of Biblical Theology. In this attempt he found a fruitful clue in the covenant idea, which he used as the organizing principle of his system.

Cocceius' leading monograph is entitled *Summa doctrinæ de fœdere et testamento Dei*, and was published at Leyden in 1648.[1] After a discussion on the meaning of the word *fœdus*, or 'covenant,' he defines the covenant of God as nothing else 'than the Divine declaration of the method (*ratio*) of perceiving the love of God and of obtaining union and communion with him' (*Opera*, Amsterdam, 1673, i. 10). It differs from human covenants in the absence of the mutual feature. God alone initiates it, yet it becomes complete only when man by God's grace binds himself to accept its provisions.[2]

Cocceius, like earlier theologians, distinguishes two covenants, that of works and that of grace. The sum of the former is the law, both natural and written. It is made with Adam for himself and for all his descendants, except Christ. It was abrogated in a fivefold way: (1) so far as the possibility of its fulfilment is concerned, by sin; (2) so far as its condemnation is concerned, by Christ, as set forth in the promises and apprehended by faith; (3) so far as its terror is concerned, by the promulgation of the new covenant; (4) so far as the struggle with sin is concerned, by the death of the body; and (5) so far as all its effects are concerned, by the resurrection from the dead.

The new covenant is the agreement between the Father and Christ as the second Adam, wherein God declares His purpose, in consideration of Christ's atoning sacrifice, to save certain individuals by working in them faith through the word of promise and the gift of the Spirit, and to confirm the same by the institution of the Church, with its sacraments. This covenant is set forth in various ways, both before and after the coming of Christ. It was made known to Adam in Paradise through the institution of sacrifice, and renewed to Abel, Enoch, Noah, Abraham, and to all the people of Israel through Moses. But its most glorious promulgation was through the coming of Christ Himself in the flesh, and the full revelation of God's loving purpose which He made. In this connexion, Cocceius is led to treat at length of the difference between the economies of the OT and of the NT, and to indicate wherein the superior excellence of the NT consists.

The novelty of Cocceius' treatment consists not so much in the special ideas which he enunciates as in the detail in which they are carried out, and, above all, in the free use which he makes of the Biblical material. The idea of the twofold covenant,

[1] Cf. pp. 114, 189. Blake's argument with Baxter turns upon the question whether faith that is short of justifying entitles to baptism, but the principles involved apply with even greater force to the more radical position taken by Blake with reference to the Lord's Supper.

[2] Cf. F. H. Foster, *A Genetic History of the New England Theology*, Chicago, 1907, p. 31 ff.

[1] Later enlarged edd. 1654, 1660. The covenant is also treated at length in Cocceius' *Summa Theologiæ ex Sacris Scripturis repetita* (Leyden, 1662, Amsterdam and Geneva, 1665), of which the covenant of works forms the subject of the eighth *locus*, and the covenant of grace of the fourteenth and following *loci*.

[2] Cocceius distinguishes between that form of covenant in which no condition is required on man's part (*e.g.* the promise to Noah that day and night shall never fail) and the more usual form, which includes the stipulation of acceptance and obedience by man.

as we have seen, goes back to Cocceius' teacher, Matthias Martinius; the distinction of different periods within the OT dispensation is recognized by Ames, but there is a breath of freedom and of originality about Cocceius' treatment which gives it a distinction of its own. It broke away from the prevailing tradition of the contemporary scholasticism, and it called forth, as such innovations always do, bitter opposition on the part of those who sat in the seat of authority.[1] Cocceius, temperate and devout as he was, soon found himself the centre of a bitter controversy, and, what was probably the last thing in the world which he intended, the founder of a school.

Among the representatives of the school of Cocceius may be mentioned Wilhelm Momma,[2] Francis Burmann,[3] Johann Braun,[4] Johann van der Wayen,[5] and Hermann Witsius.[6] The treatise of Witsius on the economy of the covenants was early translated into English, and had many readers both in England and in America. It is one of the best sources for the knowledge of the covenant theology in its later and more developed form.[7]

After an initial discussion of the covenant in general, Witsius begins by describing the covenant of works. He takes up successively the contracting parties, the law or the condition, the promises by which it was accompanied, the penal sanction which was attached to it, and the sacraments by which it was sealed. He speaks of its violation by man's sin, and its consequent abrogation by God in favour of the new covenant of grace. Like Cocceius, Witsius distinguishes between the covenant of redemption, made by the Father with the Son, and the covenant of grace, made by God with the elect. The substance of this is set forth under the familiar theological heads of 'election,' 'effectual calling,' 'regeneration,' 'faith,' etc.; and then its different economies or dispensations in the OT and NT, with their several sacraments and ceremonies, are discussed at length.

With this treatment, the covenant theology reaches its final development. Those who come after add nothing in principle to that which has gone before.

(5) *The later history.*—It is not necessary to follow the later history in detail. Treatises on the covenant continued to be written both in England and on the Continent. Ezekiel Hopkins, Bishop of Londonderry, left the manuscript of a series of sermons on the doctrine of the two covenants, posthumously published in 1712, in which he declares that 'of all the mysterious depths in Christian religion, there is none more necessary for our information or more influential upon our practice than a right apprehension and a distinct knowledge of the doctrine of the covenants' (p. 2). Thomas Boston, a Scottish Presbyterian (1676–1732), wrote a treatise on the covenant of grace,[8] which was often republished both in England and in America, and had the rare compliment paid it of being embodied, with scarcely the change of a word, in a work written nearly a hundred years later (J. Colquhoun, *Treatise on the Covenant of Grace*)[1]—not, indeed, without handsome acknowledgment on the part of the borrower. On the Continent, Turretin[2] gave the covenant idea a large place in his theology, and with his system it passed to America, to reappear in the federalism of the Princeton theologians, Charles and A. A. Hodge.[3] It has continued down to our day to form one of the prominent tenets of evangelical Calvinism.[4]

On the other hand, Jonathan Edwards makes little use of the covenant idea. While the covenant is occasionally mentioned in his history of redemption, the reference is only incidental, and the idea exercises no formative influence upon the structure of the work. This is the more striking because of the extent to which Edwards holds fast to the main tenets of the older Calvinism. The reason is not far to seek. Edwards' primary interest was in the eternal law of things. Not will, but nature, was fundamental in his thought of God. To such a theology the covenant idea, born as it was of the effort to limit the Divine arbitrariness, was foreign. With the stricter predestinarians, like Crisp and Saltmarsh, the covenant idea had long been simply a form into which the wine of a very different gospel had been poured.[5] Edwards, before all things the original thinker, was not interested in preserving a form to which there was no content to correspond. To the federal theologians, on the other hand, the covenant idea answered a real need. Their conception of freedom involved power to the contrary, both in the case of man and of God. In the former case, it was the foundation of human responsibility, and the covenant of works was conceived as a real transaction between different individuals.[6] In the latter case, it gave free scope to the electing grace of God; and the covenant of grace, as we have already seen, had its significance as determining the channel within which God, in the exercise of His Divine sovereignty, had determined to confine the river of His grace. God might have acted otherwise, if He had chosen, so the argument ran, but He was pleased to do thus and so, and this sovereign pleasure He has made known to us through the gracious covenant into which He has entered with man through Christ.

It is, no doubt, the weakening of this conception of freedom in our day which explains the falling into the background of the covenant theology. Arbitrariness, whether on man's part or on God's, is no longer the prevailing danger against which theologians are concerned to guard, and, in a world of law, other terms than those of private agreement seem better fitted to express the profoundest and most abiding relationships between God and man. It would, however, be a mistake to minimize the services rendered by the covenant theology to Christian progress. Artificial in its account of the relation between God and man, it was in reality

[1] Among the leaders in the attack upon Cocceius were Samuel Maresius, Professor of Theology at Groningen, and Gisbertus Voetius, Professor of Theology at Utrecht.

[5] Heppe (*op. cit.* i. 143 ff.) calls attention to the difference of interest which separated the early covenant theologians from the stricter predestinarians, with whose teaching their system had so much else in common.

[6] This interest appears with special clearness in the American federalists. Cf. A. A. Hodge, *op. cit.* p. 310 f., Questions 5, 9.

designed as a protest against arbitrariness. Untrustworthy in its view of the development of the Biblical religion, it helped to prepare the way for a more scientific treatment of the Biblical history. To its more earnest advocates the covenant theology, as distinct from the type of thought which it opposed, expressed the difference between a God whose purpose was known and whose character could be trusted, and a God whose nature was mysterious and whose actions were unpredictable. Few terms were richer in experimental significance to those who had been trained to understand it than that which gives its title to this article, for none more fully revealed the heart of God. Writing to his son-in-law, Fleetwood, Cromwell sends the following message to his daughter: 'Bid her be cheerful, and rejoice in the Lord, once and again; if she knows the covenant, she cannot but do so.'[1] 'The covenant,' says Edward Leigh, in the title to his *Treatise of the Divine Promises*, Lond. 1633, 'is itself the bundle and body of all the promises.'

LITERATURE.—The more important works on the covenant have been cited in the article. On the Biblical usage, see A. B. Davidson, *Theol. of OT*, Edin. 1904, p. 239 ff., and his art. 'Covenant,' in *HDB*; art. 'Covenant,' in *EBi*; R. Kraetzschmar, *Die Bundesvorstellung im AT*, Marburg, 1896; Valeton, in *ZATW* xii. [1892] 1-22, 224-260, xiii. [1893] 245-279; A. Bertholet, *Die Stellung der Israeliten und der Juden zu den Fremden*, Freiburg, 1896, pp. 46, 87 ff., 176, 214; W. Robertson Smith, *Rel. Sem.*[2], London, 1894, pp. 269 ff., 312 ff., 479 ff.; W. M. Ramsay, art. 'Covenant,' in *Expositor*, 5th ser. viii. (Nov. 1898), 321-336.

On the history of the covenant theology in general, cf. Diestel, 'Studien zur Föderaltheologie,' *Jahrb. f. deutsch. Theol.* x. [Gotha, 1865] 209 ff.; T. M. Lindsay, art. 'Covenant Theology,' in the *Brit. and For. Evangel. Review*, July 1879, p. 521 ff.; G. P. Fisher, *Discussions in History and Theology*, N.Y., 1880, pp. 355-409; M. Schneckenburger, *Vergleichende Darstellung des luther. und reform. Lehrbegriffs*, Stuttgart, 1855, ii. 140 ff.; J. H. A. Ebrard, *Christl. Dogmatik*[2], Königsberg, 1863, i. 77 ff.; and the relevant sections in the histories of W. Gass (*Gesch. der prot. Dogmatik in ihrem Zusammenhange mit der Theol. überhaupt*, Berlin, 1857, ii. 234 ff.), and A. Schweizer (*Die Glaubenslehre der evangel.-reform. Kirche*, Zürich, 1844, i. 103 ff.). Cf. also Emanuel Graf von Korff, *Die Anfänge der Föderaltheologie und ihre erste Ausgestaltung in Zürich und Holland*, Bonn, 1908.

The most reliable account of the beginnings of the covenant theology in Germany is found in H. Heppe, *Dogmatik des deutschen Protestantismus im 16ten Jahrhundert*, Gotha, 1857, i. 139 ff., 188 ff., in which a full description is given of the content of many works otherwise inaccessible to English readers. The theology of Cocceius and his school is fully discussed in the works of Gass and of Diestel, already mentioned, where references to the literature may be found. On the covenant theology in Puritanism, cf. C. G. M'Crie, *The Confessions of the Church of Scotland*, Edinburgh, 1907, p. 66 ff.; A. F. Mitchell, *The Theology of the Reformed Church, with special reference to the Westminster Standards* (in Report of Proceedings of the Second General Council of the Presbyterian Churches, 1880, p. 477).

Besides the works cited in the text may be mentioned F. Gomarus, *De Fœdere Dei*, 1594; Wendelin, *Systema Majus*, 1656; J. Ball, *Treatise on the Covenant of Grace*, 1645; Burgess, *Vindiciæ Legis* (referred to by Blake, in his *Covenant Sealed*); Cotton, *The Covenant of God's Free Grace* (1645); and S. Charnock, *Discourse of God's being the Author of Reconciliation* (Nichol's ed. of the Puritans), iii. 371 ff. H. Malcom, in his *Theological Index* (references to the principal works in every department of religious literature), Boston, 1868), p. 130, gives the titles of a number of works not accessible to the present writer, but without exact description (*e.g.* Hulsemann, *De Pacto Dei*; Musaeus, *De Pactis Dei cum Hominibus*; Bostock, *On the Covenant of Grace*; Bell, *Covenant of Grace and of Works*; Dixon, *Nature of the Two Covenants*; Taylor, *On the Covenant of Grace*; Kelley, *The Divine Covenants*, etc.).

A good monograph on the history of the covenant theology is still a desideratum. W. ADAMS BROWN.

COVETOUSNESS.—Covetousness in its most general meaning expresses an eager desire to gain some possession on which the heart is set. At first the desire, though strong, may be innocent and even commendable. Thus Caxton says (Geoffroy de la Tour-Landry, I. ii.): 'She ever coveyted the pees and love of her lord,' and Shakespeare represents the King in *Henry V.* (Act iv. Sc. 3) as saying:

[1] Letter 199, Carlyle's edition, quoted by Lindsay, in *Brit. and For. Evangel. Rev.*, July 1879, p. 521 ff.

> 'By Jove, I am not covetous for gold,
> Nor care I who doth feed upon my cost;
> It yearns me not if men my garments wear;
> Such outward things dwell not in my desires:
> But if it be a sin to covet honour,
> I am the most offending soul alive.'

In the AV of the Bible the word 'covet' is commonly of evil significance, but it is also used to translate words of good import. Thus in 1 Co 12[31] we have St. Paul's exhortation, 'Covet [RV "Desire"] earnestly the best gifts.' Keen desire, however, was usually associated with unworthy objects, and Hobbes (*Leviathan*, I. vi. 26) went so far as to declare: 'Desire of Riches [is called] Covetousnesse: a name used alwayes in signification of blame.'

In distinction from avarice (*q.v.*), covetousness emphasizes the desire for things not possessed; avarice, the undue retention of actual possessions. Thus, in covetousness the very desire may constitute an evil, and possibly St. Paul, in his declaration of the way in which sin came home to him (Ro 7[7ff.]), dwells upon the part played by the Tenth Commandment in the process, because inordinate desires are there condemned. The possessions sought may not be an evil in themselves, but the heart's desire may be unduly set upon them. An all-absorbing passion for material possessions may be restrained by the experience of their inability to constitute real happiness in life, and by the knowledge that, sooner or later, all material things must be left behind at death; but this passion is effectively curbed only when a still more passionate desire for the nobler possessions of mind and spirit and life lays hold of the heart.

The evil in covetousness may be due, however, not merely to the strength of the desire, but to the fact that the object of desire is the possession of some one else. It may be noble to seek to possess the spiritual insight or the Christian grace of another, for the imparting of such a gift ennobles and enriches both giver and receiver; but to desire a neighbour's land or goods is to seek his impoverishment. When Ahab coveted Naboth's vineyard (1 K 21), and David coveted Uriah's wife (2 S 11), they fell into deadly sin, and similar desires bring shame and guilt on those who cherish them. When these desires are expressed in acts, they are condemned by the law as crimes. True restraint is exercised only when the rights of others are recognized and honoured.

The very spring of covetousness is found in the common experience that what is not possessed seems always most desirable. The virtues and defects of actual possessions are known by the owners, but the blessings that are beyond reach are painted by the imagination in glowing colours, and incite the heart to ardent desire. This tendency has led to some noble achievements, but it is also the source of amusing comedies, and of many of the deepest tragedies of life. The very opposite state of mind is happily represented in the reply that James Smetham gave to a friend when he was asked to go to Rome and Venice:

'I suppose I ought to wish to go with you to Rome and Venice. . . . Nothing but a sense of duty will ever drive me to Rome and Venice. My difficulty is to appreciate our little back-garden, our copper beech, our weeping ash, our little nailed-up rose tree, and twisting yellow creepers' (*Letters of James Smetham*, London, 1892, p. 86 f.).

LITERATURE.—H. L. Martensen, *Christian Ethics* (General), Edin. 1885, p. 106 ff.; Newman Smyth, *Christian Ethics*, Edin. 1902, p. 365; J. Oswald Dykes, *The Manifesto of the King*, London, 1887, p. 450. D. MACRAE TOD.

COW (Hindu).[1]—The belief in the sanctity of the cow, which is a very prominent feature of Hinduism, seems to have been inherited by the Indians from pre-historic times, before they and

[1] For the place of the cow in other religions, see art. ANIMALS in vol. i. p. 506 ff.

the Iranians had separated. In the Avesta[1] we meet with a Divine being called *geus urvan* (or Goshurun), lit. 'the soul of the cow,' who is regarded as the personification and guardian of living beings. Similarly, in the Rigveda the mystical relation between the cow and the universe is several times alluded to.[2] It is further developed in the Atharvaveda, one hymn of which (x. 10) is addressed to Vaśā, the prototype of cows, and a kind of generating principle of the universe; and another (iv. 11) to Anaḍvān, the primeval ox, to whom a similar function is attributed. In Vedic times the word *go*, 'cow,' was used to express some other ideas, not merely in an allegorical way, but rather in a mystical sense so as to suggest a mysterious connexion between them and the cow. Thus in the *Naighaṇṭuka* (the ancient list of Vedic synonyms, on which Yāska commented in the *Nirukta*) the word *go*, which originally and usually denotes 'cow,' is given as a synonym of (1) earth, (2) heaven, (3) rays of light, (4) speech, and (5) singer.[3] The Earth especially was conceived under the figure of a cow, and is so represented in later mythology. This idea goes back to the Vedic *Saṁhitās*. In a hymn, or rather a prose piece, of the Atharvaveda (viii. 10), Virāj, who 'verily was this universe in the beginning,' is extolled, and she is said to have come to various classes of beings; in paragraphs 22–29 she comes to Divine beings and men, who milk from her things characteristic of their functions—the milker, the calf,[4] and the milking-vessel being stated in each case. Paragraph 24 runs thus:

'She ascended; she came to me; me called to her: "O rich in cheer, come!"; of her Manu son of Vivasvant was young [lit. "calf"]; earth was vessel; her Pṛthi son of Vena milked; from her he milked both cultivation and grain.'[5]

This passage contains the germ of a myth which has been fully developed in the Purāṇas.[6]

'Pṛthu, son of Vena, having been constituted universal monarch, desired to recover for his subjects edible plants, which, during the preceding period of anarchy, had all perished. He therefore assailed the Earth, which, assuming the form of a cow, fled from him and traversed all the heavenly regions. At last she yielded to him, and promised to fecundate the soil with her milk. Thereupon Pṛthu flattened the surface of the earth with his bow, uprooting and thrusting away hundreds and thousands of mountains. Having made Svāyaṁbhuva Manu, the calf, he milked the Earth, and received the milk into his own hand, for the benefit of mankind. Thence proceeded all kinds of corn and vegetables upon which people subsist now and always. By granting life to the Earth, Pṛthu was as her father; and she thence derived the patronymic appellation *Pṛthivī* ("daughter of Pṛthu"). Then the gods, the sages, the demons, the Rākṣasas, the Gandharvas, Yakṣas, Pitṛs, serpents, mountains, and trees took a milking vessel suited to their kind, and milked the Earth of appropriate milk. And the milker and the calf were both peculiar to their own species.'

This story is most frequently alluded to in classical Sanskrit literature. In legends and popular stories the Earth is occasionally said to assume the figure of a cow, especially in times of distress, and to implore the gods for help, or to give advice to a king or queen, to whom she appears in a dream. Again, the mythical identification of the Earth with a cow furnishes the basis of many poetical conceits, *e.g.* that a king should milk the Earth tenderly in order to get plentiful revenue, etc. (see Böhtlingk-Roth, *Sanskrit-Wörterb.*, St. Petersburg, 1855–75, *s.v.* 'Go,' 12).

The identification of cow and speech has not given rise to popular myths, but, as speech is regarded as something Divine in origin and holy in character, it added to the sanctity of the cow, though this identification was perhaps due not so much to a popular association of ideas as to a chance similarity of sound between the two words *go*, 'cow,' and *gā*, 'to sing,' or perhaps *gīr* 'speech.'

The sanctity of the cow, which has been shown to underlie certain ancient mythical conceptions, has a practical bearing on religion. It was considered a heinous sin to kill a cow or to eat her flesh. A well-known verse[1] says: 'All that kill, eat, and permit the slaughter of, cows, rot in hell for as many years as there are hairs on the body of the cow so slain.' The same feeling is already present, but not yet so strongly developed, in Vedic times. The *Śatapatha Brāhmaṇa*, when prohibiting the eating of the flesh of the cow (iii. 1, 2, 21), adds the interesting statement: 'Yājñavalkya said: "I, for one, eat it, provided that it is tender."' And the *Gṛhya Sūtras* permit the slaughter of a cow on the arrival of a guest, especially at a wedding or a sacrifice. But this ancient practice was given up in later times, when substitutes for the flesh of a cow became the rule in the entertainment of guests.[2]

In the Great Epic the sacredness of the cow is a firmly established fact. Chapters 69–82 of the *Anuśāsana parvan* of the *Mahābhārata*,[3] which chiefly treat of the giving of cows and the merit acquired by it, contain much curious information about the religious ideas regarding the cow, which became deeply engrained in the Hindu mind through the superstitious veneration of the cow. The reason alleged for its sacredness is that cows are the essential requisites for sacrifice, and that 'with their milk and with the Havis manufactured therefrom they uphold all creatures of the universe' (81. 2); they are themselves sacred and capable of cleansing others. Not only are the cows themselves sacred, but the five products of the cow (*pañchagavya*)—milk, curds, ghi, dung, and urine—are means of purifying man, and are used in many ways for that purpose, some of which are rather disgusting. But the pious are told 'never to feel any repugnance for the urine and the dung of the cow' (*ib.* 78. 17). A curious myth relating to the latter item is told in the *Mahābhārata* (xiii. 82):

Śrī, the goddess of Fortune, who had left the demons for the gods, came to the cows, desiring to reside in them. They would, however, have nothing to do with that fickle deity, but in the end they were moved by her entreaties and consented to honour her: 'Do thou live in our urine and dung; both these are sacred, O auspicious goddess!'

Cows are the daughters of the heavenly Surabhi ('the fragrant one,' so called from the peculiar smell of cows), who was created by Prajāpati from his breath (*Śatapatha Brāhmaṇa*, vii. 5. 2, 6). This notion gives rise to the following myth:[4]

'Dakṣa the creator, for the sake of the beings he had created, drank a quantity of nectar. He became gratified with the nectar he had quaffed, and thereupon an eructation came out, diffusing an excellent perfume all round. As the result of that eructation, Dakṣa saw that it gave birth to a cow which he called Surabhi. This Surabhi was thus a daughter of his, which had sprung from his mouth. The cow called Surabhi brought forth a number of cows, which came to be regarded as the mothers of the world.'

1 *e.g. Yasna*, xxviii. 1, xxix. 5. 9 (for a complete list of references, see Bartholomae, *Altiran. Wörterb.* 1540 (Strassburg, 1901); cf. also the Pahlavi texts translated in *SBE* v. 20 f., 163, 402, xvii. 380, xxxvii. 237 ff.

2 *e.g.* i. 153. 3, viii. 90. 15, x. 11. 1. On the cow in the period of the Rigveda, see Macdonell, *Vedic Mythol.* (= *GIAP* iii. 1a), Strassburg, 1897, Index, *s.vv.* 'Cow,' 'Cows'; and Zimmer, *Altind. Leben*, Berlin, 1879, p. 221 ff.

3 *Naigh.* i. i. 4, 5, ii. iii. 16. Classical lexicographers attribute still further meanings to the word *go*; *e.g.* Hemachandra in the *Anekārthasaṁgraha* (i. 6) enumerates the following meanings: sun, water, eye, heaven, heavenly quarter, kine, ray of light, thunderbolt, earth, arrow, and speech.

4 The Hindus suppose that a cow yields milk only in the presence of her calf.

5 Harvard Oriental Series, viii. 514.

6 The account in the text is from the *Viṣṇu Purāṇa* (Wilson's tr., London, 1864–70, i. ch. xiii.). More details given in other Purāṇas are mentioned in Wilson, i. 188 ff.

1 *Mahābhārata*, xiii. 74. 4.

2 The ancient practice was noticed by a writer of the 7th cent., Bhavabhūti, in his dramatical play *Uttararāmacharita*, 4th Act; but, as the scene is laid in the remote past, we cannot draw any conclusion from it with regard to the usage at the time of the author.

3 We quote from Pratāpa Chandra Ray's translation (Calcutta, 1893).

4 *Mahābhārata*, xiii. 77.

There is also a cow-heaven, Goloka, the residence of Surabhi. Once the mother of cows practised austerities, and so pleased Brahmā by her freedom from cupidity that he granted her immortality and assigned her as residence a region above the three worlds, the famous Goloka, while her daughters live among men. In another account,[1] however, Surabhi is said to dwell in Rasātala, the lowest region in the nether world, and to have for daughters the Dikpālīs, or goddesses presiding over the heavenly quarters. The cow-heaven, Goloka, is frequently mentioned in the epics and the Purāṇas. It is described as a kind of paradise, a most beautiful place of the greatest splendour and happiness, which can be attained only by the most pious and virtuous, especially by givers of cows and by their worshippers. For the cow became the centre of a peculiar worship, with proper *mantras* (*Mahābhārata*, xiii. 80. 1–3, 78. 24 f.) and rites.[2] The devotees had to recite the names of the cows, and to bow their heads in reverence to them (*ib.* 78. 16), and they were enjoined to subsist on the five products of the cow, to bathe, using cow dung at the time, etc. For some religious purposes the devotee has to live and to sleep among cows in a cow-pen, or to follow a cow everywhere, as did Dilīpa in the story told in the second book of the *Raghuvaṁśa*.

Lastly, attention may be called to the story according to which Kṛṣṇa, one of the most popular gods of India, passed his youth among cowherds and became the lover of the *gopīs*, their daughters, especially of the lovely Rādhā. This fact illustrates the high reputation which resulted from the connexion with cows, since even herdsmen were thought the fit guardians and companions of the highest god.

Reverence for the cow has not diminished in modern times.[3] It is well known that the Hindus of the present day are filled with horror at the slaughter of the cow, which is therefore prohibited in native States under treaties with the English.

LITERATURE.—The literature is given in the article.

H. JACOBI.

COYOTEROS.—The Coyoteros are a tribal division of the Apaches (*q.v.*), said by Drake (*Indian Tribes of the United States*, Philadelphia, 1884, i. 424) to have been the largest and fiercest of all the Apache tribes, although, owing to the indiscriminate method in which tribal names have been applied, it is difficult to make certain that other tribes are not included in the estimate of its size. The original home of the Coyoteros was on the head-waters of the Gila, between that river and San Carlos; but they were of nomadic habits, and ranged through Arizona and western New Mexico. Geographically, they are divided into two groups—Pinal Coyoteros and White Mountain Coyoteros. The greater number of them are now located on the San Carlos reservation, with other tribes of the Apaches. They took a prominent part in the rebellion caused by the discontent which followed when the Apaches were moved from their tribal grounds to a reservation.

The Spanish name *Coyotero* is said to have been given them on account of the fact that they subsisted partly on the flesh of coyotes, or prairie wolves (Hardy, *Travels in the Interior of Mexico*, London, 1829, p. 430, quoted by Bancroft, *NR* i. 474). Ruxton (*Journ. Ethnol. Soc. Lond.*, 1st ser., ii. 95 [1850]) calls them *coyoteros*, or 'wolf-eaters.' It is suggested, however, that the name may have been derived from their roving and unsettled habits (Hodge, *Handbook*, p. 356). Among the Tonto Apaches they are known as *Palawi* or *Pawilkna* (Gatschet, *Yuma-Spr.* i. [1883] 371, 411; *ZE* xv. 123), while the Navaho name for them was *Silká*, 'on the mountain' (ten Kate, *Synonymie*, Amsterdam, 1884, p. 6).

In culture they did not differ materially from the other Apaches. Among the Apache tribes themselves, distinctions were recognized in the character of the weapons, the distinguishing mark of the Coyoteros being the method of winging the arrows. These bore three feathers on the shaft, which was of reed, finished with hard wood and tipped with iron or flint (Cremony, *Life among the Apaches*[2], San Francisco, 1877, p. 103). Like other members of the Athapascan linguistic stock, they readily assimilated the culture of neighbouring tribes; and, just as the Lipan followed the Comanche, the Pinal Coyoteros showed traces of Pueblo customs. Their nomadic habits, as well as the character of the country, were unfavourable to any great advance in civilization, while their habitat in Sierra Blanca was peculiarly adapted to the raids by which, like other Apaches, they acquired food and wealth. Their captives were held as slaves until ransomed or sold. The Pinaleños earned an unenviable notoriety by their success in this tribal pursuit (see Bartlett, *Personal Narrative of Travels in New Mexico*, New York, 1854). Apaches are divided into clans, but these are not totemic. Their names are taken, not from animals, but from natural features of their locality. Affiliation of the clans in different tribes is recognized. Among the Coyoteros, clans have been recorded, counterparts of which have been found among other Apache divisions and also among the Navahos; while Bourke (*JAFL* iii. [1890] 112) records a number of identifications between the White Mountain Apaches and the Pinal Coyoteros.

The Apaches displayed little care in the disposal of their dead. The method followed by the Coyoteros is described by H. C. Yarrow ('A Further Contribution to the Study of the Mortuary Customs of the North American Indians,' *1 RBEW*, 1881, p. 111 f.), who says they take the least possible trouble. A hole in the ground made by a tree stump or a stone is found, and into this they cram the body, partially wrapped up. The stone or stump is then rolled back. They mourn for thirty days, uttering loud lamentations at intervals; but, he adds, unless they are reminded of it, this is frequently forgotten.

LITERATURE.—References to the Coyoteros are scattered through the literature dealing with the Apaches (see above, and at end of art. APACHES, in vol. i.); cf. also especially footnotes, *passim*, in Bancroft, *NR*; and F. W. Hodge, *Handbook of American Indians* (= *Bull. 30 BE*, Washington, 1907), pt. 1, under 'Apache' and 'Coyotero.'

E. N. FALLAIZE.

CREATION.—1. The conception in primitive heathenism.—The principle of causality is a necessary category of thought. The desire for knowledge of the nature and origin of things is inborn. It stimulates the eager wonder and prompts the clamorous questions of every child and savage. Primitive man is philosophical in so far as he does not take things as a matter of course, as he makes the phenomena around him objects of reflexion, as he is keen to understand how everything came about. He is mentally a child, with a child's vague fears of the unknown, a child's love of a thrilling tale, and a child's readiness to be satisfied with any explanation, however grotesque and absurd, of the things which arouse his interest. Curiosity and credulity are the characteristics of the primitive mind, and the roots of all mythology, which has not inaptly been called 'primitive metaphysics.' At the same time it has to be remembered that the childhood of the race included the maturity of the individual, and in not a few creation-myths

[1] *Mahābhārata*, iii. 102. For other references to Goloka, see Böhtlingk-Roth, *s.v.*

[2] Cf., further, Hillebrandt, *Rituallit.* (= *GIAP* iii. 2), Strassburg, 1897, p. 83.

[3] See the very full discussion of this subject in *PR* ii. 226 ff.

there are features which reflect the vices and passions of grown men as well as the simplicity of children. The theories of the savage are of necessity like their inventor, matching his barbaric manners and customs, his crude emotions and rude conduct. Primitive man stands helpless in the midst of a universe of which he knows not the laws, but he is of imagination all compact, and therefore never at a loss for an answer to the questions which are the subject-matter of science and philosophy. He can explain the phenomena of Nature, the making of the universe, the descent of man. The background of all myths is the experience of primitive man interpreted by himself. The tales he spins, the theories he invents, may be grave or gay, prosaic or poetical, attractive or repulsive, clever or absurd; enough if they satisfy him. He does not know how defective is his logic, how riotous his fancy. He is experimenting in thought as best he can, and 'the science of the modern *savant* has been evolved out of the errors of the simple savage' (Jevons, *Introd.* p. 9).

But the problem of origins has to be solved by religion as well as by philosophy, though it is approached from a different side and in a different spirit. Man has not only a speculative, but a religious instinct. Religion is one of his native vital forces, without which he would have what Schelling termed 'an original atheism of consciousness.' No one can manufacture his religion, which is a native personal datum; all that he requires is the due exercise and cultivation of Nature's supreme gift. It is this element in the common consciousness of all generations which makes the search for a Creator a continuous pursuit. The question whether 'the savage state . . . represents an early condition of mankind' (Tylor, *Prim. Cult.*[3] i. 32), or whether we might 'as well judge the wine by the dregs as primitive man by the savage' (Gwatkin, *Knowledge of God*, 1908, i. 253), may be left open. For in the genuine products of the religious sense, uncontaminated by the fancies of the mythopœic faculty, there seems to be no contrast of high and low. Increasing research into the mental habits of the least advanced races of mankind now living tends to demonstrate that, side by side with the most foolish, tedious, and often repulsive myths, there is almost invariably a high, if vague, conception of a good Being who is the Maker of all things, the undying Guardian of the moral life of men. The evidence is presented with adequate thoroughness and with literary charm in the writings of Andrew Lang and F. B. Jevons.

A. Lang stands in wonder before 'the high gods of low races' (*Making of Religion*[2], p. 173 ff.). He must needs smile at the opinion expressed by Flint in the earlier days of Comparative Religion (in *Faiths of the World*, Edin. 1882, p. 413), that 'at the bottom of the religious scale . . . it is always easy to see how wretchedly the divine is conceived of . . . how little conscious of his own true wants . . . is the poor worshipper' (*ib.* p. 253). He is convinced that the animistic theory of Spencer and Tylor does not fit the facts. 'The high gods of savages are not ghosts' (p. 250). 'It is a positive fact that among some of the lowest savages there exists, not a doctrinal and abstract Monotheism, but a belief in a moral, powerful, kindly creative Being, while this belief is found in juxtaposition with ghosts, totems, fetishes, and so on' (p. 254 f.). Lang presents 'an array of moral and august savage supreme Beings'; and he believes that 'an old, nay, an obsolete theory—that of degeneration in religion—has facts at its basis, which its very supporters have ignored, which orthodoxy has overlooked' (p. 252).

He finds that 'the belief in relatively pure creative beings, whether they are morally adored, without sacrifice, or merely neglected, is so widely diffused that Anthropology must ignore them, or account for them as "loan-gods," or—give up her theory' (*ib.* p. 229). He observes that the idea of a Good Maker, once reached, becomes 'the germ of future theism,' and he seeks the highest confirmation of his theory in the religion of Israel, which is 'probably a revival and purification of the old conception of a moral, beneficent creator, whose creed had been involved in sacrifice and anthropomorphic myth' (Lang, *Myth, Rit. and Rel.* i. 329).

Unfortunately this involution of religion in mythology is all but universal. When primitive man tries to explain *how* the world was made, his speculative faculty lands him in all kinds of error and confusion; his theories are incredibly childish and whimsical.

'Savages begin . . . by mythically regarding various animals, spiders, grasshoppers, ravens, eagles, cockatoos, as the creators or recoverers of the world. As civilization advances, those animals still perform their beneficent functions, but are looked on as gods in disguise' (*ib.* i. 241 f.).

Bunjil, the South Australian maker of men and things, is identified with the eagle-hawk; Cagn, the Bushman Creator, with the mantis-insect; and even Brahmā or Viṣṇu, with a boar, a fish, or a tortoise. Among the native tribes of America the hawk, the coyote, or the musk-rat is the demiurge; among others the crow, the raven, or the hare plays the chief rôle in the task of creation. If the Creator does not partake of the character of a totem or worshipful beast, he is identified with a wizard or medicine-man. Every race has had its legendary account of the origin of things, and, while creation-myths can never be far in advance of the ideas and sentiments of a people, they may, and often do, lag far behind. Religious conservatism makes adult nations slow to put away the childish things that faith has once consecrated. If a creation-legend has found its *vates sacer*, and been incorporated with the ritual of the altar, scarcely anything short of a miracle is strong enough to charm it from the popular mind.

2. **The conception in civilized paganism.**—All the early ideas of creation are, of course, geocentric. The 'earth' of which mythology offers an account may be but a circle of hills and valleys known to some wandering tribe. But the great phenomena of Nature—sun, moon, and stars, day and night, storm-wind and thunder-cloud, birds and beasts and men—are much the same everywhere, and they form the warp and woof of all cosmogonies. In spite of immense diversities of detail, there is a family likeness in the creation-myths of the world. Nothing is more striking than the parallelism between Hesiod's savage stories and those of the Maoris and Mangaians of to-day. The primitive mind, working on the same materials, seems everywhere to evolve the same crude and infantine speculations regarding the origin of things. Cf. the artt. on COSMOGONY AND COSMOLOGY.

(1) *Egypt.*—The religious history of Egypt, extending over many thousands of years, is the history of a theism almost choked by an animism which deified beasts and birds and trees. The priests of the temples, who were the advanced thinkers of the nation, endeavoured to be true to the high theistic tradition, and therefore chose to regard the innumerable popular gods as only various manifestations of the one Divine creative energy. Even the priests were henotheists rather than monotheists, worshipping one god as if there were no other, ascribing to him all the highest attributes of deity, but without any idea of logically denying the reality of other gods. Ptaḥ, the chief god of Memphis, whom the Greeks identified with Hephæstus, was called by his priests the 'master-artisan,' *i.e.* the Creator. At Elephantinē, in the clay district beside the cataracts, Khnum was the demiurge, who moulded his creatures like a potter. At Hermopolis it was Thoth who made the world, speaking it into existence. 'That which flows from his mouth, happens, and that which he speaks, comes into being.'

The following hymns date from at least 2000 B.C. (1) To Amon-Ra: 'Hail to thee, maker of all things, lord of law, father of the gods; maker of men, creator of beasts. . . . The one without a second . . . king alone, single among the gods.' (2) To Ptaḥ: 'To him is due the work of the hands, the walking of the feet, the sight of the eyes, the hearing of the ears, the breathing of the nostrils, the courage of the heart, the vigour of the hand, activity in body and in the mouth of all the gods

and men, and of all living animals: intelligence and speech, whatever is in the heart and whatever is on the tongue' (Renouf, *Orig. and Growth of Rel. of Anc. Egypt*, p. 220).

In a papyrus at Turin, the following words are put into the mouth of 'the almighty God, the self-existing': 'I am the maker of heaven and of the earth, I raise its mountains and the creatures which are upon it: I make the waters. . . . I am the maker of heaven, and of the mysteries of the twofold horizon. It is I who have given to all the gods the soul which is within them. When I open my eyes, there is light; when I close them, there is darkness. I make the hours, and the hours come into existence. I am Chepera in the morning, Rā at noon, Tmu in the evening' (*ib.* p. 221 f.). And the following is an extract from a hymn preserved in the museum at Bulak: 'Hail to thee, Amon-Rā . . . lord of all existences, the support of things, the support of all things. The One in his works, single among the gods . . . Lord of truth, father of the gods; maker of men, creator of beasts . . . Most glorious one, chief maker of the earth after his image, how great are his thoughts above every God! Atmu, maker of men . . . giving them life . . . listening to the poor who is in distress, gentle of heart when one cries unto him' (*ib.* 225).

In Egypt, however, as everywhere, the mythical mingled with the religious, the irrational with the rational. See COSMOGONY AND COSMOLOGY (Egyptian).

(2) *India.*—The problem of the origin of things naturally fascinated 'the brooding mind of India.' For ages the East was 'plunged in thought,' and brought up a few pearls, with many empty shells, from the depths. Some of the hymns of the Rig-veda are, if not monotheistic, at least henotheistic in their pure and lofty idea of creation. Varuṇa is praised as the maker of all things:

'Truly admirable for grandeur are the works of Him who has separated the two worlds and fixed their vast extent: of Him who has set in motion the high and sublime firmament, who has spread out the heavens above and the earth beneath. . . . This Asura [Lord], who is acquainted with all things, has propped up these heavens, he has fixed the boundaries of the earth. He is enthroned above all the worlds, universal king; all the laws of the world are the laws of Varuṇa. . . . Between this earth and the sublime heaven above, all things, O Varuṇa, are of thy creation' (Darmesteter, *Sel. Essays*, p. 284).

But in India, too, we see the inevitable conflict between religion and mythology, with religion often defeated and defiled. The gods of the Vedas are, on the whole, of the usual polytheistic type, and side by side with the majestic hymns of creation we find a crowd of fanciful, humorous, often obscene, myths of the making of the world, all in flagrant contradiction with every pure religious conception. See COSMOGONY AND COSMOLOGY (Indian).

The advanced thinkers of the *Vedānta* accepted a philosophy of idealism, and carried it so far as to affirm that the world of phenomena had no real existence; to the enlightened it was all illusion; only to the soul which was entangled in the deception of the senses did it still appear real. Instead of explaining the universe, they explained it away, and they did not deem it necessary to answer the question, 'Who created *maya*?'

(3) *Persia.*—The Avesta, the sacred book of the Persians, begins with the words, 'I proclaim and worship Ahura Mazda, the Creator.' The religious poetry of Persia does not stop short of monotheism, while its mythology and theology teach a dualism of the most pronounced type.

'It is through me,' says Ahura to his prophet, Zoroaster, 'that the firmament, with its distant boundaries . . . subsists without pillars to rest upon; it is through me that the earth, through me that the sun, the moon, and the stars take their radiant course through the atmosphere: it was I who formed the seeds in such a manner that, when sown in the earth, they should grow,' etc. (Darmesteter, *op. cit.* p. 288).

Much more poetical is the following piece, which in its eager questioning singularly resembles Job 38–39:

'Reveal to me the truth, O Ahura! What was the beginning of the good creation?
Who is the father, who, at the beginning of time, begat Order?
Who has traced for the sun and the stars the paths that they must follow?
Who makes the moon increase and decrease? . . .
Who has fixed the earth and the immovable stars to establish them firmly, so that they might not fall? Who has fixed the waters and the trees?
Who has directed the rapid course of the wind and of the clouds? What skilful artist has made the light and the darkness? . . .
Those are the things that I wish to ask Thee, O Mazda, O beneficent Spirit, O Creator of all things!' (*ib.* p. 290 f.).

The theology of Persia teaches that from the beginning the kingdoms of Ormuzd (Ahura Mazda, 'the Lord Wisdom') and Ahriman (Angra Mainyu, 'destructive spirit') were independent of each other. Ormuzd created this material world as a kind of rampart between the two invisible realms. Heaven and its lights were first made by his word; then, in succession, the waters, the solid land, the plants, the animals, and, lastly, man. But his rival tried to undo all the work, to spoil the fair creation. He confronted light with darkness, he pitted demons against angels, and to life, love, virtue, and truth he opposed error, vice, hatred, and death. Since then, the history of the world has been the history of the conflict between the two kingdoms of good and evil, wherein this earth is the broad field of battle. See, further, COSMOGONY AND COSMOLOGY (Iranian).

Lagarde and other scholars have strongly maintained that the Hebrew cosmogony in Gn 1 is in some respects dependent on the Persian creation-story, particularly as regards the order of events; but it is more probable that the Persian influence on Israel did not begin till after the time of the writing of the Priestly Document to which Gn 1 belongs. Be that as it may, the Persian dualism, with its eternally opposed principles of light and darkness, good and evil, had its obvious parallels in Greek thought, and was revived in Manichæism, while even shrewd thinkers like J. S. Mill have thought that the defects of the universe can be best explained by supposing the Creator hampered through the insufficiency and intractableness of the materials with which He had to work (J. S. Mill, *Three Essays on Religion*, Lond. ed. 1904, pp. 178, 186).

(4) *Greece.*—See COSMOGONY AND COSMOLOGY (Greek).

3. The Biblical conception.—The OT has three types of ideas regarding the Creation, embedded in three strata of its literature. (I) The first is found in Gn 2^{4b-25}. The narrative has all the fresh charm of the ancient writing (J) to which it belongs. It is full of naive anthropomorphisms, representing God as moulding, breathing, planting, walking, and it undoubtedly has a background of popular mythology. But the writer adorns whatever he touches, transfusing old legends with a new spirit, so that 'in depth of moral and religious insight the passage is unsurpassed in the OT' (Skinner, *Genesis*, 52). There is no attempt here to represent the creation of 'heaven and earth'; these are taken for granted; speculation is not yet advanced enough to grapple with such magnitudes. The whole interest centres in the making first of man, and then of a pleasant and fruitful place for his abode. See, further, COSMOGONY AND COSMOLOGY (Heb.).

(2) Another type of creation doctrine is found in the Deutero-Isaiah. It was the mission of this prophet to comfort Israel in her exile, and he fulfils it by giving her a lofty conception of God the Creator. He teaches that Jahweh is not merely the God of Israel, but the only God, who brought all things into being by a free act of creation. 'Who hath measured the waters in the hollow of his hand? . . . Lift up your eyes on high, and see who hath created these' (Is $40^{12.\ 26}$). Jahweh is greater than the infinite sea and sky. It was this prophet who made the creatorship of Jahweh a fundamental Jewish belief, and it is to be noted that in his doctrine there is not the faintest echo of the old creation-legends, not the remotest suggestion of a primeval chaos, or of a conflict between light and darkness, to say nothing of a slaying of 'dragons of the prime.' As if to lay the ghosts of all such superstitions, he makes the God of creation say: 'I am Jahweh, and there is none else. I form the light, and create darkness; I make peace, and create evil: I am Jahweh, that doeth all these things' (Is $45^{6.\ 7}$).

Pure religion has gained an absolute victory over mythology.

(3) The third type of cosmogony is found in Gn 1. This majestic prologue to the Bible belongs to those Priestly Writings (P) of the post-exilic period which form the greater part of the Hexateuch. Our interpretation of the opening sentences is affected by our solution of a difficult and delicate problem of syntax. Most scholars now read the passage thus:

'When God began to create the heaven and the earth—the earth being without form and void, and darkness being upon the face of the deep, and the spirit of God brooding upon the face of the waters—God said, Let there be light, and there was light.'

If this exegesis is correct, the writer teaches a dualism. He thinks of a dark watery chaos existing before the creation began, and gives it the mythical name *Tĕhōm* ('the Deep'), which is evidently the Heb. equivalent of the Bab. *Tiamāt*. This is the first of many parallels between the two famous Epics of creation. See, further, COSMOGONY AND COSMOLOGY (Heb.).

The doctrine of a creation out of nothing—*ex nihilo*—is nowhere expressly taught in Holy Scripture. The first near approach to it occurs in the words of the mother of the Maccabees: ἐξ οὐκ ὄντων ἐποίησεν αὐτὰ ὁ θεός (2 Mac 7^{28}), which are too definitely rendered by the Vulgate: *ex nihilo fecit illa Deus*. The *Wisdom of Solomon*, on the other hand, distinctly reproduces the Platonic doctrine of the creation of the world 'out of formless matter,' ἐξ ἀμόρφου ὕλης (11^{17}). In the NT the Divine creation of the world is presupposed in many sayings of our Lord and His Apostles, as in those which mention the foundation of the world (Mt 25^{34}, Lk 11^{50}, Jn 17^{24}, Eph 1^4, He 4^3, 1 P 1^{20}), the creation of man and woman (Mt 19^{4-6}, Ac 17^{24-26}, 1 Ti 2^{13}); and those which represent Him as the Maker of heaven and earth (Mt 11^{25}, Lk 10^{21}, Ac 17^{24}), the Source of all things (Ro 11^{36}, 1 Co 8^6, Eph 4^6), the Father who through the Son made the world (Jn 1^3, Col 1^{15-16}, He 1^2). Faith grasps the fact 'that the worlds have been framed by the word (ῥήματι) of God; so that what is seen hath not been made out of things which do appear' (μὴ ἐκ φαινομένων, He 11^3).

4. **The Greek conception.**—While the old cosmogonic myths were fading in the light of the pure religion of Israel, the wise men of Greece were turning upon them the light of philosophy. The great decisive step which the Ionian cosmologists took once for all consisted, as Grote and Zeller have shown, in the substitution of impersonal causes acting according to law in place of personal causes acting arbitrarily. Burnet expresses the matter by simply saying that they 'left off telling tales.' This was the beginning of a new era in the evolution of thought, and 'history teaches that science has never existed except among those peoples which the Greeks have influenced' (*Early Greek Phil.*, 1892, pp. 8, 27). For details of Greek speculation, see COSMOGONY AND COSMOLOGY (Greek).

5. **The dogmatic conception.**—Till recent times the Church's doctrine of creation was based on the acceptance of Gn 1 as literal history, and particularly on an ungrammatical exegesis of the first three verses. Most of the Fathers, the scholastics, and the Protestant theologians believed that the world was miraculously created out of nothing, in six days, some six thousand years ago. This was a truth of revelation, which closed all questions. Luther comments on Gn 1, that 'Moses is writing history and reporting things that actually happened' ('*meldet geschehene Dinge*'). The matter therefore cannot be treated speculatively. To reason about it were profane. 'God was pleased,' says Calvin, 'that a history of the creation should exist,' and he repeats a story of Augustine's about 'a good old man, who, when some one pertly asked . . . what God did before the world was created, answered: He made a hell for the inquisitive' (*Instit.* I. xiv. 1). But the doctrine of *creatio ex nihilo* cannot be deduced from Gn 1^{1-3}, which rather, as we have seen, teaches a dualism. This was, indeed, the explicit doctrine of some of the early Fathers, who remained in closer touch with the Jews, and therefore correctly interpreted the passage in question. Justin Martyr, quoting Gn 1^{1-3}, says that Plato (whom he accuses of atticizing Moses) and his followers 'and we ourselves' have thence learned that 'through the Word of God the whole world came into existence out of things subjacent and before declared by Moses' (*Apol.* i. 59). Clement of Alexandria also maintained that Plato took from Moses his doctrine of a formless matter, expressly referring for the latter to Gn 1^2 (*Strom.* v. 14).

But Christian thought could not rest in a dualism, whether Mosaic or Platonic or Gnostic. The doctrine of an eternal matter was seen to be a dangerous rival to the doctrine of the eternal Logos, and almost with one accord the theologians of the East and West alike set themselves to demolish the pagan conception of an uncreated ὕλη. With the LXX or the Vulgate instead of the Hebrew text before them, they honestly counted Moses as a monist. But, though revelation thus seemed to be on their side, they still habitually based their doctrine upon reason. They were Christian philosophers meeting other philosophers on common ground. Their arguments have been restated in C. M. Walsh's recent book, *The Doctrine of Creation* (1910). 'God alone is without beginning' was the thesis they defended. If matter were uncreated, it would be equal with God—a second God. If there were two first principles, they would be incommunicable without a third, which would be the ultimate principle. Plainly the one must come from the other, and, yet more plainly, matter from God rather than the reverse. To be Lord of all, God must have created matter. If it were uncreated, the world could not be constructed out of it, for it could not be receptive of the qualities which God wished to impose upon it, unless God Himself had made it such as He wished it to be. That which is capable of being made into an artistic world must itself have had a wise and skilful Maker.

These arguments are certainly sufficient to prove the dependence of all things upon God, and the derivation of all things from God. But the affirmation of a time—or rather an eternity—in which God was not a Creator, in which the universe was non-existent, is another matter. Some of the greatest minds found it impossible to conceive such acosmism. Origen held that before the creation of our world God had created others, as He will create others after ours, without beginning or end; that matter, or the substance underlying all the successive worlds, is eternally created (*de Princip.* III. v. 3–4). Augustine had the deep and pregnant thought that the preservation of the world is a continuous creation (*de Civ. Dei*, xii. 25). Scotus Erigena, the profoundest thinker in the Middle Ages, taught that God's working is equally eternal with His being; that creation is involved in His essence; that He necessarily manifests Himself in the world; that He precedes it not in time but only in the idea, as its cause (*de Divisione Naturæ*, iii. 25). Thomas Aquinas confessed that reason could only be satisfied with the assumption that the world had no beginning; that, God being the *sufficiens causa mundi*, the cause must apparently always have its effect; and that the doctrine of a beginning, or the non-eternity of the world, is to be

received *sola fide*, by an act of pure faith, in deference to authority: '*Mundum incoepisse est credibile, non autem demonstrabile vel scibile*' (*c. Gent.* ii. 38; *Summa*, i. 46, 104). The *Theologia Germanica* has this profound passage: 'It belongeth unto the Will, and is its property, that it should will something. What else is it for? For it were vain, unless it had some work to do, and this it cannot have without the creature (or creation). Therefore there must be creatures, and God will have them, to the end that the Will may be put in exercise by their means, and work' (ch. 51). Jacob Boehme likewise saw that a hidden will, which did not become present to itself in the object of its creation, would not attain to manifestation for itself, and so would remain unconscious.

6. The philosophical conception. — Philosophy entered upon a new era when it first ventured to ignore and then to repudiate the orthodox doctrine of creation. For a time it claimed its independence very modestly and tentatively. It seemed still content to bend the knee to authority. Bacon made a distinction between 'one who philosophizes according to the sense alone,' and 'Sacred Writ'—the former representing matter as 'self-existing,' the latter as 'from God.' That 'matter was created from nothing, we know by faith,' as it is 'one to which those philosophies could not rise' (*Works*, ed. Spedding, v. 491). Descartes introduces his revolutionary ideas in the humblest tone. 'It may be believed, without discredit to the miracle of creation, that the nature of things purely material is much more easily conceived when they are beheld coming . . . gradually into existence, than when they are only considered as produced at once in a finished and perfect state' (*On Method*, v.). Locke did not feel justified in rejecting the doctrine of *creatio ex nihilo*. He maintained that the impossibility of conceiving the making of something of which no part existed before cannot be regarded as a reasonable criterion to set a limit to the operations of an infinite Mind. To him the existence of an extra-mundane Creator was capable of demonstration. Its evidence, if he was not mistaken, was equal to mathematical certainty (*Hum. Understanding*, iv. 10). Such demonstrations were numerous during the age of Natural Religion, and Coleridge, not without reason, complained that men had come to regard the relation of the Creator to the universe in the same light as that of a mason to his work. Such mechanical deism easily gave place to pure materialism. It was Spinoza who led philosophy into more fruitful fields. As opposed to those *mechanical* conceptions, 'the developed idea of God as the omnipresent Life of the world, constantly operating in and through natural laws, is common to educated theism with pantheism, and is what modern theism owes to pantheistic exaggeration' (Fraser, *Phil. of Theism*[2], p. 83). Spinoza regarded the traditional theory of creation as making the nature of God arbitrary and the existence of the world a matter of chance. He therefore entirely rejected it. For, though his *Natura naturans*, or Nature active, may in a manner be called the Creator of his *Natura naturata*, or Nature passive, these are consubstantial and co-eternal, neither before nor after the other. There is no beginning in the universe; there can be no end. The existing order of things is the only one possible, and in its involuntary evolution it flows from its cause, the one infinite reality, with the same mathematical necessity with which the angles of a triangle are derived from the triangle. Fichte follows Spinoza in emphatically repudiating the doctrine of creation, calling it 'the root error of all false metaphysics and dogmatics,' which perverts the idea of God from the outset, investing it with caprice, and changing thought into a dreaming play of fancy ('ein träumendes Phantasiren,' *Werke*, 1845, v. 479). Hegel accepts the category of creation, but fills it with a new content. 'God,' he says, 'is the Creator of the world; it belongs to His being, His essence, to be Creator; in so far as He is not this, He is imperfectly conceived. Creation is not an act undertaken once upon a time. What belongs to the Idea belongs to it as an eternal moment or determination' (*Werke*, 1832, xii. 157 f.). 'God does not create the world once; He is the eternal Creator. This eternal self-revelation, this *actus*, is His notion, His definition' (*ib.* p. 181). '*Ohne Welt ist Gott nicht Gott*' (xi. 122). Schleiermacher felt that the idea of a beginning of God's creative activity places Him as a temporal being in the domain of change. He regarded the work of God as Creator as one with His work as Preserver, and the two together as identical with the totality of causation in Nature (*Der christl. Glaube*, 1889, i. 294–297).

All the English Idealists agree in identifying the Creation with God's self-manifestation, which they regard as an eternally necessary moral act. 'It is of the very essence of mind or spirit,' says John Caird, 'that it contains in it the necessity of self-manifestation in objective form, and therefore that which we speak of as "the creation of the world" must be conceived as the expression not of arbitrary will, but of the very nature and being of God' (*Fund. Ideas of Christianity*, i. 84 f.). Green expressed the same profound thought more daringly by saying that the world is as necessary to God as God is to the world. The words of two leading German thinkers will show how the later philosophy and theology have welcomed the new conception:

'The will to create,' says Lotze, 'is an absolutely eternal predicate of God, and ought not to be used to designate a deed of His, so much as the absolute dependence of the world upon His will, in contradistinction to its voluntary emanation from His nature' (*Out. of Phil. of Rel.* 74). 'It is a sensuous representation,' says Lipsius, 'to trace creation back to a single act now lying in the past, or to speak of a first beginning of creation; rather is the whole world-development, so soon as it is viewed religiously, to be brought under the idea of creation, consequently to be regarded as without beginning or end' (*Dogmatik*, 293).

We cannot do better than close this section with the calm pronouncement of the Nestor of Scottish philosophy:

'I do not find,' says A. C. Fraser, 'that the presence of order and design within the cosmos means that the cosmos must have had a beginning. That the universe should exist without either a beginning or an end of its orderly metamorphoses, does not seem less consistent with the ideas of theism and providence, than the hypothesis of its sudden creation in time—whatever that may mean. . . . We seem to be born into an unbeginning and unending divinely natural evolution' (*Theism*[2], pp. 125, 133).

7. The scientific conception. — Science has widened man's cosmic view and increased his cosmic emotion. His doctrine of creation is transfigured in the light of astronomy and geology, biology and palæontology. His vision of the making of this world at a certain recent time, and of the rest of the universe with it, is replaced by a grander vision of the slow and progressive formation, by the action of physical forces, of a universe in which countless new worlds are being formed to-day just as this one—this satellite of the sun—was formed hundreds of millions of years ago. His idea of a primeval chaos, which found expression in all his antique cosmogonies (as in Gn 1[2]), is discarded for the conviction that, when he goes back as far as the wings of imagination can carry him, this universe, however changed in aspect, is still a cosmos. And his old belief that 'there are just as many species of plants and animals as there were different forms originally created by the Infinite Being; and that these different forms, according to the laws of reproduction imposed

upon them, produced others, but always forms like themselves' (Linnæus), has yielded to 'a view of life, with its several powers, having been originally breathed by the Creator into a few forms or into one; and, that, whilst this planet has gone cycling on according to the fixed law of gravity, from so simple a beginning endless forms most beautiful and most wonderful have been, and are being evolved' (Darwin, *Origin of Species*[6], p. 403).

'The progress of science,' as Driver frankly admits, 'has brought the Cosmogony of Genesis into sharp and undisguised antagonism with the Cosmogony of science, . . . and to expect to find in it supernatural information on points of scientific fact, is to mistake its entire purpose' (*Genesis*, p. 33). There is nothing, however, in the cosmogony of science that is in conflict with that conception of 'a great and good Maker of the world' which is found at the heart of so many primitive and savage religions; or with Isaiah's idea of a Creator who 'hath measured the waters in the hollow of his hand, and meted out heaven with the span, and comprehended the dust of the earth in a measure, and weighed the mountains in scales, and the hills in a balance'; or with the Platonic faith expressed in the *Timæus*: 'Let me tell you, then, why the Creator created and made the universe. He was good, and desired that all things should be as like Himself as possible' (Jowett, iii. 613).

The scientific conception of creation has important bearings upon religion. It has at once made God greater and brought Him nearer. It has not only immeasurably expanded the heavens which declare His glory, but it has substituted the action of an immanent for the action of a transcendent Creator. 'The general effect of the intellectual movement of modern times,' says J. Fiske, 'has been to discredit more than ever before the Latin idea of God as a power outside of nature and occasionally interfering with it' (*Through Nature to God*, 147). The 'Great Original' can no longer be conceived as a Demiurge or Master-builder, putting forth His power once and then staying His hand; His creative action is spread all along the line of gradual development, revealing itself in ever higher potencies. And in place of a God beyond the stars, who created the world once upon a time and then was content with 'seeing it go,' we have a Spirit who is 'closer than breathing, and nearer than hands and feet.'

Further research into the ultimate nature of matter seems destined to upset many hypotheses. 'There is nothing,' said Lord Kelvin, 'between absolute scientific belief in a Creative power, and the acceptance of the theory of a fortuitous concourse of atoms. . . . If you think strongly enough, you will be forced by science to the belief in God which is the foundation of all religion' (*Nineteenth Cent.*, June 1903). And now, even the atomic theory of the origin of things, after a vogue of more than 2000 years, is at length being set aside, for it is found, as Sir O. Lodge says, that the 'atoms of matter,' instead of being ultimate, 'are liable . . . to break up or explode, and so resolve themselves into simpler forms,' called electrons, which again are described as 'knots or twists or vortices, or some sort of either static or kinetic modification, of the ether of space' (*Life and Matter*, 28, 32). Ether 'is probably the fundamental substratum of the whole material world, underlying every kind of activity, and constituting the very atoms of which our own bodies are composed' (*The Substance of Faith*, 74). 'If any one thinks that ether, with all its massiveness and energy, has probably no psychical significance, I find myself unable to agree with him' (*The Ether of Space*, 1909, p. 114).

The scientific idea of creation as involution and evolution has thus brought us nearer than ever to 'the Mind which, like our own, must underlie the material fabric,' the Nous of Anaxagoras. 'The process of evolution can be regarded as the gradual unfolding of the Divine Thought, or *Logos*, throughout the universe, by the action of Spirit upon matter' (*Substance of Faith*, 59). There are some who 'recognise in this extraordinary development a contact between this material frame of things and a universe higher and other than anything known to our senses: . . . a universe capable of infinite development . . . long after this planet . . . shall have fulfilled its present spire of destiny, and retired cold and lifeless upon its endless way' (*Life and Matter*, 199 *f.*).

CREED (Bab.-Assyr.).—Though the religion of Babylonia and Assyria was practically homogeneous, there were probably nearly as many different beliefs as there were States or provinces; and the creed of the people became modified from time to time, either through the progress of thought or on account of political exigencies. These changes in the beliefs of the people, which sometimes bore upon the nature of the gods whom they worshipped, were in some cases such as to form either important variations in the original creeds, or transformations such as might have made a fresh statement of their position needful.

Notwithstanding that this was the case, it is not certain that in any of the centres of religious teaching the priests ever thought of putting forward anything in the nature of a creed, as we understand the word to-day; indeed, no document in which they have formulated the articles of their belief has yet come down to us, except the well-known legends of their gods (which, however, are more of the nature of sacred books), and certain introductions to incantations. That they should have formulated a statement of their religious beliefs, however, would not by any means have been either an impossible thing or against their ideas of religious propriety. Often enough, and seemingly at all periods, they declared their creeds in the names they bore. Thus, in the time of Lugal-anda and Uru-ka-gina (*c.* 4000 B.C.), we meet with names similar to the following: *(S)ur-Bau*, 'man of Bau'; *Ura-Dumuzi*, 'servant of Tammuz'; *Enim-Surupak*[1] *-zida*, 'the word of Surupak is true,' or the

[1] Or *Sukurra*. This was the god of Surippak, or Suruppak, now Fara, which was the city of Ut-napištim, the Babylonian Noah.

like; *Amar-Aśnan*, 'the corn-god's steer,' etc.; and names of the same character continued to be used all through the succeeding periods. During the early Semitic period (2000 B.C.) there occur names like *Šumma-ilu-lâ-ilia*, 'if God were not my god'; *Šumma-ilu-lâ-Šamaš*, 'if my god were not the sun-god'; *Sin-lâ-šanan*, 'Sin (the moon-god) has no equal'; *Zēr-panîtum-ummi*, 'Zērpanîtum is my mother'; *Yaum-ilu*, 'Jah is God'; *Nabium-ilu*, 'Nebo is god,' etc. In Assyrian literature we likewise find such names as *Aššur-taklak*, 'I trust in Aššur'; *Tukulti-Ninip*, 'my trust is Ninip,' with its synonym *Tukulti-âpil-êšarra* (Tiglath-pileser), 'my trust is the son of É-šarra'; *Uṣur-âmat-Êa*, 'keep the word (or command) of Ea'; *Sin-šadûa*, 'Sin is our mountain (of defence),' etc. Some names express belief as to the identity of divinities—possibly in opposition to those whose creed was different: for instance, *Nabû-yâ'u*, 'Nebo is Jah'; *Yâ-Dagunu*, 'Jah is Dagon'; and such names as *Yâ-âbîni*, 'Jah is our father,' form an interesting series. The Babylonians, like all the Semites, were intensely religious, and seldom objected to asserting their creed; indeed, some of the above names show that the Western Semites in general announced it boldly, and that what men called themselves became, as it were, a challenge to such as they regarded as heterodox.

Naturally, these are very short professions of faith, and it is doubtful whether longer ones are likely to be found. Sometimes, however, it seems to have been considered necessary to make some kind of a statement before beginning the utterance of an incantation. This took the form of a recital of some religious or mythological event, which justified the mystic words and the ceremonies which were to follow. Among these are the stories of the various evil spirits, the poetical description of the vine of Eridu, and the primitive account of the Creation prefixed to, and forming part of, the incantation to toothache. The composition most like a creed, however, is that known as the bilingual story of the Creation, which is prefixed to an incantation for purification:

Incantation.—The holy house, the house of the gods, in a holy place had not been made;
A plant had not been brought forth, a tree had not been created;
A brick had not been laid, a beam had not been shaped;
A house had not been built, a city had not been constructed;
A city had not been made, the inhabitants had not been installed (?);
Niffer had not been built, Ê-kura[1] had not been constructed;
Erech had not been built, Ê-anna[2] had not been constructed;
The Abyss had not been made, Eridu had not been constructed;
The holy house, the house of the gods—its seat had not been made;
The whole of the lands were sea.
When within the sea there was a stream,
In that day Eridu was made, Ê-sagila was constructed—
Ê-sagila, which the god Lugal-du-azaga had founded within the Abyss.
Babylon was built, Ê-sagila was completed;
He made the gods and the Anunnaki altogether,
The holy city, the seat of their hearts' joy, as supreme he proclaimed.
Marduk bound together a reed-bank before the waters,
He made earth, and poured it out against the bank,
To settle the gods in a seat of joy of heart.
He made mankind—
Aruru made the seed of mankind with him.
He made the beasts of the field and the living creatures in the desert;
He made the Tigris and the Euphrates, and set (them) there.
Well[3] proclaimed he their name.
Herb, the marsh-plant, the reed, and the thicket, he made;
He made the verdure of the plain;
The lands (and) the marshes were the reedy bank.
The cow, her young, the steer; the sheep, her young, the lamb of the fold;
Plantations and forests also.
The goat and the wild goat were dear (?) to him.
Lord Marduk made a bank on the sea-shore,
. . . . [which at first he made not,
. he caused to be.
[He ma]de [the plant], he made the tree—
[Everything] he made there—
[He laid the brick], he made the beams;
[He constructed the house], he built the city;
[He built the city], he established the community;
[He built the city Niffer], he built Ê-kura the temple;
[He built the city Erech], he b[uilt Ê-a]na [the temple].

Here the obverse breaks off, and, where the text becomes legible again, on the reverse, it is an incantation for purification, similar to many others in Assyro-Babylonian literature.

[1] The temple at Niffer. [2] The temple at Erech.
[3] Or, 'as (being) good.'

It seems probable that the other centres of Divine worship in Babylonia had similar statements of the creed held in the place, and this presupposes theological schools and colleges for the priests. At present we do not know much, if anything, about them; but the temple-libraries may ultimately yield information upon the point, together with statements of their beliefs similar to that translated above.

T. G. PINCHES.

CREED (Buddhist).—Nearly six centuries before the birth of Christ, at a time when religious speculation in India was rife, Siddhārtha Gautama, the son of a Śākya chieftain, went forth from his home to 'seek after what was right.' Reverence and affection for the founder of one of the world's greatest religions have led his disciples, during many centuries, and in different Eastern countries, to embellish, in apocryphal literature, the story of Gautama's life and teaching. But it is beyond doubt that the scheme of life, religious faith, and moral standards attributed to the founder of Buddhism represents his actual teaching. In regard to this the greatest authorities on Buddhism are agreed.

'When it is recollected,' says Rhys Davids, 'that Gautama Buddha did not leave behind him a number of deeply simple sayings, from which his followers subsequently built up a system or systems of their own, but had himself thoroughly elaborated his doctrine, partly as to details, after, but in its fundamental points even before, his mission began; that, during his long career as teacher, he had ample time to repeat the principles and details of the system over and over again to his disciples, and to test their knowledge of it; and finally, that his leading disciples were, like himself, accustomed to the subtlest metaphysical distinctions, and trained to that wonderful command of memory which Indian ascetics then possessed; when these facts are recalled to mind, it will be seen that much more reliance may reasonably be placed upon the doctrinal parts of the Buddhist Scriptures than upon correspondingly late records of other religions' (*Buddhism*, p. 86 f.).

Oldenberg (*Buddha*, p. 206 f., Eng. tr.) speaks to the same general effect: 'On the whole we shall be authorized to refer to Buddha himself the most essential trains of thought which we find recorded in the sacred texts, and in many places it is probably not too much to believe that the very words in which the ascetic of the Sakya house couched his gospel of deliverance have come down to us as they fell from his lips. We find that, throughout the vast complex of ancient Buddhist literature which has been collected, certain mottoes and formulas, the expression of Buddhist convictions upon some of the weightiest problems of religious thought, are expressed over and over again in a standard form adopted once for all. Why may not these be words which have received their currency from the founder of Buddhism, which had been spoken by him hundreds and thousands of times throughout his long life, devoted to teaching?'

In the valley of the Ganges, the birthplace of Buddhism, there was, at the time when the new religion came into being, a maze of interacting ideas, which Rhys Davids (*Early Buddhism*, p. 23) has classified as follows: (1) The very wide and varied group of ideas about souls supposed to dwell within the bodies of men and animals, and to animate moving objects in Nature (trees and plants, rivers, planets, etc.). These may be summed under the convenient modern term of *Animism*. (2) We have later and more advanced

ideas about the souls supposed to animate the greater phenomena of Nature. These may be summed under the convenient modern term of *Polytheism*. (3) We have the still later idea of a unity lying behind all these phenomena, both of the first and of the second class—the hypothesis of a one First Cause on which the whole universe in its varied forms depends, in which it lives and moves, and which is the only reality. This may be summed under the convenient modern term of *Monism*. (4) We have the opposite view. In this the First Cause has either not been reached in thought, or it has been considered and deliberately rejected; but otherwise the whole soul-theory has been retained and amplified, and the hypothesis of the eternity of matter is held at the same time. This may be summed under the convenient modern term of *Dualism*.

'These modern Western terms, though useful for classification, never exactly fit the ancient Eastern thought. And we must never forget that the clear-cut distinctions we now use were then perceptible to only quite a few of the clearest thinkers. Most of the people held a strange jumble of many of the notions current around them. The enumeration here made is merely intended to show that, when Buddhism arose, the country was seething, very much as the Western world was at the same period, with a multitude of . . . theories on all sorts of questions—ethical, philosophical, and religious. There was much superstition, no doubt, and no little sophistry. But, owing partly to the easy economic conditions of those times, partly also to the mutual courtesy and intellectual alertness of the people, there was a very large proportion of them who were earnestly occupied in more or less successful attempts to solve the highest problems of thought and conduct' (*ib.* p. 24).

Traces of the influence of all these ideas upon his mind can be found in the teaching of Gautama, but the current beliefs satisfied neither his nature nor his aspirations. In two authoritative texts he reveals the reasons why prevailing beliefs were impotent to satisfy him, and why he set himself to endeavour to get to the fountain-head of truth. The first is as follows:

'An ordinary unscholared man, though himself subject to old age, not escaped beyond its power, when he beholds another man old, is hurt, ashamed, disgusted, overlooking the while his own condition. Thinking that that would be unsuitable to me, the infatuation of a youth in his youth departed utterly from me' (*Aṅguttara*, i. 146).

The other text says:

'Before the days of my enlightenment, when I was still only a Bodhisat, though myself subject to re-birth, old age, disease, and death, to sorrow and to evil, I sought after things subject also to them. Then methought: Why should I act thus? Let me, when subject to these things, seeing the danger therein, seek rather after that which is not subject thereto, even the supreme bliss and security of Nirvana' (*Majjhima*, i. 163).

After having followed, to no purpose, the paths of metaphysical speculation, of mental discipline, and of ascetic rigour, Gautama reaped on one memorable night the fruit of his prolonged spiritual effort, the truth of things being of a sudden so clearly revealed to him that thenceforth he never swerved for a moment from devotion to his creed and to the mission that it imposed upon him.

The enlightenment which Gautama received, and which was regarded by himself and his followers as a victory over all the powers of darkness, is uniformly described as

'a mental state of exaltation, bliss, insight, altruism. The different Suttas emphasize different phases, different facets, as it were, of this condition. But they regard it as one and the same upheaval of the whole mental and moral nature,—will, emotion, and intellect being equally concerned. Thus one Sutta (the Mahâ-saccaka) lays stress on the four Raptures, and the three forms of Knowledge; another (the Dvedhâ-vitakka) on the certainty, the absence of doubt; another (the Bhaya-bherava) on the conquest over fear and agitation; another (the Ariya-pariyesanâ) on the bliss and security of the Nirvana to which he then attained.'

In the first of these Suttas the recital ends:

'When this knowledge, this insight, had arisen within me, my heart was set free from the intoxication of lusts, set free from the intoxication of becomings, set free from the intoxication of ignorance. In me, thus emancipated, there arose the certainty of that emancipation. And I came to know: "Re-birth is at an end. The higher life has been fulfilled. What had to be done has been accomplished. After this present life there will be no beyond." This last insight did I attain to in the last watch of the night. Ignorance was beaten down, insight arose, darkness was destroyed, the light came, inasmuch as I was there strenuous, aglow, master of myself' (Rhys Davids, *Early Buddhism*, p. 35 f.).

Having received enlightenment, Buddha proceeded to Benares. There he met some of his former disciples, the five ascetics, and explained to them the fundamental truths of his religion—an exposition preserved in the *Dhammachakka-ppavattana Sutta*, the Sutta of the Foundation of the Kingdom of Righteousness.

'This expression is usually translated "Turning the wheel of the Law," which, while retaining the Buddhist figure of speech, fails to represent the idea the figure was meant to convey; the rendering in the text gives up the figure in order to retain the underlying meaning. The "*cakra*" (Pâli *cakka*) is no ordinary wheel; it is the sign of dominion; and a "*cakravarti*" is "he who makes the wheels of his chariots roll unopposed over all the world"—a universal monarch. *Dharma* (Pâli *Dhamma*) is not law, but that which underlies and includes the law,—a word often most difficult to translate, and best rendered here by truth or righteousness; whereas the word "law" suggests ceremonial observances, outward rules, which it was precisely the object of Gautama's teaching to do away with. *Pravartana* (Pâli *ppavattana*) is "setting in motion onwards," the commencement of an action which is to continue. The whole phrase means, therefore, "To set rolling the royal chariot-wheel of a universal empire of truth and righteousness"' (Rhys Davids, *Buddhism*, p. 45).

The full text of the Sutta is as follows:

'There are two extremes which he who has gone forth ought not to follow—habitual devotion, on the one hand, to the passions, to the pleasures of sensual things, a low and pagan way (of seeking satisfaction), ignoble, unprofitable, fit only for the worldly-minded; and habitual devotion, on the other hand, to self-mortification, which is painful, ignoble, unprofitable. There is a Middle Path discovered by the Tathâgata—a path which opens the eyes, and bestows understanding, which leads to peace, to insight, to the higher wisdom, to Nirvana. Verily! it is this Aryan Eight-fold Path; that is to say, Right Views, Right Aspirations, Right Speech, Right Conduct, Right Mode of Livelihood, Right Effort, Right Mindfulness, and Right Rapture.

Now this is the Noble Truth as to suffering. Birth is attended with pain, decay is painful, disease is painful, death is painful. Union with the unpleasant is painful, painful is separation from the pleasant; and any craving unsatisfied, that, too, is painful. In brief, the five aggregates of clinging (that is, the conditions of individuality) are painful.

Now this is the Noble Truth as to the origin of suffering. Verily! it is the craving thirst that causes the renewal of becomings, that is accompanied by sensual delights, and seeks satisfaction, now here, now there,—that is to say, the craving for the gratification of the senses, or the craving for a future life, or the craving for prosperity.

Now this is the Noble Truth as to the passing away of pain. Verily! it is the passing away so that no passion remains, the giving up, the getting rid of, the emancipation from, the harbouring no longer of, this craving thirst.

Now this is the Noble Truth as to the way that leads to the passing away of pain. Verily! it is this Aryan Eight-fold Path, that is to say, Right Views, Right Aspirations, Right Speech, Conduct, and Mode of Livelihood, Right Effort, Right Mindfulness, and Right Rapture' (Rhys Davids, *Early Buddhism*, p. 51 f.).

This concise statement contains all the essential elements of the Buddhist creed. The great deliverance, of which Gautama himself was conscious, and the means whereby he had attained it, formed the basis of all his subsequent teaching. It was this gospel of deliverance which won his earliest disciples, and which they in turn were commissioned by the Buddha to preach to suffering men. Sixty monks were soon enrolled as converts of the new faith, and they were sent forth as its first apostles. In sending them forth, Gautama thus addressed them:

'I am delivered from all fetters, human and divine. You, too, O monks, are freed from the same fetters. Go forth and wander everywhere, out of compassion for the world, and for the welfare of gods and men. Go forth, one by one, in different directions. Preach the doctrine, salutary in its beginning, middle, and end, in its spirit, and in its letter. Proclaim a life of perfect restraint, chastity, and celibacy. . . . I will go also to preach this doctrine' (*Mahâvagga*, i. 11. 1).

When the band of believers was increased to a thousand, Gautama preached his 'burning' fire-sermon, on a hill Gayâsîsa, near Gayâ:

'Everything, O monks, is burning. . . . The eye is burning; visible things are burning. The sensation produced by contact with visible things is burning—burning with the fire of lust (desire), enmity, and delusion, with birth, decay, death, grief, lamentation, pain, dejection, and despair. The ear is burning, sounds are burning; the nose is burning, odours are burning; the tongue is burning, tastes are burning; the body is burning

objects of sense are burning. The mind is burning, thoughts are burning. All are burning with the fire of passions and lusts. Observing this, O monks, a wise and noble disciple becomes weary of (or disgusted with) the eye, weary of visible things, weary of the ear, weary of sounds, weary of odours, weary of tastes, weary of the body, weary of the mind. Becoming weary, he frees himself from passions and lusts. When free, he realizes that his object is accomplished, that he has lived a life of restraint and chastity, that re-birth is ended' (*Mahāvagga*, i. 21. 2 ff.).

Shortly before his death the same teaching was again committed to the faithful Ānanda:

'O Ānanda, I am now grown old, and full of years, and my journey is drawing to its close; I have reached eighty years—my sum of days—and, just as a worn-out cart can only with much care be made to move along, so my body can only be kept going with difficulty. It is only when I become plunged in meditation that my body is at ease. In future be ye to yourselves your own light, your own refuge; seek no other refuge. Hold fast to the truth as your refuge; look not to any one but yourselves as a refuge' (*Mahā-parinibbāna-sutta*, ii. 32, 33).

Gautama afterwards delivered a summary of the duties of the monks who were to be the missionaries of his faith to the world:

'Which then, O monks, are the truths (the seven jewels) it behoves you to spread abroad, out of pity for the world, for the good of gods and men? They are: (1) the four earnest reflexions (*smṛiti*, *satipaṭṭhāna*; on the impurities of the body, on the impermanence of the sensations, of the thoughts, of the conditions of existence); (2) the four right exertions (*sammappadhāna*; viz. to prevent demerit from arising, get rid of it when arisen, produce merit, increase it); (3) the four paths to supernatural power (*iddhi-pāda*; viz. will, effort, thought, intense thought); (4) the five forces (*paṅča-bala*; viz. faith, energy, recollection, self-concentration, reason); (5) the proper use of the five organs of sense; (6) the seven "limbs" of knowledge (*bodhy-aṅga*; viz. recollection, investigation, energy, joy, serenity, concentration of mind, equanimity); (7) the noble eight-fold path' (*Mahā-parinibbāna*, iii. 65).

In order to form an accurate judgment regarding the meaning of the teaching of Buddha as set forth in the *Dhammachakka-ppavattana Sutta*, it is necessary not only to explain the terms used in the Sutta, but also to understand the doctrines which it involves. In subsequent Suttas each word, each clause, and each idea in the Discourse is fully commented and enlarged upon. It is possible, in the light of these explanations, to arrive at a true conception of the meaning which the Discourses conveyed to early Buddhists. From the same sources a general idea of the underlying beliefs may be gained.

1. **The Buddhist scheme of life.**—In Buddhist thought man is not regarded as a soul residing in a physical body, or as possessing a soul which may be separated from the body and continue to exist. A belief in self or soul is regarded so distinctly as a heresy that two well-known words in Buddhist terminology have been coined on purpose to stigmatize it. The first of these is *sakkāya-diṭṭhi*, 'the heresy of individuality,' the name given to this belief as one of the three primary delusions (the others being doubt, and belief in the efficacy of rites and ceremonies) which must be abandoned at the very first stage of the Buddhist path of holiness. The other is *attavāda*, 'the doctrine of soul or self,' which is a name given to it as a part of the chain of causes which lead to the origin of evil. It is there classed—with sensuality, heresy (as to eternity and annihilation), and belief in the efficacy of rites and ceremonies—as one of the four *upādānas*, which are the immediate cause of birth, decay, death, sorrow, lamentation, pain, grief, and despair.

What then is man? He is an aggregate of different properties or qualities—called *skandhas*, or aggregates. These *skandhas* are as follows: (1) the material properties or attributes (*rūpa*); (2) the sensations (*vedanā*); (3) the abstract ideas (*sannā*): (4) the tendencies or potentialities (lit. 'confections,' *saṅkhārā*); and (5) thought, reason (*viññāṇa*).

It is distinctly laid down that none of these *skandhas* separately, nor the *skandhas* as a whole, is the soul.

'Therefore, O monks, whatever in the way of material form, sensations, perceptions, etc., respectively, has ever been, will be, or is, either in our case or in the outer world, or strong or weak, or low or high, or far or near, *it is not self*; this must he in truth perceive, who possesses real knowledge. Whosoever regards things in this light, O monks, being a wise and noble hearer of the word, turns himself from sensation and perception, from conformation and consciousness. When he turns therefrom, he becomes free from desire: by the cessation of desire he obtains deliverance; in the delivered there arises a consciousness of his deliverance: re-birth is extinct, holiness is completed, duty is accomplished; there is no more a return to this world, he knows' (*Mahāvagga*, i. 6. 44 ff.).

Gautama refused not only to give a definite answer to questions concerning the relation of the body to the soul, but even to discuss the matter. The question 'whether the soul is the same as the body, or different from it,' was one of the Indeterminates, prohibited questions.

It is the union of the *skandhas* which makes the individual:

'Every person, or thing, or god is therefore a putting together, a compound. And in each individual, without any exception, the relation of its component parts is ever changing, is never the same for two consecutive moments. It follows that no sooner has separateness, individuality, begun, than dissolution, disintegration, also begins. There can be no individuality without a putting together: there can be no putting together without a becoming; there can be no becoming without a becoming different: and there can be no becoming different without a dissolution, a passing away, which sooner or later will inevitably be complete' (Rhys Davids, *Early Buddhism*, p. 57).

The great fact of life is the 'Wheel of Life,' called *Paticca-Sammuppāda* (*i.e.* origination through dependence): (1) on account of Ignorance, the *saṅkhāras*; (2) on account of the *saṅkhāras*, Consciousness; (3) on account of Consciousness, Name and Form; (4) on account of Name and Form, the six Provinces (of the six senses); (5) on account of the six Provinces, Contact; (6) on account of Contact, Sensation; (7) on account of Sensation, Craving; (8) on account of Craving, Attachment; (9) on account of Attachment, Becoming; (10) on account of Becoming, Birth; (11) (12) on account of Birth, old age, and death, grief, lamentation, suffering, dejection, and despair.

Buddhism teaches that everything in life has a cause, and that the Wheel of Life *must* revolve, one cause leading to another, according to an irresistible law. But there is no attempt to explain the ultimate cause of all things. This Doctrine is embodied in the familiar stanza, which is engraved upon many an image of the Buddha, and impressed upon the moulded ashes of the dead:

'Of all the phenomena sprung from a cause
The Buddha the cause hath told,
And he tells, too, how each shall come to its end,
Such alone is the word of the Sage' (*Vinaya*, i. 40).

Death does not cause the Wheel of Life to cease to turn; it is only a link in the ceaseless chain of existence. At the moment of death a new life comes into being. The *skandhas* re-combine, under conditions determined by the amount of merit or demerit which their previous combination has accumulated. The man is the same as his predecessor in the chain of re-birth. And yet he is not the same; he is on a higher or a lower scale of existence, according as his previous life has been good or bad. This is *karma* (*q.v.*), the doctrine on which the whole of Buddhism turns.

Existence is conjoined with pain—pain to which there is no ending. The conditions which make an individual are the conditions that give rise to pain. Birth, death, disease, unions, separations, unsatisfied cravings, in fact all that goes to make individuality, are painful; existence, from beginning to end, is painful.

But why this pain of life, this life of pain? The second truth answers the question. Rhys Davids says that the last words in this Noble Truth might be rendered 'the lust of the flesh, the lust of life,

and the love of this present world' (*Early Buddhism*, p. 55). The author of *The Creed of Buddha* says (p. 80), with reference to this craving, or thirst, which Gautama affirmed to be the origin of suffering:

'Desire for the pleasures, or rather for the joys, that minister to the real self is wholly good. It is desire for the pleasures that minister to the lower self; it is the desire to affirm the lower self, to live in it, to cling to it, to rest in it; it is the desire to identify oneself with the individual self and the impermanent world which centres in it, instead of with the Universal Self and the eternal world of which it is at once the centre and the circumference:—it is this desire, taking a thousand forms, which is evil, and which proves itself to be evil by causing ceaseless suffering to mankind. If the self is to be delivered from suffering, desire for what is impermanent, changeable, and unreal must be extinguished; and the gradual extinction of unworthy desire must therefore be the central purpose of one's life.'

The question that Gautama set himself to solve was the cessation of the pain consequent upon and inherent in existence itself, and the answer to his search was the attainment of Nirvāṇa, by way of the Noble Eight-fold Path.

2. The Eight-fold Path.—The divisions of the path are, as already stated: Right Views, Right Aspirations, Right Speech, Right Conduct, Right Mode of Livelihood, Right Effort, Right Mindfulness, Right Rapture. The four stages of the path are: (1) The 'entering upon the stream,' *Conversion*; which follows on (*a*) companionship with the good, (*b*) hearing of the law, (*c*) enlightened reflexion, or (*d*) the practice of virtue. The unconverted man is unwise, under the influence of sin, enmity, and impurity; but if, by one or more of the means just mentioned, he has arrived at a perception of the 'four Noble Truths,' he has become converted, and has entered the first path. While in this path, he becomes free successively from the delusion of self, from doubt as to the Buddha and his doctrines, and from the belief in the efficacy of rites and ceremonies. 'Better than universal empire in this world, better than going to heaven, better than lordship over all worlds is (this three-fold) fruit of the first path' (*Dhammapāda*, verse 178). (2) The path of those who will only once return to this world. The converted man, free from doubt and the delusions of self and ritualism, succeeds in this path in reducing to a minimum lust, hatred, and delusion. (3) The path of those who will never return to this world; in which, the last remnants of sensuality and malevolence being destroyed, not the least low desire for oneself, or wrong feeling towards others, can arise in the heart. (4) The path of the holy ones; more exactly, worthy ones, *arahats*; in which the saint becomes free from desire for material, or immaterial, existence; from pride and self-righteousness, and ignorance (Rhys Davids, *Buddhism*, p. 108 f.).

Several words are used in this description of the Eight-fold Path which require explanation.

i. *Right Views.*—Right Views refer principally to the four truths, enunciated in the *Dhammachakka-ppavattana Sutta*, and the 'three signs,' which include (*a*) the first of the four truths, (*b*) impermanence, and (*c*) non-soul, *i.e.* the absence of a soul. Impermanence and non-soul are both declared to be the 'signs' of every individual, whether god, man, or animal.

ii. *Right Aspirations.*—The Buddhist faith does not teach the suppression of all desire, but the suppression of evil desires, low ideals, useless cravings, idle excitements, by the cultivation of the opposite—right desires and lofty aspirations. In the *Majjhima* (iii. 25) examples are given of right desire, *e.g.* the desire for emancipation from sensuality, aspirations after the attainment of love for others, the wish not to injure any living thing, the desire for the eradication of wrong, and for the promotion of right dispositions in the heart.

iii. *Right Speech.*—To shun the company of the witless; to hold communion with the wise; to give honour where honour is due: this is a great blessing (*Mahā-parinibbāna Sutta*, i. 31).

iv. *Right Conduct.*—The two most important features of this quality are love and joy. Love, in the Pāli, is *mettā*, and the *Mettā Sutta* (*Sutta Nipāta*, viii. 7–9) says:

'As a mother, even at the risk of her own life, protects her son, her only son, so let him cultivate love without measure towards all beings. Let him cultivate towards the whole world—above, below, around—a heart of love unstinted, unmixed with the sense of differing or opposing interests. Let a man maintain this mindfulness all the while he is awake, whether he be standing, walking, sitting, or lying down. This state of heart is the best in the world.'

Again, the *Majjhima* (i. 129):

'Our mind shall not waver. No evil speech will we utter. Tender and compassionate will we abide, loving in heart, void of malice within. And we will be ever suffusing such an one with the rays of our loving thought. And with that feeling as a basis we will ever be suffusing the whole world with the thought of love, far-reaching, grown great, beyond measure, void of anger or ill-will.'

And the *Itivuttaka* (xxvi.):

'All the means that can be used as bases for doing right are not worth the sixteenth part of the emancipation of heart through Love. That takes all those up into itself, outshining them in radiance and glory, just as whatsoever stars there be, their radiance avails not the sixteenth part of the radiance of the moon. That takes all those up into itself, outshining them in radiance and glory—just as in the last month of the rains, at harvest time, the sun, mounting up on high into the clear and cloudless sky, overwhelms all darkness in the realms of space, and shines forth in radiance and glory—just as in the night, when the dawn is breaking, the Morning Star shines out in radiance and glory—just so all the means that can be used as helps towards doing right avail not the sixteenth part of the emancipation of the heart through Love.'

The joy of the faith is referred to in the 'Dialogues of the Buddha':

'When these five Hindrances have been put away within him, he looks upon himself as freed from debt, rid of disease, out of jail, a free man, and secure. And gladness springs up within him on his realizing that, and joy arises to him thus gladdened, and so rejoicing all his frame becomes at ease, and being thus at ease he is pervaded with a sense of peace, and in that peace his heart is stayed' (Rhys Davids, *Dialogues of the Buddha*, i. 84).

v. *Right Mode of Livelihood.*—'Whoso hurts and harms living creatures, destitute of sympathy for any living thing, let him be known as an outcaste' (*Vasala Sutta*, *Sutta Nipāta*, vii. 2).

vi. *Right Effort.*—This signifies 'a constant intellectual alertness.' The three cardinal sins of Buddhism are: sensuality (*dosa*), ill-will (*moha*), and stupidity or dullness (*rāga*); the last mentioned being regarded as the worst.

The 'Four Great Efforts' (*sammappadhānā*) are the effort or exertion (*a*) to prevent sinfulness arising, (*b*) to put away sinful states which have arisen, (*c*) to produce goodness not previously existing, and (*d*) to increase goodness where it does exist (*Mahā-parinibbāna-sutta*, *SBE* xi. 63 n.).

'The Four Roads to Saintship' (*iddhipādā*) are four means by which saintship is obtained, viz. (*a*) the will to acquire it, (*b*) the necessary exertion, (*c*) the necessary preparation of the heart, and (*d*) investigation (*SBE* xi. 63).

vii. *Right Mindfulness.*—This is closely connected with Right Effort. Dialogues in the *Dīgha* (ii. 290–315) and *Majjhima* (i. 55 f.) are devoted to the subject:

'The disciple, whatsoever he does, whether going forth or coming back, standing or walking, speaking or silent, eating or drinking, is to keep clearly in his mind all that it means, the temporary character of the act, its ethical significance, and that, above all, behind the act there is no actor (goer, seer, eater, speaker) that is an eternally persistent unity.'

viii. *Right Rapture.*—In the *Dhammapāda* (verses 197–200) this Right Rapture is thus described:

'It is in very bliss we dwell, we who hate not those who hate us;
Among men full of hate, we continue void of hate.
It is in very bliss we dwell, we in health among the ailing;
Among men weary and sick, we continue well.
It is in very bliss we dwell, free from care among the care-worn;

Among men full of worries, we continue calm.
It is in very bliss we dwell, we who have no hindrances;
We will become feeders on joy, like the gods in their shining splendour!'

In conformity with the Pāli text, all the divisions of the Eight-fold Path are described by a single word—'right.' This is, perhaps, the best translation of the original *sammā*. The word signifies 'going with'; used as an adjective, it is rendered 'general,' 'common,' or 'corresponding,' 'mutual'; as an adverb, 'commonly,' 'usually,' 'normally,' or 'fittingly,' 'properly,' 'correctly.' It is used, in a secondary sense, to mean round, fit and perfect, normal and complete. 'Right,' therefore, in the sense of 'correct' has to be understood, *i.e.* in agreement with the teaching of Gautama. The word is not used with a moral significance. The eightfold description of the perfect life is of such vital importance for the correct understanding of the Buddhist creed that it may be convenient to summarize the meaning of each division of the path:

1. Right views; free from superstition or delusion.
2. Right aspirations; high and worthy of the intelligent man.
3. Right speech; kindly, open, truthful.
4. Right conduct; peaceful, honest, pure.
5. Right livelihood; bringing hurt or danger to no living thing.
6. Right effort; in self-training and self-control.
7. Right mindfulness; the active, watchful mind.
8. Right rapture; earnest thought on the deep mysteries of life.

Gogerly (*Journ. Ceylon As. Soc.*, 1865) gives a slightly different rendering:

1. Correct views (of truth).	Correct doctrines.
2. Correct thoughts.	A clear perception (of their nature).
3. Correct words.	Inflexible veracity.
4. Correct conduct.	Purity of conduct.
5. Correct (mode of obtaining a) livelihood.	A sinless occupation.
6. Correct efforts.	Perseverance in duty.
7. Correct meditation.	Holy meditation.
8. Correct tranquillity.	Mental tranquillity.

3. **The hindrances in the way.**—The hindrances in the way of treading the Eight-fold Path, and thus securing deliverance, are very clearly detailed. They are described under different headings—'the Five Hindrances,' 'the Ten Fetters,' and 'the Four Intoxications.'

(*a*) The Five Hindrances (*nivaraṇā*) are sensuality, ill-will, torpor of mind or body, worry, and wavering. These affect a man like debt, disease, imprisonment, slavery, and anxiety.—(*b*) The Ten Fetters (*saṅgyojanas*) are: (1) delusions about the soul (*sakkāya-diṭṭhi*), (2) doubt (*vicikicchā*), (3) reliance on ceremonies (*sīlabbata-parāmāsa*), (4) sensuality (*kāma*), (5) ill-will (*paṭigha*), (6) desire for re-birth on earth (*rūpa-rāga*), (7) desire for re-birth in heaven (*arūpa-rāga*), (8) pride (*māno*), (9) self-righteousness (*uddhacca*), (10) ignorance (*avijjā*). —(*c*) The Four Intoxications consist in the mental infatuation arising from sensual pleasures, from the pride of life, from ignorance, and from speculation.

4. **The ultimate aim—Nirvāṇa.**—When the traveller has resolutely trodden the Eight-fold Path, overcome the Hindrances, broken the Fetters, and resisted the Intoxications, he has reached the goal of all Buddhist ambition and effort—Nirvāṇa.

'To him who has finished the Path, and passed beyond sorrow, who has freed himself on all sides, and thrown away every fetter, there is no more fever of grief.' 'Him whose senses have become tranquil, like a horse well broken-in by the driver; who is free from pride and the lust of the flesh, and the lust of existence, and the defilement of ignorance—him even the gods envy. Such a one whose conduct is right, remains like the broad earth, unvexed; like the pillar of the city gate, unmoved; like a pellucid lake, unruffled. For such there are no more births. Tranquil is the mind, tranquil the words and deeds of him who is thus tranquillized, and made free by wisdom' (*Dhammapāda*, verses 90, 94–96).

'They who, by steadfast mind, have become exempt from evil desire, and well-trained in the teachings of Gautama; they, having obtained the fruit of the Fourth Path, and immersed themselves in that ambrosia, have received without price, and are in the enjoyment of, Nirvāṇa... Their old *karma* is exhausted, no new *karma* is being produced; their hearts are free from the longing after future life; the cause of their existence being destroyed, and no new yearnings springing up within them, they, the wise, are extinguished like this lamp' (*Ratana Sutta*, 7. 14). 'That mendicant conducts himself well who has conquered (sin) by means of holiness, from whose eyes the veil of error has been removed, who is well-trained in religion, and who, free from yearning, and skilled in the knowledge, has attained unto Nirvāṇa' (*Sammāparibbājanīya Sutta*, 14).

The word *Nibbāna* (Pāli for *Nirvāṇa*) occurs only infrequently in the Piṭakas. A few illustrations of its use in the *Dhammapāda* are given:

'These wise people [speaking of Arahats], meditative, persevering, ever full of strength, attain to Nirvāṇa, the highest bliss' (verse 23). 'The mendicant who delights in diligence, and looks with terror on sloth, cannot fall away,—he is in the very presence of Nirvāṇa' (verse 32). 'If thou keepest thyself as silent as a broken gong, thou hast attained Nirvāṇa; no angry clamour is found in thee' (verse 134). [The preceding verse condemns harsh speaking.] 'The Buddhas declare the best self-mortification to be patience, long-suffering; the best (thing of all) to be Nirvāṇa; for he is no (true) monk who strikes, no (true) mendicant who insults others' (verse 184) 'There is no fire like lust, there is no sin like hate, there is no misery like the *skandhas*, there is no happiness like peace. Hunger is the worst disease, the *saṅkāras* the worst suffering: knowing this as it really is, is Nirvāṇa, the highest bliss' (verse 202 f.). 'Those who are ever on the watch, who study day and night, whose heart is set on Nirvāṇa, their sinfulness dies away' [lit. 'their Āsavas go to an end'] (verse 226).

In the light of these passages, what is Nirvāṇa? In the original it means 'going out,' 'extinction.' It cannot mean the extinction of the soul.

'It is the extinction of that sinful, grasping condition of mind and heart, which would otherwise, according to the great mystery of Karma, be the cause of renewed individual existence. That extinction is to be brought about by, and runs parallel with, the growth of the opposite condition of mind and heart; and it is complete when that opposite condition is reached. Nirvāṇa is therefore the same thing as a sinless, calm state of mind; and, if translated at all, may best, perhaps, be rendered "holiness"—holiness, that is, in the Buddhist sense, perfect peace, goodness, and wisdom' (Rhys Davids, *Buddhism*, p. 111 f.). See, further, art. NIRVANA.

Describing Nirvāṇa, Rhys Davids says (*Early Buddhism*, p. 72 f.):

'One might fill columns with the praises, many of them among the most beautiful passages in Pali poetry and prose, lavished on this condition of mind, the state of the man made perfect according to the Buddhist faith. Many are the pet names, the poetic epithets, bestowed upon it, each of them—for they are not synonyms—emphasizing one or other phase of this many-sided conception—the harbour of refuge, the cool cave, the island amidst the floods, the place of bliss, emancipation, liberation, safety, the supreme, the transcendental, the uncreated, the tranquil, the home of ease, the calm, the end of suffering, the medicine for all evil, the unshaken, the ambrosia, the immaterial, the imperishable, the abiding, the further shore, the unending, the bliss of effort, the supreme joy, the ineffable, the detachment, the holy city, and many others. Perhaps the most frequent in the Buddhist texts is Arahatship, "the state of him who is worthy"; and the one exclusively used in Europe is Nirvana, the "dying out," that is, the dying out in the heart of the fell fire of the three cardinal sins—sensuality, ill-will, and stupidity' (*Saṁyutta*, iv. 251, 261).

Such, then, according to the authoritative Buddhist scriptures, is the creed of Buddhism. But is it the whole of the creed which Gautama preached to the world? Was this the faith by which Buddha won the 'deepest heart of the East'? The new religion was *materialistic*, i.e. Buddha denied the soul, or ego; *atheistic*, i.e. there was no place for God in his system of thought; *pessimistic*, i.e. he regarded all existence as intrinsically evil; *egoistic*, i.e. in his scheme of life he taught men to think of themselves and their personal welfare; *nihilistic*, i.e. he regarded Nothing as the supreme reality. Oldenberg says of the philosophy of Buddha: 'We have a fragment of a circle, to complete which, and to find the centre of which, is forbidden, for

it would involve an inquiry after things which do not contribute to deliverance and happiness' (*op. cit.* p. 208). Some writers have accepted this view, and have sought to complete the circle from its segment, and to find its centre, arguing that a creed involving materialism, atheism, pessimism, egoism, and nihilism could never have achieved the triumph which attended the propaganda of Buddhism; and therefore only a part, and not the whole, of Buddha's teaching has been handed down. It is claimed, for instance, that the central truth of Buddhism was 'the conception that the Universal Self is the true self of each one of us, and that to realize the true self is the destiny and the duty of man.' The early triumph of the faith may be difficult to understand, but there is no ground for assuming that the Buddhist scriptures contain an incomplete statement of the great, central, and essential truths preached by Gautama. Details of the teaching may be lacking, but we are in possession of its essence.

There can be no doubt that Gautama's scheme of life and religious teaching lost its charm over the minds of men in the course of a few centuries —among other reasons, on account of its negations, and the absence of an effective dynamic. Hence the rise of the Mahāyāna school of Buddhism, and its new doctrine, namely, (1) help from God to save oneself and others from suffering; (2) communion with God, which gave the highest ecstatic rest to the soul; and (3) the possibility of participation in the nature of God, so that mortals might become Divine and immortal.[1] One result quickly followed. The old Buddhists of the Hīnayāna school were unwilling that their teacher, Śākyamuni, should occupy a second place in the new creed, and so they deified him, and worshipped him exactly as the Mahāyāna school worshipped God. From the time of the deification of Buddha, Buddhism took a new lease of life, and became one of the world's greatest religions. Modern Buddhism presents to the world to-day a curious combination of the earliest teaching and its later developments.

Monier-Williams thus summarizes the achievements of the Buddhist faith in its earliest years in the land of its birth:

'What the Buddha then did was this: first he stretched out the hand of brotherhood to all mankind by inviting all, without exception, to join his fraternity of celibate monks, which he wished to be co-extensive with the world itself. Then he abolished the Brahminical "ways of salvation," *i.e.* Yajna "sacrifices," and Bhakti "devotion to personal gods," and substituted for these meditation and moral conduct as the only road to true knowledge and emancipation. And then, lastly, he threw open this highest way of true knowledge to all who wished to enter it, of whatever rank, or caste, or mental calibre they might be, not excepting the most degraded. Without doubt, the distinguishing feature in the Buddha's gospel was, that no living being, not even the lowest, was to be shut out from true enlightenment' (*Buddhism*, p. 96 f.).

J. H. BATESON.

CREEDS (Ecumenical).—**I. The Apostles' Creed.**—Within two generations from the Apostles a catechist at Rome produced the famous form which lies at the root probably of all similar forms, certainly in the West, and reflects without question the recent teaching of the great Apostles Peter and Paul. Kattenbusch traces the Old Roman Creed back to the year ± 100 A.D., and finds in it the archetype of all other forms in both East and West. Other writers, notably Zahn and Sanday, conjecture an Eastern type, a sister form, which they trace back to Antioch, regarding the later legend of Apostolic authorship, taught, *e.g.*, by Rufinus (c. A.D. 400), as enshrining this modicum of truth —that the Apostles had agreed on such a form, which in the East and West passed through many modifications. It will be convenient to quote this Old Roman Creed:

OLD ROMAN CREED.

I. 1. I believe in God, (the)[1] Father Almighty;
II. 2. And in Christ Jesus, His only Son, our Lord,
3. Who was born of the Holy Ghost and the Virgin Mary,
4. crucified under Pontius Pilate and buried,
5. the third day He rose from the dead,
6. He ascended into heaven,
7. sitteth at the right hand of the Father,
8. thence He shall come to judge living and dead.
III. 9. And in the Holy Ghost,
10. (the) Holy Church,
11. (the) remission of sins,
12. (the) resurrection of the flesh.

At first we can trace only bare allusions, as in a passage of Marcion's revised New Testament where he speaks of the 'covenant which begets us in the Holy Church,' and implies that the words 'Holy Church' were contained in the Baptismal Creed which had been taught him in Rome before his breach with the Church in A.D. 145. So, again, in two passages of Tertullian:

de Virg. Vel. i.: 'The rule of faith, indeed, is one altogether . . . of believing in one God Almighty, Maker of the world, and in His Son Jesus Christ, born of Mary the Virgin, crucified under Pontius Pilate; the third day raised from the dead, received in the heavens, sitting now at the right hand of the Father, about to come to judge quick and dead, through the resurrection also of the flesh.'

de Præscr. xiii.: 'What the (Roman) Church has made a common token with the African Churches: has recognized one God, Creator of the universe, and Christ Jesus, of the Virgin Mary, Son of God, the Creator, and the resurrection of the flesh.'

With scanty references in Dionysius and Novatian, we pass on to the 4th cent., when Creeds come out to the light of day, and, greatly to our advantage, Marcellus, Bishop of Ancyra, who had been kindly received as an exile by Bishop Julius of Rome (*c.* A.D. 337), left on record his acceptance of the faith of the Roman Church. The accuracy of his quotation, recorded by Epiphanius, is confirmed by the testimony of Rufinus, priest of Aquileia, who (*c.* A.D. 400) wrote a commentary on this form, and compared with it the slightly different form of Aquileia. It is quite possible that Kattenbusch has minimized the evidence for the existence of similar Eastern forms of the 3rd century. He thinks that the Creeds of Cæsarea and Jerusalem, recovered from the pages of Athanasius and Cyril, were derived from the Roman Creed after the date when Paul of Samosata was deposed (*c.* A.D. 272); and that the Roman Creed was altered to meet the needs of the East, and became the parent of Creeds in Asia Minor and Egypt as well as in Palestine.

At present the theory of Kattenbusch still holds the field, and is supported by Harnack; but his critics are closing him in on every side. Kunze, working on the same lines as Zahn, reconstructs an Antiochene Creed of the 3rd cent., which he claims as an independent sister form:

CREED OF ANTIOCH.

I. 1. I believe in one and an only true God, Father Almighty, Maker of all things, visible and invisible.
II. 2. And in one Lord Jesus Christ, His Son, the only-begotten and firstborn of all creation, begotten of Him before all the ages, through whom also the ages were established, and all things came into existence.
3. Who, for our sakes, came down and was born of Mary the Virgin,
4. And crucified under Pontius Pilate, and buried,
5. And the third day rose according to the Scriptures,

[1] Hence, also, the evolution of the thought of a Divine Saviour in the person of Avalokiteśvara (*q.v.*), which was a purely metaphysical invention, and of Maitreya, the future Buddha.

[1] The definite article is enclosed in brackets when it is not found in the Greek text of Marcellus.

6. And ascended into heaven.
7.
8. And is coming again to judge quick and dead.

III. 9. [The beginning of the third article has not been recorded.]
10.
11. Remission of sins.
12. Resurrection of the dead, life everlasting.[1]

The Creed which Zahn has reconstructed from the *Didascalia*, a book written in the 3rd cent. not far from Antioch, affords an instructive contrast.

CREED OF THE DIDASCALIA.

I. 1. I believe in God Almighty.

II. 2. And in our Lord Jesus Christ (His Son?), who for us came and
3. was born of (Mary the?) a virgin,
4. and was crucified under Pontius Pilate and died,
5. the third day rose from (the?) dead,
6. and ascended into the heavens,
7. and sitteth on the right hand of God the Almighty,
8. and is coming with power and glory to judge dead and living.

III. 9. And in the Holy Ghost . . .
10. (a Holy Church?) . . .
12. resurrection of the dead.[2]

The uncertainties attending such reconstructions stand in marked contrast with the comparative certainty with which we can trace back the Old Roman Creed, the only really doubtful point about which is the question whether originally it did not read: 'I believe in one God, the Father Almighty,' which is suggested by the testimony of Tertullian. Tertullian, in his criticism of Praxeas, the first modalist Monarchian (that is to say, a theologian who confused the distinctions between the Divine Persons), says (*adv. Praxean*, i.): 'He routed the Paraclete, and crucified the Father.' Under these circumstances we can commend the prudence of the leaders of the Roman Church if they dropped the word 'one' as liable to misunderstanding. Zahn quotes a passage from Eusebius in which heretics are said to have accused the Roman Church of re-coining the truth like forgers, and makes the acute suggestion that the reference was to some change in the Baptismal Creed. We cannot suppose that the immutability of the Roman Creed praised by Rufinus would necessarily extend through all the past centuries.

Again, Loofs,[3] comparing 4th cent. Eastern Creeds, endeavours to prove the existence of an Eastern type which would include the word 'one' in Article I. with a reference to the Creator: 'crucified under Pontius Pilate'; and in the third division the words 'catholic' and 'eternal life.' But the resultant form would be on the same plane of development as the Roman, as compared with the theological Creeds of the 4th century. There is always the possibility that such a Creed may have been brought to the East from Rome in the 2nd century. Justin Martyr has close coincidences of language, which, in Kattenbusch's[4] opinion, prove his acquaintance with the Roman Creed, though Zahn[5] thinks that he is quoting his own Creed of Ephesus. The same may be said of Irenæus, whose writings must be searched in the light of these opposing theories before we can decide whether he brought his creed from Rome:

c. Hær. i. x. 1: 'The Church, though dispersed throughout the whole world, even to the ends of the earth, has received from the apostles and their disciples this faith: [She believes] in one God, the Father Almighty, Maker of heaven and earth, and the sea and all things that are in them; and in one Christ Jesus the Son of God, who became incarnate for our salvation; and in the Holy Spirit, who proclaimed through the prophets the dispensations of God and the advents, and the birth from a virgin, and the passion, and the resurrection from the dead, and the ascension into heaven in the flesh of the beloved Christ Jesus, our Lord, and His [future] manifestation from heaven in the glory of the Father "to gather all things in one," and to raise up anew all flesh of the whole human race, in order that to Christ Jesus our Lord and God and Saviour and King, according to the will of the invisible Father, "every knee should bow, of things in heaven, and things in earth, and things under the earth, and that every tongue should confess to Him," and that He should execute just judgment towards all.'

While Irenæus has some phrases which remind us of the Roman Creed, the lack of any mention of the Holy Ghost at the end of this rule of faith makes it doubtful whether his personal creed was any more than a short Christological confession, the longer form quoted above representing a summary of his ordinary teaching on the lines laid down by tradition. Here is a problem which demands further investigation, and we must say the same of the very interesting researches of Connolly in the writings of Aphraates, from which he deduces the existence of an early Syriac Creed.[1] This includes mention of the Creation in Art. I.; confession of our Lord Jesus Christ as God, Son of God, Light from Light, who came and put on a body from Mary the Virgin of the seed of the house of David, from the Holy Spirit, and suffered (or was crucified), went down to the place of the dead, rose, ascended, sat on the right hand of the Father, is judge of the dead and of the living; confession of the Holy Spirit, followed by '[And I believe] in the coming to life of the dead; [and] in the mystery of Baptism (of the remission of sins).'

After all, it does not matter which way the question as to the form is answered ultimately, since the facts taught were the same in the East as in Rome.

The later history of the Creed is still at some points obscure. We know that it was used by the Abbot Pirminius, who founded monasteries at Reichenau and Hornbach. It is quoted in the *Codex Einsidlensis* 199 of the 8th cent., and the *Dicta Abbatis Pirminii*, which was written about A.D. 730. Probably it was brought into its present shape at Luxeuil or Bobbio. All the later additions, such as 'descended into hell' and 'communion of saints,' were in use in the Gallican Creeds of the 5th cent., with the exception of 'maker of heaven and earth.' This latest addition may have come in some way through the travels of Columban, who in Burgundy and Rhætia came across relics of the Old Latin Church of the Danube, and the stream of influence which had flowed from the East in earlier times.[2] Nicetas of Remesiana had both 'maker of heaven and earth' and 'communion of saints' in his Creed; and the *Faith of St. Jerome*, recently discovered by Morin, which is another connecting link between East and West, probably includes phrases which St. Jerome had learned in his native Pannonian Creed. Any way, we can make sure that it was from Rome that the Received Text was finally spread, since there are indications that Pirminius was quoting from a Roman source, and there would be every reason for the decision in favour of a revision of the Old Roman Creed in the light of experience which had found each of the added phrases useful. The desire of Charles the Great for uniformity, and his careful inquiries about the different uses in Gaul and in Rome, led to the triumph of this Revision throughout the Western Church, as the Creed of daily use, although the Baptismal Creed of the Church of England still retains certain Gallican peculiarities, 'only-begotten' (=*unigenitus*, not *unicus*), 'shall come *again at the end of the world*,' and 'everlasting life *after death*.'[3]

2. The Nicene Creed.—The history of the Nicene Creed begins with the Council of Nicæa, when the Creed presented by Eusebius of Cæsarea was deliberately revised to guard against the doctrines of Arianism. Whether he had composed it for the occasion, or had simply quoted verbatim

1 *Theol. Litteraturblatt*, xxxiii. [1911] 19, 221.

the Creed of his Church, is uncertain. So far as it goes, it no doubt follows the lines of the Creed of Cæsarea, as his opening words imply; but he adds a free warning against Sabellianism, and a Baptismal Creed is not likely to have ended abruptly with mention of the Holy Ghost. But the Council was not satisfied. Prompted by Hosius, Bishop of Cordova, the Emperor Constantine himself proposed the insertion of the term *homoousios*, which guarded against all evasions of Scripture teaching. Other changes may be noted by comparing the two forms.

	Creed of Eusebius.	Creed of Nicene Council.
	We believe	We believe
I. 1.	in one God, the Father Almighty, the maker of all things visible and invisible.	in one God, the Father Almighty, maker of all things visible and invisible.
II. 2.	And in one Lord Jesus Christ, the Word of God, God of God, Light of Light, Life of Life, Son Only-begotten, first born of every creature, before all the ages, begotten from the Father, by whom also all things were made;	And in one Lord Jesus Christ, the Son of God, begotten of the Father, only-begotten, that is of the substance of the Father, God of God, Light of Light, very God of very God, begotten, not made, of one substance with the Father, by whom all things were made, both those in heaven and those on earth.
	3. Who for our salvation was made flesh, and lived as a citizen among men,	3. Who for us men and for our salvation came down and was made flesh, and lived as Man among men,
	4. And suffered	4. Suffered,
	5. And rose again the third day,	5. And rose the third day.
	6. And ascended to the Father.	6. Ascended into heaven.
	7.	7.
	8. And will come again in glory to judge the quick and the dead.	8. Is coming to judge the quick and dead.
III.	9. And we believe also in one Holy Ghost;	9. And in the Holy Ghost.
